**Re: Bedford Village Wells – Hunting Ridge Mall - Site #3-60-009
Quarterly Sampling Report – Fall 2007**

Dear Mr. Momberger:

This quarterly letter report describes the fourth of six groundwater sampling events to be conducted at the Bedford Village Wells – Hunting Ridge Mall Site, under New York State Department of Environmental Conservation (NYSDEC) Work Assignment # D004445-12. The sampling was once again conducted by Earth Tech's subcontractor, GeoLogic NY, Inc (GeoLogic), Homer, New York, in accordance with GeoLogic's Health and Safety Plan. Groundwater samples were submitted to Chemtech, Inc. under routine chain-of-custody protocol.

This report presents the field observation logs, chain-of-custody records and analytical summary table for the groundwater sampling event that took place on October 3 and 4, 2007. Fifteen wells were sampled during the event (per NYSDEC request, a greater number of wells were sampled in prior events).

Table 1 summarizes the analytical data for groundwater samples collected during the current and prior sampling events. Only detected compounds are presented. A map is attached showing the location of the site monitoring wells. Attachment 1 presents GeoLogic's field observation logs and the chain-of-custody records. The laboratory data sheets for the VOC analyses are not included but will be forwarded to the NYSDEC on request.

A review of the October 2007 analytical data indicates little to no change in the concentrations of VOCs in most of the monitoring wells at the site, with one noted exception. The concentration of methyl-tert butyl ether (MTBE) in monitoring well MW-1S increased by two orders of magnitude in comparison to all past results, from 2.7 ug/L in the July 2007 sample to 110 ug/L in the October 2007 sampling event. This well is located directly southwest of a small gas station. The contaminant levels in MW-3M remain high but consistent with the July 2007 and earlier sampling events. This well and MW-1S are the only sampled monitoring wells that exceeded groundwater standards for any compounds during the October 2007 sampling event.

Please feel free to contact me at (518) 951-2353 if you have any questions or comments regarding this report.

A **tyco** International Ltd. Company

Sincerely,
Earth Tech Northeast

All data presented in micrograms per Liter ($\mu\text{g/L}$).

All Volatile Organic Analyses were conducted by US EPA Method 624 or 524.2.

- duplicate

* New York State Ambient Water Quality Standards (TOGs 1.1.1) GV - guidance value.

** Additional compounds detected in this sample were 0.3 J toluene.

*** Additional compounds detected in the sample were 0.3 J $\mu\text{g/L}$ chloroform, 0.3 J $\mu\text{g/L}$ styrene

U - Compound not detected at or above the instrument detection limit (IDL).

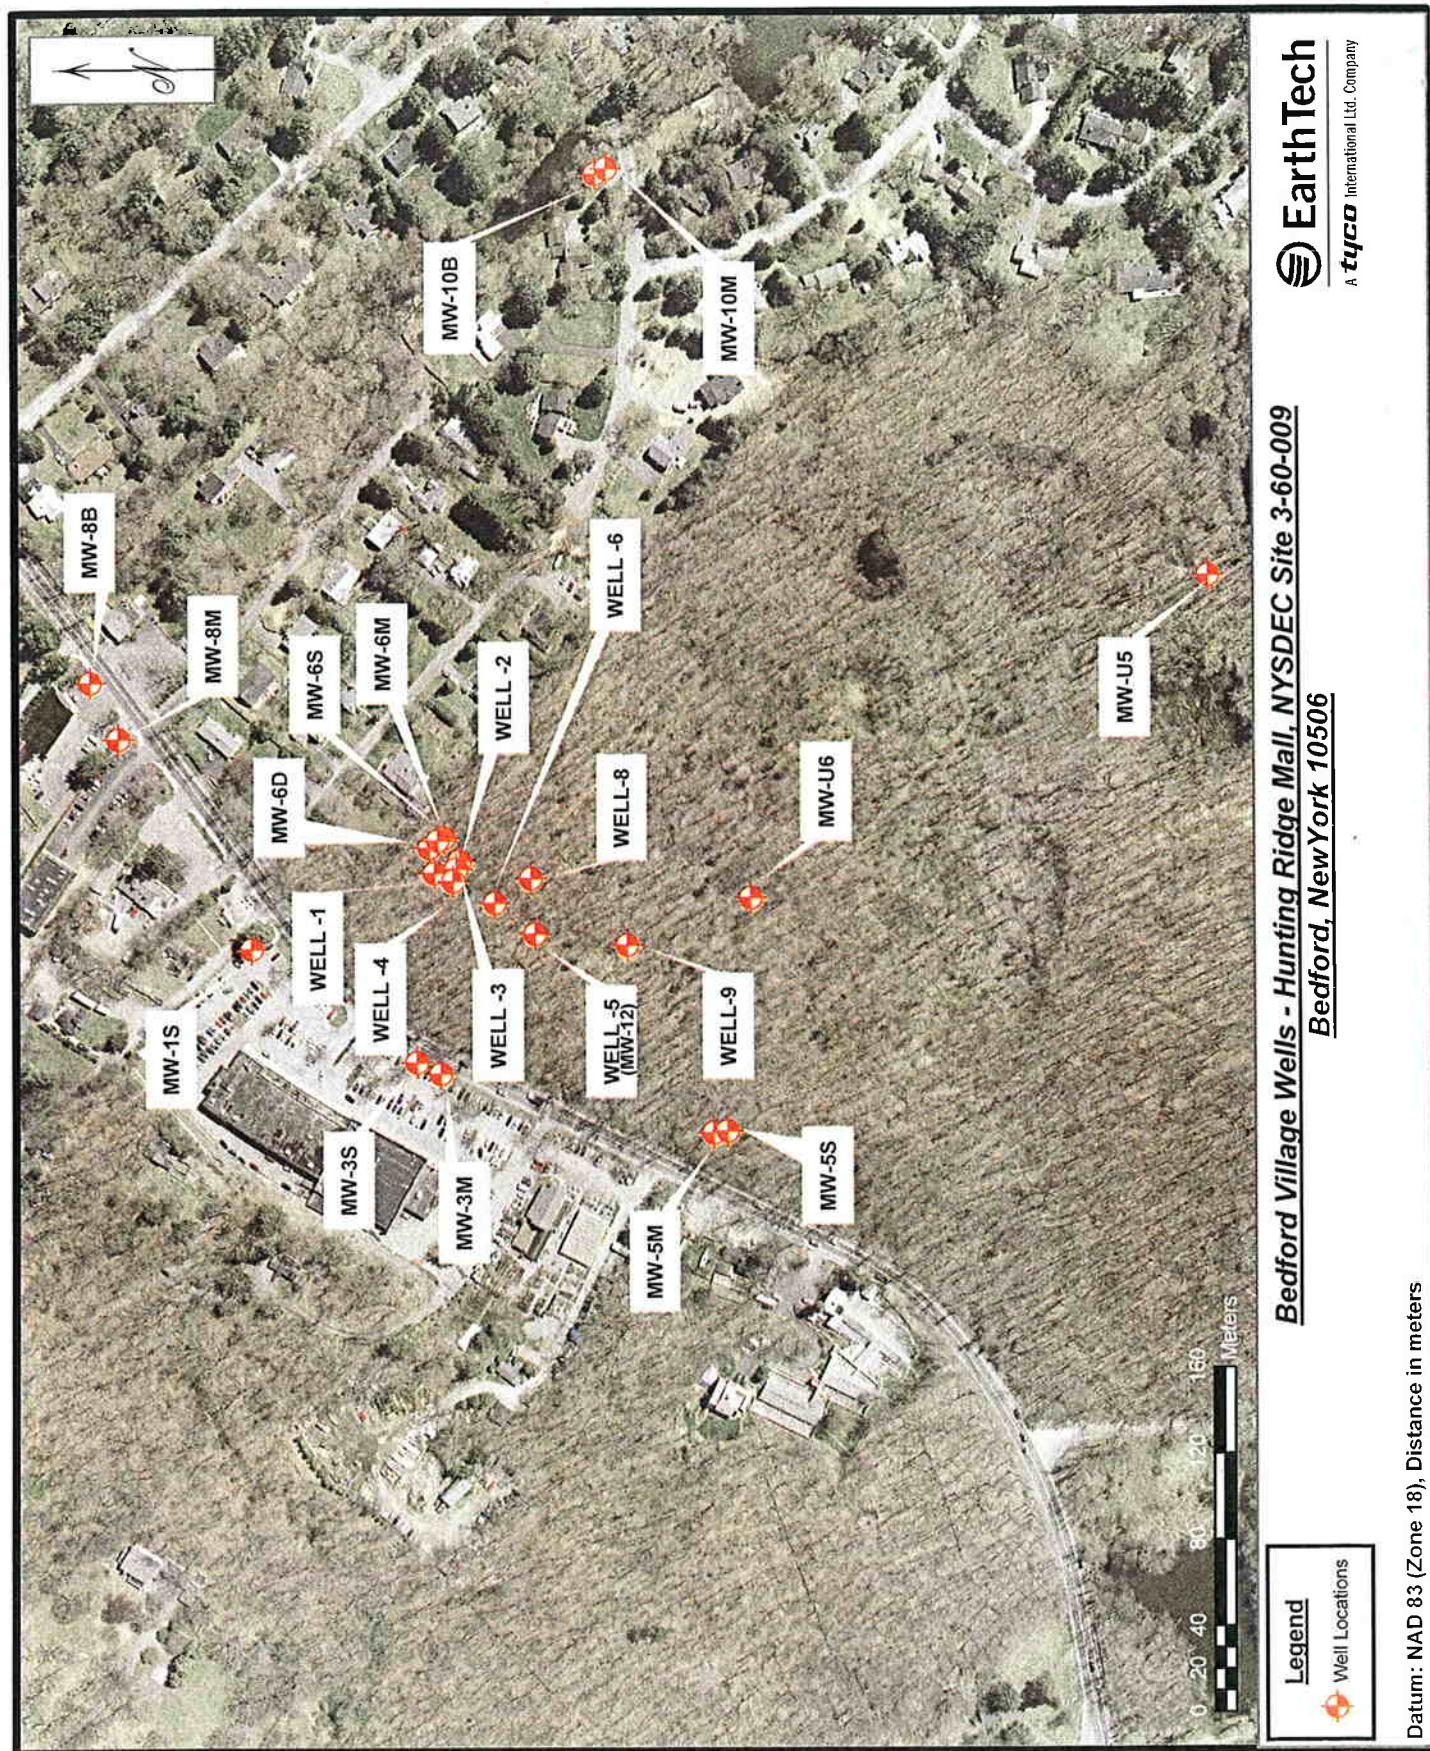

J - Estimated concentration above the IDL but less than the contract required detection limits (CRDL).

B - Analyte found in associated Method Blank

D - Results from a subsequent dilution of the original sample due to original sample results being outside the linear range.

NA indicates sample was not analyzed for indicated compound.

BOLD font in shaded cell indicates exceedances of AWQS+GV.
