FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
ND	Not Detected
RL	Reporting Limit is at the level of quantitation (LOQ)
DL	Detection Limit is the lower limit of detection determined by the MDL study
MCL	Maximum Contaminant Level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
	No results have been blank subtracted unless specified in the case narrative section.
DL-03	Elevated reporting limit due to matrix.
L-07A	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.
MS-07	Matrix spike recovery is outside of control limits. Analysis is in control based on laboratory fortified blank recovery.Possibility of sample matrix effects that lead to low bias for reported result or non-homogeneous sample aliquot cannot be eliminated.
MS-19	Sample to spike ratio is greater than or equal to 4:1. Spiked amount is not representative of the native amount in the sample. Appropriate or meaningful recoveries cannot be calculated.
PR-15	According to the NY ELAP program, all voa results less than 0.2mg/Kg are estimated and biased low if not collected according to SW-846 5035-L/5035A-L.
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Reported result is estimated.

SECTION I: REQUEST FOR APPROVAL OF THE FOLLOWING ITEMS (THIS SECTION WILL BE INITIATED BY THE CONTRACTOR)

TO: **AECOM**	FROM: **LAND REMEDIATION, Inc.**	SUBMITTAL NO.: 13-B
		PREVIOUS SUBMITTAL NO. AND DATE:
Specification Section No.: 02 30 00	Project Title: **BASF Corp. Rensselaer, NY**	

Item No.	Description of Item Submitted	Manufacturer or Contractor Catalog. Drawing or Brochure	No. of Copies	Spec. Paragraph No.	Drawing Sheet No.	Comments
1	Upland Topsoil Analytical Testing		1	02 30 00		see below
2	Upland Topsoil Geotechnical Testing		1	02 30 00		see below

Remarks:	**LAND REMEDIATION, INC.**	Signature:
attached is the submittal for upland topsoil material	I hereby certify that I have carefully examined the enclosed submittal(s) and have determined and verified all field measurements, construction criteria, materials, catalog numbers and similar data, coordinated the submittal(s) with other submissions and the work of other trades and contractors, and to the best of my knowledge and belief, the enclosed submittal(s) is/are in full compliance with the Contract Documents, except as follows. ☐ None ☐ As Equal	Title: Project Director Date: April 15, 2020

Additional Notes:
Proposed upland topsoil from Troy Sand and Gravel
Attached is the analytical testing (1 comp, 2 grabs) for 5,000 CY
PFAS and 1-4 Dioxane sampling was performed as well although not specifically required.
Geotechnical results are also provided for the Upland Topsoil

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller
Laboratory Director

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

Hexavalent Chromium:
This sample is in a reducing state.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Results are reported on an ``as received`` basis, and are not corrected for dry weight.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

S - Laboratory solvent, contamination is possible.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.

Comment:

Additional 8260 criteria: 10% of LCS/LCSD compounds can be outside of acceptance criteria as long as recovery is 40-160%, 25-160% for Chloroethane-HL and Trichlorofluoromethane-HL.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
m = This parameter is outside laboratory MS/MSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

Sample Criteria Exceedances Report

GCF58956 - LANDREM

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Analysis Comments

April 14, 2020 SDG I.D.: GCF58956

The following analysis comments are made regarding exceptions to criteria not already noted in the Analysis Report or QA/QC Report:

SVOA Narration

CHEM05 03/31/20-1: CF58956

For 8270 full list, the DDT breakdown and pentachlorophenol & benzidine peak tailing were evaluated in the DFTPP tune and were found to be in control.
For 8270 BN list, benzidine peak tailing was evaluated in the DFTPP tune and was found to be in control.

The following Initial Calibration compounds did not meet recommended response factors: 2-Nitrophenol 0.061 (0.1)
The following Initial Calibration compounds did not meet minimum response factors: None.

The following Continuing Calibration compounds did not meet recommended response factors: 2-Nitrophenol 0.077 (0.1)
The following Continuing Calibration compounds did not meet minimum response factors: None.

Up to eight compounds can be outside of ICAL %RSD criteria and up to sixteen compounds can be outside of CCAL %Dev criteria if less than 40%.

VOA Narration

CHEM03 04/01/20-1: CF58957, CF58958

The following Initial Calibration compounds did not meet RSD% criteria: 1,2-Dibromo-3-chloropropane 27% (20%), Dibromochloromethane 24% (20%), trans-1,4-dichloro-2-butene 25% (20%), Acetone 27% (20%), Bromoform 36% (20%)
The following Initial Calibration compounds did not meet maximum RSD% criteria: None.
The following Initial Calibration compounds did not meet recommended response factors: Tetrachloroethene 0.177 (0.2), Bromoform 0.088 (0.1)
The following Initial Calibration compounds did not meet minimum response factors: None.

Up to eight compounds can be outside of ICAL %RSD criteria and up to sixteen compounds can be outside of CCAL %Dev criteria if less than 40%.

Good afternoon Will,

Can you please let me know what metals you would like for us to run on the BASF sample we received today?

Thank you,

Lori Bailey

Attention: Helen Geoghegan

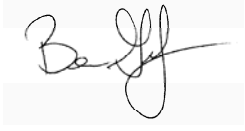
Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 02, 2020 and listed below. The project was identified as your project: **CF58959 03/31/20**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.



The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
20D0083-01	CF58959	Soil	03/31/2020	04/02/2020

General Notes for York Project (SDG) No.: 20D0083

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

YORK

Sample and Data Qualifiers Relating to This Work Order

PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Re: Soil Laboratory Testing
2009 Blanket LSA
Clifton Park, New York
ATL Report No.: AT003SL-845-09-20

Dear Brendan,

On September 17, 2020, our representative obtained one sample of top soil material from Clifton Park and delivered it to our Albany, New York facility for testing. A pH of Soils in accordance with ASTM D 4972, and Moisture, Ash, and Organic Matter of Peat and Other Organic Soils in accordance with ASTM D 2974 were performed on this sample. The results follow:

pH of SOILS
ASTM D 4972

ATL Sample No.	pH	Project Specification	Test Method	Sieved Fraction	Soaking Procedure
AT003S-846-1	7.5	---	A	#10	Distilled Water

PERCENT ORGANICS, ASH CONTENT, AND MOISTURE CONTENT
ASTM D 2974

ATL Sample No.	Organics (%)	Project Specification	Furnace Temperature (ºC)	Ash (%)	Project Specification	Moisture (%)	Test Method A	Oven Drying Temperature (ºC)
AT003S-846-1	12.8	---	440	87.2	---	44.6	Oven-Dried	110

Please contact our office should you have any questions or if we may be of further service.

Sincerely,
ATLANTIC TESTING LABORATORIES, Limited

Robert E. Field
Laboratory Manager

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory. This report is incomplete unless all pages indicated in the pagination at the bottom of the page are included.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200. The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Sincerely yours,

Phyllis Shiller

Parameter	Result	RL/ PQL	Units	Dilution	Date/Time	By	Reference

1 = This parameter is not certified by the primary accrediting authority (NY NELAC) for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected at RL/PQL
BRL=Below Reporting Level L=Biased Low
QA/QC Surrogates: Surrogates are compounds (preceeded with a %) added by the lab to determine analysis efficiency. Surrogate results(%) listed in the report are not "detected" compounds.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

The regulatory hold time for pH is immediately. This pH was performed in the laboratory and may be considered outside of hold-time.

Hexavalent Chromium:
This sample is in a reducing state.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If you are the client above and have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext.200.
The contents of this report cannot be discussed with anyone other than the client listed above without their written consent.

Comment:

Additional 8260 criteria: 10% of LCS/LCSD compounds can be outside of acceptance criteria as long as recovery is 40-160%, 25-160% for Chloroethane-HL and Trichlorofluoromethane-HL.

l = This parameter is outside laboratory LCS/LCSD specified recovery limits.
m = This parameter is outside laboratory MS/MSD specified recovery limits.
r = This parameter is outside laboratory RPD specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference
LCS - Laboratory Control Sample
LCSD - Laboratory Control Sample Duplicate
MS - Matrix Spike
MS Dup - Matrix Spike Duplicate
NC - No Criteria

Sample Criteria Exceedances Report

GCF58956 - LANDREM

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units

*** No Data to Display ***

Phoenix Laboratories does not assume responsibility for the data contained in this exceedance report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Analysis Comments

April 14, 2020 SDG I.D.: GCF58956

The following analysis comments are made regarding exceptions to criteria not already noted in the Analysis Report or QA/QC Report:

SVOA Narration

CHEM05 03/31/20-1: CF58956

For 8270 full list, the DDT breakdown and pentachlorophenol & benzidine peak tailing were evaluated in the DFTPP tune and were found to be in control.
For 8270 BN list, benzidine peak tailing was evaluated in the DFTPP tune and was found to be in control.

The following Initial Calibration compounds did not meet recommended response factors: 2-Nitrophenol 0.061 (0.1)
The following Initial Calibration compounds did not meet minimum response factors: None.

The following Continuing Calibration compounds did not meet recommended response factors: 2-Nitrophenol 0.077 (0.1)
The following Continuing Calibration compounds did not meet minimum response factors: None.

Up to eight compounds can be outside of ICAL %RSD criteria and up to sixteen compounds can be outside of CCAL %Dev criteria if less than 40%.

VOA Narration

CHEM03 04/01/20-1: CF58957, CF58958

The following Initial Calibration compounds did not meet RSD% criteria: 1,2-Dibromo-3-chloropropane 27% (20%), Dibromochloromethane 24% (20%), trans-1,4-dichloro-2-butene 25% (20%), Acetone 27% (20%), Bromoform 36% (20%)
The following Initial Calibration compounds did not meet maximum RSD% criteria: None.
The following Initial Calibration compounds did not meet recommended response factors: Tetrachloroethene 0.177 (0.2), Bromoform 0.088 (0.1)
The following Initial Calibration compounds did not meet minimum response factors: None.

Up to eight compounds can be outside of ICAL %RSD criteria and up to sixteen compounds can be outside of CCAL %Dev criteria if less than 40%.

Good afternoon Will,

Can you please let me know what metals you would like for us to run on the BASF sample we received today?

Thank you,

Lori Bailey

Attention: Helen Geoghegan

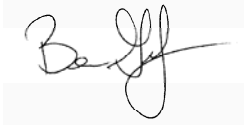
Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on April 02, 2020 and listed below. The project was identified as your project: **CF58959 03/31/20**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.



The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
20D0083-01	CF58959	Soil	03/31/2020	04/02/2020

General Notes for York Project (SDG) No.: 20D0083

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

YORK

Sample and Data Qualifiers Relating to This Work Order

PFSu-H	The isotopically labeled surrogate recovered above lab control limits due to a matrix effect. Isotope Dilution was applied.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Weekly Ambient Air Monitoring Report # 1
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operible Unit 2 (OU2) sediment remediation.

During upland site preparation activities, AECOM is performing the air monitoring in accordance with the General Community Air Monitoring Plan for OU1 (CAMP) presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday June 15, 2018, the primary construction activities included moving soil, cleaning brushes, and pre-trenching to install the sheet pile.

MONITORING LOCATIONS AND DURATION

Daily location of Particulate monitoring stations was determined based on wind direction established from a meteorological station located on-site. These included:

- A station located upwind of site activities (Station AMS-01)
- A station located downwind of site activities (Station AMS-02)
- A station located in the north east site corner adjacent to the Albany Molecular parking area (Station AMS-03).

One VOC monitoring station was installed at the north perimeter of the working area during working hours for the week ending Friday June 15, 2018.

CAMP monitoring was completed between approximately 7:00 a.m. and 6:00 p.m. on Wednesday and Thursday, June 13-14, 2018, and between approximately 7:00 a.m. and 3:00 p.m. on Friday, June 15, 2018.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the downwind PM-10 particulate level is 100 µg/m3 greater than background (upwind perimeter) for a 15-minute period, if airborne dust is observed leaving the work area, or if the average ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds 5 parts per million (ppm) above background for a 15-minute period.

In general the wind direction during this monitoring period was towards the north, northeast on Wednesday and Thursday, June 13-14, 2018 and to the south on Friday, June 15, 2018. The overall PM-10 and VOCs levels were well below action levels, during the monitoring period.

Weekly CAMP Monitoring Report # 3
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.

During upland site preparation activities, AECOM is performing the air monitoring in accordance with the General Community Air Monitoring Plan for OU1 (CAMP) presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday July 6, 2018, main activities included installing the metal sheets into the ground, soil removal along the trench line and core drilling. Truckloads of sheeting arrived every day except for Wednesday, carrying either 40ft or 50ft sheets. Wednesday there was no work in observance of the 4th of July. Monday and Tuesday were hot and humid days, with moderate heat advisory precautions being implemented on the worksite. Thursday there was thunder at 1325 accompanied by heavy rainfall. Friday was very humid, with a slightly lower temperature than Monday and Tuesdays conditions with a light rain shower at 845. Monday and Tuesday the wind was coming from the South. Thursday the wind was coming from the Southwest and Friday it shifted to the West. The street sweeper came by on Friday, 7/6 at 1520.

MONITORING LOCATIONS AND DURATION

Daily location of Particulate monitoring stations was determined based on wind direction established from a meteorological station located on-site. These included:

- A station located upwind of site activities (Station AMS-01)
- A station located downwind of site activities (Station AMS-03)
- A station located in the north east site corner adjacent to the Albany Molecular parking area (Station AMS-02).

One VOC monitoring station was installed at the downwind perimeter of the working area during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the downwind PM-10 particulate level is 100 µg/m3 greater than background (upwind perimeter) for a 15-minute period, if airborne dust is observed leaving the work area, or if the average ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds 5 parts per million (ppm) above background for a 15-minute period.

Early Monday morning the high humidity of the day affected the dust trackers, resulting in the high readings seen up until about 11am when the humidity began to drop. Visible dust was not observed in the work area when the monitor readings were elevated. The entire worksite was sprayed down with water approximately every 90 minutes when needed to ensure that airborne dust levels remained below the action levels.

The CAMP action levels described above were not exceeded during the monitoring period.

Weekly CAMP Monitoring Report # 4
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.

During upland site preparation activities, AECOM is performing the air monitoring in accordance with the General Community Air Monitoring Plan for OU1 (CAMP) presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday July 13, 2018, main activities included installing the metal sheets into the ground, tie rod fabrication and installation, soil removal along the trench line and core drilling. Terraforming of the South end of the worksite in preparation for the tent structure installation began this week. Daily temperatures averaged in the high 80s, with lower humidity than the previous week. Low wind speeds throughout the week, with one thunderstorm on 7/10 at 1700. The street sweeper came by at 0930 on 7/13.

MONITORING LOCATIONS AND DURATION

Daily location of Particulate monitoring stations was determined based on wind direction established from a meteorological station located on-site. These included:

- A station located upwind of site activities (Station AMS-01)
- A station located downwind of site activities (Station AMS-03)
- A station located in the north east site corner adjacent to the Albany Molecular parking area (Station AMS-02).

One VOC monitoring station was installed at the downwind perimeter of the working area during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the downwind PM-10 particulate level is 100 µg/m3 greater than background (upwind perimeter) for a 15-minute period, if airborne dust is observed leaving the work area, or if the average ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds 5 parts per million (ppm) above background for a 15-minute period.

The CAMP action levels described above were not exceeded during the monitoring period.

Weekly CAMP Monitoring Report # 5
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.

During upland site preparation activities, AECOM is performing the air monitoring in accordance with the General Community Air Monitoring Plan for OU1 (CAMP) presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday July 20th, 2018, main activities included installing the metal sheets into the ground, tie rod fabrication and installation, soil removal along the trench line and core drilling. Terraforming of the South end of the worksite in preparation for the tent structure installation continued. Daily temperatures averaged in the high 80s, with low humidity. Low wind speeds throughout the week, with a thunderstorm on 7/17 at 0948. The street sweeper came by at 1000 on 7/20.

MONITORING LOCATIONS AND DURATION

Daily location of Particulate monitoring stations was determined based on wind direction established from a meteorological station located on-site. These included:

- A station located upwind of site activities (Station AMS-01)
- A station located downwind of site activities (Station AMS-03)
- A station located in the north east site corner adjacent to the Albany Molecular parking area (Station AMS-02).

One VOC monitoring station was installed at the downwind perimeter of the working area during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the downwind PM-10 particulate level is 100 µg/m3 greater than background (upwind perimeter) for a 15-minute period, if airborne dust is observed leaving the work area, or if the average ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds 5 parts per million (ppm) above background for a 15-minute period.

There were no exceedances to report for this week.

Weekly CAMP Monitoring Report # 6
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.

During upland site preparation activities, AECOM is performing the air monitoring in accordance with the General Community Air Monitoring Plan for OU1 (CAMP) presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday July 27th, 2018, main activities included installing the metal sheets into the ground, tie rod fabrication and installation, soil removal along the trench line and core drilling. Terraforming of the South end of the worksite in preparation for the tent structure installation continued. Daily temperatures averaged in the high 80s, with high humidity throughout the week. Low wind speeds throughout the week, with thunderstorms on 7/23 throughout the day, as well as on 7/27 starting at 1230 which forced the worksite to close early. Light rain throughout the day on 7/25.

MONITORING LOCATIONS AND DURATION

Daily location of Particulate monitoring stations was determined based on wind direction established from a meteorological station located on-site. These included:

- A station located upwind of site activities (Station AMS-01)
- A station located downwind of site activities (Station AMS-03)
- A station located in the north east site corner adjacent to the Albany Molecular parking area (Station AMS-02).

One VOC monitoring station was installed at the downwind perimeter of the working area during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the downwind PM-10 particulate level is 100 µg/m3 greater than background (upwind perimeter) for a 15-minute period, if airborne dust is observed leaving the work area, or if the average ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds 5 parts per million (ppm) above background for a 15-minute period.

The particulate or VOC action levels were not exceeded during this week's operations. .

Weekly CAMP Monitoring Report # 7
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.

During upland site preparation activities, AECOM is performing the air monitoring in accordance with the General Community Air Monitoring Plan for OU1 (CAMP) presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday August 3rd, 2018, main activities included installing the metal sheets into the ground, tie rod fabrication and installation, soil removal along the trench line and core drilling. An aquatic vegetation survey was conducted by AECOM on Monday 7/30 and Tuesday 7/31. Terraforming of the South end of the worksite in preparation for the tent structure installation continued. Daily temperatures averaged in the high 70s and low 80's, with high humidity throughout the week. There were rain showers throughout the day on Wednesday 8/1, as well as thunderstorms beginning at 1200 on Friday 8/3. Dust monitors were not used on Friday, 8/3 due to the severe weather. On 8/3, PID was used until 1200 when the worksite closed due to severe weather.

MONITORING LOCATIONS AND DURATION

Daily location of Particulate monitoring stations was determined based on wind direction established from a meteorological station located on-site. These included:

- A station located upwind of site activities (Station AMS-01)
- A station located downwind of site activities (Station AMS-03)
- A station located in the north east site corner adjacent to the Albany Molecular parking area (Station AMS-02).

One VOC monitoring station was installed at the downwind perimeter of the working area during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the downwind PM-10 particulate level is 100 µg/m3 greater than background (upwind perimeter) for a 15-minute period, if airborne dust is observed leaving the work area, or if the average ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds 5 parts per million (ppm) above background for a 15-minute period. All PID measurements were recorded by hand.

The particulate and VOC action levels were not exceeded during the monitoring period.

Weekly CAMP Monitoring Report # 8
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.

During upland site preparation activities, AECOM is performing the air monitoring in accordance with the General Community Air Monitoring Plan for OU1 (CAMP) presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday August 10th, 2018, main activities included installing the metal sheets into the ground, tie rod fabrication and installation, soil removal along the trench line and core drilling. Terraforming of the South end of the worksite in preparation for the tent structure installation continued. Daily temperatures averaged from the mid 80's to low 90's, with high humidity throughout the week. There was a thunderstorm on 8/7 at 1235, as well as rain showers on 8/8 at 1440..

MONITORING LOCATIONS AND DURATION

Daily location of Particulate monitoring stations was determined based on wind direction established from a meteorological station located on-site. These included:

- A station located upwind of site activities (Station AMS-01)
- A station located downwind of site activities (Station AMS-03)
- A station located in the north east site corner adjacent to the Albany Molecular parking area (Station AMS-02).

One VOC monitoring station was installed at the downwind perimeter of the working area during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the downwind PM-10 particulate level is 100 µg/m3 greater than background (upwind perimeter) for a 15-minute period, if airborne dust is observed leaving the work area, or if the average ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds 5 parts per million (ppm) above background for a 15-minute period. All PID measurements were recorded by hand.

The particulate and VOC action levels were not exceeded during the monitoring period. Elevated particulate readings were recorded at all three monitoring locations during the morning of 08/07/18. Site activities were not generating visible dust during this period.

Weekly CAMP Monitoring Report # 9
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.

During upland site preparation activities, AECOM is performing the air monitoring in accordance with the General Community Air Monitoring Plan for OU1 (CAMP) presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday August 17th, 2018, main activities included installation of the nylon liner over the TFS. Rain showers throughout the week slowed progress, but by Friday the TFS was nearing completion.

MONITORING LOCATIONS AND DURATION

Daily location of Particulate monitoring stations was determined based on wind direction established from a meteorological station located on-site. These included:

- A station located upwind of site activities (Station AMS-01)
- A station located downwind of site activities (Station AMS-03)
- A station located in the north east site corner adjacent to the Albany Molecular parking area (Station AMS-02).

One VOC monitoring station was installed at the downwind perimeter of the working area during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the downwind PM-10 particulate level is 100 µg/m3 greater than background (upwind perimeter) for a 15-minute period, if airborne dust is observed leaving the work area, or if the average ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds 5 parts per million (ppm) above background for a 15-minute period. All PID measurements were recorded by hand.

There were elevated dust readings in the upwind station AMS-01and AMS -02 on Thursday, 8/16, as well as 17 dust exceedances on Friday, 8/17. The data displayed by the AMS's during this time was skewed due to the high humidity and light rain showers that the site received for the first half of the day. There was no visual dust identified leaving the worksite during these days. There were no PID exceedances to report for this week.

AECOM

Weekly CAMP Monitoring Report # 10
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.
During upland site preparation activities, AECOM is performing the perimeter air monitoring in accordance with the Community Air Monitoring Plan (CAMP) for OU1 presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday August 24th, 2018, main activities included tie rod fabrication and installation, soil removal along the trench line and core drilling, terraforming of the south end of the worksite in preparation for the tent structure installation continued.

MONITORING LOCATIONS AND DURATION

Fence-line monitoring was conducted during site work hours only.
Daily locations of particulate monitoring stations were determined based on wind direction established from a meteorological station located on-site. These included:

- A PM10 air monitoring station located upwind of site activities (Station AMS-01)
- A PM10 air monitoring station located downwind of site activities (Station AMS-03)
- A PM10 air monitoring station located on the east site fence-line approximately 50 ft. from the NE corner, near the Albany Molecular parking area (Station AMS-02).
- TVOC monitoring was also conducted downwind at AMS-03 during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the 15-minute average PM-10 concentration at the downwind AMS is 100 µg/m3 greater than background (upwind AMS concentration), if visible dust is observed leaving the site perimeter, or if the 15-minute average concentration of total volatile organic compounds (TVOC) at the downwind AMS exceeds 5 parts per million (ppm) above background.

There were no PM10 or TVOC exceedances during the week ending August 24, 2018.

AECOM

Weekly CAMP Monitoring Report # 11
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.
During upland site preparation activities, AECOM is performing the perimeter air monitoring in accordance with the Community Air Monitoring Plan (CAMP) for OU1 presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday August 31th, 2018, main activities included trenching, placing, and backfilling of electrical conduit and pipe trenches, water side work and backfilling of Deadman wall area, placing of stone and block deliveries, general site grading, disposal of old tarps, and the paving of the TFS pad.

MONITORING LOCATIONS AND DURATION

Fence-line monitoring was conducted during site work hours only.
Daily locations of particulate monitoring stations were determined based on wind direction established from a meteorological station located on-site. These included:

- A PM10 air monitoring station located upwind of site activities (Station AMS-01)
- A PM10 air monitoring station located downwind of site activities (Station AMS-03)
- A PM10 air monitoring station located on the east site fence-line approximately 50 ft. from the NE corner, near the Albany Molecular parking area (Station AMS-02).
- TVOC monitoring was also conducted downwind at AMS-03 during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the 15-minute average PM-10 concentration at the downwind AMS is 100 µg/m3 greater than background (upwind AMS concentration), if visible dust is observed leaving the site perimeter, or if the 15-minute average concentration of total volatile organic compounds (TVOC) at the downwind AMS exceeds 5 parts per million (ppm) above background.

PID measurements were logged by instrument 8/27-8/28 and were recorded by hand 8/29-8/31. There were four PM10 exceedances this week, all occurring Thursday, 8/30. These exceedances were not likely the result of intrusive soil activities. Rather, a combination of emissions from paving the TFS pad and a possible malfunction of the upwind monitor resulting in a lower than expected upwind PM10 reading was the probable cause. There were no reports of visible dust leaving the worksite. There were no TVOC exceedances.

AECOM

Weekly CAMP Monitoring Report # 12
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.
During upland site preparation activities, AECOM is performing the perimeter air monitoring in accordance with the Community Air Monitoring Plan (CAMP) for OU1 presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday, September 7th, 2018, main activities included installation of tent, concrete blocks, manholes, and pipes, upgrades to the 1974 wall, backfill and site grading.

MONITORING LOCATIONS AND DURATION

Fence-line monitoring was conducted during site work hours only.
Daily locations of particulate monitoring stations were determined based on wind direction established from a meteorological station located on-site. These included:

- A PM10 air monitoring station located upwind of site activities (Station AMS-01)
- A PM10 air monitoring station located downwind of site activities (Station AMS-03)
- A PM10 air monitoring station located on the east site fence-line approximately 50 ft. from the NE corner, near the Albany Molecular parking area (Station AMS-02).
- TVOC monitoring was also conducted downwind at AMS-03 during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the 15-minute average PM-10 concentration at the downwind AMS is 100 µg/m3 greater than background (upwind AMS concentration), if visible dust is observed leaving the site perimeter, or if the 15-minute average concentration of total volatile organic compounds (TVOC) at the downwind AMS exceeds 5 parts per million (ppm) above background.

PID measurements were logged by instrument everyday aside from Tuesday, 9/5 and Wednesday morning, 9/6 due to a PID malfunction. There were no PM10, TVOC, or visible dust exceedances reported for the entire week.

AECOM

Weekly CAMP Monitoring Report # 13
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operable Unit 2 (OU2) sediment remediation.
During upland site preparation activities, AECOM is performing the perimeter air monitoring in accordance with the Community Air Monitoring Plan (CAMP) for OU1 presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday, September 14th, 2018, main activities included installation of tent, unloading and placing of concrete blocks, backfill of electric and water lines, and installation and grading of the crane pad.

MONITORING LOCATIONS AND DURATION

Fence-line monitoring was conducted during site work hours only.
Daily locations of particulate monitoring stations were determined based on wind direction established from a meteorological station located on-site. These included:

- A PM10 air monitoring station located upwind of site activities (Station AMS-01)
- A PM10 air monitoring station located downwind of site activities (Station AMS-03)
- A PM10 air monitoring station located on the east site fence-line approximately 50 ft. from the NE corner, near the Albany Molecular parking area (Station AMS-02).
- TVOC monitoring was also conducted downwind at AMS-03 during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the 15-minute average PM-10 concentration at the downwind AMS is 100 µg/m3 greater than background (upwind AMS concentration), if visible dust is observed leaving the site perimeter, or if the 15-minute average concentration of total volatile organic compounds (TVOC) at the downwind AMS exceeds 5 parts per million (ppm) above background.

There was one PM10 alert level exceedance Thursday, 9/13 when welding was performed in close proximity to a monitoring station. Due to the lack of soil disturbance or particulate matter leaving site boundaries, work was not stopped. There were no TVOC or visible dust exceedances.

Weekly Community Air Monitoring Summary

Client: **BASF**

Location: **Rensselaer, New York**

Period: **10/22/18 – 10/28/18**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the first two weeks of operations and once per week thereafter.

Additionally, following the start of the sediment processing activities in the Temporary Fabric Structure (TFS), process monitoring and sampling will be conducted to document ambient air quality/conditions at the point of exhaust and ensure the effectiveness of the air handling systems that are installed to control potential fugitive emissions. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Processing monitoring and sampling goals will be added to this report once this program has started in the field.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, and PCB AAC are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level; and
- **Table 2**: Fenceline PCB Acceptable Ambient Concentration.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 3**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 4**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling will be conducted during TSCA sediment removal operations and processing activities and will be reported when results become available from the analytical laboratory. Fenceline PCB sampling is expected to begin in early November 2018.

Process Monitoring and Sampling Summary

Process monitoring and sampling will commence with the start of the sediment processing within the TFS and will be reported when the results become available from the field and analytical laboratory. Process monitoring and sampling is expected to begin in early November 2018.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration
PCBs	10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**10/29/18 – 11/4/18**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the first two weeks of operations and once per week thereafter.

Additionally, following the start of the sediment processing activities in the Temporary Fabric Structure (TFS), process monitoring and sampling will be conducted to document ambient air quality/conditions at the point of exhaust and ensure the effectiveness of the air handling systems that are installed to control potential fugitive emissions. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Processing monitoring and sampling goals will be added to this report once this program has started in the field.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, and PCB AAC are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level; and
- **Table 2**: Fenceline PCB Acceptable Ambient Concentration.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 3**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 4**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling will be conducted during TSCA sediment removal operations and processing activities and will be reported when results become available from the analytical laboratory. Fenceline PCB sampling is expected to begin in early November 2018.

Process Monitoring and Sampling Summary

Process monitoring and sampling will commence with the start of the sediment processing within the TFS and will be reported when the results become available from the field and analytical laboratory. Process monitoring and sampling is expected to begin in early November 2018.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**11/5/18 – 11/11/18**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the first two weeks of operations and once per week thereafter.

Additionally, following the start of the sediment processing activities in the Temporary Fabric Structure (TFS), process monitoring and sampling will be conducted to document ambient air quality/conditions at the point of exhaust and ensure the effectiveness of the air handling systems that are installed to control potential fugitive emissions. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Processing monitoring and sampling goals will be added to this report once this program has started in the field.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, and PCB AAC are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level; and
- **Table 2**: Fenceline PCB Acceptable Ambient Concentration.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 3**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 4**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling will be conducted during TSCA sediment removal operations and processing activities and will be reported when results become available from the analytical laboratory. Fenceline PCB sampling is expected to begin in late November 2018.

Process Monitoring and Sampling Summary

Process monitoring and sampling will commence with the start of the sediment processing within the TFS and will be reported when the results become available from the field and analytical laboratory. Process monitoring and sampling is expected to begin in early December 2018.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Weekly Community Air Monitoring Summary

Client: **BASF**

Location: **Rensselaer, New York**

Period: **11/12/18 – 11/18/18**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the first two weeks of operations and once per week thereafter.

Additionally, following the start of the sediment processing activities in the Temporary Fabric Structure (TFS), process monitoring and sampling will be conducted to document ambient air quality/conditions at the point of exhaust and ensure the effectiveness of the air handling systems that are installed to control potential fugitive emissions. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Processing monitoring and sampling goals will be added to this report once this program has started in the field.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, and PCB AAC are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level; and
- **Table 2**: Fenceline PCB Acceptable Ambient Concentration.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 3**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 4**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling will be conducted during TSCA sediment removal operations and processing activities and will be reported when results become available from the analytical laboratory. Fenceline PCB sampling is expected to begin in late November 2018.

Process Monitoring and Sampling Summary

Process monitoring and sampling will commence with the start of the sediment processing within the TFS and will be reported when the results become available from the field and analytical laboratory. Process monitoring and sampling is expected to begin in early December 2018.

Meteorological Monitoring Summaries and Site Map(s)

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**11/19/18 – 11/25/18**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the first two weeks of operations and once per week thereafter.

Additionally, following the start of the sediment processing activities in the Temporary Fabric Structure (TFS), process monitoring and sampling will be conducted to document ambient air quality/conditions at the point of exhaust and ensure the effectiveness of the air handling systems that are installed to control potential fugitive emissions. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Processing monitoring and sampling goals will be added to this report once this program has started in the field.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, and PCB AAC are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level; and
- **Table 2**: Fenceline PCB Acceptable Ambient Concentration.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period TVOC concentrations remained below the Action Levels. However, there was one PM_{10} concentration above the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 3**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 4**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during TSCA sediment removal operations and processing activities and will be reported when results become available from the analytical laboratory. Fenceline PCB sampling started on November 19, 2018.

Process Monitoring and Sampling Summary

Process monitoring and sampling will commence with the start of the sediment processing within the TFS and will be reported when the results become available from the field and analytical laboratory. Process monitoring and sampling is expected to begin in early December 2018.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration
PCBs	10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**11/26/18 – 12/2/18**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the first two weeks of operations and once per week thereafter.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated fenceline PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Individual process monitoring

PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period PM_{10} and TVOC concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during TSCA sediment removal operations and processing activities which began on November 19, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment processing within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Process Sampling PCB Emissions Summary;
- **Table 9**: Process Sampling PM_{10} Emissions Summary; and
- **Table 10**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client: **BASF**

Location: **Rensselaer, New York**

Period: **12/3/18 – 12/9/18**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the first two weeks of operations and once per week thereafter.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the first two weeks of sediment processing and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated fenceline PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Individual process monitoring

PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period TVOC concentrations remained below the Action Level. There were however, PM_{10} concentrations above the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during TSCA sediment removal operations and processing activities which began on November 19, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment processing within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Process Sampling PCB Emissions Summary;
- **Table 9**: Process Sampling PM_{10} Emissions Summary; and
- **Table 10**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB and VOC emission rates calculated for the AHS remained below their respective target emission rates. There were however, elevated PM_{10} concentrations at AHS-4 that resulted in emission rates greater than the target emission rate on December 4, 5, and 8, 2018. The elevated PM_{10} concentrations were caused by the carbon not being level in the AHS unit and carbon dust being emitted from the stack. The carbon was releveled on 12/12/18 and PM_{10} concentrations and emission rates have been subsequently reduced and similar to concentrations at the other locations. The PM_{10} results at the other operational AHS on these days were significantly below the target emission rate; therefore, it's believe that the AHS-4 results were unrelated to the activities ongoing within the temporary fabric structure (TFS).

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Definitions:

PAM – Portable Air Monitoring Station

TVOC – Total Volatile Organic Compounds (ppm)

PM_{10} - Particulate Matter 10 micrometers or less ($\mu g/m^3$)

ppm – Parts per million

$\mu g/m^3$ – micrograms per cubic meter

ND – No Data

NA – Not Applicable

Notes:

- Highlighted concentrations (if any) require further analysis (see **Table 4**).
- PAM reported TVOC and PM_{10} data represent 15-minute average concentrations.
- Hand-held monitoring values represent instantaneous concentrations unless otherwise noted.
- Continuous monitoring (24hrs/7days a week) started on November 19, 2018.

Table 5: Weekly Fenceline Elevated Concentrations greater than the Action Levels

Parameter	Date	Time	Location	Wind Conditions	Elevated Concentration(s)	Background	Adjusted Concentration	Comments/Explanation
PM_{10}	Tue 12/4/18	1:30PM	PAM-3	WNW 13.9 mph	159.0	5.6	153.4	The elevated PM_{10} concentration was due to Portland Cement being pumped into the TFS at a high flow rate while the TFS was under insufficient negative pressure (garage doors were open at the time). Site supervisor was notified and operations were temporarily stopped. The flow rate of Portland Cement was decreased, filters were cleaned, and garage doors were closed and only reopened intermittently as required.
PM_{10}	Thu 12/6/18	5:45AM	PAM-2	SSW 1.6 mph	153.9	30.8	123.1	The elevated PM_{10} concentrations were due to offsite activities. The elevated concentrations were confirmed with a hand-held DustTrak. Slight odors were present with an asphalt/tarry smell (not associated with site activities). Site supervisor was notified.
		6:00AM		SSW 2.3 mph	151.3	47.2	104.1	
		6:30AM		SW 3.4 mph	161.6	41.3	120.3

Definitions:

PAM – Portable Air Monitoring Station
TVOC – Total Volatile Organic Compounds (ppm)
PM_{10} - Particulate Matter 10 micrometers or less ($\mu g/m^3$)
ppm – Parts per million
$\mu g/m^3$ – micrograms per cubic meter
ND – No Data
NA – Not Applicable

Notes:

- PAM reported TVOC and PM_{10} data represent 15-minute average concentrations.
- Hand-held data represent instantaneous concentrations unless stated otherwise.

Table 5: Weekly Fenceline Elevated Concentrations greater than the Action Levels, continued

Parameter	Date	Time	Location	Wind Conditions	Elevated Concentration(s)	Background	Adjusted Concentration	Comments/Explanation
PM_{10}	Thu 12/6/18	6:45AM 7:15AM 7:30AM	PAM-5	SSW 4.9 mph SSW 5.0 mph SSW 5.0 mph	157.6 179.1 164.3	81.2 88.9 82.5	76.4 90.2 81.8	The elevated PM_{10} concentrations were due to offsite activities. The elevated concentrations were confirmed with a hand-held DustTrak. Slight odors were present with an asphalt/tarry smell (not associated with site activities). Site supervisor was notified.
TVOC	NA	NA	NA	NA	NA	NA	NA	TVOC concentrations remained below the Action Level.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**12/10/18 – 12/16/18**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the initial operations and once per week thereafter.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated fenceline PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Individual process monitoring

PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period TVOC concentrations remained below the Action Level. There were however, PM_{10} concentrations above the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during TSCA sediment removal operations and processing activities which began on November 19, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment processing within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Process Sampling PCB Emissions Summary;
- **Table 9**: Process Sampling PM_{10} Emissions Summary; and
- **Table 10**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Fenceline Real-Time Maximum Concentrations Summary

Definitions:

PAM – Portable Air Monitoring Station

TVOC – Total Volatile Organic Compounds (ppm)

PM_{10} - Particulate Matter 10 micrometers or less ($\mu g/m^3$)

ppm – Parts per million

$\mu g/m^3$ – micrograms per cubic meter

ND – No Data

NA – Not Applicable

Notes:

- Highlighted concentrations (if any) require further analysis (see **Table 4**).
- PAM reported TVOC and PM_{10} data represent 15-minute average concentrations.
- Hand-held monitoring values represent instantaneous concentrations unless otherwise noted.
- Continuous monitoring (24hrs/7days a week) started on November 19, 2018.

Table 5: Weekly Fenceline Elevated Concentrations greater than the Action Levels

Parameter	Date	Time	Location	Wind Conditions	Elevated Concentration(s)	Background	Adjusted Concentration	Comments/Explanation
PM_{10}	Tue 12/11/18	6:15AM	PAM-4	SE 0.6 mph	260.0	44.4	215.6	The elevated PM_{10} concentrations were due to offsite activities. The elevated concentrations were confirmed with a hand-held DustTrak. Slight odors were present with an asphalt/tarry smell (not associated with site activities). Site supervisor was notified.
		6:30AM	PAM-5	E 0.5 mph	230.7	53.1	177.6	
		6:30AM	PAM-1	E 0.5 mph	223.1	53.1	170.0

Weekly Community Air Monitoring Summary

Client: **BASF**

Location: **Rensselaer, New York**

Period: **12/17/18 – 12/23/18**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the initial operations and once per week thereafter.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated fenceline PCB results are

compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period TVOC concentrations remained below the Action Level. There was however, a PM_{10} concentration above the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during TSCA sediment removal operations and processing activities which began on November 19, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment processing within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Process Sampling PCB Emissions Summary;
- **Table 9**: Process Sampling PM_{10} Emissions Summary; and
- **Table 10**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and

- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Fenceline Real-Time Maximum Concentrations Summary

Definitions:

PAM – Portable Air Monitoring Station

TVOC – Total Volatile Organic Compounds (ppm)

PM_{10} - Particulate Matter 10 micrometers or less ($\mu g/m^3$)

ppm – Parts per million

$\mu g/m^3$ – micrograms per cubic meter

ND – No Data

NA – Not Applicable

Notes:

- Highlighted concentrations (if any) require further analysis (see **Table 4**).
- PAM reported TVOC and PM_{10} data represent 15-minute average concentrations.
- Hand-held monitoring values represent instantaneous concentrations unless otherwise noted.
- Continuous monitoring (24hrs/7days a week) started on November 19, 2018.

[1] TVOC data was missing between 12/17/18 (5:15PM) and 12/18/18 (9:45AM) due to a battery failure.

[2] PM_{10} data was missing between 12/17/18 (5:15PM) and 12/18/18 (8:15AM) due to a battery failure.

[3] PM_{10} data was invalid between 12/17/18 (8:00PM) and 12/18/18 (1:15AM) due to an instrument malfunction.

[4] TVOC and PM_{10} data were missing between 12/17/18 (7:45PM) and 12/18/18 (7:45AM) due to a battery failure.

[5] TVOC and PM_{10} data were missing between 12/18/18 (3:00AM) and 12/18/18 (8:00AM) due to a battery failure.

[6] TVOC data was invalid between 12/18/18 (8:00AM) and 12/19/18 (8:00AM) due to an instrument malfunction.

[7] PM_{10} data was invalid between 12/19/18 (8:15AM) and 12/19/18 (3:30PM) due to an instrument malfunction.

[8] Hand-held data was not collected on this day.

Table 5: Weekly Fenceline Elevated Concentrations greater than the Action Levels

Parameter	Date	Time	Location	Wind Conditions	Elevated Concentration(s)	Background	Adjusted Concentration	Comments/Explanation
PM_{10}	Wed 12/19/18	8:15AM	PAM-4	SSE 1.1 mph	155.9	61.8	94.1	The elevated PM_{10} concentrations were due to offsite activities. The elevated concentrations were confirmed with a hand-held DustTrak. Slight odors were present with an asphalt/tarry smell (not associated with site activities). Site supervisor was notified.
TVOC	NA	NA	NA	NA	NA	NA	NA	TVOC concentrations remained below the Action Level.

Definitions:

PAM – Portable Air Monitoring Station

TVOC – Total Volatile Organic Compounds (ppm)

PM_{10} – Particulate Matter 10 micrometers or less ($\mu g/m^3$)

ppm – Parts per million

$\mu g/m^3$ – micrograms per cubic meter

ND – No Data

NA – Not Applicable

Notes:

- PAM reported TVOC and PM_{10} data represent 15-minute average concentrations.
- Hand-held data represent instantaneous concentrations unless stated otherwise.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**12/24/18 – 12/30/18**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the initial operations and once per week thereafter.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated fenceline PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Individual process monitoring

PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during TSCA sediment removal operations and processing activities which began on November 19, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment processing within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Process Sampling PCB Emissions Summary;
- **Table 9**: Process Sampling PM_{10} Emissions Summary; and
- **Table 10**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**12/31/18 – 1/6/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the initial operations and once per week thereafter.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated fenceline PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Individual process monitoring

PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during TSCA sediment removal operations and processing activities which began on November 19, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment processing within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Process Sampling PCB Emissions Summary;
- **Table 9**: Process Sampling PM_{10} Emissions Summary; and
- **Table 10**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

PAM – Portable Air Monitoring Station

TVOC – Total Volatile Organic Compounds (ppm)

PM_{10} – Particulate Matter 10 micrometers or less ($\mu g/m^3$)

ppm – Parts per million

$\mu g/m^3$ – micrograms per cubic meter

ND – No Data

NA – Not Applicable

Notes:

- PAM reported TVOC and PM_{10} data represent 15-minute average concentrations.
- Hand-held data represent instantaneous concentrations unless stated otherwise.

Weekly CAMP Monitoring Report # 2
OU-1 of the BASF Rensselaer Facility
36 Riverside Ave, Rensselaer, NY

INTRODUCTION

Presented below are results of ambient air monitoring performed during upland site preparation activities at BASF's former facility at 36 Riverside Avenue, Rensselaer, New York. The upland site preparation activities are part of the Hudson River Operible Unit 2 (OU2) sediment remediation.

During upland site preparation activities, AECOM is performing the air monitoring in accordance with the General Community Air Monitoring Plan for OU1 (CAMP) presented in Appendix F of the Site Management Plan (SMP) for OU-1 prepared by Roux Associates (May 7, 2004).

PROJECT ACTIVITIES

For the week ending Friday June 29, 2018, main activities included installing sheet pile deadmen and soil removal along the trench line and sheet fabrication at the welding station. The tieback platform excavation began on Wednesday June 27. There were light rain showers on Wednesday. On Thursday June 28th at 2:35 pm thunder and lightning forced all work to stop until 4 pm. A street sweeper was working on Riverside Avenue on Friday morning.

MONITORING LOCATIONS AND DURATION

Daily location of Particulate monitoring stations was determined based on wind direction established from a meteorological station located on-site. These included:

- A station located upwind of site activities (Station AMS-01)
- A station located downwind of site activities (Station AMS-03)
- A station located in the north east site corner adjacent to the Albany Molecular parking area (Station AMS-02).

One VOC monitoring station was installed at the downwind perimeter of the working area during working hours.

MONITORING RESULTS

In accordance with Sections 2.2 and 2.3 of the CAMP, corrective measures are implemented when the downwind PM-10 particulate level is 100 µg/m3 greater than background (upwind perimeter) for a 15-minute period, if airborne dust is observed leaving the work area, or if the average ambient air concentration of total organic vapors at the downwind perimeter of the work area exceeds 5 parts per million (ppm) above background for a 15-minute period.

Monday and Tuesday the wind direction was towards the South. It was to the north on Wednesday and Thursday and returned to south early afternoon of Friday. Monitoring locations were adjusted as the wind direction changed so that AMS 03 was downwind from the work and AMS-01 was upwind from the work. The PM-10 and VOCs levels were well below action levels during the monitoring period.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**1/7/19 – 1/13/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the initial operations and once per week thereafter.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated fenceline PCB results are compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Individual process monitoring

PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during TSCA sediment removal operations and processing activities which began on November 19, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment processing within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Process Sampling PCB Emissions Summary;
- **Table 9**: Process Sampling PM_{10} Emissions Summary; and
- **Table 10**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Fenceline Real-Time Maximum Concentrations Summary

Date	PAM-1		PAM-2		PAM-3		PAM-4		PAM-5		PAM-6		Hand-Held

Definitions:

PAM – Portable Air Monitoring Station

TVOC – Total Volatile Organic Compounds (ppm)

PM_{10} - Particulate Matter 10 micrometers or less ($\mu g/m^3$)

ppm – Parts per million

$\mu g/m^3$ – micrograms per cubic meter

ND – No Data

NA – Not Applicable

Notes:

- Highlighted concentrations (if any) require further analysis (see **Table 4**).
- PAM reported TVOC and PM_{10} data represent 15-minute average concentrations.
- Hand-held monitoring values represent instantaneous concentrations unless otherwise noted.

[1] PM_{10} data was invalid between 1/8/19 (7:15AM) and 1/9/19 (12:15PM) due to an instrument malfunction.

[2] TVOC data was invalid between 1/9/19 (9:15PM) and 1/10/19 (8:30AM), and 1/11/19 (2:45AM) and 1/11/19 (8:15AM) due to an instrument malfunction.

Table 5: Weekly Fenceline Elevated Concentrations greater than the Action Levels

Parameter	Date	Time	Location	Wind Conditions	Elevated Concentration(s)	Background	Adjusted Concentration	Comments/Explanation
TVOC	NA	NA	NA	NA	NA	NA	NA	TVOC concentrations remained below the Action Level.
PM_{10}	NA	NA	NA	NA	NA	NA	NA	PM_{10} concentrations remained below the Action Level.

Weekly Community Air Monitoring Summary

Client: **BASF**

Location: **Rensselaer, New York**

Period: **1/14/19 – 1/20/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The monitoring program consists of the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind), as needed, during Toxic Substances Control Act (TSCA) sediment removal operations, and active dredging and sediment processing activities. Sampling is estimated to take place on a daily basis (Monday – Friday) during the initial operations and once per week thereafter.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Periodic real-time monitoring for TVOC and PM_{10} conducted at each of the eight (8) carbon units on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter; and
- Integrated 8-hour sampling for PCBs conducted at one (1) carbon unit on a daily basis (Monday – Friday) during the initial sediment processing operations and weekly thereafter.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. The project-to-date average 8-hour integrated fenceline PCB results are

compared to an Acceptable Ambient Concentration (AAC) developed for the Site. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during TSCA sediment removal operations and processing activities which began on November 19, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment processing within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Process Sampling PCB Emissions Summary;
- **Table 9**: Process Sampling PM_{10} Emissions Summary; and
- **Table 10**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and

- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Definitions:

PAM – Portable Air Monitoring Station

TVOC – Total Volatile Organic Compounds (ppm)

PM_{10} - Particulate Matter 10 micrometers or less ($\mu g/m^3$)

ppm – Parts per million

$\mu g/m^3$ – micrograms per cubic meter

ND – No Data

NA – Not Applicable

Notes:

- Highlighted concentrations (if any) require further analysis (see **Table 4**).
- PAM reported TVOC and PM_{10} data represent 15-minute average concentrations.
- Hand-held monitoring values represent instantaneous concentrations unless otherwise noted.

[1] TVOC data was invalid between 1/14/19 (4:45PM) and 1/15/19 (9:45AM), and 1/18/19 (1:30AM) and 1/18/19 (9:00AM) due to an instrument malfunction.

Table 5: Weekly Fenceline Elevated Concentrations greater than the Action Levels

Parameter	Date	Time	Location	Wind Conditions	Elevated Concentration(s)	Background	Adjusted Concentration	Comments/Explanation
TVOC	NA	NA	NA	NA	NA	NA	NA	TVOC concentrations remained below the Action Level.
PM_{10}	NA	NA	NA	NA	NA	NA	NA	PM_{10} concentrations remained below the Action Level.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**1/21/19 – 1/27/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

	Perimeter of the Fenceline			
Date	**TVOC (ppm)**	**PM_{10} ($\mu g/m^3$)**	**Odor (0-8)**	**Visible Dust**

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**1/28/19 – 2/3/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

Weekly Community Air Monitoring Summary

Client: **BASF**

Location: **Rensselaer, New York**

Period: **2/4/19 – 2/10/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client: **BASF**

Location: **Rensselaer, New York**

Period: **2/11/19 – 2/17/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

	Perimeter of the Fenceline			
Date	**TVOC (ppm)**	**PM_{10} ($\mu g/m^3$)**	**Odor (0-8)**	**Visible Dust**

Weekly Community Air Monitoring Summary

Client: **BASF**

Location: **Rensselaer, New York**

Period: **2/18/19 – 2/24/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**2/25/19 – 3/3/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**3/4/19 – 3/10/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**3/11/19 – 3/17/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**3/18/19 – 3/24/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

	Perimeter of the Fenceline

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**3/25/19 – 3/31/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB and PM_{10} emission rates calculated for the AHS remained below their respective target emission rates with the exception of the VOC emission rate calculated for AHS-8.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**4/1/19 – 4/7/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB and PM_{10} emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

Weekly Community Air Monitoring Summary

Client: **BASF**

Location: **Rensselaer, New York**

Period: **4/8/19 – 4/14/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB and PM_{10} emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**4/15/19 – 4/21/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB and PM_{10} emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**4/22/19 – 4/28/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB and PM_{10} emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

	Perimeter of the Fenceline			
Date	**TVOC (ppm)**	**PM_{10} ($\mu g/m^3$)**	**Odor (0-10)**	**Visible Dust**

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**4/29/19 – 5/5/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**5/6/19 – 5/12/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

	Perimeter of the Fenceline			
Date	**TVOC (ppm)**	**PM_{10} ($\mu g/m^3$)**	**Odor (0-10)**	**Visible Dust**
Mon 5/6/19	ND[1]	ND[1]	ND[1]	ND[1]

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**5/13/19 – 5/19/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client: **BASF**

Location: **Rensselaer, New York**

Period: **5/20/19 – 5/26/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10} and VOC emission rates calculated for the AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**5/27/19 – 6/2/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the fenceline TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB and PM_{10} emission rates calculated for the AHS remained below their respective target emission rates. The VOC emission rates remained below the target emission rate with the exception of AHS-8.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**6/3/19 – 6/9/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB and PM_{10} emission rates calculated for the AHS remained below their respective target emission rates. The VOC emission rates remained below the target emission rate with the exception of AHS-1.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**6/10/19 – 6/16/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB and PM_{10} emission rates calculated for the AHS remained below their respective target emission rates. The VOC emission rates remained below the target emission rate with the exception of AHS-1.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

	Perimeter of the Fenceline

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**6/17/19 – 6/23/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

The monitoring program consists of the following real-time monitoring and integrated sampling:

- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed; and
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The instantaneous hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Individual process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target emission rate to evaluate the performance of the TFS treatment systems.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Fenceline Real-Time Alert Levels, Action Levels, and Site Shutdown Level;

- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is no longer conducted at the fenceline following the CAMP reduction that was implemented on January 21, 2019. Project-to-date results are presented in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results have remained below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Process Sampling PCB Emissions Summary;
- **Table 8**: Process Sampling PM_{10} Emissions Summary; and
- **Table 9**: Process Sampling VOC Emissions Summary.

During the operational week, the PCB, PM_{10}, and VOC emission rates calculated for each AHS remained below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Fenceline Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – pounds per hour

Notes:

[1] Target emission rates are used for comparison of the process sampling emission rates calculated for PCBs, PM_{10} and VOCs at the air handling systems.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**7/15/19 – 7/21/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on November 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

During the operational week, there were several TVOC measurements greater than the Action Level at the 75% carbon bed depth. The project-to-date TVOC, PM_{10}, and PCB emission rates remain below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**7/22/19 – 7/28/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the PM_{10} concentrations remained below the Action Level. However, there was one TVOC concentration measured greater than the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on November 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

During the operational week, there were several TVOC measurements greater than the Action Level at the 75% carbon bed depth. The project-to-date PM_{10} and PCB emission rates remain below their respective target emission rates, while the project-to-date TVOC emission rate is currently greater than the target emission rate.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**7/29/19 – 8/4/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the PM_{10} concentrations remained below the Action Level. There was however, one TVOC concentration measured above the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on November 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation exceeded the Action Level at 75% bed depth at several of the AHS locations. The project-to-date PM_{10} and PCB emission rates remain below their respective target emission rates, while the project-to-date TVOC emission rate is currently greater than the target emission rate.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Table 4: Weekly Maximum Instantaneous Hand-held Concentrations Summary

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**8/5/19 – 8/11/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC concentrations remained below the Action Level. However, there were two PM_{10} concentrations measured above the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on November 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation exceeded the Action Level at 75% bed depth at several of the AHS locations. The project-to-date PM_{10} and PCB emission rates remain below their respective target emission rates, while the project-to-date TVOC emission rate is currently greater than the target emission rate.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**8/12/19 – 8/18/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation exceeded the Action Level at 75% bed depth at several of the AHS locations. The project-to-date PM_{10} and PCB emission rates remain below their respective target emission rates, while the project-to-date VOC emission rate is currently greater than the target emission rate.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**8/19/19 – 8/25/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC concentrations remained below the Action Level. However, there were several PM_{10} concentrations measured greater than the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation remained below the Action Level at 75% bed depth with the exception of one AHS location. The project-to-date PM_{10} and PCB emission rates remain below their respective target emission rates, while the project-to-date VOC emission rate is currently greater than the target emission rate.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**8/26/19 – 9/1/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC concentrations remained below the Action Level. However, there was one PM_{10} concentration measured greater than the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation remained below the Action Level at 75% bed depth at each of the AHS locations. The project-to-date PM_{10} and PCB emission rates remain below their respective target emission rates, while the project-to-date TVOC emission rate is currently greater than the target emission rate.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Table 4: Weekly Fenceline Real-Time Maximum Concentrations Summary

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**9/2/19 – 9/8/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the PM_{10} concentrations remained below the Action Level. There was one TVOC concentration measured greater than the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation exceeded the Action Level at 75% bed depth at one of the AHS locations. The project-to-date PM_{10} and PCB emission rates remain below their respective target emission rates, while the project-to-date VOC emission rate is currently greater than the target emission rate.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Table 4: Weekly Fenceline Real-Time Maximum Concentrations Summary

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**9/9/19 – 9/15/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC concentrations remained below the Action Level. There was one PM_{10} concentration measured greater than the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation exceeded the Action Level at 75% bed depth at two of the AHS locations. The project-to-date PM_{10} and PCB emission rates remain below their respective target emission rates, while the project-to-date VOC emission rate is currently greater than the target emission rate.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**9/16/19 – 9/22/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC and PM_{10} concentrations remained below the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation exceeded the Action Level at 75% bed depth at AHS-6. The project-to-date PM_{10} and PCB emission rates remain below their respective target emission rates, while the project-to-date VOC emission rate is currently greater than the target emission rate.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**9/23/19 – 9/29/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC and PM_{10} concentrations remained below the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation exceeded the Action Level at 75% bed depth at several of the AHS locations. Based on this data, the need for operational maintenance of one or more of the AHS locations has been identified and a suitable approach is under review by the project team. The project-to-date PM_{10} and PCB emission rates remain below their respective target emission rates, while the project-to-date VOC emission rate is currently greater than the target emission rate.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Table 4: Weekly Fenceline Real-Time Maximum Concentrations Summary

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**9/30/19 – 10/6/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC and PM_{10} concentrations remained below the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation exceeded the Action Level at 75% bed depth at several of the AHS locations. Based on this data, the need for operational maintenance of one or more of the AHS locations has been identified and a suitable approach is under review by the project team. The project-to-date PM_{10}, PCB, and VOC emission rates are currently below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Table 4: Weekly Fenceline Real-Time Maximum Concentrations Summary

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**11/11/19 – 11/17/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC concentrations remained below the Action Level and there were several PM_{10} concentrations above the Action Level. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation exceeded the Action Level at 75% bed depth at several of the AHS locations in operation. However, the project-to-date TVOC, PM_{10} and PCB emission rates remain below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**11/18/19 – 11/24/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation exceeded the Action Level at 75% bed depth at several of the AHS locations in operation. However, the project-to-date TVOC, PM_{10} and PCB emission rates remain below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**11/25/19 – 12/1/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC and PM_{10} concentrations remained below the Action Levels with the exception of one PM_{10} concentration. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

Integrated 8-hour PCB sampling is conducted during sediment removal operations and processing activities which restarted on July 15, 2019. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 6**: Fenceline PCB Sample Results; and
- **Table 7**: Project-to-date Fenceline PCB Results Summary.

The results received to-date indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 8**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 9**: Process Monitoring TVOC Emissions Summary;
- **Table 10**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 11**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation remained below the Action Level at 75% bed depth with the exception of one AHS location. The project-to-date TVOC, PM_{10} and PCB emission rates remain below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**12/2/19 – 12/8/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

More recently, Phase 2 of the remedial activities began on July 15, 2019 and includes the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

Additionally, process monitoring and sampling is conducted during sediment processing activities in the Temporary Fabric Structure (TFS) to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also

used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time continuous TVOC and PM_{10} monitoring was conducted at each of the six PAM stations. During the report period, the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Fenceline Real-Time Maximum Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

The project-to-date Fenceline PCB results collected during the project are summarized in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 8**: Process Monitoring TVOC Emissions Summary;
- **Table 9**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 10**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation remained below the Action Level at 75% bed depth at each of the operational AHS locations. The project-to-date TVOC, PM_{10} and PCB emission rates remain below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Table 4: Weekly Fenceline Real-Time Maximum Concentrations Summary

Weekly Community Air Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**12/9/19 – 12/15/19**

On behalf of BASF Corporation (BASF), AECOM has prepared this air monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient air-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Community Air Monitoring Plan (CAMP) prepared by AECOM and incorporated into the August 2018 100% Design.

Introduction

Air monitoring and sampling activities were conducted during the report period to evaluate conditions at the property line (fenceline) to ensure that the measures used to control potential fugitive emissions are effective, and to document ambient air quality/conditions at the fenceline. The CAMP monitoring activities were reduced following the approval of the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH) documented in an email dated January 18, 2019. The CAMP reduction was implemented on January 21, 2019.

Phase 2 of the remedial activities began on July 15, 2019 and included the following real-time monitoring and integrated sampling:

- Continuous real-time monitoring for 15-minute total volatile organic compound (TVOC) and respirable particulate matter (PM_{10}) concentrations conducted at six (6) portable air monitoring (PAM) stations during work hours (Monday – Friday, 7AM through 5PM) and 24 hours per day, 7 days per week as needed;
- Instantaneous hand-held monitoring for TVOCs and PM_{10}, as well as observational monitoring for odor and visible dust conducted periodically (Monday – Friday, 7AM through 5PM) as needed;
- Continuous 15-minute meteorological monitoring for wind speed, wind direction, sigma (wind variability, calculated), temperature and relative humidity at an onsite location 24 hours per day 7 days per week; and
- Integrated 8-hour sampling for polychlorinated biphenyls (PCBs) conducted at three (3) fenceline PAM stations (one upwind and two downwind) on a weekly basis during sediment removal operations.

As documented in an email from the NYSDEC dated December 6, 2019 and implemented the following Monday, December 9, 2019, continuous fenceline TVOC/PM_{10} monitoring and fenceline PCB sampling was discontinued and replaced with periodic hand-held TVOC/PM_{10} monitoring. Process monitoring/sampling is to remain in effect until all sediment is removed from the Temporary Fabric Structure (TFS).

Process monitoring and sampling is conducted during sediment processing activities in the TFS to ensure the effectiveness of each operational air handling system (AHS) that is installed to control potential fugitive emissions and to document ambient air quality/conditions at the point of exhaust. The processing monitoring and sampling program consists of the following real-time monitoring and integrated sampling:

- Real-time monitoring for TVOC and PM_{10} conducted at each of the operational carbon units on a weekly basis; and
- Integrated 8-hour sampling for PCBs conducted at one (1) operational carbon unit on a weekly basis.

The real-time continuous and hand-held monitoring results are compared to a list of Site-specific Alert Levels, Action Levels and a Site Shutdown Level. Process monitoring PCB results are used in conjunction with the real-time

process monitoring data to calculate emission rates for PCBs and PM_{10}. These emission rates are then compared to a target emission rate that is calculated using the real-time PCB AAC. The process monitoring VOC data is also used to calculate an emission rate that's compared to a separate target to evaluate the performance of the TFS treatment system.

The Site-specific Alert Levels, Action Levels, Site Shutdown Level, PCB AAC and process sampling target emission rates are defined in the following tables:

- **Table 1**: Real-Time Alert Levels, Action Levels, and Site Shutdown Level;
- **Table 2**: Fenceline PCB AAC; and
- **Table 3:** Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs.

Fenceline Real-Time Air Monitoring Summary

Real-time instantaneous hand-held TVOC and PM_{10} monitoring, in addition to odor and visible dust observations was conducted at the perimeter of the site and the TFS.

During the report period the TVOC and PM_{10} concentrations remained below the Action Levels. The results of the real-time air monitoring are presented in the following tables:

- **Table 4**: Weekly Maximum Instantaneous Hand-held Concentrations Summary; and
- **Table 5**: Weekly Fenceline Elevated Concentrations greater than the Action Levels.

Fenceline Integrated PCB Sampling Summary

The project-to-date Fenceline PCB results collected during the project are summarized in the following table:

- **Table 6**: Project-to-date Fenceline PCB Results Summary.

The results indicate that the project-to-date PCB results remain below the PCB AAC.

Process Monitoring and Sampling Summary

Process monitoring and sampling is conducted during TSCA sediment activities within the TFS which began on November 29, 2018. Results are reported when they become available from the analytical laboratory and are presented in the following tables:

- **Table 7**: Weekly TVOC Carbon Breakthrough Evaluation at 75% Bed Depth;
- **Table 8**: Process Monitoring TVOC Emissions Summary;
- **Table 9**: Process Monitoring PM_{10} Emissions Summary; and
- **Table 10**: Process Sampling PCB Emissions Summary.

The carbon breakthrough evaluation remained below the Action Level at 75% bed depth at each of the operational AHS locations. The project-to-date TVOC, PM_{10} and PCB emission rates remain below their respective target emission rates.

Meteorological Monitoring Summaries and Site Map(s)

Additional information related to the air monitoring activities during the report period is included in the following figures:

- **Figure 1**: Meteorological Summaries; and
- **Figure 2**: Site Map.

Table 1: Real-Time Alert Levels, Action Levels and Site Shutdown Level

Target Compound	Alert Level[1]	Action Level[1]	Shutdown Level
TVOC (15-minute average)	3.7 ppm	5.0 ppm	25 ppm
PM_{10} (15-minute average)	100 µg/m^3	150 µg/m^3	NA
Odor[2] (instantaneous observation)	Onsite odor related to Site activities	Onsite odor related to Site activities greater than 4 (on scale of 0-10) or public complaint	NA
TVOC in Carbon Bed[3] (instantaneous)	1.0 ppm at 50% carbon bed depth	1.0 ppm at 75% carbon bed depth	NA

Definitions:

TVOC – Total Volatile Organic Compounds

PM_{10} – Respirable particulate matter

ppm – Parts per million

µg/m^3 – Micrograms per cubic meter

NA – Not Applicable

Notes:

- Action Levels were obtained from the Site-specific CAMP, prepared by AECOM (2018).

[1] Above background concentrations. Background concentrations are determined using the upwind or minimum onsite concentration at the time of the elevated concentration.

[2] Odor assessments are based on a qualitative assessment and are ranked on a scale of 0 to 10 (0 being no odor and 10 being extreme odors).

[3] Alert/Action Level for the carbon bed evaluation represents an instantaneous TVOC concentration used to evaluate carbon bed saturation.

Table 2: Fenceline PCB Acceptable Ambient Concentration

Constituent of Interest	Acceptable Ambient Concentration[1]
PCBs	<10 µg/m^3

Definitions:

PCBs – Polychlorinated Biphenyls

µg/m^3 – micrograms per cubic meter

Notes:

[1] AAC is used for comparison of the average fenceline PCB results at the end of the project.

Table 3: Process Monitoring and Sampling Target Emission Rates for PCBs, PM_{10} and VOCs

Constituent of Interest	Target Emission Rate[1]
PCBs	<0.7 lb/hr
PM_{10}	<0.7 lb/hr
VOCs	<1.3 lb/hr

Definitions:

AHS – Air Handling System

PCBs – Polychlorinated Biphenyls

PM_{10} – Respirable particulate matter

VOCs – Volatile Organic Compounds

lb/hr – Pounds per hour

Notes:

[1] The target average emission rates represent the sum of the emissions from each of the 8 AHSs averaged over the project duration. Therefore, the total emissions from each AHS will be totaled daily and averaged over the duration of the project for comparison to Project Average Emission Rates.

Table 4: Weekly Fenceline Real-Time Maximum Concentrations Summary

Water Quality Monitoring Summary Technical Memorandum

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**12/11/18 – 12/20/18 (Chemistry)**

On behalf of BASF Corporation (BASF), AECOM Technology Services (AECOM) has prepared this chemical water quality monitoring data summary technical memorandum for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the water-quality data collected during the indicated reporting period at the Site. The data were collected in accordance with the Surface Water Remedial Action Monitoring Plan prepared by AECOM (2018).

Introduction

Surface water monitoring and sampling activities were conducted during the reporting period (9 sampling days) to evaluate conditions within the river during the remedial dredging activities to ensure that the measures used to control off-Site migration of Site related contaminants turbidity are effective, and to document ambient water quality/ conditions in the river. An example buoy layout is included as Figure 1. The monitoring program consists of the following real-time monitoring and integrated sampling[1]:

- In-situ hand-held monitoring for turbidity, as well as observational monitoring sediment plumes conducted periodically, and during sampling activities;
- Daily samples collected (one from each monitoring station from near bottom in the water column, unless the worst case turbidity is observed at another depth in which case that depth will be sampled) for laboratory analysis for VOCs, hardness and dissolved and total metals and PCBs.
- Continuous real-time monitoring for (every 15 minutes for turbidity conducted at three fixed autonomous water quality buoys positioned up-river, adjacent to, and downriver of the active work area (24 hours per day, 7 days per week);

This memorandum summarizes field turbidity and chemistry data collected during the above referenced reporting period

Constituents of Concern Evaluation

AECOM conducted daily water quality monitoring associated with the Hudson River OU-2 remedial dredging during the period 12/11/18 through 12/20/18. In accordance with the September 2018 Surface Water Remedial Action Monitoring Plan, filtered analytical chemistry samples were collected daily for analysis of PCB Aroclors and metals. Whole water samples were collected for VOCs, PCB Aroclors, metals, total suspended solids (TSS), hardness, and turbidity (3 locations, one depth based on maximum observed in-situ turbidity readings).

A Geotech Geopump™ peristaltic pump was used to collect samples at three depths in the water column (surface, mid-depth, and bottom). The PCB Aroclor and metals samples were filtered using a 0.45 micron filter. Once collected, the filter was removed and the remainder of the sample bottles were filled. While the samples were being collected, the turbidity reading from the paired YSI 6920 sonde was recorded in the project logbook. The samples

[1] Turbidity and TSS baseline relationship data have been summarized in a separate technical memorandum.

were submitted under chain of custody to the Eurofins laboratory in Lancaster, PA. Upon receipt, all lab data packages provided by the lab were reviewed by AECOM's chemistry staff for completeness and accuracy.

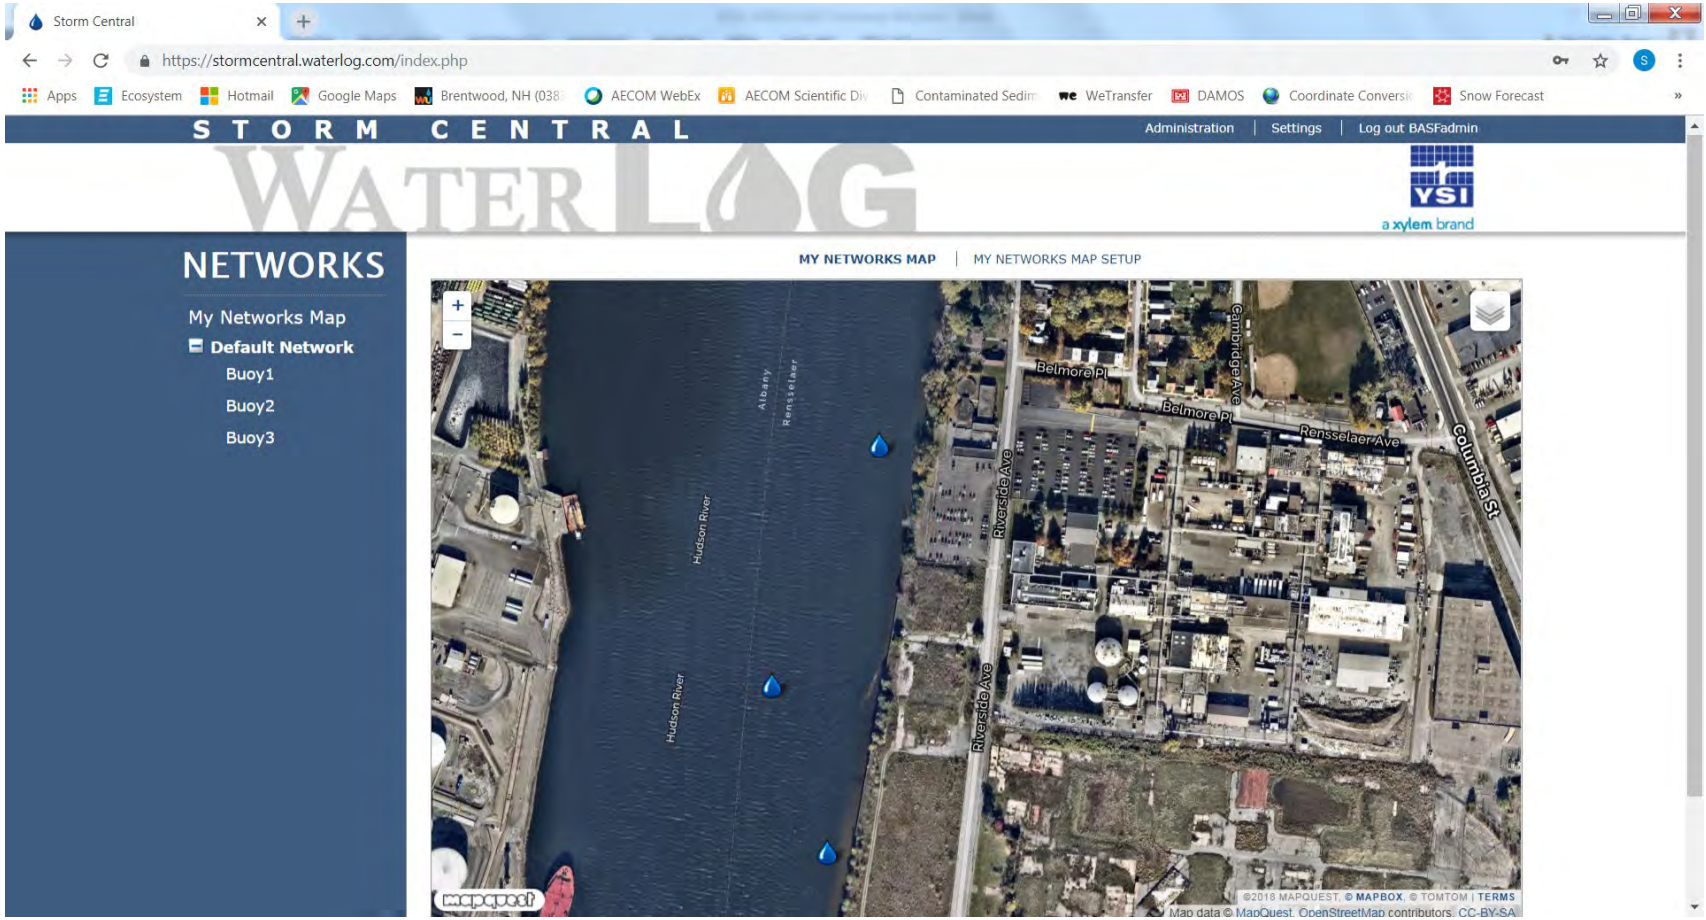
Detected concentrations of organic and inorganic constituents were compared to a list of Site-specific guidance values that were presented in Table 3-1 of the Surface Water Remedial Action Monitoring Plan. The chemical sampling/ monitoring lab reports are presented in Attachment A.

Over the reporting period, there were several low level exceedances of the water quality criteria (Table 1). Zinc (1 exceedance) has been observed in excess of the guidance criteria previously during remedial activities and is not considered to be Site related. There were seven low level Chlorobenzene exceedances over the reporting period. There were also three low level exceedances of the sum of Dichlorobenzenes during the reporting period. Dichlorobenzes have been detected at low levels in the water samples previously, but not since 12/3/18 and never before in excess of the guidance value. There were also three exceedances for PCB Aroclor 1242 (total recoverable non-filtered water). For the first time in the program, PCB Aroclor 1248 was detected in excess of the guidance value. This singular exceedance of Aroclor 1248 is the only time in the entire monitoring program that a PCB of this concentration has been observed. Additionally, in all cases of PCB exceedances, the paired filtered water sample returned a ND for all PCB Aroclors. To date, over 210 samples had been collected/ analyzed and exceedances of the guidance criteria are extremely limited in nature. PCBs Aroclors are acknowledged as not being Site-related.

The field turbidity readings from the YSI 6920 sonde used during sampling are summarized below:

- Real-time turbidity observations at the Site had a maximum reading of 24.5 NTU during this period (n=83), with an overall average of 17.9 NTU.
- Turbidity was consistent with previous sampling events with the highest turbidity occurring at the lower and middle horizons (4.45 and 4.04 NTU average respectively). The surface horizon was slightly less turbid than the other horizons (average 2.9 NTU).

Summary



Pursuant to the October 29, 2018 communication from NYSDEC, and in accordance with the final Surface Water Remedial Action Monitoring Plan, upon the completion of the on-water remedial dredging program, the chemistry monitoring program has ceased for the year and will commence when the dredging program is re-mobilized later in 2019. Continuous daily turbidity monitoring will continue as described in the Work Plan throughout the de-mobilization of the dredging equipment/ infrastructure.

Table 1: Water Quality Exceedances Summary

ANALYSIS REPORT

Prepared by:

Eurofins Lancaster Laboratories Environmental
2425 New Holland Pike
Lancaster, PA 17601

Prepared for:

BASF Corporation
100 Park Avenue
Florham Park NJ 07932-0685

Report Date: December 18, 2018 12:20

Project: Rensselaer

Account #: 04285
Group Number: 2017783
SDG: RNS68
PO Number: BASFRNNY.P093
State of Sample Origin: NY

Electronic Copy To	Environmental Standards, Inc.	Attn: Amanda Cover
Electronic Copy To	BASF Corporation	Attn: Douglas Reid-Green
Electronic Copy To	AECOM	Attn: John Bleiler
Electronic Copy To	AECOM	Attn: Ryan McCarthy
Electronic Copy To	AECOM	Attn: Lori Herberich

Respectfully Submitted,

Kay Hower

(717) 556-7364

Quality Control Summary

Client Name: BASF Corporation
Reported: 12/18/2018 12:20

Group Number: 2017783

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Group Number(s): 2017783

Client: BASF

Hudson River OU-2

Delivery and Receipt Information

Delivery Method:	Fed Ex	Arrival Timestamp:	12/12/2018 10:15
Number of Packages:	2	Number of Projects:	1
State/Province of Origin:	NY		

Arrival Condition Summary

Shipping Container Sealed:	Yes	Sample IDs on COC match Containers:	Yes
Custody Seal Present:	Yes	Sample Date/Times match COC:	Yes
Custody Seal Intact:	Yes	VOA Vial Headspace ≥ 6mm:	No
Samples Chilled:	Yes	Total Trip Blank Qty:	1
Paperwork Enclosed:	Yes	Trip Blank Type:	HCl
Samples Intact:	Yes	Air Quality Samples Present:	No
Missing Samples:	No		
Extra Samples:	No		
Discrepancy in Container Qty on COC:	No		

Unpacked by Nicole Reiff (25684) at 13:09 on 12/12/2018

Samples Chilled Details: Hudson River OU-2

Thermometer Types: DT = Digital (Temp. Bottle) IR = Infrared (Surface Temp) All Temperatures in °C.

Cooler #	Thermometer ID	Corrected Temp	Therm. Type	Ice Type	Ice Present?	Ice Container	Elevated Temp?

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: BASF Corporation
Reported: 12/21/2018 12:00

Group Number: 2018300

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: BASF Corporation
Reported: 12/20/2018 09:50

Group Number: 2018790

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Sample Administration Receipt Documentation Log

Doc Log ID: 236186

Group Number(s): 2018790

Client: BASF

Delivery and Receipt Information

Delivery Method:	Fed Ex	Arrival Timestamp:	12/14/2018 10:12
Number of Packages:	1	Number of Projects:	1
State/Province of Origin:	NY		

Arrival Condition Summary

Shipping Container Sealed:	Yes	Sample IDs on COC match Containers:	Yes
Custody Seal Present:	Yes	Sample Date/Times match COC:	Yes
Custody Seal Intact:	Yes	VOA Vial Headspace ≥ 6mm:	No
Samples Chilled:	Yes	Total Trip Blank Qty:	1
Paperwork Enclosed:	Yes	Trip Blank Type:	HCL
Samples Intact:	Yes	Air Quality Samples Present:	No
Missing Samples:	No		
Extra Samples:	No		
Discrepancy in Container Qty on COC:	No		

Unpacked by Christopher Stief (12429) at 12:22 on 12/14/2018

Samples Chilled Details

Thermometer Types: *DT = Digital (Temp. Bottle)* *IR = Infrared (Surface Temp)* *All Temperatures in °C.*

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: BASF Corporation
Reported: 12/21/2018 10:01

Group Number: 2019139

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: BASF Corporation
Reported: 12/26/2018 10:24

Group Number: 2019707

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: BASF Corporation
Reported: 12/27/2018 18:00

Group Number: 2020284

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Limits:	80-120	80-120	80-120	80-120

Analysis Name: PCB (608.3) 250 ml
Batch number: 183540002A

	Tetrachloro-m-xylene-D1	Decachlorobiphenyl-D1	Tetrachloro-m-xylene-D2	Decachlorobiphenyl-D2
9948146	75	74	76	72

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

Quality Control Summary

Client Name: BASF Corporation
Reported: 12/27/2018 18:00

Group Number: 2020284

Surrogate Quality Control (continued)

Surrogate recoveries which are outside of the QC window are confirmed unless attributed to dilution or otherwise noted on the Analysis Report.

Analysis Name: PCB (608.3) 250 ml
Batch number: 183540002A

	Tetrachloro-m-xylene-D1	Decachlorobiphenyl-D1	Tetrachloro-m-xylene-D2	Decachlorobiphenyl-D2
9948147	71	81	71	78
9948148	76	77	75	76
9948149	73	89	73	83
9948150	74	82	75	79
9948151	76	80	77	76
Blank	55	25	56	23
LCS	63	36	63	35
LCSD	58	81	58	76
Limits:	33-137	10-148	33-137	10-148

*- Outside of specification
**-This limit was used in the evaluation of the final result for the blank
(1) The result for one or both determinations was less than five times the LOQ.
(2) The unspiked result was more than four times the spike added.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: BASF Corporation
Reported: 12/27/2018 18:01

Group Number: 2020742

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

eurofins | Lancaster Laboratories Environmental

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Quality Control Summary

Client Name: BASF Corporation
Reported: 12/28/2018 18:26

Group Number: 2021302

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

BMQL	Below Minimum Quantitation Level	**mL**	milliliter(s)
C	degrees Celsius	**MPN**	Most Probable Number
cfu	colony forming units	**N.D.**	non-detect
CP Units	cobalt-chloroplatinate units	**ng**	nanogram(s)
F	degrees Fahrenheit	**NTU**	nephelometric turbidity units
g	gram(s)	**pg/L**	picogram/liter
IU	International Units	**RL**	Reporting Limit
kg	kilogram(s)	**TNTC**	Too Numerous To Count
L	liter(s)	**µg**	microgram(s)
lb.	pound(s)	**µL**	microliter(s)
m3	cubic meter(s)	**umhos/cm**	micromhos/cm
meq	milliequivalents	**MCL**	Maximum Contamination Limit
mg	milligram(s)		

<	less than
>	greater than
ppm	parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg) or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.
ppb	parts per billion
Dry weight basis	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

Analytical test results meet all requirements of the associated regulatory program (i.e., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis.

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as “analyze immediately” are not performed within 15 minutes.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL, LLC BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL AND (B) WHETHER EUROFINS LANCASTER LABORATORIES ENVIRONMENTAL HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Data Qualifiers

Qualifier	Definition
C	Result confirmed by reanalysis
D1	Indicates for dual column analyses that the result is reported from column 1
D2	Indicates for dual column analyses that the result is reported from column 2
E	Concentration exceeds the calibration range
K1	Initial Calibration Blank is above the QC limit and the sample result is ND
K2	Continuing Calibration Blank is above the QC limit and the sample result is ND
K3	Initial Calibration Verification is above the QC limit and the sample result is ND
K4	Continuing Calibration Verification is above the QC limit and the sample result is ND
J (or G, I, X)	Estimated value >= the Method Detection Limit (MDL or DL) and < the Limit of Quantitation (LOQ or RL)
P	Concentration difference between the primary and confirmation column >40%. The lower result is reported.
P^	Concentration difference between the primary and confirmation column > 40%. The higher result is reported.
U	Analyte was not detected at the value indicated
V	Concentration difference between the primary and confirmation column >100%. The reporting limit is raised due to this disparity and evident interference.
W	The dissolved oxygen uptake for the unseeded blank is greater than 0.20 mg/L.
Z	Laboratory Defined - see analysis report

Additional Organic and Inorganic CLP qualifiers may be used with Form 1 reports as defined by the CLP methods.
Qualifiers specific to Dioxin/Furans and PCB Congeners are detailed on the individual Analysis Report.

Weekly Water Quality Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**7/16/19 – 7/17/19 (Chemistry)**

On behalf of BASF Corporation (BASF), AECOM has prepared this water monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient water-quality data collected during the indicated reporting period at the Site. The data was collected in accordance with the revised Surface Water Remedial Action Monitoring Plan prepared by AECOM (2019).

Introduction

Surface water monitoring and sampling activities were conducted during the reporting period (2 working days) to evaluate conditions within the river during remedial dredging activities to ensure that the measures used to control off-Site migration of Site related contaminants turbidity are effective, and to document ambient water quality/conditions in the river. A typical buoy layout is included as Figure 1. The monitoring program consists of the following real-time monitoring and integrated sampling:

- In-situ hand-held monitoring for turbidity, as well as observational monitoring sediment plumes conducted periodically, and during sampling activities;
- Daily (Monday through Friday) Total Suspended Solids (TSS) samples collected from each monitoring buoy (from near bottom in the water column, unless the worst case turbidity is observed at another depth in which case that depth will be sampled). These samples will allow for comparison with the real-time/ field collected turbidity measurements;
- Daily (Monday through Friday) samples collected (one from each monitoring station from near bottom in the water column, unless the worst case turbidity is observed at another depth in which case that depth will be sampled) for laboratory analysis for PCB Aroclors, VOCs, hardness and dissolved/ total metals:
- Daily (Monday through Friday) TSS samples collected from the 600 ft downstream location (based on tidal stage) as a compliance check.

While not summarized in this memo, the following monitoring is also being conducted:

- Continuous real-time monitoring for (every 15 minutes for turbidity conducted at four fixed autonomous water quality buoys positioned up-river, adjacent to, downriver, and up-river off-Site (background) of the active work area (24 hours per day, 7 days per week);

The sampling/ monitoring results are compared to a list of Site-specific guidance values that were presented in Table 3-1 of the Surface Water Remedial Action Monitoring Plan.

Contaminants of Concern Evaluation

AECOM conducted daily water quality monitoring associated with the Hudson River OU-2 sheetpile installation over the period 7/16/19 through 7/17/19. In accordance with the July 2019 Surface Water Remedial Action Monitoring Plan, filtered analytical chemistry samples were collected daily for analysis of metals. Whole water samples were collected for VOCs, PCB Aroclors, metals, total suspended solids (TSS), and hardness (4 locations, one depth based on maximum observed in-situ turbidity readings). TSS was collected from one additional location.

A Geotech Geopump™ peristaltic pump was used to collect the water column samples. The initial metals sample were filtered using a 0.45 micron filter. Once collected, the filter was removed and the remainder of the sample bottles were filled. While the samples was being collected the turbidity reading from the paired YSI EXO2 sonde

was recorded in the project logbook. The samples were submitted under chain of custody to the Adirondack laboratory in Albany, NY. Upon receipt, all lab data packages provided by the lab were reviewed by AECOM's chemistry staff for completeness and accuracy.

Detected concentrations of organic and inorganic constituents were compared to a list of Site-specific guidance values that were presented in Table 3-1 of the Surface Water Remedial Action Monitoring Plan. The chemical sampling/ monitoring lab reports are presented in Attachment A. Over the reporting period, there were not any exceedances of the water quality criteria.

There was one deviation to the sampling program on 7/17/19. Due to severe thunderstorms (which included lightning), the chemistry sample associated with Buoy #3 (downstream) and the 600 ft TSS compliance sample were not collected. The entire Site (including the dredge operations) were in a Health and Safety "Stand Down" due to the hazardous weather conditions. All other obligations to the Water Quality program were met.

Field turbidity readings from the YSI EXO2 sonde were not observed to be greater than 10 NTU and were consistently highest in the near-bottom horizon.

Summary

Pursuant to the final Surface Water Remedial Action Monitoring Plan, the chemistry monitoring program for the first month of the remedial dredging operations (VOCs, hardness, PCBs, TSS, and total and dissolved metals) will be continued on a daily basis. Continuous daily turbidity monitoring will continue as described in the Work Plan throughout the duration of the dredging operations.

RE: BASF Rensselaer – Hudson River OU-2

Dear Ryan McCarthy:

Adirondack Environmental Services, Inc received 7 samples on 7/17/2019 for the analyses presented in the following report.

Please see case narrative for specifics on analysis.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

ELAP#: 10709

Monica Higdon
Laboratory Manager

TERMS, CONDITIONS & LIMITATIONS

All service rendered by the **Adirondack Environmental Services, Inc.** are undertaken and all rates are based upon the following terms:

(a) Neither **Adirondack Environmental Services, Inc.,** nor any of its employees, agents or sub-contractors shall be liable for any loss or damage arising out of **Adirondack Environmental Services, Inc.'s** performance or nonperformance, whether by way of negligence or breach of contract, or otherwise, in any amount greater than twice the amount billed to the customer for the work leading to the claim of the customer. Said remedy shall be the sole and exclusive remedy against **Adirondack Environmental Services, Inc.** arising out of its work.

(b) All claims made must be in writing within forty-five (45) days after delivery of the **Adirondack Environmental Services, Inc.** report regarding said work or such claim shall be deemed or irrevocably waived.

(c) **Adirondack Environmental Services, Inc.** reports are submitted in writing and are for our customers only. Our customers are considered to be only those entities being billed for our services. Acquisition of an **Adirondack Environmental Services, Inc.** report by other than our customer does not constitute a representation of **Adirondack Environmental Services, Inc.** as to the accuracy of the contents thereof.

(d) In no event shall **Adirondack Environmental Services, Inc.,** its employees, agents or sub-contractors be responsible for consequential or special damages of any kind or in any amount.

(e) No deviation from the terms set forth herein shall bind **Adirondack Environmental Services, Inc.** unless in writing and signed by a Director of **Adirondack Environmental Services, Inc.**

(f) Results pertain only to items analyzed. Information supplied by client is assumed to be correct. This information may be used on reports and in calculations and **Adirondack Environmental Services, Inc.** is not responsible for the accuracy of this information.

(g) Payments by Credit Card/Purchase Cards are subject to a 3% additional charge.

RE: BASF Rensselaer – Hudson River OU-2

Dear Ryan McCarthy:

Adirondack Environmental Services, Inc received 4 samples on 7/17/2019 for the analyses presented in the following report.

Please see case narrative for specifics on analysis.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

ELAP#: 10709

Monica Higdon
Laboratory Manager

MS/MSD/DUP Report

Adirondack Environmental Services, Inc CASE NARRATIVE

CLIENT:	AECOM Environment	**Date:** *19-Jul-19*
Project:	BASF Rensselaer – Hudson River OU-2	
Lab Order:	190717070	

Sample containers were supplied by Adirondack Environmental Services.

Definitions - RL: Reporting Limit DF: Dilution factor

Qualifiers:

ND : Not Detected at reporting limit	C: CCV below acceptable Limits
J: Analyte detected below quantitation limit	C+: CCV above acceptable Limits
B: Analyte detected in Blank	S: LCS Spike recovery is below acceptable limits
X : Exceeds maximum contamination limit	S+: LCS Spike recovery is above acceptable limits
H: Hold time exceeded	Z: Duplication outside acceptable limits
N: Matrix Spike below acceptable limits	T : Tentatively Identified Compound-Estimated
N+: Matrix Spike is above acceptable limits	E :Above quantitation range-Estimated

Note : All Results are reported as wet weight unless noted

The results relate only to the items tested. Information supplied by the client is assumed to be correct.

TERMS, CONDITIONS & LIMITATIONS

All service rendered by the **Adirondack Environmental Services, Inc.** are undertaken and all rates are based upon the following terms:

(a) Neither **Adirondack Environmental Services, Inc.,** nor any of its employees, agents or sub-contractors shall be liable for any loss or damage arising out of **Adirondack Environmental Services, Inc.'s** performance or nonperformance, whether by way of negligence or breach of contract, or otherwise, in any amount greater than twice the amount billed to the customer for the work leading to the claim of the customer. Said remedy shall be the sole and exclusive remedy against **Adirondack Environmental Services, Inc.** arising out of its work.

(b) All claims made must be in writing within forty-five (45) days after delivery of the **Adirondack Environmental Services, Inc.** report regarding said work or such claim shall be deemed or irrevocably waived.

(c) **Adirondack Environmental Services, Inc.** reports are submitted in writing and are for our customers only. Our customers are considered to be only those entities being billed for our services. Acquisition of an **Adirondack Environmental Services, Inc.** report by other than our customer does not constitute a representation of **Adirondack Environmental Services, Inc.** as to the accuracy of the contents thereof.

(d) In no event shall **Adirondack Environmental Services, Inc.,** its employees, agents or sub-contractors be responsible for consequential or special damages of any kind or in any amount.

(e) No deviation from the terms set forth herein shall bind **Adirondack Environmental Services, Inc.** unless in writing and signed by a Director of **Adirondack Environmental Services, Inc.**

(f) Results pertain only to items analyzed. Information supplied by client is assumed to be correct. This information may be used on reports and in calculations and **Adirondack Environmental Services, Inc.** is not responsible for the accuracy of this information.

(g) Payments by Credit Card/Purchase Cards are subject to a 3% additional charge.

Weekly Water Quality Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**7/18/19 – 7/22/19 (Chemistry)**

On behalf of BASF Corporation (BASF), AECOM has prepared this water monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient water-quality data collected during the indicated reporting period at the Site. The data was collected in accordance with the revised Surface Water Remedial Action Monitoring Plan prepared by AECOM (2019).

Introduction

Surface water monitoring and sampling activities were conducted during the reporting period (2 working days) to evaluate conditions within the river during remedial dredging activities to ensure that the measures used to control off-Site migration of Site related contaminants turbidity are effective, and to document ambient water quality/conditions in the river. A typical buoy layout is included as Figure 1. The monitoring program consists of the following real-time monitoring and integrated sampling:

- In-situ hand-held monitoring for turbidity, as well as observational monitoring sediment plumes conducted periodically, and during sampling activities;
- Daily (Monday through Friday) Total Suspended Solids (TSS) samples collected from each monitoring buoy (from near bottom in the water column, unless the worst case turbidity is observed at another depth, in which case that depth will be sampled). These samples will allow for comparison with the real-time/ field collected turbidity measurements;
- Daily (Monday through Friday) samples collected (one from each monitoring station from near bottom in the water column, unless the worst case turbidity is observed at another depth in which case that depth will be sampled) for laboratory analysis for PCB Aroclors, VOCs, hardness and dissolved/ total metals:
- Daily (Monday through Friday) TSS samples collected from the 600 ft downstream location (based on tidal stage) as a compliance check.

While not summarized in this memo, the following monitoring is also being conducted:

- Continuous real-time monitoring for (every 15 minutes for turbidity conducted at four fixed autonomous water quality buoys positioned up-river, adjacent to, downriver, and up-river off-Site (background) of the active work area (24 hours per day, 7 days per week);

The sampling/ monitoring results are compared to a list of Site-specific guidance values that were presented in Table 3-1 of the Surface Water Remedial Action Monitoring Plan.

Contaminants of Concern Evaluation

AECOM conducted daily water quality monitoring associated with the Hudson River OU-2 remedial dredging installation over the period 7/18/19 through 7/22/19. In accordance with the July 2019 Surface Water Remedial Action Monitoring Plan, filtered analytical chemistry samples were collected daily for analysis of metals. Whole water samples were collected for VOCs, PCB Aroclors, metals, total suspended solids (TSS), and hardness (4 locations, one depth based on maximum observed in-situ turbidity readings). TSS was collected from one additional location.

A Geotech Geopump™ peristaltic pump was used to collect the water column samples. The initial metals sample were filtered using a 0.45 micron filter. Once collected, the filter was removed and the remainder of the sample

bottles were filled. While the samples was being collected the turbidity reading from the paired YSI EXO2 sonde was recorded in the project logbook. The samples were submitted under chain of custody to the Adirondack laboratory in Albany, NY. Upon receipt, all lab data packages provided by the lab were reviewed by AECOM's chemistry staff for completeness and accuracy.

Detected concentrations of organic and inorganic constituents were compared to a list of Site-specific guidance values that were presented in Table 3-1 of the Surface Water Remedial Action Monitoring Plan. The chemical sampling/ monitoring lab reports are presented in Attachment A. Over the reporting period, there were two exceedances of the water quality criteria (one each for chlorobenzene and sum of dichlorobenzenes). Upon receipt of the exceedance data, an immediate project stand down occurred and the production rate was reduced. This was all communicated to the NYSDEC in accordance with the Plan. Additionally, there has not been a PCB Aroclor detection during the program to date.

Typically, field turbidity readings from the YSI EXO2 sonde were not observed to be greater than 10 NTU, with the exception of the 7/22/19 readings where the probe may have bumped the bottom. The associated buoy turbidity and lab TSS values collected at the same time were in the single digits. Overall, the turbidity readings continued to be in the near-bottom horizon.

Summary

Pursuant to the final Surface Water Remedial Action Monitoring Plan, the chemistry monitoring program for the first month of the remedial dredging operations (VOCs, hardness, PCBs, TSS, and total and dissolved metals) will be continued on a daily basis. Continuous daily turbidity monitoring will continue as described in the Work Plan throughout the duration of the dredging operations.

RE: BASF Rensselaer – Hudson River OU-2

Dear Ryan McCarthy:

Adirondack Environmental Services, Inc received 6 samples on 7/18/2019 for the analyses presented in the following report.

Please see case narrative for specifics on analysis.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

ELAP#: 10709

Monica Higdon
Laboratory Manager

TERMS, CONDITIONS & LIMITATIONS

All service rendered by the **Adirondack Environmental Services, Inc.** are undertaken and all rates are based upon the following terms:

(a) Neither **Adirondack Environmental Services, Inc.,** nor any of its employees, agents or sub-contractors shall be liable for any loss or damage arising out of **Adirondack Environmental Services, Inc.'s** performance or nonperformance, whether by way of negligence or breach of contract, or otherwise, in any amount greater than twice the amount billed to the customer for the work leading to the claim of the customer. Said remedy shall be the sole and exclusive remedy against **Adirondack Environmental Services, Inc.** arising out of its work.

(b) All claims made must be in writing within forty-five (45) days after delivery of the **Adirondack Environmental Services, Inc.** report regarding said work or such claim shall be deemed or irrevocably waived.

(c) **Adirondack Environmental Services, Inc.** reports are submitted in writing and are for our customers only. Our customers are considered to be only those entities being billed for our services. Acquisition of an **Adirondack Environmental Services, Inc.** report by other than our customer does not constitute a representation of **Adirondack Environmental Services, Inc.** as to the accuracy of the contents thereof.

(d) In no event shall **Adirondack Environmental Services, Inc.,** its employees, agents or sub-contractors be responsible for consequential or special damages of any kind or in any amount.

(e) No deviation from the terms set forth herein shall bind **Adirondack Environmental Services, Inc.** unless in writing and signed by a Director of **Adirondack Environmental Services, Inc.**

(f) Results pertain only to items analyzed. Information supplied by client is assumed to be correct. This information may be used on reports and in calculations and **Adirondack Environmental Services, Inc.** is not responsible for the accuracy of this information.

(g) Payments by Credit Card/Purchase Cards are subject to a 3% additional charge.

RE: BASF Rensselaer – Hudson River OU-2

Dear Ryan McCarthy:

Adirondack Environmental Services, Inc received 6 samples on 7/19/2019 for the analyses presented in the following report.

Please see case narrative for specifics on analysis.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

ELAP#: 10709

Tara Daniels
Laboratory Director

MS/MSD/DUP Report

Adirondack Environmental Services, Inc CASE NARRATIVE

CLIENT:	AECOM Environment	**Date:** *23-Jul-19*
Project:	BASF Rensselaer – Hudson River OU-2	
Lab Order:	190719089	

Sample containers were supplied by Adirondack Environmental Services.

Definitions - RL: Reporting Limit DF: Dilution factor

Qualifiers:

ND : Not Detected at reporting limit	C: CCV below acceptable Limits
J: Analyte detected below quantitation limit	C+: CCV above acceptable Limits
B: Analyte detected in Blank	S: LCS Spike recovery is below acceptable limits
X : Exceeds maximum contamination limit	S+: LCS Spike recovery is above acceptable limits
H: Hold time exceeded	Z: Duplication outside acceptable limits
N: Matrix Spike below acceptable limits	T : Tentatively Identified Compound-Estimated
N+: Matrix Spike is above acceptable limits	E :Above quantitation range-Estimated

Note : All Results are reported as wet weight unless noted

The results relate only to the items tested. Information supplied by the client is assumed to be correct.

TERMS, CONDITIONS & LIMITATIONS

All service rendered by the **Adirondack Environmental Services, Inc.** are undertaken and all rates are based upon the following terms:

(a) Neither **Adirondack Environmental Services, Inc.,** nor any of its employees, agents or sub-contractors shall be liable for any loss or damage arising out of **Adirondack Environmental Services, Inc.'s** performance or nonperformance, whether by way of negligence or breach of contract, or otherwise, in any amount greater than twice the amount billed to the customer for the work leading to the claim of the customer. Said remedy shall be the sole and exclusive remedy against **Adirondack Environmental Services, Inc.** arising out of its work.

(b) All claims made must be in writing within forty-five (45) days after delivery of the **Adirondack Environmental Services, Inc.** report regarding said work or such claim shall be deemed or irrevocably waived.

(c) **Adirondack Environmental Services, Inc.** reports are submitted in writing and are for our customers only. Our customers are considered to be only those entities being billed for our services. Acquisition of an **Adirondack Environmental Services, Inc.** report by other than our customer does not constitute a representation of **Adirondack Environmental Services, Inc.** as to the accuracy of the contents thereof.

(d) In no event shall **Adirondack Environmental Services, Inc.,** its employees, agents or sub-contractors be responsible for consequential or special damages of any kind or in any amount.

(e) No deviation from the terms set forth herein shall bind **Adirondack Environmental Services, Inc.** unless in writing and signed by a Director of **Adirondack Environmental Services, Inc.**

(f) Results pertain only to items analyzed. Information supplied by client is assumed to be correct. This information may be used on reports and in calculations and **Adirondack Environmental Services, Inc.** is not responsible for the accuracy of this information.

(g) Payments by Credit Card/Purchase Cards are subject to a 3% additional charge.

RE: BASF Rensselaer – Hudson River OU-2

Dear Ryan McCarthy:

Adirondack Environmental Services, Inc received 6 samples on 7/22/2019 for the analyses presented in the following report.

Please see case narrative for specifics on analysis.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

ELAP#: 10709

Monica Higdon
Laboratory Manager

MS/MSD/DUP Report

Adirondack Environmental Services, Inc CASE NARRATIVE

CLIENT:	AECOM Environment	**Date:** *24-Jul-19*
Project:	BASF Rensselaer – Hudson River OU-2	
Lab Order:	190722043	

Sample containers were supplied by Adirondack Environmental Services.

Definitions - RL: Reporting Limit DF: Dilution factor

Qualifiers:

ND : Not Detected at reporting limit	C: CCV below acceptable Limits
J: Analyte detected below quantitation limit	C+: CCV above acceptable Limits
B: Analyte detected in Blank	S: LCS Spike recovery is below acceptable limits
X : Exceeds maximum contamination limit	S+: LCS Spike recovery is above acceptable limits
H: Hold time exceeded	Z: Duplication outside acceptable limits
N: Matrix Spike below acceptable limits	T : Tentatively Identified Compound-Estimated
N+: Matrix Spike is above acceptable limits	E :Above quantitation range-Estimated

Note : All Results are reported as wet weight unless noted

The results relate only to the items tested. Information supplied by the client is assumed to be correct.

TERMS, CONDITIONS & LIMITATIONS

All service rendered by the **Adirondack Environmental Services, Inc.** are undertaken and all rates are based upon the following terms:

(a) Neither **Adirondack Environmental Services, Inc.,** nor any of its employees, agents or sub-contractors shall be liable for any loss or damage arising out of **Adirondack Environmental Services, Inc.'s** performance or nonperformance, whether by way of negligence or breach of contract, or otherwise, in any amount greater than twice the amount billed to the customer for the work leading to the claim of the customer. Said remedy shall be the sole and exclusive remedy against **Adirondack Environmental Services, Inc.** arising out of its work.

(b) All claims made must be in writing within forty-five (45) days after delivery of the **Adirondack Environmental Services, Inc.** report regarding said work or such claim shall be deemed or irrevocably waived.

(c) **Adirondack Environmental Services, Inc.** reports are submitted in writing and are for our customers only. Our customers are considered to be only those entities being billed for our services. Acquisition of an **Adirondack Environmental Services, Inc.** report by other than our customer does not constitute a representation of **Adirondack Environmental Services, Inc.** as to the accuracy of the contents thereof.

(d) In no event shall **Adirondack Environmental Services, Inc.,** its employees, agents or sub-contractors be responsible for consequential or special damages of any kind or in any amount.

(e) No deviation from the terms set forth herein shall bind **Adirondack Environmental Services, Inc.** unless in writing and signed by a Director of **Adirondack Environmental Services, Inc.**

(f) Results pertain only to items analyzed. Information supplied by client is assumed to be correct. This information may be used on reports and in calculations and **Adirondack Environmental Services, Inc.** is not responsible for the accuracy of this information.

(g) Payments by Credit Card/Purchase Cards are subject to a 3% additional charge.

Weekly Water Quality Monitoring Summary

Client:	**BASF**
Location:	**Rensselaer, New York**
Period:	**7/23/19 – 7/29/19 (Chemistry)**

On behalf of BASF Corporation (BASF), AECOM has prepared this water monitoring data summary for Hudson River Operable Unit 2 (OU-2) remedial activities at the Former BASF Facility located in Rensselaer, New York (referred to herein as "Site"). This data summary includes both tabular information and written discussions summarizing the ambient water-quality data collected during the indicated reporting period at the Site. The data was collected in accordance with the revised Surface Water Remedial Action Monitoring Plan prepared by AECOM (2019).

Introduction

Surface water monitoring and sampling activities were conducted during the reporting period (5 working days) to evaluate conditions within the river during remedial dredging activities to ensure that the measures used to control off-Site migration of Site related contaminants turbidity are effective, and to document ambient water quality/conditions in the river. A typical buoy layout is included as Figure 1. The monitoring program consists of the following real-time monitoring and integrated sampling:

- In-situ hand-held monitoring for turbidity, as well as observational monitoring sediment plumes conducted periodically, and during sampling activities;
- Daily (Monday through Friday) Total Suspended Solids (TSS) samples collected from each monitoring buoy (from near bottom in the water column, unless the worst case turbidity is observed at another depth, in which case that depth will be sampled). These samples will allow for comparison with the real-time/ field collected turbidity measurements;
- Daily (Monday through Friday) samples collected (one from each monitoring station from near bottom in the water column, unless the worst case turbidity is observed at another depth in which case that depth will be sampled) for laboratory analysis for PCB Aroclors, VOCs, hardness and dissolved/ total metals:
- Daily (Monday through Friday) TSS samples collected from the 600 ft downstream location (based on tidal stage) as a compliance check.

While not summarized in this memo, the following monitoring is also being conducted:

- Continuous real-time monitoring for (every 15 minutes for turbidity conducted at four fixed autonomous water quality buoys positioned up-river, adjacent to, downriver, and up-river off-Site (background) of the active work area (24 hours per day, 7 days per week);

The sampling/ monitoring results are compared to a list of Site-specific guidance values that were presented in Table 3-1 of the Surface Water Remedial Action Monitoring Plan.

Constituent Evaluation

AECOM conducted daily water quality monitoring associated with the Hudson River OU-2 remedial dredging installation over the period 7/23/19 through 7/29/19. In accordance with the July 2019 Surface Water Remedial Action Monitoring Plan, filtered analytical chemistry samples were collected daily for analysis of metals. Whole water samples were collected for VOCs, PCB Aroclors, metals, total suspended solids (TSS), and hardness (4 locations, one depth based on maximum observed in-situ turbidity readings). TSS was collected from one additional location.

A Geotech Geopump™ peristaltic pump was used to collect the water column samples. The initial metals sample were filtered using a 0.45 micron filter. Once collected, the filter was removed and the remainder of the sample bottles were filled. While the samples was being collected the turbidity reading from the paired YSI EXO2 sonde was recorded in the project logbook. The samples were submitted under chain of custody to the Adirondack laboratory in Albany, NY. Upon receipt, all lab data packages provided by the lab were reviewed by AECOM's chemistry staff for completeness and accuracy.

Detected concentrations of organic and inorganic constituents were compared to a list of Site-specific guidance values that were presented in Table 3-1 of the Surface Water Remedial Action Monitoring Plan (see Table 1). The chemical sampling/ monitoring lab reports are presented in Attachment A. Over the reporting period, there were two low level exceedances of the water quality criteria (both PCB Aroclor 1242). One of these exceedences (0.26 µg/l vs threshold of 0.2 µg/l) was at the newly installed (Buoy 4) upstream background locations, whereas the 2nd Acoclor 1242 exceedance was adjacent to the Site (0.27 µg/l vs threshold of 0.2 µg/l). Given that these concentrations are virtually identical, both near-Site and at upstream background, it is assumed that this is a background condition and not related to dredging activities.

Typically, field turbidity readings from the YSI EXO2 sonde were not observed to be greater than 10 NTU. The associated buoy turbidity and lab TSS values collected at the same time were in the single digits. Overall, the turbidity readings continued to be in the near-bottom horizon.

Summary

Pursuant to the final Surface Water Remedial Action Monitoring Plan, the chemistry monitoring program for the first month of the remedial dredging operations (VOCs, hardness, PCBs, TSS, and total and dissolved metals) will be continued on a daily basis. Continuous daily turbidity monitoring will continue as described in the Work Plan throughout the duration of the dredging operations.

RE: BASF Rensselaer – Hudson River OU-2
Water Analysis

Dear Ryan McCarthy:

Adirondack Environmental Services, Inc received 6 samples on 7/23/2019 for the analyses presented in the following report.

Please see case narrative for specifics on analysis.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

ELAP#: 10709

Monica Higdon
Laboratory Manager

TERMS, CONDITIONS & LIMITATIONS

All service rendered by the **Adirondack Environmental Services, Inc.** are undertaken and all rates are based upon the following terms:

(a) Neither **Adirondack Environmental Services, Inc.,** nor any of its employees, agents or sub-contractors shall be liable for any loss or damage arising out of **Adirondack Environmental Services, Inc.'s** performance or nonperformance, whether by way of negligence or breach of contract, or otherwise, in any amount greater than twice the amount billed to the customer for the work leading to the claim of the customer. Said remedy shall be the sole and exclusive remedy against **Adirondack Environmental Services, Inc.** arising out of its work.

(b) All claims made must be in writing within forty-five (45) days after delivery of the **Adirondack Environmental Services, Inc.** report regarding said work or such claim shall be deemed or irrevocably waived.

(c) **Adirondack Environmental Services, Inc.** reports are submitted in writing and are for our customers only. Our customers are considered to be only those entities being billed for our services. Acquisition of an **Adirondack Environmental Services, Inc.** report by other than our customer does not constitute a representation of **Adirondack Environmental Services, Inc.** as to the accuracy of the contents thereof.

(d) In no event shall **Adirondack Environmental Services, Inc.,** its employees, agents or sub-contractors be responsible for consequential or special damages of any kind or in any amount.

(e) No deviation from the terms set forth herein shall bind **Adirondack Environmental Services, Inc.** unless in writing and signed by a Director of **Adirondack Environmental Services, Inc.**

(f) Results pertain only to items analyzed. Information supplied by client is assumed to be correct. This information may be used on reports and in calculations and **Adirondack Environmental Services, Inc.** is not responsible for the accuracy of this information.

(g) Payments by Credit Card/Purchase Cards are subject to a 3% additional charge.

RE: BASF Rensselaer – Hudson River OU-2
Water Analysis

Dear Ryan McCarthy:

Adirondack Environmental Services, Inc received 9 samples on 7/24/2019 for the analyses presented in the following report.

Please see case narrative for specifics on analysis.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

ELAP#: 10709

Tara Daniels
Laboratory Director

MS/MSD/DUP Report

Adirondack Environmental Services, Inc CASE NARRATIVE

CLIENT:	AECOM Environment	**Date:**	*26-Jul-19*
Project:	BASF Rensselaer – Hudson River OU-2		
Lab Order:	190724079		

Sample containers were supplied by Adirondack Environmental Services.

Definitions - RL: Reporting Limit DF: Dilution factor

Qualifiers:		
	ND : Not Detected at reporting limit	C: CCV below acceptable Limits
	J: Analyte detected below quantitation limit	C+: CCV above acceptable Limits
	B: Analyte detected in Blank	S: LCS Spike recovery is below acceptable limits
	X : Exceeds maximum contamination limit	S+: LCS Spike recovery is above acceptable limits
	H: Hold time exceeded	Z: Duplication outside acceptable limits
	N: Matrix Spike below acceptable limits	T : Tentatively Identified Compound-Estimated
	N+: Matrix Spike is above acceptable limits	E :Above quantitation range-Estimated

Note : All Results are reported as wet weight unless noted

The results relate only to the items tested. Information supplied by the client is assumed to be correct.

TERMS, CONDITIONS & LIMITATIONS

All service rendered by the **Adirondack Environmental Services, Inc.** are undertaken and all rates are based upon the following terms:

(a) Neither **Adirondack Environmental Services, Inc.,** nor any of its employees, agents or sub-contractors shall be liable for any loss or damage arising out of **Adirondack Environmental Services, Inc.'s** performance or nonperformance, whether by way of negligence or breach of contract, or otherwise, in any amount greater than twice the amount billed to the customer for the work leading to the claim of the customer. Said remedy shall be the sole and exclusive remedy against **Adirondack Environmental Services, Inc.** arising out of its work.

(b) All claims made must be in writing within forty-five (45) days after delivery of the **Adirondack Environmental Services, Inc.** report regarding said work or such claim shall be deemed or irrevocably waived.

(c) **Adirondack Environmental Services, Inc.** reports are submitted in writing and are for our customers only. Our customers are considered to be only those entities being billed for our services. Acquisition of an **Adirondack Environmental Services, Inc.** report by other than our customer does not constitute a representation of **Adirondack Environmental Services, Inc.** as to the accuracy of the contents thereof.

(d) In no event shall **Adirondack Environmental Services, Inc.,** its employees, agents or sub-contractors be responsible for consequential or special damages of any kind or in any amount.

(e) No deviation from the terms set forth herein shall bind **Adirondack Environmental Services, Inc.** unless in writing and signed by a Director of **Adirondack Environmental Services, Inc.**

(f) Results pertain only to items analyzed. Information supplied by client is assumed to be correct. This information may be used on reports and in calculations and **Adirondack Environmental Services, Inc.** is not responsible for the accuracy of this information.

(g) Payments by Credit Card/Purchase Cards are subject to a 3% additional charge.

RE: BASF Rensselaer – Hudson River OU-2

Dear Ryan McCarthy:

Adirondack Environmental Services, Inc received 6 samples on 7/25/2019 for the analyses presented in the following report.

Please see case narrative for specifics on analysis.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

ELAP#: 10709

Monica Higdon
Laboratory Manager

MS/MSD/DUP Report

Adirondack Environmental Services, Inc CASE NARRATIVE

CLIENT:	AECOM Environment	**Date:**	*29-Jul-19*
Project:	BASF Rensselaer – Hudson River OU-2		
Lab Order:	190725069		

Sample containers were supplied by Adirondack Environmental Services.

Definitions - RL: Reporting Limit DF: Dilution factor

Qualifiers:		
	ND : Not Detected at reporting limit	C: CCV below acceptable Limits
	J: Analyte detected below quantitation limit	C+: CCV above acceptable Limits
	B: Analyte detected in Blank	S: LCS Spike recovery is below acceptable limits
	X : Exceeds maximum contamination limit	S+: LCS Spike recovery is above acceptable limits
	H: Hold time exceeded	Z: Duplication outside acceptable limits
	N: Matrix Spike below acceptable limits	T : Tentatively Identified Compound-Estimated
	N+: Matrix Spike is above acceptable limits	E :Above quantitation range-Estimated

Note : All Results are reported as wet weight unless noted

The results relate only to the items tested. Information supplied by the client is assumed to be correct.
