Re: Former Philmar Electronics – Morrisonville, NY  
NYSDEC Project #510008

Dear Ms. Salotto,

Aztech Environmental Technologies (Aztech) has prepared this letter to outline the remedial progress and provide a status update for the former Philmar Electronics site, New York State Department of Environmental Conservation (NYSDEC) Project #510008 (**Figure 1**). The activities summarized in this correspondence were completed throughout the first and second quarter of 2016.

### **Remediation System**

Site visits were conducted on February 10, March 28, and June 16, 2016 to confirm that the remediation system was operating. During the first half of 2016, the remediation system was operating. No repairs were performed on the system during this reporting period.

A summary of the pumping rates, to date, is presented in **Table 1**. Approximately 28.7 million gallons of groundwater have been pumped through the remediation system between May 2004 and June 16, 2016. During the first half of 2016, approximately 1,294,634 gallons of water were pumped through the system.

### **Groundwater Gauging and Sampling**

Aztech surveyed the top of the groundwater monitoring well casing elevations on September 7, 2011. The top of casing elevations were surveyed relative to an arbitrary site datum of 100.00 feet using a Sokkia C3<sub>30</sub> optical level. Longitude and latitude coordinates of selected monitoring wells and sample locations were collected on this date for spatial reference. The top of casing elevations are shown on **Table 2**.

Aztech determined depth to groundwater using an electronic water level indicator graduated in 0.01 feet increments. The depth to groundwater measurements were collected from the highest point of the well casing or from a surveyed mark. Groundwater elevations collected from 2008 through April 13, 2016 are shown on Table 2.

The groundwater elevations collected on April 13, 2016 were plotted on the site map to determine groundwater flow direction and hydraulic gradient (**Figure 2**). During this groundwater gauging event, the groundwater flow direction was towards the southeast beneath the site at a hydraulic gradient of approximately 0.050 ft/ft.

Aztech collected groundwater samples on April 13, 2016 from monitoring wells MW-6, MW-7, DGC-6S, DGC-7S, DGC-8S and MW-9. The Trench and Discharge samples were also collected during this event. Groundwater was purged from the monitoring wells using dedicated, disposable bailers. The groundwater samples collected on April 13, 2016 were shipped to Test America, Inc. in Amherst, New York for volatile organic compound (VOC) analysis using Environmental Protection Agency (EPA) Method 624. A hardcopy of the laboratory analytical report is included with this document. The tabulated laboratory analytical results are included in **Table 3**. **Figure 3** shows the VOC distribution in groundwater on April 13, 2016. A summary of the groundwater analytical results are below:

- 1,2-dichloroethene (total) was detected above the NYSDEC groundwater standard of 5.0 micrograms per liter ( $\mu\text{g/l}$ ) in monitoring well DGC-8S at 12  $\mu\text{g/l}$ . All other sampling locations reported either non-detect results or concentrations below the NYSDEC groundwater standard.
- Trichloroethene (TCE) was detected above the NYSDEC standard of 5.0  $\mu\text{g/l}$  in monitoring well DGC-8S at 7.8  $\mu\text{g/l}$ . All other sampling locations either reported non-detect TCE results or concentrations below the NYSDEC groundwater standard.
- Vinyl chloride was detected at the NYSDEC standard of 2.0  $\mu\text{g/l}$  in monitoring well DGC-7s. All other sampling locations either reported non-detect results or concentrations below the NYSDEC groundwater standard.
- Chlorobenzene was not detected above the groundwater standard of 5.0  $\mu\text{g/l}$  in any of the sampling locations on April 13, 2016.
- The remaining VOCs were either not detected or were below the NYSDEC groundwater standards in the sampled monitoring wells on April 13, 2016.

Based on the groundwater analytical results, it appears that TCE is effectively breaking down to its daughter products 1,2-dichloroethene and vinyl chloride. Additionally, the highest concentrations of these compounds appear to be located hydraulically downgradient of the groundwater recharge gallery (DGC-8S & MW-9).

Groundwater field measurements consisting of temperature; specific conductance; dissolved oxygen; pH; and, oxidation-reduction potential (ORP) were collected on April 13, 2016. These measurements are presented on **Table 4**. Based on the measurements collected on April 13, 2016, it appears the groundwater is generally anaerobic and natural attenuation of the contaminant plume is occurring at a slow rate.

## Recommendations

Aztech recommends that the semi-annual groundwater sampling events and bi-monthly (once every two months) system operation and maintenance visits continue until the concentrations of trichloroethene and 1,2-dichloroethene meet the ambient drinking water standards. The next system check will be completed in August 2016, and the next groundwater sampling event will be performed in October 2016.

If you have any questions, please call us at (518) 885-5383.

Sincerely,  
**Aztech Technologies, Inc.**

All values reported in parts per billion (ug/L)

Volatile Organic Compounds analyzed by USEPA Method 624

TOC = Total Organic Carbon

TOC analyzed by EPA Method 415.1

MtBE = Methyl Tertiary Butyl Ether

Metabolic Acids include Acetic Acid, Butyric Acid, Lactic Acid, Propionic Acid and Pyruvic Acid

**Bold** values exceed NYSDEC groundwater standards

Underlined = Cis-1,2-Dichloroethene result reflects "1,2-Dichloroethene, Total"

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximated value

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

TestAmerica Job ID: 480-98343-1

### Qualifiers

#### GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Case Narrative

Client: New York State D.E.C.

TestAmerica Job ID: 480-98343-1

## Job ID: 480-98343-1

Laboratory: TestAmerica Buffalo

### Narrative

#### Job Narrative 480-98343-1

### Receipt

The samples were received on 4/15/2016 2:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.2° C.

### GC/MS VOA

Method(s) 624: The preservative used in the sample containers provided is not compatible with the Method 624 analytes requested. The following samples were received preserved with hydrochloric acid: MW-6 (480-98343-1), MW-7 (480-98343-2), MW-9 (480-98343-3), DGC-6S (480-98343-4), DGC-7S (480-98343-5), DGC-8S (480-98343-6), TRENCH (480-98343-7) and DISCHARGE (480-98343-8). The requested target analyte list contains 2-chloroethyl vinyl ether, which are acid-labile compounds that degrade in an acidic medium.

Method(s) 624: The following samples contained residual chlorine upon receipt: MW-6 (480-98343-1), MW-7 (480-98343-2), MW-9 (480-98343-3), DGC-6S (480-98343-4) and DGC-8S (480-98343-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Login Sample Receipt Checklist

Client: New York State D.E.C.

Job Number: 480-98343-1

**Login Number:** 98343

**List Source:** TestAmerica Buffalo

**List Number:** 1

**Creator:** Kolb, Chris M

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	AZTECH
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	False	LAB TO CHECK RC
