Subject:
NYSEG Goshen Former MGP Site
Monitoring Well Decommissioning Work Plan

Dear Ms. Saucier:

This letter presents a work plan for decommissioning select monitoring wells at the NYSEG Goshen Former Manufactured Gas Plant (MGP) Site (the site) located on West Main Street in Goshen, New York (Site No. 3-36-046).

Well decommissioning activities will be conducted in support of the forthcoming remedial construction activities (anticipated to begin in the summer of 2016). Well decommissioning activities will be completed in accordance with the New York State Department of Environmental Conservation- (NYSDEC-) approved November 2014 *Draft Final (95%) Remedial Design Report* (RD Report) (ARCADIS, 2014) and NYSDEC's guidance presented in NYSDEC's 2009 *CP-43 Groundwater Monitoring Well Decommissioning Policy*.

The locations of monitoring wells to be decommissioned in support of the remedial construction activities are shown on Figure 1. Monitoring wells MW93-3S, MW93-3D, MW08-09S, MW08-09D, and NMW08-02 will be decommissioned by removing the curb box, over-drilling and removing the casings, followed by tremie-grouting the borehole. ARCADIS will restore disturbed asphalt in the vicinity of the abandoned wells with an asphalt cold-mix patch.

Overburden monitoring wells and piezometers located within the in-situ soil solidification (ISS) treatment area (i.e., NMW08-01, PZ08-1, PZ08-2, and PZ08-3) will not be decommissioned and will be pulled by the Remediation Contractor (or mixed with site material) during the remedial construction activities, as the wells do not extend below the confining till unit.

Real-time air quality monitoring will be conducted for the duration of the well decommissioning activities. Community air monitoring will be conducted in

Imagine the result

accordance with the procedures presented in the March 2015 *Pre-Remediation In-Situ Sampling and Analysis Work Plan* (ARCADIS, 2015).

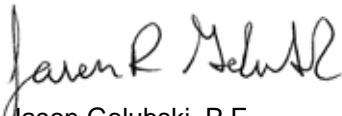

ARCADIS anticipates that monitoring well decommissioning activities will be conducted as part of the pre-remediation in-situ waste characterization sampling activities, tentatively scheduled to be conducted during the weeks of April 20 and April 27, 2015.

Following completion of the well decommissioning activities, ARCADIS will prepare and submit to the NYSDEC a brief letter report summarizing the well decommissioning activities. The letter report will consist of a summary of the well decommissioning activities, a site figure, and well decommissioning logs.

Please contact NYSEG's project manager, Tracey Blazicek, at 607.762.8839 if you have any questions.

Sincerely,

ARCADIS of New York, Inc.

Jason Golubski, P.E.
Project Engineer

1. ALL LOCATIONS ARE APPROXIMATE.
2. MONITORING WELLS MW93-3S, MW93-3D, MW08-09S, MW08-09D, AND NWW08-02 WILL BE DECOMMISSIONED BY ARCADIS PRIOR TO THE START OF REMEDIAL CONSTRUCTION ACTIVITIES.
3. OVERBURDEN MONITORING WELLS AND PIEZOMETERS LOCATED WITHIN THE ISS TREATMENT AREA (NWW08-01, PZ08-1, PZ08-2, AND PZ08-3) WILL NOT BE DECOMMISSIONED AND WILL BE REMOVED BY THE REMEDIATION CONTRACTOR DURING REMEDIAL CONSTRUCTION ACTIVITIES.
