1. Introduction

1.1 Project Authorization

The Army National Guard (ARNG) G-9 is the lead agency in performing Remedial Investigations (RI) / Feasibility Studies (FS), Decision Documents, Time Critical Removal Actions (TCRA) for Per- and Polyfluoroalkyl Substances (PFAS) Impacted Sites, ARNG Installations, Nationwide. This work is supported by the United States Army Corps of Engineers (USACE) Baltimore District and their contractor AECOM Technical Services, Inc. (AECOM) under Contract Number W912DR-19-D-0001, Task Order W912DR21F0349, issued 17 August 2021. Consistent with the Programmatic Quality Assurance Project Plan, the ARNG is assessing the potential environmental impacts primarily from aqueous film-forming foam (AFFF) and similar chemical releases suspected at their properties related to processes that used PFAS (e.g., fire training, firefighting, and metal plating). This Drinking Water Well Survey addresses RI activities to be completed at the Albany Army Aviation Support Facility (AASF) #3 in Latham, New York (also referred to as the “facility”).

A Preliminary Assessment (PA) and Site Inspection (SI) were performed under a separate contract vehicle on behalf of the ARNG at Albany AASF #3. The PA determined whether there was a potential release to the environment related to processes that used PFAS. Based on the findings of the PA, Albany AASF #3 moved forward to the SI phase. The SI concluded that there was a release to the environment from Areas of Interest (AOIs) identified in the PA and determined the presence of perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS), perfluorohexanesulfonic acid (PFHxS), and perfluorooctanoic acid (PFNA) at or above screening levels (SLs) established in a memorandum from the Office of the Secretary of Defense (OSD) dated 6 July 2022 (Assistant Secretary of Defense, 2022). Due to the updated SLs, the presence of perfluorobutanoic acid (PFBA), perfluorohexanoic acid (PFHxA) and hexafluoropropylene oxide dimer acid (HFPO-DA or GenX) will also be evaluated as part of this RI.

This Drinking Water and Surface Water Survey is being completed to identify potential exposure routes to off-facility receptors within 4-miles of the Facility.

1.2 Well Survey Purpose

To assist with the understanding of potential exposures to off-facility receptors, a drinking water survey within 0-4 miles of Albany AASF #3 was conducted. All available information on types of wells (domestic, irrigation and public supply) surrounding the Facility has been summarized in the following sections. Results of the survey are provided in **Table 1** and **Appendix A** and shown in **Figure 1** through **Figure 3**, where **Figure 1** provides results for domestic and irrigation wells within 0-4 miles of the facility boundary, **Figure 2** provides results for public water supplier (PWS) service areas and associated infrastructure (treatment plants, and supply well fields) in the vicinity of the facility, and **Figure 3** provides water utility type by parcel within the vicinity of the facility.

1.3 Hydrogeology

Regional groundwater flow follows a relatively simple drainage pattern, facilitated by the topographic and structural channel of the Mohawk River Valley, which lies between the Appalachian and Adirondack Mountain uplands. Generally, groundwater flows from divides of high elevation to the lowland of the Mohawk River Valley and discharges into the streams and rivers (USGS 2006). The direction of regional groundwater flow in Albany County is presumed to be north towards the Mohawk River. Unconsolidated sand and gravel units form a virtually continuous aquifer system underlying the eastern end of the Mohawk River Valley (USGS, 1981). Water in the aquifer is principally under water-table conditions and in hydraulic contact with the Mohawk

River, so that pumping of most wells in the area induces recharge from the river to an unknown extent (USGS, 2002).

Based on a review of the United States Environmental Protection Agency's (USEPA) map of Sole Source Aquifers, Albany AASF #3 is not located above a sole source aquifer. The primary surficial aquifer underlying the facility is an unconfined lacustrine sand aquifer. The Colonie Channel aquifer consisting of stratified glacial drift also lies beneath the facility. The Colonie Channel Aquifer is confined within the deepest parts of the channel and is variably confined and unconfined within the shallower peripheral channel areas. Precipitation that infiltrates the land surface is the sole source of recharge to the lacustrine sand aquifer and unconfined parts of the Colonie channel aquifer (United States Geological Survey [USGS], 2002).

Depths to water measured in April 2022 during the SI ranged from 0.56 to 5.72 feet below ground surface (ft bgs) and indicate the groundwater flow direction at the facility is primarily to the west (**Figure 1**; AECOM, 2018).

2. Potable Well Research

Potable well details referenced in this well survey were sourced from the New York State Department of Environmental Conservation's (NYSDEC) *DECinfo Locator* interactive map, as well as NYSDEC's Water Wells geospatial data published on the New York State Geographic Information Systems (GIS) Clearinghouse (NYSDEC, 2023; NYSDEC Division of Water Resource Management, 2001; New York State, 2023). Well records identified through use of the *DECinfo Locator*, and the NYS GIS Clearinghouse are limited to well completion reports aggregated by NYSDEC since April 2000. Therefore, this well survey is not necessarily all-inclusive of potable wells drilled and operated within 4 miles of Albany AASF #3; some wells may have been installed without well completion reports or prior to April 2000.

2.1 Domestic Well Summary

Information on domestic wells identified between 0 to 4 miles can be found in **Table 1** and on **Figure 1**.

- Seven domestic wells were identified within 2 miles of the Albany AASF #3 boundary. The wells are all located within Albany County and range in depth from 70 to 402 ft bgs.
- 14 domestic wells were identified between 2 to 4 miles of the Albany AASF #3 boundary. The wells range in depth from 26 to 623 ft bgs, and are located across Albany, Schenectady, and Saratoga Counties.

2.2 Irrigation Well Summary

Information on irrigation wells identified between 0 to 4 miles can be found in **Table 1** and on **Figure 1**.

- Six irrigation wells were identified within 2 miles of the Albany AASF #3 boundary. The wells are all located within Albany County and range in depth from 16 to 740 ft bgs. The well type for two of these six wells (A1879 and A1750) are incorrectly labeled as, 'Car Wash,' and 'Power' respectively in the available NYSDEC geospatial data. A review of the well completion reports for the wells confirmed that they function as irrigation wells and were incorrectly labeled in the NYSDEC database.
- Eight irrigation wells were identified between 2 to 4 miles of the Albany AASF #3 boundary. The wells are all located within Albany County and range in depth from 100 to 500 ft bgs.

THIS PAGE INTENTIONALLY BLANK

3. Public Water System Research

PWS service areas and information related to PWS drinking water sources were obtained from the New York State Department of Health (NYSDOH), the Latham Water District, and from historical New York State Geological Association publications (NYSDOH, 2023; Latham Water District, 2023; Maswick, 1995). NYSDOH PWS geospatial data is undated, and information for the latter two sources are dated 2022 and 1995. As such, the publicly available information presented as part of this PWS survey may not necessarily be the most up to date.

3.1 PWS Service Areas

Information on public water suppliers within a 4-mile radius of the facility boundary are presented on **Figure 2**. The following nine PWS service areas were identified within 4-miles of the facility:

1. Latham Water District (NY0100198)
2. Colonie Village (NY0100194)
3. Albany City (NY0100189)
4. Niskayuna Consolidated Water District II (NY4600073)
5. Menands Village (NY0100200)
6. Watervliet City (NY0110127)
7. Cohoes City (NY0100192)
8. Halfmoon Water District (Purchase Troy; NY4519111)
9. Clifton Park Water Authority (NY4500175)

Most of the area within the 4-mile radius of the facility is serviced by the Latham Water District. Southwest of the facility the entire Colonie Village water system lies within the 4-mile radius. The Albany City water system to the south and the Niskayuna Consolidated Water District II to the northwest of the facility cover the most area after the Latham and Colonie Village water districts. Small areas of the Cohoes City, Watervliet City, Menands Village, Halfmoon Water District, and Clifton Park Water Authority service areas intersect the outer edge of the 4-mile radius. However, the Halfmoon Water District and Clifton Park Water Authority located north of the Mohawk River are hydrologically separated from the facility and the seven other PWS service areas identified.

3.2 Latham Water District

The Latham Water District serving a population of 78,500, sources raw water from the Mohawk River and five groundwater supply wells (NYSDOH, 2023; Latham Water District, 2023; Maswick, 1995). The Stony Creek Reservoir located in the Town of Clifton Park is used as an emergency raw water source. The Stony Creek Reservoir was not used in 2022, and the 2023 Water Quality Report is not publicly available at the time of this report (Latham Water District, 2023).

The five supply wells are located on the Mohawk View Water Treatment Plant property at 100 Onderdonk Avenue in Latham (**Figure 2**). Latham Water District's Mohawk River intake is approximately halfway between Crescent Dam and Lock Number (No.) 7 (**Figure 2**; Maswick, 1995). The exact location of the intake is not publicly available. In October 2022, Latham Water District's drinking water was tested for three PFAS compounds, the results are as follows (Latham Water District, 2023):

- Perfluorobutanoic acid (PFBA): 2.8 nanograms/liter (ng/L)
- Perfluoropentanoic acid (PFPeA): 2.3 ng/L
- Perfluorohexanoic acid (PFHxA): 2.3 ng/L

New York State and the USEPA do not have promulgated drinking water maximum contaminant levels (MCLs) for PFBA, PFPeA, and PFHxA (NYSDOH, 2022; USEPA, 2023). Additionally, at the time of this report there are no USEPA drinking water health advisories for PFBA, PFPeA, and PFHxA either (USEPA, 2022).

4. Water Supply Class

Water supply class geospatial data for tax parcels within a 4-mile radius of the facility are sourced from the New York State Department of State's Mohawk River Watershed Tax Parcel GIS feature layer (New York State Department of State, 2023). The feature layer is titled 'Mohawk River Watershed Tax Parcels from 2010 to 2011,' however the feature layer was created in ArcGIS Online on January 5, 2023, and subsequently updated on August 30, 2023. As such, it is unclear whether the feature layer has been updated to reflect current information.

Water supply class within a 4-mile radius of the facility is shown on a parcel-by-parcel basis in **Appendix A** and on **Figure 3**. 29,805 parcels intersect with the 4-mile facility radius:

- 175 parcels do not have any water supply information to categorize.
- 854 parcels are categorized as using no water supply.
- 28,497 parcels are categorized as using community/public water supply.
- 283 parcels are categorized as using a private water supply. 112 of which are in Albany County, the county where the facility is located. Within Albany County:
 - 59 parcels are categorized as 1 and 2 family residences.
 - One parcel is categorized as an apartment.
 - Three parcels are categorized as manufactured housing or a manufactured housing park.

No parcels on private water were identified directly adjacent to the facility. However, one parcel (012689_18.-4-3.1) to the north, separated from the facility by one approximately 115-foot lobe of the Albany International Airport's parcel, is identified as using private water. The parcel is classified as a one family residential property, Google Earth aerial imagery depicts what appears to be a residential home at the location of this parcel as well.

The five closest private water parcels to the facility, including the parcel discussed above are shown on **Figure 4**, and listed in **Table 2** below:

Table 2. Closest Private Water Parcels to Albany AASF #3.

Statewide Information System Print Key	Approximate Distance and Direction from Facility Boundary (miles)	Property Type
012689_18.-4-3.1	0.02 N	1 Family Residential
012689_30.-4-18	07. S	1 Family Residential
012689_30.-5-10	0.9 SSW	Commercial
012689_29.2-3-45	1.5 SW	1 Family Residential
012689_29.2-3-44.2	1.5 SW	Rural Residential

4.1 Domestic Wells and Private Water Supply

The NYSDEC domestic wells inventory (**Section 2.1**) was overlain on the Water Supply Class feature layer (**Figure 3**) to identify parcels that may be missing private well completion reports. The domestic wells do not plot on parcels categorized as using a private water supply. There are limitations to both sets of data. Thus, it is unclear if the NYSDEC dataset is missing active private wells that may be receptors.
