RE: Summary of Emerging Contaminants Sampling
Saint-Gobain Performance Plastics Corporation
11 Sicho Road, Poestenkill, NY

Dear Ms. Edwards:

As requested by the New York State Department of Environmental Conservation (NYSDEC) in its August 10, 2021 letter, Ramboll US Consulting Inc. (Ramboll), on behalf of Saint-Gobain Performance Plastics Corporation (Saint-Gobain), submitted a Sampling and Analysis Plan (SAP) on December 16, 2021 to NYSDEC for the collection of groundwater samples for 1,4-dioxane and per- and polyfluoroalkyl substances (PFAS) analyses at the Saint-Gobain facility located at 11 Sicho Road in Poestenkill, New York (the Plant). The SAP was approved by NYSDEC on December 20, 2021. A summary of the groundwater sampling program is provided below.

Ramboll performed the sample collection on January 6, 2022. Groundwater samples were collected from Well #1, Well #3, Well #4, and Well #5 for 1,4-dioxane and PFAS analyses (see **Figure 1** for the locations of monitoring wells at the Plant). Sampling of Well #2 was attempted but the well had a hard obstruction and a damaged well casing and therefore was unable to be sampled. Field quality control (QC) samples were collected for 1,4-dioxane analysis and consisted of one blind duplicate sample and one equipment blank. Field QC samples were also collected for PFAS analysis and consisted of one blind duplicate sample, one equipment blank, and one field reagent blank (FRB).

In accordance with the SAP, the monitoring wells were purged using conventional methods (i.e., purging three well volumes prior to sampling). Groundwater field parameter data (temperature, pH, specific conductivity, oxidation-reduction potential, dissolved oxygen, and turbidity) were collected after each well volume and documented on field forms prior to sample collection. Well #4 was observed to be dry after one well volume was purged; a groundwater sample was collected from this well immediately after the well had adequately recharged. The completed field forms are included as **Appendix A**.

Eurofins Lancaster Labs Environment Testing, LLC (ELLE) in Lancaster, Pennsylvania performed the 1,4-dioxane and PFAS analyses. The 1,4-dioxane analysis was performed using United States Environmental Protection Agency (USEPA) Method 8270 Selective Ion Monitoring (SIM) with a reporting limit equal to or below 0.31 parts per billion (ppb). The PFAS analyses were performed using USEPA Method 537, modified, and achieved a reporting limit of 2 parts per trillion (ppt) or less for perfluorooctanesulfonic acid (PFOS), perfluorooctanoic acid (PFOA) and several (but not all) of the other PFAS analytes. The complete analytical package is included in **Appendix B** and the Data Usability Summary Report (DUSR) is included in **Appendix C**.

As shown on **Table 1**, no 1,4-dioxane was detected in the monitoring wells. Also shown on **Table 1**, PFAS were detected in each of the sampled monitoring wells. PFOS was detected at concentrations ranging from 4.2 ppt in Well 3 to 5.0 ppt in Well 5. PFOA was detected at concentrations ranging from 0.47 ppt (estimated) in Well 4 to 3.7 ppt in Well 5. Although not applicable to groundwater monitoring wells, these detections are considerably below the state's drinking water standard of 10 ppt for PFOS and 10 ppt for PFOA. They are also considerably below the groundwater screening levels included in

NYSDEC's June 2021 guidance document for emerging contaminants (which are also 10 ppt for PFOS and 10 ppt for PFOA).

The source(s) of the low concentrations of PFAS detected is not known, but the data do not indicate the presence of a source at the Plant. The four sampled monitoring wells are located in different directions from the building, Well #1 close to the building in the parking lot in the northwest corner, Well #3 and Well #4 close to the building on the east side, and Well #5 in the wooded area to the east of the building. Low concentrations of PFOS were reported in all four monitoring wells, with the highest concentration (5.0 ppt) reported in Well #5 located farthest from the building in a direction inconsistent with the expected groundwater flow. Low concentrations of PFOA were reported in three of the four monitoring wells, with the highest concentration (3.7 ppt) also in Well #5. Perfluorobutanesulfonic acid (PFBS) was also reported at low concentrations in the same three monitoring wells, with the highest concentration (an estimated 1.1 ppt) also in Well #5.

Observed PFAS concentrations may be due to anthropogenic background conditions and/or from sources not associated with the Plant. Because the PFAS concentrations are low (including PFOS and PFOA concentrations well below the 10 ppt drinking water standards and 10 ppt groundwater screening levels), perfluoroalkyl sulfonic acids (PFSAs, including PFOS and PFBS) are dominant over the perfluoroalkyl carboxylic acids (PFCAs, including PFOA), and there are other potential sources in the same area as the Plant (such as a small regional airport and a fire hall), we do not believe that further action is needed at the Plant .

We are aware of the on-going evaluation of the PFAS-impacted supply well(s) at the Algonquin Middle School. However, the school is located more than two miles from the Plant, and considerably higher PFAS concentrations have been documented at the school (including above the 10 ppt drinking water standard for PFOA). It is clear that the Plant is a not a source of the PFAS detected in the groundwater samples collected at the school based on the significant geographic separation and the higher PFAS concentrations in the supply well(s) for the school than at the Plant.

Should you have any questions, please contact Paul D'Annibale at 518-847-9838.

Sincerely,
Ramboll US Consulting, Inc.

Megan.Moeller@eurofinset.com

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
cn	Refer to Case Narrative for further detail

LCMS

Qualifier	Qualifier Description
*5+	Isotope dilution analyte is outside acceptance limits, high biased.
cn	Refer to Case Narrative for further detail
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
410-69080-1

Receipt
The samples were received on 1/7/2022 12:37 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.1°C and 3.0°C

GC/MS Semi VOA
Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 410-216205 recovered above the upper control limit for 1,4-Dioxane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 410-216613 recovered above the upper control limit for 1,4-Dioxane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PFAS
Method PFC_IDA: The recovery for the labeled isotope(s) in the following samples: Well-5-010622 (410-69080-4), X-1-010622 (410-69080-5), FRB-1-010622 (410-69080-6) and EB-1-010622 (410-69080-7) is outside the QC acceptance limits. Since the recovery is high and the native analyte is not detected in the sample, the data is reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Ramboll US Corporation
Job ID: 410-69080-1
Project/Site: Emerging Contaminants Sampling

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10670	04-01-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
537 IDA	537 IDA	Groundwater	6:2 Fluorotelomer sulfonic acid
537 IDA	537 IDA	Groundwater	8:2 Fluorotelomer sulfonic acid
537 IDA	537 IDA	Groundwater	NEtFOSAA
537 IDA	537 IDA	Groundwater	NMeFOSAA
537 IDA	537 IDA	Groundwater	Perfluorobutanesulfonic acid

Question	Answer	Comment
The cooler's custody seal is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Is the Field Sampler's name present on COC?	True	
Sample custody seals are intact.	N/A

Subject: **Saint-Gobain**
January 2022 Well Sampling Validation
Eurofins Lancaster Method 537 by ID
SDG J69080, 5 Groundwater Samples, 2 Field Blanks

Ramboll
Boston, MA 02210
USA

T +1 617 946 6114
www.ramboll-environ.com

Data validation was conducted for Eurofins Lancaster data package J69080 based on the National Functional Guidelines for Superfund Organic Methods Data Review OSWER 9355.0-132, EPA-540-R-014-002 (USEPA January 2017). The data package included results for samples analyzed by USEPA Method 537 IDA (Isotope Dilution). The following samples were reported in this data package:

Sample ID	Lab Sample ID
Well-1-010622	FA75952-1
Well-3-010622	FA75952-2
Well-4-010622	FA75952-3
Well-5-010622	FA75952-4
X-1-010622	FA75952-5
FRB-1-010622	FA75952-6
EB-1-010622	FA75952-7

Data validation included a review of the following QC parameters:

- Data Package Completeness
- Preservation and Holding Times
- Blanks
- Deuterated Monitoring Compound or Surrogate Spikes
- Matrix Spike/Matrix Spike Duplicate
- Laboratory Control Sample
- Internal Standards
- Overall Assessment of Data

QC criteria were met for each parameter with minor exceptions as noted in the attached worksheet reviews. Results should be used for project purposes only after reviewing the QA deficiencies discussed there.

Overall Assessment of Sampling Data

Overall, data are usable for project purposes. Data can be used and reported as presented by the laboratory. Laboratory flags indicating possible biases (cn) can be removed based on this review. No other issues were identified with data.
