Subject: Air Sampling Summary Report  
Sub-Slab Depressurization System Termination  
Tops Markets #532 - 271 Main Street, New Paltz  
STERLING File #2017-06

Dear Mr. Hubicki,

This letter provides a summary of collected data needed to petition for termination of the sub-slab depressurization (SSD) system operating at the Tops Markets, LLC (Tops) store (#532) located in the New Paltz Plaza, 271 Main Street, New Paltz, NY. The following work summary is in accordance with the New York State Department of Health (NYSDOH) *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, dated October 2006, updated May 2017.

The SSD system was installed during the grocery store construction in the spring and summer of 2006. The system beneath the grocery store was designed and installed by the engineering consultant for Stop & Shop Supermarket Company LLC (Stop & Shop), and was approved by the New York State Department of Environmental Conservation (NYSDEC) and the NYSDOH. Tops recently replaced Stop & Shop as the leasee of the store and seeks to shutdown the SSD system with the approval of NYSDEC and NYSDOH.

Sterling Environmental Engineering, P.C. (STERLING) proposes to shutdown the system immediately, on behalf of Tops, upon receiving approval from NYSDEC and NYSDOH following review and approval of this report. The system was shutdown on July 11, 2017 and sampling approved by NYSDEC and NYSDOH was completed on September 12, 2017. The system was restarted on September 21, 2017 and continues to operate until a determination is made by the aforementioned agencies regarding permanent termination of the SSD system.

#### **Background and Purpose**

Stop & Shop began voluntarily operating the SSD system in December 2006 as a precautionary measure to prevent potential vapor intrusion into the building. The SSD system consists of six (6) parallel runs of 2-inch diameter perforated PVC piping installed beneath the building slab and a vapor barrier. Sub-slab monitoring ports for each of the six (6) perforated PVC laterals are located on landscaping islands to the south of the building. The length of the subsurface piping ranges from approximately 230 to 245 feet from the north end of the store to the sampling ports.

*“Serving our clients and the environment since 1993”*

The perforated PVC piping connects to a 2-inch diameter solid PVC manifold located on the northern wall of the building. The manifold is vented to the atmosphere through a 6-inch diameter riser pipe which extends up the northern wall of the building to a roof-mounted vacuum blower. An as-built drawing of the SSD system is provided as Attachment 1, including the location of samples collected during this investigation.

The purpose of this letter report is to provide the sample analytical data to demonstrate sub-slab vapors are not affecting indoor air quality when the SSD system is turned off, based upon indoor air, outdoor air and sub-slab vapor sampling results.

### **Building Inventory**

Prior to the sampling, STERLING performed an inventory of the building (Attachment 2). The inventory included screening of volatile gases in the vicinity of proposed indoor air sampling locations using a RAE Systems MiniRAE 3000 photoionization detector (PID) with an 11.7 eV lamp. The purpose of the inventory was to identify potential sources of volatile gases in the building other than intrusion of sub-slab vapors.

Supermarkets contain a large number of commercially available products for sale that potentially contain a range of volatile organic compounds (VOCs) that could be detected in indoor air samples. Generally, such products available on store shelving for retail sale, or in storage at the store, are unopened and/or sealed and are not of concern with respect to indoor air sampling. Unopened and undamaged commercial products for retail sale were not included in the building inventory.

### **Sample Collection**

STERLING collected indoor/outdoor air and sub-slab vapor samples using laboratory supplied and certified 6-Liter capacity Summa® canisters fitted with a laboratory-calibrated critical orifice flow regulation device sized to allow the collection of the air samples over a 12 hour period.

#### *Sub-Slab Vapor Sampling*

A vacuum pump was connected to the sampling ports on collection laterals #2, #4, and #6 and a volume of air equal to or greater than the volume of the subsurface pipe was evacuated before sampling. Three (3) sub-slab vapor samples (SV-1, SV-1, and SV-3) were collected at existing sub-slab monitoring ports #2, #4, and #6. The sample collected from sub-slab monitoring port #6 was not submitted for laboratory analysis due to the failure of the orifice flow regulation device.

Prior to collecting a sub-slab vapor sample, a helium tracer test was conducted to ensure that the sampling port is properly sealed. The helium tracer test was conducted using a shroud, helium gas as a tracer, and a helium detector. The shrouds were placed over the sampling ports, and helium gas was introduced into the shroud. A helium detector was used to test the sampling port for the presence of helium to verify that helium was not leaking into the sampling port. No helium was present in the sampling port, establishing that leakage did not occur through the seal.

#### *Indoor Air Sampling*

Three (3) indoor air samples (IA-1, IA-2, and IA-3) were collected at three (3) equally spaced locations in the store area shown in Attachment 1. Sampling locations were selected based on store conditions and access in the store interior. Indoor air samples were collected at floor level, closest to where sub-slab vapors, if any, might enter through the building slab.

### *Outdoor Air Sampling*

One (1) outdoor air sample (OA-1) was collected from an upwind location with respect to the onsite building for comparison to the sub-slab and indoor air samples.

### **Sample Analysis and Reporting**

The Summa® canister samples were submitted to Alpha Analytical Laboratory of Mansfield Massachusetts, a NYSDOH Environmental Laboratory Approval Program (ELAP) certified analytical laboratory for analysis of VOCs by USEPA Method TO-15. The laboratory report is provided in Attachment 3. A summary table of the laboratory analytical data is presented below in Table 1.

**Table 1**

Sample ID	IA-1	IA-2	IA-3	SV-1	SV-2	OA-1	Soil Vapor / Indoor Air Decision Matrix Conclusion
Compound	Concentration ( $\mu\text{g}/\text{m}^3$ )						
Vinyl Chloride	ND	ND	ND	ND	ND	ND	No Further Action – Matrix C
1,1-Dichloroethene	ND	ND	ND	ND	ND	ND	No Further Action – Matrix A
Cis-1,2-Dichloroethene	0.025	0.022	0.027	ND	ND	ND	No Further Action – Matrix A
1,1,1-Trichloroethane	ND	ND	ND	ND	ND	ND	No Further Action – Matrix B
Carbon Tetrachloride	0.099	0.104	0.107	ND	ND	0.078	No Further Action – Matrix A
Trichloroethene	0.027	ND	ND	ND	ND	ND	No Further Action – Matrix A
Tetrachloroethene	0.091	0.085	0.099	ND	2.34	0.088	No Further Action – Matrix B

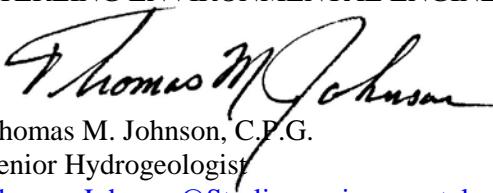

ND= Not Detected

### **Conclusions and Recommendations**

Analytical results from the sub-slab, indoor, and ambient outdoor air samples were compared to the values established by the May 2017 update to the *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, dated October 2006. As indicated in the right hand column in Table 1, no further action is required, according to the decision matrix and the laboratory analytical results for the indoor air and sub-slab vapor samples. On this basis, STERLING requests to cease all operation, maintenance, and monitoring of the SSD system.

Please contact me with any questions regarding this report.

Very truly yours,  
STERLING ENVIRONMENTAL ENGINEERING, P.C.

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

### Case Narrative (continued)

#### Volatile Organics in Air

Canisters were released from the laboratory on September 1, 2017. The canister certification results are provided as an addendum.

L1732228-01 through -03 results for Acetone should be considered estimated due to co-elution with a non-target peak.

L1732228-05: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

#### Sample Receipt

The canister ID number for the sample designated TOPS-IA-3 (L1732228-03) is listed on the CoC as 2243 but should be 489.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### **Acronyms**

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

### **Footnotes**

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### **Terms**

- Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.
- Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.
- Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.
- Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.
- Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

### **Data Qualifiers**

- A - Spectra identified as "Aldol Condensation Product".
- B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related

**Report Format:** Data Usability Report

**Project Name:** TOPS  
**Project Number:** 2017-06

**Lab Number:** L1732228  
**Report Date:** 09/19/17

**Data Qualifiers**

projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedances are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the reporting limit (RL) for the sample.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

## Certification Information

---

**The following analytes are not included in our Primary NELAP Scope of Accreditation:**

**Westborough Facility**

EPA 624: m/p-xylene, o-xylene  
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.  
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.  
EPA 300: DW: Bromide  
EPA 6860: NPW and SCM: Perchlorate  
EPA 9010: NPW and SCM: Amenable Cyanide Distillation  
EPA 9012B: NPW: Total Cyanide  
EPA 9050A: NPW: Specific Conductance  
SM3500: NPW: Ferrous Iron  
SM4500: NPW: Amenable Cyanide, Dissolved Oxygen; SCM: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.  
SM5310C: DW: Dissolved Organic Carbon

**Mansfield Facility**

SM 2540D: TSS  
EPA 3005A NPW  
EPA 8082A: NPW: PCB: 1, 5, 31, 87, 101, 110, 141, 151, 153, 180, 183, 187.  
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.  
Biological Tissue Matrix: EPA 3050B
