SUBJECT: Groundwater Monitoring Report – No. 4 (Q4) for 2007
Former Safety-Kleen Service Center, Thornwood, New York

Dear Mr. Johnson:

This letter serves as the Safety-Kleen Systems, Inc, (Safety-Kleen) fourth quarter 2007 groundwater monitoring report for the above-referenced site. Oxidation Systems, Inc. (OSI) collected the requisite groundwater samples and field data on December 19, 2007.

Safety-Kleen submitted the requisite groundwater samples to Analytical Services, Inc. (ASI) - Norcross, GA. ASI is Safety-Kleen's outside, third party remediation sample analytical laboratory. ASI holds current NYSDEC ELAP certifications for the specified analyses, as well as National Environmental Laboratory Accreditation Conference (NELAC) certification. They are also accredited by USEPA's National Environmental Laboratory Accreditation Program (NELAP).

CLOSURE COMPLIANCE STATUS

The site is currently in the Compliance Monitoring phase of the Post Closure Monitoring program.

SCOPE OF WORK

The following scope of work was performed at the above referenced site during the reporting period:

- Quarterly groundwater gauging,
- Collection of field parameters, and
- Quarterly groundwater sampling of site wells.

GROUNDWATER GAUGING AND FIELD PARAMETER COLLECTION

Monitoring wells GT-1R through GT-5 were gauged and field indicator parameters were collected during the Q4 - 2007 site visit in December 2007. Temperature, pH, conductivity, dissolved oxygen, redox potential, and visual turbidity were recorded for each well location. The Field Log Sampling Summary Form is included as **Attachment 1**. This quarter's field data are presented in **Attachment 3, Table 2 – Field Data Water Quality Summary**.

The pH continues to be within the normal range for naturally occurring groundwater averaging 7.1 with a maximum of 7.11 in GT-1R and a minimum of 7.05 in GT-5. Average dissolved oxygen (DO) was lower this quarter at 2.8 mg/L as compared to 3.1 mg/L during Q3 2007. Dissolved oxygen ranged from 2.44 mg/L in monitoring well GT-5 and a maximum of 3.10 mg/L in GT-1R. Redox potential (Eh) ranged from -105 mV in GT-3 to a high of -10 mV in GT-1R and averaged -67 mV. The average redox potential continues to be less than zero, suggesting active biodegradation may be occurring.

Depth-to-water ranged from 8.55-feet (GT-4) to 11.69-feet below grade at GT-1R. **Attachment 2, Groundwater Contour Map** depicts the flow conditions for this gauging event. The water table appears to be lower, as would be expected with seasonal changes. The groundwater flow remains to the north-northwest with an average gradient of 0.88 %.

GROUNDWATER SAMPLING

Each well was purged of 3 to 5 well volumes (conditions permitting) of groundwater with a submersible pump prior to sampling. Samples were collected with dedicated, disposable polyethylene bailers and placed into glass containers provided by Analytical Services, Inc., Norcross, GA (ASI) as specified for each analysis.

Samples were kept cool during overnight transport to the laboratory and were accompanied by chain-of-custody documents and a trip blank. Due to weather related delays, the courier delivered the samples one day later than contracted. However, the samples were received by the laboratory within the acceptable temperature limits and were analyzed within the method hold times. ASI analyzed the water and groundwater samples for Volatile Organic Compounds (VOCs) via EPA Method 8260B, and for Mineral Spirits via Modified EPA Method 8260B.

GROUNDWATER ANALYTICAL RESULTS

During this groundwater sampling event, volatile organic target compounds (VOCs) were not detected in monitoring wells GT-3, GT-4, and GT-5. PCE was detected in GT-1R at a concentration of 0.003 milligrams per liter (mg/L), which is the same value detected in the previous quarter. This value is below the New York State Groundwater Quality Standard (GWQS) of 0.005 mg/L.

The VOCs chlorobenzene and 1,4-dichlorobenzene were detected in the groundwater sample collected from monitoring well GT-2R at concentrations of 0.003 and 0.002 mg/L,

respectively. These concentrations are below the GWQS. A duplicate sample, labeled X-1, had identical VOC concentrations. Concentrations of mineral spirits in monitoring well GT-2R currently exceed the GWQS of 0.05 mg/L at 0.640 mg/L (0.0650 mg/L duplicate). This is higher than reported during Q3 2007 (0.440 mg/L).

Site-Wide Sampling Summary

Well ID	Total BTEX (ppm)	Total VOCs (ppm)	Mineral Spirits (ppm)
GT-1R	ND	0.003	ND
GT-2R	ND/(ND)	0.005/(0.005)	0.640/(0.650)
GT-3	ND	ND	ND
GT-4	ND	ND	ND
GT-5	ND	ND	ND

Key: ppm = parts per million
BTEX = benzene, toluene, ethyl benzene, total xylenes
ND = not detected (below detection limits - "BDL" - on the lab report)
(ND) = concentrations reported in duplicate sample X-1
NS = not sampled
0.640 = Red indicates above GWQS

The current and historic groundwater quality data are presented in **Attachment 3**. The laboratory analytical report is included as **Attachment 4**.

GROUNDWATER SAMPLING SUMMARY

- Field indicator parameters are within normal ranges for naturally occurring groundwater and indicate a positive subsurface environment for active biodegradation. Both the eH and DO remain at measurable levels, and present across the site.
- PCE continues to be detected in monitoring well GT-1R but, again, at a concentration below the New York State GWQS.
- Dissolved-phase volatile organic compounds were not detected in monitoring wells GT-3, GT-4, and GT-5. Mineral spirits was not detected in any of the sampled wells except GT-2R.
- Volatile organic compounds reported in the GT-2R/AS-1R target area were again very low. No compounds were reported above the New York State GWQS's.
- Concentrations of mineral spirits at GT-2R and its' duplicate were higher (0.640 mg/L) as compared to Q3 2007 results (0.440 mg/L) and continues to exceed the GWQS. However, no sheen, and only a slight odor were present when the sample from this well was collected.

CONCLUSIONS

- Dissolved phase mineral spirits in the GT-2R/AS-1R area continues to exceed the NYS GWQS and was higher as compared to the last sampling event.
- Dissolved oxygen and other bio-activity parameters remain measureable and suggest that biodegradation is occurring.
- Although levels of both dissolved phase VOCS and mineral spirits remain lower when compared to historic highs, it appears that natural degradation has slowed down, and augmentation could stimulate on-going remediation efforts on-site.

RECOMMENDATIONS

- Safety-Kleen recommends completing one round of ozone/peroxide sparging in order to enhance the natural degradation process in the GT-2R/AS-1R area.
- Safety-Kleen will schedule this injection program for the first quarter of 2008 (Likely March 2008), in accordance with your January 10, 2008 Q3, 2007 report approval letter.

If you should have any questions or comments concerning this report, please do not hesitate to contact me at (513) 956-2172. We appreciate the Department's review of the last report, and approval to commence the ozone/peroxide injection program for the site.

Sincerely,

Safety-Kleen Systems, Inc.

IJB

Laboratory ReportReport Number **253330**

Project: SK-Thornwood NY

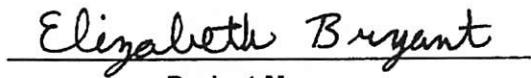

Prepared For:
Safety-Kleen Corporation - Cincinnati
11923 Tramway Drive
Cincinnati, OH 45241

Attention: Mr. Joe Basile

January 4, 2008

P.O. No. 4500440673

We appreciate the opportunity to provide the analytical support for your project. The analytical results in this report are based upon information supplied by you, the client, and are for your exclusive use. If you have any questions regarding this data package, please do not hesitate to call the Project Manager listed below.

Legend

Definitions of Laboratory Terms

- BDL** - Below Detection Limit
- ND** - None Detected
- TIC** - Tentatively Identified Compound
- CFU** - Colony Forming Units
- SOP** - Method run per ASI Standard Operating Procedure
- MCL** - Maximum Contaminant Level

Definitions of QC Terms

- BLK** - Blank
- DL** - Dilutions
- RR** - Reanalyzed
- RE** - Re-extracted or Re-Digested and Reanalyzed
- DD** - Dissolved and Digested

Definitions of Qualifiers

- B** - Found in Laboratory Blank
- J** - Estimated value; value may not be accurate
 - The J Qualifier may be used alone or along with the following identifiers:
 1. Surrogate recovery failed to meet established criteria
 2. Sample result above the MDL but below the reporting limit
 3. The reported value failed to meet the established quality control criteria for either precision or accuracy
- M** - Estimated value: A matrix effect was determined to be present in the sample
- H** - Estimated value: Sample out of hold
- U** - Not Detected at the Level Reported
- * - Sample not preserved within method requirements

NOTE: Unless otherwise noted, all results are reported on an as received basis.

Analytical Services Inc., Norcross Laboratory maintains the following certifications, approvals, and accreditations: Georgia (812); NELAC (E87315) scope: CWA, SDWA, RCRA expires June 30, 2008; Arkansas; California (01160CA); Connecticut (PH-0250); Florida(E87315); Kansas (E-10334); Kentucky (90126); Louisiana (02069); New Jersey (GA001); New York (11762); North Carolina (381); Oklahoma (9907); South Carolina (98011); Tennessee (02994); USDA Soil Import License (S-36027). ** North Carolina Samples ONLY - When a laboratory receives samples which do not meet sample collection, holding time, or preservative requirements, the laboratory must notify the sample collector or client and secure another sample. If another sample cannot be secured, the original sample may be analyzed but the results reported must be qualified with the nature of the infraction(s) and the laboratory must notify the State Laboratory about the infraction(s).
North Carolina Administrative Code, Reference 15A NCAC 2H.0805(a)(7)(N)
