Sampling Data Legend

U - Indicates that the compound was analyzed for but not detected.
X - Matrix Spike Compound
J - Indicates that the compound was analyzed for and determined to be present in the sample
The mass spectrum of the compound meets the identification criteria of the method.
The concentration listed is an estimated value, which is less than the specified minimum detection limit,
but is greater than zero
B - This flag is used when the analyte is found in the blanks as well as the sample.
It indicates possible sample contamination and warns the data user to use caution when applying the results of t
Value will not be listed on tabular result sheet.
S - Estimated due to surrogate outliers
E - Indicates that it exceeds calibration curve rang.
v - Value edited in accordance with data validation findings
UJ - The analyte failed to satisfy minimum requirements in initial and continuing calibrations, however relative response factors below the required minimum were reported for low level aqueous and soil matrices.
The response was sufficient to indicate that the compound can be detected if present in samples. Therefor, this data should be considered a completely usable estimation.
NJ - Although this compound was analyzed for, it was not requested as an analyte. Its identification is presumptive and should be considered a usable estimation.
R - This data was found to be unusable and has therefor been rejected
