

Site Characterization Report

Location:

Sunshine Cleaners
Newton Plaza
592 New Loudon Road
NYSDEC P-Site No. 401085
Latham, New York 12110

Prepared for:

Newton Plaza Associates, LLC
596 New Loudon Road, #14
Latham, New York 12110

LaBella Project No. 2243806

Revised November 19, 2025

CERTIFICATIONS

"I, Michael B. Carr, certify that I am currently a Qualified Environmental Professional as defined in 6 NYCRR Part 375 and that this Site Characterization Report was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER Technical Guidance for Site Investigation and Remediation (DER-10)."

COMMON ACRONYMS / ABBREVIATIONS

AMSL – Above Mean Sea Level

ASTM – American Society for Testing and Materials

AWQSGV – Ambient Water Quality Standards and Guidance Values

bgs – below ground surface

CAMP – Community Air Monitoring Plan

CAS – Chemical Abstracts Service

COCs – Compounds of Concern

CVOCs – Chlorinated Volatile Organic Compounds

DER – Division of Environmental Remediation

ELAP – Environmental Laboratory Approval Program

HASP – Health and Safety Plan

IDW – Investigation Derived Waste

MS/MSD – Matrix Spike / Matrix Spike Duplicate

ND – non-detect

ng/L – nanograms per liter (equal to parts per trillion – ppt)

NYCRR – New York Code of Rules and Regulations

NYSDEC – New York State Department of Environmental Conservation

NYSDOH – New York State Department of Health

PCBs – Polychlorinated Biphenyls

PFAS - Per- and Polyfluoroalkyl Substances

PFOA – Perfluorooctanoic Acid

ppt – parts per trillion (equal to nanograms per liter - ng/L)

QCP – Quality Control Plan

RL – Reporting Limit

SC – Site Characterization

SCGs – Standards, Criteria, and Guidelines

SCWP – Site Characterization Work Plan

SVOC – Semi-volatile Organic Compound

USEPA – United States Environmental Protection Agency

VOC – Volatile Organic Compound

1.0 INTRODUCTION

LaBella Associates, D.P.C. (LaBella) is pleased to submit this Site Characterization Report (SCR) summarizing the investigation conducted at the Newton Plaza Site, a commercial plaza, in a commercial zone located on New Loudon Road in the hamlet of Latham, Town of Colonie, Albany County, New York, hereinafter referred to as the “Site.” The Site is listed as New York State Department of Environmental Conservation (NYSDEC) P-Site No. 401085. A Site Location Map is included as **Figure 1**.

LaBella previously completed a Phase I Environmental Site Assessment (ESA) in compliance with the scope and limitations of ASTM Standard Practice E1527-13/21 and also a Limited Phase II ESA. Spill number 22-09261 was reported by LaBella to the NYSDEC as part of the Limited Phase II ESA. The Limited Phase II ESA is located in **Appendix A**. An Order on Consent was executed by the NYSDEC and Newton Plaza Associates as of August 29, 2023.

Information in the Phase I ESA and Limited Phase II ESA materials was used in support of the preparation of the Site Characterization Work Plan (SCWP), which was submitted and approved by NYSDEC on June 24, 2024. This report summarizes the Site Characterization work performed, analytical sampling results, observed groundwater contour, and any deviations from the original SCWP.

1.1 Purpose and Objectives

The goals of the Site Characterization (SC), as defined in the SCWP, were as follows:

- To evaluate the areal and vertical distribution of environmental contamination in soil, soil vapor, and groundwater at targeted locations and peripheral locations on the property.

This SCR details the investigative activities that were performed to meet the goals of the project in accordance with NYSDEC regulations and program policy. The Site Characterization activities were carried out in accordance with the NYSDEC’s Division of Environmental Remediation (DER)-10 (*Technical Guidance for Site Investigation and Remediation*) issued May 3, 2010. A detailed discussion of the objectives and rationale behind this SC is presented below in Section 3.0.

1.2 Site Location / Description

The commercial property is located on the Town of Colonie tax parcel No. 31.3-4-72.21-1. This is a 10.77-acre property located on the western side of New Loudon Road (U.S. Route 9). The property is in an urban/suburban setting in an area with nearby properties developed for residential and commercial uses. Adjacent properties include residential properties to the south, commercial and limited residential properties to the east, commercial properties, including a restaurant to the north, and a wooded area to the west.

Improvements on the property include four (4) commercial buildings of wood frame and concrete block construction. These include standalone buildings and commercial “strip mall” buildings containing leaseholds of various businesses including drycleaning, retail, and restaurants. The property is accessible via asphalt driveways and parking areas that have two (2) entrances on New Loudon Road. The remainder of the property consists of sidewalks, maintained grass/landscaped areas and a wooded area along the western portion of the property. Two (2) storm water retention ponds are located west of the main strip mall buildings, prior to the wooded area. A property map is provided in **Figure 2**. The property is serviced via municipal water and sewer and is currently a vibrant and busy commercial property.

2.0 PROJECT BACKGROUND

2.1 Site History

The property is currently owned by Newton Plaza Associates, LLC of Latham, New York. Newton Plaza Associates constructed the retail shopping facility in 1984. Various businesses have been operating on the property and Sunshine Cleaners, the drycleaning tenant, was noted as a recognized environmental concern (REC) in LaBella's previously completed Phase I ESA. Sunshine Cleaners does not currently use PCE as a drycleaning compound. A single 12-ounce bottle of PICRIN Stain Remover was identified onsite during chemical inventory which contains Trichloroethylene according to the Safety Data Sheet (SDS). The current fluid in use is an ExxonMobil Chemical Company product "DF-2000 Fluid" additionally identified as "Aliphatic Hydrocarbon" with a CAS NO. 64742-48-9.

Based on LaBella's review of historical sources during the ESA, the Site was developed in or before 1952 as an agricultural property and several structures were previously on the property. Circa 1965, redevelopment of the Site for retail use began. LaBella performed a limited Phase II ESA in January 2023 with the installation of three (3) soil borings and conversion to temporary groundwater monitoring wells which documented the detection of low-level concentrations of VOCs in soil and groundwater in samples submitted for laboratory analysis. A subsequent soil vapor intrusion (SVI) investigation was performed in February 2023 which recorded concentrations for sub-slab samples above mitigation action levels at the Sunshine Cleaners leasehold as per the *NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, May 2017*.

2.2 Physical Conditions

2.2.1 Soil

Soil encountered during sampler advancement was primarily coarse to fine sand to approximately 18 fbg. A transition to fine sand, silt, and some clay was recorded at approximately 18 fbg.

2.2.2 Topography

The topographic relief in proximity to the Site is generally level, with an overall gentle slope to the west. West of the Site is vegetated with developing forest and brush. Wetlands exist further west as part of the wooded area and beyond. North of the Site is mostly unvegetated in the area of a former amusement park. East (across Rt 9) is another shopping plaza with typical landscaping of mowed grass and green spaces consisting of ornamental plantings. South of the Site there are residential homes.

2.2.3 Surface Water

There are no apparent natural surface water features on the Site. Surface water from storm events is shed from the asphalt parking lot via storm drop inlets and is collected in retention ponds along the western edge of the property.

2.2.4 Geology and Hydrogeology

According to the Surficial Geologic Map of New York, Lower Hudson Sheet (1989) there are various glacial deposits in the vicinity of the Site including glacial till, lacustrine (glacial lake) sand, and kame deposits. These unconsolidated deposits overlie shales and graywackes (a lithified mixture of sand-sized particles in a fine-grained matrix) of the Austin Glen Formation. The Austin Glen Formation is an upper Middle Ordovician unit of interbedded greywackes and shales that were deposited in a deep marine environment and later became an allochthon associated with the Taconic Orogeny. Bedrock was not encountered during this investigation. Soils encountered include primarily well-sorted, medium to fine sand with trace amounts of silt throughout the site. The depth to water ranges from 4.88 to 8.02 feet below ground surface and generally flows in a southwesterly direction at an approximate gradient of 0.004 ft/ft.

3.0 OBJECTIVES AND RATIONALE

The objective of this SC is to further evaluate the presence/location of impacts above Standards, Criteria, and Guidelines (“SCGs”), and to determine the depth and direction of groundwater flow across the Site in order to determine the need, if any for additional investigation and/or cleanup efforts required to protect public health and the environment.

3.1 Preliminary Contaminants

Based on laboratory analytical results of LaBella’s previous Phase I and Phase II ESAs and SVI investigation, chlorinated solvents, including PCE, TCE and related degradation by-products were detected in soil, groundwater, and indoor air. PCE and TCE are historically common degreasers that have been associated with dry cleaning, wood processing and metal fabrication. They can also be components of paint, paint remover, spot removers, adhesives, water repellents and wood cleaners.

Analytical results for this project are compared with applicable SCGs for the Commercial Use of the Site. The SCGs for this Site are presented below in Section 4.1, “Standards, Criteria, and Guidelines.”

4.0 SITE CHARACTERIZATION METHODS

4.1 Standards, Criteria, and Guidance

The SCGs utilized as part of the implementation of the SCWP are identified below.

Soil SCGs: The following SCGs for soil were used in developing this report:

- NYCRR Subpart 375-6(b): Restricted Use Soil Cleanup Objectives (Commercial), and
- NYSDEC’s “Sampling, Analysis, and Assessment of Per- and Polyfluoroalkyl Substances (PFAS)”, November 2022

Groundwater SCGs: The following SCGs for groundwater were used in developing this report:

- Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values (AWQSGVs); and
- NYSDEC’s “2023 Addendum to June 1998 Division of Water TOGS 1.1.1”, February 2023. This includes:
 - A standard of 6.7 ng/L for PFOA; and
 - A screening level of 2.7 ng/L for PFOS.

Soil Vapor SCG: The following SCG for soil vapor was used in developing this report:

- NYSDOH *Guidance for Evaluating Soil Vapor Intrusion in the State of New York*, May 2017 and as updated February 2024.

4.2 Sample Analysis

Based on LaBella’s Site Characterization Workplan submitted to NYSDEC and NYSDOH and approved June 2024, three (3) media were sampled. These include soil, groundwater, and soil vapor. The analytical methods for samples are defined below.

Soil Sample Parameters:

- USEPA Target Compound List (TCL) list volatile organic compounds (VOCs) including tentatively identified compounds (TICs) using USEPA Method 8260;
- USEPA TCL list semi-volatile organic compounds (SVOCs) using USEPA Method 8270;
- RCRA metals by USEPA Method 6010, mercury by Method 7471;
- Pesticides using USEPA Method 8081;
- Total polychlorinated biphenyls (PCBs) using USEPA Method 8082;
- 1,4-dioxane using USEPA Method 8270 and,
- PFAS using USEPA Method 1633.

Analysis for soil was performed on up to three (3) intervals within each borehole. PFAS and 1,4-dioxane analyses were performed on two (2) soil samples from boring locations which were mutually agreed upon by LaBella and NYSDEC in the field.

Groundwater Sample Parameters:

- USEPA Target Compound List (TCL) list volatile organic compounds (VOCs) including tentatively identified compounds (TICs) using USEPA Method 8260;
- USEPA TCL list semi-volatile organic compounds (SVOCs) using USEPA Method 8270;
- RCRA metals by USEPA Method 6010, mercury by Method 7471;
- Pesticides using USEPA Method 8081;
- Total polychlorinated biphenyls (PCBs) using USEPA Method 8082;
- 1,4-dioxane using USEPA Method 8270 SIM (for aqueous samples);
- PFAS using USEPA Method 1633.

One (1) groundwater sample was obtained from each monitoring well. Analysis for PFAS and 1,4-dioxane samples was performed on two (2) samples obtained from groundwater monitoring well locations mutually agreed upon in the field by LaBella and NYSDEC.

Soil Vapor Sample Parameters:

- Sub-slab soil vapor, indoor air, outdoor air, and outdoor soil vapor samples were analyzed by USEPA Method TO-15

Quality assurance/quality control (QA/QC) samples (i.e. field duplicates and matrix spike/matrix spike duplicates [MS/MSD]) were collected at a rate of one (1) per every twenty (20) samples. Field duplicates and MS/MSD samples were analyzed for VOCs (via analytical Method SW-846-8260) only.

Phoenix Environmental Laboratories, Inc. of Manchester, Connecticut (Phoenix) is the analytical laboratory for the sample analysis described herein. Phoenix is certified in New York by both the National Environmental Laboratory Accreditation Conference (NELAC) and a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory. Analysis of PFAS was subcontracted by Phoenix to York Analytical Laboratories, which holds a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certification.

4.3 Utility Identification and Clearance

Prior to commencing with any intrusive investigation related activities, a Dig Safely New York (UDig NY) notification was executed. To locate private utilities within the Site and identify potential migration pathways, LaBella contracted Clean Globe Environmental, LLC of New City, New York to perform a private utility mark out by ground penetrating radar (GPR) and electromagnetic location (EM) methods. The results of the which were used in part to assist in the anticipated placement of soil borings and outside soil vapor points. A copy of the GPR/EM Investigation map is attached as **Figure 3**. The locations of sanitary lines located immediately adjacent to the building(s) were identified by the property owner's representative due to due to unavailability of "as-built" drawings. Each proposed drill location was hand-

excavated to a depth of approximately 4.0 feet below grade to ensure that underground utilities associated with the property were not encountered.

4.4 Soil Boring and Sampling

Soil borings were advanced at the Site from August 20th through 26th, 2024. Soil boring locations are shown on **Figure 4**. A total of fourteen (14) soil borings were advanced at the Site using direct push macro-core tooling lined with disposable acetate sleeves. Terminal depths obtained during boring activities ranged from 15 fbg to 20 fbg. Individual boring logs are attached as **Attachment 1**. During soil boring advancement, the soil was continuously assessed for visible and olfactory indications of impairment, and/or indication of detectable VOCs with a PID. Presented below is a summary table of PID readings recorded for all 14 soil boring locations and depths.

Table A 1– Soil PID Readings

Soil Boring/Well ID	Sample Interval (ft bgs)			
	0-5	5-10	10-15	15-20
SB-1	<1.0	<1.0	<1.0	-
SB-2	<1.0	<1.0	<1.0	-
SB-3	<1.0	<1.0	<1.0	<1.0
SB-4	<1.0	<1.0	<1.0	-
SB-5	<1.0	<1.0	<1.0	-
SB-6	<1.0	<1.0	<1.0	-
SB-7	<1.0	<1.0	<1.0	-
SB-8	<1.0	<1.0	<1.0	-
SB-9	<1.0	<1.0	<1.0	-
SB-10	<1.0	<1.0	<1.0	<1.0
SB-11	<1.0	79.5	<1.0	-
SB-12	<1.0	<1.0	<1.0	-
SB-13	<1.0	<1.0	<1.0	-
SB-14	<1.0	<1.0	<1.0	-

A maximum of three (3) soil samples was anticipated from each borehole. Soil samples were collected from within the vadose zone (i.e., soil above the water table as observed during borehole advancement); one (1) sample from below the water table, and one (1) sample from the bottom of the borehole.

The sample aliquot was transferred to the appropriate laboratory-supplied sample glassware using a stainless-steel sampling trowel washed via a non-phosphate soap and potable water solution and triple-rinsed with potable water at the start of sampling activities and between sample locations. All samples were placed on ice after collection and transferred to the laboratory/courier following chain of custody protocols.

Soil cuttings were containerized as Investigative Derived Waste (IDW) and as such, were placed into properly labeled steel, 55-gallon drums and stored on the property prior to disposal.

Table A.2 indicates sample location, sample depth, and analytical parameters for soil borings.

Table A.2 – Soil Boring Samples

Location	Sample Depth (fbg)	Analytical Parameters	Location	Sample Depth (fbg)	Analytical Parameters
SB-1/MW-1	6 - 7	VOCs, SVOCs, PCBs, Pests, 1,4-Diox., Metals, PFAS	*SB-9/MW-9	8 - 9	VOCs, SVOCs, PCBs, Pests, Metals

Pests = Pesticides

4.5 Monitoring Well Installation, Groundwater Sampling, and Contour

Well Installation

To assess potential impacts to groundwater at the Site, groundwater monitoring well installation and sampling was conducted as part of this Site Characterization.

Soil boring locations were converted to 2-inch groundwater monitoring wells during the boring activities from August 22nd through 26th 2024. The monitoring wells were installed by advancing 4.25-inch hollow stem augers to the terminal depth of the macro-core tooling during soil probe activities. The annular space between the well screen and borehole wall was backfilled with graded well sand as the augers were incrementally withdrawn. Well sand was installed to extend approximately 2.0 feet above the top of the screen and then sealed with approximately 2.0 feet of bentonite. The remaining space was backfilled with clean soil cuttings and finished in a steel bolt-down road box. Table A3 provides a summary of Groundwater Monitoring Well Completion Specifications.

Table A3 – Monitoring Well Completion Specifications

Well ID	Depth to Water	TOC Elevation	Total Depth	Screen Interval	Sand Pack Interval	Bentonite Seal
SB-1/MW-1	8.0'	360.95'	15'	15' - 5.0'	14' - 4.0'	4.0' - 1.0'

NOTES:

All depth intervals given in feet below grade.

TOC = Top of Casing

Well Development

Groundwater well development was performed on September 18th and 19th, 2024 with a Waterra pump, PFAS-free tubing, and foot valve. The collection of water quality field parameters with a flow-through cell was abandoned during development activities due to the large amount of silt clogging the instrument. Each well was purged no less than 10 well volumes. The average depth to water (DTW) measured from tops of well casings during the well development activities was 6.58 fbg. Purge water associated with the well development was containerized as IDW in steel 55-gallon drums and staged onsite prior to disposal. Copies of the well development logs are located in **Attachment 2**.

Groundwater Sampling

The wells were subsequently sampled October 7th and October 8th, 2024. Water quality field parameters were recorded during performance of the sampling by low-stress (low-flow) techniques. In general, dissolved oxygen (DO) concentrations recorded during purging and just prior to sampling were less than 1.0 mg/L which relates to an anaerobic environment. The average pH concentration was 6.73. Copies of the low-flow sampling logs are provided in **Attachment 3**. Groundwater samples were collected using a PFAS-free peristaltic pump with PFAS-free tubing. Samples collected from these wells were analyzed for parameters as defined above in Section 4.2 and summarized in Table B-1 below. Purge water generated during the sampling activities was containerized as IDW in steel 55-gallon drums and staged onsite prior to disposal.

Pests = pesticides

Groundwater Flow Direction and Contour

The Site is topographically relatively flat as is the observed water table. The average DTW as measured from tops of casings during the October 2024 sampling event was 6.84 fbg. Depth to water measurements as recorded during LaBella's previous Limited Phase II Investigation in January 2023, reported an average DTW of 5.62 fbg which is consistent with DTW measurements recorded during both the well development and sampling events performed as part of this Site Characterization.

Static water levels recorded during the October 2024 sampling event were used to determine the groundwater flow direction across the Site. Groundwater flow direction is calculated to be towards the west-southwest at a gradient of approximately 0.004 ft/ft, however, water table mounding is evident in the vicinity of monitoring well MW-12 which may affect the flow direction and gradient in this area. The

stormwater infiltration basins that are located on the western portion of the property may temporarily rise as a result of a significant precipitation event creating groundwater mounding. This mounding can occur in areas where infiltrating water intersects a groundwater table and the rate of water entering the subsurface is greater than the rate at which water is conveyed away from the infiltration basin. It should be noted that any mounding created is strictly dependent upon the amount and duration of precipitation events and would be temporary in nature. There is no definitive data to indicate that the infiltration basins are significantly affecting groundwater flow direction at the property. The groundwater flow direction/contour map is presented in **Figure 5**.

4.6 Soil Gas and Soil Vapor Intrusion Sampling

Soil Gas

To evaluate soil gas at the perimeter of the Site buildings, ten (10) soil gas monitoring probes (SV-1 through SV-10) were installed. The depth of each probe was determined by the overseeing geologist based upon the observed water table during soil boring/monitoring well installations. The probes were installed using a hand auger due to the water table elevation. This method allowed for greater accuracy to place the probe above the saturated zone. Each probe location was finished as detailed in the SCWP and finished within a steel bolt-down road box set in a concrete pad. The average depth of the soil vapor probes was 46.7 inches with the deepest being SV-2 at 60 inches below grade surface and shallowest probe was SV-6 at 30 inches below grade. Soil gas samples were collected on December 2, 2024, using Summa canisters equipped with 8-hour regulators and submitted to Phoenix for VOC analysis by USEPA Method TO-15. Locations of soil gas probes are depicted on Figure 4.

Soil Vapor Intrusion Sampling

To characterize sub-slab soil vapor and indoor air within the two Site buildings selected within the SCWP, samples were collected from each of the 23 individual leaseholds. Samples were collected from December 3rd through December 5th, 2024, using six-liter batch certified Summa canisters equipped with laboratory calibrated 8-hour (0.004 L/min) flow controllers. Sub-slab soil vapor sampling points were installed utilizing a Vapor Pin[®] as described in the SCWP. Representative ambient indoor air (IA), outdoor air (OA) samples, and Duplicates were concurrently collected in accordance with NYSDOH guidance. A helium tracer gas test was performed on each sub-slab soil vapor sampling point prior to commencing with sampling and a NYSDOH Structure Sampling Questionnaire was filled out for each leasehold complete with chemical inventory. A copy of the Structure Sampling Questionnaire for each location is provided in **Attachment 4**. After sample collection, the samples were sent to Phoenix for VOC analysis by USEPA Method TO-15.

4.7 Survey

The locations of all monitoring wells, ground surface elevation, and inner and outer casing elevations have been surveyed by a licensed professional surveyor. Horizontal datum and north orientation are based on the State Plane Coordinate System North American Datum of 1983 (NAD83) East, as derived from onsite static Global Navigation Satellite System (GNSS) Observations. Elevations (vertical) data is based on the North American Vertical Datum of 1988 (NAVD88). The elevation of the top inner casing used for water-level measurements was measured to the nearest 0.01 foot. Groundwater measurements obtained during the investigation were calculated with surveyed elevations to establish the direction of groundwater flow beneath the property. A copy of the survey is included in **Attachment 5**.

4.8 Community Air Monitoring Plan

All ground intrusive work performed was conducted in accordance with the requirements established by the NYSDOH's May 2010 *Generic Community Air Monitoring Plan* (CAMP), NYSDOH's DER-10, and (for installation of sub-slab soil vapor points only) the Special Requirement CAMP as set forth within LaBella's SCWP. No exceedances of particulate or VOCs were recorded during soil boring activities or installation

of soil vapor sub-slab sampling points. Recorded CAMP data is provided in **Attachment 6 (CAMP data)** and **Attachment 7 (Special Requirement CAMP)**.

4.9 Decontamination and Investigation Derived Waste

All down-hole drill tooling was washed onsite prior to commencement of soil boring activities. Additionally, drill tooling was washed prior to advancing to subsequent boring locations. All tooling was washed with Alconox and rinsed with potable water within a decontamination pad constructed at the northwestern section of the Site.

Soil cuttings and purge water associated with groundwater well development and sampling were containerized within steel, 55-gallon, drums and labeled with “Pending Analytical” labels prior to receipt of the laboratory analytical results. “Non-Hazardous” labels were applied by LaBella upon receipt of the analytical data and in communication with the waste hauler.

LaBella contracted Corbett Industrial Cleaning Services, Inc. of Slingerlands, New York to transport and dispose of a total of 22 drums of Site-related IDW. A copy of the disposal manifest is attached as **Attachment 8**.

4.10 Changes or Deviations to Site Characterization Work Plan

Based on field conditions and discussions with NYSDEC, one (1) change was made to the work plan:

Soil Sampling/Monitoring Well Location

The location of soil boring/monitoring well 11 was moved approximately 20 feet to the northwest due to concerns with disturbing the retention pond lining and possibly being off the tax parcel. The revised location was agreed upon in the field with NYSDEC, LaBella, and the Newton Plaza property manager.

Based upon email correspondence with the NYSDEC on September 24, 2024, the staged Investigation Derived Waste (IDW) drums were either missing labels -or- mislabeled, and one soil (1) drum was observed to be pierced. The drums were labeled the same day, and contents of the pierced drum were transferred to a new drum. The perimeter staging area was subsequently marked off with caution tape as also requested by the NYSDEC. Representatives from the NYSDEC were onsite to observe the actions taken.

5.0 SITE CHARACTERIZATION RESULTS

This section summarizes the analytical results observed during this Site Characterization.

5.1 Soil Results

Soil sampling was conducted as described above in Section 4.4. Samples were collected from soil boring locations SB-1 through and including SB-14. Locations SB-1 and SB-14 were selected in agreement with the NYSDEC for the analysis of PFAS and 1,4-Dioxane. A summary of the laboratory analytical results for soil samples compared to NYCRR Part 375 Commercial Use SCOs can be found in Tables 1 through 4. **Figure 6** displays a summary of reported compounds for each boring location. The complete laboratory analytical reports are provided in **Attachment 9**.

VOCs (Table 1)

Sample SB-11 8'-9':

- sec-butylbenzene, n-Butylbenzene, and Naphthalene were reported at concentrations of 0.940 mg/Kg, 0.740 mg/Kg, and 0.570 mg/Kg respectively, all below the Commercial Use SCO of 500 mg/Kg.
- 2-Isopropyltoluene was reported at a concentration of 0.250 mg/Kg with no listed SCO value.

Acetone concentrations were reported in soil samples from locations SB-2, SB-4, SB-5, SB-8, SB-9, SB-10, SB-11, SB-12, and SB-13 but well below the SCO of 500 mg/kg. Acetone is not a compound of concern for this Site and is considered a laboratory artifact due to its use as a cleaning agent in the laboratory. Refer to the laboratory analytical reports “S” modifier which is described as “laboratory solvent, contamination is possible.”

No other VOCs were reported at concentrations above the laboratory RL.

SVOCs (Table 2)

Sample SB-12 6'-7':

- Benzo(b)fluoranthene and Fluoranthene were reported at concentrations of 0.320 mg/Kg and 0.390 mg/Kg, below their respective SCOs of 56 mg/Kg and 500 mg/Kg.

No other SVOCs were reported at concentrations above the laboratory RL.

Metals (Table 3)

Sample SB-12 6'-7':

- Mercury was reported at a concentration of 8.89 mg/Kg, an exceedance of the SCO of 2.8 mg/Kg.

Five (5) metals were reported above the laboratory RL but well below their respective SCOs: Arsenic, Barium, Cadmium, Chromium, and Lead.

Pesticides (Table 3)

Seven (7) pesticides were reported above the laboratory RL but well below their respective SCOs: 4,4 - DDD, 4,4 - DDT, 4,4 - DDE, a-chlordane, chlordane, g-Chlordane, and Dieldrin.

Polychlorinated biphenyls (PCBs) (Table 3)

As indicated in Table 3, PCBs were not detected above laboratory RLs for any compounds.

PFAS and 1,4-Dioxane (Table 4)

As indicated in Table 4, no concentrations of PFAS compounds or 1,4-Dioxane were recorded above the laboratory RL.

5.2 Groundwater Results

Groundwater sampling was conducted as described in Section 4.5. All fourteen (14) groundwater monitoring wells were sampled as part of this Site Characterization. MW-1 and MW-14 were selected for sampling of PFAS and 1,4-Dioxane. A summary of laboratory analytical results for groundwater monitoring well locations as compared to TOGS 1.1.1 AWQSGV can be found in Tables 5 through 8. **Figure 7** displays a summary of reported compounds for each monitoring well location. Complete copies of the laboratory analytical reports are provided in **Attachment 10**.

VOCs (Table 5)

As indicated in Table 5, no VOCs were reported above the laboratory RL.

The groundwater sample from MW-11 reported concentrations of 2-isopropyltoluene, n-Butylbenzene, and sec-Butylbenzene below the RL and as such, are considered estimated values.

SVOCs (Table 6)

SVOCs were detected above laboratory RLs in seven (7) of the 14 groundwater samples analyzed. Six (6) compounds exceeded TOGS 1.1.1 AWQSGVs. These compounds and their reported concentrations are listed below:

MW-2:

- Phenol was reported at a concentration of 2.3 µg/L, an exceedance of the TOGS 1.1.1 AWQSGV (TOGS) of 0.002 µg/L.

MW-3:

- Phenol was reported at a concentration of 3.0 µg/L, an exceedance of the 0.002 µg/L TOGS value.

MW-5:

- Chrysene was reported at a concentration of 0.02 µg/L, an exceedance of the 0.002 µg/L TOGS value.

MW-9

- Benz(a)anthracene was reported at a concentration of 0.04 µg/L, an exceedance of the 0.002 µg/L TOGS value.
- Benzo(b)fluoranthene was reported at a concentration of 0.03 µg/L, an exceedance of the 0.002 µg/L TOGS value.
- Benzo(k)fluoranthene was reported at a concentration of 0.03 µg/L, an exceedance of the 0.002 µg/L TOGS value.
- Chrysene was reported at a concentration of 0.03 µg/L, an exceedance of the 0.002 µg/L TOGS value.
- Indeno(1,2,3-cd)pyrene was reported at a concentration of 0.04 µg/L, an exceedance of the 0.002 µg/L TOGS value.
- Benzo(a)pyrene was reported at a concentration of 0.04 an exceedance of the ND TOGS value.

MW-10

- Benz(a)anthracene was reported at a concentration of 0.02 µg/L, an exceedance of the 0.002 µg/L TOGS value.

MW-11

- Phenol was reported at a concentration of 3.0 µg/L, an exceedance of the 0.002 µg/L TOGS value.

MW-14

- Benzo(b)fluoranthene was reported at a concentration of 0.02 µg/L, an exceedance of the 0.002 µg/L TOGS value.
- Chrysene was reported at a concentration of 0.02 µg/L, an exceedance of the 0.002 µg/L TOGS value.

Metals (Table 7)

Metals were detected above and below laboratory RLs in all 14 groundwater samples analyzed. The reported concentration of Lead in MW-9 was the only exceedance at a concentration of 34 µg/L as compared to the TOGS guidance value of 25 µg/L.

Pesticides (Table 7)

Pesticides were reported above the laboratory RL in the MW-3 groundwater sample. Two (2) compounds were reported in exceedance of TOGS guidance values. The compounds and their respective concentration are reported below.

MW-3

- Chlordane was reported at a concentration of 0.38 µg/L, an exceedance of the 0.05 µg/L TOGS value.
- Heptachlor epoxide was reported at a concentration of .037 µg/L, an exceedance of the 0.03 µg/L TOGS value.
- A-chlordane was reported above the laboratory RL at a concentration of 0.11 µg/L with no TOGS listed value.
- G-chlordane was reported above the RL at a concentration of .037 µg/L, with no TOGS listed value.

PCBs (Table 7)

As indicated in Table 7, PCBs were not detected above laboratory RLs in any of the groundwater samples.

PFAS and 1,4-Dioxane (Table 8)

PFAS were detected above laboratory RLs. TOGS provides standards of 6.7 ng/L for PFOA and 2.7 ng/L for PFOS. No reported concentrations of 1,4-Dioxane were reported above the laboratory RL. A comparison of these compounds to the guidance values is presented below:

MW-1

- PFOS and PFOA were reported at concentrations of 3.1 ng/L and 2.9 ng/L respectively.

MW-14

- PFOA was reported at a concentration of 147 ng/L.

5.3 Soil Vapor Results

5.3.1 Sub-Slab Soil Vapor and Indoor Air

A Summary of the laboratory analytical results for the December 2024 soil vapor sampling event compared to the NYSDOH Decision Matrix values as per the NYSDOH *Guidance for Evaluating Soil Vapor Intrusion in the State of New York, May 2017*, updated February 2024, are presented in **Table 9**. Laboratory analytical reports are included as **Attachment 11**. A review of the SVI results for each individual leasehold is presented below. Leasehold locations are reported as compared to NYSDOH Matrix guidelines and categorized in order from Mitigate, to Monitor, to Identify Source(s) and Resample or Mitigate, and No Further Action. **Figure 8** is provided as a map key for locations of leasehold tenant spaces within the Site. **Figures 8a** through **Figure 8c** depict SVI sampling point locations with NYSDOH Decision Matrices representative concentrations reported. Analytes reported as part of the TO-15 list, but not a part of the NYSDOH Decision Matrices are also listed in Table 9.

The following leasehold locations have reported concentrations at or above the NYSDOH Criteria for Mitigate:

Café 1

- Trichloroethene (TCE) concentrations were reported above the Mitigate category in sub-slab (SS) and indoor air (IA) samples at 93.4 µg/m³ and 0.53 µg/m³ respectively.
- Carbon tetrachloride concentrations were reported within the Monitor category in SS and IA at 26.2 µg/m³ and 0.53 µg/m³ respectively.
- Concentrations of 1,1-Dichloroethene, Cis-1,2-Dichloroethene, Tetrachloroethene (PCE), Ethylbenzene, Isooctane, 1,2,4-Trimethylbenzene, o-Xylene, m,p-Xylene, Heptane, and Toluene were reported at levels within the No Further Action category.

Sunshine Cleaners 2

- TCE concentrations were reported above the Mitigate category in SS and IA samples at 317 $\mu\text{g}/\text{m}^3$ and 0.32 $\mu\text{g}/\text{m}^3$ respectively.
- PCE concentrations were reported above the Mitigate category in SS and IA samples at 996 $\mu\text{g}/\text{m}^3$ and 16.8 $\mu\text{g}/\text{m}^3$ respectively.
- Concentrations of Carbon Tetrachloride, Cis-1,2-Dichloroethene, Ethylbenzene, Isooctane, 1,2,4-Trimethylbenzene, o-Xylene, m,p-Xylene, and Toluene were reported at levels within the No Further Action category.

The following leasehold locations have reported concentrations within the NYSDOH Criteria for Monitor:
Candy Shop 4

- TCE concentrations were reported within the Monitor category in SS and IA samples at 14.7 $\mu\text{g}/\text{m}^3$ and 0.38 $\mu\text{g}/\text{m}^3$ respectively.
- Concentrations of Carbon Tetrachloride, PCE, Isooctane, m,p-Xylene, and Toluene were reported at levels within the No Further Action category.

The following leasehold locations have reported concentrations within the NYSDOH Criteria for Identify Source(s) and Resample or Mitigate:

Retail Clothing 13

- TCE was reported in the IA sample at a concentration of 1.05 $\mu\text{g}/\text{m}^3$.
- Concentrations of Carbon Tetrachloride, PCE, Isooctane, m,p-Xylene, and Toluene were reported at levels within the No Further Action category.

Retail Clothing 17

- TCE was reported in the IA sample at a concentration of 1.66 $\mu\text{g}/\text{m}^3$.
- Concentrations of Carbon Tetrachloride, PCE, Isooctane, m,p-Xylene, and Toluene were reported at levels within the No Further Action category.

The remaining 17 leasehold locations have reported concentrations within the NYSDOH Criteria for No Further Action.

5.3.2 Soil Gas

A summary of USEPA Method TO-15 laboratory analytical results for soil gas samples is presented in **Table 10**. A copy of the laboratory analytical report is provided in **Attachment 12**. A total of nine (9) compounds were recorded above the RL laboratory analytical results of the soil gas sampling. For this discussion, the reported concentrations for Acetone and Isopropyl alcohol are omitted due to their use in the laboratory as cleaning agents. Soil gas sampling locations SV-1 through and including SV-10 recorded the following compounds and concentrations:

- SV-1: Chloroform was reported at a concentration of 85.9 $\mu\text{g}/\text{m}^3$.
- SV-2: Chloroform was reported at a concentration of 106 $\mu\text{g}/\text{m}^3$, Ethanol was reported at a concentration of 10 $\mu\text{g}/\text{m}^3$, Tetrachloroethene was reported at a concentration of 40.9 $\mu\text{g}/\text{m}^3$, and Trichlorofluoromethane was reported at a concentration of 12.2 $\mu\text{g}/\text{m}^3$.
- SV-3: Tetrachloroethene was reported at a concentration of 3.36 $\mu\text{g}/\text{m}^3$.
- SV-4: Dichlorodifluoromethane was reported at a concentration of 74.6 $\mu\text{g}/\text{m}^3$, Tetrachloroethene was reported at a concentration of 5.22 $\mu\text{g}/\text{m}^3$, and Trichlorofluoromethane was reported at a concentration of 6.46 $\mu\text{g}/\text{m}^3$.
- SV-5 (DUP Parent): No concentrations reported above the RL, however Ethanol was reported in the DUP sample at 8.62 $\mu\text{g}/\text{m}^3$.
- SV-6: Chloroform was reported at a concentration of 6.2 $\mu\text{g}/\text{m}^3$, and Tetrachloroethene was reported at a concentration of 2.98 $\mu\text{g}/\text{m}^3$.
- SV-7: Ethanol was reported at a concentration of 5.18 $\mu\text{g}/\text{m}^3$.

- SV-8: Chloroform was reported at a concentration of 8.3 µg/m³, Cis-1,2-Dichloroethene was reported at a concentration of 126 µg/m³, Tetrachloroethene was reported at a concentration of 47,200 µg/m³, Trichloroethene was reported at a concentration of 967 µg/m³, and Trichlorofluoromethane was reported at a concentration of 11.2 µg/m³.
- SV-9: Ethanol was reported at a concentration of 6.78 µg/m³.
- SV-10: No concentrations reported above the RL apart from Isopropyl alcohol.

Soil Gas sampling probe locations with reported compound concentration tables are depicted on **Figure 9**.

5.4 Data Usability Summary Report

Pursuant to DER-10 guidelines, a Data Usability Summary Report (DUSR) was prepared as part of this SC. LaBella contracted Environmental Assessment and Remediation of Patchogue, New York to complete the review of the laboratory analytical data. The data has been verified as usable. The completed DUSRs are provided in **Attachment 13**.

6.0 DISCUSSION

Most of the commercial property, including unaffected leasehold locations, is covered by retail buildings and pavement for parking which is an effective confining layer for any volatile organic vapors. With the depth to groundwater generally five (5) to eight (8) feet below grade and an extensive asphalt covering, a relatively thin vadose zone is created beneath the buildings. As such, it is apparent that the presence of CVOCs in sub-slab samples in a limited number of leaseholds is a direct result of vapors collecting within this compact, unconsolidated portion of the subsurface.

6.1 Observations

Based on analytical sampling results the following observations have been made:

- SVI laboratory analytical reported the leasehold locations of the Café (SS/IA-1) and Sunshine Cleaners (SS/IA-2) have concentrations of VOCs which exceed NYSDOH guidance for Mitigate.
- The leasehold locations for Retail Clothing 13 (SS/IA-13), Candy Shop 4 (SS/IA-4), and Retail Clothing 17 (SS/IA-17) have reported laboratory analytical concentrations of VOCs within the NYSDOH guidance to Identify Sources and/or Resample or Mitigate.
- Soil gas laboratory analytical data reported concentrations of CVOCs in sample SV-8, which is located immediately outside the back door of the Sunshine Cleaners leasehold.
- There were no Exceedances of VOCs, SVOCs, Pesticides, PCBs, PFAS, or 1,4-Dioxane in soil samples as compared to Part 375 Commercial Use SCOs. Lead was the only exceedance for metals at a concentration of 8.89 µg/kg in soil sample SB-12 6'-7'.
- There were no exceedances for VOCs in groundwater. Six (6) SVOCs were reported in exceedance of TOGS Guidance values.

6.2 Conclusions

The work completed at the Newton Plaza property reflects that there has not been a significant release of CVOCs into the subsurface nor a significant contamination condition. Soil, groundwater, and soil vapor intrusion laboratory analytical results indicate mostly favorable conditions. The soil gas location SV-8 recorded a concentration of tetrachloroethene which warrants additional investigation/remediation and will be addressed in future site work. LaBella proposes to follow DER-10 guidance and proceed to an Interim Remedial Measure (IRM) to address both the design of Sub-Slab Depressurization Systems (SSDS) at the locations identified along with the additional investigation/remediation of the immediate area around SV-8.

Sincerely,
LaBella Associates D.P.C.

Client: LaBella

Site Address: Newton Plaza, 580-602 Loudon Road, Latham, NY

Dates of Investigation: July 29-31 and August 16, 2024

Please note: -The orthoimage does not represent current conditions, but serves to represent the locations of the permanent structures, such as the building and adjacent sidewalks. -This is not a survey quality map and locations of features should be considered approximate. -The scope for this investigation was to locate utilities with exterior surface expressions, and to investigate for additional utilities and structures in within the AOIs surrounding the proposed borings.-Buildings were not entered to searched for utility rooms, and it should be noted that not all utilities are detectable, especially if there is no surface expression to apply detectable toning signals.-Sanitary and irrigation features were not located during this investigation.

NOTES:

UNAUTHORIZED ALTERATION OR ADDITION TO A SURVEY MAP BEARING A LICENSED LAND SURVEYOR'S SEAL IS A VIOLATION OF SECTION 7209, SUBDIVISION 2 OF THE NEW YORK STATE EDUCATION LAW.

REPRODUCTION OR COPYING OF THIS DOCUMENT MAY BE A VIOLATION OF COPYRIGHT LAW UNLESS PERMISSION OF THE AUTHOR AND/OR COPYRIGHT HOLDER IS OBTAINED.

ONLY COPIES FROM THE ORIGINAL OF THIS SURVEY MARKED WITH AN ORIGINAL OF THE LAND SURVEYOR'S INKED SEAL OR HIS EMBOSSED SEAL SHALL BE CONSIDERED TO BE VALID TRUE COPIES.

SURVEYED WITHOUT THE BENEFIT OF A TITLE SEARCH.

SUBJECT TO ALL EASEMENTS OF RECORD.

SUBJECT TO COVENANTS, EASEMENTS, RESTRICTIONS, CONDITIONS AND AGREEMENTS OF RECORD.

COPYRIGHT LABELLA ASSOCIATES PC, ALL RIGHTS RESERVED.

SURVEYED FROM RECORD DESCRIPTION AND AS IN POSSESSION.

BUILDING SHOWN HEREON SERVED BY UNDERGROUND UTILITIES.

HORIZONTAL DATUM & NORTH ORIENTATION ARE BASED ON THE STATE PLANE COORDINATE SYSTEM NAD83 NY EAST, AS DERIVED FROM ON SITE STATIC GNSS OBSERVATIONS ON SEPTEMBER 2023.

UNDERGROUND UTILITIES SHOWN HEREON ARE THE RESULT OF AN UNDERGROUND UTILITY DESIGNATION COMPLETED BY CLEAN GLOBE ENVIRONMENTAL LLC ON JULY 29-31 & AUGUST 16, 2025 IN COAND FROM DATA OBTAINED FROM RECORD MAPS AND DRAWINGS. THE UTILITY DESIGNATION WAS COMPLETED IN ACCORDANCE WITH THE STANDARD PROCEDURES SET FORTH IN ASCE 38-22. ALL ABOVE GROUND STRUCTURES, SURFACE FEATURES AND THE LOCATION OF THE MARK OUT ARE THE RESULT OF AN INSTRUMENT SURVEY COMPLETED BY THIS OFFICE UNLESS OTHERWISE NOTED. THERE MAY BE OTHER UNDERGROUND UTILITIES, THE EXISTENCE OF WHICH ARE NOT KNOWN OR CERTIFIED BY THE UNDERSIGNED. THE SIZE AND LOCATION OF ALL UNDERGROUND UTILITIES AND STRUCTURES MUST BE VERIFIED BY THE APPROPRIATE AUTHORITIES AND UDIG-NY MUST BE NOTIFIED PRIOR TO CONDUCTING TEST BORINGS, EXCAVATION OR CONSTRUCTION. THE SURVEYOR FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED ALTHOUGH THE SURVEYOR DOES CERTIFY THAT THEY ARE LOCATED AS ACCURATELY AS POSSIBLE FROM INFORMATION AVAILABLE. THE SURVEYOR HAS NOT PHYSICALLY LOCATED THE UNDERGROUND UTILITIES.

THE CONTRACTOR SHALL COMPLY WITH NEW YORK STATE INDUSTRIAL CODE RULE 753 - 48 HOURS PRIOR TO DIGGING CALL UDIG-NY 1-800-962-7962 TO HAVE PUBLIC UTILITY LOCATIONS PAINTED.

SUBSURFACE STRUCTURES NOT VISIBLE OR READILY APPARENT ARE NOT SHOWN AND THEIR LOCATION AND EXTENT ARE NOT CERTIFIED.

A BOUNDARY SURVEY WAS NOT PERFORMED AS PART OF THIS SURVEY. ALL PROPERTY LINES SHOWN ARE APPROXIMATE.

MAP REFERENCE:

MAP ENTITLED "NEWTON PLAZA, 580-602 LOUDON ROAD, LATHAM NY", PREPARED BY CLEAN GLOBE ENVIRONMENTAL LLC (CGE), DATED JULY 29-31 AND AUGUST 16, 2024.

NOTES:

Metals values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm)
PCBs and Pesticide values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm)
" < " - Indicates compound was not detected above the indicated laboratory method detection limit (MDL).
Metals analyzed by USEPA Method 6010/7471
PCBs analyzed by USEPA Method 8082
Pesticides analyzed by USEPA Method 8081
NL indicates Not Listed

NA indicates Not Analyzed
Bold font indicates the concentration exceeds the method detection limit (MDL).

Qualifiers (Qual):

Laboratory: **S** Laboratory solvent, contamination is possible.
DUSR **J** The associated numerical value is the approximate concentration of the analyte in the sample.
J+ The result is an estimated quantity, but the result may bias high.
J- The result is an estimated quantity, but the result may bias low.

U/U The analyte was analyzed for, but not detected above the level of the reported sample quantitation limit.
R The data is unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present.

NOTES:

Metals values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm)
PCBs and Pesticide values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm)
"<" - Indicates compound was not detected above the indicated laboratory method detection limit (MDL).
Metals analyzed by USEPA Method 6010/7471
PCBs analyzed by USEPA Method 8082
Pesticides analyzed by USEPA Method 8081
NL indicates Not Listed

NA indicates Not Analyzed

Bold font indicates the concentration exceeds the method detection limit (MDL).

Qualifiers (Qual):

- Laboratory: S Laboratory solvent, contamination is possible.
- DUSR J The associated numerical value is the approximate concentration of the analyte in the sample.
- J+ The result is an estimated quantity, but the result may bias high.
- J- The result is an estimated quantity, but the result may bias low.

- U/U The analyte was analyzed for, but not detected above the level of the reported sample quantitation limit.
- R The data is unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present.

NOTES:
Metals values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm)
PCBs and Pesticide values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm)
" < " - Indicates compound was not detected above the indicated laboratory method detection limit (MDL).
Yellow highlight = compound detected above its respective NYCRR Part 375-6.8(b) Commercial Use SCO
Metals analyzed by USEPA Method 6010/7471
PCBs analyzed by USEPA Method 8082
Pesticides analyzed by USEPA Method 8081
NL indicates Not Listed

NA indicates Not Analyzed
Bold font indicates the concentration exceeds the method detection limit (MDL).
Qualifiers (Qual):
Laboratory: **S** Laboratory solvent, contamination is possible.
DUSR **J** The associated numerical value is the approximate concentration of the analyte in the sample.
J+ The result is an estimated quantity, but the result may bias high.
J- The result is an estimated quantity, but the result may bias low.

U/U The analyte was analyzed for, but not detected above the level of the reported sample quantitation limit.
R The data is unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present.

NOTES:

1,4 - Dioxane values displayed in milligrams per kilograms (mg/kg) or parts per million (ppm)

PFAS values displayed in nanograms per grams (ng/g) or parts per billion (ppb)

"<" - Indicates compound was not detected above the indicated laboratory method detection limit (MDL).

PFAS (40) analyzed by USEPA 1633 Draft 3

SVOCs analyzed by USEPA Method 8270E (SIM)

NL indicates Not Listed

Qualifiers (Qual): DUSR Lab

U/U The analyte was analyzed for, but not detected above the level of the reported sample quantitation limit.

UJ Analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate/imprecise.

NOTES:

All values displayed in micrograms per liter (µg/l) or parts per billion (ppb)

*< Indicates compound was not detected above the indicated laboratory method detection limit (MDL).

VOCs analyzed by USEPA Method 8260

Qualifiers (Qual):

Laboratory: S =Laboratory solvent, contamination is possible. "J" indicates an estimated value

DUSR: J = The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but the result may bias high.

J- The result is an estimated quantity, but the result may bias low.

U/U The analyte was analyzed for, but not detected above the level of the reported sample quantitation limit.

R The data is unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present.

U Analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate/imprecise.

NOTES:

All values displayed in micrograms per liter (µg/l) or parts per billion (ppb)

"<" Indicates compound was not detected above the indicated laboratory method detection limit (MDL).

VOCs analyzed by USEPA Method 8260

Qualifiers (Qual):

Laboratory: S =Laboratory solvent, contamination is possible. "J" indicates an estimated value

DU5R: J = The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but the result may bias high.

J- The result is an estimated quantity, but the result may bias low.

U/U The analyte was analyzed for, but not detected above the level of the reported sample quantitation limit.

R The data is unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present.

U Analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate/imprecise.

NOTES:

Metals values displayed in micrograms per liter (µg/l) or parts per billion (ppb)

PCBs and Pesticide values displayed in micrograms per liter (µg/l) or parts per billion (ppb)

"<" - Indicates compound was not detected above the indicated laboratory method detection limit (MDL).

Yellow highlight indicates that the compound was detected at a concentration exceeding Technical and Operational Guidance Series (TOGS 1.1.1) Guidance Value

Metals analyzed by USEPA Method 6010/7471 PCBs analyzed by USEPA Method 8082 Pesticides analyzed by USEPA Method 8081

Qualifiers (Qual):

Laboratory: "S" Laboratory solvent, contamination is possible.

DUSR :

J The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but the result may bias high.

J- The result is an estimated quantity, but the result may bias low.

U/U The analyte was analyzed for, but not detected above the level of the reported sample quantitation limit.

R The data is unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present.

UJ Analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate/imprecise.

NA indicates Not Analyzed

ND indicates Non-detect

J indicates an estimated value

NOTES:

1,4 - Dioxane values displayed in micrograms per liter (µg/l) or parts per billion (ppb)

PFAS values displayed in micrograms per liter (µg/L) or parts per billion (ppb) per Feb. 2023 TOGS Addendum

"<" - Indicates compound was not detected above the indicated laboratory method detection limit (MDL).

Yellow highlight indicates that the compound was detected at a concentration Technical and Operational Guidance Series (TOGS 1.1.1) Guidance Value

PFAS (40) analyzed by USEPA 1633 Draft 3

SVOCs analyzed by USEPA Method 8270E (SIM)

NL indicates Not Listed

Qualifiers (Qual): **DUSR** Lab

J indicates an estimated value

U/U The analyte was analyzed for, but not detected above the level of the reported sample quantitation limit.

UJ Analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate/imprecise

1310	18	10.02	21.99	9.96	>1000	.96	

Total ~18 Gallons Purged Purge Start Time: ~1100 Purge End Time:

OBSERVATIONS:

Notes for the comments section should include: Color, LNAPL/DNAPL Observed, Odor Yes/No, and Sheen Yes/No

- Started taking readings ~100 mins after starting (very silty)
- Switched to taking readings every 10 mins
- ~1145 Flow thru was getting clogged and coming out suds, tried cleaning but then line was clogged spoke w/ PVE went to taking readings from "cup" every 10 mins.
- purged 10 well volumes
Well Volume (2" well) = 0.163-gal/ft.
- Horizon should get baked at high pH readings

5 McCrea Hill Rd., Ballston Spa

NYSDOH Structure Sampling Questionnaires

ATTACHMENT_4 Restaurant 14 DOH questionnaire**NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH**

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Garon LeClair Date/Time Prepared 12/5/2024

Preparer's Affiliation LaBella Associates Phone No. (518) 885-5383

Purpose of Investigation Part of the Newton Plaza site investigation work plan

1. OCCUPANT:

Interviewed: Y / ☒ N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ☐)

Interviewed: ☒ Y / N

Last Name: Jesman First Name: Chuck

Address: 596 Loudon Road, Latham, NY

County: Albany

Home Phone: - _____ Office Phone: (518) 783-5871

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential
Industrial

School
Church

Commercial/Multi-use
Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other: _____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Restaurant and bar

Does it include residences (i.e., multi-use)? Y / ☒ N If yes, how many? _____

Other characteristics:

Number of floors 1

Building age 1988

Is the building insulated? ☒ Y / N

How air tight? Tight / ☒ Average / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other _____
- c. Basement floor: concrete dirt stone other _____
- d. Basement floor: uncovered covered covered with _____
- e. Concrete floor: unsealed sealed sealed with _____
- f. Foundation walls: poured block stone other _____
- g. Foundation walls: unsealed sealed sealed with _____
- h. The basement is: wet damp dry moldy
- i. The basement is: finished unfinished partially finished
- j. Sump present? Y / N
- k. Water in sump? Y / N / not applicable

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Some minor cracks in concrete floor. Large crack in bathroom floor. Floor drains.

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- | | | | |
|----------------------------|------------------|---------------------|-------------|
| <u>Hot air circulation</u> | Heat pump | Hot water baseboard | |
| Space Heaters | Stream radiation | Radiant floor | |
| Electric baseboard | Wood stove | Outdoor wood boiler | Other _____ |

The primary type of fuel used is:

- | | | |
|--------------------|----------|----------|
| <u>Natural Gas</u> | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Electric

Boiler/furnace located in: Basement Outdoors Main Floor Other _____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? ☒ Y / ☐ N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Good where visible.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level **General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**

Basement No basement

1st Floor Restaurant and bar

2nd Floor No second floor

3rd Floor _____

4th Floor _____

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / ☒ N

b. Does the garage have a separate heating unit? Y / N / ☒ NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / ☒ NA
Please specify _____

d. Has the building ever had a fire? Y / ☒ N When? _____

e. Is a kerosene or unvented gas space heater present? Y / ☒ N Where? _____

f. Is there a workshop or hobby/craft area? Y / ☒ N Where & Type? _____

g. Is there smoking in the building? Y / ☒ N How frequently? _____

h. Have cleaning products been used recently? ☒ Y / ☐ N When & Type? kitchen

i. Have cosmetic products been used recently? Y / ☒ N When & Type? _____

- j. Has painting/staining been done in the last 6 months? Y ☒ N Where & When? _____
- k. Is there new carpet, drapes or other textiles? Y ☒ N Where & When? _____
- l. Have air fresheners been used recently? Y ☒ N When & Type? _____
- m. Is there a kitchen exhaust fan? ☒ Y ☐ N If yes, where vented? _____
- n. Is there a bathroom exhaust fan? ☒ Y ☐ N If yes, where vented? back of building
- o. Is there a clothes dryer? Y ☒ N If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y ☒ N When & Type? _____

Are there odors in the building?

Y ☒ N

If yes, please describe: _____

Do any of the building occupants use solvents at work?

Y ☒ N

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work?

Y ☒ N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

☒ No

Unknown

Is there a radon mitigation system for the building/structure? Y ☒ N Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: ☒ Public Water Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: ☒ Public Sewer Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

No Basement

First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Rae Systems PPB

List specific products found in the residence that have the potential to affect indoor air quality.

[illegible]

* Describe the condition of the product containers as **Unopened (UO)**, **Used (U)**, or **Deteriorated (D)**

**** Photographs of the front and back of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.**

**NEW YORK STATE DEPARTMENT OF HEALTH
INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH**

This form must be completed for each residence involved in indoor air testing.

INDOOR AIR QUALITY QUESTIONNAIRE AND BUILDING INVENTORY
CENTER FOR ENVIRONMENTAL HEALTH**

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Garon LeClair Date/Time Prepared 12/4/2024

Preparer's Affiliation LaBella Associates Phone No. (518) 885-5383

Purpose of Investigation Part of the Newton Plaza site investigation work plan

1. OCCUPANT:

Interviewed: Y / ☒ N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ☐)

Interviewed: ☒ Y / ☐ N

Last Name: Jesman First Name: Chuck

Address: 596 Loudon Road, Latham, NY

County: Albany

Home Phone: - _____ Office Phone: (518) 783-5871

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential
Industrial

School
Church

☒ Commercial/Multi-use
Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other: _____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) flower shop

Does it include residences (i.e., multi-use)? Y / ☒ N If yes, how many? _____

Other characteristics:

Number of floors 1 Building age 1988

Is the building insulated? ☒ Y / N How air tight? Tight / ☒ Average / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other _____
- c. Basement floor: concrete dirt stone other _____
- d. Basement floor: uncovered covered covered with _____
- e. Concrete floor: unsealed sealed sealed with _____
- f. Foundation walls: poured block stone other _____
- g. Foundation walls: unsealed sealed sealed with _____
- h. The basement is: wet damp dry moldy
- i. The basement is: finished unfinished partially finished
- j. Sump present? Y / N
- k. Water in sump? Y / N / not applicable

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Drain in bathroom, 4 inches.

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- | | | | |
|----------------------------|------------------|---------------------|-------------|
| <u>Hot air circulation</u> | Heat pump | Hot water baseboard | |
| Space Heaters | Stream radiation | Radiant floor | |
| Electric baseboard | Wood stove | Outdoor wood boiler | Other _____ |

The primary type of fuel used is:

- | | | |
|--------------------|----------|----------|
| <u>Natural Gas</u> | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Electric

Boiler/furnace located in: Basement Outdoors Main Floor Other _____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? ☒ Y / ☐ N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Good condition where visible, vents in ceiling.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level **General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**

Basement No basement

1st Floor flower shop

2nd Floor No second floor

3rd Floor _____

4th Floor _____

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

- a. Is there an attached garage? Y / ☒ N
- b. Does the garage have a separate heating unit? Y / N / ☒ NA
- c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / ☒ NA
Please specify _____
- d. Has the building ever had a fire? Y / ☒ N When? _____
- e. Is a kerosene or unvented gas space heater present? Y / ☒ N Where? _____
- f. Is there a workshop or hobby/craft area? ☒ Y N Where & Type? prep flowers
- g. Is there smoking in the building? Y / ☒ N How frequently? _____
- h. Have cleaning products been used recently? Y / ☒ N When & Type? _____
- i. Have cosmetic products been used recently? Y / ☒ N When & Type? _____

- j. Has painting/staining been done in the last 6 months? Y ☐ N ☒ Where & When? _____
- k. Is there new carpet, drapes or other textiles? Y ☐ N ☒ Where & When? _____
- l. Have air fresheners been used recently? Y ☐ N ☒ When & Type? _____
- m. Is there a kitchen exhaust fan? Y ☐ N ☒ If yes, where vented? _____
- n. Is there a bathroom exhaust fan? ☒ Y ☐ N If yes, where vented? back of building
- o. Is there a clothes dryer? Y ☐ N ☒ If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y ☐ N ☒ When & Type? _____

Are there odors in the building?

Y ☐ N ☒

If yes, please describe: _____

Do any of the building occupants use solvents at work?

Y ☐ N ☒

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work?

Y ☐ N ☒

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

☒ No

Unknown

Is there a radon mitigation system for the building/structure? Y ☐ N ☒ Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: ☒ Public Water ☐ Drilled Well ☐ Driven Well ☐ Dug Well Other: _____

Sewage Disposal: ☒ Public Sewer ☐ Septic Tank ☐ Leach Field ☐ Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

No Basement

First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

A large grid of 30 columns and 30 rows, intended for drawing a sketch of the area surrounding the building being sampled. The grid is composed of small squares, providing a structured space for the user to draw and label various features such as spill locations, air contamination sources, sampling locations, and other site-specific details.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Rae Systems PPB

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition *	Chemical Ingredients	Field Instrument Reading (units)	Photo ** <u>Y / N</u>
back room	Miracle Grow Plant Food	1 box		see photo log		Y

* Describe the condition of the product containers as **Unopened (UO)**, **Used (U)**, or **Deteriorated (D)**

** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

Miracle Grow Plant Food

DATE: 12/4/2024

Section 3. Composition/information on ingredients

Substance/mixture : Mixture
Chemical name : Not applicable.
Other means of identification : Not available.

Ingredient name	%	CAS number
Boric acid	$\geq 0.1 - < 0.3$	10043-35-3

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

- k. Is there new carpet, drapes or other textiles? Y ☐ N ☒ Where & When? _____
- l. Have air fresheners been used recently? Y ☐ N ☒ When & Type? _____
- m. Is there a kitchen exhaust fan? Y ☐ N ☒ If yes, where vented? _____
- n. Is there a bathroom exhaust fan? ☒ Y ☐ N If yes, where vented? back of building
- o. Is there a clothes dryer? Y ☐ N ☒ If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y ☐ N ☒ When & Type? _____

Are there odors in the building?

Y ☐ N ☒

If yes, please describe: _____

Do any of the building occupants use solvents at work?

Y ☐ N ☒

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work?

Y ☐ N ☒

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

☒ No

Unknown

Is there a radon mitigation system for the building/structure? Y ☐ N ☒ Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: ☒ Public Water ☐ Drilled Well ☐ Driven Well ☐ Dug Well Other: _____

Sewage Disposal: ☒ Public Sewer ☐ Septic Tank ☐ Leach Field ☐ Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home ☐ relocate to friends/family ☐ relocate to hotel/motel ☐

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

No Basement

First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

A large grid of 30 columns and 30 rows, intended for drawing a sketch of the area surrounding the building being sampled. The grid is composed of small squares, providing a structured space for the user to draw and label various features such as spill locations, air contamination sources, sampling locations, and other site-specific details.

Make & Model of field instrument used: Rae Systems PPB

1. OCCUPANT:

Interviewed: Y / ☒ N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ☐)

Interviewed: ☒ Y / ☐ N

Last Name: Jesman First Name: Chuck

Address: 596 Loudon Road, Latham, NY

County: Albany

Home Phone: - _____ Office Phone: (518) 783-5871

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential
Industrial

School
Church

Commercial/Multi-use
Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other: _____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Clothing Store

Does it include residences (i.e., multi-use)? Y / ☒ N If yes, how many? _____

Other characteristics:

Number of floors 1 Building age 1988

Is the building insulated? ☒ Y / N How air tight? Tight / ☒ Average / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other _____
- c. Basement floor: concrete dirt stone other _____
- d. Basement floor: uncovered covered covered with _____
- e. Concrete floor: unsealed sealed sealed with _____
- f. Foundation walls: poured block stone other _____
- g. Foundation walls: unsealed sealed sealed with _____
- h. The basement is: wet damp dry moldy
- i. The basement is: finished unfinished partially finished
- j. Sump present? Y / N
- k. Water in sump? Y / N / not applicable

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Drains in floor.

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- | | | | |
|----------------------------|------------------|---------------------|-------------|
| <u>Hot air circulation</u> | Heat pump | Hot water baseboard | |
| Space Heaters | Stream radiation | Radiant floor | |
| Electric baseboard | Wood stove | Outdoor wood boiler | Other _____ |

The primary type of fuel used is:

- | | | |
|--------------------|----------|----------|
| <u>Natural Gas</u> | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Electric

Boiler/furnace located in: Basement Outdoors Main Floor Other _____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? ☒ Y / ☐ N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Good condition where visible.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level **General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**

Basement No basement

1st Floor Clothing Store

2nd Floor No second floor

3rd Floor

4th Floor

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / ☒ N

b. Does the garage have a separate heating unit? Y / N / ☒ NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / ☒ NA
Please specify _____

d. Has the building ever had a fire? Y / ☒ N When? _____

e. Is a kerosene or unvented gas space heater present? Y / ☒ N Where? _____

f. Is there a workshop or hobby/craft area? Y / ☒ N Where & Type? _____

g. Is there smoking in the building? Y / ☒ N How frequently? _____

h. Have cleaning products been used recently? Y / ☒ N When & Type? _____

i. Have cosmetic products been used recently? Y / ☒ N When & Type? _____

- j. Has painting/staining been done in the last 6 months? Y ☐ N ☒ Where & When? _____
- k. Is there new carpet, drapes or other textiles? Y ☐ N ☒ Where & When? _____
- l. Have air fresheners been used recently? Y ☐ N ☒ When & Type? _____

Floor drain in bathroom, has cracks.

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- | | | | |
|----------------------------|------------------|---------------------|-------------|
| <u>Hot air circulation</u> | Heat pump | Hot water baseboard | |
| Space Heaters | Stream radiation | Radiant floor | |
| Electric baseboard | Wood stove | Outdoor wood boiler | Other _____ |

The primary type of fuel used is:

- | | | |
|--------------------|----------|----------|
| <u>Natural Gas</u> | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Electric

Boiler/furnace located in: Basement Outdoors Main Floor Other _____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? ☒ Y / ☐ N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Good where visible.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level **General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**

Basement No basement

1st Floor Clothing Store

2nd Floor No second floor

3rd Floor _____

4th Floor _____

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / ☒ N

b. Does the garage have a separate heating unit? Y / N / ☒ NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / ☒ NA
Please specify _____

d. Has the building ever had a fire? Y / ☒ N When? _____

e. Is a kerosene or unvented gas space heater present? Y / ☒ N Where? _____

f. Is there a workshop or hobby/craft area? Y / ☒ N Where & Type? _____

g. Is there smoking in the building? Y / ☒ N How frequently? _____

h. Have cleaning products been used recently? Y / ☒ N When & Type? _____

i. Have cosmetic products been used recently? Y / ☒ N When & Type? _____

- j. Has painting/staining been done in the last 6 months? Y ☐ N ☒ Where & When? _____
- k. Is there new carpet, drapes or other textiles? Y ☐ N ☒ Where & When? _____
- l. Have air fresheners been used recently? Y ☐ N ☒ When & Type? _____
- m. Is there a kitchen exhaust fan? Y ☐ N ☒ If yes, where vented? _____
- n. Is there a bathroom exhaust fan? ☒ Y ☐ N If yes, where vented? back of building
- o. Is there a clothes dryer? Y ☐ N ☒ If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y ☐ N ☒ When & Type? _____

Are there odors in the building?

Y ☐ N ☒

If yes, please describe: _____

Do any of the building occupants use solvents at work?

Y ☐ N ☒

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work?

Y ☐ N ☒

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

☒ No

Unknown

Is there a radon mitigation system for the building/structure? Y ☐ N ☒ Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: ☒ Public Water ☐ Drilled Well ☐ Driven Well ☐ Dug Well Other: _____

Sewage Disposal: ☒ Public Sewer ☐ Septic Tank ☐ Leach Field ☐ Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home ☐ relocate to friends/family ☐ relocate to hotel/motel ☐

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

No Basement

First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

Make & Model of field instrument used: Rae Systems PPB

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential
Industrial

School
Church

Commercial/Multi-use
Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other: _____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Clothing Store

Does it include residences (i.e., multi-use)? Y / (N) If yes, how many? _____

Other characteristics:

Number of floors 1 Building age 1988

Is the building insulated? (Y) / N How air tight? Tight / (Average) / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other _____
- c. Basement floor: concrete dirt stone other _____
- d. Basement floor: uncovered covered covered with _____
- e. Concrete floor: unsealed sealed sealed with _____
- f. Foundation walls: poured block stone other _____
- g. Foundation walls: unsealed sealed sealed with _____
- h. The basement is: wet damp dry moldy
- i. The basement is: finished unfinished partially finished
- j. Sump present? Y / N
- k. Water in sump? Y / N / not applicable

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Drains in floor. _____

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other _____
- c. Basement floor: concrete dirt stone other _____
- d. Basement floor: uncovered covered covered with _____
- e. Concrete floor: unsealed sealed sealed with _____
- f. Foundation walls: poured block stone other _____
- g. Foundation walls: unsealed sealed sealed with _____
- h. The basement is: wet damp dry moldy
- i. The basement is: finished unfinished partially finished
- j. Sump present? Y / N
- k. Water in sump? Y / N / not applicable

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Drain in bathroom and workshop floor.

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- | | | | |
|----------------------------|------------------|---------------------|-------------|
| <u>Hot air circulation</u> | Heat pump | Hot water baseboard | |
| Space Heaters | Stream radiation | Radiant floor | |
| Electric baseboard | Wood stove | Outdoor wood boiler | Other _____ |

The primary type of fuel used is:

- | | | |
|--------------------|----------|----------|
| <u>Natural Gas</u> | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Electric

Boiler/furnace located in: Basement Outdoors Main Floor Other _____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? ☒ Y / ☐ N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Good where visible

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level **General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**

Basement No basement

1st Floor Art Gallery and workshop

2nd Floor No second floor

3rd Floor _____

4th Floor _____

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

- a. Is there an attached garage? Y / ☒ N
- b. Does the garage have a separate heating unit? Y / N / ☒ NA
- c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / ☒ NA
Please specify _____
- d. Has the building ever had a fire? Y / ☒ N When? _____
- e. Is a kerosene or unvented gas space heater present? Y / ☒ N Where? _____
- f. Is there a workshop or hobby/craft area? ☒ Y N Where & Type? picture framing ar ☒ +
- g. Is there smoking in the building? Y / ☒ N How frequently? _____
- h. Have cleaning products been used recently? ☒ Y N When & Type? floor cleaner / Gur ☒ +
- i. Have cosmetic products been used recently? Y / ☒ N When & Type? _____

- j. Has painting/staining been done in the last 6 months? Y ☒ N Where & When? _____
- k. Is there new carpet, drapes or other textiles? Y ☒ N Where & When? _____
- l. Have air fresheners been used recently? Y ☒ N When & Type? _____
- m. Is there a kitchen exhaust fan? Y ☒ N If yes, where vented? _____
- n. Is there a bathroom exhaust fan? ☒ Y N If yes, where vented? back of building
- o. Is there a clothes dryer? Y ☒ N If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y ☒ N When & Type? _____

Are there odors in the building?

Y ☒ N

If yes, please describe: _____

Do any of the building occupants use solvents at work?

☒ Y N

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? WD-40 and Gum-Out

If yes, are their clothes washed at work?

Y ☒ N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

☒ No

Unknown

Is there a radon mitigation system for the building/structure? Y ☒ N Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: ☒ Public Water Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: ☒ Public Sewer Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

No Basement

First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Rae Systems PPB

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition *	Chemical Ingredients	Field Instrument Reading (units)	Photo ** <u>Y / N</u>
	Gumout			See Photo Log		Y
	WD-40			See Photo Log		Y

* Describe the condition of the product containers as **Unopened (UO)**, **Used (U)**, or **Deteriorated (D)**

** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

- j. Sump present? Y / N
- k. Water in sump? Y / N / not applicable

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Drain in bathroom

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- | | | | |
|----------------------------|------------------|---------------------|-------------|
| <u>Hot air circulation</u> | Heat pump | Hot water baseboard | |
| Space Heaters | Stream radiation | Radiant floor | |
| Electric baseboard | Wood stove | Outdoor wood boiler | Other _____ |

The primary type of fuel used is:

- | | | |
|--------------------|----------|----------|
| <u>Natural Gas</u> | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Electric

Boiler/furnace located in: Basement Outdoors Main Floor Other _____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? ☒ Y / ☐ N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

No ductwork visible, drop ceiling.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level **General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**

Basement No basement

1st Floor Resturant

2nd Floor No second floor

3rd Floor _____

4th Floor _____

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / ☒ N

b. Does the garage have a separate heating unit? Y / N / ☒ NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / ☒ NA
Please specify _____

d. Has the building ever had a fire? Y / ☒ N When? _____

e. Is a kerosene or unvented gas space heater present? Y / ☒ N Where? _____

f. Is there a workshop or hobby/craft area? Y / ☒ N Where & Type? _____

g. Is there smoking in the building? Y / ☒ N How frequently? _____

h. Have cleaning products been used recently? ☒ Y / ☐ N When & Type? kitchen supplies

i. Have cosmetic products been used recently? Y / ☒ N When & Type? _____

- j. Has painting/staining been done in the last 6 months? Y ☒ N Where & When? _____
- k. Is there new carpet, drapes or other textiles? Y ☒ N Where & When? _____
- l. Have air fresheners been used recently? Y ☒ N When & Type? _____
- m. Is there a kitchen exhaust fan? ☒ Y N If yes, where vented? back of building
- n. Is there a bathroom exhaust fan? ☒ Y N If yes, where vented? back of building
- o. Is there a clothes dryer? Y ☒ N If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y ☒ N When & Type? _____

Are there odors in the building?

Y ☒ N

If yes, please describe: _____

Do any of the building occupants use solvents at work?

Y ☒ N

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work?

Y ☒ N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

☒ No

Unknown

Is there a radon mitigation system for the building/structure? Y ☒ N Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: ☒ Public Water Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: ☒ Public Sewer Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

No Basement

First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

A large grid of 30 columns and 30 rows, intended for drawing a sketch of the area surrounding the building being sampled. The grid is composed of small squares, providing a structured space for the user to draw and label various features such as spill locations, air contamination sources, sampling locations, and other relevant site information.

Make & Model of field instrument used: Rae Systems PPB

[illegible]

** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

Purpose of Investigation Part of the Newton Plaza site investigation work plan

1. OCCUPANT:

Interviewed: Y / ☒ N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ☐)

Interviewed: ☒ Y / ☐ N

Last Name: Jesman First Name: Chuck

Address: 596 Loudon Road, Latham, NY

County: Albany

Home Phone: - _____ Office Phone: (518) 783-5871

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential
Industrial

School
Church

Commercial/Multi-use
Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other: _____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Coffee shop

Does it include residences (i.e., multi-use)? Y / ☒ N If yes, how many? _____

Other characteristics:

Number of floors 1 Building age 1988

Is the building insulated? ☒ Y / N How air tight? Tight / ☒ Average / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other _____
- c. Basement floor: concrete dirt stone other _____
- d. Basement floor: uncovered covered covered with _____
- e. Concrete floor: unsealed sealed sealed with _____
- f. Foundation walls: poured block stone other _____
- g. Foundation walls: unsealed sealed sealed with _____
- h. The basement is: wet damp dry moldy
- i. The basement is: finished unfinished partially finished
- j. Sump present? Y / N
- k. Water in sump? Y / N / not applicable

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Floor drains 3-4 inch

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

Home Phone: - _____ Office Phone: (518) 783-5871

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential
Industrial

School
Church

Commercial/Multi-use
Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other: _____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Resturant

Does it include residences (i.e., multi-use)? Y / (N) If yes, how many? _____

Other characteristics:

Number of floors 1 Building age 1988

Is the building insulated? (Y) / N How air tight? Tight / (Average) / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other _____
- c. Basement floor: concrete dirt stone other _____
- d. Basement floor: uncovered covered covered with _____
- e. Concrete floor: unsealed sealed sealed with _____
- f. Foundation walls: poured block stone other _____
- g. Foundation walls: unsealed sealed sealed with _____
- h. The basement is: wet damp dry moldy
- i. The basement is: finished unfinished partially finished
- j. Sump present? Y / N
- k. Water in sump? Y / N / not applicable

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Drains in floor 3-4 inch

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- | | | |
|----------------------------|------------------|---------------------------------|
| <u>Hot air circulation</u> | Heat pump | Hot water baseboard |
| Space Heaters | Stream radiation | Radiant floor |
| Electric baseboard | Wood stove | Outdoor wood boiler Other _____ |

The primary type of fuel used is:

- | | | |
|--------------------|----------|----------|
| <u>Natural Gas</u> | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Electric

Boiler/furnace located in: Basement Outdoors Main Floor Other _____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? ☒ Y / ☐ N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Good condition where visible, vents in ceiling.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level **General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**

Basement No basement

1st Floor Cafe

2nd Floor No second floor

3rd Floor _____

4th Floor _____

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

a. Is there an attached garage? Y / ☒ N

b. Does the garage have a separate heating unit? Y / N / ☒ NA

c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / ☒ NA
Please specify _____

d. Has the building ever had a fire? Y / ☒ N When? _____

e. Is a kerosene or unvented gas space heater present? Y / ☒ N Where? _____

f. Is there a workshop or hobby/craft area? Y / ☒ N Where & Type? _____

g. Is there smoking in the building? Y / ☒ N How frequently? _____

h. Have cleaning products been used recently? ☒ Y / ☐ N When & Type? kitchen cleaning s+

i. Have cosmetic products been used recently? Y / ☒ N When & Type? _____

- j. Has painting/staining been done in the last 6 months? Y ☒ N Where & When? _____
- k. Is there new carpet, drapes or other textiles? Y ☒ N Where & When? _____
- l. Have air fresheners been used recently? ☒ Y N When & Type? bathroom air fresh ☒
- m. Is there a kitchen exhaust fan? ☒ Y N If yes, where vented? back of build ☒
- n. Is there a bathroom exhaust fan? ☒ Y N If yes, where vented? back of build ☒
- o. Is there a clothes dryer? Y ☒ N If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y ☒ N When & Type? _____

Are there odors in the building?

Y ☒ N

If yes, please describe: _____

Do any of the building occupants use solvents at work?

Y ☒ N

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? _____

If yes, are their clothes washed at work?

Y ☒ N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

☒ No

Unknown

Is there a radon mitigation system for the building/structure? Y ☒ N Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: ☒ Public Water Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: ☒ Public Sewer Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

No Basement

First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

Make & Model of field instrument used: Rae Systems PPB

[illegible]

**** Photographs of the front and back of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.**

This form must be completed for each residence involved in indoor air testing.

Preparer's Name Garon LeClair Date/Time Prepared 12/4/2024

Preparer's Affiliation LaBella Associates Phone No. (518) 885-5383

Purpose of Investigation Part of the Newton Plaza site investigation work plan

1. OCCUPANT:

Interviewed: Y / ☒ N

Last Name: _____ First Name: _____

Address: _____

County: _____

Home Phone: _____ Office Phone: _____

Number of Occupants/persons at this location _____ Age of Occupants _____

2. OWNER OR LANDLORD: (Check if same as occupant ☐)

Interviewed: ☒ Y / ☐ N

Last Name: Jesman First Name: Chuck

Address: 596 Loudon Road, Latham, NY

County: Albany

Home Phone: - _____ Office Phone: (518) 783-5871

3. BUILDING CHARACTERISTICS

Type of Building: (Circle appropriate response)

Residential
Industrial

School
Church

Commercial/Multi-use
Other: _____

If the property is residential, type? (Circle appropriate response)

Ranch	2-Family	3-Family
Raised Ranch	Split Level	Colonial
Cape Cod	Contemporary	Mobile Home
Duplex	Apartment House	Townhouses/Condos
Modular	Log Home	Other: _____

If multiple units, how many? _____

If the property is commercial, type?

Business Type(s) Candy Store

Does it include residences (i.e., multi-use)? Y / ☒ N If yes, how many? _____

Other characteristics:

Number of floors 1 Building age 1988

Is the building insulated? ☒ Y / N How air tight? Tight / ☒ Average / Not Tight

4. AIRFLOW

Use air current tubes or tracer smoke to evaluate airflow patterns and qualitatively describe:

Airflow between floors

Airflow near source

Outdoor air infiltration

Infiltration into air ducts

5. BASEMENT AND CONSTRUCTION CHARACTERISTICS (Circle all that apply)

- a. Above grade construction: wood frame concrete stone brick
- b. Basement type: full crawlspace slab other _____
- c. Basement floor: concrete dirt stone other _____
- d. Basement floor: uncovered covered covered with _____
- e. Concrete floor: unsealed sealed sealed with _____
- f. Foundation walls: poured block stone other _____
- g. Foundation walls: unsealed sealed sealed with _____
- h. The basement is: wet damp dry moldy
- i. The basement is: finished unfinished partially finished
- j. Sump present? Y / N
- k. Water in sump? Y / N / not applicable

Basement/Lowest level depth below grade: _____(feet)

Identify potential soil vapor entry points and approximate size (e.g., cracks, utility ports, drains)

Drain in bathroom, 3 inch.

6. HEATING, VENTING and AIR CONDITIONING (Circle all that apply)

Type of heating system(s) used in this building: (circle all that apply – note primary)

- | | | | |
|----------------------------|------------------|---------------------|-------------|
| <u>Hot air circulation</u> | Heat pump | Hot water baseboard | |
| Space Heaters | Stream radiation | Radiant floor | |
| Electric baseboard | Wood stove | Outdoor wood boiler | Other _____ |

The primary type of fuel used is:

- | | | |
|--------------------|----------|----------|
| <u>Natural Gas</u> | Fuel Oil | Kerosene |
| Electric | Propane | Solar |
| Wood | Coal | |

Domestic hot water tank fueled by: Electric

Boiler/furnace located in: Basement Outdoors Main Floor Other _____

Air conditioning: Central Air Window units Open Windows None

Are there air distribution ducts present? ☒ Y / ☐ N

Describe the supply and cold air return ductwork, and its condition where visible, including whether there is a cold air return and the tightness of duct joints. Indicate the locations on the floor plan diagram.

Good condition where visible.

7. OCCUPANCY

Is basement/lowest level occupied? Full-time Occasionally Seldom Almost Never

Level **General Use of Each Floor (e.g., familyroom, bedroom, laundry, workshop, storage)**

Basement No basement

1st Floor Store front / Candy prep area

2nd Floor No second floor

3rd Floor _____

4th Floor _____

8. FACTORS THAT MAY INFLUENCE INDOOR AIR QUALITY

- a. Is there an attached garage? Y / ☒ N
- b. Does the garage have a separate heating unit? Y / N / ☒ NA
- c. Are petroleum-powered machines or vehicles stored in the garage (e.g., lawnmower, atv, car) Y / N / ☒ NA
Please specify _____
- d. Has the building ever had a fire? Y / ☒ N When? _____
- e. Is a kerosene or unvented gas space heater present? Y / ☒ N Where? _____
- f. Is there a workshop or hobby/craft area? ☒ Y / N Where & Type? prep area in rear
- g. Is there smoking in the building? Y / ☒ N How frequently? _____
- h. Have cleaning products been used recently? ☒ Y / N When & Type? clorox daily
- i. Have cosmetic products been used recently? Y / ☒ N When & Type? _____

- j. Has painting/staining been done in the last 6 months? Y ☒ N Where & When? _____
- k. Is there new carpet, drapes or other textiles? Y ☒ N Where & When? _____
- l. Have air fresheners been used recently? Y ☒ N When & Type? _____
- m. Is there a kitchen exhaust fan? ☒ Y N If yes, where vented? back of build ☒
- n. Is there a bathroom exhaust fan? ☒ Y N If yes, where vented? back of build ☒
- o. Is there a clothes dryer? Y ☒ N If yes, is it vented outside? Y / N
- p. Has there been a pesticide application? Y ☒ N When & Type? _____

Are there odors in the building?

Y ☒ N

If yes, please describe: _____

Do any of the building occupants use solvents at work?

☒ Y N

(e.g., chemical manufacturing or laboratory, auto mechanic or auto body shop, painting, fuel oil delivery, boiler mechanic, pesticide application, cosmetologist)

If yes, what types of solvents are used? floor cleaning solvents

If yes, are their clothes washed at work?

Y ☒ N

Do any of the building occupants regularly use or work at a dry-cleaning service? (Circle appropriate response)

Yes, use dry-cleaning regularly (weekly)

Yes, use dry-cleaning infrequently (monthly or less)

Yes, work at a dry-cleaning service

☒ No

Unknown

Is there a radon mitigation system for the building/structure? Y ☒ N Date of Installation: _____

Is the system active or passive? Active/Passive

9. WATER AND SEWAGE

Water Supply: ☒ Public Water Drilled Well Driven Well Dug Well Other: _____

Sewage Disposal: ☒ Public Sewer Septic Tank Leach Field Dry Well Other: _____

10. RELOCATION INFORMATION (for oil spill residential emergency)

a. Provide reasons why relocation is recommended: _____

b. Residents choose to: remain in home relocate to friends/family relocate to hotel/motel

c. Responsibility for costs associated with reimbursement explained? Y / N

d. Relocation package provided and explained to residents? Y / N

11. FLOOR PLANS

Draw a plan view sketch of the basement and first floor of the building. Indicate air sampling locations, possible indoor air pollution sources and PID meter readings. If the building does not have a basement, please note.

Basement:

No Basement

First Floor:

12. OUTDOOR PLOT

Draw a sketch of the area surrounding the building being sampled. If applicable, provide information on spill locations, potential air contamination sources (industries, gas stations, repair shops, landfills, etc.), outdoor air sampling location(s) and PID meter readings.

Also indicate compass direction, wind direction and speed during sampling, the locations of the well and septic system, if applicable, and a qualifying statement to help locate the site on a topographic map.

13. PRODUCT INVENTORY FORM

Make & Model of field instrument used: Rae Systems PPB

List specific products found in the residence that have the potential to affect indoor air quality.

Location	Product Description	Size (units)	Condition *	Chemical Ingredients	Field Instrument Reading (units)	Photo ** <u>Y / N</u>
	Chlorox Spray	12 oz	Open	see photo log		Y
	Orange Floor Cleaning Solvent	12 oz	Open	NA Poured Into An Unlabeled Bottle		Y

* Describe the condition of the product containers as **Unopened (UO)**, **Used (U)**, or **Deteriorated (D)**

** Photographs of the **front and back** of product containers can replace the handwritten list of chemical ingredients. However, the photographs must be of good quality and ingredient labels must be legible.

ATTACHMENT_4 Candy Shop 4 DOH questionnaire

Clorox Spray & Orange Citrus Solvent

DATE: 12/4/2024

3. COMPOSITION/INFORMATION ON INGREDIENTS

Chemical Name	CAS-No	Weight %	Trade Secret
Sodium hypochlorite	7681-52-9	1 - 5	*
Sodium hydroxide	1310-73-2	0.1 - 1	*

* The exact percentage (concentration) of composition has been withheld as a trade secret.

NOTES:

UNAUTHORIZED ALTERATION OR ADDITION TO A SURVEY MAP BEARING A LICENSED LAND SURVEYOR'S SEAL IS A VIOLATION OF SECTION 7209, SUBDIVISION 2 OF THE NEW YORK STATE EDUCATION LAW.

REPRODUCTION OR COPYING OF THIS DOCUMENT MAY BE A VIOLATION OF COPYRIGHT LAW UNLESS PERMISSION OF THE AUTHOR AND/OR COPYRIGHT HOLDER IS OBTAINED.

ONLY COPIES FROM THE ORIGINAL OF THIS SURVEY MARKED WITH AN ORIGINAL OF THE LAND SURVEYOR'S INKED SEAL OR HIS EMBOSSED SEAL SHALL BE CONSIDERED TO BE VALID TRUE COPIES.

SURVEYED WITHOUT THE BENEFIT OF A TITLE SEARCH.

SUBJECT TO ALL EASEMENTS OF RECORD.

SUBJECT TO COVENANTS, EASEMENTS, RESTRICTIONS, CONDITIONS AND AGREEMENTS OF RECORD.

COPYRIGHT LABELLA ASSOCIATES PC, ALL RIGHTS RESERVED.

SURVEYED FROM RECORD DESCRIPTION AND AS IN POSSESSION.

BUILDING SHOWN HEREON SERVED BY UNDERGROUND UTILITIES.

HORIZONTAL DATUM & NORTH ORIENTATION ARE BASED ON THE STATE PLANE COORDINATE SYSTEM NAD83 NY EAST, AS DERIVED FROM ON SITE STATIC GNSS OBSERVATIONS ON SEPTEMBER 2023.

UNDERGROUND UTILITIES SHOWN HEREON ARE THE RESULT OF AN UNDERGROUND UTILITY DESIGNATION COMPLETED BY CLEAN GLOBE ENVIRONMENTAL LLC ON JULY 29-31 & AUGUST 16, 2025 IN COAND FROM DATA OBTAINED FROM RECORD MAPS AND DRAWINGS. THE UTILITY DESIGNATION WAS COMPLETED IN ACCORDANCE WITH THE STANDARD PROCEDURES SET FORTH IN ASCE 38-22. ALL ABOVE GROUND STRUCTURES, SURFACE FEATURES AND THE LOCATION OF THE MARK OUT ARE THE RESULT OF AN INSTRUMENT SURVEY COMPLETED BY THIS OFFICE UNLESS OTHERWISE NOTED. THERE MAY BE OTHER UNDERGROUND UTILITIES, THE EXISTENCE OF WHICH ARE NOT KNOWN OR CERTIFIED BY THE UNDERSIGNED. THE SIZE AND LOCATION OF ALL UNDERGROUND UTILITIES AND STRUCTURES MUST BE VERIFIED BY THE APPROPRIATE AUTHORITIES AND UDIG-NY MUST BE NOTIFIED PRIOR TO CONDUCTING TEST BORINGS, EXCAVATION OR CONSTRUCTION. THE SURVEYOR FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED ALTHOUGH THE SURVEYOR DOES CERTIFY THAT THEY ARE LOCATED AS ACCURATELY AS POSSIBLE FROM INFORMATION AVAILABLE. THE SURVEYOR HAS NOT PHYSICALLY LOCATED THE UNDERGROUND UTILITIES.

THE CONTRACTOR SHALL COMPLY WITH NEW YORK STATE INDUSTRIAL CODE RULE 753 - 48 HOURS PRIOR TO DIGGING CALL UDIG-NY 1-800-962-7962 TO HAVE PUBLIC UTILITY LOCATIONS PAINTED.

SUBSURFACE STRUCTURES NOT VISIBLE OR READILY APPARENT ARE NOT SHOWN AND THEIR LOCATION AND EXTENT ARE NOT CERTIFIED.

A BOUNDARY SURVEY WAS NOT PERFORMED AS PART OF THIS SURVEY. ALL PROPERTY LINES SHOWN ARE APPROXIMATE.

MAP REFERENCE:

MAP ENTITLED "NEWTON PLAZA, 580-602 LOUDON ROAD, LATHAM NY", PREPARED BY CLEAN GLOBE ENVIRONMENTAL LLC (CGE), DATED JULY 29-31 AND AUGUST 16, 2024.

Attachment 6

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-925646
Unit Firmware Ver	V2.22A

Running Mode	Hygiene Mode
Datalog Mode	Manual
Diagnostic Mode	No
Stop Reason	Pause in Communication Mode

Site ID	RAE00000
User ID	USER0000

Begin	12/3/2024 10:17
End	12/3/2024 12:24
Sample Period(s)	60
Number of Records	127

Sensor	PID(ppm)
Sensor SN	S023030039V8
Measure Type	Min; Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	25
TWA Alarm	10
Measurement Gas	Isobutylene
Calibration Time	11/25/2024 10:26
Peak	0
Min	0
Average	0

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-925646
Unit Firmware Ver	V2.22A
Running Mode	Hygiene Mode
Datalog Mode	Manual
Diagnostic Mode	No
Stop Reason	Power Down
Site ID	RAE00000
User ID	USER0000
Begin	12/3/2024 13:38
End	12/3/2024 15:08
Sample Period(s)	60
Number of Records	89
Sensor	PID(ppm)
Sensor SN	S023030039V8
Measure Type	Min; Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	25
TWA Alarm	10
Measurement Gas	Isobutylene
Calibration Time	11/25/2024 10:26
Peak	0
Min	0
Average	0

Summary

Unit Name	MiniRAE 3000(PGM-7320)
Unit SN	592-925646
Unit Firmware Ver	V2.22A
Running Mode	Hygiene Mode
Datalog Mode	Manual
Diagnostic Mode	No
Stop Reason	Pause in Communication Mode
Site ID	RAE00000
User ID	USER0000
Begin	12/4/2024 9:55
End	12/4/2024 10:12
Sample Period(s)	60
Number of Records	17
Sensor	PID(ppm)
Sensor SN	S023030039V8
Measure Type	Min; Avg; Max; Real
Span	100
Span 2	1000
Low Alarm	50
High Alarm	100
Over Alarm	15000
STEL Alarm	25
TWA Alarm	10
Measurement Gas	Isobutylene
Calibration Time	11/25/2024 10:26
Peak	0
Min	0
Average	0

=====

24/12/05 09:29

Summary

Unit Name MiniRAE 3000(PGM-7320)

Unit SN 592-925646

Unit Firmw: V2.22A

Running Mc Hygiene Mode

Datalog Mo Manual

Diagnostic No

Stop Reaso Stop by User

Site ID RAE00000

User ID USER0000

Begin 12/5/2024 9:29

End 12/5/2024 11:48

Sample Per 60

Number of 139

Sensor PID(ppm)

Sensor SN S023030039V8

Measure Ty Min; Avg; Max; Real

Span 100

Span 2 1000

Low Alarm 50

High Alarm 100

Over Alarm 15000

STEL Alarm 25

TWA Alarm 10

Measurem Isobutylene

Calibration 11/25/2024 10:26

Peak 0

Min 0

Average 0

Soil Laboratory Analytical Reports

Wednesday, May 07, 2025

Attn: Todd Rollend
Labella Associates DPC
5 McCrea Hill Rd.,
Ballston Spa, NY 12020

Project ID: NEWTON
SDG ID: GCR46087
Sample ID#s: CR46087 - CR46098

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".

Phyllis/Shiller

Methodology Summary

Pesticides:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8081B.

Polychlorinated Biphenyls (PCBs):

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8082A.

Semivolatile Organic Compounds

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update VI, June 2018, Method 8270E.

Volatile Organic Compounds:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update III, Method 8260D and Environmental Protection Agency, EPA-600/4-79-020, Revised March 1983 (Methods 624) as printed in 40CFR part 136.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Phoenix I.D.: CR46092

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

[illegible]

J - Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the identification criteria, but the results is less than the quantitation limit, but greater than zero.

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Subject: Re: [Ext] Newtown Project - Add Category B Deliverable

Yes. Every report under this Newton PO should get CatB deliverables. I believe this is five reports but can't confirm at this moment.

Hi Todd,

Got your message and want to confirm the list of SDGs you would like us to add a Category B Data Package to. Our records show five SDGs.

GCR45184
GCR46087
GCR47003
GCR48033
GCR48041

Please confirm this list is complete and we will get the data packages ordered for you.

Thank you,

Rebecca Merz

Subject: [Ext] Add TICs VOC's (82260) Soi & GW - Newton

Hi Todd,

Please confirm you would like us to proceed with adding TICs to all 8260 samples for this project GW and Soil matrices. The standard lab report will be revised to include Form 1E Volatile Organics Analysis Data Sheet Tentatively Identified Compounds. No raw data would accompany the form.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Analysis Report

May 07, 2025

FOR: Attn: Todd Rollend
Labella Associates DPC
5 McCrea Hill Rd.,
Ballston Spa, NY 12020

Sample Information

Matrix: SOIL
Location Code: LABELLA
Rush Request: Standard
P.O.#: NEWTON

Custody Information

Collected by: TR
Received by: B
Analyzed by: see "By" below

Date

08/22/24
08/22/24

Time

11:20
17:25

Laboratory Data

SDG ID: GCR47003
Phoenix ID: CR47009

Project ID: NEWTON
Client ID: SB-7 / MW-7 11-12`

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
Silver	ND	0.37	0.37	mg/Kg	1	08/26/24	TH	SW6010D

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Subject: Re: [Ext] Newtown Project - Add Category B Deliverable

Yes. Every report under this Newton PO should get CatB deliverables. I believe this is five reports but can't confirm at this moment.

Hi Todd,

Got your message and want to confirm the list of SDGs you would like us to add a Category B Data Package to. Our records show five SDGs.

GCR45184
GCR46087
GCR47003
GCR48033
GCR48041

Please confirm this list is complete and we will get the data packages ordered for you.

Thank you,

Rebecca Merz

Subject: [Ext] Add TICs VOC's (82260) Soi & GW - Newton

Hi Todd,

Please confirm you would like us to proceed with adding TICs to all 8260 samples for this project GW and Soil matrices. The standard lab report will be revised to include Form 1E Volatile Organics Analysis Data Sheet Tentatively Identified Compounds. No raw data would accompany the form.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".

Methodology Summary

Mercury Prep

Soil Sample - USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 7471B.

Metals

ICP :

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 6010D.

Mercury:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, 7471B

Pesticides:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8081B.

Polychlorinated Biphenyls (PCBs):

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8082A.

Semivolatile Organic Compounds

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update VI, June 2018, Method 8270E.

Volatile Organic Compounds:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update III, Method 8260D and Environmental Protection Agency, EPA-600/4-79-020, Revised March 1983 (Methods 624) as printed in 40CFR part 136.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Comment:

Additional 8270 criteria: Four of the compounds can be outside of acceptance criteria as long as recovery is at least 10%. (Acid surrogates acceptance range for aqueous samples: 10-110%, for soils 30-130%)

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Subject: Re: [Ext] Newtown Project - Add Category B Deliverable

Yes. Every report under this Newton PO should get CatB deliverables. I believe this is five reports but can't confirm at this moment.

Hi Todd,

Got your message and want to confirm the list of SDGs you would like us to add a Category B Data Package to. Our records show five SDGs.

GCR45184
GCR46087
GCR47003
GCR48033
GCR48041

Please confirm this list is complete and we will get the data packages ordered for you.

Thank you,

Rebecca Merz

Hi Rebecca,

The list is complete. Revised CATA reports will work.

Thank you,
Todd

Subject: [Ext] Add TICs VOC's (82260) Soi & GW - Newton

Hi Todd,

Please confirm you would like us to proceed with adding TICs to all 8260 samples for this project GW and Soil matrices. The standard lab report will be revised to include Form 1E Volatile Organics Analysis Data Sheet Tentatively Identified Compounds. No raw data would accompany the form.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".

Methodology Summary

Mercury Prep

Soil Sample - USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 7471B.

Metals

ICP :

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 6010D.

Mercury:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, 7471B

Pesticides:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8081B.

Polychlorinated Biphenyls (PCBs):

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update IV, Method 8082A.

Semivolatile Organic Compounds

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update VI, June 2018, Method 8270E.

Volatile Organic Compounds:

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods 3rd Ed. Update III, Method 8260D and Environmental Protection Agency, EPA-600/4-79-020, Revised March 1983 (Methods 624) as printed in 40CFR part 136.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Volatile Comment:

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Subject: Re: [Ext] Newtown Project - Add Category B Deliverable

Yes. Every report under this Newton PO should get CatB deliverables. I believe this is five reports but can't confirm at this moment.

Hi Todd,

Got your message and want to confirm the list of SDGs you would like us to add a Category B Data Package to. Our records show five SDGs.

GCR45184
GCR46087
GCR47003
GCR48033
GCR48041

Please confirm this list is complete and we will get the data packages ordered for you.

Thank you,

Rebecca Merz

Subject: [Ext] Add TICs VOC's (82260) Soi & GW - Newton

Hi Todd,

Please confirm you would like us to proceed with adding TICs to all 8260 samples for this project GW and Soil matrices. The standard lab report will be revised to include Form 1E Volatile Organics Analysis Data Sheet Tentatively Identified Compounds. No raw data would accompany the form.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Volatile Comment:

Elevated reporting limits for volatiles due to the presence of non-target compounds.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Comments:

Volatile Comment:

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

3 = This parameter exceeds laboratory specified limits.

C = This parameter is subcontracted.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

*See attached

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

PFAS (40) by EPA 1633 (EPA 1633 Draft 3), PFOA/PFOS - Soil Extraction (EPA 1633 Draft 3) were analyzed by NY certified lab #12058.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

Number TICs found: 0

CONCENTRATION UNITS:
(ug/L or ug/KG) ug/Kg

[illegible]

J - Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the identification criteria, but the results is less than the quantitation limit, but greater than zero.

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Subject: RE: [Ext] Add TICs VOC's (82260) Soi & GW - Newton

Hi Rebecca,

The list is complete. Revised CATA reports will work.

Thank you,
Todd

Subject: [Ext] Add TICs VOC's (82260) Soi & GW - Newton

Hi Todd,

Please confirm you would like us to proceed with adding TICs to all 8260 samples for this project GW and Soil matrices. The standard lab report will be revised to include Form 1E Volatile Organics Analysis Data Sheet Tentatively Identified Compounds. No raw data would accompany the form.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 29, 2024 and listed below. The project was identified as your project: **GCR50329**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24H2004

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

3 = This parameter exceeds laboratory specified limits.

C = This parameter is subcontracted.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

*See attached

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

PFAS (40) by EPA 1633 (EPA 1633 Draft 3), PFOA/PFOS - Soil Extraction (EPA 1633 Draft 3) were analyzed by NY certified lab #12058.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Parameter	Result	RL/ PQL	LOD/ MDL	Units	Dilution	Date/Time	By	Reference
-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

-----------	--------	------------	-------------	-------	----------	-----------	----	-----------

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

TRIP BLANK INCLUDED.

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

[illegible]

J - Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the identification criteria, but the results is less than the quantitation limit, but greater than zero.

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Subject: Re: [Ext] Newtown Project - Add Category B Deliverable

Yes. Every report under this Newton PO should get CatB deliverables. I believe this is five reports but can't confirm at this moment.

Hi Todd,

Got your message and want to confirm the list of SDGs you would like us to add a Category B Data Package to. Our records show five SDGs.

GCR45184
GCR46087
GCR47003
GCR48033
GCR48041

Please confirm this list is complete and we will get the data packages ordered for you.

Thank you,

Rebecca Merz

Hi Rebecca,

The list is complete. Revised CATA reports will work.

Thank you,
Todd

Subject: [Ext] Add TICs VOC's (82260) Soi & GW - Newton

Hi Todd,

Please confirm you would like us to proceed with adding TICs to all 8260 samples for this project GW and Soil matrices. The standard lab report will be revised to include Form 1E Volatile Organics Analysis Data Sheet Tentatively Identified Compounds. No raw data would accompany the form.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 22, 2024 and listed below. The project was identified as your project: **GCR45184**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24H1485

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-LCS-L	The LCS recovery for this PFAS compound was below control limits.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

SDG Comments

May 07, 2025

SDG I.D.: GCR82666

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

Version 3: This report has been revised to include added analysis per client request.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

3 = This parameter exceeds laboratory specified limits.

C = This parameter is subcontracted.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

*See attached

PFAS (40) by EPA 1633 (EPA 1633 Draft 3), PFOA/PFOS - Water Extraction (EPA 1633 Draft 3) were analyzed by NY certified lab #12058.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

3 = This parameter exceeds laboratory specified limits.

C = This parameter is subcontracted.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

*See attached

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

PCB Comment:

Poor surrogate recovery was observed for PCBs. Sample was re-extracted with similar results.

PFAS (40) by EPA 1633 (EPA 1633 Draft 3), PFOA/PFOS - Water Extraction (EPA 1633 Draft 3) were analyzed by NY certified lab #12058.

Purge Volume: 25000 (uL)

Soil Aliquot Vol (uL): n.a.

Number TICs found: 0

CONCENTRATION UNITS:
(ug/L or ug/KG) ug/L

[illegible]

FORM I VOA-TIC

J - Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the identification criteria, but the results is less than the quantitation limit, but greater than zero.

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

Comment:

A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.

Additional 8270 criteria: Four of the compounds can be outside of acceptance criteria as long as recovery is at least 10%. (Acid surrogates acceptance range for aqueous samples: 10-110%, for soils 30-130%)

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Subject: [Ext] Add TICs VOC's (82260) Soi & GW - Newton

Hi Todd,

Please confirm you would like us to proceed with adding TICs to all 8260 samples for this project GW and Soil matrices. The standard lab report will be revised to include Form 1E Volatile Organics Analysis Data Sheet Tentatively Identified Compounds. No raw data would accompany the form.

Manchester CT, 06040
Attention: Helen Geoghegan

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on October 11, 2024 and listed below. The project was identified as your project: **GCR82666**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 24J0825

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

PFSu-L	The isotopically labeled surrogate recovered below lab control limits due to a matrix effect. Isotope Dilution was applied.
PF-CCV-L	The CCV recovery for this PFAS compound was below control limits.
PF-CCV-H	The CCV recovery for this PFAS compound was above control limits.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

SDG Comments

May 08, 2025

SDG I.D.: GCR81261

Any compound that is not detected above the MDL/LOD is reported as ND on the report and is reported in the electronic deliverables (EDD) as <RL or U at the RL per state and EPA guidance.

Version 1: Analysis results minus raw data.

Version 2: Complete report with raw data.

Version 3: This report has been revised to include added analysis per client request.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

3 = This parameter exceeds laboratory specified limits.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

PCB Comment:

Poor surrogate recovery was observed for PCBs. Sample was re-extracted with similar results.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected BRL=Below Reporting Level L=Biased Low J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit1

QA/QC Surrogates: Surrogates are compounds (preceded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

FORM I VOA-TIC

J - Used when estimating a concentration for TIC where a 1:1 response is assumed or when the result indicates the presence of a compound that meets the identification criteria, but the results is less than the quantitation limit, but greater than zero.

N - The concentration is based on the response of the nearest internal. This flag is used on the TIC form for all compounds identified

Q - For TICS, this compound was quantitated using a calibration curve. This compound is part of the instrument method, but not part of the client target list.

Parameter	Blank	Blk RL	LCS %	LCSD %	LCS RPD	MS %	MSD %	MS RPD	% Rec Limits	% RPD Limits
Comment:										
A LCS and LCS duplicate were performed instead of a MS and MSD. Alpha and gamma chlordane were spiked and analyzed instead of technical chlordane. Gamma chlordane recovery is reported as chlordane in the LCS and LCSD

Comment:

A LCS and LCS Duplicate were performed instead of a matrix spike and matrix spike duplicate.

Additional 8270 criteria: Four of the compounds can be outside of acceptance criteria as long as recovery is at least 10%. (Acid surrogates acceptance range for aqueous samples: 10-110%, for soils 30-130%)

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Subject: [Ext] Add TICs VOC's (82260) Soi & GW - Newton

Hi Todd,

Please confirm you would like us to proceed with adding TICs to all 8260 samples for this project GW and Soil matrices. The standard lab report will be revised to include Form 1E Volatile Organics Analysis Data Sheet Tentatively Identified Compounds. No raw data would accompany the form.

Ballston Spa, NY 12020

Project ID: NEWTON
SDG ID: GCS24309
Sample ID#s: CS24309 - CS24324

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".
