## *Fact Sheet*

National Grid Company, Cohoes, NY

January 2007

If you would like more information about National Grid's environmental investigations at the Cohoes Former MGP Site, please contact any of the following representatives:

Steven Stucker  
National Grid Company  
300 Erie Boulevard West  
Syracuse, NY 13202  
Phone: 315.428.5652

John B. Miller  
NYS Department of  
Environmental Conservation  
625 Broadway  
Albany, NY 12233-7014  
Phone: 518.402.9564  
Fax: 518.402.9679

Mark Van Valkenburg  
NYS Department of Health  
Bureau of Environmental  
Exposure Investigation  
547 River Street  
Troy, NY 12180-2216  
Phone: (800) 458-1158  
E-mail:

## **National Grid continues Remedial Investigation at the Cohoes (Linden Street) Property**

National Grid Company will conduct additional site investigation activities of a historical manufactured gas plant (MGP) operation formerly located on the Linden Street Extension in the area between NYS Route 787 and the Mohawk River, Cohoes, New York. The former MGP site was owned and operated by a predecessor company of Niagara Mohawk and National Grid. Pursuant to an agreement with the New York State Department of Environmental Conservation (DEC), National Grid collected and analyzed additional soil and groundwater samples to determine the extent of environmental impacts associated with the former MGP operations as part of the remedial investigation (RI) conducted during 2005. A Data Summary Report was submitted to DEC during January 2006 which indicated that MGP impacts were detected in the soil, ground water and shale bedrock on the site. Following discussions with DEC, it was determined that additional on-site and off-site sampling is required. The additional sampling is scheduled to be conducted during 2007. The results of these sampling efforts will be presented in a Supplemental Remedial Investigation Data Summary that National Grid will submit to the DEC during Fall 2007.

### ***Background Information***

While owned by the Cohoes Gas Company from 1880 until 1926, and the Cohoes Power and Light Corporation from 1926 until approximately 1930, this plant heated coal and produced a "manufactured" gas which was utilized for lighting, heating and cooking by Cohoes homes and businesses. Manufactured gas was stored in above and below ground tanks on the current site of the St. Michaels Community Center property until approximately 1949. The site was transferred to Niagara Mohawk in 1950 as part of its incorporation from many smaller companies, including Cohoes Power and Light Corporation. In 2002, Niagara Mohawk entered into a Voluntary Cleanup Agreement with the New York State Department of Environmental Conservation (NYSDEC) to evaluate and, where necessary, remediate MGP by-products that may remain at 24 former MGPs sites located throughout the New York State. The former St. Michaels Community Center property located off from Linden Street, is one of those former MGP sites.

### **Environmental Investigations Scheduled**

An Initial Site Characterization (ISC) was completed during 2003, and a report was submitted to the NYSDEC. The results of the ISC indicated the presence of MGP by-products in the soil and groundwater on-site. RI activities were performed in 2005 in order to further evaluate on-site and off-site conditions. The results of the RI indicated that additional on-site and off-site activities are needed. A Supplemental RI work plan was reviewed and approved by the DEC during

2006, and will be implemented during early 2007. The data generated during the Supplemental RI will be used to evaluate appropriate remedial alternatives for the site. With oversight from the DEC, contractors from National Grid will complete additional soil borings, and install additional groundwater monitoring wells at and in the vicinity of the parcels that comprise the former MGP site.

Soil and groundwater samples will be collected and analyzed by a licensed laboratory, and the results will be reported to National Grid and DEC officials for evaluation. The investigation activities are anticipated to take approximately one month to complete, although the schedule may be adjusted depending on conditions encountered in the field and the weather. Once installed, the ground water monitoring wells will be monitored periodically as part of ongoing investigation efforts.

Based on the results of the sampling, National Grid will coordinate with DEC to develop a plan to evaluate and determine the next appropriate step in the investigation.

Work at the site will be conducted in a safe and controlled manner according to the Health and Safety Plan prepared specifically for this project. If other actions are needed in the future, then all work will be monitored to protect workers and our local residents.

### For More Information

If you would like more information about the planned activities, please contact any of the project representatives listed on the sidebar on the front of this fact sheet. Project documents can be reviewed by contacting Deborah Canzano at the Cohoes City Library.

The Cohoes Former MGP site is located on the Linden Street Extension in the area between NYS Route 787 and the Mohawk River. National Grid will conduct environmental investigations of soil and groundwater at the site. Results of the investigations will be used to develop and evaluate appropriate clean up actions at the

### Inside .....

.....this fact sheet you will find information about environmental investigations planned for the Cohoes (Linden Street) Former MG site in Cohoes. National Grid is working with the Department of Environmental Conservation to investigate a number of properties potentially impacted by MGP-related materials.
