Appendix B - Regulatory Information/ERIIS Report

1.0 SUMMARY

The Chazen Companies (TCC) have performed a Phase I Environmental Site Assessment in conformance with the scope and limitation set forth in ASTM Practice E 1527-94 of the Airport Realty (former Shop Rite) property located on Boices Lane, Town of Ulster, New York. Any exceptions to, or deletions from, this practice are described in Section 2.4 of this report.

The assessment, performed during February 1996, was comprised of an interview with the property owner and local officials familiar with the site, regulatory and historic information review and a site reconnaissance by TCC personnel. The site reconnaissance was performed on February 14, 1996 by George B. Minervini for TCC.

Except for the following, the assessment has revealed no signs of recognized environmental conditions regarding the subject property:

- Suspect asbestos containing materials (ACM) in the form of floor tiles are present in the portions of the former Shop Rite building now occupied by Miron Clearance Center. Approximately 660 square feet of suspect ACM was identified. If this material is to be disturbed by demolition, renovation or remodeling, bulk samples should be collected for laboratory analysis to determine asbestos content. If asbestos is detected in amounts greater than 1%, these materials should be handled in accordance with applicable federal and state regulations.
- One pad mounted transformer, identified with Central Hudson Gas & Electric (CHG&E) as #621269, is located near the southwest corner of the Miron Clearance Center (former Shop Rite). Conversation with personnel at CHG&E indicates that the cooling oil within the unit has not been tested for PCB content. No evidence of leakage was identified around the unit during the site investigation.
- One spill of petroleum product is reported to have occurred at the rear of the property in the Bear Cat Kill on May 19, 1988. The spill event has been assigned a status of "C" by the NYSDEC. A "C" status indicates that the spill has been cleaned up and all paperwork completed.

2.0 INTRODUCTION

2.1 Purpose

This Phase I Environmental Site Assessment was performed to assess current site conditions and to identify potential environmental liabilities associated with the Airport Realty, located on Boices Lane, Town of Ulster, New York.

Specifically, the goal of this assessment was to identify "the presence or likely presence of any hazardous substances or petroleum products on the property under conditions that indicate an existing release, a past release, or a material threat of a release of any {such} substances into structures on the property or into the ground, groundwater, or surface water of the property." This practice is intended to permit a user to satisfy the "appropriate inquiry" requirement to qualify for the innocent landowner defense to CERCLA liability (42 USC 9601(35)(B)).

2.2 Special Terms and Conditions

The conditions of this contract do not include any additional services beyond the scope of work outlined in the proposal for this report.

2.3 Limitations and Exceptions of Assessment

This Phase I Environmental Site Assessment is site specific in that it relates to assessment of environmental conditions at the subject commercial property. Consequently, this practice does not address many additional issues raised in transactions such as purchases of business entities, or interests therein, or of their assets, that may well involve environmental liabilities pertaining to properties previously owned or operated or other off-site environmental liabilities.

2.4 Limiting Conditions and Methodology Used

No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice, in accordance with ASTM Standards, is intended to reduce, but not eliminate such uncertainty. Accordingly, TCC accepts no responsibility for any deficiencies, misstatements or inaccuracies contained in this report which occur as a result of misrepresentations, omissions or fraudulent acts of the sources questioned. Furthermore, opinions and recommendations presented in this report apply to site conditions existing at the time of the TCC evaluation and cannot necessarily apply to future conditions.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property consists of an irregularly shaped parcel of land containing approximately 4.3 acres located on the south side of Boices Lane. The property is located immediately west of the intersection of Boices Lane and U.S. Route 9W (Figures 1 and 2). The 4.3 acre parcel is identified on the Ulster County Tax Records as being Section 48.42, Block 3, Lot 20.

3.2 Site and Vicinity Characteristics

The property is located in an area that over the years has become dedicated to commercial and retail enterprises including shopping malls, large retail outlets and smaller shops and strip malls containing commercial and retail businesses. The subject property is bordered on the west by a Consolidated Rail Corporation Right-of-Way.

3.3 Descriptions of Structures, Roads, Other Improvements on the Site

3.3.1 Structures

One structure is present on the property and consists of one approximately 33,000 square foot structure which formerly was operated as a Shop Rite food market and presently is operated as a clearance center for the Miron Corporation and an associated 11,400 square foot attached strip mall containing four separate store areas. Three of the store areas are presently occupied by the following retail outlets: Fantasy Video which occupies the easternmost store area; Empire Vision; Miron Liquors, and a vacant area formerly occupied by Lou's Submarines.

3.3.2 Roads

The property is accessed from both the west side of Route 9W and the south side of Boices Lane. The rear of the structure can also be accessed by the property located to the southeast, presently a retail beverage outlet.

3.3.3 Heating/Cooling System

The buildings are heated by gas fired forced hot air units and HVAC units are located on the roof of the smaller retail stores.

3.3.4 Sewage Disposal

Sanitary waste generated on the property are reportedly directed to the Municipal Sewer Collection System.

3.3.5 Water Supply

Water is reportedly supplied to the property by the Municipal Water Supply System.

3.4 Environmental Liens

Representatives of the Miron Corporation have indicated that they are not aware of any environmental liens in connection with the subject property.

3.5 Current Uses of Property

As mentioned in Section 3.3.1, the largest portion of the structure on site is presently operated as a Clearance Center for Miron products typically sold at the Miron Home Center (see photographs Appendix A). The retail stores located on the east side of the subject structure are small retail units operating as a video rental store, an eye wear outlet, and a liquor store.

3.6 Current Uses of Adjacent Properties

References made to adjacent properties by tax identification numbers can be correlated to Figure 2. Properties to the north, lots 1, 2 and 3, are occupied by Montgomery Ward, a small residence and Frank's Quick Stop, a small retail store respectively. Properties on the east side of Route 9W are retail/commercial properties identified as lot 7.1 (Color Tile), lot 7.2 (zoned commercial and vacant), lot 8 (a diner), and lot 9 (a shopping center called Shoppers World).

The adjacent property to the southeast (lot 19) is a retail discount beverage store. The adjacent land to the south (lot 25) is operated as the Hoffman Car Wash and as mentioned earlier the west boundary of the subject property is bordered by a Conrail Right-of-Way. Properties to the west of the Conrail Right-of-Way include a strip mall on lot 21.2 which contains offices for an insurance company, an art gallery and frame shop and a delicatessen. Lot 21.10 and lot 21.12 contain a larger building housing other retail type stores including a dry cleaning establishment identified as Quality Dry Cleaners. All adjacent properties are connected to the Municipal Sewage Collection System.

3.7 Persons Interviewed

George Crevling, Miron Corporation

Personnel at the Miron Clearance Center

Louis A. Perry, Building Inspector and Fire Inspector, Town of Ulster

Allen Dumas, Ulster County Department of Health.

4.0 RECORDS REVIEW

Federal and State databases were referenced by Environmental Risk Information & Imaging Services (ERIIS). A listing of referenced databases and the most recent update of each list made available by the regulatory agency is included in the ERIIS report located in Appendix B. In some instances, the exact location of listed sites could not be determined from addresses furnished by the regulatory agencies, and those sites are listed as "unplottable sites".

4.1 Standard Environmental Record Sources, Federal and State

4.1.1 Federal

A review of the United States Environmental Protection Agency (USEPA) National Priorities List (NPL) for Region II has shown that the Airport Realty property is not included on the NPL as a Superfund site. No NPL sites are located within 1.0 mile of the facility.

A review of the USEPA Comprehensive Environmental Responsibility, Compensation and Liability System (CERCLIS), a list of potential NPL sites, has shown that the Airport Realty property is not currently included in the CERCLIS database. No CERCLIS sites are located within 0.5 mile of the subject site.

A listing of Resource Conservation Recovery Act (RCRA) Treatment, Storage and or Disposal (TSD) Facilities for Hazardous Waste was also reviewed. The subject property does not appear on the RCRA information system data base; however one property located approximately .64 miles northwest identified as the IBM Corporation is identified as a RCRIS Treatment Storage or Disposal facility.

A listing of Resource Conversation Recovery Information System (RCRIS) Generators was reviewed and four RCRIS large quantity generators are located within 1/4 mile of the subject property. These RCRIS generators are identified as the Sears Roebuck Co. located .06 miles northeast; the Montgomery Ward Co. located .065 miles north; Sanborn's Family Cleaners located 0.12 miles southwest and P&A Realty Company located 0.14 miles southwest. Large quantity generators generate more than 1,000 kilograms of hazardous waste per month or meet other

applicable resource conservation requirements of the Resource Conservation and Recovery Act. These generators are located in the assumed down-gradient direction from the subject property and are not thought to pose a threat to the environmental quality of the subject property.

The Emergency Response Notification System (ERNS), a national computer database system that is used to store information on the sudden or accidental release of hazardous substances including petroleum in to the environment, was reviewed. No such releases were reported as occurring on the subject property or adjacent properties.

4.1.2 State

The following New York State Department of Environmental Conservation (NYSDEC) inventories and lists were reviewed:

- NYSDEC, List of Inactive Hazardous Waste Disposal Sites
- NYSDEC, List of Petroleum Bulk Storage Facilities
- NYSDEC, List of Chemical Bulk Storage Facilities
- NYSDEC, List of Chemical and Petroleum Spills
- NYSDEC, List of Leaking Storage Tanks

There are no NYSDEC Inactive Hazardous Waste Sites within a 1.0 mile radius of the subject property.

One spill of petroleum product is reported to have occurred at the rear of the property on May 19, 1988. The spill was assigned spill # 8801543 and the location listed as the Bear Cat Kill, which is the southern boundary of the property. The spill involved an unknown volume of gasoline and was cleaned and closed on July, 15, 1988. The spill event has been assigned a status of "C" by the NYSDEC. A "C" status indicates that the spill has been cleaned up and all paperwork completed.

One New York Leaking Storage Tank (LRST) was identified as being approximately 0.07 miles southeast of the subject property and identified as the Ulster Mall Mobil Station.

A listing of New York Resolved Leaking Storage tanks (NALST), a listing of all leaking storage tanks reported to NYSDEC which had been resolved or remediated, indicates that three NALST sites have been identified within 0.25 miles of the subject property. A review of the NYSDEC Petroleum Bulk Storage data base has indicated that three PBS facilities are located within 0.25 miles of the property and are identified as Montgomery Ward Co.; Kingston Mobil Station, approximately 0.07 miles southeast of the subject property; and IBM BP located at the intersection

of Boices Lane and Morton Road, approximately 0.145 miles west of the subject property.

Based on a review of the Federal and State data bases, and a review of the locations of the properties listed in the various data bases and based on review of the local topography and assumed groundwater flow direction, the possibility of impact to the environmental quality of the Miron property by the migration of contaminants onto the site, is considered to be low.

4.1.3 Local

Under the Freedom of Information Act (FOIA) information was requested from the Ulster County Department of Health (UCDH), UCDH responded that they had no files regarding this property.

The Chazen Companies also contacted the Building Inspector and Fire Inspector for the Town of Ulster, Mr. Louis A. Perry who provided letters indicating that there were no environmental problems with respect to the subject property (Appendix B).

4.2 Physical Setting Source(s) (USGS/DOT map)

A review of the NYS Department of Transportation (NYSDOT) map, Kingston east quadrangle, shows the subject property to be located in a relatively level area at an approximate elevation of 180 feet above mean sea level. The property is bound on the south by the Bear Cat Kill, a small tributary to the Esopus Creek. The topography in the general area slopes from east to west from a series of high ridges bordering the Hudson River, to an elevation of approximately 140 feet above mean sea level at the Esopus Creek, approximately 1 mile west of the subject property.

A review of geographic maps produced by the University of the State of New York indicates that bedrock in the area has been mapped as the Lower Devonian aged Esopus Shale.

4.3 Historical Use Information

4.3.1 Aerial Photograph/Sanborn Fire Insurance Map Review

Aerial photographs produced in the years 1980 and 1994 were available for comparative analysis from the Ulster County Soil Conservation Service and Miron Building Products Co., Inc. The 1980 photograph identified by number V8-116 shows the building on site and no evidence of land filling or land disturbance.

The 1994 photograph shows no indications of land filling or land disturbance on the property.

Inquiry to the ERIIS Company has indicated that no Sanborn Fire Insurance Maps were produced for this area between the years 1867 and 1990.

4.3.2 Land Title Record

Records available at the Ulster County Real Property Tax Office indicate the property to be owned by Julie Greenspan Miron, et al. since March 1968.

4.3.3 Past Uses of Subject Property

Information received from Miron personnel and the Town of Ulster Building Inspector has indicated that the subject property was developed approximately 35 years ago and that a hotel may have been located on the property approximately 70 years ago.

4.3.4 Past uses of Adjacent Properties

Prior to development primarily starting in the 1960s, the general area was vacant with a residential neighborhood located to the west of Morton Boulevard.

5.0 INFORMATION FROM SITE RECONNAISSANCE AND INTERVIEWS

5.1 Hazardous Substances in Connection with Identified Uses

Hazardous substances identified on the site are small containers (1 gallon cans) of paints and thinners stocked in the Miron Clearance Center building for retail sale. No other hazardous substances or substance containers were identified during the site investigation.

5.2 Hazardous Substance Containers and Unidentified Substance Containers

No hazardous substances containers other than those mentioned in Section 5.1 were observed on site during the investigation.

5.3 Storage Tanks

No above ground or underground storage tanks are known to be present on the subject property.

5.4 PCBs

One pad mounted transformer, identified as being owned by Central Hudson Gas & Electric Co. (CHG&E) and identified with #621269, is present near the southwest corner of the building. Personnel at CHG&E have indicated that the cooling oil has not been tested for PCB content.

5.5 Indications of Solid Waste Disposal

Presently solid waste dumpsters were identified in the rear (south side) of the building and are labeled as being maintained on a regular basis by a local carting company.

5.6 Physical Setting Analysis (Potential Receptors)

Groundwater flow in the area is primarily sheet flow across the parking lot and is directed to catch basins located within the parking area and near the rear of the building. Based on the local topography, it is assumed that storm water drainage is directed to the Bear Cat Kill located south of the subject property and ultimately to the Esopus Creek.

6.0 FINDINGS AND CONCLUSIONS

The Chazen Companies have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-94 of the Airport Realty property, located on Boices Lane, Town of Ulster, New York. Any exceptions to, or deletions from, this Practice are described in Section 2.4 of this report. Except for the following, this assessment has revealed no evidence of recognized environmental conditions in connection with the property:

- Suspect asbestos containment materials in the form of floor tiles are present in the portions of the former Shop Rite building now occupied by Miron Clearance Center. Approximately 660 square feet of suspect ACM was identified and if this material is to be disturbed by demolition, renovation or remodeling, bulk samples should be collected for laboratory analysis to determine asbestos content. If asbestos is detected in amounts greater than 1%, these materials should be handled in accordance with applicable federal and state regulations.
- One pad mounted transformer identified with Central Hudson Gas & Electric (CHG&E) as #621269 is located near the southwest corner of the Miron Clearance Center (former Shop Rite). Conversation with personnel at CHG&E indicates that the cooling oil within the unit has not been tested for PCB

content. No evidence of leakage was identified around the unit during the site investigation.

ERIIS DISCLAIMER

The information contained in this report has been obtained from publicly available sources and other secondary sources of information produced by entities other than Environmental Risk Information & Imaging Services (ERIIS). Although great care has been taken by ERIIS in compiling and checking the information contained in this report to insure that it is current and accurate, ERIIS disclaims any and all liability for any errors, omissions, or inaccuracies in such information and data; whether attributable to inadvertence or otherwise, and for any consequences arising therefrom. The data provided hereunder neither purports to be nor constitutes legal or medical advice. It is further understood that ERIIS MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND, INCLUDING, BUT NOT LIMITED TO, THE WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OF MERCHANTABILITY, NOR ANY SUCH REPRESENTATIONS OR WARRANTIES TO BE IMPLIED WITH RESPECT TO THE DATA FURNISHED, AND ERIIS ASSUMES NO RESPONSIBILITY WITH RESPECT TO CUSTOMER'S, ITS EMPLOYEES', CLIENTS', OR CUSTOMERS' USE THEREOF. ERIIS SHALL NOT BE LIABLE FOR ANY SPECIAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES RESULTING, IN WHOLE OR IN PART, FROM CUSTOMER'S USE OF THE DATA. Liability on the part of the Environmental Risk Information & Imaging Services (ERIIS) is limited to the monetary value paid for this report. The report is valid only for the geographical parameters specified on the cover page of this report, and any alteration or deviation from this description will require a new report. This report does not constitute a legal opinion.

ERIIS REPORT OVERVIEW

The following features are available for an ERIIS report:

- * Database Report
 - * Statistical Profile
 - * Database Records
- * Related Maps
 - * Digital Custom Plotted Map
 - * Sanborn Fire Insurance Map(s)
 - * Topographical Map(s)

Statistical Profile

The statistical profile is an at-a-glance numeric summary of the databases searched for your ERIIS Report.

Database Records

The detailed federal and state database information indicates potential and actual environmental threats within the study radius. These records are sorted by their distance from the study site.

Digital Custom Map

The digital custom map is cross referenced with the database records. The cross-in-circle in the center of the map represents the study site. The red circles represent distances from the study site. The plottable sites in the report are distinguished on the map by symbols of different shape and color.

Historic Fire Insurance Maps

The ERIIS collection of historical Sanborn Fire Insurance Maps covers 14,000 cities and towns. These maps may indicate prior use of the study site. If no maps are available for the study site, a notice to that effect is included. This notice should serve as evidence of due diligence.

Topographical Map

USGS topographical maps show natural and man-made features as well as the shape and elevation of the terrain. The 7.5 minute quad maps are produced at a scale of 1:24,000, or one inch represents 2,000 feet.

Resource Conservation And Recovery Information System - Treatment, Storage, And Disposal Facilities

The RCRIS TS Report Contains Information Pertaining To Facilities Which Either Treat, Store, Or Dispose Of Hazardous Waste. Information Pertaining To The Status Of Facilities Tracked By The RCRA Administrative Action Tracking System (RAATS 3/03/95) Is Included In The RCRIS_TS Report.

CERCLIS

Date of Data: 07/01/1995
Release Date: 10/11/1995
US Environmental Protection Agency
Office Of Solid Waste And Emergency Response
703/603-8730

Comprehensive Environmental Response, Compensation, And Liability Information System

The CERCLIS Database Is A Comprehensive Listing Of Known Or Suspected Uncontrolled Or Abandoned Hazardous Waste Sites. These Sites Have Either Been Investigated, Or Are Currently Under Investigation By The Federal EPA For The Release, Or Threatened Release Of Hazardous Substances. Once A Site Is Placed In CERCLIS, It May Be Subjected To Several Levels Of Review And Evaluation And Ultimately Placed On The National Priorities List. As Of February 1995, CERCLIS Sites Designated "No Further Remedial Action Planned" (NFRAP) Have Been Removed From The CERCLIS Database.

NFRAP

Date of Data: 02/28/1995
Release Date: 04/07/1995
US Environmental Protection Agency
Office Of Solid Waste And Emergency Response
703/603-8881

No Further Remedial Action Planned Sites

The No Further Remedial Action Planned Report (NFRAP) Contains Information Pertaining To Sites Which Have Been Removed From The Federal EPA's CERCLIS Database. NFRAP Sites May Be Sites Where, Following An Initial Investigation, No Contamination Was Found, Contamination Was Removed Quickly Without Need For The Site To Be Placed On The NPL, Or The Contamination Was Not Serious Enough To Require Federal Superfund Action Or NPL Consideration.

Radon Zone Level: 1

Zone 1 has a predicted average indoor screening level > than 4 pCi/L

A Radon Zone should not be used to determine if individual homes need to be tested for radon. The EPA's Office of Radiation and Indoor Air (202/233-9320) recommends that all homes be tested for radon, regardless of geographic location or the zone designation in which the property is located.

A property is defined as a .05 mile buffer around the site's latitude and longitude.

A blank radius count indicates that the database was not searched by this radius per client instructions.

NR in a radius count indicates that the database cannot be reported by this search criteria due to insufficient and/or inaccurate addresses reported by a federal/state agency.

Unplottable Sites

The remaining report pages list additional environmental sites that have been selected based on geographic criteria unique to your study site. They are classified as "unplottable sites" and require further investigation to assess their potential impact on your site.

How to Evaluate Unplottable Sites

Step 1

Streets Within the Radius: the following page is an alphabetical index of all streets that intersect or are contained within the largest study radius (usually one mile).

Step 2

Cross-Reference: use the "Streets Within the Radius" index to cross-reference the unplottable sites. For example, if Maple Avenue and Oak Avenue are listed in the street index, then any unplottable sites with a Maple Avenue or Oak Avenue address should be checked for possible impact on study site.

Questions on ERIIS' Proprietary Geocoding?

We're happy to answer any questions you might have about our data processing and point-geocoding (assigning a latitude and longitude to each address). Just give us a call on our toll-free number at (800) 989-0402 and let us know what state you're calling from. Our customer service staff is available from 8 a.m. to 8 p.m. (EST).

The ASTM Standard Practice For Environmental Site Assessments

As stated in the recently published **Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527)** by the American Society for Testing and Materials (ASTM):

"For large databases with numerous facility records (such as RCRA hazardous waste generators and registered underground storage tanks), the records are not practically reviewable unless they can be obtained from the source agency in the smaller geographic area of ZIP code (3.3.24)."

Therefore, this Report contains information available by latitude/longitude or by ZIP code. If your research requires environmental records for which only city or county information is available (i.e., no valid street or ZIP code) ERIIS will include this data at no extra charge.

1.0 SUMMARY

The Chazen Companies (TCC) have performed a Phase I Environmental Site Assessment in conformance with the scope and limitation set forth in ASTM Practice E 1527-94 of the Former Mayfair Theater property located on Route 9W in the Town of Ulster, New York. Any exceptions to, or deletions from, this practice are described in Section 2.4 of this report.

The assessment, performed during February 1996, was comprised of an interview with the property owner and local officials familiar with the site, regulatory and historic information review and a site reconnaissance by TCC personnel. The site reconnaissance was performed on February 14, 1996 by Richard J. Buckey for TCC. Snow covered ground surfaces during the site investigation.

Except for the following, the assessment has revealed no signs of recognized environmental conditions regarding the subject property:

- A fill pipe, commonly associated with an underground storage tank (UST) was observed along the west side of the Mayfair Theater. No information as to the size, condition or contents contained within the UST was readily available. Section 7.0 of this report outlines recommendations to investigate the UST.
- Suspect asbestos containing materials (ACM) in the form of floor tiles, pipe insulation and duct insulation were observed in the Mayfair Theater. Should renovation, remodeling or demolition activities take place, an asbestos building survey should be conducted that includes sampling of materials considered to be suspect ACM.

2.0 INTRODUCTION

2.1 Purpose

This Phase I Environmental Site Assessment was performed to assess current site conditions and to identify potential environmental liabilities associated with the Former Mayfair Theater property, located on Route 9W, in the Town of Ulster, New York.

Specifically, the goal of this assessment was to identify "the presence or likely presence of any hazardous substances or petroleum products on the property under conditions that indicate an existing release, a past release, or a material threat of a release of any {such} substances into structures on the property or into the ground, groundwater, or surface water of the property." This practice is intended to permit a user to satisfy the "appropriate inquiry" requirement to

qualify for the innocent landowner defense to CERCLA liability (42 USC 9601(35)(B)).

2.2 Special Terms and Conditions

The conditions of this contract do not include any additional services beyond the scope of work outlined in the proposal for this report.

2.3 Limitations and Exceptions of Assessment

This Phase I Environmental Site Assessment is site specific in that it relates to assessment of environmental conditions at the subject commercial property. Consequently, this practice does not address many additional issues raised in transactions such as purchases of business entities, or interests therein, or of their assets, that may well involve environmental liabilities pertaining to properties previously owned or operated or other off-site environmental liabilities.

2.4 Limiting Conditions and Methodology Used

No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice, in accordance with ASTM Standards, is intended to reduce, but not eliminate such uncertainty. Accordingly, TCC accepts no responsibility for any deficiencies, misstatements or inaccuracies contained in this report which occur as a result of misrepresentations, omissions or fraudulent acts of the sources questioned. Furthermore, opinions and recommendations presented in this report apply to site conditions existing at the time of the TCC evaluation and cannot necessarily apply to future conditions.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property is located on the west side of Route 9W in the Town of Ulster, New York. The western border of the property is defined by Route 9W and the eastern border is defined by Jon Clark Drive. The property is identified in the Ulster County Tax Records as Section 48.007, Block 1, Lot 27.1 and occupies approximately 4.3 acres (Figures 1 & 2).

Ulster County Tax Records indicate that the subject property is presently owned by Jules Miron and Airport Realty. One tenant, Burger King, leases the smaller of two buildings situated on the property.

3.2 Site and Vicinity Characteristics

The subject property is situated in an area occupied by retail/commercial entities and restaurants. To the west, across Jon Clark Drive, is an active freight railway and to the west, beyond the rail line, is an industrial facility owned by IBM.

Two structures, one occupied by Burger King and the other, the former Mayfair Theater, are located on the property. Paved areas exist between the two buildings and one unpaved area exists along the northwest border. Large mounds of snow containing debris such as lumber, steel strapping and plastic were located on the unpaved area of the site (See Photographs, Appendix A). Personnel from Miron Building Corp. indicated that the soil mounds and associated debris were deposited on-site from snow collected at a nearby off-site location. Concrete debris was observed near the northwest perimeter of the property.

3.3 Descriptions of Structures, Roads, Other Improvements on the Site

3.3.1 Structures

As mentioned in the previous section, there are two structures, a former theater and a Burger King Restaurant, situated on the property. Sources familiar with the site history reported that the Mayfair theater was constructed in 1966 and the restaurant building was constructed in 1965. The Mayfair theater is a two story concrete block building with a concrete poured floor and steel deck roof. Building materials inside include 12"x 12" and 9"x 9" floor tiles. A large boiler unit is located on the second floor in a room along the east side of the building. The seats and other portions of the theater have been removed. Small animal carcasses (mostly birds) and excrement were observed throughout the theater.

3.3.2 Roads

The subject property can be accessed from the west side of Route 9W and from the east side of John Clark Drive (Figure 1).

3.3.3 Heating/Cooling System

Heating is provided to the Mayfair Theater by an oil fired forced hot air unit, supplemented by baseboard units. Insulation observed on some of the piping and duct associated with the boiler unit could be considered suspect asbestos containing material. Heat to the Burger King Building is provided by a natural gas fired Heating Ventilation Air Conditioning (HVAC) unit.

3.3.4 Sewage Disposal

Sanitary wastes generated at both of the buildings on the subject property are reportedly directed to the Town of Ulster municipal collection system.

3.3.5 Water Supply

Water is supplied to the subject property by the Town of Ulster municipal water supply system.

3.4 Environmental Liens

The owner of the property did not indicate that there were any known encumbrances in connection with the subject property.

3.5 Current Uses of Property

The Mayfair Theater has reportedly been non-operational since March 1987. The other building on-site is used by Burger King, a fast food restaurant.

3.6 Current Uses of Adjacent Properties

With the exception of IBM, a manufacturing facility, and the rail line, both located to the west of the subject property, adjacent properties are used for commercial/retail purposes. The property adjacent to the northeast is owned by Key Bank. The property adjacent to the northern border is used by Anaconda Kaye, a sporting goods retailer. The property to the south is occupied by Montgomery Ward, a retail store and lands to the east, across Route 9W are assorted retail stores.

4.0 RECORDS REVIEW

Federal and State databases were referenced by Environmental Risk Information & Imaging Services (ERIS). A listing of referenced databases and the most recent update of each list made available by the regulatory agency is included in the ERIS report located in Appendix B. In some instances, the exact location of listed

sites could not be determined from addresses furnished by the regulatory agencies, and those sites are listed as "unplottable sites".

4.1 Standard Environmental Record Sources, Federal and State

4.1.1 Federal

A review of the United States Environmental Protection Agency (USEPA) National Priorities List (NPL) for Region II has shown that the Former Mayfair Theater property is not included on the NPL as a Superfund site. No NPL sites are located within 1.0 mile of the facility.

A review of the USEPA Comprehensive Environmental Responsibility, Compensation and Liability System (CERCLIS), a list of potential NPL sites, has shown that the Mayfair Theater property is not currently included in the CERCLIS database. No CERCLIS sites are located within 0.5 mile the subject site.

A listing of Resource Conservation Recovery Act (RCRA) Treatment, Storage and or Disposal (TSD) Facilities for Hazardous Waste was also reviewed. One RCRA TS facility, the IBM Kingston plant (EPA ID No. NYD001359694) is located on Neighborhood Road, approximately 0.465 miles to the west.

A listing of RCRA Hazardous Waste Generators was reviewed. The subject property is not included on the RCRA listing. Aside from the IBM facility on Neighborhood Road, no listed RCRA generators occupy adjacent properties.

The Emergency Response Notification System (ERNS), a national computer database system that is used to store information on the sudden or accidental release of hazardous substances including petroleum in to the environment, was reviewed. No such releases were reported as occurring on the subject property or adjacent properties.

4.1.2 State

The following New York State Department of Environmental Conservation (NYSDEC) inventories and lists were reviewed:

- NYSDEC, List of Inactive Hazardous Waste Disposal Sites
- NYSDEC, List of Petroleum Bulk Storage Facilities
- NYSDEC, List of Chemical Bulk Storage Facilities
- NYSDEC, List of Chemical and Petroleum Spills
- NYSDEC, List of Leaking Storage Tanks

There is one NYSDEC Inactive Hazardous Waste Site, the IBM facility, located on Neighborhood Road, that is 0.465 miles west of the subject property. Volatile organic compounds (VOC's) were detected in the groundwater on-site, but sampling of the nearest off-site wells in 1992 showed no contaminants. The estimated groundwater flow direction appears to be east to west and the material threat from releases at the IBM facility could be considered low.

The subject property is not included on the NYSDEC list of Petroleum Bulk Storage Facilities (PBS), Chemical Bulk Storage (CBS) Facilities or Major Oil Storage Facilities (MOSF). The IBM facility, located 0.465 miles northwest is included on all three of the above mentioned lists under the following registration numbers:

- PBS No. 3-600410
- CBS No. 3-00108
- MOSF No. 3-1820

As mentioned previously, the estimated groundwater flow direction in the vicinity is east to west and the threat of off-site source contaminant migration from the IBM facility on to the subject site low.

Review of the NYSDEC list of leaking registered storage tanks (LRST) has revealed that a reported release occurred on December 5, 1994 at the Mobil service station located on 1146 Ulster Avenue, approximately 0.261 miles to the southwest. The potential for environmental impact at the subject site from this release is low, based on the estimated groundwater flow direction (east to west).

4.1.3 Local

Under the Freedom of Information Act (FOIA), information was requested from the Ulster County Department of Health (UCDH). Alan Dumas, Public Health Engineer at the UCDH responded that his office did not have any files pertinent to the subject property.

4.2 Physical Setting Source(s) (USGS/DOT map)

Review of the New York State Department of Transportation (NYSDOT) map (Kingston East Quadrangle) shows the subject property to be located on the west side of Route 9W, in a relatively flat area with an approximate elevation of 180 feet above mean sea level.

A review of geologic maps, produced by the University of the State of New York, indicates that bedrock in the area has been mapped as the Lower Devonian aged Onondaga Limestone, a series of cherty limestones and shales.

4.3 Historical Use Information

4.3.1 Aerial Photograph/Sanborn Fire Insurance Map Review

Aerial photographs, produced in the years 1972 and 1993 were available for comparative analysis. Review of the both aerial photographs showed two buildings present on the subject property and the buildings on the adjoining properties to the south, west and north configured as observed at the present date. The east side of Route 9W had not been developed in 1973 to the extent that it was seen in the 1993 photograph. The open area along the northwest border of the subject property was undeveloped in both photographs.

As part of the historic review process, a request was made to ERIIS for Sanborn Fire Insurance Maps including the subject property. ERIIS responded that they did not have any historic maps in their collection for the subject property covering the years 1867 to 1990.

4.3.2 Land Title Record

Ulster County Tax Records indicate that Jules Miron & Others & Airport Realty are listed owners of the subject property to date. Jules Miron acquired the subject property in 1964 from Daniel V. Morehouse and others. A copy of the deed chain report, dating back to February 23, 1915 when Willis H. & Mary C. Barton were listed as owners, is included in Appendix C.

4.3.3 Past Uses of Subject Property

The subject property was reportedly undeveloped until 1965 when the restaurant was built. The restaurant was formerly known as Carrols and the franchise was eventually bought sometime in the 1970's and became Burger King. The theater was constructed in 1966 and reportedly operated as a movie theater up until 1987. The theater has not had any reported usage since closing in 1987.

4.3.4 Past uses of Adjacent Properties

To provide a historical perspective of adjacent properties, inquiry was made with the Town of Ulster Building Department and Tax Assessor's office. The IBM manufacturing plant, located to the east on Neighborhood Road was constructed in the early 1950's and has operated as a manufacturing facility since that time. The

building on the property to the northeast, now owned and occupied by Key Bank, was constructed in 1968 and has been historically used as a bank. Montgomery Ward, located to the south was built in 1963 and has been a retail store since that time. The large warehouse that abuts the northern border of the subject property, now occupied by Anaconda Sports, was built in 1971. The original tenant was reportedly a toy store and Anaconda expanded the building around 1989 and commenced operation as a sporting goods warehouse center.

5.0 INFORMATION FROM SITE RECONNAISSANCE AND INTERVIEWS

5.1 Hazardous Substances in Connection with Identified Uses

No hazardous substances were identified during the course of the site investigation.

5.2 Hazardous Substance Containers and Unidentified Substance Containers

No hazardous substance containers or unidentified substance containers were observed during the course of the site investigation.

5.3 Storage Tanks

A fill pipe, commonly associated with the presence of an underground storage tank (UST) was observed along the west side of the Mayfair Theater. No additional information regarding the usage or storage capacity of the presumed UST was made available to TCC. The subject property is not included on the NYSDEC list of Petroleum Bulk Storage Facilities.

5.4 PCBs

No transformers were observed on-site during the site investigation. Fluorescent light fixtures are present in the Mayfair Theater. The ballasts of these fixtures may contain PCB's in their dielectric fluid. Prior to disposal, the dielectric fluid should be sampled to determine if the material is PCB containing.

5.5 Indications of Solid Waste Disposal

Snow mounds with wood, steel and plastic fragments were observed along the western portion of the property (See Photographs, Appendix A). The snow and debris items were reportedly deposited on-site, from another property associated with Miron Building Corporation. In addition to the debris observed within the snow mounds, concrete fragments were observed along the northern border of the site.

5.6 Physical Setting Analysis (Potential Receptors)

No surface waters are present on-site and properties in the vicinity are provided water by a municipal water supply source.

6.0 FINDINGS AND CONCLUSIONS

The Chazen Companies have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-94 of the Former Mayfair Theater property, located in the Town of Ulster, New York. Any exceptions to, or deletions from, this Practice are described in Section 2.4 of this report.

Except for the following, this assessment has revealed no evidence of recognized environmental conditions in connection with the property:

- A fill port, typically associated with the presence of an underground storage tank (UST) was observed adjacent to the Mayfair Theater. No information regarding the type of material stored, or the volume capacity of the UST was made available to TCC. The subject property is not included on the NYSDEC list of Petroleum Bulk Storage Facilities (PBS).
- Suspect asbestos containing materials (ACM) in the form of floor tiles, pipe insulation and duct insulation were observed at various locations in the Mayfair Theater.

7.0 RECOMMENDATIONS

- Physical inquiry, by means of opening the fill port and measuring the product level should be performed to assess the volume capacity of the tank and the quantity of product contained within. If it is determined that the tank has a storage capacity of greater than 1,100 gallons, the tank should either be closed or registered in accordance with NYSDEC regulations regarding petroleum bulk storage (6NYCRR Part 612).
- Should renovation, remodeling or demolition take place in the Mayfair Theater, samples of materials considered to be suspect ACM should be collected and analyzed for asbestos content. In the event that materials are deemed ACM, applicable regulations governing the handling, removal and disposal of ACM should be adhered to.

ERIIS DISCLAIMER

The information contained in this report has been obtained from publicly available sources and other secondary sources of information produced by entities other than Environmental Risk Information & Imaging Services (ERIIS). Although great care has been taken by ERIIS in compiling and checking the information contained in this report to insure that it is current and accurate, ERIIS disclaims any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence or otherwise, and for any consequences arising therefrom. The data provided hereunder neither purports to be nor constitutes legal or medical advice. It is further understood that ERIIS MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND, INCLUDING, BUT NOT LIMITED TO, THE WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OF MERCHANTABILITY, NOR ANY SUCH REPRESENTATIONS OR WARRANTIES TO BE IMPLIED WITH RESPECT TO THE DATA FURNISHED, AND ERIIS ASSUMES NO RESPONSIBILITY WITH RESPECT TO CUSTOMER'S, ITS EMPLOYEES', CLIENTS', OR CUSTOMERS' USE THEREOF. ERIIS SHALL NOT BE LIABLE FOR ANY SPECIAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES RESULTING, IN WHOLE OR IN PART, FROM CUSTOMER'S USE OF THE DATA. Liability on the part of the Environmental Risk Information & Imaging Services (ERIIS) is limited to the monetary value paid for this report. The report is valid only for the geographical parameters specified on the cover page of this report, and any alteration or deviation from this description will require a new report. This report does not constitute a legal opinion.

ERIIS REPORT OVERVIEW

The following features are available for an ERIIS report:

- Database Report
 - Statistical Profile
 - Database Records
- Related Maps
 - Digital Custom Plotted Map
 - Sanborn Fire Insurance Map(s)
 - Topographical Map(s)

Statistical Profile

The statistical profile is an at-a-glance numeric summary of the databases searched for your ERIIS Report.

Database Records

The detailed federal and state database information indicates potential and actual environmental threats within the study radius. These records are sorted by their distance from the study site.

Digital Custom Map

The digital custom map is cross referenced with the database records. The cross-in-circle in the center of the map represents the study site. The red circles represent distances from the study site. The plottable sites in the report are distinguished on the map by symbols of different shape and color.

Historic Fire Insurance Maps

The ERIIS collection of historical Sanborn Fire Insurance Maps covers 14,000 cities and towns. These maps may indicate prior use of the study site. If no maps are available for the study site, a notice to that effect is included. This notice should serve as evidence of due diligence.

Topographical Map

USGS topographical maps show natural and man-made features as well as the shape and elevation of the terrain. The 7.5 minute quad maps are produced at a scale of 1:24,000, or one inch represents 2,000 feet.

			<u>6</u>	<u>9</u>	<u>1</u>	<u>0</u>	<u>16</u>

Radon Zone Level: 1

Zone 1 has a predicted average indoor screening level > than 4 pCi/L

A Radon Zone should not be used to determine if individual homes need to be tested for radon. The EPA's Office of Radiation and Indoor Air (202/233-9320) recommends that all homes be tested for radon, regardless of geographic location or the zone designation in which the property is located.

A property is defined as a .05 mile buffer around the site's latitude and longitude.

A blank radius count indicates that the database was not searched by this radius per client instructions.

NR in a radius count indicates that the database cannot be reported by this search criteria due to insufficient and/or inaccurate addresses reported by a federal/state agency.

ENVIRONMENTAL RISK INFORMATION & IMAGING SERVICES
DATABASE REFERENCE GUIDE

NPL

Date of Data: 07/01/1995
Release Date: 10/11/1995
US Environmental Protection Agency
Office Of Solid Waste And Emergency Response
703/603-8881

National Priorities List

The NPL Report, Also Known As The Superfund List, Is An EPA Listing Of Uncontrolled Or Abandoned Hazardous Waste Sites. The List Is Primarily Based Upon A Score Which The Site Receives From The EPA's Hazardous Ranking System. These Sites Are Targeted For Possible Long-Term Remedial Action Under The Superfund Act.

RCRIS TS

Date of Data: 06/01/1995
Release Date: 07/14/1995
US Environmental Protection Agency
Office Of Solid Waste And Emergency Response
202/260-4610

Resource Conservation And Recovery Information System - Treatment, Storage, And Disposal Facilities

The RCRIS TS Report Contains Information Pertaining To Facilities Which Either Treat, Store, Or Dispose Of Hazardous Waste. Information Pertaining To The Status Of Facilities Tracked By The RCRA Administrative Action Tracking System (RAATS 3/03/95) Is Included In The RCRIS TS Report.

CERCLIS

Date of Data: 07/01/1995
Release Date: 10/11/1995
US Environmental Protection Agency
Office Of Solid Waste And Emergency Response
703/603-8730

Comprehensive Environmental Response, Compensation, And Liability Information System

The CERCLIS Database Is A Comprehensive Listing Of Known Or Suspected Uncontrolled Or Abandoned Hazardous Waste Sites. These Sites Have Either Been Investigated, Or Are Currently Under Investigation By The Federal EPA For The Release, Or Threatened Release Of Hazardous Substances. Once A Site Is Placed In CERCLIS, It May Be Subjected To Several Levels Of Review And Evaluation And Ultimately Placed On The National Priorities List. As Of February 1995, CERCLIS Sites Designated "No Further Remedial Action Planned" (NFRAP) Have Been Removed From The CERCLIS Database.

NFRAP

Date of Data: 02/28/1995
Release Date: 04/07/1995
US Environmental Protection Agency
Office Of Solid Waste And Emergency Response
703/603-8881

No Further Remedial Action Planned Sites

The No Further Remedial Action Planned Report (NFRAP) Contains Information Pertaining To Sites Which Have Been Removed From The Federal EPA's CERCLIS Database. NFRAP Sites May Be Sites Where, Following An Initial Investigation, No Contamination Was Found, Contamination Was Removed Quickly Without Need For The Site To Be Placed On The NPL, Or The Contamination Was Not Serious Enough To Require Federal Superfund Action Or NPL Consideration.

RCRIS LG

Date of Data: 06/01/1995
Release Date: 07/14/1995
US Environmental Protection Agency
Office Of Solid Waste And Emergency Response
202/260-4610

Resource Conservation And Recovery Information System - Large Quantity Generators

The RCRIS LG Report Contains Information Pertaining To Facilities Which Either Generate More Than 1000kg Of Hazardous Waste Per Month Or Meet Other Applicable Requirements Of The Resource Conservation And Recovery Act. Information Pertaining To The Status Of Facilities Tracked By The RCRA Administrative Action Tracking System (RAATS 3/03/95) Is Included In The RCRIS LG Report.

RCRIS SG

Date of Data: 06/01/1995
Release Date: 07/14/1995
US Environmental Protection Agency
Office Of Solid Waste And Emergency Response
202/260-4610

Resource Conservation And Recovery Information System - Small Quantity Generators

The RCRIS SG Report Contains Information Pertaining To Facilities Which Either Generate Between 100kg And 1000kg Of Hazardous Waste Per Month Or Meet Other Applicable Requirements Of The Resource Conservation And Recovery Act. Information Pertaining To The Status Of Facilities Tracked By The RCRA Administrative Action Tracking System (RAATS 3/03/95) Is Included In The RCRIS SG Report.

Unplottable Sites

The remaining report pages list additional environmental sites that have been selected based on geographic criteria unique to your study site. They are classified as "unplottable sites" and require further investigation to assess their potential impact on your site.

How to Evaluate Unplottable Sites

Step 1

Streets Within the Radius: the following page is an alphabetical index of all streets that intersect or are contained within the largest study radius (usually one mile).

Step 2

Cross-Reference: use the "Streets Within the Radius" index to cross-reference the unplottable sites. For example, if Maple Avenue and Oak Avenue are listed in the street index, then any unplottable sites with a Maple Avenue or Oak Avenue address should be checked for possible impact on study site.

Questions on ERIIS' Proprietary Geocoding?

We're happy to answer any questions you might have about our data processing and point-geocoding (assigning a latitude and longitude to each address). Just give us a call on our toll-free number at (800) 989-0402 and let us know what state you're calling from. Our customer service staff is available from 8 a.m. to 8 p.m. (EST).

The ASTM Standard Practice For Environmental Site Assessments

As stated in the recently published Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527) by the American Society for Testing and Materials (ASTM):

"For large databases with numerous facility records (such as RCRA hazardous waste generators and registered underground storage tanks), the records are not practically reviewable unless they can be obtained from the source agency in the smaller geographic area of ZIP code (3.3.24)."

Therefore, this Report contains information available by latitude/longitude or by ZIP code. If your research requires environmental records for which only city or county information is available (i.e., no valid street or ZIP code) ERIIS will include this data at no extra charge.

NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
DIVISION OF HAZARDOUS WASTE REMEDIATION
INACTIVE HAZARDOUS WASTE DISPOSAL REPORT

4/1/95

CLASSIFICATION CODE: 4

REGION: 3

SITE CODE: 356002

EPA ID: NYD001359694

NAME OF SITE : IBM, Kingston

STREET ADDRESS: Neighborhood Road

TOWN/CITY:

Kingston

COUNTY:

Ulster

ZIP:

12401

SITE TYPE: Open Dump- X Structure- Lagoon-X Landfill- Treatment Pond-
ESTIMATED SIZE: 10+ Acres

SITE OWNER/OPERATOR INFORMATION:

CURRENT OWNER NAME....: IBM Corporation

CURRENT OWNER ADDRESS.: Neighborhood Road, Kingston, NY

OWNER(S) DURING USE....: IBM Corporation

OPERATOR DURING USE....: IBM Corporation - Kingston

OPERATOR ADDRESS.....: Neighborhood Road, Kingston, NY

PERIOD ASSOCIATED WITH HAZARDOUS WASTE: From To

SITE DESCRIPTION:

Groundwater was contaminated within the main production area, primarily by volatile organic compounds (VOCs). Preliminary investigations indicated contravention of groundwater standards. The Esopus Creek is nearby to the west of the site. The scheduled remedial actions, consisting of a perimeter interceptor trench and recovery wells at known source areas, have been completed by IBM. A small quantity of waste was stabilized and left in place during the lagoon closure. Significant groundwater contamination has not been related to this lagoon. A monitoring program is being performed by the responsible party and monitoring reports are submitted to DEC for oversight. This site is an active RCRA facility and managed within DEC and EPA by HWM permit.

HAZARDOUS WASTE DISPOSED:

TYPE

QUANTITY (units)

Volatile organic solvents primarily
Trichloroethylene, 1,1,1-trichloroethane
(F001, F002)

90 lbs. (est.)

SITE CODE: 356002

ANALYTICAL DATA AVAILABLE:

Air- Surface Water- Groundwater-X Soil- Sediment-

CONTRAVENTION OF STANDARDS:

Groundwater-X Drinking Water-X Surface Water- Air-

LEGAL ACTION:

TYPE...: Consent Order State- X Federal-
STATUS: Negotiation in Progress- Order Signed- X

REMEDIAL ACTION:

Proposed- Under design- In Progress-X Completed-
NATURE OF ACTION: Interceptor trench, recovery wells

GEOTECHNICAL INFORMATION:

SOIL TYPE: Glaciofluvial

GROUNDWATER DEPTH: less than 10 feet

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Contravention of groundwater standards.

ASSESSMENT OF HEALTH PROBLEMS:

Access to the site is limited. No public water supply wells are located nearby and downgradient of the site. Four of the closest wells were resampled in March 1992 and no contaminants were found.
