Executive Summary

Overview

A data assessment was performed by Helen A. Jones of AECOM – Ithaca and Gregory A. Malzone of AECOM – Pittsburgh on seventeen data packages from Test America Laboratories in Pittsburgh, PA (TA) for the analysis of soil and groundwater samples collected on July 14, 2008-December 11, 2008 at the Clinton Street, Schenectady, NY site. The data reports were evaluated for conformance to method specifications and data qualifications were applied in accordance to the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review*, USEPA-540-R-07-003, July 2007 and *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review*, EPA-540-R-04-004, October 2004, as they applied to the analytical methods employed.

TestAmerica processed the samples and reported the results under seventeen sample delivery groups (SDGs). Table 1 provides a sample submittal list. The following analytical methods were requested on the chain-of-custody (COC) records:

- TCL Volatile Organic Compounds by USEPA SW-846 Method 8260B,
- TCL Semivolatile Organic Compounds by USEPA SW-846 Method 8270C,
- TAL Trace Metals by USEPA SW-846 Methods 6010B, 7471A/7470A,
- Total Cyanide by USEPA SW-846 Method 9012A, and
- Total Residue by SM20 2540G (soils only) for dry weight corrections.

(1): The trip blank was submitted for volatiles analysis only.
(2): Sample SB300(41.5-43.5) is the field duplicate of SB30(41.5-43.5).
(3): Sample SB440(38-40) is the field duplicate of SB44(38-40).
(4): Sample MW-1600D is the field duplicate of MW-16D.
(5): Sample MW-1400 is the field duplicate of MW-14.
(6): Sample MW-6 was analyzed for SVOCs only in this SDG.

Summary

Data quality for the organic analyses was evaluated by reviewing the following parameters: holding times, GC/MS tuning and performance standards, internal standards, initial and continuing calibrations, surrogate recoveries, laboratory control standards (LCSs), laboratory blanks, laboratory and field duplicates, compound identification, and compound quantitation.

Inorganic data quality was evaluated by reviewing the following parameters: holding times, matrix spikes, initial calibrations, continuing calibration verification standard recoveries, contract required detection limit standard recoveries, laboratory control samples, ICP interference check sample recoveries, ICP serial dilution results, field and laboratory duplicates, and laboratory blanks.

The data have been determined to be useable for the purpose of assessing the presence/absence and quantitative concentrations of the analytes in the media tested (i.e., soil and groundwater) with the qualifications described below. Several data points were qualified as estimates because of blank contamination, low method and/or instrument bias, matrix effects or sample heterogeneity, and method/field sampling imprecision. There were several instances of elevated reporting limits caused by the dilution required to bring the analyte concentrations into the calibration range and/or minimize matrix interferences. No data points were rejected. Completeness of 100% was achieved for this data set.

The data qualifier summaries are attached as Appendix B of this report. A glossary of data qualifier definitions is included in Appendix A of this report.

Each noncompliance with specific data usability criteria is discussed below. Support documentation for data qualifications was included in Appendix C of this report. Specific page references for the supporting documentation in the laboratory reports were provided in each item header.

1.0 Volatile Organic Compounds

C8G160152

a. Blank Contamination (See VOC Sections for SDGs C8L100288 and C8L120342): The common laboratory solvents methylene chloride and acetone were detected in the trip blanks associated with the aqueous samples collected for this project. In addition, methylene chloride was detected in the two aqueous samples that required analysis at a dilution: MW-1D and MW-11D. It was strongly suspected that the methylene chloride was in the reagent water used by the laboratory. Based on professional judgment, the methylene chloride and acetone results for the soil samples were qualified "U" at the reporting limits, because of laboratory contamination.

b. Calibrations (pp. 1124-1125): The continuing calibration percent differences or percent drifts (%Ds) for acetone, 2-butanone, 2-hexanone, and methyl acetate were greater than the quality control limit of 20% on 07/17/08 at 04:55 on instrument HP3. Sensitivity increased with respect to the initial calibration average relative response factor. All soil samples within this SDG were affected. The positive acetone results for samples TP12(5)W(8-8.5) and TP12(17)W(10.5-11) have been qualified "U," as undetected because of laboratory contamination; no other data qualifications were required. All other affected results were non-detect and data qualifications were not required in response to the high instrument bias.

C8G220214

a. Blank Contamination (See VOC Sections for SDGs C8L100288 and C8L120342): The common laboratory solvents methylene chloride and acetone were detected in the trip blanks associated with the aqueous samples collected for this project. In addition, methylene chloride was detected in the two aqueous samples that required analysis at a dilution: MW-1D and MW-11D. It was strongly suspected that the methylene chloride was in the reagent water used by the laboratory. Based on professional judgment, the methylene chloride and acetone results for the soil samples were qualified "U" at the reporting limits as undetected, because of laboratory contamination. Note: The acetone results for samples SB50(14.5-15) and SB50(22-24) were greater than the reporting limit and were qualified "U," as undetected, because of laboratory contamination.

b. Calibrations (pp. 1125-1126, 1131-1132): The continuing calibration %Ds for chloroethane, trichlorofluoromethane, tetrachloroethene, dibromochloromethane, 1,1,1,2-tetrachloroethane, and bromoform were greater than the quality control limit of 20% on 07/25/08 at 04:57 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor. The chloroethane, trichlorofluoromethane, tetrachloroethene, dibromochloromethane, 1,1,1,2-tetrachloroethane, and bromoform results for affected sample SB50(22-24) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

   The continuing calibration %D for chloroethane was greater than the quality control limit of 20% on 07/28/08 at 05:30 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor. The chloroethane results for affected samples SB50(14.5-15) and SB50(24-26) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

C8G260118

a. Blank Contamination (See VOC Sections for SDGs C8L100288 and C8L120342): The common laboratory solvents methylene chloride and acetone were detected in the trip blanks associated with the aqueous samples collected for this project. In addition, methylene chloride was detected in the

two aqueous samples that required analysis at a dilution: MW-1D and MW-11D. It was strongly suspected that the methylene chloride was in the reagent water used by the laboratory. Based on professional judgment, the methylene chloride and acetone results for the soil sample SB50(80-81) were qualified "U," as undetected, because of laboratory contamination.

b. Calibrations (pp. 1168, 1174-1175): The continuing calibration %D for chloroethane was greater than the quality control limit of 20% on 07/28/08 at 05:30 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor. The chloroethane result for affected sample SB50(80-81) was non-detect and was qualified "UJ," as an estimate, because of low instrument bias.

   The continuing calibration %Ds for dichlorodifluoromethane and chloromethane were greater than the quality control limit of 20% on 07/29/08 at 07:30 on instrument HP5. Sensitivity increased with respect to the initial calibration average relative response factor. The dichlorodifluoromethane and chloromethane results for associated sample SB46(8-10) were non-detect. No data qualifications were required.

c. Reporting Limits (Form 1): Sample SB46(8-10) required analysis using the medium-level methanol soil extraction (MLS) method to bring the target compound concentrations into the calibration range. The reporting and detection limits are higher for MLS. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8H080154

a. Blank Contamination (See VOC Sections for SDGs C8L100288 and C8L120342): The common laboratory solvents methylene chloride and acetone were detected in the trip blanks associated with the aqueous samples collected for this project. In addition, methylene chloride was detected in the two aqueous samples that required analysis at a dilution: MW-1D and MW-11D. It was strongly suspected that the methylene chloride was in the reagent water used by the laboratory. Based on professional judgment, the acetone result for the soil sample SB49(8-10) was qualified "U" at the reporting limit, as undetected, because of laboratory contamination.

b. Calibrations (pp. 1179-1180, 1185-1186): The continuing calibration %Ds for dichlorodifluoromethane, carbon disulfide, and acetone were greater than the quality control limit of 20% on 08/11/08 at 05:39 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor. The positive acetone result for SB49(8-10) was qualified "U," as undetected, because of laboratory contamination; no other qualifications are required. All other dichlorodifluoromethane, carbon disulfide, and acetone results for affected samples SB46(74-76), SB49(8-10), and SB49(72-74) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

   The continuing calibration %D for dichlorodifluoromethane was greater than the quality control limit of 20% on 08/14/08 at 07:32 on instrument HP5. Sensitivity increased with respect to the initial calibration average relative response factor. The dichlorodifluoromethane results for associated samples SB49(22-24) and SB49(28-30) were non-detect. No data qualifications were required.

c. Reporting Limits (Form 1): Samples SB49(22-24) and SB49(28-30) required analysis using the MLS method to bring the target compound concentrations into the calibration range. The reporting and detection limits are higher for MLS. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8I060176

a. Calibrations (pp. 1078-1079): The continuing calibration %Ds for carbon tetrachloride, dibromochloromethane, 1,1,1,2-tetrachloroethane, and bromoform were greater than the quality control limit of 20% on 09/12/08 at 07:32 on instrument HP5. Sensitivity increased with respect to the initial calibration average relative response factor. The carbon tetrachloride, dibromochloromethane, 1,1,1,2-tetrachloroethane, and bromoform results for affected sample SB51(23.5-25.5) were non-detect. No data qualifications were required.

b. Reporting Limits (Form 1): Sample SB51(23.5-25.5) required analysis using the MLS method to bring the benzene concentration into the calibration range. The reporting and detection limits are higher for MLS. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8J100124

a. Blank Contamination (pp. 1269-1270, See VOC Sections for SDGs C8L100288 and C8L120342): Methylene chloride was detected in the low-level soil method blank associated with preparation batch 8291500 at a concentration of 1.8 µg/Kg. The positive methylene chloride results for samples SB45(20-22), SB41(15-17), and SB41(20-22) were less than five times the blank level and less than the reporting limits and were qualified "U," at the reporting limits, because of laboratory contamination.

   The common laboratory solvents methylene chloride and acetone were detected in the trip blanks associated with the aqueous samples collected for this project. In addition, methylene chloride was detected in the two aqueous samples that required analysis at a dilution: MW-1D and MW-11D. It was strongly suspected that the methylene chloride was in the reagent water used by the laboratory. Based on professional judgment, the acetone result for the soil sample SB41(15-17) was qualified "U," as undetected, because of laboratory contamination.

b. Calibrations (pp. 1237-1238): The continuing calibration %Ds for acetone, 2-butanone, 1,2,4-trichlorobenzene, and methyl acetate were greater than the quality control limit of 20% on 10/07/08 at 09:34 on instrument HP4. Sensitivity decreased with respect to the initial calibration average relative response factor. The positive and non-detect acetone, 2-butanone, 1,2,4-trichlorobenzene, and methyl acetate results for associated sample SB45(8-10) were qualified "J/UJ," as estimates, because of low instrument bias.

c. Reporting Limits (Form 1): Sample SB45(8-10) required analysis using the MLS method to bring the target compound concentrations into the calibration range. The reporting and detection limits are higher for MLS. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8J110134

a. Blank Contamination (See VOC Sections for SDGs C8L100288 and C8L120342): The common laboratory solvents methylene chloride and acetone were detected in the trip blanks associated with the aqueous samples collected for this project. In addition, methylene chloride was detected in the two aqueous samples that required analysis at a dilution: MW-1D and MW-11D. It was strongly suspected that the methylene chloride was in the reagent water used by the laboratory. Based on professional judgment, the acetone and methylene chloride results for the soil sample SB40(50-52) were qualified "U" at the reporting limits, as undetected, because of laboratory contamination.

b. Calibrations (pp. 1220-1221, 1226-1227, 1231-1232): The MLS continuing calibration %Ds for acetone, 2-butanone, 1,2,4-trichlorobenzene, and methyl acetate were greater than the quality control

limit of 20% on 10/16/08 at 09:34 on instrument HP4. Sensitivity decreased with respect to the initial calibration average relative response factor. The acetone, 2-butanone, 1,2,4-trichlorobenzene, and methyl acetate results for affected sample SB36(10-12) were non-detect and were qualified "UJ," as estimates, because of low method bias.

The continuing calibration %Ds for trichlorofluoromethane, 1,1,2-trichloro-1,2,2-trifluoroethane, methylene chloride, and methyl acetate were greater than the quality control limit of 20% on 10/20/08 at 11:02 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor for 1,1,2-trichloro-1,2,2-trifluoroethane, methylene chloride, and methyl acetate. The methylene chloride result for associated sample SB40(50-52) was qualified "U," as undetected, because of laboratory contamination; no further qualifications were required. The 1,1,2-trichloro-1,2,2-trifluoroethane and methyl acetate results for affected sample SB40(50-52) were non-detect and were qualified "UJ," as estimates, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for trichlorofluoromethane. The trichlorofluoromethane result was non-detect such that no data qualifications were required.

The continuing calibration %Ds for dichlorodifluoromethane, chloroethane, trichlorofluoromethane, acetone, 2-butanone, 4-methyl-2-pentanone, 2-hexanone, 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane, and methyl acetate were greater than the quality control limit of 20% on 10/21/08 at 07:23 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor for acetone, 2-butanone, 4-methyl-2-pentanone, 2-hexanone, 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane, and methyl acetate. The acetone, 2-butanone, 4-methyl-2-pentanone, 2-hexanone, 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane, and methyl acetate results for affected sample SB40(14-16) were non-detect and were qualified "UJ," as estimates, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for dichlorodifluoromethane, chloroethane, and trichlorofluoromethane. The dichlorodifluoromethane, chloroethane, and trichlorofluoromethane results were non-detect such that no data qualifications were required.

c. Reporting Limits (Form 1): Sample SB36(10-12) required analysis using the MLS method to bring the target compound concentrations into the calibration range. The reporting and detection limits are higher for MLS. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8J160275

a. Calibrations (pp. 1155-1156, 1164-1165): The LLS continuing calibration %Ds for trichlorofluoromethane, acetone, and methyl acetate were greater than the quality control limit of 20% on 10/23/08 at 07:45 on instrument HP3. The continuing calibration %Ds for dichlorodifluoromethane, acetone, bromoform, and methyl acetate were greater than the quality control limit of 20% on 10/24/08 at 07:16 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor for methyl acetate and increased for trichlorofluoromethane, acetone, dichlorodifluoromethane, and bromoform. The methyl acetate results for affected samples SB36(17.5-20), SB36(32.5-35), SB37(11-12), SB37(57.6-60), SB32(20-22.5), and SB32(42-47.5) were non-detect and were qualified "UJ," as estimates, because of low instrument bias while the non-detect trichlorofluoromethane, acetone, dichlorodifluoromethane, and bromoform results required no data qualification due to high instrument bias.

b. Reporting Limits (Form 1): Samples SB36(17.5-20), SB37(11-12), and SB32(20-22.5) required analysis at an initial five-fold dilution to bring the target compound concentrations into the calibration range. The dilutions elevated the reporting and detection limits. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8J220183

a. Blank Contamination (pp. 1250-1251, 1258-1259): Methylene chloride was detected in the method blank associated with LLS preparation batch 8303599 at a concentration estimated below the reporting limit. The positive methylene chloride results for associated soil samples SB38(45-47.5), SB31(47.5-50), SB39(32.5-35), and SB39(47.5-50) were qualified "U" at the reporting limits, as undetected, because of laboratory contamination.

   1,2,4-Trichlorobenzene was detected in the method blank associated with MLS preparation batch 8304449 at a concentration estimated below the reporting limit. The positive 1,2,4-trichlorobenzene result for associated soil sample SB38(22.5-25) was qualified "U" at the reporting limit, as undetected, because of laboratory contamination.

b. Calibrations (pp. 1152-1153, 1225-1226): The MLS initial calibration verification %Ds for dichlorodifluoromethane and chloroethane were greater than the quality control limit of 20% on 10/30/08 at 14:28 on instrument HP5. Sensitivity decreased with respect to the initial calibration average relative response factor for dichlorodifluoromethane. The dichlorodifluoromethane results for affected samples SB38(22.5-25) and SB31(25-27.5) were non-detect and were qualified "UJ," as estimates, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for chloroethane such that the non-detect chloroethane results required no data qualification.

   The LLS continuing calibration verification %Ds for acetone, dichlorodifluoromethane, carbon disulfide, and methylcyclohexane were greater than the quality control limit of 20% on 10/29/08 at 20:59 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor for acetone. The acetone results for affected samples SB38(45-47.5), SB31(47.5-50), SB39(32.5-35), and SB39(47.5-50) were non-detect and were qualified "UJ," as estimates, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for dichlorodifluoromethane, carbon disulfide, and methylcyclohexane such that the non-detect chloroethane results required no data qualification.

c. Reporting Limits (Form 1): Samples SB39(32.5-35) and SB39(47.5-50) required analysis at an initial five-fold dilution to bring the target compound concentrations into the calibration range. The dilutions elevated the reporting and detection limits. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

   Samples SB38(22.5-25) and SB31(25-27.5) required extraction using the MLS method and analysis at an initial two-fold and five-fold dilution, respectively, to bring the target compound concentrations into the calibration range. The reporting and detection limits were elevated as required. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8J290111

a. Blank Contamination (pp. 1287-1288): Methylene chloride was detected in the method blank associated with LLS preparation batch 8304532 at a concentration estimated below the reporting limit. The positive methylene chloride results for associated soil samples SB34(42.5-45), SB33(35-37.5), SB28(33.5-35), SB28(47.5-50) and SB30(50-52.5) were qualified "U" at the reporting limits, as undetected, because of laboratory contamination.

b. Calibrations (pp. 1261-1262, 1268-1269): The LLS continuing calibration verification %Ds for 1,2,4-trichlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, carbon disulfide, and methylcyclohexane were greater than the quality control limit of 20% on 10/31/08 at 06:57 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor for 1,2,4-

trichlorobenzene. The 1,2,4-trichlorobenzene results for affected samples SB34(42.5-45), SB33(35-37.5), SB28(33.5-35), SB28(47.5-50) and SB30(5-52.50) were non-detect and were qualified "UJ," as estimates, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for 1,1,2-trichloro-1,2,2-trifluoroethane, carbon disulfide, and methylcyclohexane such that the non-detect results required no data qualifications.

The MLS continuing calibration verification %Ds for acetone, 2-hexanone, and bromoform were greater than the quality control limit of 20% on 11/3/08 at 08:27 on instrument HP4. Sensitivity increased with respect to the initial calibration average relative response factor such that the non-detect results required no data qualifications.

c. Reporting Limits (Form 1): Samples SB34(32.5-35), SB33(22.5-25), SB30(41.5-43.5), and SB300(41.5-43.5) required extraction using the MLS method and analysis at an initial five-fold dilution to bring the target compound concentrations into the calibration range. The reporting and detection limits were elevated as required. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8K010195

a. Blank Contamination (pp. 1223-1224): Methylene chloride was detected in the method blank associated with MLS preparation batch 8316306 at a concentration estimated below the reporting limit. Methylene chloride was not detected in associated soil sample SB48(9-10). No data qualifications were required.

b. Calibrations (pp. 1115-1116, 1192-1193, 1197-1198): The LLS initial calibration verification %Ds for acetone and dichlorodifluoromethane were greater than the quality control limit of 20% on 11/06/08 at 00:36 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor. The acetone and dichlorodifluoromethane results for affected samples SB26(35-37.5) and SB30(50-52.5) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration verification %Ds for trichlorofluoromethane and isopropylbenzene were greater than the quality control limit of 20% on 11/7/08 at 06:03 on instrument HP3. Sensitivity increased with respect to the initial calibration average relative response factor. The non-detect trichlorofluoromethane and isopropylbenzene results for the affected samples did not require qualification.

The MLS continuing calibration verification %D for dichlorodifluoromethane was greater than the quality control limit of 20% on 11/11/08 at 07:36 on instrument HP4. Sensitivity decreased with respect to the initial calibration average relative response factor. The dichlorodifluoromethane result for affected sample SB48(9-10) was non-detect and was qualified "UJ," as an estimate, because of low instrument bias.

The MLS continuing calibration verification %Ds for bromomethane, 2-butanone, and 1,2,4-trichlorobenzene were greater than the quality control limit of 20% on 11/11/08 at 07:36 on instrument HP4. Sensitivity increased with respect to the initial calibration average relative response factor. The positive 1,2,4-trichlorobenzene result for affected sample SB48(9-10) was qualified "J," as an estimated concentration, because of high instrument bias. The non-detect bromomethane and 2-butanone results did not require qualification.

c. Reporting Limits (Form 1): Sample SB48(9-10) required extraction using the MLS method and analysis at an initial five-fold dilution to bring the target compound concentrations into the calibration

range. The reporting and detection limits were elevated as required. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8K040347

a. Blank Contamination (pp. 1228-1229): Methylene chloride was detected in the method blank associated with MLS preparation batch 8316306 at a concentration estimated below the reporting limit. Methylene chloride was not detected in associated soil samples SB43(40-42.5) and SB35(40-41.5). No data qualifications were required.

b. Calibrations (pp. 1120-1121, 1197-1198, 1202-1203): The LLS initial calibration verification %Ds for acetone and dichlorodifluoromethane were greater than the quality control limit of 20% on 11/06/08 at 00:36 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor. The acetone and dichlorodifluoromethane results for affected samples SB43(50-52.5) and SB30(45-47.5) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

   The continuing calibration verification %Ds for trichlorofluoromethane and isopropylbenzene were greater than the quality control limit of 20% on 11/7/08 at 06:03 on instrument HP3. Sensitivity increased with respect to the initial calibration average relative response factor. The non-detect trichlorofluoromethane and isopropylbenzene results for the affected samples did not require qualification.

   The MLS continuing calibration verification %D for dichlorodifluoromethane was greater than the quality control limit of 20% on 11/11/08 at 07:36 on instrument HP4. Sensitivity decreased with respect to the initial calibration average relative response factor. The dichlorodifluoromethane result for affected samples SB43(40-42.5) and SB35(40-41.5) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

   The MLS continuing calibration verification %Ds for bromomethane, 2-butanone, and 1,2,4-trichlorobenzene were greater than the quality control limit of 20% on 11/11/08 at 07:36 on instrument HP4. Sensitivity increased with respect to the initial calibration average relative response factor. The non-detect bromomethane, 2-butanone, and 1,2,4-trichlorobenzene results did not require qualification.

c. Reporting Limits (Form 1): Samples SB43(40-42.5) and SB35(40-41.5) required extraction using the MLS method and analysis at an initial 100-fold and ten-fold dilution, respectively, to bring the target compound concentrations into the calibration range. The reporting and detection limits were elevated as required. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8K070273

a. Blank Contamination (pp. 1332-1333): Methylene chloride was detected in the method blank associated with MLS preparation batch 8316342 at a concentration estimated below the reporting limit. Methylene chloride was not detected in associated soil sample SB44(38-40). No data qualifications were required.

b. Calibrations (pp. 1272-1273, 1278-1279, 1284-1285, 1298-1299): The MLS continuing calibration verification %Ds for bromomethane, 2-butanone, 1,2,4-trichlorobenzene, and dichlorodifluoromethane were greater than the quality control limit of 20% on 11/11/08 at 07:36 on instrument HP4. Sensitivity decreased with respect to the initial calibration average relative response factor for dichlorodifluoromethane. The dichlorodifluoromethane result for affected sample SB44(38-40) was

non-detect and was qualified "UJ," as an estimate, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for bromomethane, 2-butanone, and 1,2,4-trichlorobenzene such that the non-detect results required no data qualification.

The LLS initial calibration verification %Ds for acetone and dichlorodifluoromethane were greater than the quality control limit of 20% on 11/06/08 at 00:36 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor. The acetone and dichlorodifluoromethane results for affected sample SB44(52.5-55) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration verification %D for trichlorofluoromethane was greater than the quality control limit of 20% on 11/10/08 at 04:47 on instrument HP3. Sensitivity increased with respect to the initial calibration average relative response factor such that the non-detect results required no qualification.

The MLS continuing calibration verification %D for acetone and styrene were greater than the quality control limit of 20% on 11/12/08 at 12:16 on instrument HP3. Sensitivity decreased with respect to the initial calibration average relative response factor for acetone. The acetone results for affected samples SB47(18-20.5) and SB47(38-40) were non-detect and were qualified "UJ," as estimates, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for styrene such that the non-detect results required no qualification.

c. Reporting Limits (Form 1): Samples SB47(18-20.5) and SB47(38-40) required analysis using the MLS method to bring the target compound concentrations into the calibration range. The reporting and detection limits are higher for MLS. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

   Samples SB44(38-40) and SB440(38-40) required extraction using the MLS method and analysis at an initial 50-fold dilution, to bring the target compound concentrations into the calibration range. The reporting and detection limits were elevated as required. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8L110357

a. Blank Contamination (pp. 1254-1255): Methylene chloride was detected in the method blank associated with LLS preparation batch 8352263 at a concentration estimated below the reporting limit. The positive methylene chloride result for associated soil sample SB54(11-12) was qualified "U" at the reporting limit, as undetected, because of laboratory contamination.

b. Calibrations (pp. 1226-1227, 1232-1233): The LLS continuing calibration verification %Ds for tetrachloroethene, acetone and 1,2-dibromo-3-chloropropane were greater than the quality control limit of 20% on 12/17/08 at 07:44 on instrument HP4. Sensitivity decreased with respect to the initial calibration average relative response factor for acetone and 1,2-dibromo-3-chloropropane. The acetone and 1,2-dibromo-3-chloropropane results for affected samples SB27(35-36), SB53(25-26), SB54(11-12), SB56(11-12), SB59(23-24), and SB57(11-12) were non-detect and were qualified "UJ," as estimates, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for tetrachloroethene such that the non-detect results required no qualification.

   The continuing calibration verification %D for acetone was greater than the quality control limit of 20% on 12/19/08 at 11:01 on instrument HP3. Sensitivity increased with respect to the initial calibration average relative response factor such that the non-detect results required no qualification.

c. Reporting Limits (Form 1): Sample SB59(15-16) required analysis using the MLS method to bring the target compound concentrations into the calibration range. The reporting and detection limits are higher for MLS. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

Sample SB27(23-23.5) required extraction using the MLS method and analysis at an initial ten-fold dilution, to bring the target compound concentrations into the calibration range. The reporting and detection limits were elevated as required. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8L100288

a. Blank Contamination (pp. 1085-1086): Methylene chloride was detected in the trip blank associated with the 12/09/08 sample shipment at a concentration of 0.42 µg/L. Methylene chloride was detected in the two samples that required analysis at a dilution: MW-1D and MW-11D. It was strongly suspected that the methylene chloride was in the reagent water used by the laboratory. The positive methylene chloride results for samples MW-1D and MW-11D were qualified "U," at the reporting limits, because of laboratory contamination.

b. Calibrations (pp. 1150-1152, 1165-1167): The initial calibration verification and continuing calibration %Ds for bromomethane were greater than the quality control limit of 20% on 12/17/08 at 13:15 and 12/18/08 at 08:02 on instrument HP5. Sensitivity increased with respect to the initial calibration average relative response factor. All samples within this SDG were affected. Bromomethane was not detected in any of the field samples within this SDG. No data qualifications were required.

c. Reporting Limits (Form 1): Samples MW-11D and MW-1D required analysis at an initial 25-fold and 1000-fold dilution, respectively, to bring the target compound concentration(s) into the calibration range. The dilution elevated the reporting and detection limits. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8L110371

a. Calibrations (pp. 1179-1181, 1187-1189, 1204-1206): The initial calibration verification %D for bromomethane was greater than the quality control limit of 20% on 12/17/08 at 08:19 on instrument HP5. Sensitivity increased with respect to the initial calibration average relative response factor. All samples within this SDG were affected. Bromomethane was not detected in any of the field samples within this SDG. No data qualifications were required.

The continuing calibration %D for dichlorodifluoromethane was greater than the quality control limit of 20% on 12/17/08 at 08:54 on instrument HP5. Sensitivity decreased with respect to the initial calibration average relative response factor. The dichlorodifluoromethane results for affected samples MW-7 and MW-9 were non-detect and was qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration %D for bromomethane was greater than the quality control limit of 20% on 12/22/08 at 07:41 on instrument HP5. Sensitivity increased with respect to the initial calibration average relative response factor. Bromomethane was not detected in the affected samples MW-16D and MW-1600D. No data qualifications were required.

b. Reporting Limits (Form 1): Samples CTM-MW-1, MW-7D, MW-12D, and MW-13D required analysis at an initial 25-fold to 100-fold dilution to bring the target compound concentration(s) into the calibration range. The dilutions elevated the reporting and detection limits. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8L120342

a. Blank Contamination (pp. 12-13): Toluene and acetone were detected in the trip blank associated with the aqueous samples collected on 12/11/08. In addition, methylene chloride was detected in the one aqueous sample that required analysis at a dilution: CTM-15. It was strongly suspected that the methylene chloride was in the reagent water used by the laboratory. Based on professional judgment, the methylene chloride result for the groundwater sample CTM-15 was qualified "U" at the reporting limit, as undetected, because of laboratory contamination. The positive toluene results for samples CTM-15 and MW-15D were less than the reporting limit and less than five times the trip blank level and were qualified "U," at the reporting limit, because of laboratory contamination. Acetone was not detected in any of the associated field samples. No data qualifications were required for acetone.

b. Calibrations (pp. 1205-1207, 1274-1276, 1282, 1284, 1260-1262, 1268-1269): The initial calibration verification %D for bromomethane was greater than the quality control limit of 20% on 12/17/08 at 13:15 on instrument HP5. Sensitivity increased with respect to the initial calibration average relative response factor. All samples within this SDG were affected. Bromomethane was not detected in any of the field samples within this SDG. No data qualifications were required.

   The continuing calibration %D for bromomethane was greater than the quality control limit of 20% on 12/23/08 at 07:38 on instrument HP5. Sensitivity increased with respect to the initial calibration average relative response factor. Bromomethane was not detected in any of the field samples within this SDG. No data qualifications were required.

   The continuing calibration %D for dichlorodifluoromethane was greater than the quality control limit of 20% on 12/23/08 at 19:59 on instrument HP5. Sensitivity decreased with respect to the initial calibration average relative response factor. The dichlorodifluoromethane results for affected samples MW-1400, CTM-1, CTM-15, and MW-15D were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

   The initial calibration verification %Ds for vinyl chloride and dichlorodifluoromethane were greater than the quality control limit of 20% on 12/17/08 at 14:49 on instrument HP6. Sensitivity decreased with respect to the initial calibration average relative response factor. Samples MW-14D and the trip blank were affected. The vinyl chloride and dichlorodifluoromethane results for affected samples MW-14D and the trip blank were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

   The continuing calibration %Ds for dichlorodifluoromethane, 1,1,1-trichloroethane, carbon tetrachloride, isopropylbenzene, and methylcyclohexane were greater than the quality control limit of 20% on 12/21/08 at 07:48 on instrument HP6. Sensitivity increased with respect to the initial calibration average relative response factor. The positive isopropylbenzene result for associated sample MW-14D was qualified "J," as an estimated concentration, because of high instrument bias. All other affected compounds were not detected in the associated samples. No data qualifications were required in response to the high bias.

   The continuing calibration %Ds for acetone, 2-butanone, 4-methyl-2-pentanone, 2-hexanone, 1,2-dibromo-3-chloropropane, and methyl acetate were greater than the quality control limit of 20% on 12/21/08 at 07:48 on instrument HP6. Sensitivity decreased with respect to the initial calibration average relative response factor. The positive and non-detect acetone, 2-butanone, 4-methyl-2-pentanone, 2-hexanone, 1,2-dibromo-3-chloropropane, and methyl acetate results for associated samples MW-14D and TRIP BLANK were qualified "J/UJ," as estimates, because of low instrument bias.

c. Reporting Limits (Form 1): Samples CTM-MW-1, MW-7D, MW-12D, and MW-13D required analysis at an initial 25-fold to 100-fold dilution to bring the target compound concentration(s) into the calibration range. The dilutions elevated the reporting and detection limits. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

2.0 Semivolatile Organic Compounds

C8G160152

a. Calibrations (pp. 2263-2265): The continuing calibration %D for benzaldehyde was greater than the quality control limit of 20% on 07/22/08 at 00:58 on instrument 731. Sensitivity decreased with respect to the initial calibration average relative response factor. The benzaldehyde results for affected samples TP10(29)E(8-8.5), TP10(31)E(8-8.5), TP11(50)E(8-8.5), TP12(5)W(8-8.5), and TP12(17)W(10.5-11) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

b. Dilutions (Form 1s): Samples TP10(29)E(8-8.5) and TP12(5)W(8-8.5) were analyzed at initial dilutions to bring several target compound concentrations into the calibration range. The dilutions elevated the detection limits and reporting limits. The surrogate recoveries were acceptable. No data qualifications were required.

C8G220214

a. Calibrations (pp. 2185-2187): The continuing calibration %D for benzaldehyde was greater than the quality control limit of 20% on 07/28/08 at 00:25 on instrument 731. Sensitivity decreased with respect to the initial calibration average relative response factor. The benzaldehyde results for affected samples were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

b. Dilutions (Form 1s): Sample SB50(14.5-15) was analyzed at an initial 10-fold dilution to bring the naphthalene and 2-methylnaphthalene concentrations into the calibration range. The dilution elevated the detection limits and reporting limits. The surrogate recoveries were acceptable. No data qualifications were required.

C8G260118

a. Calibrations (pp. 2090, 2092, 2151-2153): The initial calibration relative standard deviations (RSDs) for several target compounds were greater than the method specification limit of 15% on 06/12/08 on instrument 732. The positive benzo(b)fluoranthene and indeno(1,2,3-cd)pyrene results for sample SB46(8-10) were qualified "J" as estimated concentrations, because of the calibration nonconformance. All other associated results for samples SB46(8-10) and SB50(80-81) were non-detect and did not require qualification.

   The continuing calibration %Ds for benzaldehyde, benzo(b)fluoranthene, bis(2-ethylhexyl)phthalate, and 4-nitroaniline were greater than the quality control limit of 20% on 08/04/08 at 05:34 on instrument 732. Sensitivity decreased with respect to the initial calibration average relative response factor. The positive and non-detect benzaldehyde, benzo(b)fluoranthene, and 4-nitroaniline results for affected samples SB46(8-10) and SB50(80-81) were were qualified "J/UJ," as estimates, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for bis(2-ethylhexyl)phthalate. bis(2-Ethylhexyl)phthalate was not detected in the associated samples. No further data qualifications were required.

b. Dilutions (Form 1s): Sample SB46(8-10) was analyzed at an initial 10-fold dilution to bring several target compound concentrations into the calibration range. The dilution elevated the detection limits and reporting limits. The surrogate recoveries were acceptable. No data qualifications were required.

C8H080154

Calibrations (pp. 2184-2186): The continuing calibration %D for benzaldehyde was greater than the quality control limit of 20% on 08/12/08 at 23:07 on instrument 733. Sensitivity decreased with respect to the initial calibration average relative response factor. The benzaldehyde results for affected samples SB46(74-76), SB49(8-10), SB49(22-24), SB49(28-30), and SB49(72-74) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

C8I060176

Calibrations (pp. 2126-2128): The continuing calibration %Ds for benzaldehyde and hexachlorocyclopentadiene were greater than the quality control limit of 20% on 09/11/08 at 00:51 on instrument 733. Sensitivity decreased with respect to the initial calibration average relative response factor. The benzaldehyde and hexachlorocyclopentadiene results for affected sample SB51(23.5-25.5) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

C8J100124

a. Calibrations (pp. 2234-2236): The initial calibration RSDs for several target compounds were greater than the method specification limit of 15% on 10/02/08 on instrument 722. All associated results for samples SB45(8-10), SB45(20-22), SB41(15-17), and SB41(20-22) were non-detect and did not require qualification.

   The continuing calibration %Ds for hexachlorocyclopentadiene, 3,3'-dichlorobenzidine, atrazine, and 4-nitroaniline were greater than the quality control limit of 20% on 10/14/08 at 04:13 on instrument 722. Sensitivity decreased with respect to the initial calibration average relative response factor. The hexachlorocyclopentadiene, 3,3'-dichlorobenzidine, atrazine, and 4-nitroaniline results for affected samples SB45(8-10), SB45(20-22), SB41(15-17), SB41(20-22) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

b. Dilutions (p. 53, Form 1s): Sample SB45(8-10) was analyzed at an initial 20-fold dilution and a subsequent 4000-fold to bring several target compound concentrations into the calibration range. The dilutions diluted out the surrogates. There were sufficient acceptable quality control check results to show that the analytical process was in-control. The dilutions elevated the detection limits and reporting limits. No data qualifications were required.

   Sample SB41(15-17) was analyzed at an initial five-fold dilution to bring several target compound concentrations into the calibration range. The dilution elevated the detection limits and reporting limits. The surrogate recoveries were acceptable. No data qualifications were required.

C8J110134

a. Calibrations (pp. 2160-2162, 2168-2170): The initial calibration RSDs for several target compounds were greater than the method specification limit of 15% on 10/02/08 on instrument 722. All associated results for samples SB40(14-16) and SB36(10-12) were non-detect and did not require qualification.

   The continuing calibration %Ds for hexachlorocyclopentadiene and atrazine were greater than the quality control limit of 20% on 10/17/08 at 04:53 on instrument 722. Sensitivity decreased with respect to the initial calibration average relative response factor. The hexachlorocyclopentadiene and atrazine results for affected samples SB40(14-16) and SB36(10-12) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration %Ds for hexachlorocyclopentadiene, 2,4-dinitrophenol, atrazine, indeno(1,2,3-cd)pyrene, dibenz(a,h)anthracene, and benzo(g,h,i)perylene were greater than the quality control limit of 20% on 10/21/08 at 05:12 on instrument 722. Sensitivity decreased with respect to the initial calibration average relative response factor. The hexachlorocyclopentadiene, 2,4-dinitrophenol, atrazine, indeno(1,2,3-cd)pyrene, dibenz(a,h)anthracene, and benzo(g,h,i)perylene results for affected sample SB40(50-52) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

b. Dilutions (pp. 51, Form 1s): Sample SB36(10-12) was analyzed at an initial 20-fold dilution to bring several target compound concentrations into the calibration range. The dilution diluted out the surrogates. There were sufficient acceptable quality control check results to show that the analytical process was in-control. The dilution elevated the detection limits and reporting limits. No data qualifications were required.

C8J160275

a. Calibrations (pp. 2224, 2226, 2260-2262, 2271-2273): The initial calibration RSDs for several target compounds were greater than the method specification limit of 15% on 09/30/08 on instrument 732. The positive benzo(b)fluoranthene and indeno(1,2,3-cd)pyrene results for samples SB36(17.5-20), SB37(11-12), SB32(20-22.5) were qualified "J," as estimated concentrations, because of the initial calibration nonconformance.

   The continuing calibration %Ds for benzaldehyde, hexachlorocyclopentadiene, 2,4-dinitrophenol, and atrazine were greater than the quality control limit of 20% on 10/23/08 at 06:1 on instrument 732. Sensitivity decreased with respect to the initial calibration average relative response factor. The benzaldehyde, hexachlorocyclopentadiene, 2,4-dinitrophenol, and atrazine results for affected samples SB36(17.5-20), SB37(11-12), and SB32(20-22.5) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

   The continuing calibration %Ds for benzaldehyde, 2,4-dinitrophenol, atrazine, and benzo(k)fluoranthene were greater than the quality control limit of 20% on 10/24/08 at 15:01 on instrument 732. Sensitivity decreased with respect to the initial calibration average relative response factor. The benzaldehyde, 2,4-dinitrophenol, atrazine, and benzo(k)fluoranthene results for affected samples SB36(32.5-35), SB32(42-47.5), and SB37(57.6-60) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

b. Surrogate Recoveries (p. 64): The 2,4,6-tribromophenol surrogate recoveries for samples SB37(11-12) and SB36(17.5-20) were less than the lower quality control limit but greater than 10%. No data qualifications were required.

   Samples SB37(11-12) and SB32(20-22.5) required analysis at dilutions high enough to dilute out the surrogates. There were sufficient, acceptable quality control check results to show that the analytical process was in-control. No data qualifications were required.

c. Dilutions (Form 1s): Samples SB36(17.5-20), SB32(20-22.5), and SB37(11-12) was analyzed at an initial dilution to bring several target compound concentrations into the calibration range. The initial or subsequent dilution diluted out the surrogates. There were sufficient acceptable quality control check results to show that the analytical process was in-control. The dilution elevated the detection limits and reporting limits. No data qualifications were required.

C8J220183

a. Calibrations (pp.2199, 2297-2299, 2300-2302): The initial calibration RSD for benzaldehyde was greater than the method specification limit of 15% on 10/08/08 on instrument 733. The initial calibration verification standard recovery for benzaldehyde was greater than the upper quality control limit of 120%. All samples within this SDG were affected. All benzaldehyde results were non-detect and were qualified "UJ," as estimates, because of the calibration nonconformance.

The continuing calibration %Ds for hexachlorocyclopentadiene and benzo(b)fluoranthene were greater than the quality control limit of 20% on 10/27/08 at 02:57 on instrument 733. Sensitivity decreased with respect to the initial calibration average relative response factor. The positive and non-detect hexachlorocyclopentadiene and benzo(b)fluoranthene results for affected samples SB38(22.5-25), SB38(45-47.5), SB31(25-27.5), SB31(47.5-50), SB39(32.5-35), and SB39(47.5-50) were qualified "J" and "UJ," as estimates, because of low instrument bias.

b. Dilutions (Form 1): Samples SB38(22.5-25) and SB39(32.5-35) required analysis at a dilution to bring the target compound concentration(s) into the calibration range. The initial surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8J290111

a. Calibrations (pp.2302, 2308-2310, 2369-2371, 2456-2458): The initial calibration RSDs for benzaldehyde, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and atrazine were greater than the method specification limit of 15% on 10/02/08 on instrument 722. The initial calibration verification standard recovery for 2,4-dinitrophenol was greater than the upper quality control limit of 120%. All samples within this SDG were affected. All benzaldehyde, 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, and atrazine results were non-detect and were qualified "UJ," as estimates, because of the calibration nonconformance.

The continuing calibration %Ds for benzaldehyde, hexachlorocyclopentadiene, atrazine, and 3,3'-dichlorobenzidine were greater than the quality control limit of 20% on 11/06/08 at 03:38 on instrument 722. Sensitivity decreased with respect to the initial calibration average relative response factor. The benzaldehyde, hexachlorocyclopentadiene, atrazine, and 3,3'-dichlorobenzidine results for affected samples SB34(32.5-35), SB34(42.5-45), SB33(22.5-25), SB33(35-37.5), SB28(33.5-35), SB28(47.5-50), SB30(41.5-43.5), SB30(50-52.5) and SB300(41.5-43.5) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

b. Dilutions (Form 1): Samples SB34(32.5-35) and SB33(22.5-25) required analysis at an initial five-fold dilution to bring the target compound concentration(s) into the calibration range. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

Samples SB30(41.5-43.5) and SB300(41.5-43.5) required analysis at an initial 20-fold and subsequent 40-fold dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out and could not be used to assess method accuracy. There were sufficient, acceptable quality control check results to show that the analytical process was in-control. No data qualifications were required.

c. Matrix Spike Recoveries and RPDs (pp.2005-2006): Sample SB34(32.5-35) was processed as the MS/MSD sample. The SB34(32.5-35) MS and/or MSD recoveries for compounds acenaphthene, naphthalene, pyrene, and 2,4-dinitrotoluene were greater than the upper advisory limits. The positive acenaphthene, naphthalene, and pyrene results for sample SB34(32.5-35) were qualified "J," as estimated concentrations, because of high bias attributable to matrix effects. 2,4-Dinitrotoluene was not detected in sample SB34(32.5-35); no data qualifications were required in response to the high bias.

C8K010195

a. Calibrations (pp.2218-2220): The continuing calibration %Ds for benzaldehyde and hexachlorocyclopentadiene were greater than the quality control limit of 20% on 11/13/08 at 01:48 on instrument 731. Sensitivity decreased with respect to the initial calibration average relative response factor. The benzaldehyde and hexachlorocyclopentadiene results for affected samples SB26(35-37.5), SB48(9-10), and SB48(27.5-30) were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

b. Dilutions (Form 1): Sample SB48(9-10) required analysis at a initial 100-fold and subsequent 250-fold dilution to bring the target compound concentrations into the calibration range. The surrogates were diluted out and could not be used to assess method accuracy. There were sufficient, acceptable quality control check results to show that the analytical process was in-control. No data qualifications were required.

C8K040347

a. Calibrations (pp.2258-2260, 2261-2263): The continuing calibration %D for hexachlorocyclopentadiene and 2,4-dinitrophenol were greater than the quality control limit of 20% on 11/15/08 at 08:24 on instrument 731. Sensitivity decreased with respect to the initial calibration average relative response factor for hexachlorocyclopentadiene. The hexachlorocyclopentadiene results for affected samples SB43(40-42.5), SB43(50-52.5), SB35(40-41.5), and SB35(45-47.5) were non-detect and were qualified "UJ," as estimates, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for 2,4-dinitrophenol such that the non-detect results required no qualification.

b. Dilutions (Form 1): Sample SB43(40-42.5) required analysis at a initial 100-fold, and subsequent 400-fold dilution to bring the naphthalene concentration into the calibration range. The surrogates were diluted out and could not be used to assess method accuracy. There were sufficient, acceptable quality control check results to show that the analytical process was in-control. No data qualifications were required.

   Sample SB35(40-41.5) required analysis at a five-fold dilution to bring the phenanthrene concentration into the calibration range. The surrogate recoveries and calibrations were acceptable. No data qualifications were required.

C8K070273

a. Calibrations (pp.2291-2296): The continuing calibration %Ds for hexachlorocyclopentadiene and 2,4-dinitrophenol were greater than the quality control limit of 20% on 11/15/08 at 08:24 on instrument 731. Sensitivity decreased with respect to the initial calibration average relative response factor for hexachlorocyclopentadiene. The hexachlorocyclopentadiene results for affected samples SB44(38-40), SB440(38-40), SB44(52.5-55), SB47(18-20.5) and SB47(38-40) were non-detect and were qualified "UJ," as estimates, because of low instrument bias. Sensitivity increased with respect to the initial calibration average relative response factor for 2,4-dinitrophenol such that the non-detect results required no qualification.

b. Dilutions (Form 1): Samples SB44(38-40)and SB440(38-40) required analysis at a initial 100-fold, and subsequent 400-fold dilution to bring the naphthalene concentration into the calibration range. The surrogates were diluted out and could not be used to assess method accuracy. There were sufficient, acceptable quality control check results to show that the analytical process was in-control. No data qualifications were required.

C8L110357

a. Calibrations (pp.2234-2236, 2238-2240): The continuing calibration %Ds for 2-nitroaniline, 2,4-dinitrophenol, 4-nitrophenol, and 4,6-dinitro-2-methylphenol were greater than the quality control limit of 20% on 12/13/08 at 07:16 on instrument 733. Sensitivity increased with respect to the initial calibration average relative response factors. 2-Nitroaniline, 2,4-dinitrophenol, 4-nitrophenol, and 4,6-dinitro-2-methylphenol results were not detected in associated samples SB27(23-23.5), SB27(35-36), SB53(25-26), SB54(11-12), SB56(11-12), SB57(11-12), SB59(15-16), and SB59(23-24). No data qualifications were required in response to the high instrument bias.

b. Dilutions (Form 1): Sample SB27(23-23.5) required analysis at a initial 10-fold, and subsequent 100-fold dilution to bring the naphthalene, fluorene, and phenanthrene concentrations into the calibration range. The initial (i.e., 10-fold dilution analysis) surrogate recoveries were acceptable. The surrogates were diluted out of the 100-fold dilution analysis and could not be used to assess method accuracy. There were sufficient, acceptable quality control check results to show that the analytical process was in-control. No data qualifications were required.

C8L100288

Calibrations (pp. 2200-2202, 2203-2206): The continuing calibration %D for 2,4-dinitrophenol was greater than the quality control limit of 20% on 12/18/08 at 23:58 on instrument 733. Sensitivity increased with respect to the initial calibration average relative response factor. 2,4-Dinitrophenol was not detected in any of the groundwater associated samples. No data qualifications were required in response to the high instrument bias.

C8L110371

a. Calibrations (pp.2217, 2219- 2222, 2224-2225, 2227-2228, 2285-2287, 2292-2294, 2300-2302): The initial calibration RSDs for benzaldehyde, 4-chloroaniline, hexachlorocyclopentadiene, 3-nitroaniline, 2,4-dinitrophenol, 4-nitroaniline, 4,6-dinitro-2-methylphenol, 3,3'-dichlorobenzidine and bis(2-ethylhexyl)phthalate were greater than the method specification limit of 15% on 12/18/08 on instrument 722. The initial calibration verification standard recovery for benzaldehyde was greater than the upper quality control limit of 120%. All samples within this SDG were affected. The positive and non-detect benzaldehyde, 4-chloroaniline, hexachlorocyclopentadiene, 3-nitroaniline, 2,4-dinitrophenol, 4-nitroaniline, 4,6-dinitro-2-methylphenol, 3,3'-dichlorobenzidine and bis(2-ethylhexyl)phthalate results were qualified "J" and "UJ," as estimates, because of the calibration nonconformance.

   The continuing calibration %D for hexachlorocyclopentadiene was greater than the quality control limit of 20% on 12/23/08 at 04:01 on instrument 722. The continuing calibration %D for 3,3'-dichlorobenzidine was greater than the quality control limit of 20% on 12/24/08 at 03:02 on instrument 722. Sensitivity decreased with respect to the initial calibration average relative response factors. The hexachlorocyclopentadiene and 3,3'-dichlorobenzidine results for the affected samples were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

   The continuing calibration %Ds for 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol were greater than the quality control limit of 20% on 12/23/08 at 04:01 and on 12/24/08 at 03:02 on instrument 722. Sensitivity increased with respect to the initial calibration average relative response factor. The 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol results for all field samples within this SDG were non-detect. No further data qualifications were required in response to the high instrument bias.

b. Dilutions (Form 1): Sample MW-12D required analysis at an 18.8-fold secondary dilution to bring the naphthalene concentration into the calibration range. The surrogate recoveries for the undiluted sample analysis and calibrations were acceptable. No data qualifications were required.

Samples MW-7D, CTM-MW-1, and MW-13 required analysis at an initial 10-fold to bring the naphthalene concentration into the calibration range. The surrogates recoveries and calibrations were acceptable. The dilutions elevated the sample quantitation and method detection limits. No data qualifications were required.

C8L120342

a. Calibrations (pp.2198-2200, 2205-2207): The continuing calibration %D for 2,4-dinitrophenol were greater than the quality control limit of 20% on 12/22/08 at 03:52 on instrument 731. Sensitivity decreased with respect to the initial calibration average relative response factors. The 2,4-dinitrophenol results for associated samples MW-14D, MW-14, MW-1400, CTM-1, CTM-15, and MW-15D were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

The continuing calibration %Ds for acetophenone, nitrobenzene, 4-nitrophenol and 4-chlorophenyl-phenylether were greater than the quality control limit of 20% on 12/22/08 at 03:52 on instrument 731. Sensitivity increased with respect to the initial calibration average relative response factor. The acetophenone, nitrobenzene, 4-nitrophenol and 4-chlorophenyl-phenylether concentrations in associated samples MW-14D, MW-14, MW-1400, CTM-1, CTM-15, and MW-15D were non-detect. No data qualifications were required in response to the high instrument bias.

The continuing calibration %D for 4-nitrophenol was greater than the quality control limit of 20% on 12/26/08 at 04:19 on instrument 731. Sensitivity increased with respect to the initial calibration average relative response factors. The 4-nitrophenol results for associated samples MW-8 and MW-8D were non-detect. No data qualifications were required in response to the high instrument bias.

The continuing calibration %D for 3,3'-dichlorobenzidine was greater than the quality control limit of 20% on 12/26/08 at 04:19 on instrument 731. Sensitivity decreased with respect to the initial calibration average relative response factors. The 3,3'-dichlorobenzidine results for associated samples MW-8 and MW-8D were non-detect and were qualified "UJ," as estimates, because of low instrument bias.

b. Dilutions (Form 1): Samples MW-8D and MW-8 required analysis at an initial 47-fold and 380-fold dilution, respectively, to bring the target compound concentration(s) into the calibration range. The surrogates were diluted out of the analyses and could not be used to assess method accuracy. There were sufficient, acceptable quality control check results to show that the analytical process was in-control. No data qualifications were required.

3.0 Trace Metals

C8G160152

a. Blank Contamination (pp. 3018-3019, 3043, 3045-3046): Aluminum, silver, and zinc were detected in preparation blank associated with batch 8206318 at concentrations less than the quantitation limits. Cobalt and thallium were detected in the 07/27/08 ICP initial calibration blank. Antimony, beryllium, and thallium were detected in the associated 07/27/08 ICP continuing calibration blanks (CCB6 and CCB7) at concentrations less than the quantitation limits. The 07/27/08 ICP initial and continuing calibration blank results were negative for sodium (CCB6 and CCB7). The associated results were qualified as required. See Section 3.0 of this report for details.

b. Matrix Spike Recovery and RPDs (pp.3031-3034): Sample TP12(5)W(8-8.5) was prepared as the MS/MSD sample for ICP batch 8206318. The aluminum, calcium, and iron spikes added to TP12(5)W(8-8.5) MS/MSD were less than 25% of the original sample results. The spike recoveries and RPDs could not be calculated. The effect of matrix on these determinations could not be evaluated. No data qualifications were required.

C8G220214

a. Blank Contamination (pp. 3039, 3041-3042): Zinc was detected in preparation blank associated with batch 8213170 at a concentration less than the quantitation limit. Manganese was detected in the associated 08/11/08 ICP initial calibration blank at a concentration less than the quantitation limit. One or more of the 08/11/08 ICP initial and/or continuing calibration blank results were negative for sodium (CCB7 and CCB8). The associated results were qualified as required. See Section 3.0 of this report for details.

b. Matrix Spike Recovery and RPDs (pp. 3022-3026): Sample SB50(24-26) was prepared as the MS/MSD sample for ICP batch 8213170. The aluminum and iron spikes added to SB50(24-26) MS/MSD were less than 25% of the original sample results. The spike recoveries and RPDs could not be calculated. The effect of matrix on these determinations could not be evaluated. No data qualifications were required.

Sample SB50(14.5-15) was prepared as the MS/MSD sample for mercury CVAA batch 8217026. The mercury spike added to SB50(14.5-15) MS/MSD was less than 25% of the original sample result. The spike recoveries and RPDs could not be calculated. The effect of matrix on the mercury determinations could not be evaluated. No data qualifications were required.

C8G260118

Blank Contamination (pp. 3009-3011, 3034, 3036-3037): Iron and manganese were detected in preparation blank associated with batch 8213170 at concentrations less than the quantitation limits. Silver was detected in the associated 08/12/08 ICP initial calibration blank at a concentration less than the quantitation limit. The 08/12/08 ICP initial and continuing calibration blank results were negative for sodium (CCB7 and CCB8). The associated results were qualified as required. See Section 3.0 of this report for details.

C8H080154

a. Blank Contamination (pp. 3019-3020, 3042, 3044): Manganese was detected in preparation blank associated with batch 8233156 at a concentration less than the quantitation limit. Antimony, barium, beryllium, cobalt, lead, and silver were detected in the associated 08/25/08 ICP initial and/or

calibration blanks at concentrations less than the quantitation limits. One or more of the 08/25/08 ICP initial and/or continuing calibration blank results were negative for aluminum, magnesium, sodium, chromium, and nickel (CCB1 and CCB2). The associated results were qualified as required. See Section 3.0 of this report for details.

b. Matrix Spike Recovery and RPDs (pp. 3031-3034): Sample SB46(74-76) was prepared as the MS/MSD sample for ICP batch 8233156 and mercury batch 8225044. The aluminum, calcium, iron, and manganese spikes added to SB46(74-76) MS/MSD were less than 25% of the original sample results. The spike recoveries and RPDs could not be calculated. The effect of matrix on these determinations could not be evaluated. No data qualifications were required.

c. ICP Reporting Limit Verification Standard Recovery (pp. 3040, 3086-3087): The reporting limit standard recoveries for iron and selenium were less than the lower specification limit of 70%, but greater than 50% for the 08/25/08 ICP run. All associated iron results were greater than twice the sample quantitation limits. No data qualifications were required for iron. The selenium results for associated samples SB46(74-76), SB49(8-10), SB49(22-24), SB49(28-30), and SB49(72-74) were non-detect and were qualified "UJ," as estimates, because of low bias at the reporting limit.

C8I060176

Blank Contamination (pp. 3006-3007, 3032, 3034): Silver and zinc were detected in preparation blank associated with batch 8261206 at concentrations less than the quantitation limits. Barium, chromium, cobalt, manganese and silver were detected in the associated 09/18/08 ICP initial and/or continuing calibration blanks at concentrations less than the quantitation limits. The associated 09/18/08 ICP initial and continuing calibration blank results were negative for sodium (ICV and CCB1). The associated results were qualified as required. See Section 3.0 of this report for details.

C8J100124

a. Blank Contamination (pp. 3015-3016, 3042-3047): Calcium, iron, and zinc were detected in preparation blank associated with batch 8289530 at concentrations less than the quantitation limits. Beryllium was detected in the associated 10/23/08 ICP initial and/or continuing calibration blanks at concentrations less than the quantitation limits. The associated 10/23/08 ICP initial and continuing calibration blank results were negative for sodium (CCB5 and CCB6). The 10/20/08 initial and continuing calibration blanks for mercury were negative. The associated results were qualified as required. See Section 3.0 of this report for details.

b. Matrix Spike Recovery and RPDs (p. 3025): Sample SB45(8-10) was prepared as the MS/MSD sample mercury batch 8294184. The mercury spike added to SB45(8-10) MS/MSD was less than 25% of the original sample results. The spike recoveries and RPDs could not be calculated. The effect of matrix on the mercury determinations could not be evaluated. No data qualifications were required.

C8J110134

Blank Contamination (pp. 3012-3013, 3038, 3040): Calcium, iron, and zinc were detected in preparation blank associated with batch 8290475 at concentrations less than the quantitation limits. Beryllium was detected in the associated 10/17/08 ICP initial and continuing calibration blanks at concentrations less than the quantitation limits. The associated 10/17/08 ICP initial and continuing calibration blank results were negative for sodium (ICV and CCB2). The associated results were qualified as required. See Section 3.0 of this report for details.

C8J160275

a. Blank Contamination (pp. 3021-3023, 3052-3058): Silver, aluminum, barium, beryllium, calcium, cadmium, iron, magnesium, nickel, and zinc were detected in preparation blank associated with batch 8296214 at concentrations less than the quantitation limits. Mercury was detected in preparation blank associated with batch 8303021 at a concentration less than the quantitation limit. Aluminum, beryllium, cadmium, iron, silver, and zinc were detected in the associated 11/02/08 ICP initial and/or calibration blanks at concentrations less than the quantitation limits. One or more of the 11/02/08 ICP initial and/or continuing calibration blank results were negative for copper and sodium. (CCB9 and CCB10). Chromium was detected in the ICV and one or more of the 11/06/08 ICP continuing calibration blanks (CCB6 and CCB7). The associated results were qualified as required. See Section 3.0 of this report for details.

b. Matrix Spike Recovery and RPDs (pp. 3034-3038): Sample SB36(17.5-20) was prepared as the MS/MSD sample for ICP batch 8296214. The aluminum and iron spikes added to SB36(17.5-20) MS/MSD were less than 25% of the original sample results. The spike recoveries and RPDs could not be calculated. The effect of matrix on these determinations could not be evaluated. No data qualifications were required.

   The SB36(17.5-20) MS/MSD recoveries for antimony were less than the lower advisory limit of 75%, but greater than 30%. The positive and non-detect antimony results for associated samples SB36(17.5-20), SB36(32.5-35), SB37(11-12), SB37(57.6-60), SB32(20-22.5), and SB32(42-47.5) were qualified "J-" and "UJ," as estimates, because of matrix effects.

c. ICP Serial Dilution (p. 3065): Sample SB36(17.5-20) was analyzed as the ICP serial dilution sample. The percent difference for zinc was greater than the specification limit of 10%. The zinc results for associated samples SB36(17.5-20), SB36(32.5-35), SB37(11-12), SB37(57.6-60), SB32(20-22.5), and SB32(42-47.5) were positive and were qualified "J," as estimated concentrations, because of physical/chemical matrix interference.

.

C8J220183

a. Blank Contamination (pp. 3021-3023, 3048, 3050-3051): Beryllium, cadmium, silver, and zinc were detected in preparation blank associated with batch 8303105 at concentrations less than the quantitation limits. Beryllium, thallium, and zinc were detected in the associated 10/31/08 ICP initial and/or continuing calibration blanks at concentrations less than the quantitation limits (CCB7 and CCB8). The 10/31/08 ICP initial and continuing calibration blank results were negative for sodium. The associated results were qualified as required. See Section 3.0 of this report for details.

b. ICP Reporting Limit Verification Standard Recovery (pp. 3046): The reporting limit standard recovery for selenium was greater than the upper specification limit of 130% for the 10/30-31/08 ICP run. The selenium results for associated samples were non-detect. No data qualifications were required in response to the high bias at the reporting limit.

C8J290111

Blank Contamination (pp. 3030-3032, 3058, 3060-3061): Beryllium, calcium, iron, and zinc were detected in the preparation blank associated with batch 8306097 at concentrations less than the quantitation limits. Beryllium, chromium, selenium, and zinc were detected in the associated 11/06/08 ICP initial and/or continuing calibration blanks at concentrations less than the quantitation limits (CCB9 and CCB10). The 11/06/08 ICP initial and continuing calibration blank results were negative for sodium, CCB9 was negative for cadmium. The associated results were qualified as required. See Section 3.0 of this report for details.

C8K010195

Blank Contamination (pp. 3012-3014, 3038, 3040): Zinc was detected in the preparation blank associated with batch 8316240 at a concentration less than the quantitation limit. The 11/12/08 ICP initial and continuing calibration blank results were negative for sodium. The associated results were qualified as required. See Section 3.0 of this report for details.

C8K040347

Blank Contamination (pp. 3015-3017, 3041, 3043): Chromium and zinc were detected in preparation blank associated with batch 8317212 at concentrations less than the quantitation limits. Beryllium was detected in the associated 11/14/08 ICP initial and continuing calibration blanks at concentrations less than the quantitation limits (CCB1 and CCB2). The 11/14/08 ICP initial and continuing calibration blank results were negative for sodium. The associated results were qualified as required. See Section 3.0 of this report for details.

C8K070273

a. Blank Contamination (pp. 3018-3020, 3043, 3045-3046): Chromium, iron, nickel, vanadium, and zinc were detected in preparation blank associated with batch 8318216 at concentrations less than the quantitation limits. Beryllium, calcium, chromium, and zinc were detected in the associated 11/23/08 ICP initial and/or calibration blanks at concentrations less than the quantitation limits (CCB2 – CCB5). The 11/23/08 ICP initial and continuing calibration blank results were negative for sodium. The associated results were qualified as required. See Section 3.0 of this report for details.

b. Matrix Spike Recovery and RPDs (pp. 3031-3034): Sample SB44(52.5-55) was prepared as the MS/MSD sample for ICP batch 8318216. The aluminum, calcium, and iron spikes added to SB44(52.5-55) MS/MSD were less than 25% of the original sample results. The spike recoveries and RPDs could not be calculated. The effect of matrix on these determinations could not be evaluated. No data qualifications were required.

c. ICP Serial Dilution (p. 3051): Sample SB44(52.5-55) was analyzed as the ICP serial dilution sample. The percent difference for zinc was greater than the specification limit of 10%. The zinc results for associated samples SB47(18-20.5), SB47(38-40), SB44(38-40), SB440(38-40), and SB44(52.5-55) were positive and were qualified "J," as estimated concentrations, because of physical/chemical matrix interference.

d. Field Duplicate Precision (pp. 88-93): Sample SB440(38-40) was the field duplicate of sample SB440(38-40). The RPD between the calcium results was greater than the advisory limit of 50%. The calcium results for samples SB47(18-20.5), SB47(38-40), SB44(38-40), SB440(38-40), and SB44(52.5-55) were positive and were qualified "J," as estimated concentrations, because of field sampling/laboratory imprecision and/or sample heterogeneity. See Section 5.0 for details.

C8L110357

a. . Blank Contamination (pp. 3027-3029, 3055, 3057-3059): Beryllium and zinc were detected in preparation blank associated with batch 8347504 at concentrations less than the quantitation limits. Beryllium, selenium, and zinc were detected in the associated 12/23/08 ICP initial and/or calibration blanks at concentrations less than the quantitation limits (CCB10 – CCB12). The 12/23/08 ICP initial and continuing calibration blank results were negative for sodium. The associated results were qualified as required. See Section 3.0 of this report for details.

b. Matrix Spike Recovery and RPDs (pp. 3042-3045): Sample SB59(15-16) was prepared as the MS/MSD sample for ICP batch 8347504. The aluminum and iron spikes added to SB59(15-16) MS/MSD were less than 25% of the original sample results. The spike recoveries and RPDs could not be calculated. The effect of matrix on these determinations could not be evaluated. No data qualifications were required.

c. ICP Serial Dilution (p. 3064): Sample SB59(15-16) was analyzed as the ICP serial dilution sample. The percent difference for zinc was greater than the specification limit of 10%. The zinc results for associated samples SB27(23-23.5), SB27(35-36), SB53(25-26), SB54(11-12), SB56(11-12), SB57(11-12), SB59(15-16), and SB59(23-24) were positive and were qualified "J," as estimated concentrations, because of physical/chemical matrix interference.

C8L100288

Blank Contamination (pp. 3030-3031, 3064, 3066-3068): Calcium and zinc were detected in preparation blank associated with batch 8346399 at concentrations less than the quantitation limits. Barium, beryllium, calcium, cobalt, iron, manganese, nickel, and thallium were detected in the associated 12/27/08 ICP initial and/or calibration blanks at concentrations less than the quantitation limits (CCB1 – CCB3). The 12/27/08 ICP initial and continuing calibration blank results were negative for sodium. The associated results were qualified as required. See Section 3.0 of this report for details.

C8L110371

a. . Blank Contamination (pp. 3033-3035, 3063-3064, 3066-3068): Aluminum, barium, beryllium, calcium, and zinc were detected in preparation blank associated with batch 8351421 at concentrations less than the quantitation limits. Aluminum, barium, beryllium, and thallium were detected in the associated 12/28/08 ICP initial and/or calibration blanks at concentrations less than the quantitation limits (CCB3 – CCB7). The 12/28/08 and 12/30/08 ICP initial and continuing calibration blank results were negative for sodium. The associated results were qualified as required. See Section 3.0 of this report for details.

b. Matrix Spike Recovery and RPDs (pp. 3048-3051): Sample MW-12 was prepared as the MS/MSD sample for ICP batch 8351421. The manganese and iron spikes added to MW-12 MS/MSD were less than 25% of the original sample results. The spike recoveries and RPDs could not be calculated. The effect of matrix on these determinations could not be evaluated. No data qualifications were required.

   The MW-12 MS/MSD recoveries for aluminum were greater than the upper advisory limit of 125% The positive aluminum results for associated samples MW-12, MW-7D, MW-1600D, and MW-16D were greater than the quantitation limits and were qualified "J+," as estimated concentrations, biased high because of matrix effects.

c. ICP Serial Dilution (p. 3075): Sample MW-12 was analyzed as the ICP serial dilution sample. The percent difference for aluminum was greater than the specification limit of 10%. The positive aluminum results for associated samples MW-12, MW-7D, MW-1600D and MW-16D were greater than the quantitation limits and were qualified "J," as estimated concentrations, because of physical/chemical matrix interference.

C8L120342

Blank Contamination (pp. 3027-3029, 3056-3057, 3059-3062): Beryllium, calcium, and zinc were detected in preparation blank associated with batch 8351456 at concentrations less than the quantitation limits. The 12/31/08 and 01/02/09 ICP initial and continuing calibration blank results were negative for sodium. The

12/31/08 ICP continuing calibration blanks (CCB3) results were negative for cobalt. The associated results were qualified as required. See Section 3.0 of this report for details.

4.0 Total Cyanide

C8G160152

Matrix Spike Recovery and RPDs (p. 4006): Sample TP12(5)W(8-8.5) was prepared as the MS/MSD sample for QC batch 8204169. The total cyanide spike added to TP12(5)W(8-8.5) MS/MSD was less than 25% of the original sample result. The spike recoveries and RPD could not be calculated. No data qualifications were required.

C8G220214

No data quality issues were noted. No data qualifications were required.

C8G260118

Matrix Spike Recovery and RPDs (p. 4006): Sample SB46(8-10) was prepared as the MS/MSD sample for QC batch 8210160. The spike recoveries for total cyanide were greater than the upper advisory limit. No post-distillation spike was performed. The positive total cyanide result for sample SB46(8-10) was qualified "J+," as an estimated concentration biased high because of matrix effects.

C8H080154

Blank Contamination (p. 4004): Total cyanide was detected in the method blank associated with QC batch 8225208 at an estimated concentration of 0.27 mg/Kg. The positive total cyanide results for samples SB46(74-76), SB49(22-24), SB49(28-30) and SB49(72-74) were less than five times the blank level and less than the reporting limits and were qualified "U," as undetected at the reporting limits, because of laboratory contamination. The "J" flag appended to the positive cyanide result for sample SB49(8-10) was removed as unnecessary by the validator because the result was greater than five times the blank level.

C8I060176

No data quality issues were noted. No data qualifications were required.

C8J100124

Matrix Spike Recovery and RPDs (p. 4006): Sample SB45(20-22) was prepared as the MS/MSD sample for QC batch 8285042. The MS recovery was just below the lower advisory limit of 75%, at 73%. The MSD and RPD were within the advisory limits. No data qualifications were required based on professional judgment.

C8J110134

No data quality issues were noted. No data qualifications were required.

C8J160275

No data quality issues were noted. No data qualifications were required.

C8J220183

Blank Contamination (p. 4004): Total cyanide was detected in the method blank associated with QC batch 8301372 at an estimated concentration of 0.37 mg/Kg. The positive total cyanide results for sample

SB39(32.5-35) was greater than five times the blank level. The "J" flag appended to the positive cyanide result for sample SB39(32.5-35) was removed as unnecessary by the validator because the result was greater than five times the blank level.

C8J290111

No data quality issues were noted. No data qualifications were required.

C8K010195

a. Blank Contamination (p. 4004): Total cyanide was detected in the method blank associated with QC batch 8316143 at an estimated concentration of 0.38 mg/Kg. The positive total cyanide result for sample SB48(27.5-30) was less than five times the blank level and was qualified "U," as undetected, because of laboratory contamination. The "J" flag appended to the positive cyanide result for sample SB48(9-10) was removed as unnecessary by the validator because the result was greater than five times the blank level.

b. Matrix Spike Recovery and RPDs (p. 4006): Sample SB48(9-10) was prepared as the MS/MSD sample for QC batch 8316143. The spike recoveries for total cyanide were greater than the upper advisory limit. The matrix spikes did not improve upon reanalysis of the sample and MS/MSD on a different day. The reanalysis was performed three days outside the USEPA 14-day holding time and so the reanalysis results were not reported. No post-distillation spike was performed. The original positive total cyanide result for sample SB48(9-10) was qualified "J+," as an estimated concentration biased high because of matrix effects.

C8K040347

a. Blank Contamination (p. 4004): Total cyanide was detected in the method blank associated with QC batch 8316143 at an estimated concentration of 0.38 mg/Kg. The positive total cyanide results for samples SB35(40-41.5) and SB35(45-47.5) were less than five times the blank level and were qualified "U," as undetected, because of laboratory contamination. The positive total cyanide result for sample SB43(40-42.5) was less than the reporting limit and was qualified "U," as undetected at the reporting limit, because of laboratory contamination.

b. Matrix Spike Recovery and RPDs (p. 4006): Sample SB48(9-10) was prepared as the MS/MSD sample for QC batch 8316143. The spike recoveries for total cyanide were greater than the upper advisory limit. No post-distillation spike was performed. The positive total cyanide results within this SDG were qualified "U," as undetected, because of method blank contamination. No further data qualifications were required.

C8K070273

Blank Contamination (p. 4004): Total cyanide was detected in the method blank associated with QC batch 8316146 at an estimated concentration of 0.25 mg/Kg. The positive total cyanide results for samples SB47(18-20.5) and SB47(38-40) were less than five times the blank level and were qualified "U," as undetected, because of laboratory contamination.

C8L110357

No data quality issues were noted. No data qualifications were required.

Aqueous Sample SDGs: C8L100288, C8L110371, C8L120342

No data quality issues were noted. No data qualifications were required.

5.0 Field Duplicate Comparisons

The samples listed in Table 2 were the primary and field duplicate samples collected for this sampling event.

Table 2 – Field Duplicates
National Grid/ Clinton Street, Schenectady, NY 2008 Soil and Groundwater Samples

Primary Sample	Field Duplicates	Matrix
SB30(41.5-43.5)	SB300(41.5-43.5)	Soil
SB44(38-40)	SB440(38-40)	Soil
MW-16D	MW-1600D	Groundwater
MW-14	MW-1400	Groundwater

The results for the primary and field duplicate samples were non-detects, with exception to those listed in Tables 2A through 2D below. All RPDs were less than the maximum advisory limit of 50% for soils and 30% for aqueous samples or the difference criteria was met for all analytes except for those results listed below in bolded text. The bolded results were qualified "J/UJ," as estimates, as estimates, because of field sampling/laboratory imprecision and/or sample heterogeneity.

Table 2A – Field Duplicate Comparison
National Grid/ Clinton Street, Schenectady, NY 2008 Soil and Groundwater Samples

Parameter	SB30(41.5-43.5)		SB300(41.5-43.5)		RPD (%)
Ethylbenzene	3200	µg/Kg	3300	µg/Kg	3
Isopropylbenzene	14000	µg/Kg	13000	µg/Kg	7
Methylcyclohexane	560	µg/Kg	430	µg/Kg	26
1,2,4-Trichlorobenzene	980 J	µg/Kg	1500 U	µg/Kg	NC*
Xylenes (total)	64000	µg/Kg	62000	µg/Kg	3
Toluene	300 J	µg/Kg	280 J	µg/Kg	7
1,1'-Biphenyl	85000	µg/Kg	59000	µg/Kg	36
Carbazole	2100	µg/Kg	1200 J	µg/Kg	55*
Naphthalene	490000	µg/Kg	330000	µg/Kg	39
2-Methylnaphthalene	450000	µg/Kg	310000	µg/Kg	37
Acenaphthylene	290000	µg/Kg	220000	µg/Kg	27
Acenaphthene	62000	µg/Kg	44000	µg/Kg	34

NC: The RPD could not be calculated.

*: The difference between the primary and the field duplicate results was less than the reporting limit for results up to five times the reporting limit. Variation of this magnitude is acceptable.

6.0 Notes

Sample Mislabeled (C8J100124 p. 7): Sample SB4(20-22) was inadvertently mislabeled on the chain of custody and sample jars. The correct sample identification is SB41(20-22).

Positive organic results less than the reporting limit, but greater than the method detection limit (MDL) were qualified "J," as estimated concentrations, due to increased uncertainty near the detection limit. The "J" qualifiers were maintained in the data validation.

Positive inorganic results less than the reporting limit, but greater than the MDL were flagged with a "B," to indicate an estimated concentration, due to increased uncertainty near the detection limit. The "B" flags were changed to "J" qualifiers by the validator.

Matrix spike and matrix spike duplicates, laboratory duplicates, and ICP serial dilutions that were performed on non-project samples were not evaluated because matrix similarity to project samples could not be assumed.

For trace metals determinations, the majority of data qualifications were in response to blank contamination. The following table summarizes the criteria for evaluation of blanks. This criteria apply to any blank associated with the samples, (e.g., method preparation blank [PB], initial and continuing calibration blanks [ICB/CCB]). If problems with any blank exist, all data were evaluated to determine if there was an inherent variability in the data, or if the problem was an isolated occurrence not affecting the samples. Data qualification action was based on the blank having the highest contaminant concentration and was applied in the following order.

- For PB nonconformance, action was applied to all samples in the analytical batch.
- For ICB nonconformance, action was applied to all samples in the analytical sequence.
- For CCB nonconformance, action was applied to samples analyzed between the previous in-control CCB and the subsequent in-control CCB.

Blank Type	Blank Result	Sample Result	Action for Samples
ICB/CCB (Positive)	≥ IDL/MDL but ≤ QL	Non-detect	No action
		≥ IDL/MDL but ≤ QL	Qualify as non-detect (U) at the QL
		> QL	Use AECOM professional judgment (see below [1])
	>QL	≥ IDL/MDL but ≤ QL	Qualify as non-detect (U) at the QL
		> QL but < ICB/CCB Result	Qualify result as unusable ®
		>ICB/CCB but <10x the ICB/CCB result	Qualify as estimated (J)
		≥ 10x ICB/CCB	No action is taken based on AECOM professional judgment
ICB/CCB (Negative)	< (-QL)	Non-detect	Use AECOM professional judgment and qualify as estimated (UJ)
		≥ IDL/MDL but < QL	Use AECOM professional judgment and qualify results < QL as estimated (J)
		< 10x QL	Qualify results ≥ QL but <10x QL as estimated (J)
		≥ 10x QL	No action is taken based on AECOM professional judgment
	< -IDL/MDL and ≥ -QL	Non-detect	Use AECOM professional judgment, qualify as estimated (UJ)
		>IDL/MDL and <5x |neg. blank|	Use AECOM professional judgment, qualify results as estimated (J)

Blank Type	Blank Result	Sample Result	Action for Samples
PB (Positive)	> QL	≥ IDL/MDL but ≤ QL	Qualify as non-detect (U) at the QL
		>QL but < Blank Result	Qualify results as unusable (R)
		> Blank Result but < 10x Blank Result	Qualify results as estimated (J)
		≥ 10x Blank Result	No action is taken based on AECOM professional judgment
	≥ IDL/MDL but ≤ QL	Non-detect	No action is taken based on AECOM professional judgment
		≥ IDL/MDL but ≤ QL	Qualify as non-detect (U) at the QL
		> QL	Use AECOM professional judgment (see below [1])
PB (Negative)	< (-QL)	< 10x QL	Qualify positive results <10x QL as estimated (J) and non-detects as estimated (UJ)
		≥ 10x QL	No action is taken based on AECOM professional judgment
	< -IDL/MDL and ≥ -QL	Non-detect	Use AECOM professional judgment, qualify as estimated (UJ)
		>IDL/MDL and <5x |neg. blank|	Use AECOM professional judgment, qualify results as estimated (J)

[1] Establish an action level (AL) at 5x the blank contamination. If sample result is <AL, qualify the reported result with a "U".

Appendix A

Glossary of Data Qualifier Codes

Glossary of Data Qualifier Codes

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximated and may be inaccurate or imprecise.

J The analyte was positively identified. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ (Inorganics) The result is an estimated quantity, likely to be biased high. The associated numerical value is the approximate concentration of the analyte in the sample.

J- (Inorganics) The result is an estimated quantity, likely to be biased low. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in the ability to meet quality control criteria. The presence or absence of the analyte cannot be verified.

N (Organics) The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.

NJ (Organics) The analysis indicates the presence of an analyte that has been tentatively identified and the associated numerical value represents its approximate concentration.

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8G160152

Sample Receiving:
Samples were received at TestAmerica's Pittsburgh laboratory on July 16, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
There were no problems associated with the analysis.

GC/MS Semivolatiles:
Sample TP10(29)E(8-8.5) was analyzed at a dilution as the extract was too viscous to be analyzed undiluted.

Due to the concentration of target compounds sample TP12(5)W(8-8.5) was analyzed at a dilution.

Metals:
The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

For the matrix spike and matrix spike duplicate of sample TP12(5)W(8-8.5), aluminum, calcium and iron recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

The matrix spike duplicate of sample TP12(5)W(8-8.5) was outside the control limits for lead. The RPD between the spikes and the recovery of the laboratory control sample were within the control limits.

General Chemistry:
Sample TP12(5)W(8-8.5) was analyzed at a dilution for total cyanide.

For the matrix spike and matrix spike duplicate of sample TP12(5)W(8-8.5), total cyanide recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

Cooler Receipt Form
TestAmerica Pittsburgh

Client: ENSR Corp Project: _____ Quote: 72910

Cooler Rec'd & Opened for Temp. Check on: 7/16/08

Coolers Opened and Unpacked on: 7/16/08 By: PRF
(Signature)

TestAmerica Pittsburgh Lot Number: C8G160152

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?		✓	
	If YES, how many and where? Quantity __ Location			
	Were signatures and date correct?			✓
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?	✓		
	If YES, what type? Bubble Wrap			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?			✓
9.	Were all bottles sealed in separate plastic bags?		✓	
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?			
14.	Were all VOA vials checked for the presence of air bubbles?			✓
15.	Was a sufficient amount of sample sent in each bottle?	✓		

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

NOTE(S):

Calculations are performed before rounding to avoid round-off errors in calculated results.

Results and reporting limits have been adjusted for dry weight.

NC The recovery and/or RPD were not calculated.

N Spiked analyte recovery is outside stated control limits.

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8G220214

Sample Receiving:
Samples were received at TestAmerica's Pittsburgh laboratory on July 22, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
There were no problems associated with the analysis.

GC/MS Semivolatiles:
Due to the concentration of target compounds sample SB50 (14.5-15) was analyzed at a dilution.

Metals:
The method blank had zinc detected at a concentration between the MDL and the reporting limit. The result was flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

For the matrix spike and matrix spike duplicate of sample SB50(14.5-15), mercury, aluminum, and iron recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
There were no problems associated with the analysis.

C8G220214

Coolers Opened and Unpacked on: 7.22-08 By: _____ (Signature)

TestAmerica Pittsburgh Lot Number: C8G220214

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?	✓		
	If YES, how many and where? Quantity 1 Location Front			
	Were signatures and date correct?	✓		
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?	✓		
	If YES, what type? Bubble Bag			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?			✓
9.	Were all bottles sealed in separate plastic bags?	✓		
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?			✓
15.	Was a sufficient amount of sample sent in each bottle?	✓		

16. Samples received by: FEDEX UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8G260118

Sample Receiving:
Samples were received at TestAmerica's Pittsburgh laboratory on July 26, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds sample SB46(8-10) was analyzed as a medium level, methanol dilution.

GC/MS Semivolatiles:
Due to the concentration of target compounds sample SB46(8-10) was analyzed at a dilution.

Metals:
The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:
For the matrix spike and matrix spike duplicate of sample SB46(8-10), total cyanide recoveries and the RPD between the spikes were above the control limits. The recovery of the laboratory control sample was within the control limits.

C8G260118

* Relative percent difference (RPD) is outside stated control limits.

N Spiked analyte recovery is outside stated control limits.

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8H080154

Sample Receiving:
Samples were received at TestAmerica's Pittsburgh laboratory on August 7, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds samples SB49(22-24) and SB49(28-30) were analyzed as medium level, methanol dilutions.

GC/MS Semivolatiles:
There were no problems associated with the analysis.

Metals:
The method blank had manganese detected at a concentration between the MDL and the reporting limit. The result was flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

For the matrix spike and matrix spike duplicate of sample SB46(74-76), aluminum, calcium, iron, and manganese recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
The method blank had cyanide detected at a concentration between the MDL and the reporting limit. The result was flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

Cooler Receipt Form
TestAmerica Pittsburgh

Client: ENSR Project: _____ Quote: 72910

Cooler Rec'd & Opened for Temp. Check on: 8/7/08

Coolers Opened and Unpacked on: 8/8/08 By: PRF (Signature)

TestAmerica Pittsburgh Lot Number: C8H080154

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?		✓	
	If YES, how many and where? Quantity __ Location			✓
	Were signatures and date correct?			
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?			
	If YES, what type? Bubble Wrap			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?			✓
9.	Were all bottles sealed in separate plastic bags?		✓	
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?			✓
15.	Was a sufficient amount of sample sent in each bottle?	✓		

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8I060176

Sample Receiving:
One sample was received at TestAmerica's Pittsburgh laboratory on September 5, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds detected, sample SB51(23.5-25.5) was analyzed as medium level, methanol dilution.

GC/MS Semivolatiles:
There were no problems associated with the analysis.

Metals:
The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:
There were no problems associated with the analysis.

Cooler Number	Temperature*	Thermometer ID
1	2.6	5

*Acceptable Temperature Range: 4°C ± 2°C

Sample	Lot Number**

**Please use an asterisk if bottle lot number was covered by the label

If samples required preservation in the laboratory, the following lot number(s) was/were used:

Nitric Acid _____ Hydrochloric Acid _____

Sulfuric Acid _____ Sodium Hydroxide _____

TestAmerica Pittsburgh

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8J100124

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on October 9, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds detected, sample SB45(8-10) was analyzed as medium level, methanol dilution.

The method blank for batch 8291500 had methylene chloride detected between the MDL and the reporting limit. The result was flagged with a "J" qualifier. Any sample that had this compound detected had the result flagged with a "B' qualifier.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, sample SB45(8-10) was analyzed at a 200x and a 4000X dilution. Both analyses had the surrogates diluted out. Both sets of data were reported.

Due to the concentration of target compounds detected, sample SB41(15-17) was analyzed at a 5X dilution.

Metals:
Sample SB45(8-10) contained mercury over the instrument's calibration range and required dilution.

The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

For the matrix spike and matrix spike duplicate of sample SB45(8-10), mercury recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?			
	If YES, how many and where? Quantity 1 Location front			
	Were signatures and date correct?			
2.	Were custody papers included inside the cooler?			
3.	Were custody papers properly filled out (ink, signed, match labels)?			
4.	Did you sign the custody papers in the appropriate place?			
5.	Was shippers packing slip attached to this form?			
6.	Were packing materials used?			
	If YES, what type? Bubble Wrap			
7.	Were the samples received within the acceptable temperature range?			
8.	Were the samples appropriately preserved?			
9.	Were all bottles sealed in separate plastic bags?			
10.	Did all bottles arrive in good condition (unbroken)?			
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?			
12.	Did all bottle labels and/or tags agree with custody papers?			
13.	Were correct bottles used for tests indicated?			
14.	Were all VOA vials checked for the presence of air bubbles?			
15.	Was a sufficient amount of sample sent in each bottle?			

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

Cooler Receipt Form

TestAmerica Pittsburgh

P: Preserved
UP: Unpreserved

Sample ID	TMET PH<2	DMET PH<2	HG PH<2	NUT(1) PH<2	CN PH ≥12	OG TPHC PH<2	PHEN PH<2	SULF PH ≥12	TOC PH<2	TOX PH<2	VOA P/UP	hrdnss PH<2			

(1) "NUT" could include sample bottles for ammonia, chemical oxygen demand, nitrate/nitrite, TKN, or total phosphorus

Comments: _____

Cooler Number	Temperature*	Thermometer ID
1	2.1	3

*Acceptable Temperature Range: 4°C ± 2°C

Sample	Lot Number**

**Please use an asterisk if bottle lot number was covered by the label

If samples required preservation in the laboratory, the following lot number(s) was/were used:

Nitric Acid _____ Hydrochloric Acid _____

Sulfuric Acid _____ Sodium Hydroxide _____

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8J110134

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on October 11, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds detected, sample SB36(10-12) was analyzed as medium level, methanol dilution.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, sample SB36(10-12) was analyzed at a dilution. The surrogates were diluted out.

Metals:
The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:
There were no problems associated with the analysis.

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?		/	
	If YES, how many and where? Quantity __ Location			
	Were signatures and date correct?			
2.	Were custody papers included inside the cooler?	/		
3.	Were custody papers properly filled out (ink, signed, match labels)?	/		
4.	Did you sign the custody papers in the appropriate place?	/		
5.	Was shippers packing slip attached to this form?	/		
6.	Were packing materials used?	/		
	If YES, what type? BUBBLE WRAP			
7.	Were the samples received within the acceptable temperature range?	/		
8.	Were the samples appropriately preserved?	/		
9.	Were all bottles sealed in separate plastic bags?	/		
10.	Did all bottles arrive in good condition (unbroken)?	/		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	/		
12.	Did all bottle labels and/or tags agree with custody papers?	/		
13.	Were correct bottles used for tests indicated?	/		
14.	Were all VOA vials checked for the presence of air bubbles?			/
15.	Was a sufficient amount of sample sent in each bottle?	/

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8J160275

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on October 16, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds detected, several samples were analyzed at a dilution.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, several samples were analyzed at a dilution.

Several samples had the surrogates were diluted out.

Samples SB36(17.5-20) and SB37(11-12) had the surrogate recovery of 2,4,6-tribromophenol recover below control limits. As theses samples were analyzed at a dilution, the results were reported

Metals:
The serial dilution of sample SB36(17.5-20) was outside of the control limits for zinc. The result was flagged with an "E" qualifier.

The method blanks had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

For the matrix spike and matrix spike duplicate of sample SB36(17.5-20), aluminum and iron recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

The matrix spikes of sample SB36(17.5-20) recovered below the control limits for antimony. The RPD between the spikes and the recovery of the laboratory control sample were within the control limits.

General Chemistry:
There were no problems associated with the analysis.

Client: ENSR Project: _____ Quote: 72910

Cooler Rec'd & Opened for Temp. Check on: 10/16/08

Coolers Opened and Unpacked on: 10/16/08 By: PRF (Signature)

TestAmerica Pittsburgh Lot Number: C8J160275

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?			
	If YES, how many and where? Quantity __ Location			
	Were signatures and date correct?			
2.	Were custody papers included inside the cooler?			
3.	Were custody papers properly filled out (ink, signed, match labels)?			
4.	Did you sign the custody papers in the appropriate place?			
5.	Was shippers packing slip attached to this form?			
6.	Were packing materials used?			
	If YES, what type? Bubble Wrap			
7.	Were the samples received within the acceptable temperature range?			
8.	Were the samples appropriately preserved?			
9.	Were all bottles sealed in separate plastic bags?			
10.	Did all bottles arrive in good condition (unbroken)?			
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?			
12.	Did all bottle labels and/or tags agree with custody papers?			
13.	Were correct bottles used for tests indicated?			
14.	Were all VOA vials checked for the presence of air bubbles?			
15.	Was a sufficient amount of sample sent in each bottle?			

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8J220183

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on October 21, 2008. The cooler was received within the proper temperature range.

The chain of custody listed sample SB31(47.5-50). The 8 oz jar with a matching sampling time for this sample was labeled SB31(52.5-55). As discueed with the client, the sample jar was incorrectly labeled. The ID was SB31(47.4-50).

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds detected, several samples were analyzed as medium level, methanol dilutions. Some required subsequent dilution.

The method blank for batch 8303599 had methylene chloride detected between the MDL and the reporting limit. The result was flagged with a "J" qualifier. Any sample in this batch that had this compound detected had the result flagged with a "B" qualifier.

The method blank for batch 8304449 had 1,2,4-trichlorobenzene detected between the MDL and the reporting limit. The result was flagged with a "J" qualifier. Any sample in this batch that had this compound detected had the result flagged with a "B" qualifier.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, several samples were analyzed at a dilution.

Samples SB38(22.5-25) (5X dilution) and SB39(32.5-35) (10X dilution) had surrogate 2,4,6-tribromophenol recover below the control limits. As all surrogates recoveries were within the control limits n the lesser dilution analyses, the results were reported.

Metals:
The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:
The method blank for batch 8301732 had total cyanide detected at a concentration between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

Cooler Receipt Form

TestAmerica Pittsburgh

Client: ENSR Project: _____ Quote: 72910

Cooler Rec'd & Opened for Temp. Check on: 10/21/08

Coolers Opened and Unpacked on: 10/22/08 By: PLF (Signature)

TestAmerica Pittsburgh Lot Number: C8J220183

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?			✓
	If YES, how many and where? Quantity __ Location			
	Were signatures and date correct?			
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?	✓		
	If YES, what type? Bubble Wrap			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?			✓
9.	Were all bottles sealed in separate plastic bags?			✓
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?		✓	
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles? PLF 10/21/08			✓
15.	Was a sufficient amount of sample sent in each bottle?			✓

16. Samples received by: FEDEX UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

Cooler Receipt Form

TestAmerica Pittsburgh

P: Preserved
UP: Unpreserved

Sample ID	TMET PH<2	DMET PH<2	HG PH<2	NUT(1) PH<2	CN PH ≥12	OG TPHC PH<2	PHEN PH<2	SULF PH ≥12	TOC PH<2	TOX PH<2	VOA P/UP	hrdnss PH<2			

(1) "NUT" could include sample bottles for ammonia, chemical oxygen demand, nitrate/nitrite, TKN, or total phosphorus

Comments: _____

Cooler Number	Temperature*	Thermometer ID
1	2.3	7

*Acceptable Temperature Range: 4°C ± 2°C

Sample	Lot Number**

**Please use an asterisk if bottle lot number was covered by the label

If samples required preservation in the laboratory, the following lot number(s) was/were used:

Nitric Acid _____ Hydrochloric Acid _____

Sulfuric Acid _____ Sodium Hydroxide _____

Work Order No.: _____

Condition Upon Receipt Variance Report
TestAmerica Pittsburgh Laboratory

Client: ENSR
Date: 10/22/08
Project No.: _____
Initiated by: RAF
Analysis Requested: See Below
RFA/COC: _____
Client Sample Numbers Affected: _____

Condition/Variance (Check all that apply):

1. ☒ Not enough sample received for proper analysis. Received approx. _____
2. ☒ Sample received broken/leaking.
3. ☒ Sample received without proper preservative.
   - ☒ Cooler temperature not within 4°C ± 2°C.
     Record temperature: _____
   - ☒ pH _____
   - ☒ other: _____
4. ☒ Sample received in improper container.
5. ☒ Sample received without proper paperwork.
6. ☒ Paperwork received without sample.
7. ☒ No sample ID on sample container.
8. ☒ Custody tape disturbed/broken/missing.
9. ☒ Sample splits performed by lab.
10. ☒ Volatile sample received with approximately _____ mm headspace.
11. ☒ Sample ID on container does not match on paperwork. Explain: See Below
12. ☒ All coolers on airbill not received with
13. ☒ Other (explain below):

Notes: The 250g jar for SB31(47.5-50) is labeled as ~~BB~~ SB31(52.5-55) The times match - sample will be logged according to the C.O.C.

Corrective Action:

☒ Client's Name: Scott Hauger — ~~Informed~~ replied verbally on: 10/29/08 By: DeL

☒ Client's Name: James Edwards — Informed in writing on: 10/23/08 By: DeL

☒ Sample(s) processed "as is" all bottles should be SB31(47.5-50)

☒ Sample(s) on hold until: _____ If released: _____

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8J290111

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on October 28, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds detected, several samples were analyzed as medium level, methanol dilutions. These samples also required subsequent dilution.

The method blank for batch 8304532 had methylene chloride detected between the MDL and the reporting limit. The result was flagged with a "J" qualifier. Any sample in this batch that had this compound detected had the result flagged with a "B" qualifier.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, several samples were analyzed at a dilution. Several samples had the surrogates diluted out.

The matrix spike and matrix spike duplicate of sample SB34(32.5-35) had recoveries above the control limits. Possibly due to the concentrations of these compounds dectected in the samples compared to the concentrations spiked. The RPDs between the spikes were within control limits.

Metals:
The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:
There were no problems associated with the analysis.

Schenectady RI

Lot # C8K010195

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on November 1, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds detected, SB48(9-10) was analyzed as a medium level, methanol dilution.

The method blank for batch 8316306 had methylene chloride detected between the MDL and the reporting limit. The result was flagged with a "J" qualifier. Any sample in this batch that had this compound detected had the result flagged with a "B" qualifier.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, SB48(9-10) was analyzed at a dilution. The surrogates were diluted out.

Metals:
The method blank had zinc detected at a concentration between the MDL and the reporting limit. The result was flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:
The method blank for batch 8316143 had cyanide detected at a concentration between the MDL and the reporting limit. The result was flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

The matrix spike and matrix spike duplicate of sample SB48(9-10) recovered significantly above the control limits for cyanide. The sample and its matrix spikes were redistilled outside of the holding time and reanalyzed. The spike recoveries were not calculated due to the concentration of cyanide detected in the sample being >4 times the concentration of spike added. Results of both analyses were reported.

C8K010195

Chain of Custody Record

SEVERN TRENT **STL**

Severn Trent Laboratories, Inc.

STL-4124 (0901)

Client: AECOM ITHACA	Project Manager: JAMES EDWARDS	Date: 10/21/08	Chain of Custody Number: 315519
Address: 1001 W. SENECA ST., SUITE 204	Telephone Number (Area Code)/Fax Number: 607-277-5716	Lab Number:	Page 1 of 1

Possible Hazard Identification
☐ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal
☐ Return To Client ☑ Disposal By Lab ☐ Archive For _____ Months (A fee may be assessed if samples are retained longer than 1 month)

Turn Around Time Required
☐ 24 Hours ☐ 48 Hours ☐ 7 Days ☐ 14 Days ☐ 21 Days ☑ Other ROUTINE

QC Requirements (Specify)

	Date	Time		Date	Time
1. Relinquished By	10/31/08	1800 FEDEX	1. Received By		
2. Relinquished By			2. Received By		
3. Relinquished By			3. Received By	11-1-8	1030

Comments

DISTRIBUTION: WHITE - Returned to Client with Report; CANARY - Stays with the Sample; PINK - Field Copy

Cooler Receipt Form

TestAmerica Pittsburgh

Client: AECOM Project: _____ Quote: 72910

Cooler Rec'd & Opened for Temp. Check on: 11/1/9

Coolers Opened and Unpacked on: 11/1/8 By: JS

TestAmerica Pittsburgh Lot Number: C8K010195 (Signature)

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?		✓	
	If YES, how many and where? Quantity __ Location			
	Were signatures and date correct?			
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?	✓		
	If YES, what type? BUBBLE BAGS			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?	✓		
9.	Were all bottles sealed in separate plastic bags?	✓		
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?		✓	✓
15.	Was a sufficient amount of sample sent in each bottle?			

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8K040347

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on November 3, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds detected, samples SB43(40-42.5) and SB35(40-41.5) were analyzed as medium level, methanol dilutions. These samples also required subsequent dilution.

The method blank for batch 8316306 had methylene chloride detected between the MDL and the reporting limit. The result was flagged with a "J" qualifier. Any sample in this batch that had this compound detected had the result flagged with a "B" qualifier.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, samples SB43(40-42.5) and SB35(40-41.5) were analyzed at a dilution. Sample SB43(40-42.5) had the surrogates diluted out.

Metals:
The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:
The method blank for batch 8316143 had total cyanide detected at a concentration between the MDL and the reporting limit. The result was flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

TestAmerica Pittsburgh Lot Number: C8K040347

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?	✓		
	If YES, how many and where? Quantity 1 Location Front			
	Were signatures and date correct?	✓		
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?	✓		
	If YES, what type? Bubble Bags			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?			✓
9.	Were all bottles sealed in separate plastic bags?	✓		
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?			✓
15.	Was a sufficient amount of sample sent in each bottle?	✓		

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: Oily Substance in cooler and all over sample SB43 (40 - 42.5)

Level 2 Review

Was contacted on _____ by _____ to resolve discrepancies.

Method : \\PITSVR06\D\chem\731.i\V102308.b\827011.m
Meth Date : 23-Oct-2008 02:43 piccolinov Quant Type: ISTD
Cal Date : 23-OCT-2008 02:14 Cal File: V1023IC7.D
Als bottle: 9
Dil Factor: 1.00000
Integrator: HP RTE Compound Sublist: padep.sub
Target Version: 4.14
Processing Host: PITSVR06

	Compounds	QUANT SIG MASS	RT	EXP RT	REL RT	RESPONSE	CONCENTRATIONS ON-COLUMN (NG)	FINAL (NG)

CASE NARRATIVE

ENSR
Schenectady RI

Lot # C8K070273

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on November 7, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of target compounds detected, several samples were analyzed as medium level, methanol dilutions. These samples also required subsequent dilution.

The method blank for batch 8316342 had methylene chloride detected between the MDL and the reporting limit. The result was flagged with a "J" qualifier. Any sample in this batch that had this compound detected had the result flagged with a "B" qualifier.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, samples SB44(38-40) and SB440(38-40) were analyzed at two dilutions. These samples had the surrogates diluted out. Both sets of data were reported for each sample.

Metals:
The serial dilution of sample SB44(52.5-55) was outside of the percent difference control limits for zinc. The result was flagged with an "E" qualifier.

The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

For the matrix spike and matrix spike duplicate of sample SB44(52.5-55), aluminum, calcium, and iron recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
The method blank for batch 8316146 had total cyanide detected at a concentration between the MDL and the reporting limit. The result was flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

Cooler Receipt Form
TestAmerica Pittsburgh

Client: AECOM / ENSR Project: _____ Quote: 72910

Cooler Rec'd & Opened for Temp. Check on: 11/7/08

Coolers Opened and Unpacked on: 11/7/08 By: PRF (Signature)

TestAmerica Pittsburgh Lot Number: C8K070273

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?	✓		
	If YES, how many and where? Quantity __ Location PRF 11/7/08			
	Were signatures and date correct?			✓
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?	✓		
	If YES, what type? Bubble Wrap			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?			✓
9.	Were all bottles sealed in separate plastic bags?		✓	
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?			✓
15.	Was a sufficient amount of sample sent in each bottle?	✓		

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

CASE NARRATIVE

AECOM
Schenectady RI

Lot # C8L110357

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on December 11, 2008. The cooler was received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the sample matrix, samples SB27(23-23.5) and SB59(15-16) were analyzed as medium level, methanol dilutions. SampleSB27(23-23.5) was analyzed at a subsequent dilution.

The method blank for batch 8352263 had methylene chloride detected between the MDL and the reporting limit. The result was flagged with a "J" qualifier. Any sample in this batch that had this compound detected had the result flagged with a "B" qualifier.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, samples SB27(23-23.5) was analyzed at two dilutions. The 100X dilution had the surrogates diluted out. Both sets of data were reported for each sample.

Metals:
The serial dilution of sample SB59(15-16) was outside of the percent difference control limits for zinc. The result was flagged with an "E" qualifier.

The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

For the matrix spike and matrix spike duplicate of sample SB59(15-16), aluminum and iron recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

General Chemistry:
There were no problems associated with the analysis.

Cooler Receipt Form
TestAmerica Pittsburgh

Client: AECOM Project: Schenectady Quote: 72910

Cooler Rec'd & Opened for Temp. Check on: 12/11/08

Coolers Opened and Unpacked on: 12/11/08 By: (Signature)

TestAmerica Pittsburgh Lot Number: C8L110357

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?	✓		
	If YES, how many and where? Quantity 1 Location LID			
	Were signatures and date correct?		✓	
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?			
6.	Were packing materials used?		✓	
	If YES, what type?			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?	✓		
9.	Were all bottles sealed in separate plastic bags?		✓	
10.	Did all bottles arrive in good condition (unbroken)?		✓	
11	Were all bottle labels complete (sample ID, preservatives, etc)?			✓
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?			✓
15.	Was a sufficient amount of sample sent in each bottle?	✓		

16. Samples received by: ~~FEDEX~~ UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: only Some samples were wrapped in Bubble Bags

Level 2 Review

Was contacted on _____ by _____ to resolve discrepancies.

E Serial dilution percent difference not within limits

Form 9 Equivalent

CASE NARRATIVE

AECOM
Schenectady RI

Lot # C8L100288

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on December 10, 2008. The coolers were received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of compounds detected, several samples were analyzed at a dilution.

GC/MS Semivolatiles:
There were no problems associated with the analysis.

Metals:
Sample MW-1 contained sodium over the instrument's linear range and required dilution.

The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:
There were no problems associated with the analysis.

10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?	✓		
15.	Was a sufficient amount of sample sent in each bottle?	✓		

16. Samples received by: (FEDEX) UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies: _____

Level 2 Review _____

Was contacted on _____ by _____ to resolve discrepancies.

Cooler Receipt Form

TestAmerica Pittsburgh

P: Preserved
UP: Unpreserved

(1) "NUT" could include sample bottles for ammonia, chemical oxygen demand, nitrate/nitrite, TKN, or total phosphorus

Comments: _____

Cooler Number	Temperature*	Thermometer ID
1	5.9	8
2	5.6	7
3	5.4	10

*Acceptable Temperature Range: 4°C ± 2°C

Sample	Lot Number**

**Please use an asterisk if bottle lot number was covered by the label

If samples required preservation in the laboratory, the following lot number(s) was/were used:

Nitric Acid _____ Hydrochloric Acid _____

Sulfuric Acid _____ Sodium Hydroxide _____

U Result is less than the MDL
B Result is between MDL and RL

Form 3 Equivalent

CASE NARRATIVE

AECOM
Schenectady RI

Lot # C8L110371

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on December 11, 2008. The coolers were received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of compounds detected, several samples were analyzed at a dilution.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, several samples were analyzed at a dilution. The 20X dilution of sample MW-12D dilution had the surrogates diluted out. Two sets of results were reported for the sample.

Metals:
The serial dilution of sample MW-12 was outside of the percent difference control limits for aluminum. The result was flagged with an "E" qualifier.

Sample MW-7, CTM-MW-1, and MW-9 contained sodium over the instrument's linear range and required dilution.

The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

For the matrix spike and matrix spike duplicate of sample MW-12, manganese, and iron recoveries were not calculated due to the concentration of analyte in the sample being >4 times the concentration of spike added.

For the matrix spike and matrix spike duplicate of sample MW-12, aluminum recovered above control limits. The RPD between the spikes and the recovery of the laboratory control sample were within the control limits.

General Chemistry:
There were no problems associated with the analysis.

Cooler Receipt Form
TestAmerica Pittsburgh

Client: ENSR Project: Schenectady Quote: 72910

Cooler Rec'd & Opened for Temp. Check on: 12/11/08

Coolers Opened and Unpacked on: 12/11/08 By: [signature] (Signature)

TestAmerica Pittsburgh Lot Number: C8L110371

		Yes	No	NA
1.	Were custody seals on the outside of the cooler?		✓	
	If YES, how many and where? Quantity __ Location			
	Were signatures and date correct?			✓
2.	Were custody papers included inside the cooler?	✓		
3.	Were custody papers properly filled out (ink, signed, match labels)?	✓		
4.	Did you sign the custody papers in the appropriate place?	✓		
5.	Was shippers packing slip attached to this form?	✓		
6.	Were packing materials used?	✓		
	If YES, what type? Bubble Bags			
7.	Were the samples received within the acceptable temperature range?	✓		
8.	Were the samples appropriately preserved?	✓		
9.	Were all bottles sealed in separate plastic bags?	✓		
10.	Did all bottles arrive in good condition (unbroken)?	✓		
11.	Were all bottle labels complete (sample ID, preservatives, etc.)?	✓		
12.	Did all bottle labels and/or tags agree with custody papers?	✓		
13.	Were correct bottles used for tests indicated?	✓		
14.	Were all VOA vials checked for the presence of air bubbles?	✓		
15.	Was a sufficient amount of sample sent in each bottle?	✓		

16. Samples received by: FEDEX UPS CLIENT DROP-OFF OTHER DHL US CARGO

Explain any discrepancies:

Level 2 Review

Was contacted on _____ by _____ to resolve discrepancies.

E Serial dilution percent difference not within limits

Form 9 Equivalent

CASE NARRATIVE

AECOM
Schenectady RI

Lot # C8L120342

Sample Receiving:
TestAmerica's Pittsburgh laboratory received samples on December 12, 2008. The coolers were received within the proper temperature range.

If project specific QC was not required for samples contained in this report and batch QC was completed on these samples, anomalous results will be discussed below.

GC/MS Volatiles:
Due to the concentration of compounds detected, several samples were analyzed at a dilution.

GC/MS Semivolatiles:
Due to the concentration of target compounds detected, several samples were analyzed at a dilution. Samples MW-8 and MW-8D had the surrogates diluted out.

Metals:
The serial dilution of sample MW-12 was outside of the percent difference control limits for aluminum. The result was flagged with an "E" qualifier.

Sample MW-8, CTM-1, and CTM-15 contained sodium over the instrument's linear range and required dilution.

The method blank had analytes detected at concentrations between the MDL and the reporting limit. The results were flagged with a "B" qualifier. Any sample associated with a method blank that had the same analyte detected had the result flagged with a "J" qualifier.

General Chemistry:
There were no problems associated with the analysis.
