Albany, NY 12233-7017

SUBJECT: Groundwater Monitoring Report – No. 2 (Q2) for 2013

Former Safety-Kleen Service Center

27 St. Charles Street, Thornwood, New York

Dear Mr. Johnson:

This letter serves as the Safety-Kleen Systems, Inc., (Safety-Kleen) second quarter 2013 groundwater monitoring report for the above-referenced site (**Attachment 1 – Site Map**). Basile Environmental Solutions, LLC (BES) collected the requisite groundwater samples and field data on June 19, 2013.

The samples were sent to Test America, Inc. (TA). TA holds NY NELAP and NYDOH laboratory certifications. A recent consolidation of TA functions necessitated that they use another network laboratory to perform analytical services for the volatile organic compounds (VOCs) for all Safety-Kleen NY sites. In specific, TA's New Jersey laboratory is now performing both the Mineral Spirit Range Organics (MSRO) analyses as well as the VOCs.

Ann Gladwell, Director Laboratory Operations, Test America (Edison, NJ) confirmed with BES that they will continue to analyze MSRO by EPA Method 8260 through the third quarter 2013. Following this, with formal approval, Safety-Kleen will direct the laboratory to begin the method studies for EPA Method 8015, using Safety-Kleen's mineral spirits as the standard.

The previously installed oxygen release compound – advanced (ORC-A®) slow release filter socks in GT-2R were again removed prior to sampling. After sampling, the socks were re-installed.

CLOSURE COMPLIANCE STATUS

The site is in the Compliance Monitoring phase of the Post Closure Monitoring program. A New York State multi-site Consent Order has been proposed by the NYSDEC. A draft of document is currently being prepared by the Agency.

SCOPE OF WORK

The following scope of work was performed at the above referenced site:

- 1. Quarterly groundwater gauging and collection of field parameters,
- 2. Quarterly groundwater sampling of site wells,
- 3. Packing of the sample set on-ice. The sample set was consolidated with N. Amityville Q1 samples on 6/20/2013. They were kept cool (on ice) and delivered to a TA courier for transport to the laboratory on 6/20/2013.
- 4. Removal and redeployment of the Oxygen Release Compound Advanced® Filter Socks at monitoring well GT-2R.

GROUNDWATER GAUGING AND FIELD PARAMETER COLLECTION

Monitoring wells GT-1R through GT-5 were gauged and field indicator parameters measured. The depth-to-groundwater, temperature, pH, conductivity, dissolved oxygen (DO), redox potential (ORP) and visual turbidity were recorded for each location.

The Field Log Sampling Summary is included as **Attachment 2.** The current and historic site field parameter measurements are presented in **Attachment 3**, **Table 1**.

Depth-to-groundwater ranged from 7.18 feet (GT-4) to 9.83 feet below grade (GT-1R). The water table was higher by approximately one-third to one-half foot. The changes in the depth to water across the site are presented below in **Figure 1**.

The natural fluctuation in the water table due to seasonal variability is evident for wells GT-1R (down-gradient) and GT-3 (up-gradient).

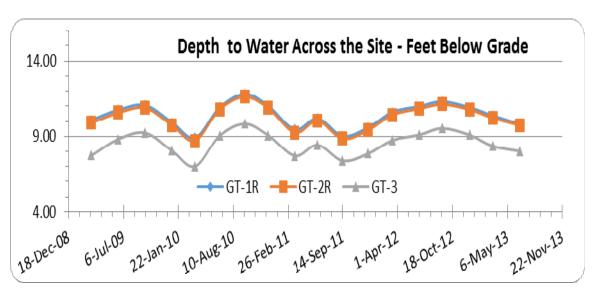

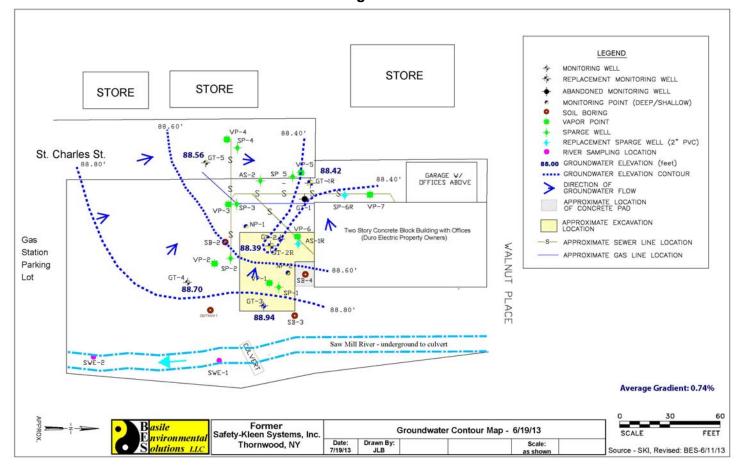

Figure 1

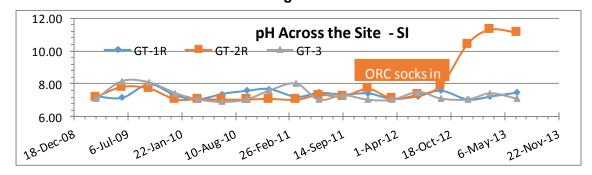

Figure 2 below depicts the flow conditions observed for June 19, 2013. The groundwater flow was west – northwest. A "ridge-like" feature was visible between GT-1R and GT-2R; it is due to the higher elevation at GT-1R (88.42') than GT-2R (88.39'). The water table surface was shallower than the past two quarters at 0.74 %.

Figure 2

The average groundwater pH was within the normal range for naturally occurring groundwater (6 - 8 SI) at wells GT-1, GT-3, GT-4 and GT-5. The pH at GT-2R was 11.12; slightly lower than last period. The ORC-A® media appears to be temporarily increasing pH in the area of the former tank pit. An increase in the local pH is not uncommon during the application of this product.

Figure 3

Dissolved oxygen (DO) as measured at GT-2R, was 8.25 milligrams/liter (mg/l); higher than last quarter (~ 6.0 mg/l). The temporary increase may be due to a rise in the water table wetting an additional sock. DO trends for GT-1R, GT-2R and GT-3 are presented below as **Figure 4**. DO at other site wells ranged from 2.40 mg/l (GT-4) to 4.58 mg/l (GT-1).

12.00 GT-1R Dissolved Oxygen Across the Site - mg/l
7.00 GT-2R
2.00 -3.00

18-Dec-08 6-Jul-09 22-Jan-10 26-Feb-11 1-Apr-12 18-Oct-12 6-May-13 22-Nov-13

Figure 4

The ORP results were lower but mainly positive and ranged from -14 uV (GT-1R) to 88 uV (GT-2R), suggesting that an oxidizing environment in the subsurface appears present.

GROUNDWATER SAMPLING

Each well was purged of 3 to 5 well volumes (conditions permitting) of groundwater with a submersible pump or bailer prior to sampling. Samples were collected with dedicated polyethylene bailers and placed into glass containers provided by TA, specified for each analysis.

Samples were kept cool during transport to the laboratory's courier and were accompanied by chain-of-custody documents and a trip blank.

TA analyzed the water and groundwater samples for Volatile Organic Compounds (VOCs) via EPA Method 8260B and for Mineral Spirit-Range Organics (MSRO) via Modified EPA Method 8260B.

GROUNDWATER ANALYTICAL RESULTS

Historic (through September 2009) data are presented in **Attachment 3, Table 2**. This quarter's groundwater quality data are summarized in **Attachment 3, Table 3**.

The laboratory analytical report is included as **Attachment 4** (Executive Summary in hard copy, report on CD).

Volatile Organic Compounds (VOCs)

Low level VOCs were detected in monitoring wells GT-1R, GT-2R and GT-5R. Target compounds were not detected above regulatory standards in any monitoring well, including GT-2R and its' duplicate (Duplicate).

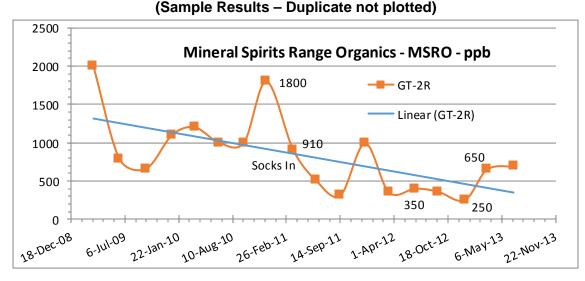

However, the concentrations of suspected regional impacts from tetrachloroethene (PCE), trichloroethene (TCE), and their breakdown compounds, were generally higher, particularly at GT-1R and GT-5 than reported last period.

Mineral Spirit-Range Organics (MSRO)

MSRO were not detected at GT-1R, GT-3, GT-4 or GT-5. MSRO was detected in GT-2R (and the duplicate) at concentrations of 690 and 670 ppb respectively. This is similar to/slightly higher than reported last quarter (600/590 ppb).

The concentration of MSRO at GT-2R from March 2009 through the present is presented below as **Figure 5**.

Figure 5

GROUNDWATER SAMPLING SUMMARY

- Depth to water across the site was higher by approximately one-third to one-half feet.
 The water table flow field was generally similar to March's, but shallower and
 generally similar to historic trends.
- Direction of flow trended toward the west-northwest, as observed historically. A
 pronounced "ridge-like" pattern was visible between GT-1R and GT-2R. The
 elevation at GT-1R was just slightly higher than observed at GT-2R, and appears
 anomalous. Typically, a shallow depression forms between the two monitoring
 locations.

- 3. The groundwater pH was within the range for naturally occurring groundwater; with the exception it was reported at 11.12 at GT-2R. The elevated pH is likely due to dissolution of the ORC-A® media. The same effect has occurred historically with the deployment of new material (September 2012).
- 4. The dissolved oxygen content at monitoring well GT-2R was higher (8.25 mg/l) than reported last period (6.25 mg/l), and may be due to the rise in water table wetting an additional sock. The higher DO during the past nine quarters is due to the ORC-A® media reacting with groundwater.
- 5. Low VOC levels were detected but none at concentrations above the New York State groundwater quality standards.
- 6. The trace detections of PCE (generally higher than last quarter) may be indicative of a regional matter not associated with former Safety-Kleen site operations.
- 7. Mineral Spirit Range Organics were only detected at monitoring well GT-2R. The concentrations reported this period (690/670 ppb) were slightly higher/similar than observed the previous quarter (600/590 ppb).
- 8. The variability in concentrations (GT-2R) is somewhat typical of the dissolved nature of MSRO, as well as subsurface conditions and a rise in the water table.

However, levels are considerably lower than the previous three year high, and post installation of the ORC-A® filter socks, are still trending lower.

CONCLUSIONS

The increase in dissolved oxygen at GT-2R is a direct result of the ORC-A® filter socks reacting with groundwater.

The MSRO concentrations have declined since the filter socks were installed during Q1 2011. The DO appears to be effective in lowering MSRO concentrations.

RECOMMENDATIONS

- 1. Revert to a semiannual groundwater monitoring program immediately, given the volume of data available.
- 2. Safety-Kleen proposes to sample the site twice annually, with March as an anchor month (sampled each year).
- 3. One other quarter will be sampled also during the year (June 2014, September 2015, December 2016).
- 4. Change, as needed, the ORC-A® filter socks (scheduled for Q3 2013).

If you should have any questions or comments concerning this report, please do not hesitate to contact me at (513) 956-2172. As always, we appreciate the Department's assistance with this site.

Sincerely,

Safety-Kleen Systems, Inc.

Stephen D. Fleming, PE, CHMM

Senior Remediation Manager

ANALYTICAL REPORT

Job Number: 460-58251-1

Job Description: 2013 Safety-Kleen Thornwood

For:

Basile Environmental Solutions, LLC 1188 Hillside Drive Cortland, NY 3045

Attention: Joseph Basile, Jr., MSc.

Nelissa Haas

Approved for release Melissa Haas Project Manager I 7/15/2013 10:46 AM

Melissa Haas, Project Manager I 128 Long Hill Cross Road, Shelton, CT, 06484 melissa.haas@testamericainc.com 07/15/2013

The test results in this report meet all NELAP requirements unless specified within the case narrative. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Edison Project Manager.

TestAmerica Edison Certifications and Approvals: Connecticut: CTDOH #PH-0200, New Jersey: NJDEP (NELAP) #12028, New York: NYDOH (NELAP) #11452, NYDOH (ELAP) #11452, Pennsylvania: PADEP (NELAP) 68-00522 and Rhode Island: RIDOH LAO00132

Job Number: 460-58251-1

Job Description: 2013 Safety-Kleen Thornwood

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Melissa Haas

Approved for release. Melissa Haas Project Manager I 7/15/2013 10:46 AM

Melissa Haas

Job Narrative 460-58251-1

Comments

No additional comments.

Receipt

The samples were received on 6/20/2013 4:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.0° C.

Except:

Technical and Operational Guidance Series subpart 1.1.1 (The New York State Ambient Water Quality Standards and Guidance Values) references a class GA standard of 0.04 ug/L for 1,2-dibromo-3-Chloropropane and 1,2,3-Trichloropropane. The laboratory is unable to meet this standard by reporting to their established reporting limit (RL) or method detection limit (MDL). Sample results are evaluated to the MDL, which is the lowest level the instrumentation has been able to detect, which is 0.4 ug/L for 1,2-Dibromo-3-Chloropropane and 0.42 ug/L for 1,2,3-Trichloropropane.

The Edison lab does not hold NY certification for the following analytes via method 8260 for water or soil: Ethyl Methacrylate, lodomethane and Methacrylonitrile.

GC/MS VOA

Method 8260B: The laboratory control sample (LCS) for batch 168597 recovered outside control limits for the following analyte: Chloroethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 168597 were outside control limits for Benzyl chloride. The MS recoveries were also outside control limits for cis-1,3-Dichloropropene, trans-1,3-Dichloropropene, and 1,1,1,2-Tetrachloroethane. The associated laboratory control sample (LCS) recoveries met acceptance criteria for these analytes.

No other analytical or quality issues were noted.

GC/MS VOA

No analytical or quality issues were noted.

VOA Prep

No analytical or quality issues were noted.

Project Specific Reporting Limits - Aqueous Samples

For aqueous samples, please note that the reporting limits listed below may vary for each sample analyzed based on sample volume, and/or sample dilution. The aqueous laboratory reporting limits are based on the New York State Department of Environmental Conservation (NYSDEC) Technical & Operational Guidance Series (TOGS) section 1.1.1 class GA standards, and ASI's previously reported

laboratory reporting limits where no TOGS class GA standard exists.

Project Specific Reporting Limits – Solid Samples

For solid samples, please note that the reporting limits listed below will vary for each sample analyzed based on sample moisture content, sample volume, and/or sample dilution. The solid laboratory reporting limits are based on the New York State Department of Environmental Conservation (NYSDEC) Subpart 375-6.8(a) Unrestricted Use Soil Cleanup Objectives and TestAmerica Connecticut's laboratory reporting limits where no part 375 cleanup objectives exist.

| Analyte | Solid Project Specific Reporting Limits | |
|-----------------------------|---|-------|
| Acetone | | ug/Kg |
| Acetonitrile | | ug/Kg |
| Allyl chloride | | ug/Kg |
| Benzene | | ug/Kg |
| Benzyl chloride | | ug/Kg |
| Bromodichloromethane | | ug/Kg |
| Bromoform | | ug/Kg |
| Bromomethane | | ug/Kg |
| 2-Butanone (MEK) | | ug/Kg |
