## CERTIFICATION

I, Mark P. Millspaugh, P.E., certify that I am a New York State registered professional engineer and that this Periodic Review Report (PRR) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the Division of Environmental Remediation (DER) Technical Guidance for Site Investigation and Remediation (DER-10) and that all activities were performed in accordance with the DER-approved work plan and any DER-approved modifications.

Mark P. Millspaugh, P.E.

Date

## **EXECUTIVE SUMMARY**

The Town of Ramapo Landfill (Landfill), located at 250 Torne Valley Road in the Village of Hillburn, Town of Ramapo, Rockland County, New York (refer to Figure 1), is a National Priorities List (NPL) site and is regulated by the United States Environmental Protection Agency (USEPA), CERCLIS ID NYD000511493. The Landfill property is also registered as a New York State Class 2 Inactive Hazardous Waste Disposal Site, Registry No. 344004.

The Landfill was placed on the Superfund National Priorities List (NPL) in September 1983. The USEPA issued a Record of Decision (ROD) dated March 31, 1992 (and modified in December 1997 (Explanation of Significant Difference (ESD).

Between 1980 and 1988, the NYSDEC and the Town of Ramapo entered into four (4) Orders on Consent phasing out Landfill operations, constructing a surface water and groundwater diversion system and a leachate collection and transport system, and conducting a Remedial Investigation and Feasibility Study (RI/FS). The leachate collection system was completed along the downgradient edge of the Landfill in 1985. Leachate has been discharged to the Rockland County Sewer District (RCSD) No. 1 Publicly Owned Treatment Works (POTW) since 1996.

The selected remedies for the Landfill include Institutional Controls (IC) through a Declaration of Covenants and Restrictions that restricts disturbance of the Landfill cover and places restrictions on site use and offsite groundwater use restrictions, and onsite Engineering Controls (EC) provided by the Landfill cover and leachate collection systems, groundwater containment, fencing and access controls, air and water quality monitoring, regular inspections and maintenance activities. The Covenant of Restrictions and Environmental Easements were filed with the Rockland County Clerk on August 28, 2012 and October 10, 2012. Post-closure air and water quality monitoring, leachate removal, inspections and maintenance at the Landfill have been provided by the Town of Ramapo since 1999. A Site Management Plan (SMP) incorporates the Institutional/Engineering Control (IC/EC) Plan, the Inspection and Monitoring Plan, and the Operation and Maintenance Plan to provide for the continual post-closure monitoring and maintenance of the Landfill.

An annual Periodic Review Report (PRR) is required to document site management activities outlined in the SMP. This PRR covers the period January 1, 2016 to March 31, 2017.

The remedial program implemented at the Landfill has been successful in meeting the remedial objectives set forth in the RODs. Leachate generation and contaminant migration through groundwater has been reduced, contaminated surface runoff and direct human/animal contact with waste is eliminated, and Landfill gas migration/buildup is prevented.

Based on the results of activities performed in 2016 through March 2017, no changes to the approved SMP are recommended. The requirements for discontinuing site management have not been met. As such, continued compliance with the approved SMP is recommended.

## **1.0 INTRODUCTION**

The Town of Ramapo Landfill (Landfill), located at 250 Torne Valley Road in the Village of Hillburn, Town of Ramapo, Rockland County, New York (refer to Figure 1), is a National Priorities List (NPL) site and is regulated by the United States Environmental Protection Agency (USEPA), CERCLIS ID NYD000511493. The Landfill property is also registered as a New York State Class 2 Inactive Hazardous Waste Disposal Site, Registry No. 344004.

The Landfill was placed on the Superfund National Priorities List (NPL) in September 1983. The USEPA issued a Record of Decision (ROD) dated March 31, 1992 (and modified in December 1997 (Explanation of Significant Difference (ESD).

An annual Periodic Review Report (PRR) is required to document site management activities outlined in the Site Management Plan (SMP). This PRR covers the period January 1, 2016 to March 31, 2017 and includes the 2017 Post-Closure Monitoring (PCM) event, conducted between January 16 and 19, 2017. A Landfill inspection, air monitoring, leachate monitoring, groundwater monitoring, and an evaluation of institutional controls (IC) and engineering controls (EC) was completed in support of the 2017 PCM event.

### **1.1 Summary of Site History**

The Landfill is approximately 80 acres of waste-fill within a 96-acre parcel owned by the Town of Ramapo. The Landfill is located at the western base of the Ramapo Mountains on Torne Valley Road and consists of two major lobes commonly known as the north and south lobes. Landfill slopes range from three (3) to thirty-three (33) percent. Property features are presented in Figure 2.

Prior to landfilling operations in the 1950s and 1960s, portions of the property were excavated for gravel. In 1971, the Town was permitted by the Rockland County Department of Health (RCDOH) to operate a sanitary landfill. Under various operators, municipal solid waste (MSW) was accepted until 1984 and construction and demolition (C&D) debris was accepted until 1989. Substances reportedly disposed at the Landfill include industrial and sewer sludge, municipal refuse, asbestos, construction and demolition (C&D) debris, yard debris, paint sludge (presumably from an automotive plant) and liquid waste (reportedly from a paper company).

The Landfill was placed on the Superfund National Priorities List (NPL) in September 1983. Between 1980 and 1988, the NYSDEC and the Town of Ramapo entered into four (4) Orders on Consent phasing out Landfill operations, constructing a surface water and groundwater diversion system and a leachate collection and transport system, and conducting a Remedial Investigation and Feasibility Study (RI/FS). The leachate collection system was constructed along the downgradient edge of the Landfill from 1984 to 1985. Initially, collected leachate was conveyed by pumps and lift stations to a wastewater treatment pond in the southwest corner of the Landfill property. After aeration and settling occurred, the water was discharged to the Ramapo River. Since 1996, leachate has been discharged to the Rockland County Sewer District (RCSD) No. 1 Publicly Owned Treatment Works (POTW).

In 1998, the Town of Ramapo subdivided the sections of the Landfill property that are used for the transfer facility, scale house, and leachate storage tank. The transfer facility and scale house properties were sold to the Rockland County Solid Waste Management Authority (RCSWMA) and the leachate storage tank property was sold to the RCSD.

The selected remedies for the Landfill include Institutional Controls (IC) through a Declaration of Covenants and Restrictions that restricts disturbance of the Landfill cover and places restrictions on site uses, and Engineering Controls (EC) provided by the Landfill cover and leachate collection systems, air and water quality monitoring, regular inspections and maintenance activities. The Covenant of Restrictions and Environmental Easements were filed with the Rockland County Clerk on August 28, 2012 and October 10, 2012. Post-closure water and air quality monitoring, leachate removal, inspections and maintenance at the Landfill have been provided by the Town of Ramapo since 1999. An existing Site Management Plan (SMP) incorporates the Institutional/Engineering Control (IC/EC) Plan, the Inspection and Monitoring Plan, and the Operation and Maintenance Plan to provide for the continual post-closure monitoring and maintenance of the Landfill.

## **1.2 Effectiveness of the Remedial Program and Compliance**

The remedial program implemented at the Landfill has been successful in meeting the remedial objectives set forth in the Orders on Consent. Leachate generation and contaminant migration through groundwater has been reduced, contaminated surface runoff and direct human/animal contact with waste is eliminated, and Landfill gas migration/buildup is prevented.

## **1.3 Recommendations**

Based on the results of activities performed in 2016 through March 2017, no changes to the approved SMP are recommended. The requirements for discontinuing site management have not been met. As such, continued compliance with the approved SMP, including additional required submittals and actions addressing the seeps, is recommended.

## **2.0 OVERVIEW**

The following information was collected in support of the PCM of the Landfill:

- The Annual PCM inspection of the Landfill was performed by Sterling Environmental Engineering, P.C. (STERLING) during the 2017 sampling event. Site Location and Property Features Maps are provided as Figures 1 and 2. The 2017 Landfill inspection documents the physical integrity and stability of the Landfill cover system and assesses the condition and capability of existing surface water drainage and erosion control features at the Landfill. An Inspection Checklist and Institutional and Engineering Control Evaluation Form are provided in Appendix A. The NYSDEC Institutional and Engineering Controls Certification Form is provided in Appendix B while a photograph log was prepared to document observations during the Annual Site Inspection (Appendix C).
- The 2017 air quality monitoring event was conducted on January 16 to 19, 2017. Air monitoring locations are shown on Figure 3 and results are summarized on Table 1.
- Groundwater samples were collected from monitoring wells 1-OS, 2-OS, 3-OS/I, 4-OS, 7-OS, 8-OS, 8-I, 8-R, 9-OS, 9-I, 9-R, 10-OS, 10-I, 10-R, UP-OS, UP-I, UP-R, private water supply wells PW-1 and PW-2, and public water supply wells SVWC-93, SVWC-94, SVWC-95, and SVWC-96. Well locations are shown on Figure 3. The groundwater samples were analyzed for parameters listed in Table 2. A summary of field parameter measurements and analytical results for each well is summarized in Tables 3, 4, and 5; analytical reports are provided in Appendix D.

In addition, static water level readings were obtained at all of the sampled monitoring wells as well as monitoring wells 1-R, 2I, 2-R, 3-R, 4-I, 4-R, 5-OS, 5-I, 5-R, 6-I, 6-R, 7-I, and 7-R.

- Historical data for selected parameters (aluminum, beryllium, cadmium, copper, antimony, arsenic, chromium, iron, lead, magnesium, manganese, nickel, sodium, and thallium) are provided in tables 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, and 19).
- Reported discharge volumes pumped from the groundwater/leachate extraction wells, located on the downgradient side of the Landfill, to the Rockland County Sewer District (RCSD) #1 Publicly Owned Treatment Works (POTW) were provided to STERLING by the Town of Ramapo. The information is provided in Table 20.
- Analytical results from 2009 through the 2017 sampling event for leachate/groundwater pumped to the POTW are provided in Appendix E and summarized in Table 21.

### **3.0 PERFORMANCE, EFFECTIVENESS, AND PROTECTIVENESS**

The Landfill has been subject to a SMP since March 1999. The SMP provides for regular site inspections, air, groundwater, and leachate monitoring, leachate collection and management, mowing, and Landfill gas management. Monitoring locations are shown on Figure 3.

#### **3.1 Air Quality**

Air quality monitoring consisted of measuring concentrations of explosive gas (measured in percent of lower explosive limit (LEL)), Hydrogen Sulfide (H<sub>2</sub>S), and Volatile Organic Compounds (VOCs) in the headspace of each monitoring well, leachate manhole A-5, lift stations A-10 and W-20, and ambient breathing space at the Baler Building and along the Landfill perimeter at designated locations shown on Figure 3. Air quality monitoring results are summarized in Table 1. Explosive gas and H<sub>2</sub>S measurements were obtained with a QRAE multi-gas monitor while VOC measurements were obtained with a miniRAE 3000 photoionization detector (PID).

VOC readings were observed in the interior of the Baler Building, located east of the upper Landfill gate. These VOC readings are less than 3 parts per million (ppm) and represent a background condition given the numerous trucks present within the building at the time the screening occurred. All other VOC, H<sub>2</sub>S, and explosive gas readings are nondetect at or near the Landfill. No potential migration of landfill gases is observed. The January 2017 air quality monitoring survey for explosive gas, H<sub>2</sub>S, and VOCs indicated the Landfill is in full compliance with the requirements set forth in 6 NYCRR 360-2.15(k)(4) and 2.17(f).

#### **3.2 Groundwater Quality**

##### **3.2.1 Groundwater Analytical Results**

All samples were analyzed by Alpha Analytical, located in Westborough, Massachusetts, following established methodologies and protocols. A copy of the analytical reports, prepared in accordance with NYSDEC Analytical Services Protocol (ASP) Category A reporting requirements, are provided in Appendix D.

Static water level and water quality field parameters (temperature, specific conductivity, pH, and oxidation-reduction potential (ORP)) readings were measured in the field and are presented on Table 3.

The summary of the 2017 PCM groundwater analytical results are provided on Tables 4 and 5. A duplicate sample was collected from intermediate monitoring well 8-I and is labeled “Duplicate”.

Analytical results for monitoring well samples are compared to the NYSDEC Division of Water Technical and Operational Guidance Series 1.1.1 (TOGS 1.1.1), Ambient Water Quality Standards and Guidance Values (June 1998). No site related VOCs were detected at any of the shallow overburden monitoring wells (UP-OS, 1-OS, 2-OS, 3-OS/I, 4-OS, 7-OS, 8-OS, 9-OS, and 10-OS), intermediate overburden monitoring wells (UP-I, 3-OS/I, 8-I, 9-I, and 10-I) or bedrock monitoring wells (UP-R, 8-R, 9-R, and 10-R).

TOGS 1.1.1 exceedances were observed at six (6) shallow overburden monitoring wells (1-OS, 2-OS, 3-OS/I, 4-OS, 7-OS, and 8-OS), one (1) intermediate overburden monitoring well (8-I), one (1) upgradient bedrock monitoring well (UP-R), and two (2) of the downgradient bedrock monitoring wells (8-R and 9-R). A detailed summary of reported parameter exceedances is provided below.

Reported concentrations for the following parameters exceed the applicable water quality standard:

<b>Parameter Exceeding Water Quality Standard (TOGS 1.1.1)</b>	<b>Onsite Monitoring Well Location (Analytical Result)</b>
Chromium (0.05 mg/L)	1-OS (1.26 mg/L), 2-OS (0.23 mg/L), 3-OS/I (0.59 mg/L), 4-OS (0.21 mg/L), 7-OS (0.13 mg/L), and 8-OS (0.30 mg/L)
Iron (0.3 mg/L*)	UP-R (0.46 mg/L), 1-OS (10.4 mg/L), 2-OS (3.67 mg/L), 3-OS/I (8.56 mg/L), 4-OS (1.16 mg/L), 7-OS (0.81 mg/L), 8-OS (2.14 mg/L), 8-I (9.52 mg/L), 8-R (0.37 mg/L), and 9-R (0.97 mg/L)
Magnesium (35 mg/L)	8-R (47.4 mg/L)
Manganese (0.3 mg/L*)	1-OS (2.48 mg/L), 2-OS (0.09 mg/L*), 3-OS/I (0.52 mg/L), 4-OS (0.02 mg/L*), 7-OS (0.02 mg/L*), 8-OS (0.07 mg/L*), 8-I (1.56 mg/L), 8-R (0.26 mg/L*), and 9-R (1.66 mg/L)
Nickel (0.1 mg/L)	1-OS (0.62 mg/L), 2-OS (0.25 mg/L), and 3-OS/I (0.31 mg/L)
Sodium (20 mg/L)	1-OS (103 mg/L), 3-OS/I (25.9 mg/L), 4-OS (84.7 mg/L), 8-I (29.2 mg/L), 8-R (39.7 mg/L), and 9-R (50.4 mg/L)

\* The sum of iron and manganese should not exceed 0.5 mg/L.

### 3.2.2 Concentration Versus Time Trends

Historical data tables of reported concentrations for specific inorganic parameters (aluminum, antimony, arsenic, beryllium, cadmium, copper, chromium, iron, lead, magnesium, manganese, nickel, sodium, and thallium) where water quality standards or guidance values are or have been exceeded are provided in Tables 6 through 19 and include time versus concentration plots to enable data trend analysis. Historical data for antimony (Table 10), arsenic (Table 11), beryllium (Table 7), cadmium (Table 8), copper (Table 9), lead (Table 14), and thallium (Table 19) are provided. Reported concentrations for these parameters were less than the applicable drinking water or TOGs water quality standard for all groundwater samples collected during the 2017 PCM event.

General trends indicate manganese and sodium are increasing with time while chromium, magnesium, nickel, and sodium are stable for applicable onsite monitoring wells. Concentrations of aluminum and iron are decreasing with time. No site related VOCs were detected at or above the respective laboratory method detection limits (Table 4). Analytical results for the drinking water supply well samples for the 2017 PCM sampling event indicate that there are no reported USEPA MCL and NYSDOH Part 5 exceedances at the public water supply wells.

The concentration trends over time for parameters with TOGS exceedances reported for this event are presented in plots shown in Tables 6, 12, 13, 15, 16, 17, and 18 and are summarized below:

### **Chromium (Table 12)**

The following monitoring wells exceeded the TOGS 1.1.1 standard for chromium (0.05 mg/L): 1-OS, 2-OS, 3-OS/I, 4-OS, 7-OS, and 8-OS.

The following monitoring wells show an increasing trend over time: 1-OS, 2-OS, and 8-OS. The following monitoring wells show a slightly decreasing trend over time: 7-OS and 9-OS. The following monitoring wells show a relative stable trend over time: 4-OS, 9-R, 10-OS, 10-I, and 10-R. The review of historical chromium concentrations at wells 3-OS/I and 9-I revealed no discernible trend over time.

### **Iron (Table 13)**

The following monitoring wells exceeded the TOGS 1.1.1 standard for iron: UP-R, 1-OS, 2-OS, 3-OS/I, 4-OS, 7-OS, 8-OS, 8-I, 8-R, and 9-R.

The iron concentration at UP-R (0.46 mg/L) slightly exceeds the TOGS 1.1.1 standard of 0.3 mg/L. The iron result at UP-R is significantly lower than historical results reported for the other upgradient bedrock monitoring well (5-R), which exhibited an average iron concentration of 5.52 mg/L and a maximum concentration of 28.1 mg/L.

The following monitoring well shows an increasing trend over time: 1-OS. The following monitoring wells show a decreasing trend over time: 2-OS, 3OS/I, 4-OS, 8-I, 9-I, and 10-I. The following monitoring wells show a relative stable trend over time: 7-OS, 8-R, 9-R, and 10-OS. The following wells show no discernible trend over time: 8-OS and 9-OS.

This is the first TOGS 1.1.1 exceedance for iron at monitoring well UP-R.

### **Magnesium (Table 15)**

The following monitoring well exceeded the TOGS 1.1.1 standard for magnesium: 8-R. The magnesium concentration in well 8-R is slightly increasing over time.

### **Manganese (Table 16)**

The following monitoring wells exceeded the TOGS 1.1.1 standard for manganese: 1-OS, 2-OS, 3-OS/I, 4-OS, 7-OS, 8-OS, 8-I, 8-R, and 9-R. Monitoring wells 4-OS, 7-OS, 8-OS, and 8-R did not exceed the individual groundwater standard for manganese; however, do exceed the combined groundwater standard for the sum of iron and manganese of 0.5 mg/L.

Although the 2017 manganese results were lower than 2015 results, the following monitoring wells show a slight increasing trend over time: 1-OS and 9-R. The following monitoring wells show a decreasing trend over time: 2-OS, 3-OS/I, 4-OS, 7-OS, and 8-OS. The following wells show a stable trend over time: 8-I, 8-R, 10-OS, 10-I, and 10-R.

#### **Nickel (Table 17)**

The following monitoring wells exceeded the TOGS 1.1.1 standard for nickel: 1-OS, 2-OS and 3-OS/I. Monitoring wells 1-OS and 2-OS show an increasing trend over time while the nickel concentration at monitoring well 3-OS/I shows no discernable trend over time.

#### **Sodium (Table 18)**

The following monitoring wells exceeded the TOGS 1.1.1 standard for sodium: 1-OS, 3-OS/I, 4-OS, 8-I, 8-R, and 9-R. The following monitoring wells show an increasing trend over time: 1-OS, 4-OS, 8-OS, 8-I, and 9-R. Monitoring well 8-R shows a decreasing trend over time for sodium while monitoring wells 2-OS, 3-OS/I, 7-OS, and 10-OS are stable trend over time for sodium. No discernable trend over time is observed in sodium concentrations at monitoring wells 9-OS, 9-I, 10-I, and 10-R.

There are no NYSDOH drinking water quality standard or designated limits for sodium. Water containing more than 20 mg/L of sodium should not be used for drinking by people on severely restricted sodium diets. Water containing more than 270 mg/L of sodium should not be used for drinking by people on moderately restricted sodium diets. The onsite and offsite monitoring wells are not used as a drinking water supply source.

Sodium is included on the USEPA's Drinking Water Contaminant Candidate List (CCL). The CCL is a list of contaminants which, at the time of publication, are not subject to any proposed or promulgated National Primary Drinking Water Regulation (NPDWR), are known or anticipated to occur in public water systems, and may require regulations under the Safe Drinking Water Act (SDWA).

### **3.2.3 Offsite Private Drinking Water Supplies / Offsite Public Water Supplies**

Groundwater from PW-1 and PW-2 is utilized as a private drinking water supply while groundwater from SVWC-93, SVWC-94, SVWC-95, and SVWC-96 are utilized as a public water supply. The sodium results at PW-1 and PW-2 are below the Applicable or Relevant and Appropriate Requirements (ARAR) standard of 20 mg/L while sodium results for public water supply wells SVWC-93, SVWC-94, SVWC-95, and SVWC-96 have historically exceeded the ARAR for sodium and are increasing over time.

Analytical results for the private and municipal drinking water supply wells (PW-1, PW-2, SVWC-93, SVWC-94, SVWC-95, and SVWC-96) are compared to the New York State Department of Health (NYSDOH) 10 NYCRR Part 5 Maximum Contaminant Levels (MCLs) and the USEPA MCLs for Primary Drinking Water Regulations. No exceedances of NYSDOH or USEPA MCLs were noted at the private water supply wells or public water supply wells (Table 5 and Appendix D).

### **3.3 Leachate Quality**

The 2017 analytical results for leachate/groundwater are summarized in Table 21 and are generally consistent with previous results. Leachate water quality is generally characterized by detectable to elevated concentrations of leachate indicators such as alkalinity, ammonia, COD, chloride, hardness, nitrate, sulfate, TDS, TKN, and TOC and inorganic parameters, including aluminum, antimony, barium,

boron, calcium, cobalt, iron, lead, magnesium, manganese, nickel, potassium, sodium, and zinc. Inorganic parameters that were not detected include: arsenic, chromium, copper, mercury, selenium, silver, and thallium.

## **4.0 INSTITUTIONAL/ENGINEERING CONTROL PLAN COMPLIANCE**

The multiple institutional and engineering controls for the Landfill implemented by the RODs and documented in the SMP continue to be in place and performing as designed. These controls were reviewed and evaluated through this PRR.

### **4.1 Institutional Controls**

Institutional Controls (IC) include non-physical means of enforcing a restriction on the use of real property that limits human and environmental exposure, restricts the use of groundwater, provides notice to the potential owners, operators, or members of the public, or prevents actions that would interfere with the effectiveness of the remedial program or with the effectiveness and/or integrity of operation, maintenance or monitoring activities at or pertaining to the Landfill property.

An Institutional Control (IC) is any non-physical means of enforcing a restriction on the use of real property that limits human and environmental exposure, restricts the use of groundwater, provides notice to the potential owners, operators, or members of the public, or prevents actions that would interfere with the effectiveness of the remedial program or with the effectiveness and/or integrity of operation, maintenance or monitoring activities at or pertaining to the Landfill property. Types of ICs include, but are not limited to: environmental easements, deed restrictions, discharge permits, site security (other than fencing), local permits, Orders on Consent/decrees, zoning restrictions, hazardous waste site registry, deed notice, groundwater use restrictions, condemnation of property, and public health advisories.

The Covenant of Restrictions and Environmental Easements were filed with the Rockland County Clerk on August 28, 2012 and October 10, 2012. The Environmental Easements stay with the property in perpetuity in order to provide an effective and enforceable means of encouraging the reuse and redevelopment of the property at a level that is determined to be safe for a specific use, while ensuring the performance of operation, maintenance, and/or monitoring requirements; and to ensure the potential restriction of future uses of the land that are consistent with the ROD.

The following restrictions apply to the Landfill property (Parcel 39.19-1-3):

- There shall be no construction, use or occupancy that results in a disturbance or excavation that threatens the integrity of the engineering controls (ECs) described in Section 4.2, or which results in unacceptable human exposure to contaminated soils.
- The Owner shall not disturb, remove or otherwise interfere with the installation, use, operation and maintenance of ECs described in Section 4.2 unless a written waiver is obtained from the USEPA and NYSDEC for each occasion.
- The Owner shall prohibit land use from ever being used for purposes other than commercial/industrial use without the express written waiver by the USEPA and NYSDEC.
- The owner shall prohibit the use of underlying groundwater, without rendering it safe for drinking water or industrial purposes, as appropriate, unless the user first obtains permission to do so from

the USEPA and NYSDEC. This restriction also applies to Parcel 39.19-1-3.1, owned by Rockland County Sewer District #1, and Parcels 39.19-1-4 and 39.19-1-5, owned by Rockland County Waste Management Authority (Appendix B).

- The Owner shall provide an annual certification (see Section 2.3) prepared by a Professional Engineer or environmental professional acceptable to the USEPA and NYSDEC. The certification will document in-place ICs and ECs are unchanged from the previous certification, comply with the current SMP and have not been impaired.
- The Owner shall continue to implement and maintain the ICs and ECs identified in the SMP unless permission to discontinue such controls is granted from the USEPA and NYSDEC. This requirement also applies to Parcel 39.19-1-3.1, owned by Rockland County Sewer District #1, and Parcels 39.19-1-4 and 39.19-1-5, owned by Rockland County Waste Management Authority (Appendix B).
- All ICs and ECs shall be binding for present and all future owners. Any conveyance of the Landfill property or portions of the Landfill property are subject to the ICs and ECs.

## **4.2 Engineering Controls**

Engineering Controls (EC) include physical barriers or methods employed to actively or passively contain, stabilize, or monitor contamination, restrict the movement of contamination to ensure the long-term effectiveness of the remedial program, or eliminate potential exposure pathways to contamination. The following sections describe the ECs and their goals as part of the remedy for the Landfill from the ROD.

The ECs for the Ramapo Landfill to control the source of contamination and the generation of contaminated leachate include:

- A Landfill cover that includes layers of fill material, gas venting system, and an impermeable membrane.
- Groundwater extraction wells to supplement the existing leachate collection system.
- Leachate collection system for offsite treatment.
- Drainage swales to collect and divert surface water runoff downgradient of sections of the impermeable membrane installed on the Landfill slopes (Figure 4).
- Site security fencing to reduce trespassers on the Landfill property.

### **4.2.1 Landfill Cover System**

Major components of the final cover system are a geomembrane barrier, secondary cushion geotextile, barrier protection soil layer, and a topsoil layer with vegetation.

The geomembrane barrier overlies the secondary cushion geotextile layer, which overlies the prepared existing subgrade, thereby covering the existing refuse mass and residual contaminated soil. The geomembrane barrier is overlain by another secondary cushion geotextile and a layer of 12 inches of low

permeability barrier protection soil. The barrier protection soil layer is overlain by a 6-inch topsoil layer and seeded to minimize soil loss. The Landfill slopes are graded to provide proper drainage with a slope range of 3-33%.

Installation of the standard Part 360 Landfill cover system minimizes infiltration of precipitation to wastes and the resultant generation of leachate, and prevents the release of previously disposed wastes. The cover system is regularly inspected by the Town of Ramapo to evaluate its performance and assess the physical condition of the following Landfill components: settlement and erosion of Landfill cover, vegetative growth, slope stability, damage due to presence of vector populations over or near Landfill cover (i.e., burrow holes), monitoring well and Landfill gas vent integrity, presence or absence of leachate outbreaks, surface water drainage structures, site fencing, gates and access roads, and evidence of trespassing. A completed Inspection Checklist and Institutional and Engineering Control Evaluation Form from the annual site inspection are provided in Appendix A. No damage to the Landfill cover system was observed. The Landfill appears secure, stable, and the Landfill cover was observed to be well maintained and remains in good condition. The Landfill was intact with no evidence of stressed vegetation or damage due to settlement or active vectors. No evidence was observed of significant settlement or evidence of erosion of the Landfill cover. Beyond the regular ongoing post-closure care, no actions or special maintenance is required for the Part 360 Landfill cover system at this time. There were no observed leachate discharges or iron-stained soils during the Annual Landfill Inspection. The stormwater drainage system appeared to be functioning as designed.

#### **4.2.2 Leachate Collection System**

All leachate collected from the slopes, drainage ditches and groundwater extraction wells flows by gravity to the leachate control building on the east side of Torne Valley Road, through a forcemain to the RCSD No. 1 POTW. The leachate collection/transfer system is designed and constructed to fully operate in an automatic mode. Extraction well and lift station locations are provided in Figure 7.

Individual pump controls are as follows:

1. Extraction Wells - Water Level Sensors
2. Lift Station and Pump Pit Pumps - Floaters with mercury switches sensing actual water levels (Inactive).

#### **4.2.3 Groundwater Extraction Wells**

The groundwater extraction wells are pumped to contain the contaminant plume that migrates from the Landfill. The groundwater extraction wells are located on the western side of the Landfill along Torne Valley Road between monitoring well clusters MW-3 and MW-8. The layout of the extraction well system is approximately 700 feet in length. Three (3) extraction wells, W-5, W-6 and W-7, are approximately 20 feet deep and screened in dense sand and partially into the upper two (2) feet of bedrock. The remaining extraction wells, W-1 through W-4, are deeper, ranging from 38 to 51 feet in depth and are screened in dense sand and partially into upper ten feet of bedrock (see Figure 7 for locations).

The Town hired a consultant, Roberge Electric (Roberge), to install a flow meter on Extraction Well W-3 to serve as a prototype. Installation was completed at the end of May 2016. After evaluation, the flow meter performance was determined to be satisfactory and the Town contracted with Roberge to equip the remaining extraction wells with similar flow meters. Roberge completed installation of six (6) other flow

meters at lift station A-7 and extraction wells W-1, W-2, W-4, W-7, and W-20 in mid-November 2016. Installation of flow meters at extraction wells W-5 and W-6 are scheduled to be completed in 2017. Once complete, each groundwater extraction point will be monitored and the records will include separate flow meter readings.

The leachate collection system is located along the perimeter of the waste mass. The perimeter leachate collection system continues to function as designed. Annual leachate/groundwater volumes pumped from the Landfill to the RCSD #1 POTW between 1995 and December 30, 2016 are summarized in Table 20. The total leachate/groundwater removed from the Landfill in 2016 (11,314,000 gallons) was directed through a forcemain to the RCSD No. 1 POTW for treatment. The total leachate/groundwater removed from the Landfill in 2015 was 14,591,000 gallons and the volume of leachate/groundwater pumped from the Landfill extraction wells from 2007 through 2016 has averaged slightly greater than 12.67 million gallons per year. The last three (3) years have had annual volume removals below the ten (10) year average while the 2016 extraction well discharge volume was the fourth lowest recorded since 1995.

#### **4.2.4 Drainage Swales**

Drainage swales at the Landfill collect and divert surface water runoff (Figure 4). Two (2) swales are located on the north lobe and two (2) swales are located on the south lobe of the Landfill. These swales divert runoff into wetlands, a retention pond, and Torne Brook.

#### **4.2.5 Groundwater Monitoring Wells**

Existing groundwater monitoring wells are located along the upgradient, crossgradient, and downgradient perimeter of the Landfill waste mass. The wells are used to monitor groundwater quality around the Landfill property. Monitoring wells are routinely checked for sediment buildup in the well using depth to bottom measurements and the integrity of the outer casing, lid and lock. These monitoring wells are sampled every fifth quarter for 6 NYCRR Part 360 Baseline Parameters for indication of contamination by the Landfill waste mass.

Overall, the monitoring well network is functioning as designed and the Town of Ramapo will continue the approved annual monitoring program.

#### **4.2.6 Surface Water Runoff Features**

Surface water runoff features are located on and around the Landfill property (Figure 4). Terraces and riprap downchutes on the Landfill waste mass direct stormwater runoff to the Landfill perimeter drainage ditches successfully preventing the occurrence of standing water on the Landfill. The surface water runoff is directed into perimeter drainage ditches into drainage basins to reduce particulates and sediment before it ultimately enters into the Torne Brook. These surface water runoff features are checked routinely by the Town of Ramapo for sediment buildup, overgrowth of vegetation, overflow of drainage ditches or basins, improper drainage of terraces and downchutes, and sloughing of the Landfill cover. Based on the observed conditions during the Annual Landfill Site Inspection, no corrective measures are needed for the surface water management features.

### **4.3 IC/EC Certification**

As required by DER-10, Section 6.3(a), the completed and signed NYSDEC IE/EC Certification Form is provided as Appendix B. All ICs/ECs are in place and functioning as designed.

## **5.0 MONITORING PLAN COMPLIANCE**

The Landfill was granted a post-closure monitoring variance by the NYSDEC on October 27, 2003, reducing the monitoring frequency to once every year with the monitoring event being rotated to the next quarter for each year. Monitoring includes collection of groundwater and leachate samples for analysis of 6 NYCRR Part 360 Baseline parameters, as well as water level measurements from select monitoring wells, and air quality monitoring. Monitoring wells and sample locations are shown on Figure 3. The following sections describe the monitoring requirements for air, groundwater, and leachate quality.

### **5.1 Air Quality Monitoring**

Air quality monitoring includes field measurements of explosive gas, H<sub>2</sub>S, and VOC concentrations in the headspaces of each monitoring well, leachate manhole A-5, lift stations A-10 and W-20, and ambient breathing space at the Baler Building and along the Landfill perimeter at designated locations (Figure 3) during each monitoring event. VOC analyses are also performed on collected groundwater and leachate samples. Results of the air quality monitoring are described in Section 3.1.

The air quality monitoring program meets the remedial objectives to evaluate the effectiveness of the selected remedy in that it provides a direct means to determine if Landfill gases are prevented from migration and buildup. The Town of Ramapo will continue air quality monitoring according to the approved SMP.

### **5.2 Groundwater Monitoring**

Depth to water measurements were obtained at or near the Landfill perimeter to determine groundwater elevations in the shallow overburden and bedrock aquifer systems. Groundwater flow direction in the overburden aquifer is to the northwest and/or west towards Torne Brook (see Figure 5). Groundwater flow direction in the bedrock aquifer is similar (see Figure 6). Groundwater gradients are similar in both aquifer systems and downward vertical gradients are noted throughout the Landfill perimeter, except at monitoring well clusters 8 and 10, which were observed to be slight (MW-8) to moderately (MW-10) upward. These vertical gradients are consistent with historical trends.

A new monitoring well cluster was added to the monitoring network in November 2016. UP-OS, UP-I, and UP-R replaces the MW-5 cluster as the upgradient groundwater quality monitoring location for the Landfill. The screened interval, screened elevation, and total depth for the newly installed monitoring wells are listed as follows:

Well ID	Ground Surface Elevation (feet amsl)	Measuring Point Elevation (feet amsl)	Screened Interval (feet below grade)	Screened Elevation (feet amsl)	Total Depth (feet below grade)
UP-OS	532.66	538.89	10.0 - 20.0	522.66 - 512.66	20.5
UP-I	535.01	537.13	30.0 - 35.0	505.01 - 500.01	35.5
UP-R	536.48	535.59	106.9 - 111.9	429.58 - 424.58	112.1

The newly installed UP monitoring well cluster is upgradient to the Landfill and also exhibited upward vertical gradient conditions. In fact, monitoring well UP-R is considered as artesian and flowing above the installed measuring point.

Overall, the groundwater monitoring program meets the remedial objectives by providing suitable means to determine the effectiveness of the selected remedy. The Town of Ramapo will continue groundwater monitoring according to the approved SMP.

### **5.3 Leachate Monitoring**

Through June 2011, leachate and groundwater from the Landfill extraction well network were pumped to the RCSD #1 POTW located at 4 Route 340, Orangeburg, New York. Starting in June 2011, leachate/groundwater collected by the Landfill extraction wells has been pumped to the RCSD #1 Western Ramapo Treatment Plant in Hillburn, New York. Analytical testing of the Landfill leachate/groundwater occurs on a biannual basis from a manhole located upstream of the discharge to the leachate wet well.

Analytical results from August 2009 through September 21, 2016 are summarized in Table 21. Reported parameter concentrations are compared with Maximum Contaminant Limits (MCL) set by RCSD #1. There are no discharge limit exceedances for any of the listed parameters between August 2009 and September 21, 2016.

Leachate/groundwater extracted from the Landfill and discharged to the RCSD #1 meets the industrial permit requirements for samples collected from August 2009 through September 21, 2016. Sampling of the discharge from the Landfill continues to be collected from the same location described above on a biannual basis (Figure 7).

## **6.0 OPERATION AND MAINTENANCE PLAN COMPLIANCE**

The Operation and Maintenance (O&M) Plan for the Landfill, outlined in the SMP, consists of the following components:

- Repair, if necessary, of the Landfill cover system in accordance with approved specification materials and methods;
- Annual mowing of the vegetated cover system;
- Investigation of landfill cover system for evidence of sloughing, cracks, settlement, erosion and deposition, stressed vegetation, and undesirable vegetation;
- Vector control;
- Assess integrity of gas venting system;
- Investigate gas odors;
- Snow plowing and upkeep of the perimeter access road;
- Collection, removal and disposal of leachate;
- Preventative maintenance of leachate pumps;
- Repair or replacement, if necessary, of monitoring wells; and,
- Annual or more frequent clearing of drainage swales, ditches and downchutes.

Between January 1, 2016 and March 31, 2017, the following O&M activities were performed:

- Routine and annual inspections of the Landfill cap and cover materials, surface water drainage features, monitoring wells, leachate collection system, and the Landfill property;
- Mowing of the Landfill cover system;
- Regular leachate removal from onsite extraction wells for treatment at RCSD #1 (Table 20); and,
- Air, groundwater, and leachate quality monitoring performed on January 16 to 19, 2017.

Operation and maintenance of the property continues to protect human health and the overall integrity of the Landfill. There were no deficiencies in complying with the O&M Plan between the January 1, 2016 and March 31, 2017 reporting period. The components of the remedy subject to O&M requirements (Landfill cover, gas venting and leachate collection systems, and surface water runoff features) are functioning as designed. The integrity of the monitoring network remains intact although one of the downgradient shallow overburden monitoring wells (7-OS) is damaged. Regular inspections performed by Town of Ramapo personnel continue to show compliance with the remedy determined for the Landfill.

## 7.0 CONCLUSIONS AND RECOMMENDATIONS

The Landfill continues to comply with the required activities set forth in the SMP for the subject reporting period. The ICs and ECs implemented at the Site continue to function as designed. The environmental monitoring plan for the Landfill is ongoing and remains in accordance with the approved variance granted by the NYSDEC in 2003. The Town of Ramapo will continue to perform regular inspections to maintain the integrity of the Landfill and surrounding property and protect human health and the environment.

The following conclusions are made based on observations and analytical results collected during the reporting period (January 1, 2016 through March 31, 2017):

- The Landfill appears secure, stable, and the Landfill cover is intact with no evidence of stressed vegetation, leachate discharges or damage due to settlement or active vectors.
- Thin patches of grassy cover are along the southwestern most sideslope of the Landfill.
- Three (3) damaged vents were observed on the Landfill (see Figure 4 for locations).
- Although the stormwater drainage system appeared to be functioning as designed vegetative growth is locally present along some sections of the Landfill's offsite drainage structures.
- There were no explosive gas or VOC detections at any of the monitoring wells, Landfill perimeter locations, and manholes. There were minor detections of VOCs within the Baler Building; however, these appear related to vehicle exhaust and do not indicate a release of landfill gas. These detections do not indicate migration of Landfill gases. The January 2017 air quality monitoring survey for explosive gas, H<sub>2</sub>S, and VOCs indicated the Landfill is in full compliance with the requirements set forth in 6 NYCRR 360-2.15(k)(4) and 2.17(f).
- The cover for existing monitoring wells MW 3-R, 4-I, and 5-R do not close properly.
- Monitoring well MW-7-OS is damaged, apparently due to a semi truck turning around in the vicinity. The Town has placed several concrete deadman blocks between the well 7 cluster and

the turnaround area to serve as a protective barrier and maintain the integrity of monitoring wells in the future.

- The January 2017 air quality monitoring survey for explosive gas, H<sub>2</sub>S, and VOCs indicated the Landfill is in full compliance with the requirements set forth in 6 NYCRR 360-2.15(k)(4) and 2.17(f).
- A new monitoring well cluster was added to the monitoring network in November 2016. UP-OS, UP-I, and UP-R replaces the MW-5 cluster as the upgradient monitoring location for the Landfill. The screened interval, screened elevation, and total depth for the newly installed monitoring wells are listed as follows:

Well ID	Screened Interval (feet below grade)	Screened Elevation (feet amsl)	Total Depth (feet below grade)
UP-OS	10.0 - 20.0	522.66 - 512.66	20.5
UP-I	30.0 - 35.0	505.01 - 500.01	35.5
UP-R	106.9 - 111.9	429.58 - 424.58	112.1

The newly installed UP monitoring well cluster is upgradient to the Landfill and also exhibited upward vertical gradient conditions. In fact, monitoring well UP-R is considered as artesian and flowing above the installed measuring point.

- Groundwater flow direction in the overburden and bedrock aquifer systems is to the northwest and/or west towards Torne Brook and the Ramapo River. Groundwater gradients are similar in both aquifer systems and downward vertical gradients are noted throughout the Landfill perimeter, except at monitoring well clusters UP, 8, and 10, which were observed to be slightly to moderately upward.
- No site-related VOCs were detected at or above the respective laboratory method detection limits.
- No exceedances of USEPA MCLs were noted at the private water supply wells or public water supply wells. The ARAR exceedance for sodium was reported at all public water supply wells, which is consistent with historical results.
- Applicable TOGS 1.1.1 standards were exceeded for chromium, iron, magnesium, manganese, nickel, and sodium at one or more monitoring wells.
- Historical trends are relatively consistent with the 2017 PCM analytical results. This was the first sampling event to include the newly installed upgradient monitoring well cluster (UP-OS, UP-I and UP-R). The iron concentration at UP-R (0.46 mg/L) slightly exceeds the TOGS 1.1.1 standard of 0.3 mg/L. The iron result at UP-R is significantly lower than historical results reported for the other upgradient bedrock monitoring well (5-R), which exhibited an average iron concentration of 5.52 mg/L and a maximum concentration of 28.1 mg/L.
- The volume of leachate/groundwater pumped from Landfill extraction wells to the RCSD #1 POTW has averaged slightly less than 12.7 million gallons per year from 2007 through 2016.

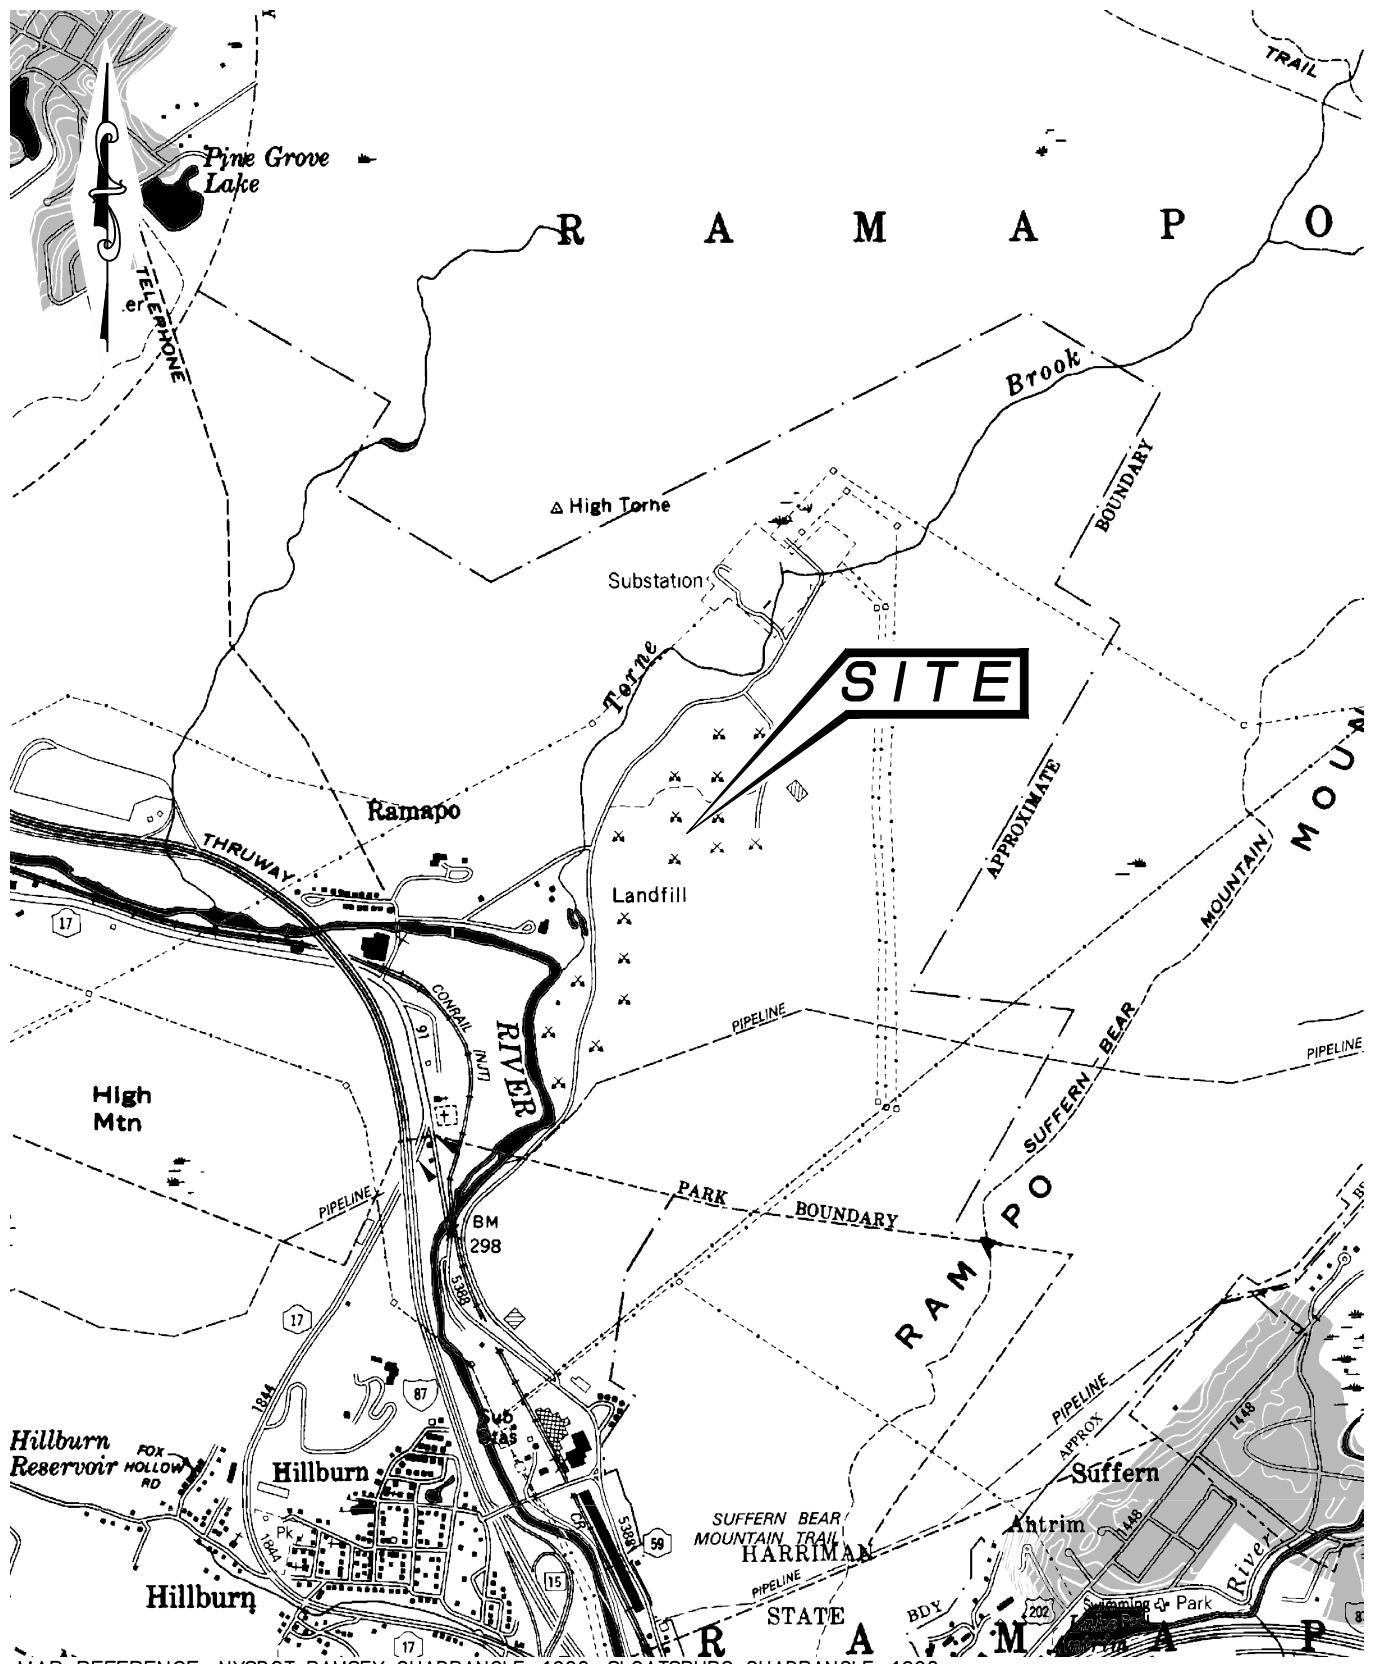

- There were no reported discharge limits exceedances for the leachate/groundwater extracted from the Landfill and pumped to the RCSD #1 POTW.

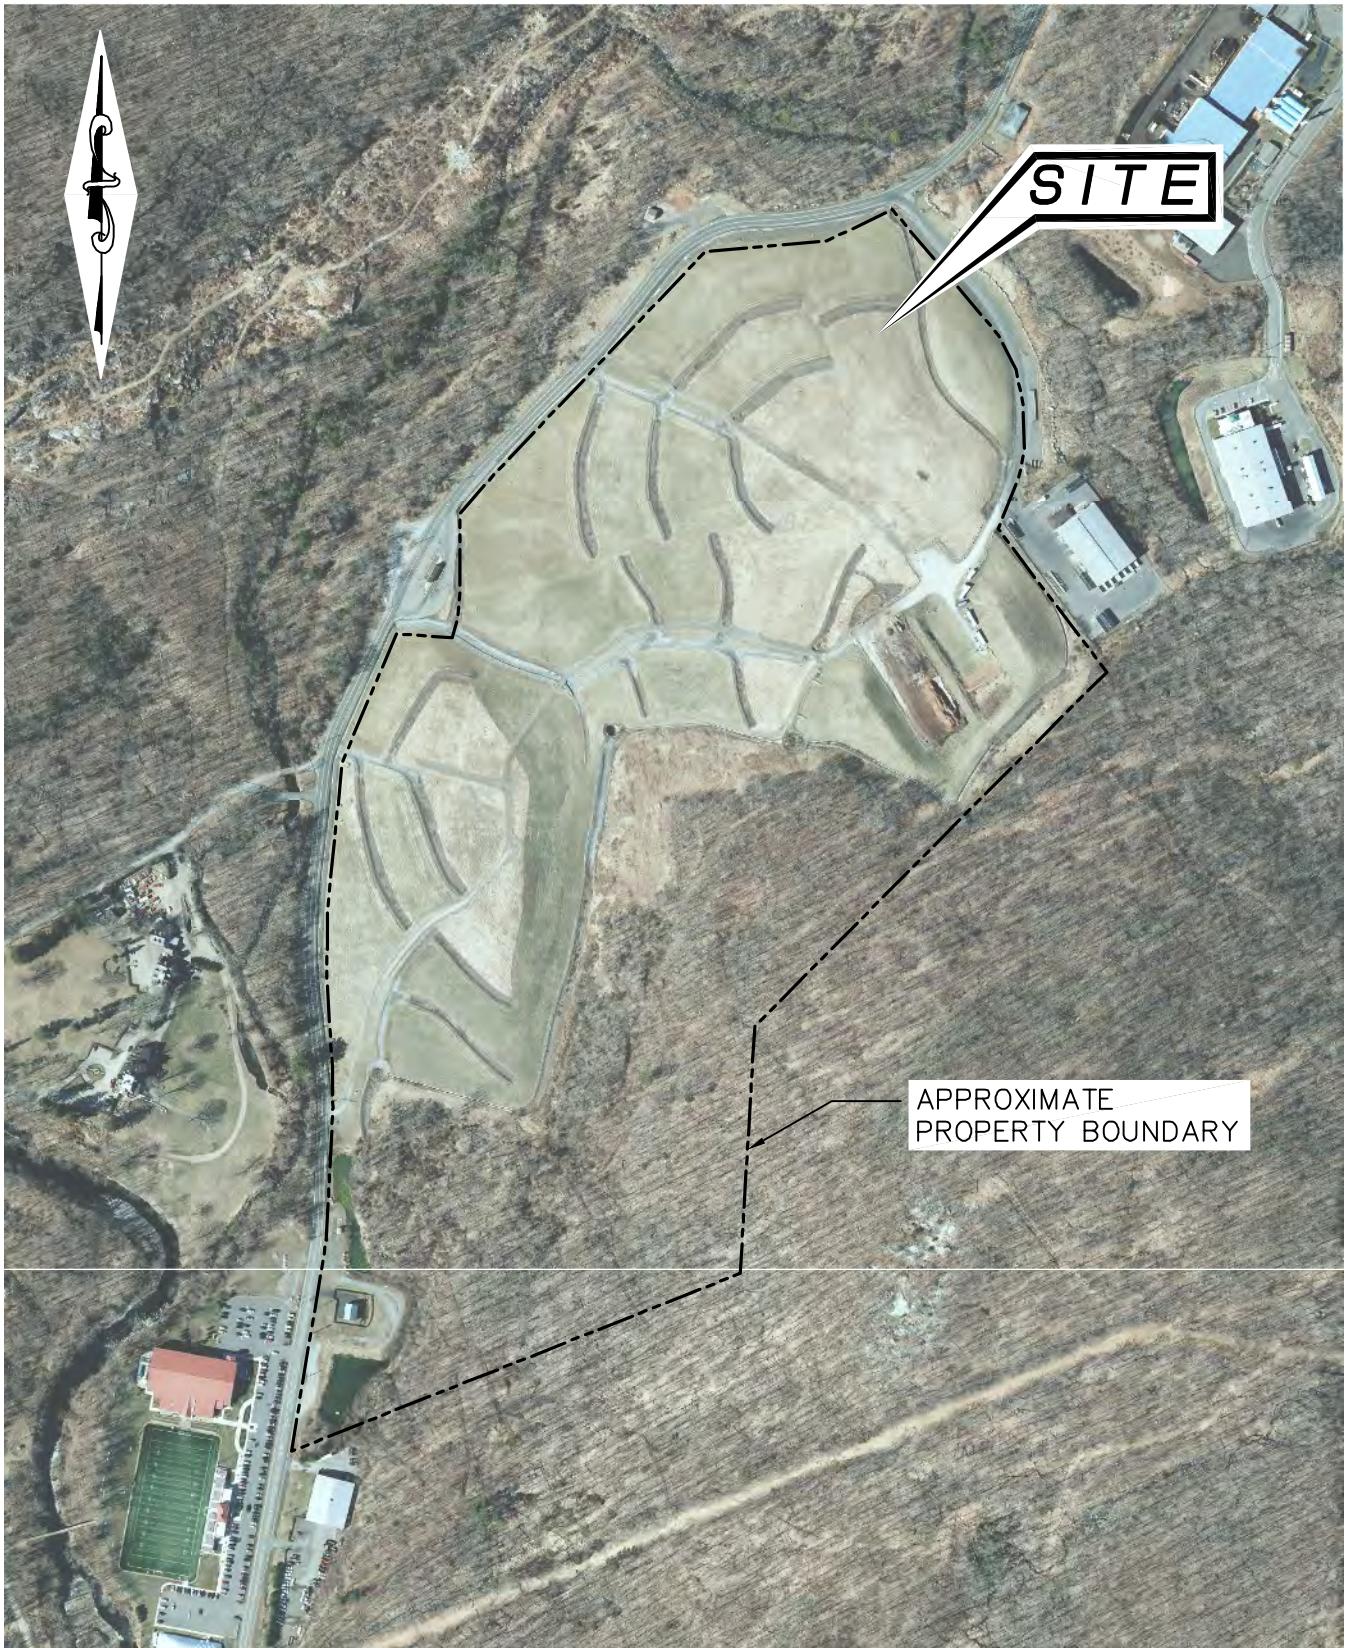

The following recommendations are made based on analytical results and observations during the reporting period:

- Excessive vegetative growth from the above stated areas should be periodically removed, as necessary, from stormwater drainage structures.
- Damaged vents should be refastened to extend above the Landfill cover, as originally designed.
- The inner monitoring well casing should be trimmed using an internal PVC cutter to re-establish the integrity and security of each monitoring point. The revised measuring point elevation will require resurveying of the vertical elevation to the nearest 0.01 foot. The surveying task requires the services of a NYS licensed Professional Land Surveyor (PLS).
- The protective casing and damaged portion of the riser pipe for shallow overburden monitoring well 7-OS should be replaced to re-establish well integrity and security. Once repaired, the revised top of casing elevation and measuring point elevation will require resurveying of the vertical elevation to the nearest 0.01 foot. The surveying task will require the services of a NYS licensed PLS.
- As a result of historical trends, it is recommended to continue monitoring in accordance with Site Management Plan requirements.

## NOTES :

<sup>1</sup> Measured from the top of the PVC or stainless steel well casing to water surface.

<sup>2</sup> Monitoring Well UP-R has artesian well characteristics. The static water level was exactly at the measuring point elevation.

Value in **BOLD** indicates an exceedance of applicable water quality standard or guidance value.

--- Denotes no standard or not measured.

## NOTES

**Bolded** value indicates reported concentration exceeds T.O.G.S 1.1.1 water quality standards.

J = Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.

\* Duplicate groundwater sample collected from intermediate monitoring well 8-I.

\*\*\* = The sum of iron and manganese should not exceed 0.5 mg/l.

--- Denotes no applicable water quality standard

II = Analyte was not detected at or above laboratory method detection limit

Column Name      Description

<sup>1</sup> NYSDOH Part 5: NYSDOH Part 5-SubPart5-1 Public Water Supply Stds.: MCLs Tables 1-7; Eff. 1 October 2007.

<sup>2</sup> USEPA MCLs: USEPA - Primary Drinking Water Standards

<sup>3</sup>: While there is no Maximum Contaminant Level (MCL) for Sodium, people on severely restricted Sodium diets should consult with the County Health Department for guidance if reported Sodium concentration is higher than 20 mg/L.

**Bold** = Value indicates reported concentration exceeds applicable NYSDOH Part 5 water quality standards.

**Yellow** = Value indicates reported concentration exceeds USEPA Primary or Secondary Drinking Water Standards.

J = Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value.

U = Analyte was not detected at or above the laboratory method detection limit.

\* = If Iron and Manganese are present, the total concentration of both should not exceed 0.5 mg/L.

\*\* = USEPA Secondary Drinking Water Standard. This standard is associated with aesthetic characteristics of the sample and not adverse health effects.

--- Denotes no applicable water quality standard.

**Notes:**

Values in **BOLD** indicate the reported concentration is greater than the ARAR for the groundwater monitoring wells or MCL for the private and municipal drinking water wells water quality standard.

NA = Not Analyzed

< = The compound was analyzed for but not detected at the laboratory detection limit listed.

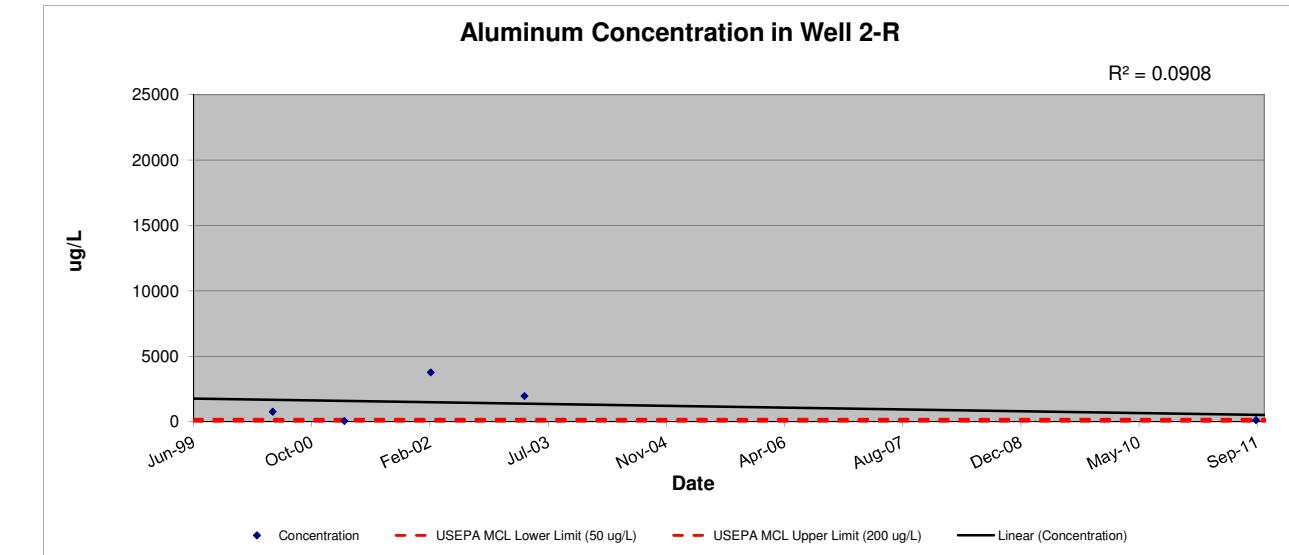

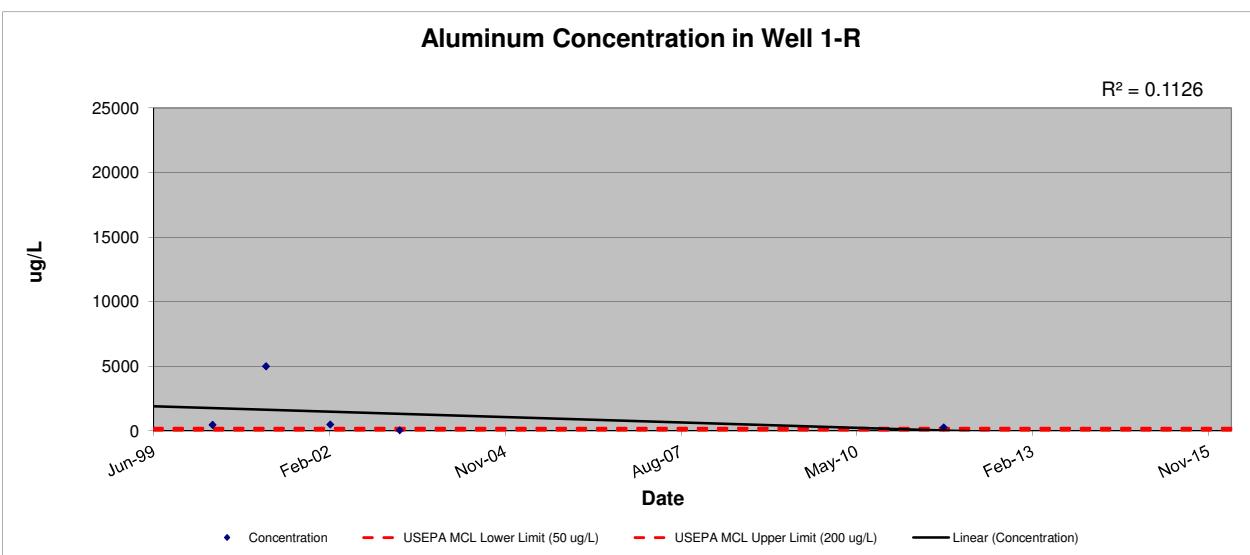

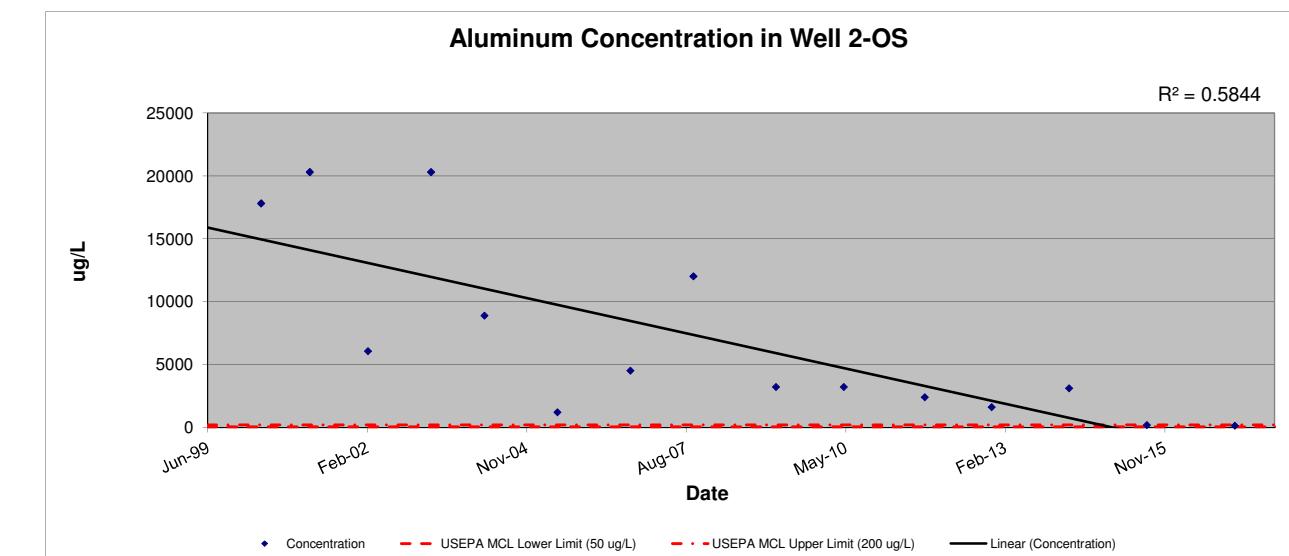

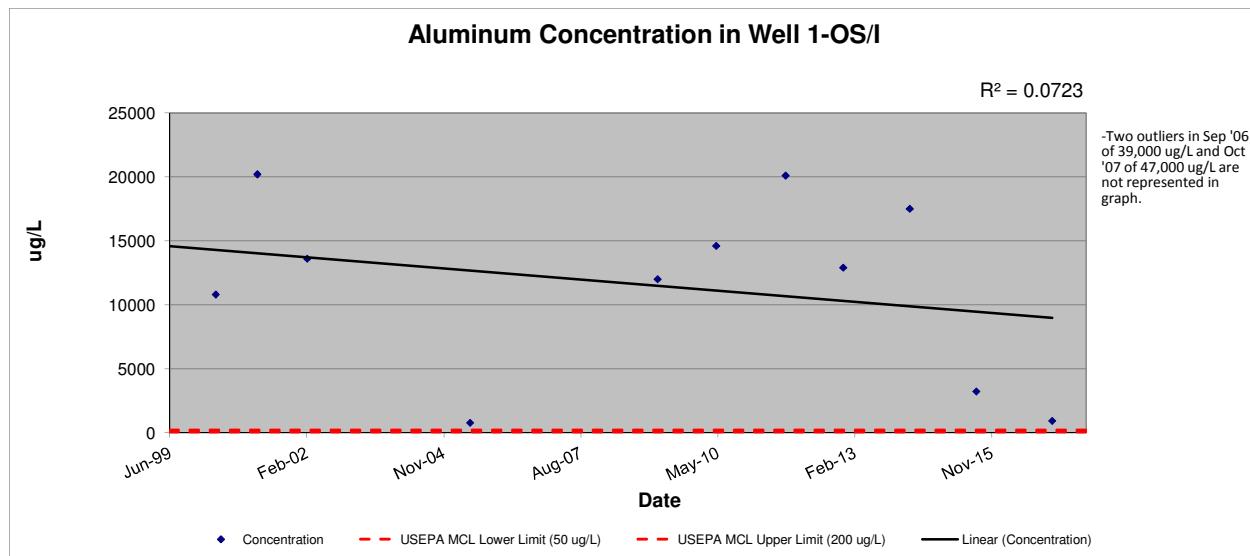

ARAR = Applicable or Relevant and Appropriate Requirement: NYSDEC TOGS 1.1 Ambient Water-Quality Standards and Guidance Values and Groundwater Effluent Limitations (June 1998).

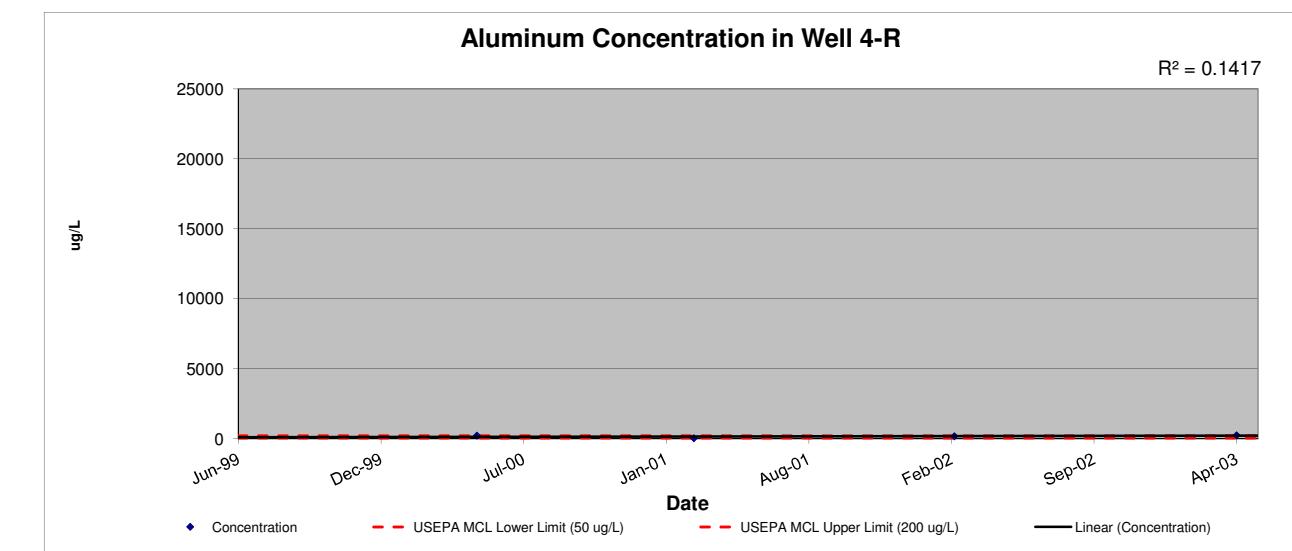

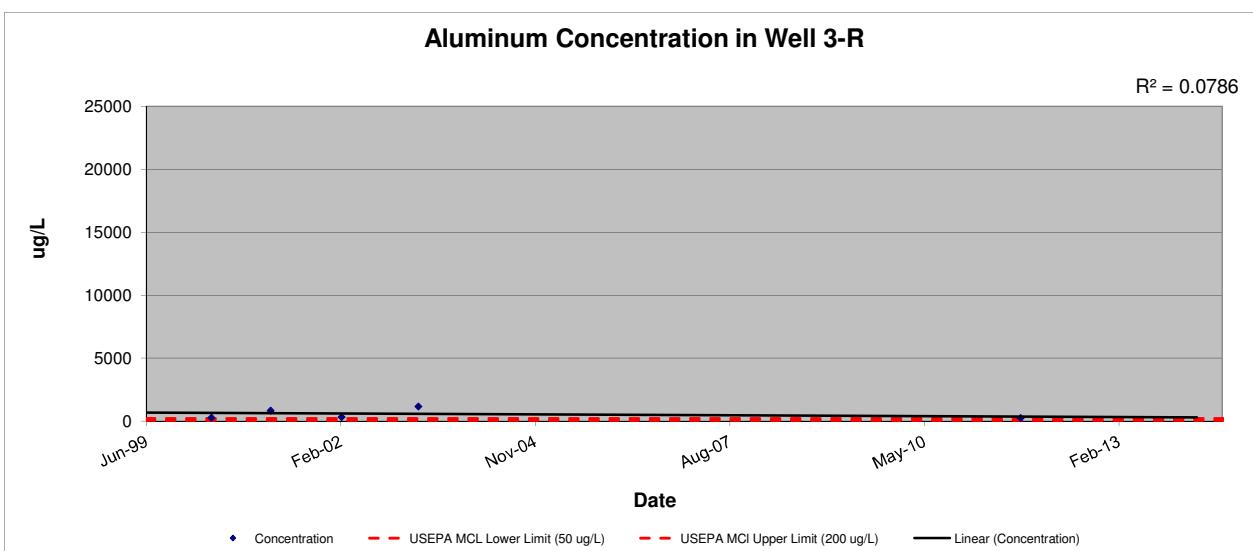

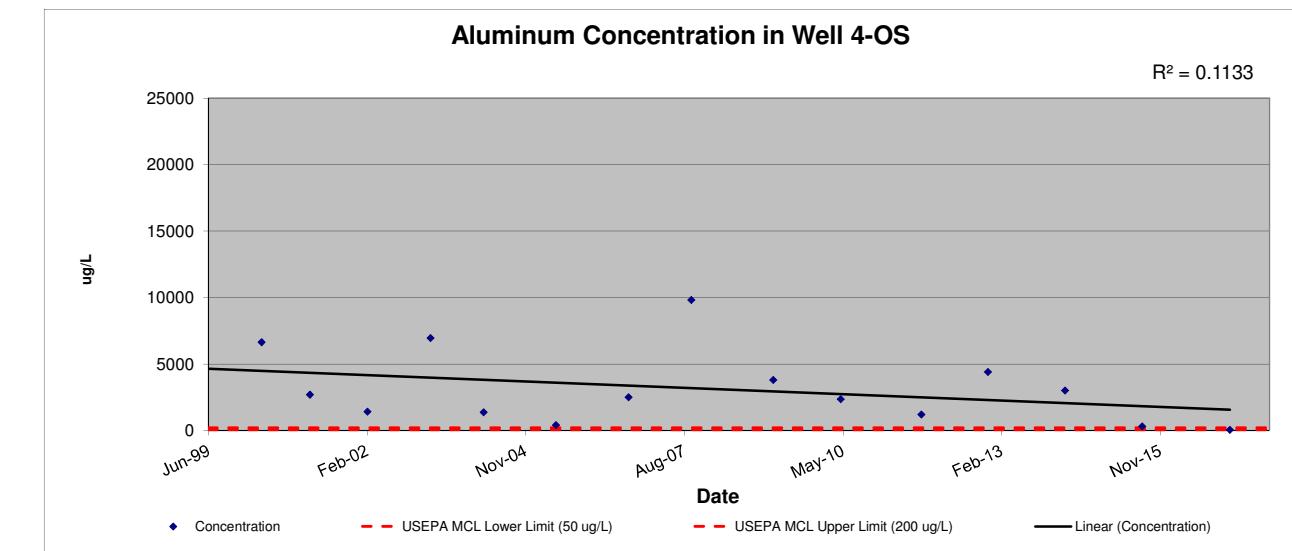

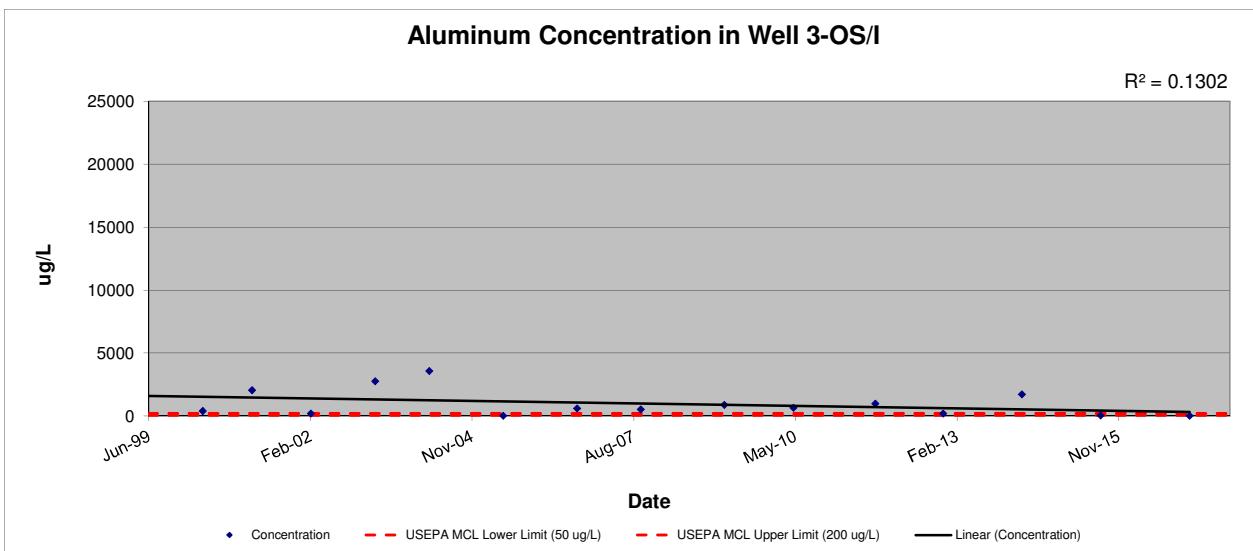

MCL = Maximum Contaminant Level: USEPA National Primary Drinking Water Regulations.

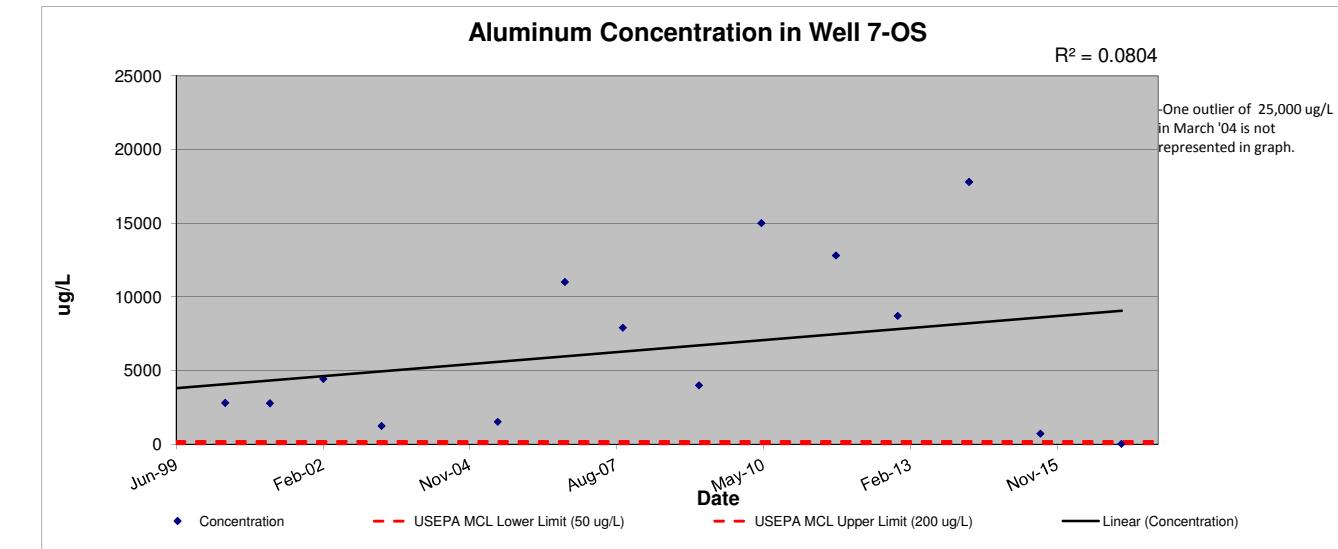

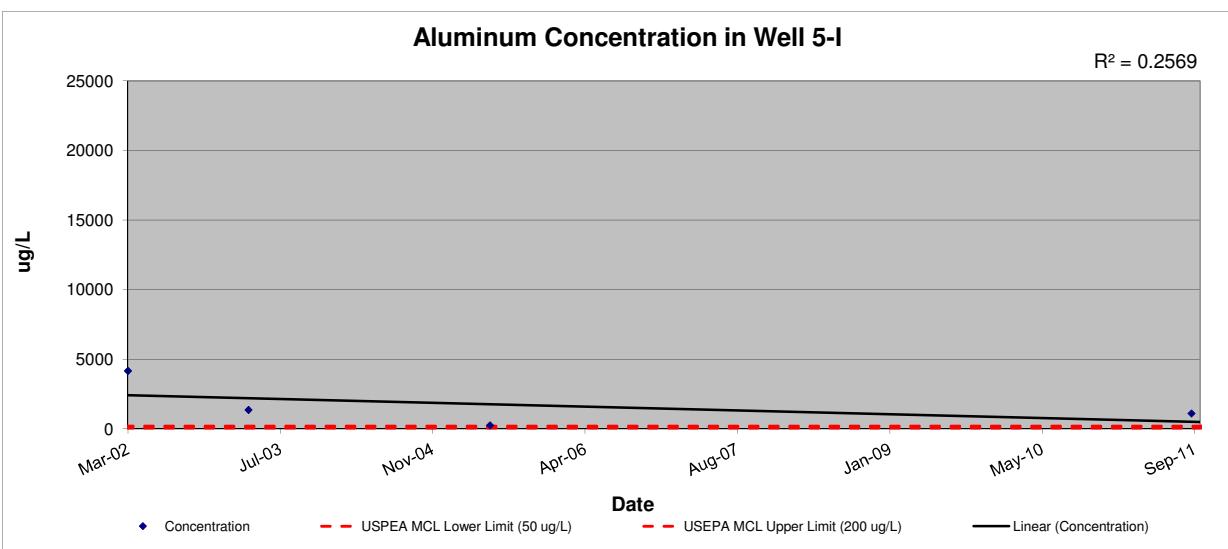

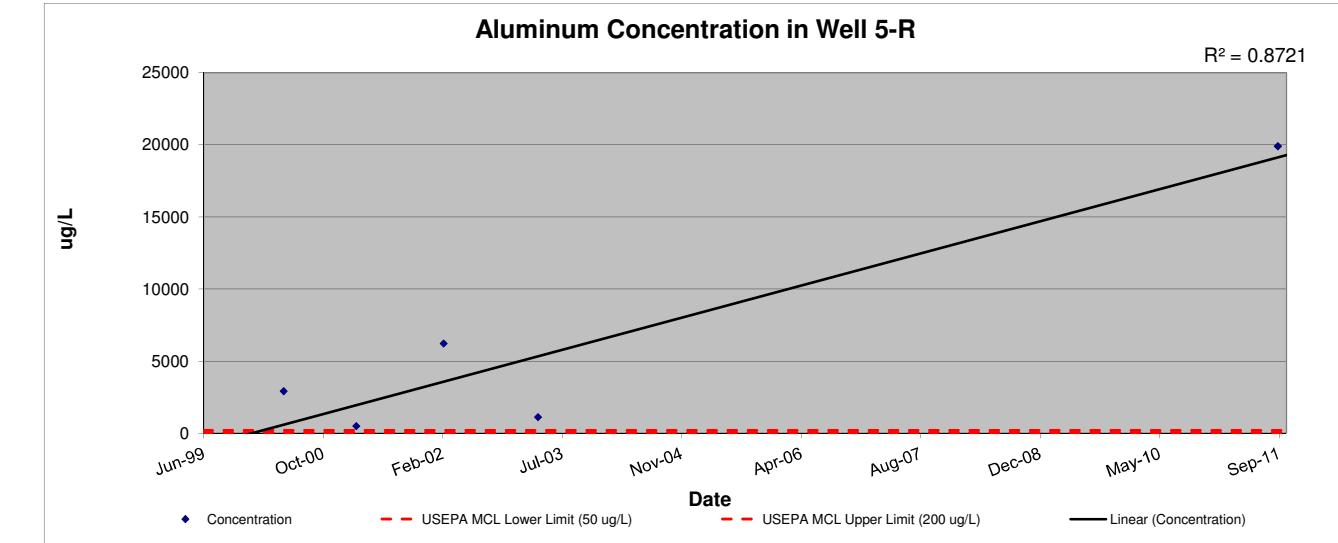

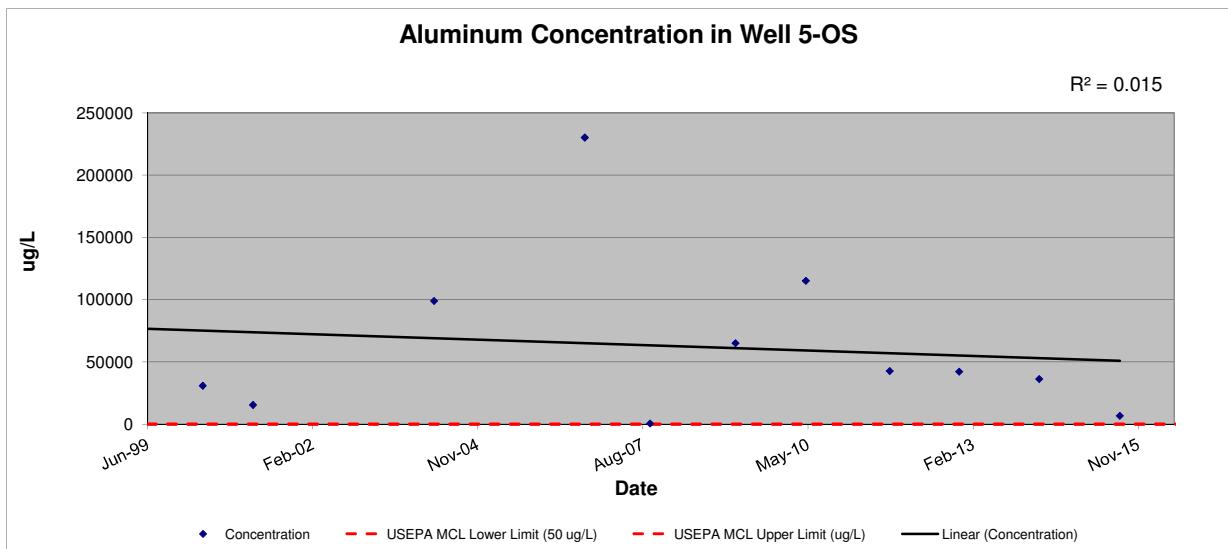

**Laboratory Qualifier Definitions**

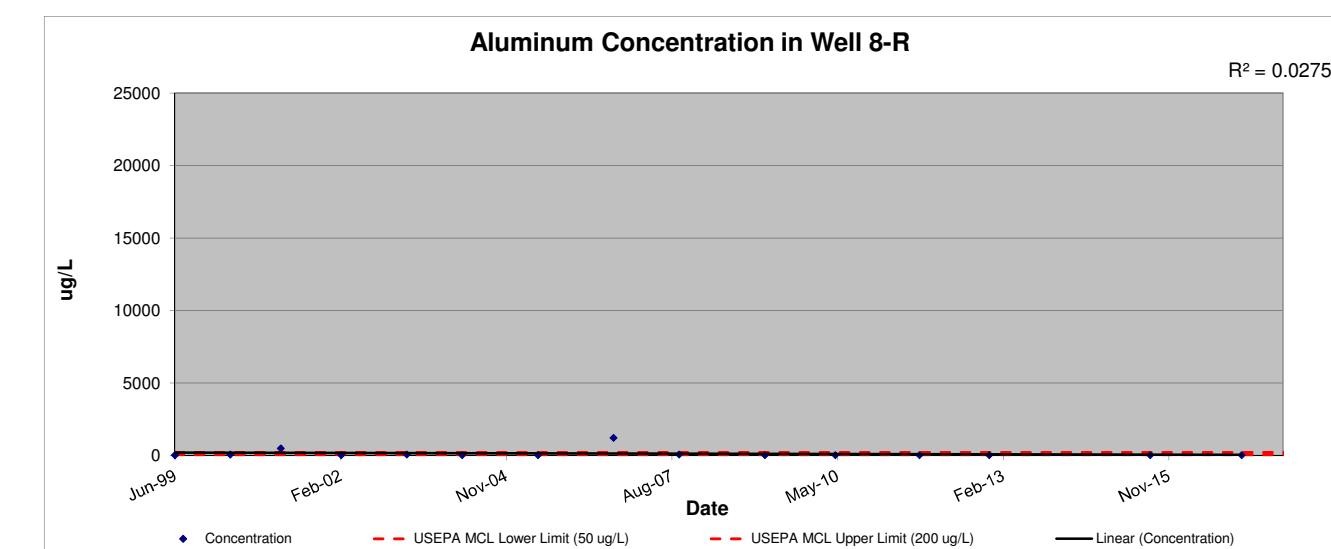

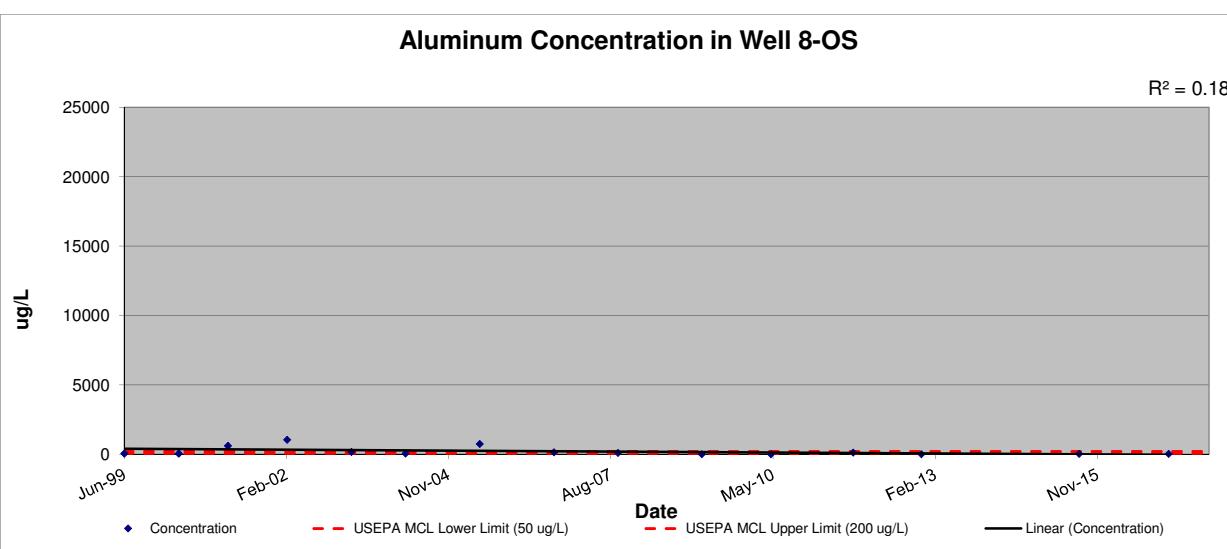

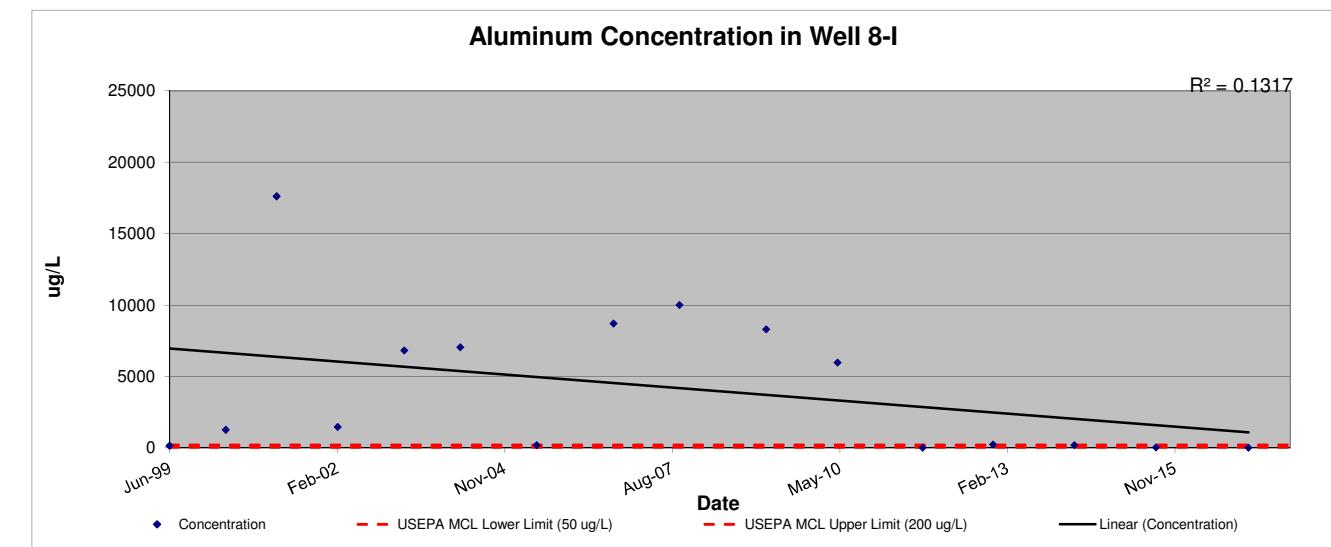

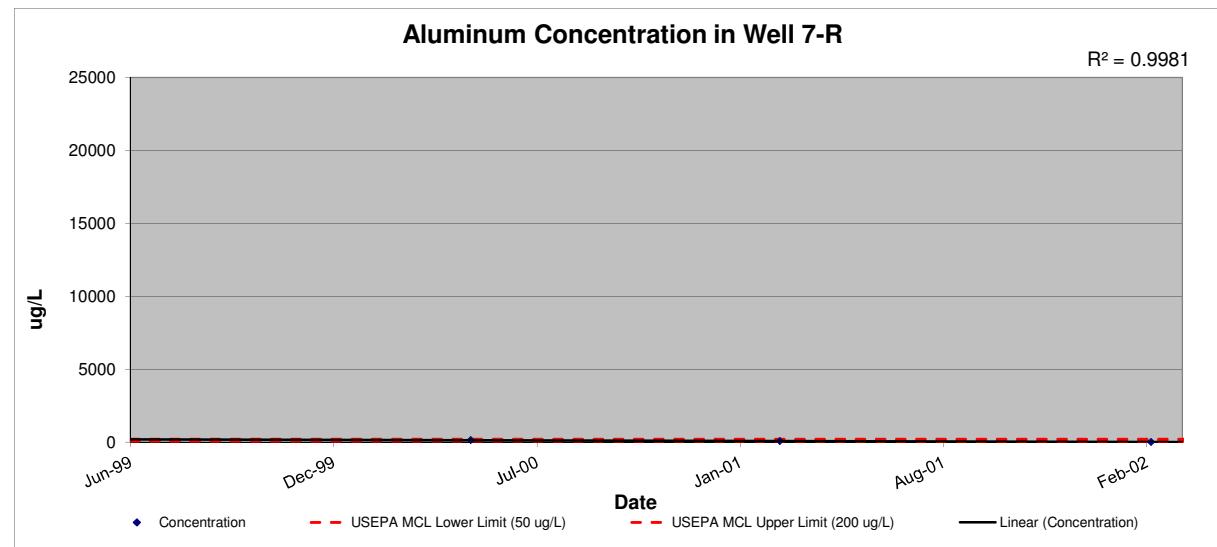

B = The reported value is less than the Contract Required Detection Limit, but greater than the Instrument Detection Limit.

N = Spiked sample recovery not within control limits.

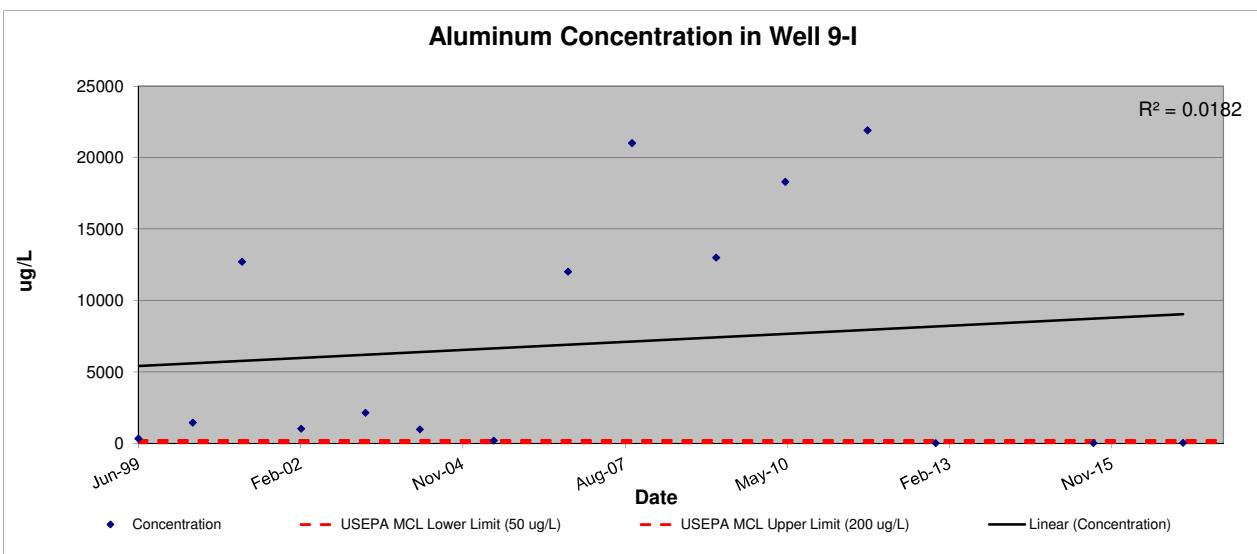

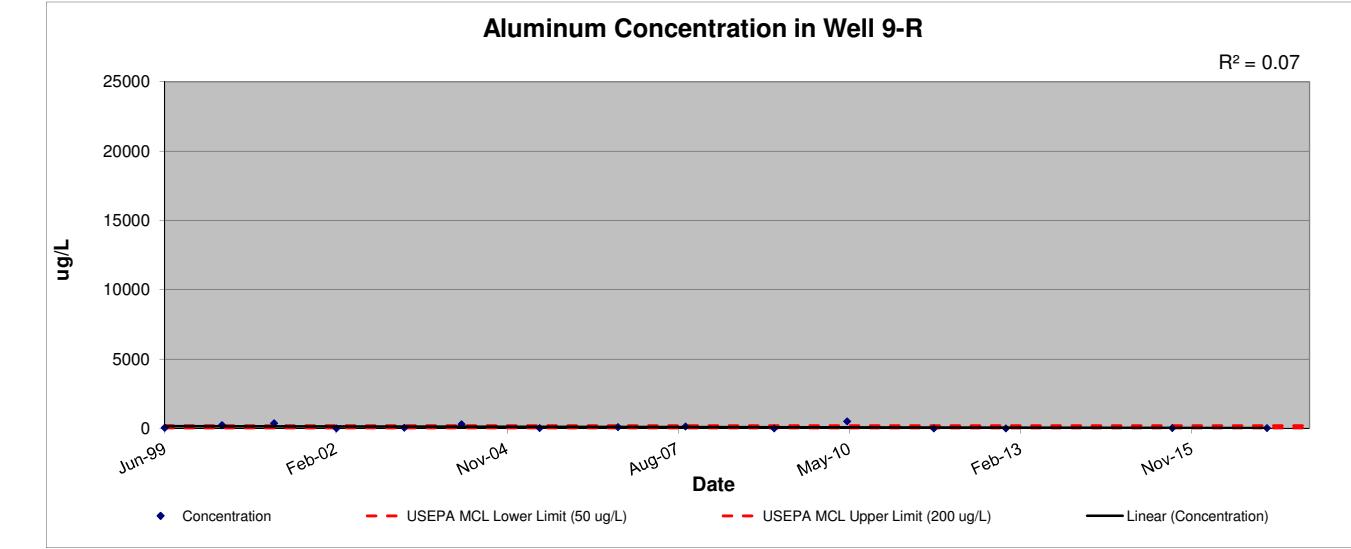

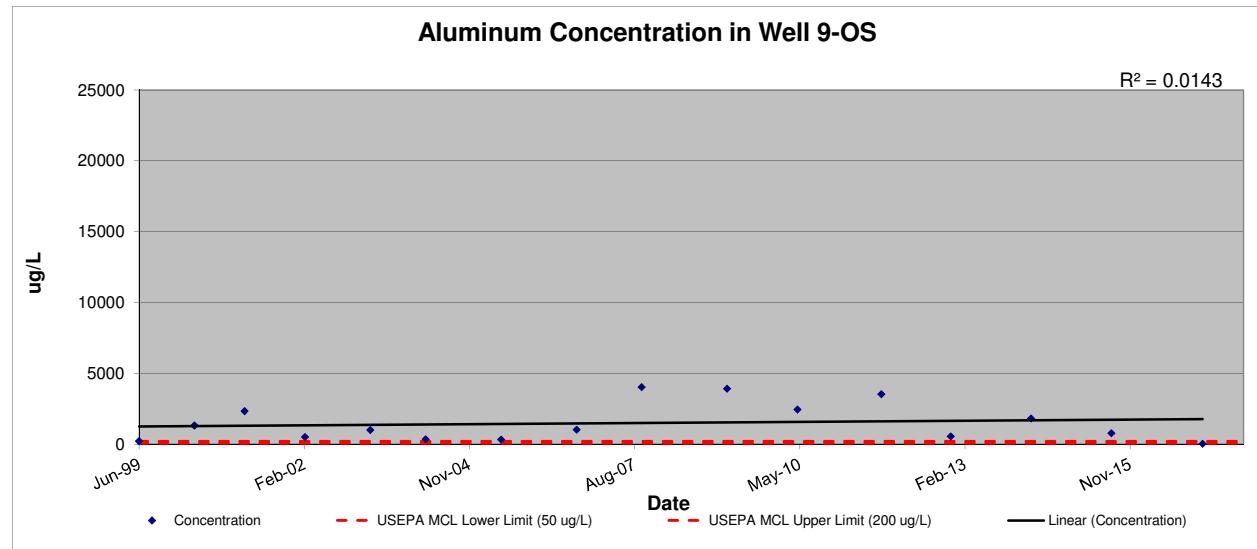

TABLE 7

## Notes:

Values in **BOLD** indicate the reported concentration is greater than the ARAR for the groundwater monitoring wells or MCL for the private and municipal drinking water wells water quality standard.

NA = Not Analyzed

ND = Not Detected

< = The compound was analyzed for but not detected at the laboratory detection limit listed.

ARAR = Applicable or Relevant and Appropriate Requirement: NYSDEC TOGS 1.1.1 Ambient Water-Quality Standards and Guidance Values and Groundwater Effluent Limitations (June 1998).

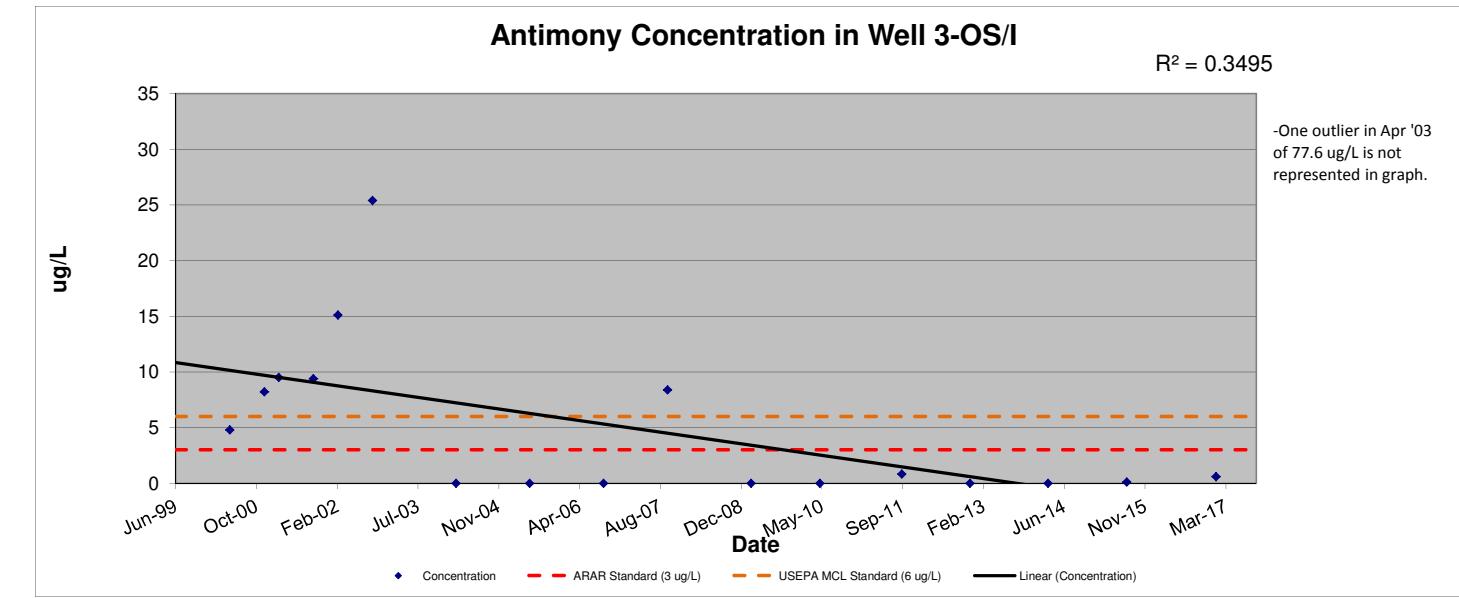

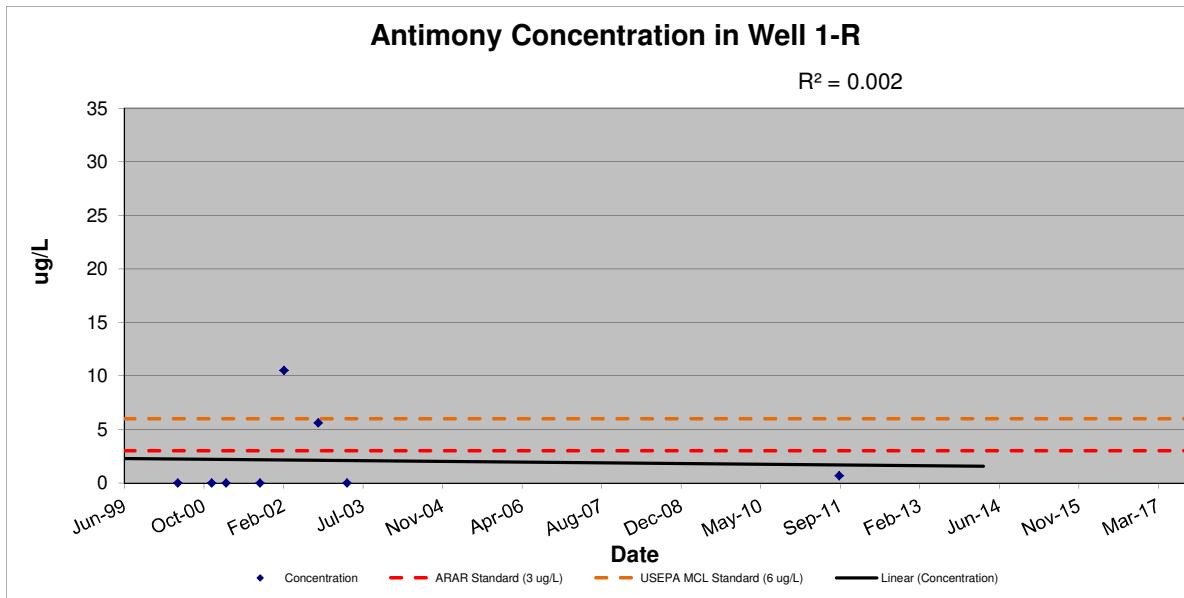

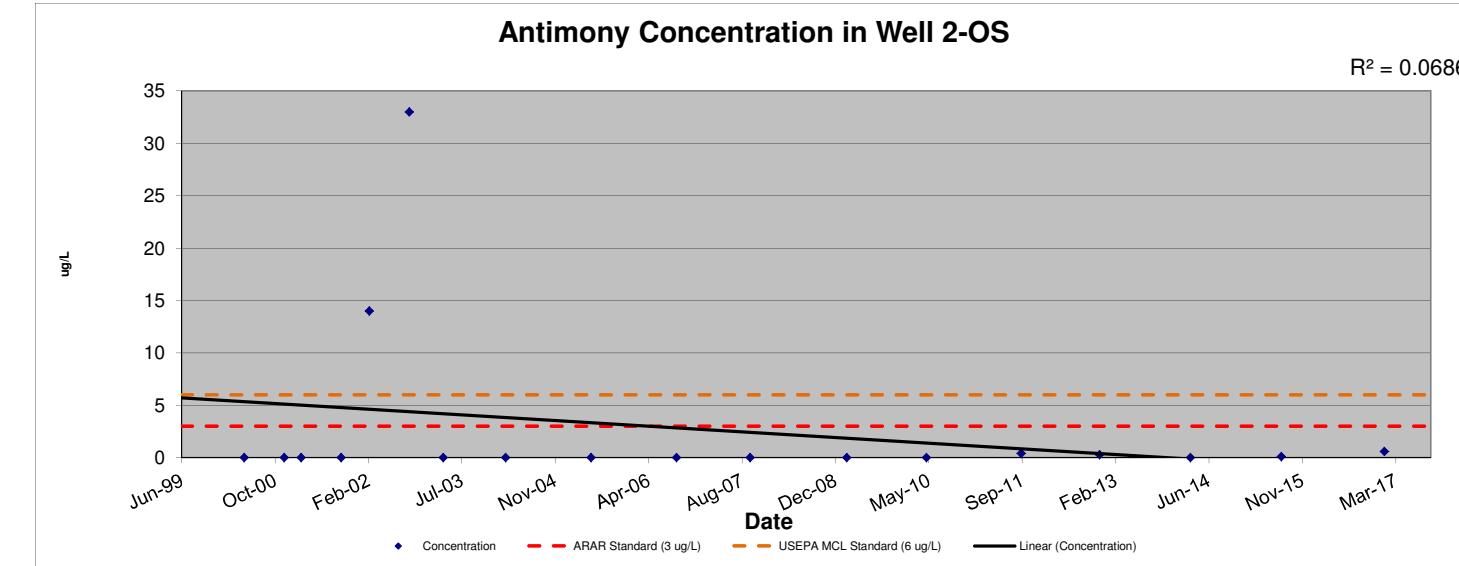

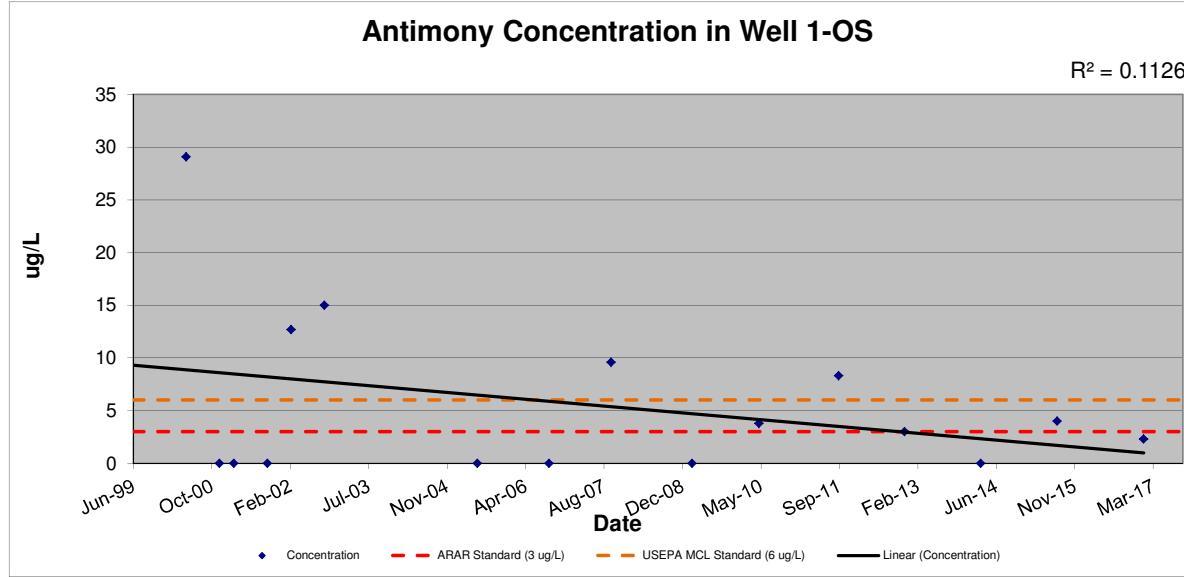

MCL = Maximum Contaminant Level: USEPA National Primary Drinking Water Regulations.

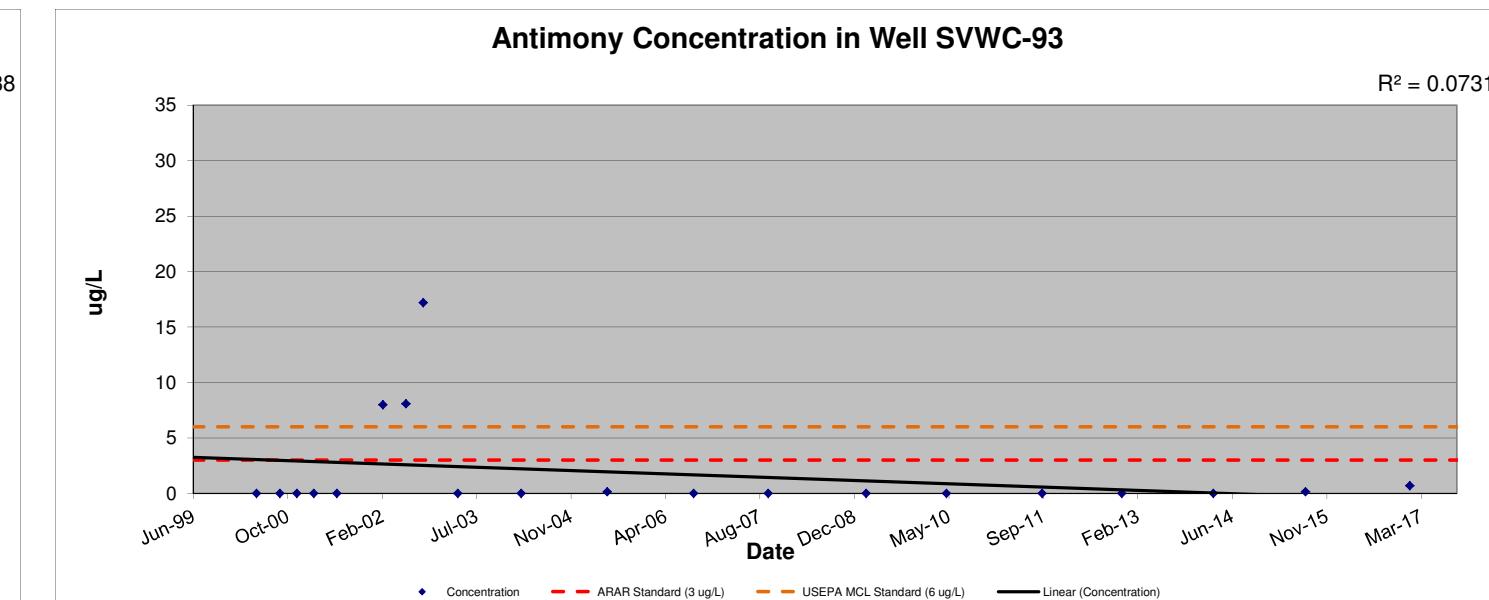

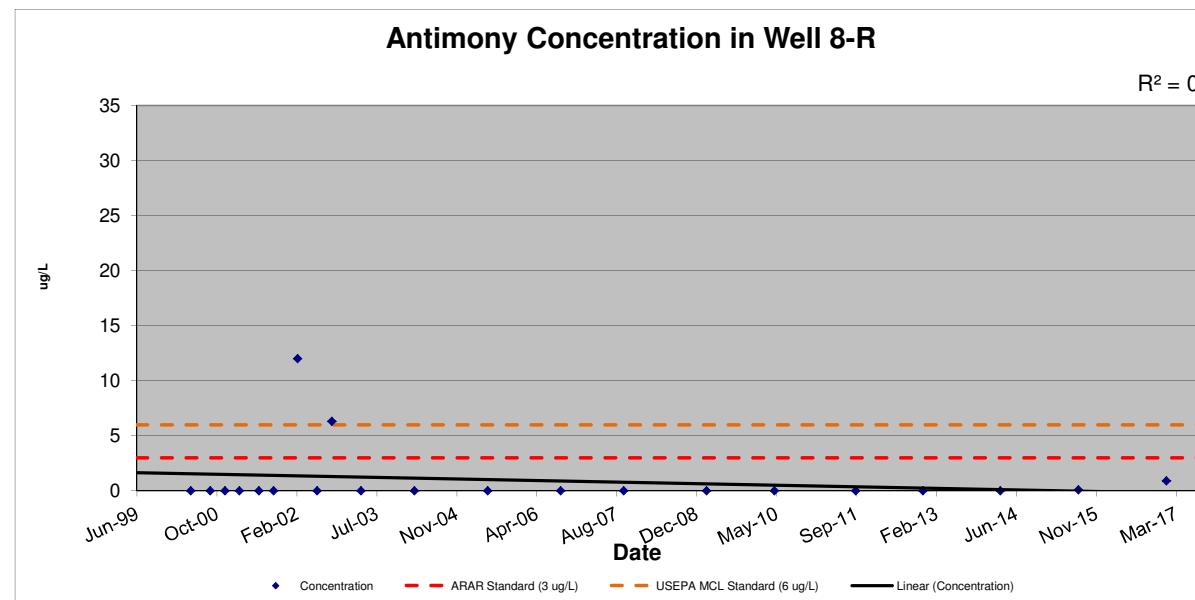

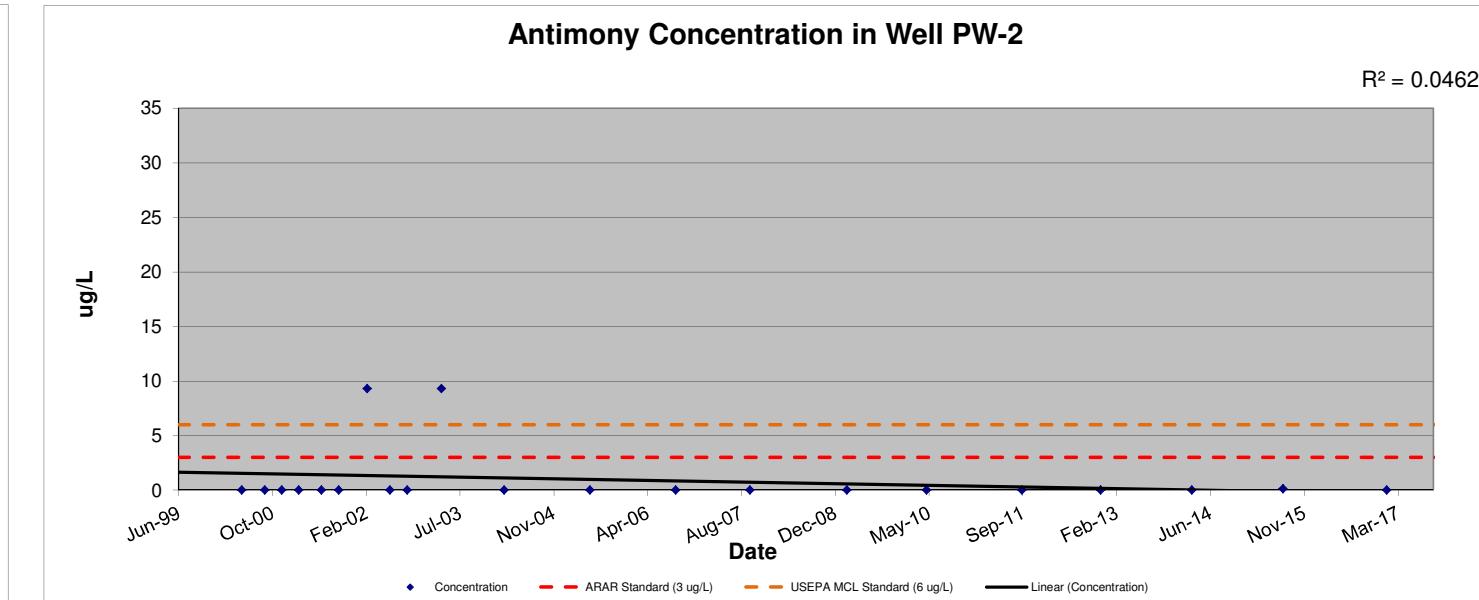

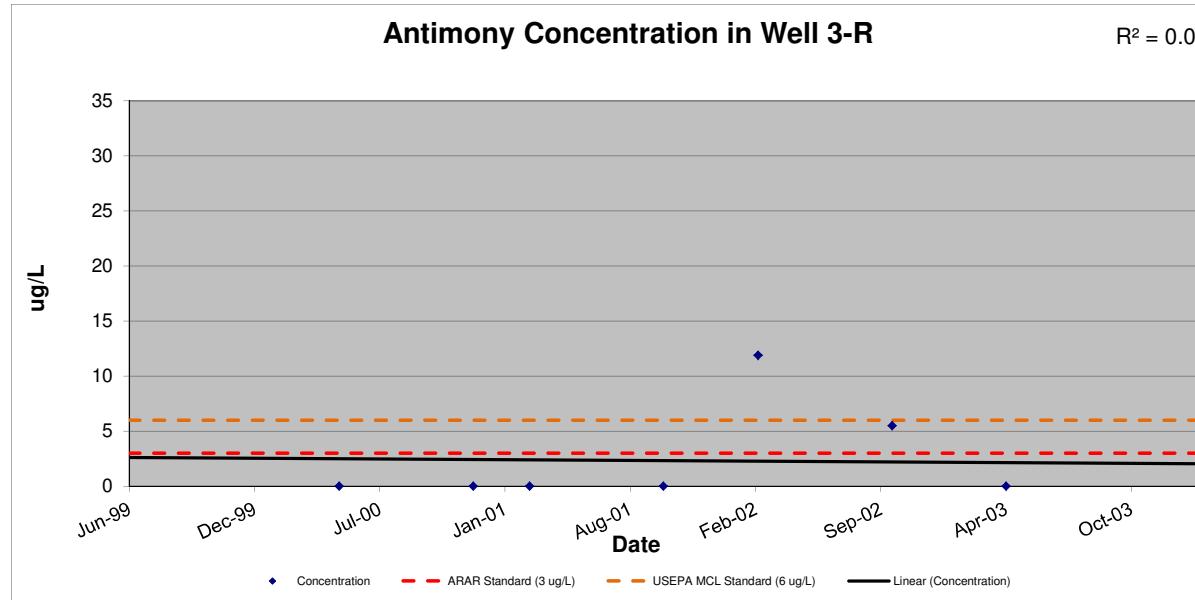

## Laboratory Qualifier Definitions

B = The reported value is less than the Contract Required Detection Limit, but greater than the Instrument Detection Limit.

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

N = Spiked sample recovery not within control limits.

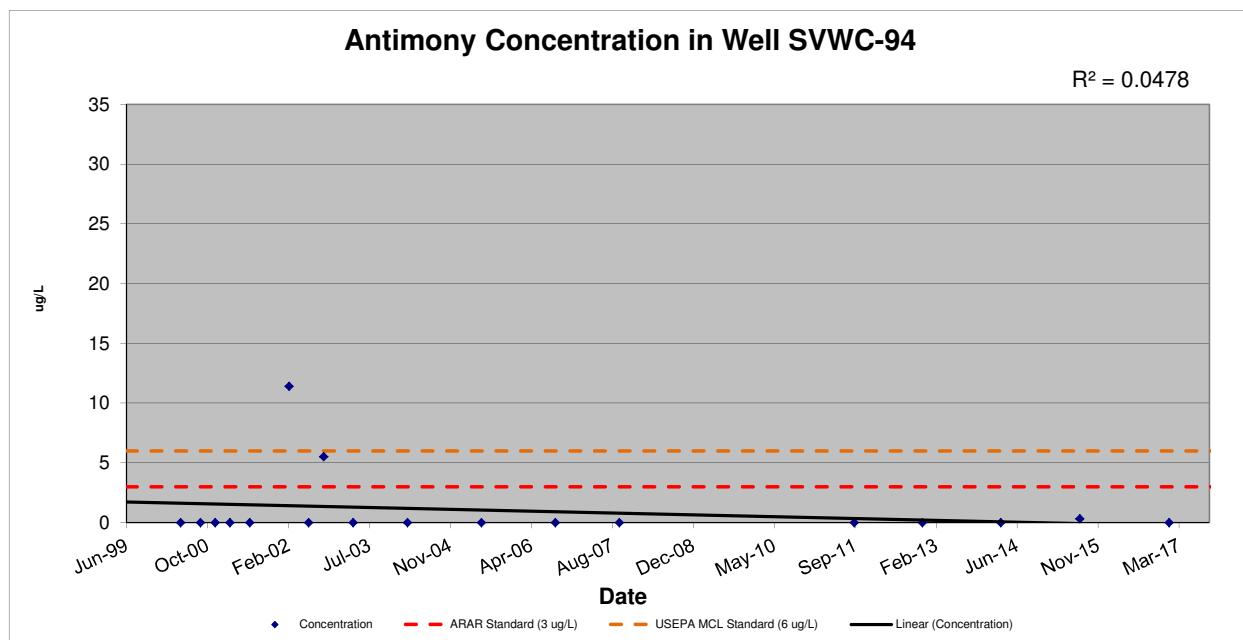

TABLE 11

## **Notes:**

Values in **BOLD** indicate the reported concentration is greater than the ARAR for the groundwater monitoring wells or MCL for the private and municipal drinking water wells water quality standard.

NA = Not Analyzed

ND = Not Detected

< = The compound was analyzed for but not detected at the laboratory detection limit listed.

ARAR = Applicable or Relevant and Appropriate Requirement: NYSDEC TOGS 1.1.1 Ambient Water-Quality Standards and Guidance Values and Groundwater Effluent Limitations (June 1998).

MCL = Maximum Contaminant Level; USEPA National Primary Drinking Water Regulations.

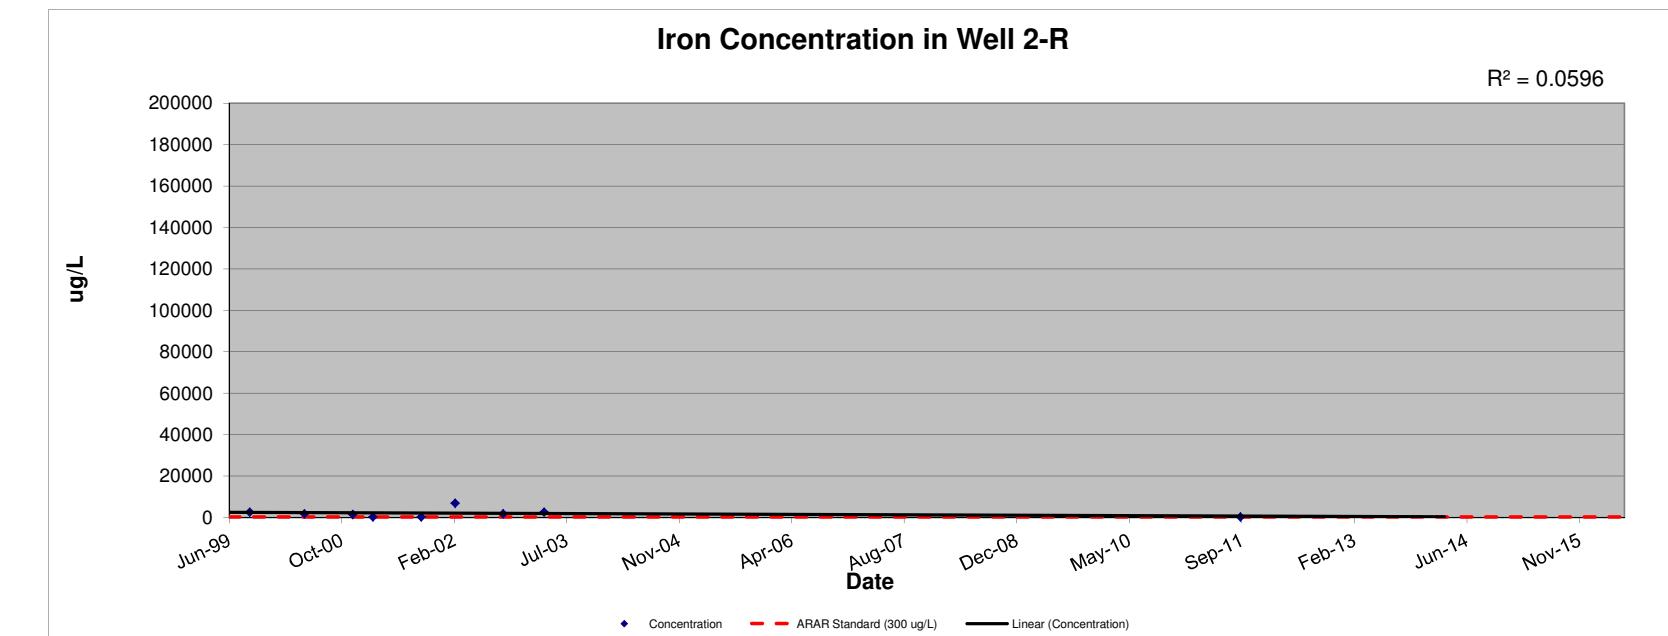

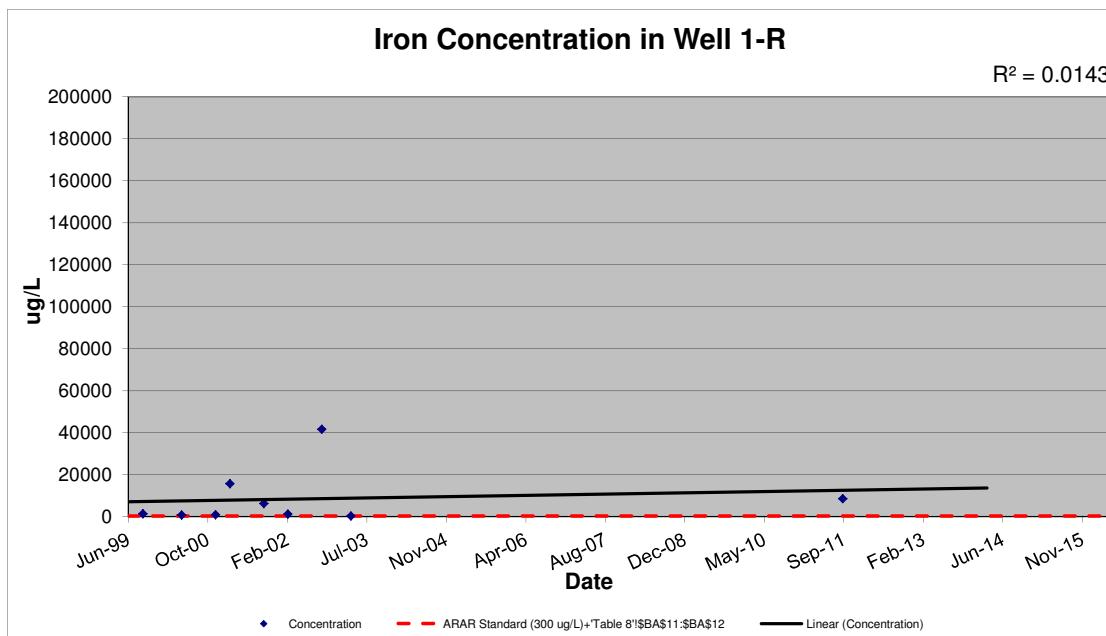

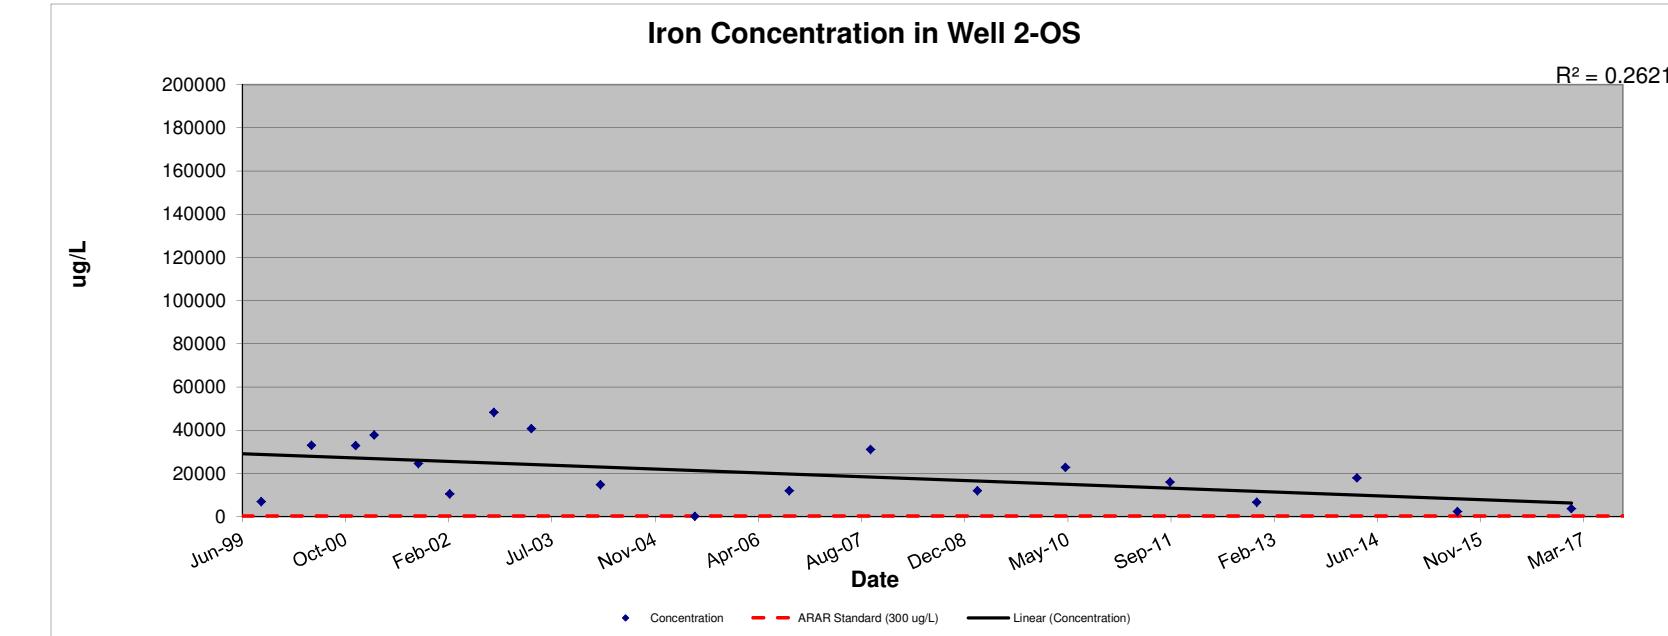

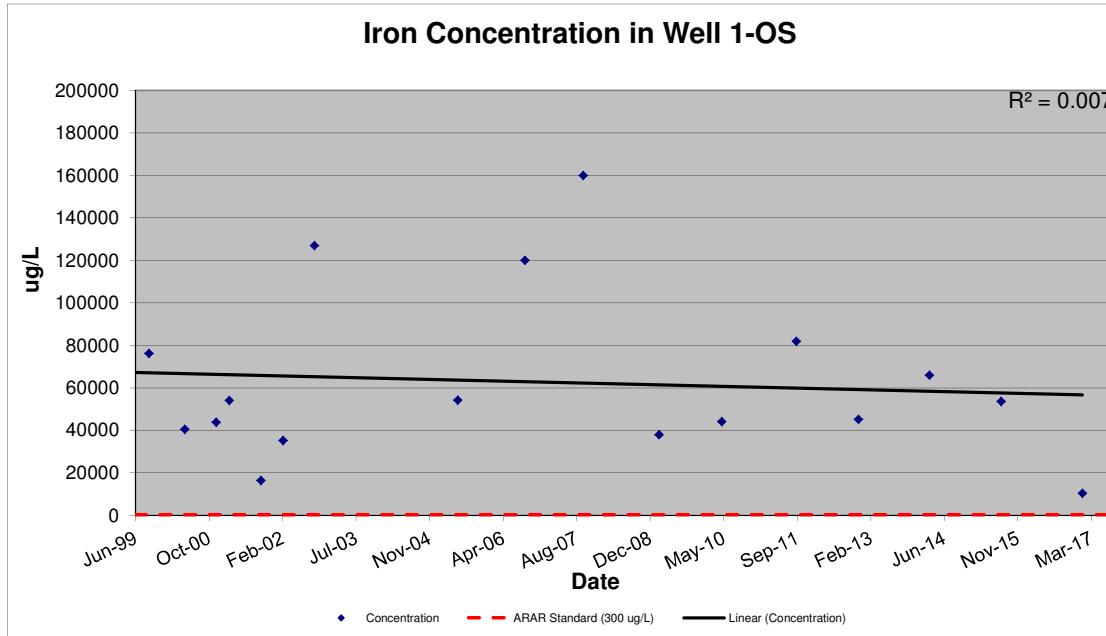

## Laboratory Qualifier Definitions

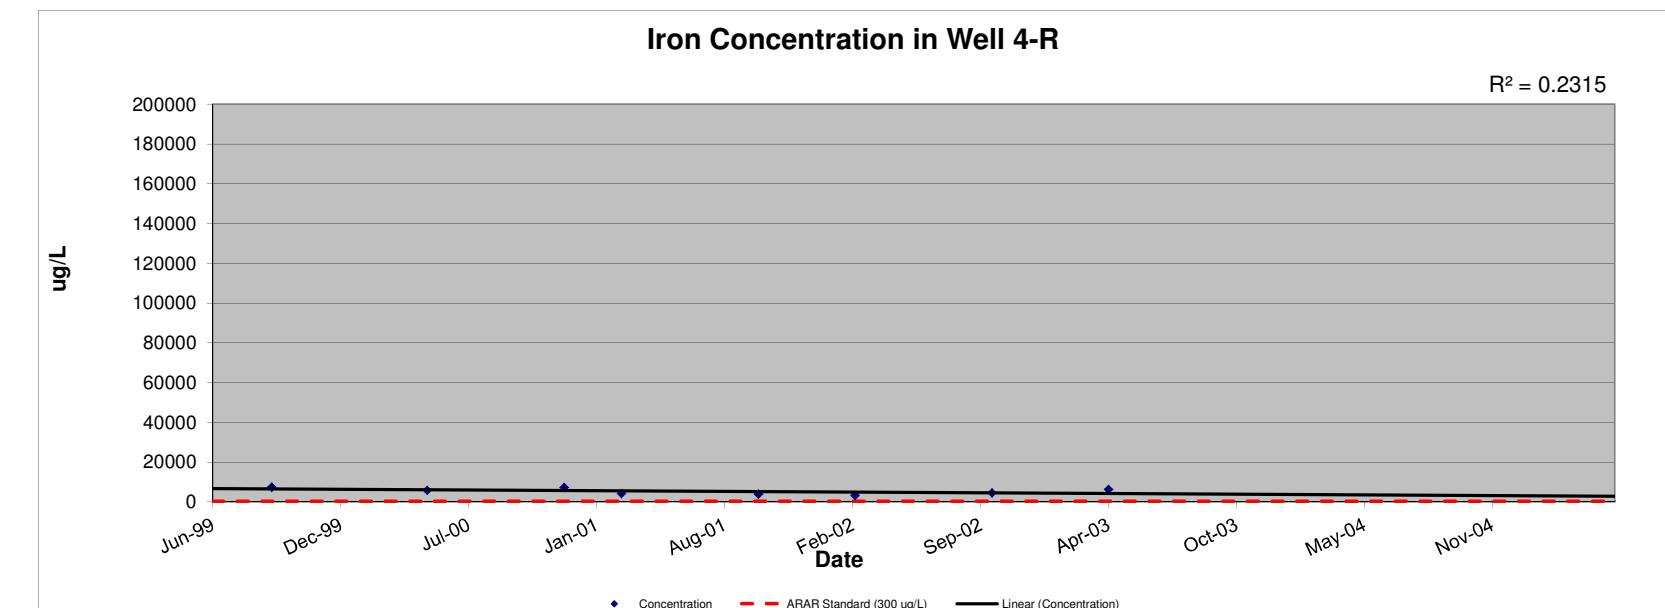

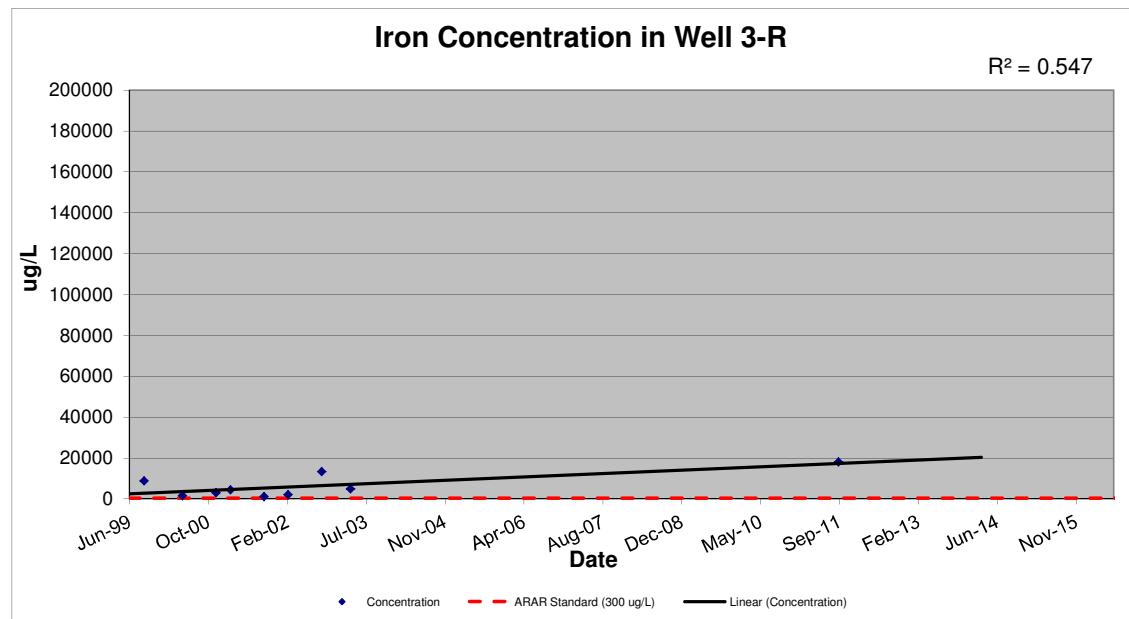

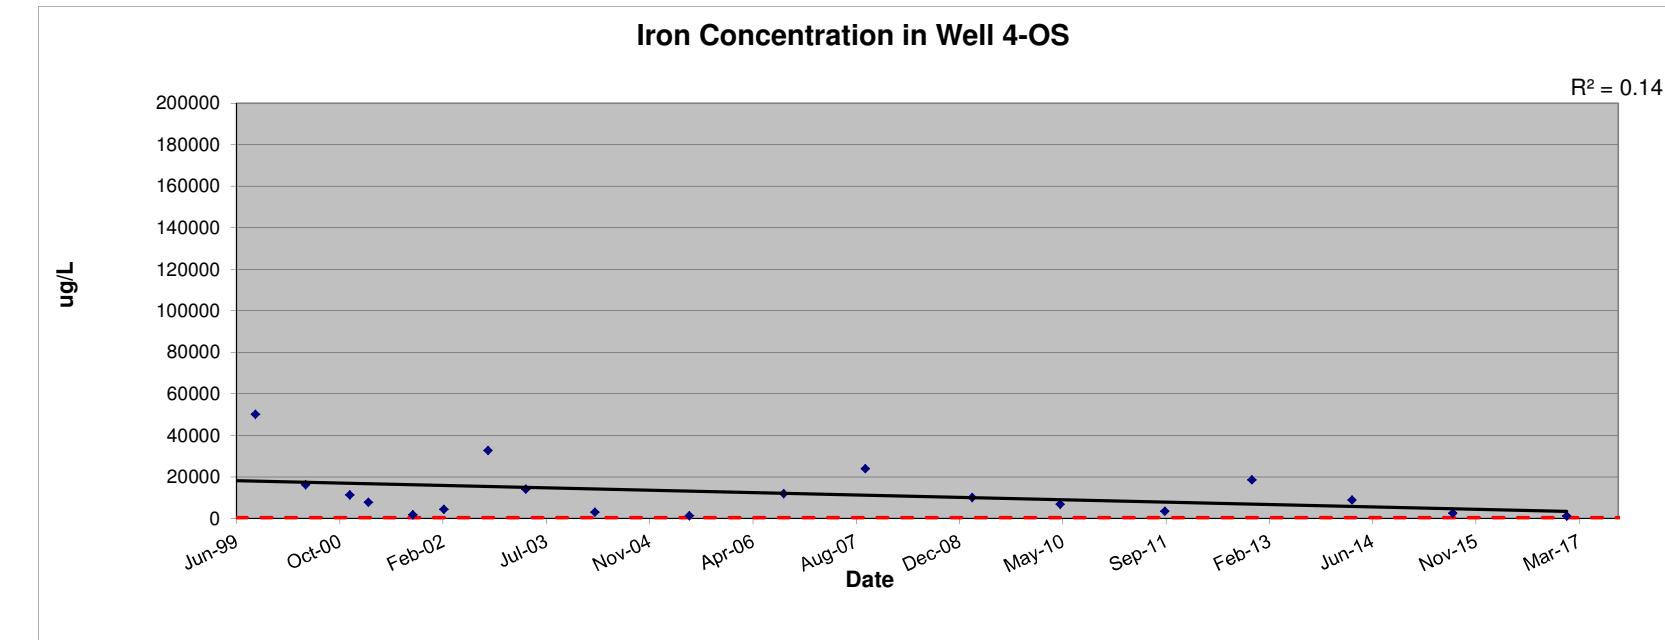

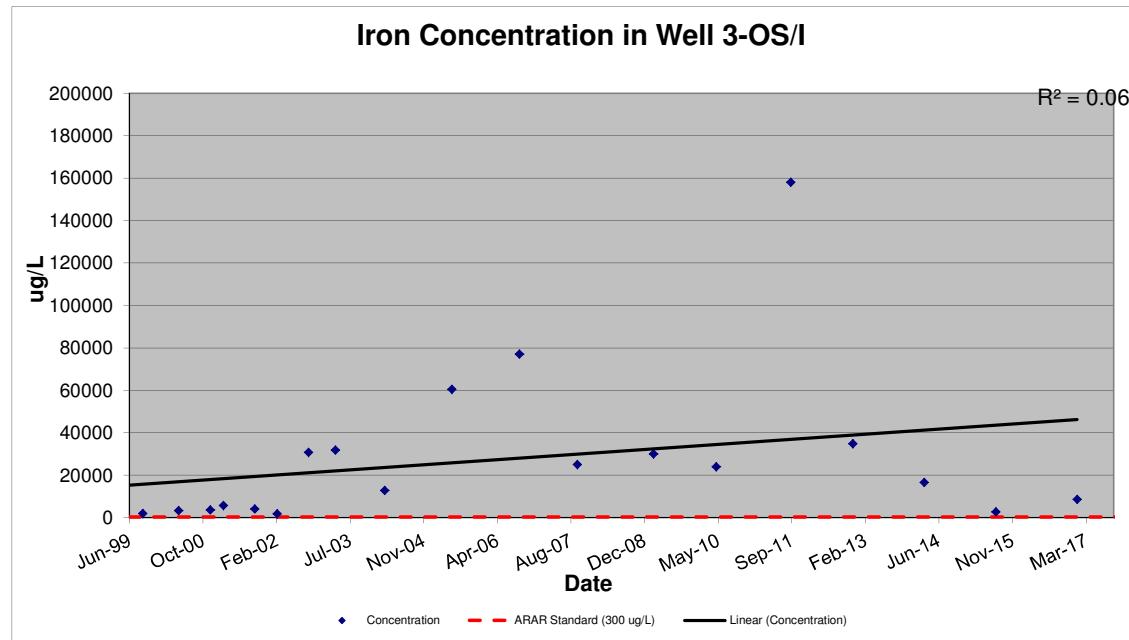

B = The reported value is less than the Contract Required Detection Limit, but greater than the Instrument Detection Limit.

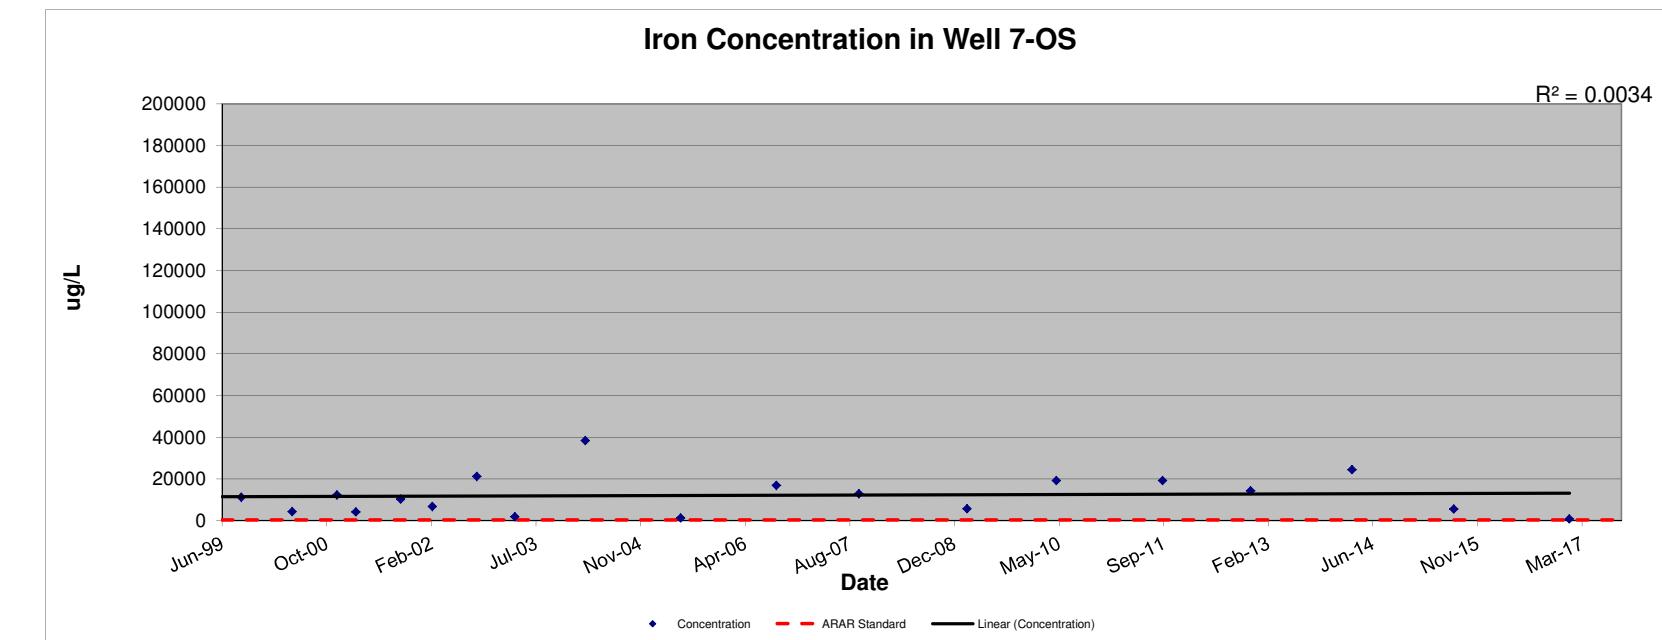

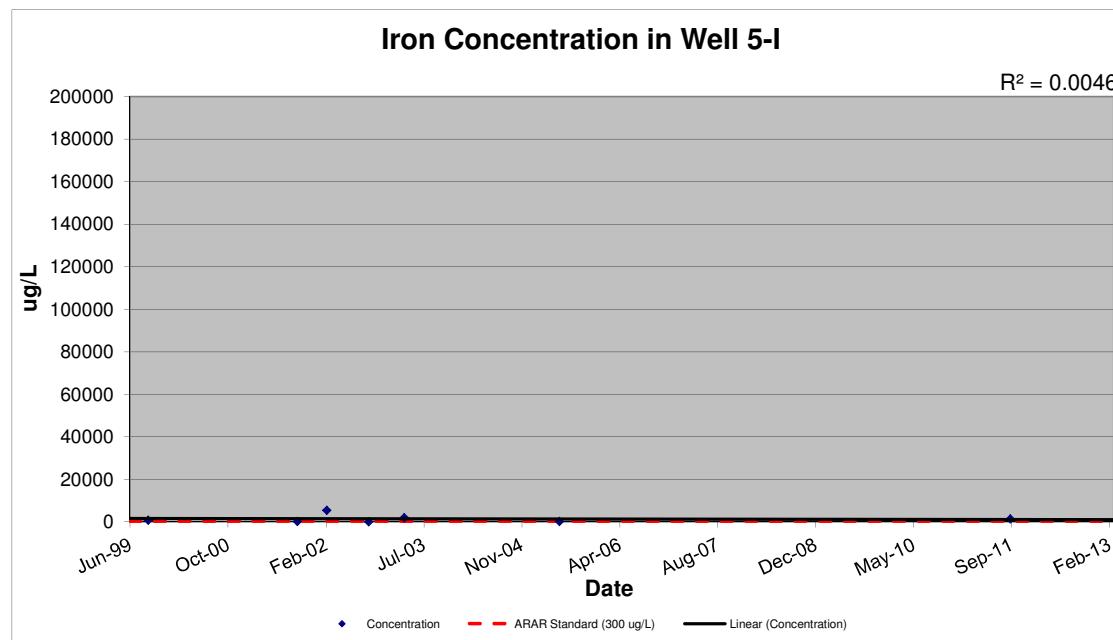

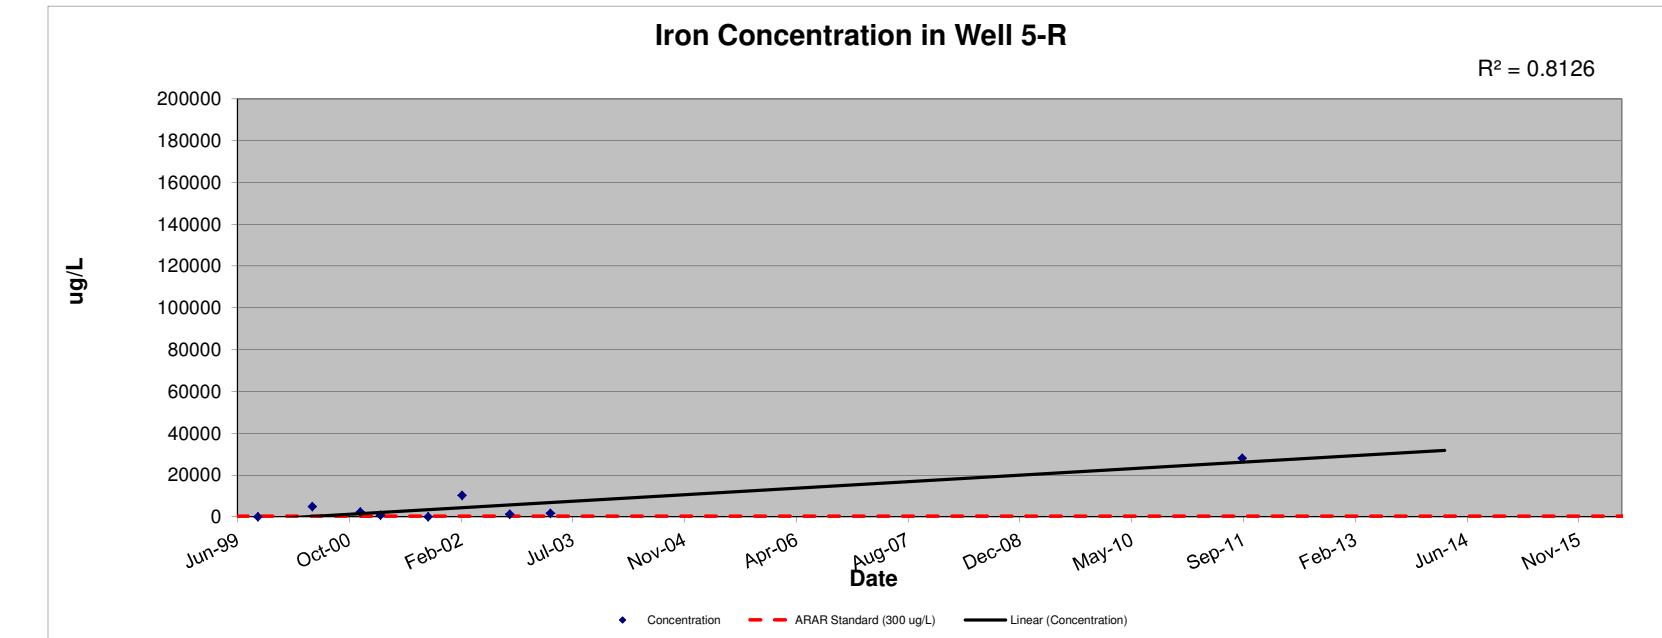

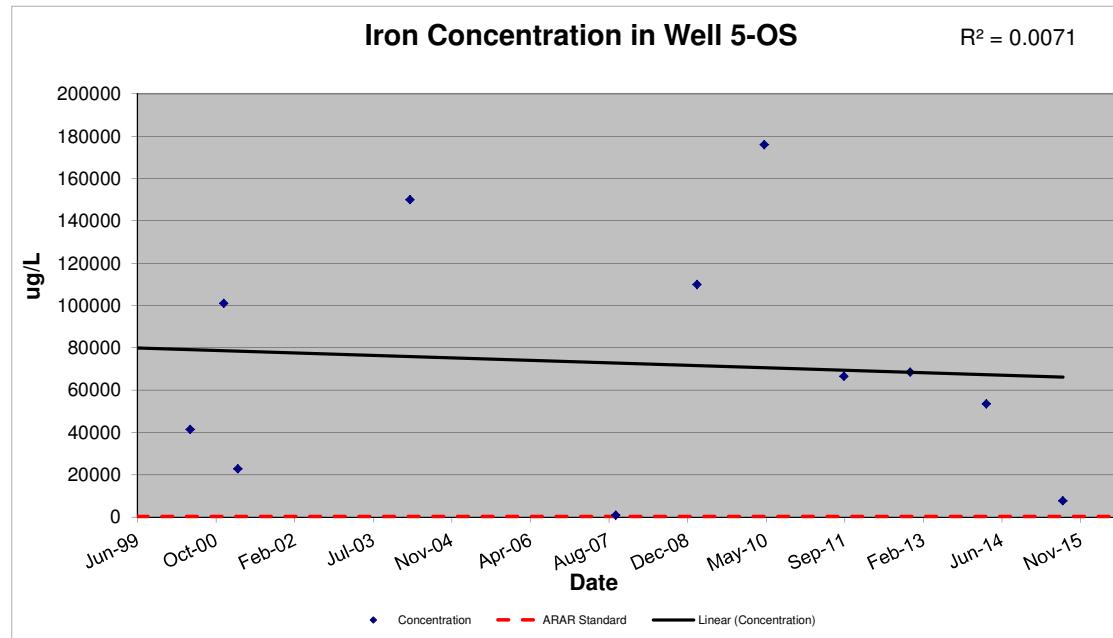

E = Indicates an estimated value because of the possible presence of interference.

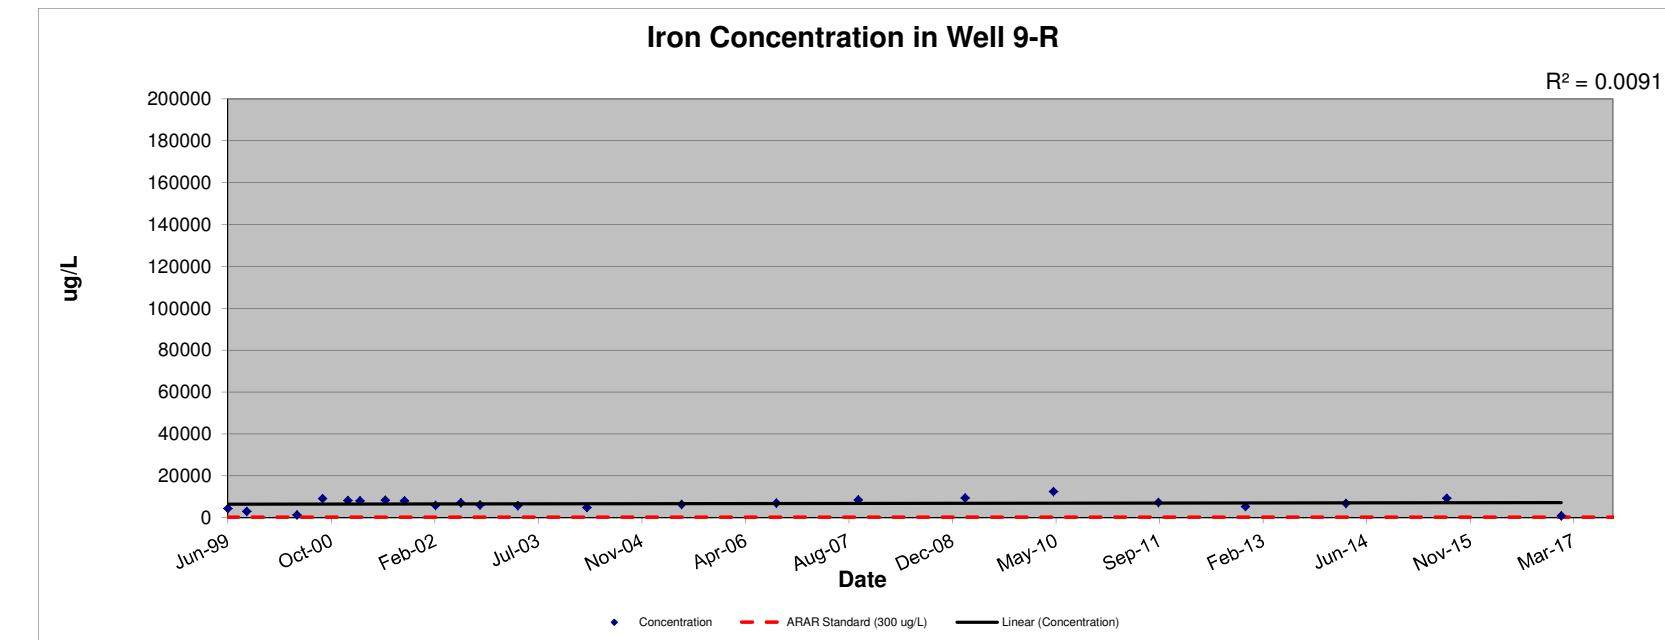

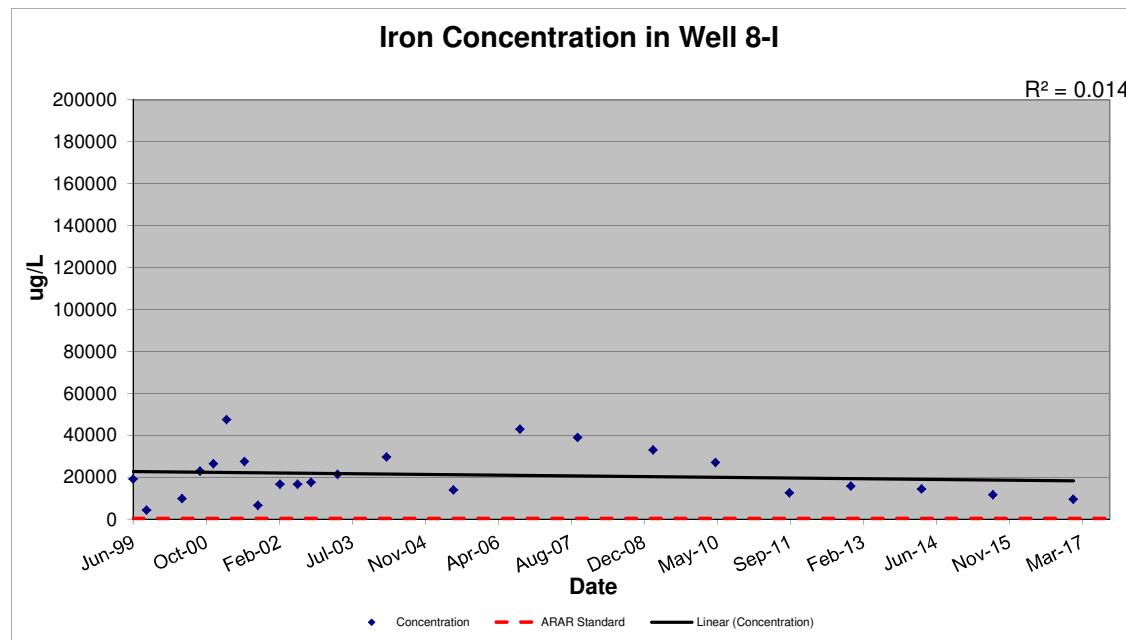

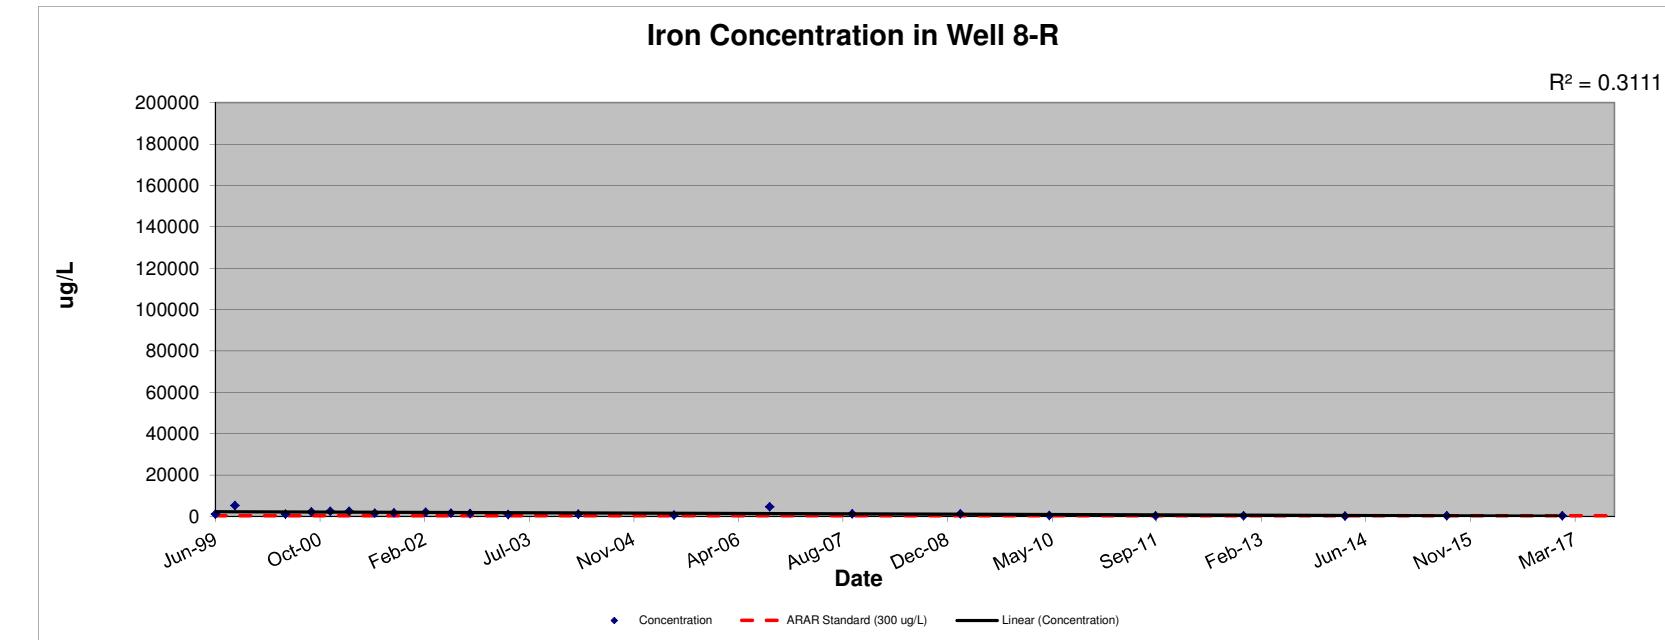

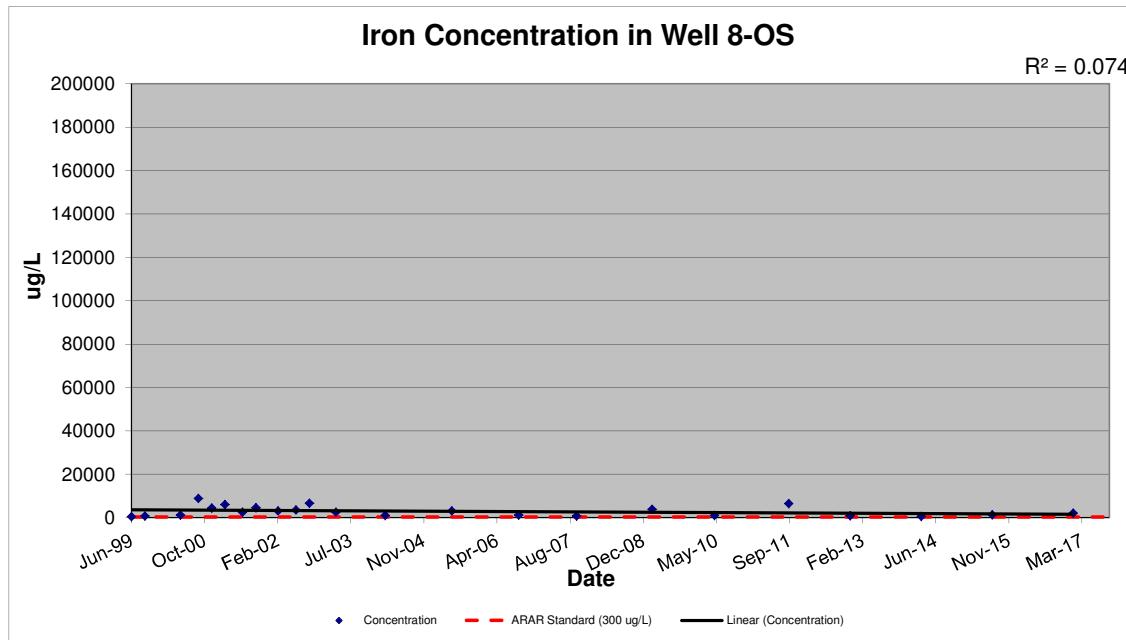

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

N = Spiked sample recovery not within control limits.

## **Notes:**

Values in **BOLD** indicate the reported concentration is greater than the ARAR for the groundwater monitoring wells or MCL for the private and municipal drinking water wells water quality standard.

NA = Not Analyzed  
ND = Not Detected

< = The compound was analyzed for but not detected at the laboratory detection limit listed.

ARAR = Applicable or Relevant and Appropriate Requirement: NYSDEC TOGS 1.1.1 Ambient Water-Quality Standards and Guidance Values and Groundwater Effluent Limitations (June 1998).

MCL = Maximum Contaminant Level: USEPA National Primary Drinking Water Regulations.

## Laboratory Qualifier Definitions

B = The reported value is less than the Contract Required Detection Limit, but greater than the Instrument Detection Limit.

**Notes:**

Values in **BOLD** indicate the reported concentration is greater than the ARAR for the groundwater monitoring wells or MCL for the private and municipal drinking water wells water quality standard.

NA = Not Analyzed

ND = Not Detected

< = The compound was analyzed for but not detected at the laboratory detection limit listed.

ARAR = Applicable or Relevant and Appropriate Requirement: NYSDEC TOGS 1.1.1 Ambient Water-Quality Standards and Guidance Values and Groundwater Effluent Limitations (June 1998).

MCL = Maximum Contaminant Level: USEPA National Primary Drinking Water Regulations.

Laboratory Qualifier Definitions

B = The reported value is less than the Contract Required Detection Limit, but greater than the Instrument Detection Limit.

E = Indicates an estimated value because of the possible presence of interference.

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

**Notes:**

(1) While there is no Part 5 MCL for sodium, people on severely restricted diets should consult with the County Health Department for guidance if the reported sodium concentration is higher than 20,000 mg/L.

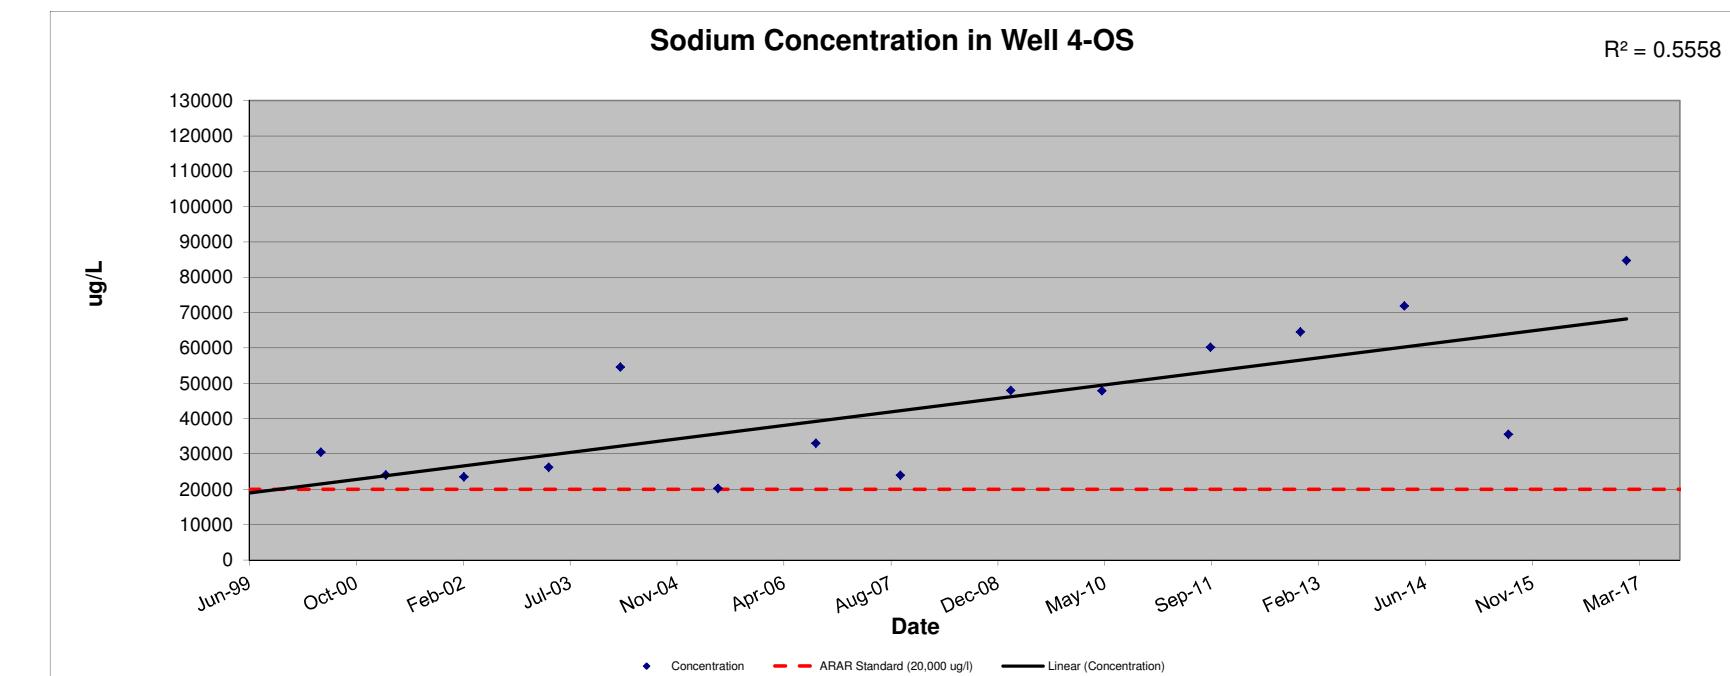

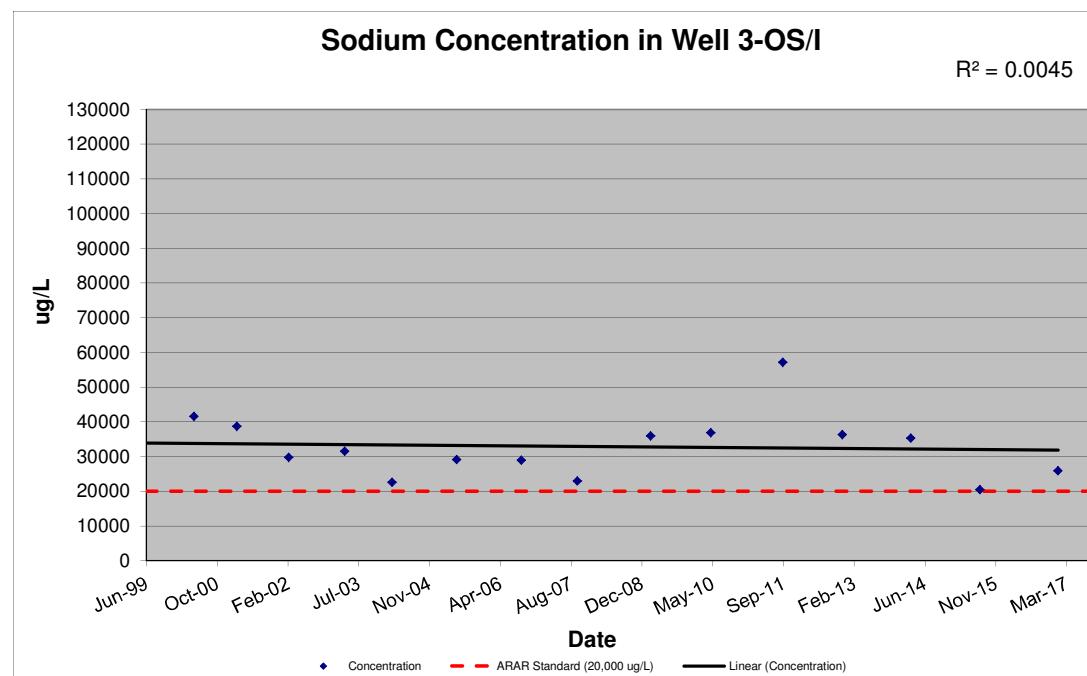

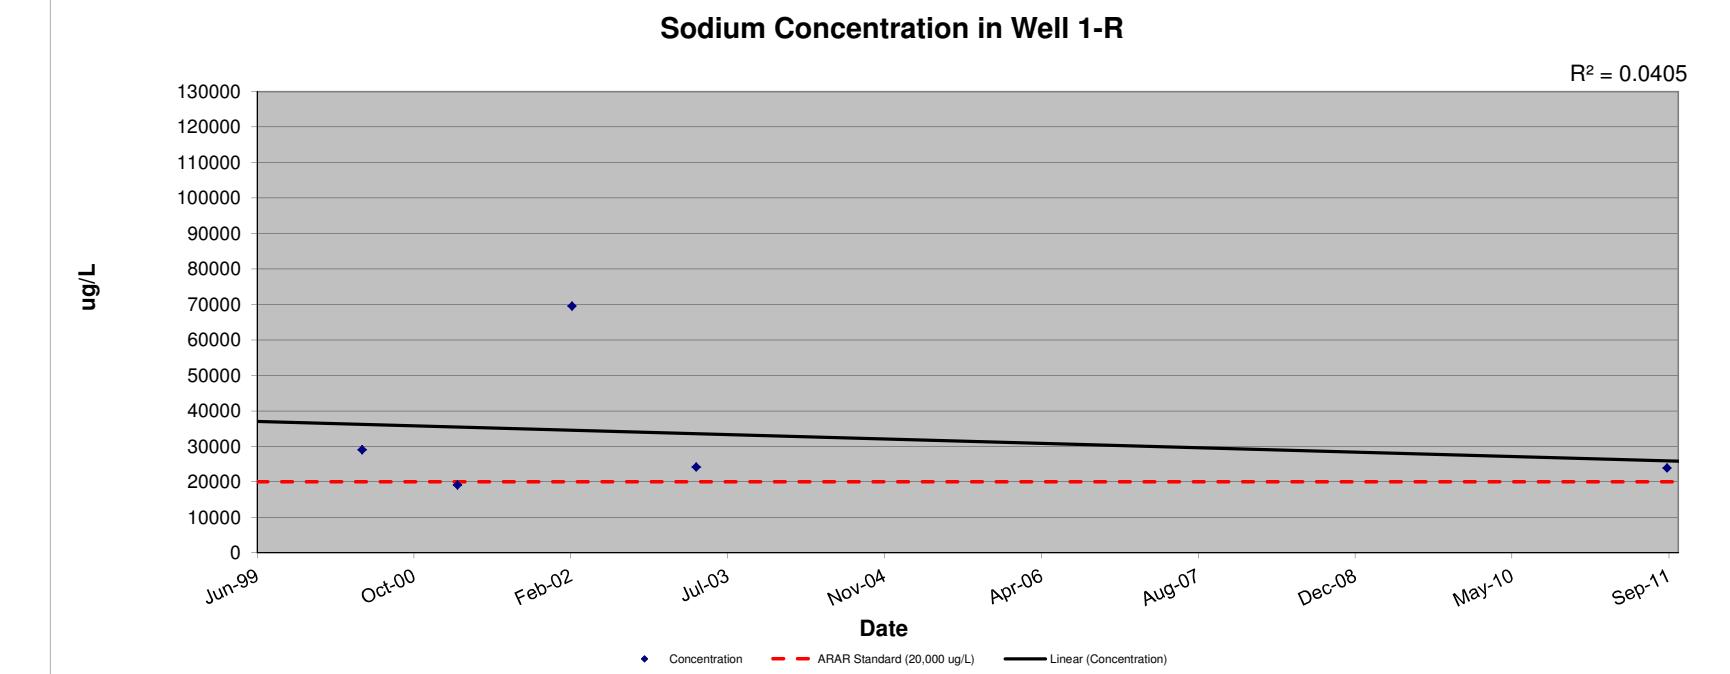

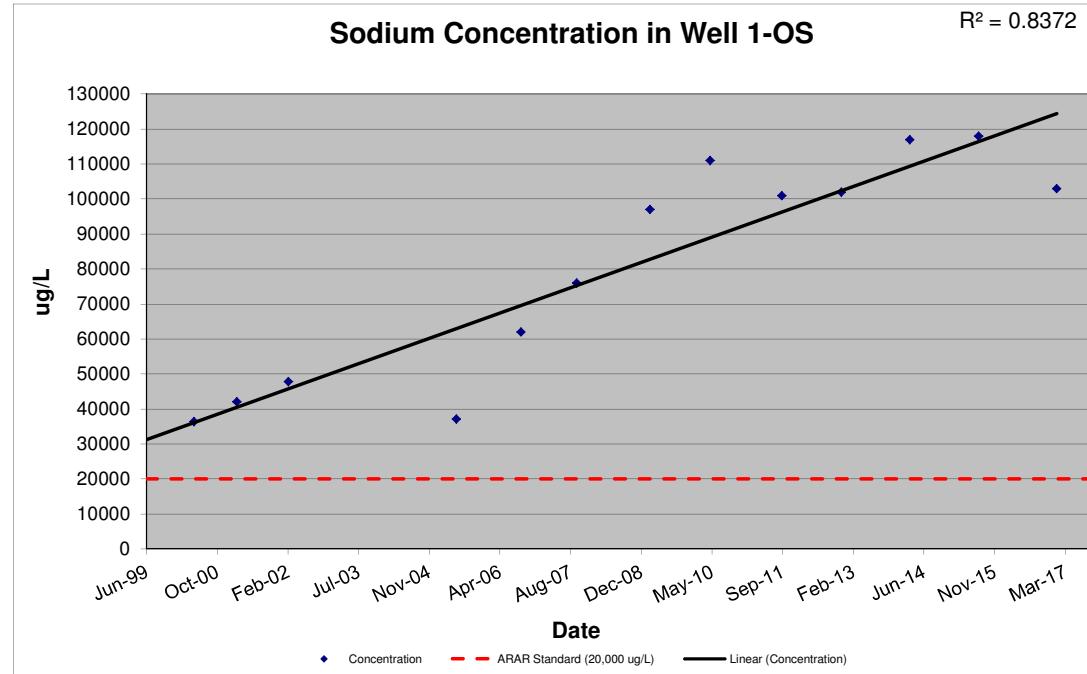

Values in **BOLD** indicate the reported concentration is greater than the ARAR for the groundwater monitoring wells or MCL for the private and municipal drinking water wells water quality standard.

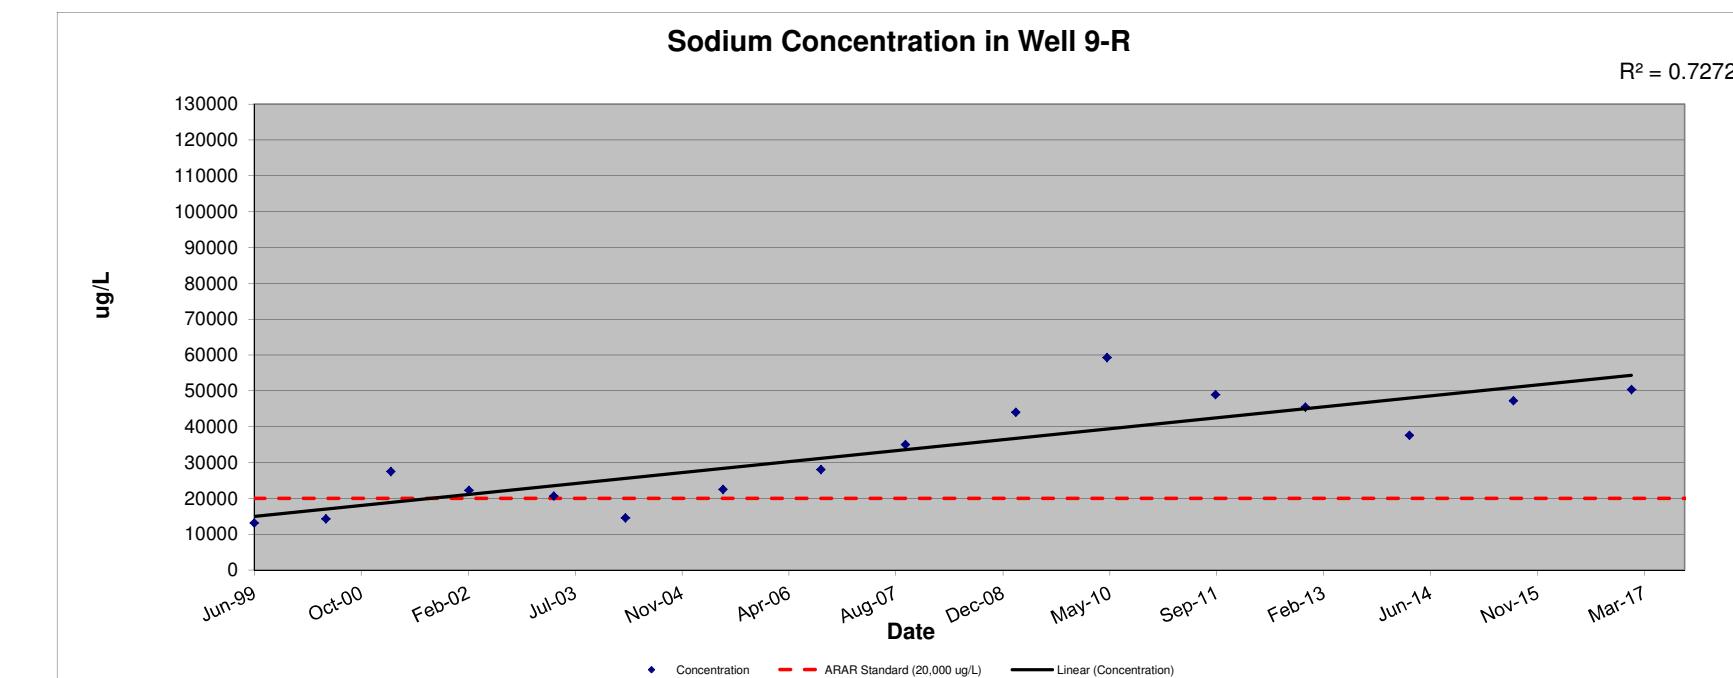

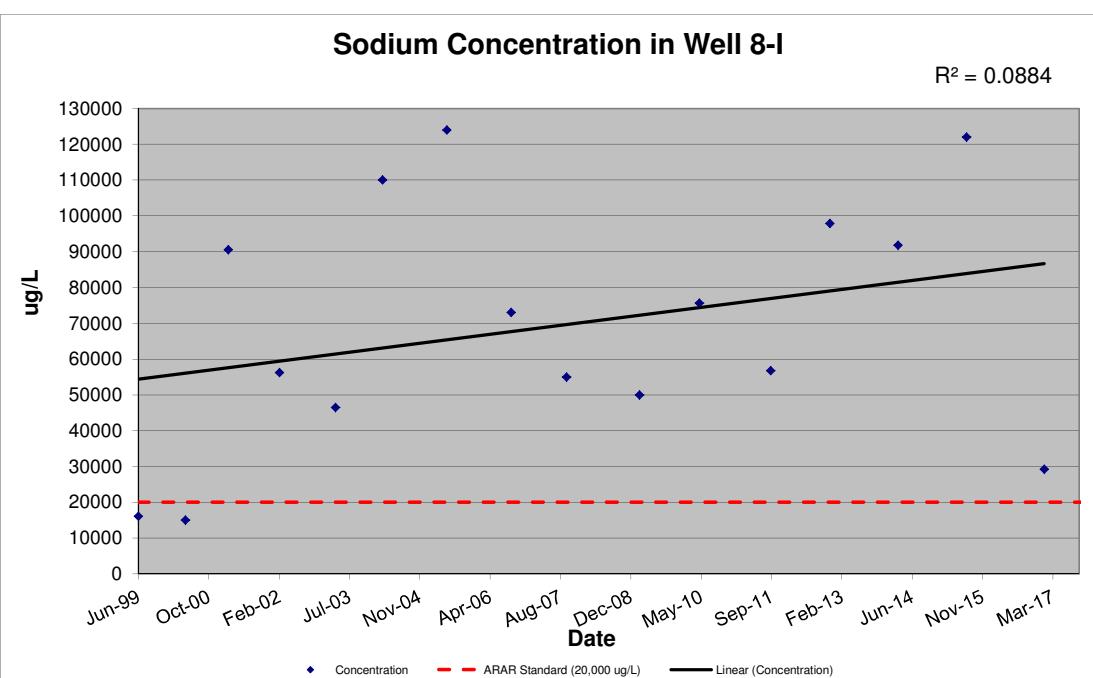

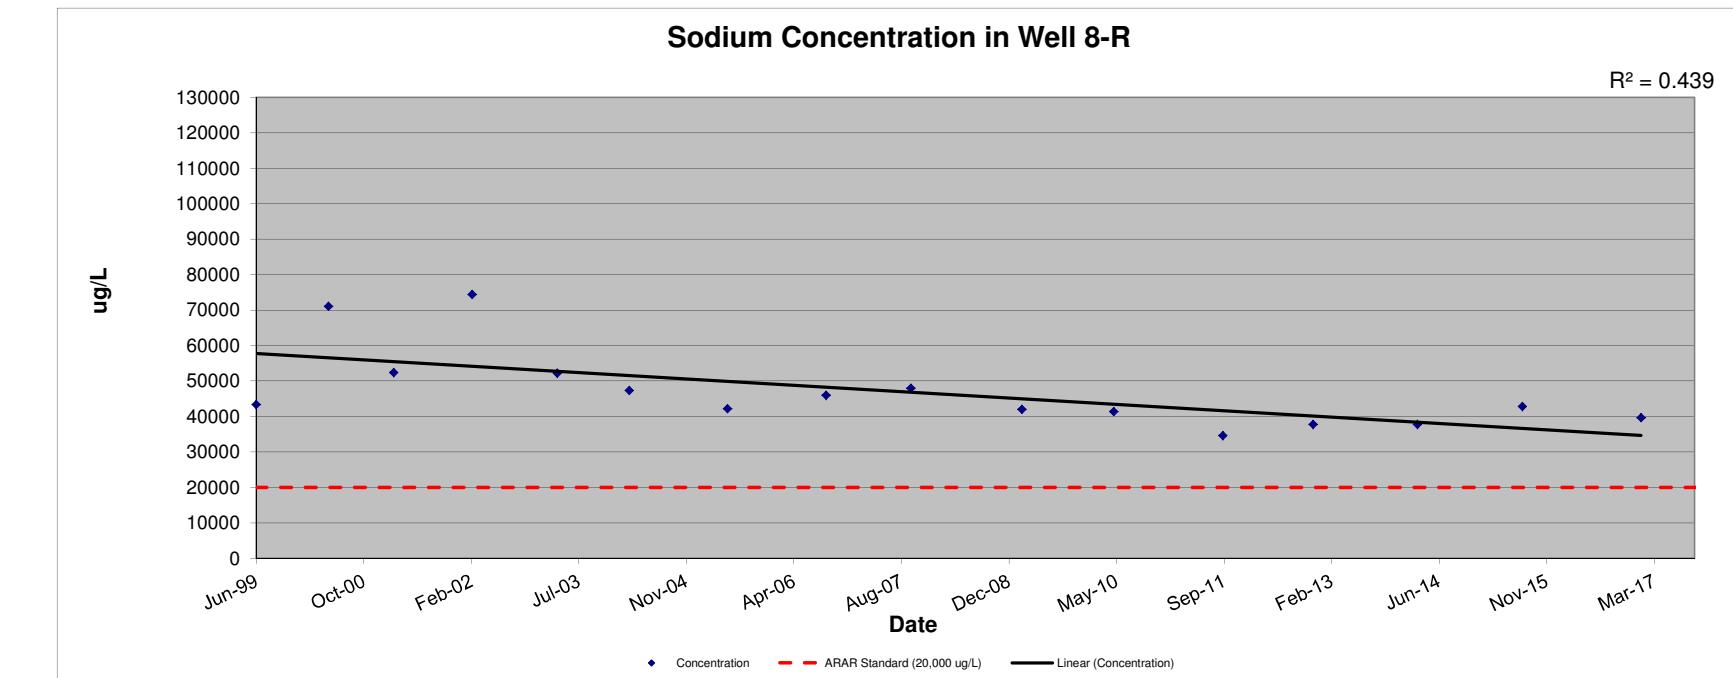

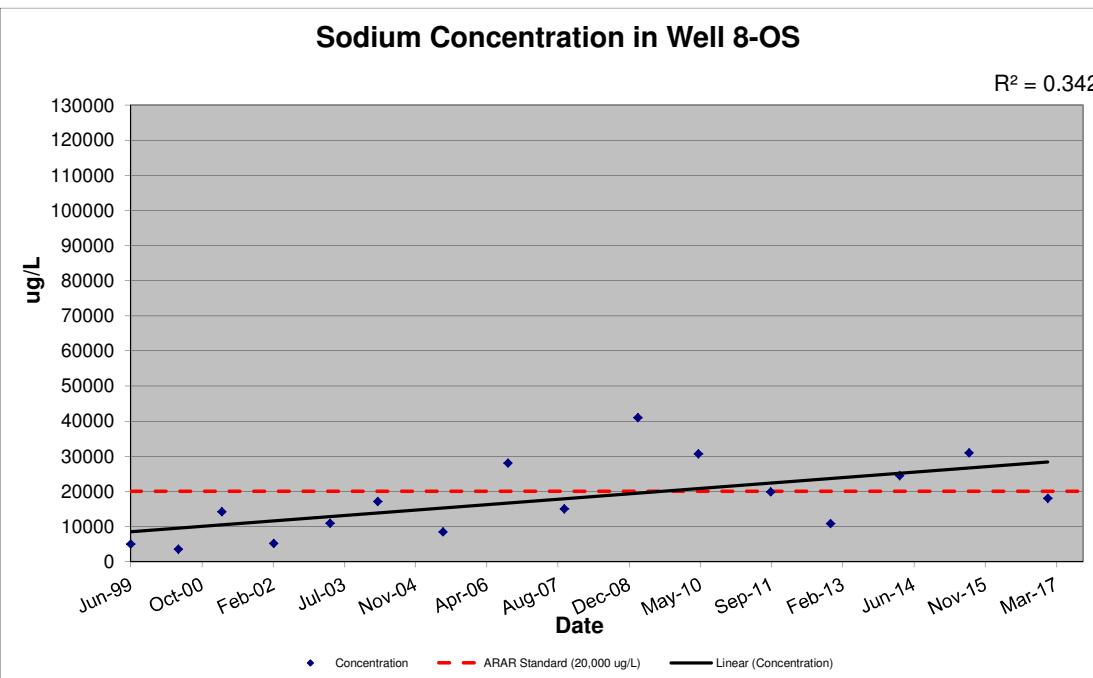

NA = Not Analyzed

ND = Not Detected

&lt; = The compound was analyzed for but not detected at the laboratory detection limit listed.

ARAR = Applicable or Relevant and Appropriate Requirement: NYSDEC TOGS 1.1.1 Ambient Water-Quality Standards and Guidance Values and Groundwater Effluent Limitations (June 1998

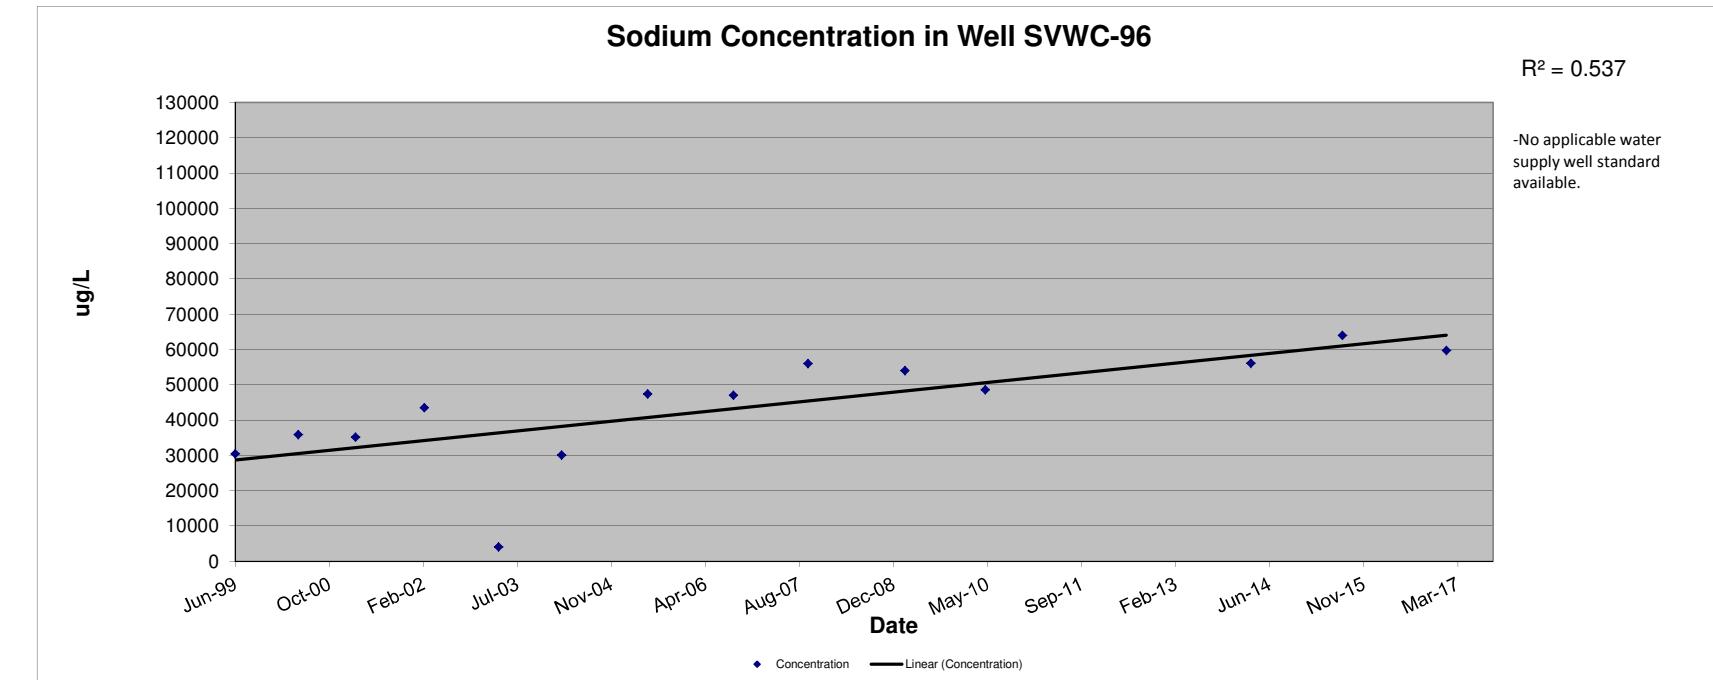

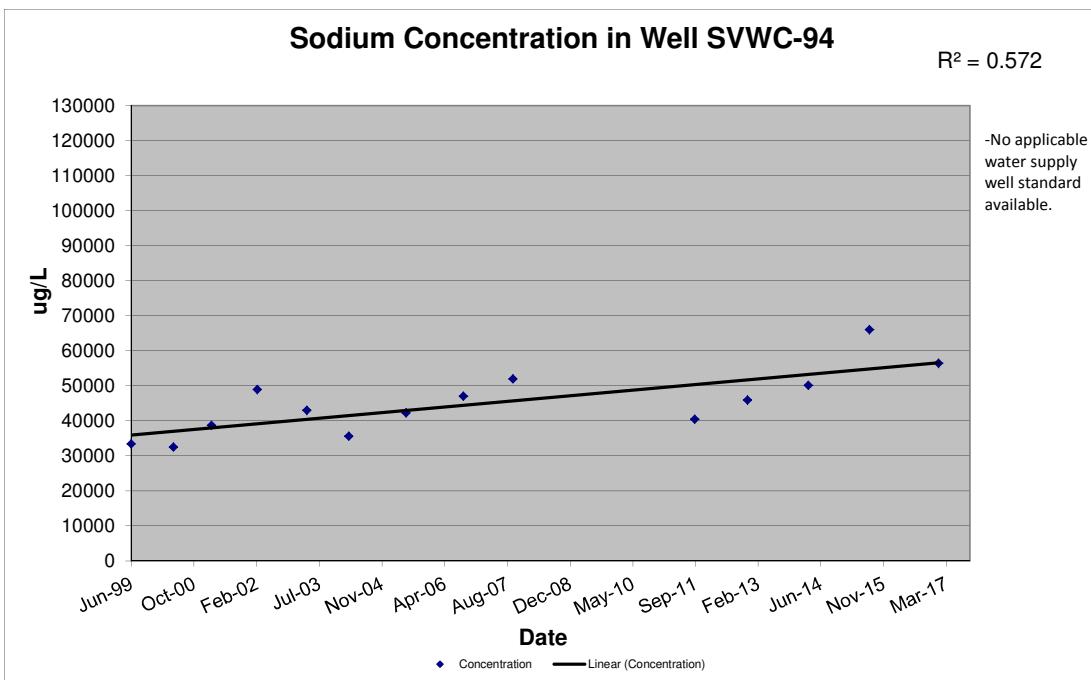

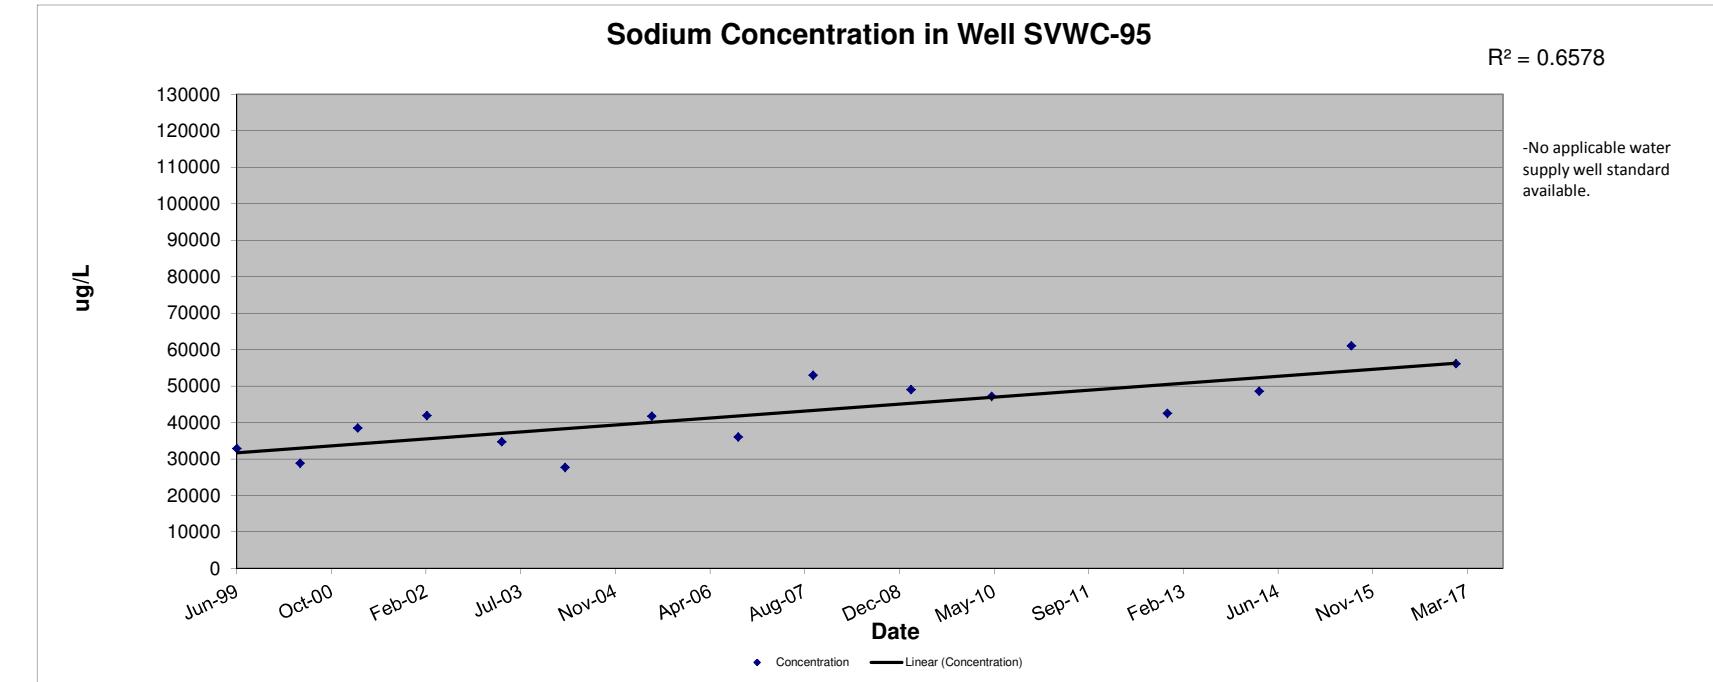

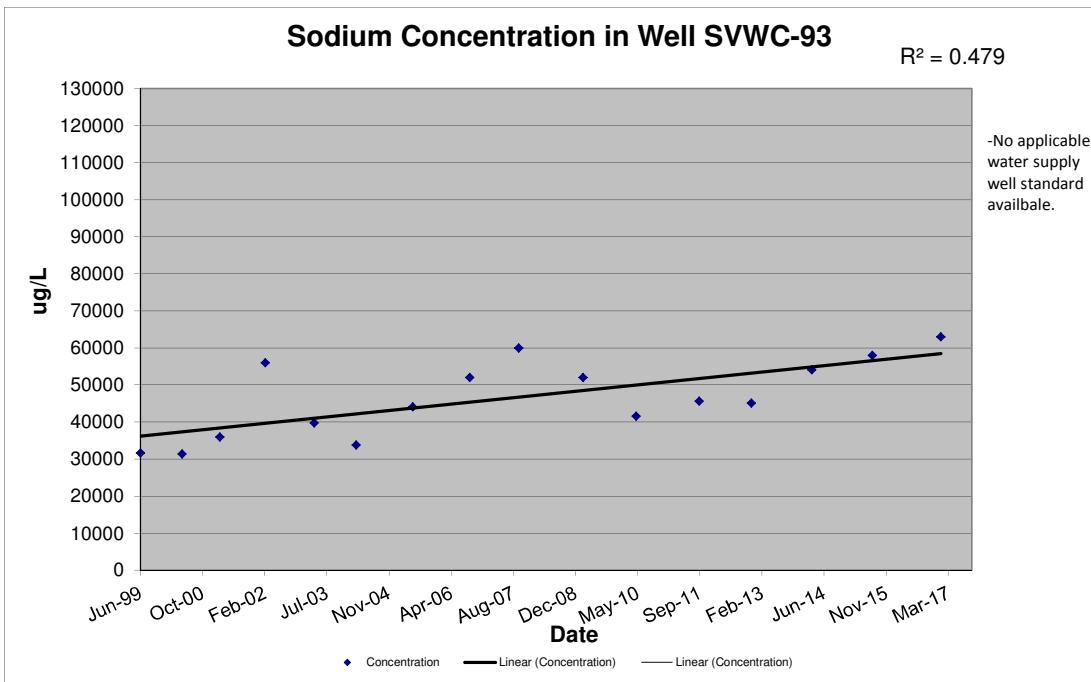

TABLE 19

**Notes:**

Values in **BOLD** indicate the reported concentration is greater than the ARAR for the groundwater monitoring wells or MCL for the private and municipal drinking water wells water quality standard.

NA = Not Analyzed

ND = Not Detected

< = The compound was analyzed for but not detected at the laboratory detection limit listed.

ARAR = Applicable or Relevant and Appropriate Requirement: NYSDEC TOGS 1.1.1 Ambient Water-Quality Standards and Guidance Values and Groundwater Effluent Limitations (June 1998).

MCL = Maximum Contaminant Level: USEPA National Primary Drinking Water Regulations.

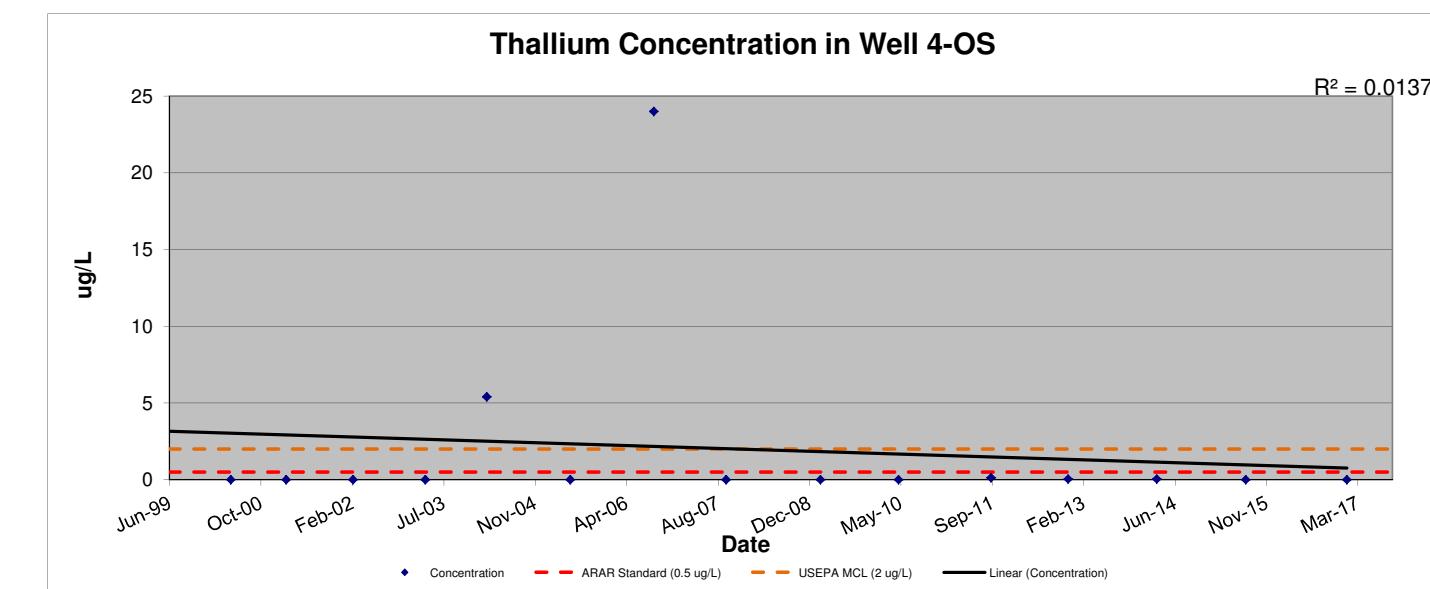

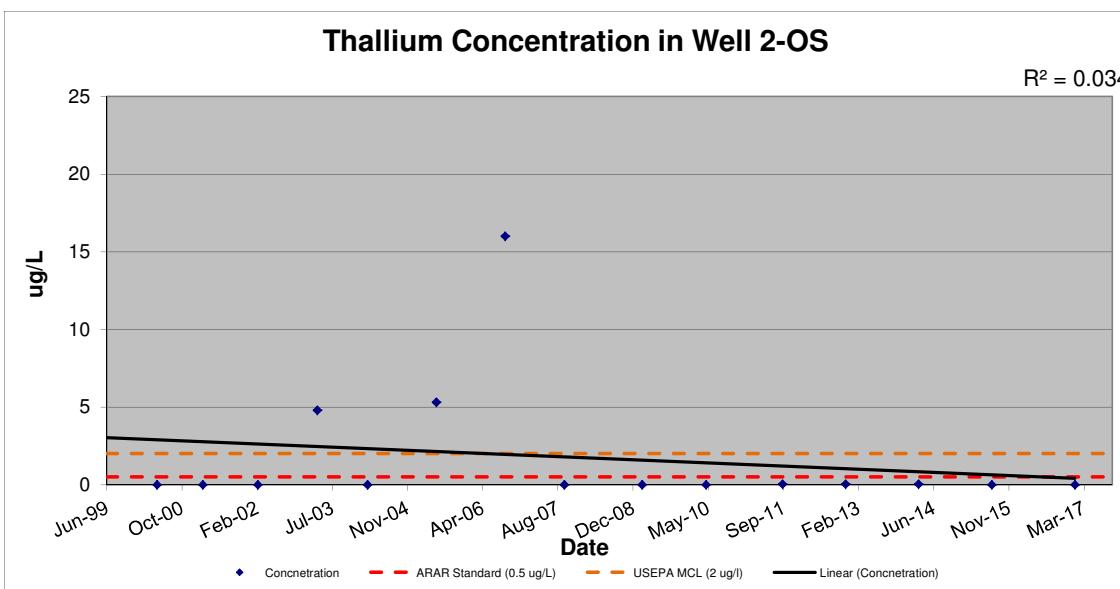

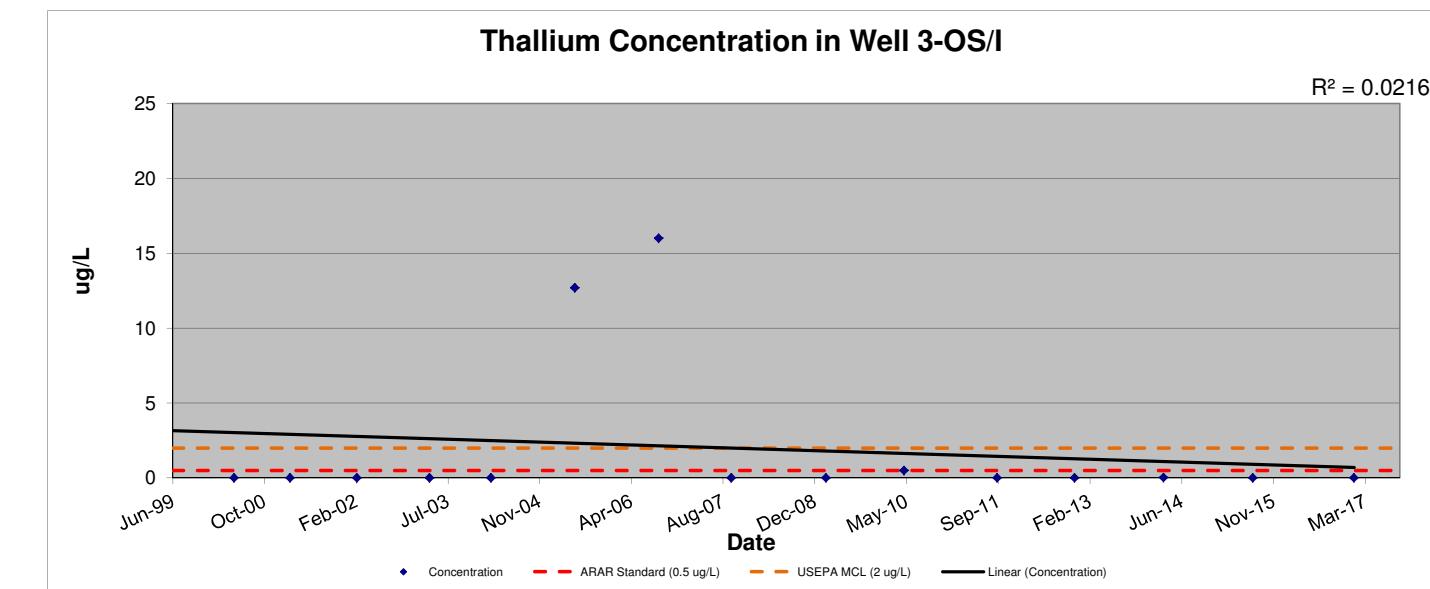

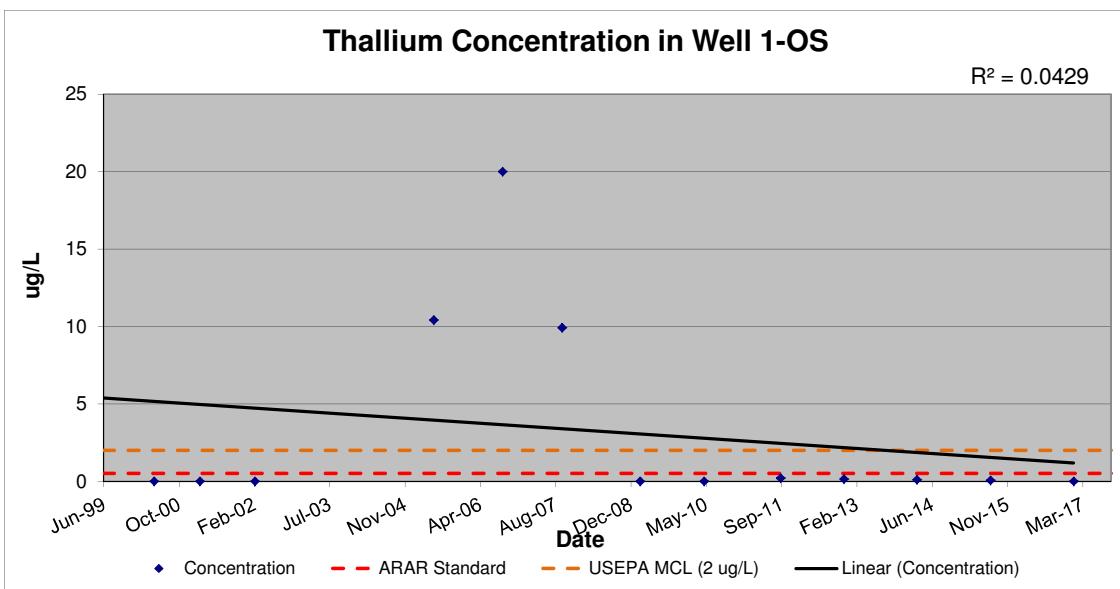

**Laboratory Qualifier Definitions**

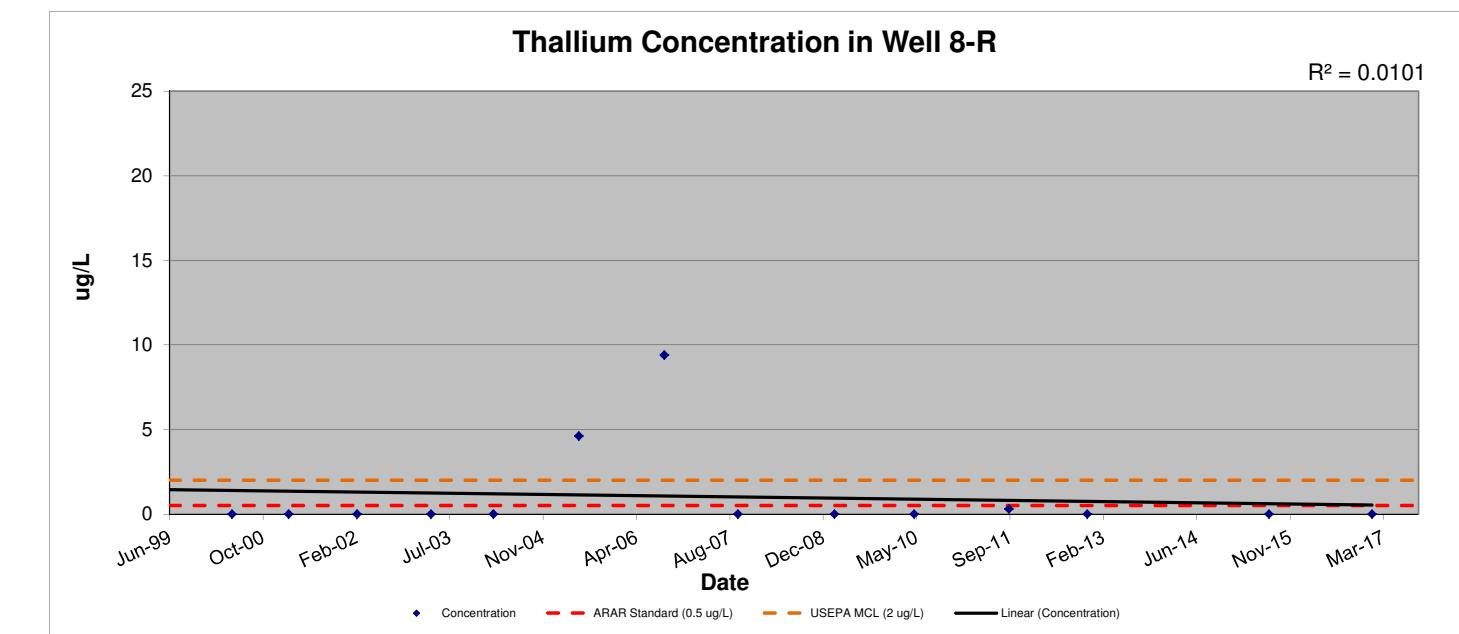

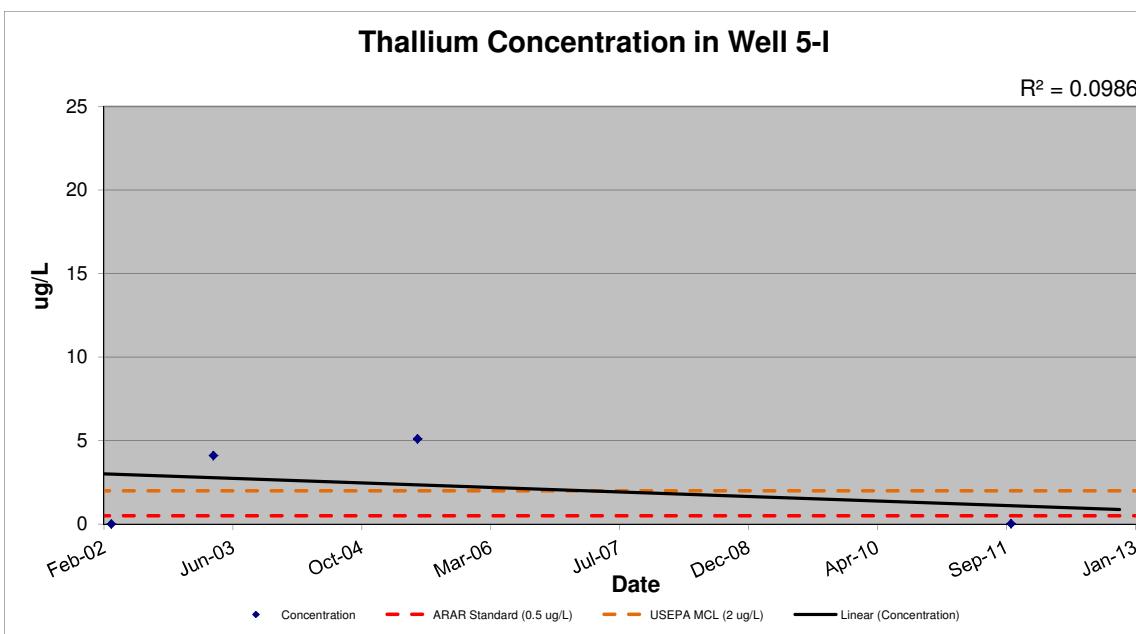

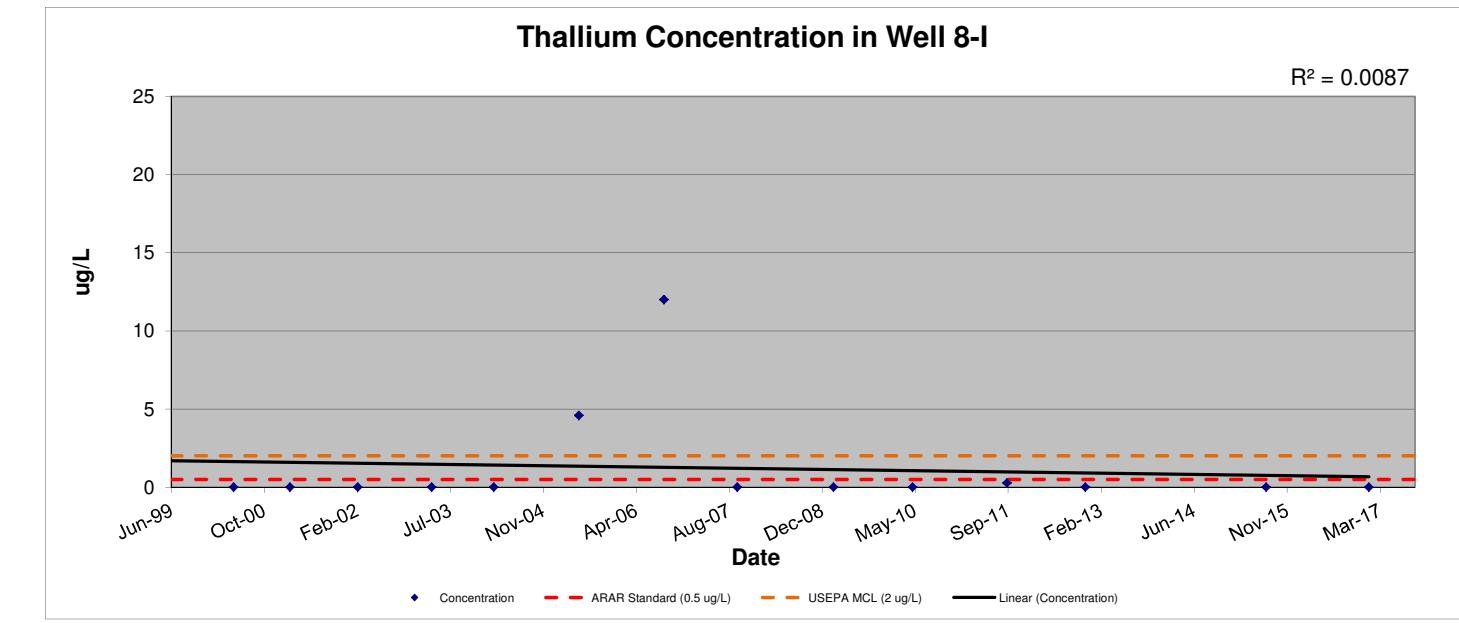

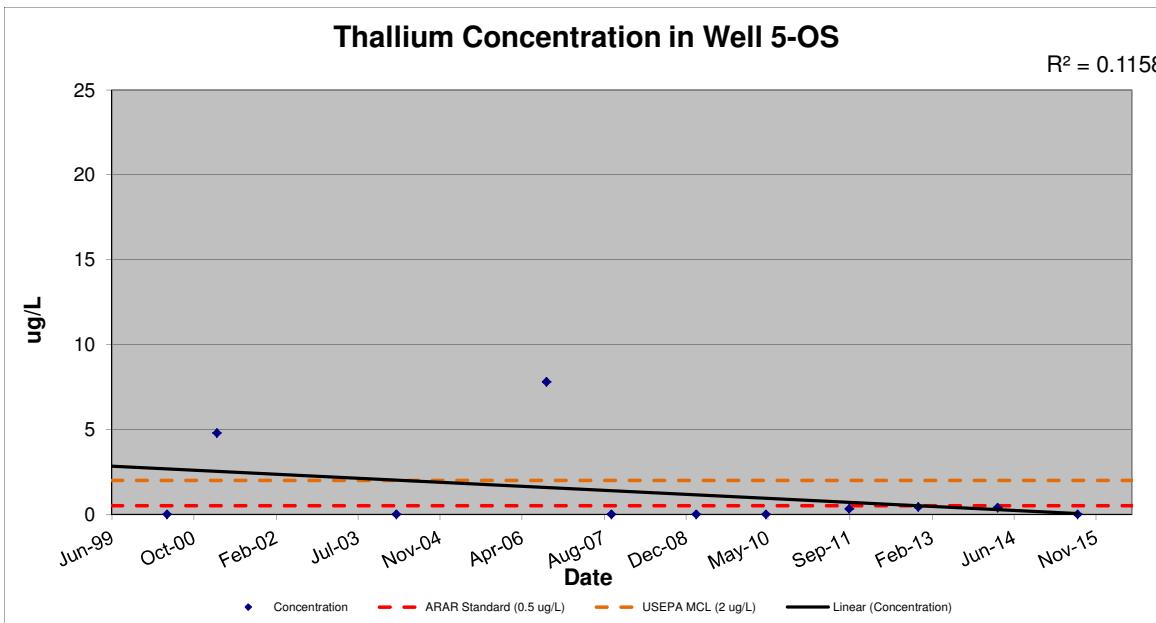

B = The reported value is less than the Contract Required Detection Limit, but greater than the Instrument Detection Limit.

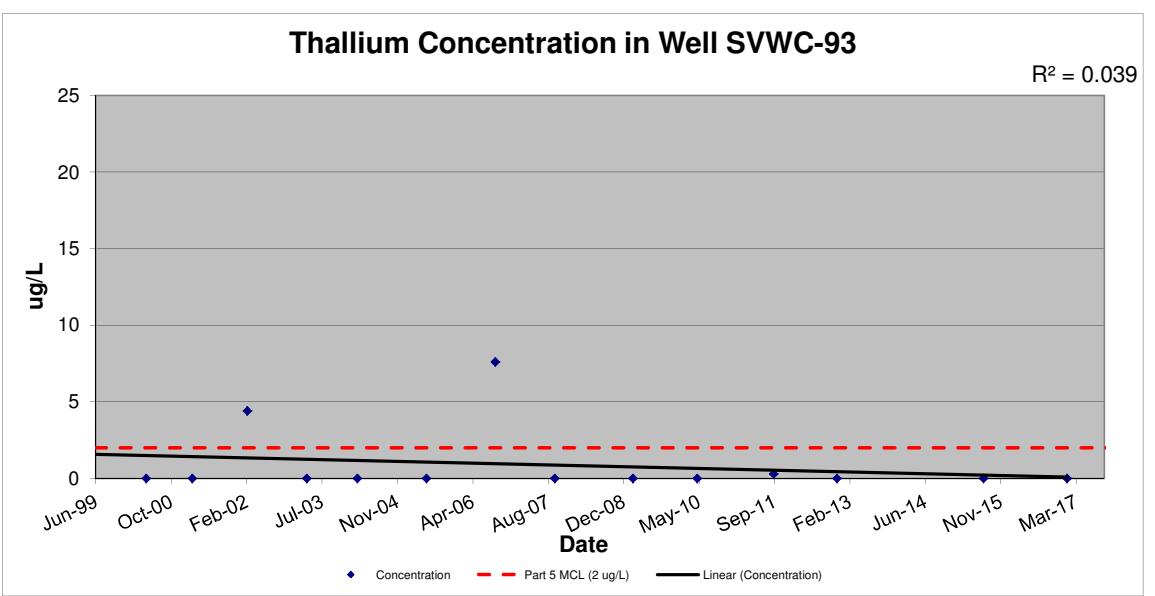

D14 = Dilution required due to high concentration of dissolved solids known to cause failure of routine quality control. Analytical method recommends a five-fold dilution for samples that contain greater than 2,000 mg/L of total solids.

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

N = Spiked sample recovery not within control limits.

Notes:

B = Indicates a value that is &gt; than method detection limit (MDL) but &lt; than laboratory quantitation limit.

J = Estimated value due to the compound was detected below the reporting limit.

u = Reported at concentration less than laboratory reporting limit.

(1) A surcharge will apply if BOD is &gt; 250 ppm

(2) A surcharge will apply if Suspended Solids is &gt; 300 ppm

(3) Could not report free Cyanide due to matrix interference

(4) Excluding metals, Phenol and Cyanides

(5) Does not include : Acrolein, Acrylonitrile, Benzidine, Parachlorometa cresol, 1, 2-diphenylhydrazine, 4-chlorophenyl phenyl ether, 4-bromophenyl phenyl ether, Methyl chloride, Methyl bromide, 4, 6 -dinitro-o-cresol

## **APPENDIX A**

### **INSPECTION CHECKLIST AND INSTITUTIONAL AND ENGINEERING CONTROLS EVALUATION FORM**

**TOWN OF RAMAPO LANDFILL**  
**POST-CLOSURE ANNUAL SITE INSPECTION CHECKLIST**

Date: 1/16/17

Inspected By: Cody Sargood & Joseph Spaulding – Sterling Environmental Engineering, P.C.

<b>Landfill Property Item</b>	<b>Condition: (Check applicable items)</b>			<b>Remarks</b>
	<b>Acceptable</b>	<b>Not Acceptable</b>	<b>Not Present</b>	
1. Vegetative Cover	X			Good condition – No problems noted.
2. Surface Water Drainage Structures (Swales, Downchutes, Channels, Plunge Pools, Outfalls to Torne Brook).		X		Overgrown vegetation is present in many of the drainage channels along the perimeter of the Landfill (see Photographs 3, 5, 13, and 15). Landfill Downchutes are in acceptable condition.
a. Sediment Build-Up in Drainage Structures	X			Some minor sediment buildup observed at the northernmost corner drainage swale (see Photograph 4).
b. Pooling or Ponding			X	Three (3) plunge pools (Plunge Pool No.'s 1, 2 and 3) are part of the drainage system, but are not on the Landfill cover (see Figure 4).
c. Slope Integrity	X			Good condition – No problems noted.
d. Overall Adequacy	X			
e. Concrete Lining	X			
f. Gabion Lining	X			
g. Corrugated Metal Pipe (CMP) Lining	X			
3. Access Road	X			Good condition – No problems noted.
4. Landfill Cover System	X			Overall acceptable condition.
a. Erosion Damage	X			Minor erosion observed along the southwestern side slope of the Landfill (see Photographs 10 and 11). The integrity of the slope is acceptable.
b. Leachate Seeps			X	Good condition – No problems noted.
c. Settlement			X	
d. Stone Aprons	X			

Landfill Property Item	Condition: (Check applicable items)			Remarks
	Acceptable	Not Acceptable	Not Present	
5. Gabion Retaining Walls	X			Good condition – No problems noted.
a. Structural	X			
b. Drainage Media Behind Wall	X			
6. Fence and Gates	X			Good condition – No problems noted.
7. Slope Stability	X			Good condition – No problems noted.
a. Landfill	X			
b. Mountain Side	X

Obtain Groundwater Extraction Well Operation Period Records and Maintenance Records for Current Year	X	

**Comments:**

Monitoring wells MW-3R, MW-4I and MW-5R have steel protective caps, but do not close properly. MW-3R is locked, but there is no J-Plug over the well's casing to completely shield it from the elements (see Photograph 25). MW-4I does have a PVC cap, however, the monitoring well's steel protective casing cannot be closed and locked (see Photograph 21). MW-5R does have a J-Plug, however, the monitoring well's steel protective cap cannot be closed and locked (see Photograph 20).

Monitoring well MW-7-OS is damaged. The outer steel and inner PVC casings are bent at three (3) feet from the top of the steel casing. STERLING was able to bend the protective steel cap to close and lock. STERLING wrapped the steel cap in duct tape to shield the well from the elements (see Photographs 22, 23 and 24).

# **INSTITUTIONAL AND ENGINEERING CONTROL EVALUATION FORM**

## **I. Site Background Information**

### **A. Site Name and Location:**

Site name as it appears on the Environmental Easement: Ramapo Landfill Site

Name of the current property owner(s): Town of Ramapo

Site Street Address: 198 Torne Valley Road (or 200-300 Torne Valley Road)

Municipality (-ies): Town of Ramapo County (-ies): Rockland

Blocks: 3

Lots: 1

Source information obtained from: Town of Ramapo 2015 Assessment Roll

### **B. Person responsible for preparing Institutional and Engineering Control Evaluation Form:**

Person's Name: Mark P. Millspaugh, P.E.

Person's Title: President

Company Name: Sterling Environmental Engineering, P.C.

Relationship to the Site (check as appropriate): Owner \_\_\_\_\_ Operator \_\_\_\_\_

Lessee \_\_\_\_\_ Person Who Conducted the Cleanup \_\_\_\_\_

Other (describe) Environmental Consultant to Owner

Street Address: 24 Wade Road

City: Latham State: New York

Telephone Number: (518) 456-4900

Fax Number: (518) 456 - 3532

E-mail Address: mark.millspaugh@sterlingenvironmental.com

**C. Case Specific Information (Complete all that apply)**

- Site Name: Ramapo Landfill Site
- Site Registry Number: 344004
- Date of final Remediation Report and/or Certificate of Completion: September 30, 1997
- Name and program of assigned Project Manager at issuance of Environmental Easement:  
Robert W. Shick, Director, Division of Environmental Remediation

**D. Existing Site Conditions**

- Describe the physical characteristics of the site (features, topography, drainage, vegetation, access, etc.). If necessary, attach additional sheets.

See #1 Attached.

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

- Describe the current site operations/use. If necessary, attach additional sheets.

See #2 Attached.

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

- Describe visual integrity/condition engineering control. If necessary, attach additional sheets.

See #3 Attached.

## **II. Protectiveness Evaluation**

**A. Environmental Easement and Engineering Control Information (Complete below)**

- Provide the following information for the recorded Environmental Easement:

Book Number:

Page Number:

Date the date the Environmental Easement was filed in the office of the county recording officer: June 28, 2012 - Town of Ramapo Supervisor  
(accepted by the State of NY July 12, 2012)

- Have any amendments and/or additional filings been recorded that may modify or supersede the Environmental Easement?

Yes \_\_\_\_ No x

If "Yes", provide an explanation. If necessary, attach additional sheets.

---

---

---

---

---

**B. Evaluation of Institutional and Engineering Controls**

**1. Zoning or Land Use Changes (Complete below)**

a. Land use at the time the Environmental Easement was filed (check all that apply):

Non-Residential x Residential \_\_\_\_ Agricultural \_\_\_\_ Other \_\_\_\_

b. Current land use (check all that apply):

Non-Residential x Residential \_\_\_\_ Agricultural \_\_\_\_ Other \_\_\_\_

c. Has there been an actual or pending zoning or land-use change?

Yes \_\_\_\_ No x

**2. Inspections (Complete below)**

Have periodic inspections of the site identified any excavation or other disturbance activities that have taken place within the restricted areas?

Yes \_\_\_\_ No x

Date(s) of Disturbance: \_\_\_\_\_

Duration of Disturbance: Years \_\_\_\_ Months \_\_\_\_ Days \_\_\_\_

Date the NYSDEC was notified: \_\_\_\_\_

Date Work Plan Approved: \_\_\_\_\_

Description of the disturbance and methods to address the disturbance. If necessary, attach additional sheets.

---

---

---

Name of Contact Person Relative to the Disturbance:

---

Title: \_\_\_\_\_

Street Address: \_\_\_\_\_

City: \_\_\_\_\_ State: \_\_\_\_\_ Zip Code: \_\_\_\_\_

Telephone Number: \_\_\_\_\_

Email Address: \_\_\_\_\_

**3. Changes to Laws and Regulations (Complete below)**

- a. Are there any subsequently promulgated or modified environmental laws or regulations, which apply to the site?

Yes \_\_\_\_ No x \_\_\_\_

- b. If "Yes", has the evaluation also determined that the Environmental Easement and engineering control, as applicable, meets the requirements of the new laws and regulations?

Yes \_\_\_\_ No \_\_\_\_

- c. The Environmental Easement and engineering control, as applicable that did not meet the requirements of the new laws and regulations has been addressed in the following manner to bring them into compliance. If necessary, attach additional sheets.

---

---

---

1. The Ramapo Landfill Site encompasses 86.07 acres and is located east of Torne Valley Road and immediately south of Baler Boulevard. The Baler Building, which is actively accepting waste, is located on Baler Boulevard and is adjacent to the Landfill to the northeast. The highest elevation of the site is located on the eastern most edge of the site. The Landfill slopes downward in a westerly direction towards Torne Brook. The lowest elevation of the site is located along the southwestern edge of the property. Stone and concrete drainage ditches are present along the perimeter of the Landfill. Several stone drainage channels and swales are connected to four (4) main stone drainage downchutes that drain into the western perimeter drainage ditch of the Landfill. The site is covered with suitable shallow rooted vegetation with no evidence of erosion. Some deeper rooted vegetation is present in drainage structures across the Landfill. The Landfill is surrounded by perimeter fencing and can only be accessed through an access gate at the northeast edge of the Landfill adjacent to Baler Boulevard.
2. The Landfill stages compost wind rows on the upper east edge of the property, as well as a shooting range for the Town of Ramapo Police Department. The Landfill is mowed regularly to prevent deep rooted vegetation to grow and damage the cover; however, portions of the Landfill are not mowed due to Timber Rattlesnake habitats.
3. The Ramapo Landfill Site was observed to be in good condition during the inspection on January 16 through January 19, 2017. The Landfill cover was observed to be in good condition with no evidence of surface water ponding. De minimus evidence of erosion was observed along the southwestern most side slope of the Landfill. STERLING will continue to monitor in order to ensure substantial erosion does not occur. No evidence of sloughing was observed and the overall physical integrity of the Landfill is in good condition. The majority of the drainage structures onsite are in good working condition. Some deeper rooted vegetation is present within the Landfill drainage structures identified on the Landfill Inspection Form in Appendix A and should be maintained.

**APPENDIX B**

**NYSDEC INSTITUTIONAL AND ENGINEERING CONTROLS  
CERTIFICATION FORM**

Enclosure 2  
NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION  
Site Management Periodic Review Report Notice  
Institutional and Engineering Controls Certification Form

Site No. **344004**

Site Details

Box 1

Site Name Ramapo Town Landfill

Site Address: Torne Valley Road Zip Code: 10901

City/Town: Ramapo

County: Rockland

Site Acreage: 80.0

Reporting Period: January 1, 2016 to March 31, 2017

YES      NO

1. Is the information above correct? **X**

If NO, include handwritten above or on a separate sheet.

2. Has some or all of the site property been sold, subdivided, merged, or undergone a tax map amendment during this Reporting Period? **X**

3. Has there been any change of use at the site during this Reporting Period (see 6NYCRR 375-1.11(d))? **X**

4. Have any federal, state, and/or local permits (e.g., building, discharge) been issued for or at the property during this Reporting Period? **X**

If you answered YES to questions 2 thru 4, include documentation or evidence that documentation has been previously submitted with this certification form.

5. Is the site currently undergoing development? **X**

Box2

YES      NO

6. Is the current site use consistent with the use(s) listed below? **X**  
Commercial and Industrial

7. Are all ICs/ECs in place and functioning as designed? **X**

IF THE ANSWER TO EITHER QUESTION 6 OR 7 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.

A Corrective Measures Work Plan must be submitted along with this form to address these issues.\*

\*As described in Section 4.2.2 of the Periodic Review Report, seeps have been investigated through work plans approved by NYSDEC pursuant to the Order on Consent

## Periodic Review Report (PRR) Certification Statements

1. I certify by checking "YES" below that:

- a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the certification;
- b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and compete.

✓ YES

2. If this site has an IC/EC Plan (or equivalent as required in the Decision Document), for each Institutional or Engineering control listed in Boxes 3 and/or 4, I certify by checking "YES" below that all of the following statements are true:

- (a) the Institutional Control and/or Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;
- (b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;
- (c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;
- (d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and
- (e) ~~if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.~~ [Not Applicable]

✓ YES

IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and  
DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.

A Corrective Measures Work Plan must be submitted along with this form to address these issues.

**Report Date:** 01/24/17

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Lab Number:** L1701491  
**Report Date:** 01/24/17

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Volatile Organics by Method 624

L1701491-12 and -14: The pH of the sample was less than two. It should be noted that 2-Chloroethylvinyl ether breaks down under acidic conditions.

#### Metals

The WG970682-4 Laboratory Duplicate RPD, performed on L1701491-01, is outside the acceptance criteria for manganese (36%). The elevated RPD has been attributed to the non-homogeneous nature of the native sample.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### **Footnotes**

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### **Terms**

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### **Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** RAMAPO LANDFILL  
**Project Number:** 20010

**Lab Number:** L1701491  
**Report Date:** 01/24/17

**Data Qualifiers**

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

*Report Format:* DU Report with 'J' Qualifiers

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEX data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Project Name:** RAMAPO LANDFILL  
**Project Number:** 20010

**Lab Number:** L1701799  
**Report Date:** 01/25/17

### Case Narrative (continued)

#### Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

#### Sample Receipt

L1701799-06: The sample ID was specified by the client.

#### Volatile Organics by Method 624

The WG971582-6 MS recovery for benzene (120%), performed on L1701799-10, is outside Alpha's acceptance criteria, but within the acceptance criteria specified in the method.

#### Metals

The WG971698-3/-4 MS/MSD recoveries for calcium (70%/50%), performed on L1701799-10, do not apply because the sample concentration is greater than four times the spike amount added.

#### Alkalinity, Total

The WG971297-4 MS recovery (85%), performed on L1701799-10, is outside the acceptance criteria; however, the associated LCS recoveries are within criteria. No further action was taken.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### **Footnotes**

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### **Terms**

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### **Data Qualifiers**

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the

**Report Format:** DU Report with 'J' Qualifiers

**Project Name:** RAMAPO LANDFILL  
**Project Number:** 20010

**Lab Number:** L1701799  
**Report Date:** 01/25/17

**Data Qualifiers**

reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

**The following analytes are not included in our Primary NELAP Scope of Accreditation:**

**Westborough Facility**

EPA 624: m/p-xylene, o-xylene

EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 300: DW: Bromide

EPA 6860: NPW and SCM: Perchlorate

EPA 9010: NPW and SCM: Amenable Cyanide Distillation

EPA 9012B: NPW: Total Cyanide

EPA 9050A: NPW: Specific Conductance

SM3500: NPW: Ferrous Iron

SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

SM5310C: DW: Dissolved Organic Carbon

**Mansfield Facility**

SM 2540D: TSS

EPA 3005A NPW

EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

**Biological Tissue Matrix**: EPA 3050B

Re: Wastewater Analysis Report/s - 2015

**DEPARTMENT OF  
PUBLIC WORKS**

Dear Mr. Sadowski:

Enclosed is the analysis report/s for the sample/s collected from your facility on February 24, 2016. The sampling is conducted to comply with the requirements of the Wastewater Discharge Permit and the Pretreatment Program. The charges for such services as deemed applicable by the District will be billed to you in the early part of 2017.

Should you have any questions or need additional information please call this office.

Very truly yours,  
  
Joan Roth  
Compliance Administrator

RLs = Laboratory Reporting/Quantitation Limit

When "xx" is present immediately following the "RLs" units, the "RLs" is the Method Detection Limit (MDL).

A result of "ND" indicates the concentration of the analyte tested was either not detected or below the RLs.

"B" indicates a value that is > than MDL but < than laboratory quantitation limit and the concentration is an estimated value.

\*Analysis was performed by Phoenix Environmental Laboratories Inc., 587 East Middle Turnpike, P.O. Box 370, Manchester, CT 06040.

NY Lab Registration #11301

\*RL/PQL= Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation)

\*ND = Not Detected, BRL = Below Reporting Limit

Re: Wastewater Analysis Report/s - 2015

Dear Mr. Sadowski:

Enclosed is the analysis report/s for the sample/s collected from your facility on June 8, 2016. The sampling is conducted to comply with the requirements of the Wastewater Discharge Permit and the Pretreatment Program. The charges for such services as deemed applicable by the District will be billed to you in the early part of 2017.

Should you have any questions or need additional information please call this office.

Very truly yours,  
  
Joan Roth  
Compliance Administrator

RLs = Laboratory Reporting/Quantitation Limit

When "\*" is present immediately following the "RLs" units, the "RLs" is the Method Detection Limit (MDL).

A result of "ND" indicates the concentration of the analyte tested was either not detected or below the RLs.

"B" indicates a value that is > than MDL but < than laboratory quantitation limit and the concentration is an estimated value.

\*Analysis was performed by Phoenix Environmental Laboratories Inc., 587 East Middle Turnpike, P.O. Box 370, Manchester, CT 06040.

NY Lab Registration #11301

\*RL/PQL= Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation)

\*ND = Not Detected, BRL = Below Reporting Limit

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the systems, or those persons directly responsible for gathering the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Re: Wastewater Analysis Report/s - 2015

**TOWN OF RAMAPO**

OCT 31 2016

**DEPARTMENT OF  
PUBLIC WORKS**

Dear Mr. Sadowski:

Enclosed is the analysis report/s for the sample/s collected from your facility on September 21, 2016. The sampling is conducted to comply with the requirements of the Wastewater Discharge Permit and the Pretreatment Program. The charges for such services as deemed applicable by the District will be billed to you in the early part of 2017.

Should you have any questions or need additional information please call this office.

Very truly yours,

Joan Roth  
Compliance Administrator

Encl

RLs = Laboratory Reporting/Quantitation Limit

When "\*" is present immediately following the "RLs" units, the "RLs" is the Method Detection Limit (MDL).

A result of "ND" indicates the concentration of the analyte tested was either not detected or below the RLs

"B" indicates a value that is > than MDL but < than laboratory quantitation limit and the concentration is an estimated value

\*Analysis was performed by Phoenix Environmental Laboratories Inc., 587 East Middle Turnpike, P.O. Box 370, Manchester, CT 06040.  
NY Lab Registration #11301

\*RL/PQL= Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation)

\*ND = Not Detected, BRL = Below Reporting Limit

Sample Size:	1 liter	pH:	5.0-9.0
Matrix:	Non-Potable Water	Dilution Factor:	1

Compound Name	LOD ( $\mu\text{g/L}$ )	Result ( $\mu\text{g/L}$ )		Compound Name	LOD ( $\mu\text{g/L}$ )	Result ( $\mu\text{g/L}$ )
Aldrin	0.20	ND		Endrin	0.10	ND
Alpha-BHC	0.10	ND		Endrin aldehyde	0.20	ND
Beta-BHC	0.10	ND		Heptachlor	0.19	ND
Gamma-BHC (Lindane)	0.10	ND		Heptachlor Epoxide	0.10	ND
Delta-BHC	0.20	ND		Toxaphene	0.72	ND
Chlordane	0.72	ND		Methoxychlor	0.20	ND
4, 4'-DDD	0.20	ND		PCB-1016	0.40	ND
4, 4'-DDE	0.10	ND		PCB-1221	0.88	ND
4,4'-DDT	0.30	ND		PCB-1232	0.88	ND
Dieldrin	0.10	ND		PCB-1242	0.81	ND
Alpha-Endosulfan	0.10	ND		PCB-1248	0.79	ND
Beta-Endosulfan	0.10	ND		PCB-1254	0.88	ND
Endosulfan sulfate	0.20	ND		PCB-1260	0.20	ND

LOD = Limit of Detection

A result of "ND" indicates that the analyte was Not Detected at the Limit of Detection

"J" indicates a value that is greater than LOD but less than the lowest calibration standard and the result is an estimated value

"D" = Diluted; "B" = Compound also found in the Lab Blank

RLs = Laboratory Reporting/Quantitation Limit

When "\*\*\*\*" is present immediately following the "RLs" units, the "RLs" is the Method Detection Limit (MDL).

A result of "ND" indicates the concentration of the analyte tested was either not detected or below the RLs

"B" indicates a value that is > than MDL but < than laboratory quantitation limit

\*Analysis was performed by Phoenix Environmental Laboratories Inc., 587 East Middle Turnpike, P.O. Box 370, Manchester, CT 06040. NY Lab Registration #11301

\*RL/PQL= Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation)

\*ND = Not Detected, BRL = Below Reporting Limit

\*Total Metals Digestion was completed on 09/22/16
