RE: Additional Site Characterization
700 Smith Boulevard at the Port of Albany
NYSDEC Spill No. 1405730

Dear Mr. Grathwol:

Thank you for your letter of October 3, 2018 in which you indicated that the Department does not have any comments on the additional site characterization work plan. At that time you also asked for sampling of catch basin sediments for the full TCL/TAL parameters to help the Department confirm that offsite impacts are not a significant concern.

As you know, the sampling of catch basins was completed on November 29th and 30th and samples were sent out at that time for analysis. The catch basin sediment analysis is now complete and we can confirm that offsite impacts through the catch basin sediments are not a significant concern at this industrial site. Find attached Table 1 which provides a sample summary, and Figure 1 showing the sample locations. The Category B Laboratory Report and Data Usability Summary Report (DUSR) are provided as Attachment A and Attachment B, respectively. As you will see, we did get a number of detections and for review have compared the results to the restricted industrial use soil cleanup objectives (SCOs).

We also provide this following summary of the observations made at each catch basin location during the sampling effort.

- Location CB-01 was observed to be a manhole structure with a steel manhole cover lid, which was open on the day of sampling. Much of the soil surrounding the sides of the manhole and basin have been removed. An invert was observed to be present on the north side of the catch basin. No standing water was observed inside the basin and there does not appear to be any flow through of water occurring at the present time. CHA biased the collection of sediment material to the area around the effluent drain.
- Location CB-02 was observed to be a catch basin or manhole structure with a damaged top portion, currently open and at present grade. The inside of the basin was filled with soil, leaf litter, and was growing vegetation and trees, some of which CHA physically removed by hand to facilitate sample collection. No inverts were observed. No standing water was observed inside the basin and there does not appear to be any flow through of water occurring at the present time.
- Location CB-03 was observed to be an active catch basin with one invert on the southwest end of the basin. The invert is elbowed down/baffled. A few inches of organic-rich sediment material were noted to be present at the bottom of the catch basin covered by several inches of standing water.

- Location CB-04 was observed to be an active catch basin with one invert situated on the east end of the basin. The invert is elbowed down/baffled. Sediment material was relatively sparse and largely consisted of degraded leaf litter and gravel. Several inches of standing water were observed in the basin.
- Location CB-05 consists of an open top steel cylinder that appeared to be placed over a manhole to provide protection to the manhole. The manhole cover is approximately 2 feet below grade within the cylinder. APDC personnel entered the vault to remove the manhole cover, which revealed a concrete vault below grade. The vault contains electrical wires and approximately 1 foot of standing water, whereupon a solid bottom was encountered. The vault was not observed to contain any subsurface effluent or influent piping. Only sparse sediment sample material consisting of decayed vegetation was noted to be present. CHA collected sufficient sample volume material to analyze the sample material for PCBs only. There was insufficient material present on the floor of the vault to allow for the other parameter analyses. Based on the conditions encountered, including lack of any observed influent/effluent piping inverts, large amount of wiring present, and historical location of the site's emergency backup generator in the vicinity, it has been concluded that this location is an electrical-related vault and not a storm water or sanitary sewer basin, as was previously suspected.

There are really three conditions observed. CB-01 & 02 which appear to have soil/sediment, possibly from the surface soils as both are currently open; CB-03 & 04 which receive surface flow from the paved areas in the southwest corner of the site and presently are operating as catch basins and were observed to have water present, but minimal sediment; and CB-05 is not a catch basin at all, but appears to be an electrical vault with no inverts.

Based upon these observations, the only operative catch basins onsite are CB-03 and CB-04. Both of these structures demonstrate compliance with the industrial soil cleanup objectives. In closing and based on the observations and analytical results presented, no remediation of any of the structures observed and sampled is considered necessary, nor is it recommended.

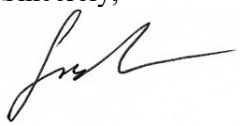
Sincerely,



Seth H. Fowler

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L1849060-06: The Client ID was specified by the client.

Volatile Organics

L1849060-02 through -06: Any reported concentrations that are below 200 ug/kg may be biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

WG1186672-6 MS: The internal standard (IS) response for 1,4-dichlorobenzene-d4 (35%) was outside the acceptance criteria; however, the failure was confirmed in the WG1186672-7 MSD: 1,4-dichlorobenzene-d4 (37%). The results of both analyses are reported.

Semivolatile Organics

L1849060-06: The sample has elevated detection limits due to the dilution required by the sample matrix.

The WG1184852-4/-5 MS/MSD recoveries, performed on L1849060-03, are below the acceptance criteria for 3,3'-dichlorobenzidine (0%/0%), hexachlorocyclopentadiene (0%/0%), 3-nitroaniline (MS at 0%), 4-nitroaniline (MS at 0%), 2-nitrophenol (MS at 0%), 4-nitrophenol (MS at 0%), 2,4-dinitrophenol (0%/0%), 4,6-dinitro-o-cresol (0%/0%) and atrazine (0%/0%) due to the concentration of these compounds falling below the reported detection limit.

The WG1184852-4/-5 MS/MSD recoveries, performed on L1849060-03, are outside the acceptance criteria for bis(2-ethylhexyl)phthalate (0%/0%). The unacceptable percent recoveries are attributed to the elevated concentration of target compound present in the native sample.

PCBs

L1849060-02 and -05: The surrogate recoveries are below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene (0%) and decachlorobiphenyl (0%) due to the dilution required to quantitate the sample. Re-extraction

Case Narrative (continued)

was not required; therefore, the results of the original analysis are reported.
L1849060-03, -06, WG1184841-4 and WG1184841-5: The sample has elevated detection limits due to the limited sample volume utilized during extraction, as required by the sample matrix.

Pesticides
L1849060-06: The sample has elevated detection limits due to the limited sample volume utilized during extraction, as required by the sample matrix.

Total Metals
L1849060-02 through -06: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.
The WG1186031-3/-4 MS/MSD recoveries for aluminum (223%/460%), calcium (0%/876%), chromium (561%/54%), copper (0%/5350%), iron (0%/0%), lead (0%/0%), manganese (65%/148%) and zinc (739%/0%), performed on L1849060-03, do not apply because the sample concentrations are greater than four times the spike amounts added.
The WG1186031-3/-4 MS/MSD recoveries, performed on L1849060-03, are outside the acceptance criteria for barium (67%/73%), cadmium (MSD at 68%) and thallium (MSD at 72%). A post digestion spike was performed and was within acceptance criteria.
The WG1186031-3 MS recovery, performed on L1849060-03, is outside the acceptance criteria for nickel (132%). A post digestion spike was performed and yielded an unacceptable recovery for nickel (77%). The serial dilution recovery was acceptable; therefore, the matrix test passed for the sample matrix.
The WG1186031-3/-4 MS/MSD RPDs for calcium (47%), chromium (56%), copper (82%) and zinc (29%), performed on L1849060-03, are above the acceptance criteria.
The WG1186191-3/-4 MS/MSD recoveries for mercury (0%/67%), performed on L1849060-03, do not apply because the sample concentration is greater than four times the spike amount added.

Cyanide, Total
The WG1184981-2 LCS recovery (53%), associated with L1849060-02 through -06, is outside our in-house

Case Narrative (continued)

acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analyses are reported.

The WG1184981-2/-3 LCS/LCSD RPD (49%), associated with L1849060-02 through -06, is above the acceptance criteria.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.
