Re: National Grid Excelsior Avenue Site, Saratoga Springs, NY
2025 Periodic Review Report

Dear Mr. Wiener:

Enclosed for your review is the 2025 Periodic Review Report for the National Grid Excelsior Avenue Site, Saratoga Springs, New York. This report includes the following information:

- Site inspections for January through December 2025.
- Monthly water level gauging data for January through December 2025.
- Profiles for the groundwater well pairs on the inside and outside of the Former MGP Site containment wall and former Spa Steel Site containment cell.
- 2025 quarterly groundwater sampling event results for the Former MGP Site, Former Skating Rink Area, and Former Spa Steel Site.
- Operation and maintenance data for operations of the water treatment system for January through December 2025.
- OM&M Conclusions and Recommendations.

As per the approved Site Management Plan, a quarterly summary report will be submitted to the EPA in April 2026, July 2026, and October 2026, and the 2026 Periodic Review Report will be submitted by March 2027.

If you have any questions regarding OM&M issues, then please feel free to contact me at 315.540.0829.

Very truly yours,

for NAS

Nicholas A. Smith, P.G.

1 Introduction

1.1 Purpose

Groundwater & Environmental Services, Inc. (GES) has prepared this 2025 Periodic Review Report, on behalf of National Grid, for the Niagara Mohawk Power Corporation (NMPC) Superfund site located on Excelsior Avenue in the City of Saratoga Springs, Saratoga County, New York (the Site). The Operations, Maintenance, and Monitoring (OM&M) activities described in this report were performed in Operable Unit 1 (OU 1), which consists of the Former Manufactured Gas Plant (MGP) site, the Former Skating Rink Area, and a portion of Spring Run Creek. **Figure 1** provides a site location map.

Groundwater monitoring has been conducted in OU 1 to evaluate the effectiveness of remedial activities previously completed at the Site and to monitor long-term groundwater quality trends. Currently, groundwater sampling at the Former MGP site is performed on a quarterly basis, and groundwater sampling at the Former Skating Rink Area is completed on a semi-annual basis.

The following OM&M activities were conducted during the 2025 reporting period:

- Monthly site inspections, including checks on the asphalt cap, the security fence/gates, the groundwater monitoring wells/piezometers/vaults, and the water treatment system.
- Monthly collection, documentation, and evaluation of water levels in site groundwater monitoring wells.
- Monthly inspection of the seven passive dense non-aqueous phase liquid (DNAPL) collection wells and DNAPL recovery, if necessary.
- Quarterly collection of water samples from groundwater monitoring wells at the Former MGP site, a storm water manhole sampling point (MH#01), and a public water access (Old Red Spring [ORS] Fountain). Semi-annual collection of water samples from groundwater monitoring wells in the Former Skating Rink Area. Water samples are submitted to Eurofins Environmental Testing (Eurofins) for laboratory analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX), as well as select polycyclic aromatic hydrocarbons (PAHs). Results are compared to New York State Department of Environmental Conservation (NYSDEC) Ambient Water Quality Standards (AWQS).
- Groundwater recovery from containment area pumping wells, water treatment via the onsite water treatment system, and discharge of treated effluent to the Saratoga County Sewer District (SCSD) #1 sewer.
- Decommissioning of wells LTMW-09 and LTMW-10.

The above activities are summarized in Sections 2 through 4 of this report.

1.2 Site Description

The Site consists of two operable units. OU 1 consists of an approximately 7-acre parcel owned by National Grid (referred to as the Former MGP site), an approximately 2.3-acre property formerly owned by the City (referred to as the Former Skating Rink Area) located immediately southeast of the Former MGP site, and an approximate 1 mile stretch of Spring Run Creek. Both the Former MGP site and the Former Skating Rink Area are currently owned by National Grid. The Former MGP site is surrounded by chain-link fencing and bounded on the north by New York State Route 50, to the south by Excelsior Avenue, to the east by East Avenue, and to the west by the former Spa Steel Corporation (now owned by Saratoga Restaurant Hospitality, LLC).

The Former MGP site is relatively flat topographically and is trapezoidal in shape. Several buildings are located on the Former MGP site, including a cylindrical, brick storage building (a former gas holder referred to as the brick roundhouse), a two-story brick storage building, and an aboveground electric substation. A service center building was previously located on the Former MGP site; however, it was demolished before initiation of remedial construction in 2001. Adjacent to the Former MGP site are several properties zoned for residential, light industrial, or planned business use.

The Former Skating Rink Area is located on the southeast corner of Excelsior Avenue and East Avenue. This property was formerly owned by the City and was used for the storage of City-owned equipment. In 2001, the former skating rink building was demolished and removed.

Figures 2A, **2B**, and **2C** provides Site Maps, which show the layout of the Former MGP site, Former Spa Steel site, and Former Skating Rink Area.

The portion of Spring Run Creek that is contained within the Site is located to the east of the Former MGP site.

OU 2 occupies approximately 0.5 acres of land bounded to the north by the former Spa Steel Corporation property and the Former MGP site, to the south by High Rock Avenue, to the east by Warren Street, and to the west by property owned by 519 Broadway LLC (a remediated and delisted NYSDEC inactive hazardous waste site, number 546036, known as the Van Raalte Knitting Mill Site), part of which is now used for the Grace Fellowship Church. OU 2 consists of the following: (1) a portion of Excelsior Avenue; (2) a grass-covered parcel owned by the City that contains an active groundwater well known as the Old Red Spring well (i.e., deep well screened in an unconsolidated silty-sand layer immediately above bedrock); and (3) a small portion of a paved parking lot for the Grace Fellowship Church located west of the City-owned parcel.

1.3 Site History

As presented in the 1995 Feasibility Study by Remediation Technologies, Inc. (RETEC) and Atlantic Environmental Services, Inc. (Atlantic), beginning in 1868, town gas was manufactured at the Site from coal, coke, and petroleum oils for use in lighting and heating. Gas manufacturing operations continued at this location until 1929. The production of manufactured gas led to the generation of both organic and inorganic residuals and waste products. Residual materials, including coal tar, were often used to make other products but in many cases were accumulated

and managed onsite. The chemical classes associated with the residuals include PAHs, volatile aromatic constituents, phenolics, trace metals, and nitrogen and sulfur compounds. Manufactured gas plant operations at the Site resulted in areas of subsurface soil and groundwater contamination.

The United States Environmental Protection Agency (USEPA) has defined the Site as the Former MGP site and any associated area where contamination is found or to which contamination could migrate and be deposited. Areas beyond the Former MGP site property boundaries that are considered part of the Site are located to the southeast (Former Skating Rink Area), and along the corridor of Spring Run Creek located to the east of the Former MGP site. The following provides general chronology of key project-related events.

- In 1982, National Grid (contemporaneously known as Niagara Mohawk Power Corporation) notified USEPA that the Saratoga Springs Site (presently identified as the Former MGP site) was once the site of a gas manufacturing facility, and that previous owners may have deposited coal tars in the property.
- In October 1989, National Grid (contemporaneously known as Niagara Mohawk Power Corporation) and USEPA entered into an Order on Consent to conduct a remedial investigation (RI) and feasibility study (FS) at the Saratoga Springs Site (presently identified as the Former MGP site). In February 1990, the Saratoga Springs Site (presently identified as the Former MGP site) was placed on the National Priorities List (NPL). The RI was conducted by Atlantic and is presented in the Remedial Investigation Report, National Grid Site, Saratoga Springs, New York (Atlantic, 1992) and Draft Supplemental Investigation Report for Additional Site Characterization, National Grid Site, Saratoga Springs, New York (Atlantic, 1994). The FS was conducted by RETEC and Atlantic and is presented in the Feasibility Study (RETEC/Atlantic, 1995).
- In September 1995, USEPA issued a Record of Decision (ROD) for the Site.
- In September 1996, USEPA issued a Consent Decree for remedial design/remedial action (RD/RA).
- In September 2000, USEPA approved the final RA design from Blasland, Bouck, and Lee, Inc. (BBL), and the RA implementation went to bid for a remedial contractor.
- In February 2001, Williams Environmental Services, Inc. was selected as the remedial contractor, and the RA implementation began.
- In May 2001, remedial construction activities were initiated in Operable Unit 1 (OU 1).
    - Approximately 2,350 linear feet (lf) of heavy-duty watertight steel sheeting was installed around the perimeter of the Former MGP site to depths of approximately 20 feet (ft) below ground surface (bgs), keying into a competent, low-permeability, lacustrine clay unit.
    - A brick roundhouse structure (70 ft in diameter and 50 ft high) with historical significance was preserved and relocated to the northeast corner of the Former MGP site.
    - Approximately 3,780 cubic yards (cy) of surface soil was excavated from a total of seven areas (each 100 ft in diameter and 2 ft deep) at the Former MGP site and disposed of at

Environmental Soil Management, Inc.'s (ESMI) low-temperature thermal desorption (LTTD) facilities in Fort Edward, New York, and Louden, New Hampshire.

- Approximately 19,610 cy of subsurface soil was excavated from a total of nine areas (ranging from 800 square feet [sf] to 7,300 sf in size, and ranging in depth from 4 feet to 22 feet bgs) located on the Former MGP site and disposed of at ESMI's LTTD facilities in Fort Edward, New York, and Louden, New Hampshire.
- All surficial and subsurface excavation areas were backfilled and compacted to previously existing grade using clean, offsite fill materials; permitted backhauled materials from ESMI; or crushed stone from an approved local borrow area.
- A perimeter groundwater drainage system was installed outside the upgradient portion of the barrier wall system in order to control storm water flow upgradient from the Site and prevent flooding of East Avenue. The perimeter drainage system was installed along the northern, western, and eastern portions of the Former MGP site. It consisted of a 10-inch-diameter, high-density polyethylene (HDPE), perforated pipe surrounded by crushed stone placed within a geotextile cloth. The perimeter drainage pipeline was installed to a depth of several feet bgs within an approximately 4-ft-wide, crushed stone-filled trench. The drainage pipeline passes through several manholes located along the pipe alignment, ultimately discharging into a manhole at the southeast corner of the Former MGP site, which connects to a drainage culvert that discharges to Spring Run Creek. In addition to the perimeter drainage system, several catch basins and storm sewer conveyance pipes were installed within the limits of the Former MGP site to provide for the collection of storm water runoff from the surface of the asphaltic cap that covers the entire containment area. The onsite drainage system consists of seven catch basins and continuously welded HDPE pipe that is sealed at joints to prevent the infiltration of groundwater. The onsite drainage system also discharges into a manhole at the southeast corner of the Former MGP site.
- A water treatment system was constructed in order to prevent overtopping of the watertight steel sheeting/barrier wall surrounding the containment area. Recovered groundwater is treated by the water treatment system, which is located within a building at the southwest corner of the containment area. After treatment, the groundwater is discharged to SCSD#1 for final disposal.
- An asphaltic cap was placed over the entire 7-acre property of the Former MGP site. The asphaltic cap was installed to isolate residual materials and provide a low permeability cover to reduce/prevent infiltration of storm water. The asphaltic cap is keyed into the perimeter barrier wall system, essentially encapsulating the Former MGP site. The asphaltic cap consists of 4 inches of base course material followed by 2 inches of top course material, placed upon a prepared and compacted subbase.
- A total of seven DNAPL recovery wells (DW-01, DW-02, DW-03, DW-04, DW-05, DW-06, and DW-07) were installed within the limits of the barrier wall system for passive DNAPL recovery.

- A total of nine monitoring wells and piezometers were installed both within and outside the limits of the barrier wall to evaluate the hydraulic conditions and groundwater quality.
- Site security fencing (6 ft chain link) was installed along the eastern, western, and southern perimeters of the Former MGP site, connecting to the existing northern perimeter fence along Route 50. An access gate is located at the southern perimeter of the property, near the electrical substation, with a second access gate located at the southwestern property corner to allow for access to the water treatment system. Additional fencing and an access gate were also installed at the southwestern corner of the property in order to isolate the water treatment system building from the remainder of the property.
- Remedial action activities at the Former Skating Rink Area involved the demolition and removal of the former skating rink building, surface soil excavation (7,470 cy, 2.3 acres, 0 to 2 ft deep) and offsite removal (at ESMI's LTTD facilities in Fort Edward, New York, and Louden, New Hampshire), subsurface soil excavation (10,120 cy, 7 areas ranging from 1,600 sf to 3,800 sf in size and ranging in depth from 7 feet to 28 feet bgs) and offsite removal (at ESMI's LTTD facilities in Fort Edward, New York, and Louden, New Hampshire), backfill of excavation areas, and installation of five long-term monitoring wells (LTMW-06, LTMW-07, LTMW-08, LTMW-09, and LTMW-10).
- Sediment excavation activities were performed at three distinct areas along a 1 mile stretch of Spring Run Creek, generally located east of the Former MGP site toward Interstate 87. Approximately 5,475 cy of sediment was excavated from the three areas totaling approximately 1,940 lf of Spring Run Creek located between the outfall of twin 86-inch box culverts and Interstate 87. Excavated sediment was stockpiled, sampled, and disposed of at ESMI's LTTD facilities in Fort Edward, New York, and Louden, New Hampshire. All sediment excavation areas were backfilled to original grade elevations using clean sand. A temporary access road was installed along the remediated Spring Run Creek for access. Wetlands were restored with topsoil, seed mix, and various plantings along the creek. The temporary access road was converted into a bike trail.
- Abandonment/rehabilitation of a 36-inch-diameter brick storm sewer was conducted along approximately 5,500 lf, beginning at the intersection of East Avenue and Excelsior Avenue to its discharge into Spring Run Creek near Interstate 87. Prior to abandonment, an approximately 800 lf portion of storm sewer located between the intersection of East Avenue and Excelsior Avenue and the southeast corner of the Former Skating Rink Area was cleaned using pressurized-jet cleaning equipment to remove accumulated debris. Following cleaning, the cleaned length of storm sewer was videotaped. During video inspection, an active connection to the storm sewer was identified, which was traced to a swale immediately north of Excelsior Avenue. To address the active discharge, a portion of the storm sewer was slip-lined using a 12-inch pipe within the 36-inch brick storm sewer. The new 12-inch pipe was connected to the active contributing pipe near Excelsior Avenue, with the new 12-inch pipe ultimately discharging the storm water flow immediately adjacent to the 86-inch, twin-box culvert's discharge location. Following the pipe lining efforts, the remaining portions of the 5,500 lf of storm sewer were abandoned by filling all structural failures and accessible manholes with grout.

- In September 2002, the initial remedial construction activities were completed and contractor demobilization initiated.
- In October 2002, EA Environmental was contracted by National Grid to conduct the Site operation and maintenance (O&M) work, with the exception of the wetland assessments. BBL was contracted by National Grid to conduct the annual qualitative and quantitative wetland assessments. Wetlands monitoring requirements ended in 2007, when the Wetlands Monitoring Report indicated that performance standards for herbaceous ground cover and woody plants were met and no additional monitoring would be performed. As indicated in the USEPA's third Five-Year Review Report, no additional monitoring or inspection is required for the Spring Run Creek wetlands.
- At the request of National Grid, Innovative Engineering Solutions, Inc. (IESI) conducted a review of the operation and performance of the groundwater extraction and treatment system in 2004. IESI focused on several aspects of the system: that a No Flow Boundary exists at the barrier wall; compliance with the SCSD#1 permit limits for the treatment system effluent discharge; removal of DNAPL prior to the bag filters; iron fouling throughout the system; and capability of the flow of the system to meet the treatment objectives. Based on that review, IESI proposed and implemented several modifications to the groundwater treatment system, including: overall downsizing of the system from a continuous 20 gallons per minute (gpm) throughput to a 5 gpm throughput; replacing the oil-water separator (OWS), replacing the chemical pre-treatment system with an in-line sequestering agent addition system (iron fouling solution), removing the backwash tank and multimedia filters, replacing the two liquid-phase granular activated carbon (GAC) vessels with three smaller liquid-phase GAC vessels (plus one spare), and replacing the single bag filter with a dual bag filter unit.
- In January 2005, several additional groundwater monitoring wells were installed at the Spa Steel site (SS-01, SS-02, SS-03, and SS-04) and within the barrier wall to evaluate hydraulic gradient and groundwater quality.
- Due to frost damage (2004-2005), shallow piping from the pumping wells to the groundwater treatment system was replaced. In the spring of 2005, the piping was installed to a depth below the frost line (approximately 4 ft bgs).
- The reconstruction of the water treatment system was completed in January 2006. IESI conducted monthly batch mode operation (5,000 gallons of collected/treated water per month) of the current treatment system from January 2006 to June 2006.
- In May 2006, USEPA, NYSDEC, United States Army Corps of Engineers (USACE), and New York State Department of Health (NYSDOH) conducted the first five-year remedy review of the Site.
- CDM Smith took over OM&M activities from IESI in July 2006. A draft OM&M Plan was submitted to the USEPA in October 2006.
- Between July 2006 and January 1012, five separate investigations were conducted by USEPA or National Grid to evaluate and delineate MGP-related residuals within soil and groundwater southwest of the former MGP site.

- Between November 2007 and April 2008, remedial construction was performed on the former Spa Steel site (as a separate remediation project than the main site) and included installation of 300 lf of vertical watertight steel sheet pile barrier wall within an approximately 7,000 sf area and construction of an impermeable surface cap within that area. The sheeting was installed to an average depth of approximately 28 feet bgs, which was approximately 5 feet into the underlying clay confining unit. The surface cap featured a 30-mil PVC liner and a geosynthetic drainage composite covered by 12-inches of clean fill, an orange demarcation geotextile, and 9 inches of run-of-crusher stone. The surface layer was later replaced by asphalt pavement during construction of the Excelsior Springs Event Center.
- As part of the Spa Steel remediation project, monitoring wells LTMW-07, LTMP-7A, SS-01, and SS-04 were decommissioned on November 29, 2007. Monitoring well SS-02 was decommissioned on February 5, 2008. All decommissioning activities were performed by ADT Drilling.
- Construction of Spa Steel monitoring wells (LTMW-11, LTMW-12, LTMP-12, LTMP-13) and a new pumping well (PW-5) in the Spa Steel area was completed in April of 2008. However, due to the planned construction of a restaurant (now the Excelsior Springs Event Center) at and adjacent to the Spa Steel property, the installation of the remaining wells was delayed until after construction.
- In September 2008, seven new monitoring wells and piezometers were installed; LTMW-14/LTMP-14/LTMP-14A (well pair #14), LTMW-15/LTMP-15/LTMP-15A (well pair #15), and LTMP-06A (a piezometer installed as part of well pair #6).
- On September 8, 2008, operation of the water treatment system changed from monthly batch mode (5,000 gallons per month) to continuous mode (~ 1.5 gpm).
- On June 1, 2009, operation of the water treatment system was modified from continuous mode (~ 65,000 gallons/month) to fixed daily mode (4 hours of operation of each pumping well per day; ~ 15,000 gallons/month). This modification was made based upon significant DNAPL and iron/biological fouling within the pumping wells that caused pump failure and operation disruption. The fixed daily pumping has maintained hydraulic control within the containment area, complies with the ROD, and minimizes uptake of DNAPL into submersible pumps which are not intended to pump this type of material. Furthermore, no DNAPL has been detected proximal to the barrier wall; therefore, the current fixed daily pumping mode meets the post-remedial goals established by the USEPA.
- In January 2011, construction of the Excelsior Springs Event Center re-started at and adjacent to the former Spa Steel property.
- On May 24, 2011, USEPA, NYSDEC, USACE, and NYSDOH conducted a five-year remedy review for the Site.
- On June 1, 2013, construction of the banquet hall on the Spa Steel property was completed.
- In March 2013, USEPA issued a ROD for OU 2.
- In January 2015, USEPA issued a second Consent Decree for the OU 2 RD/RA.

- In July 2015, National Grid obtained an access agreement with the banquet hall property owner (Saratoga Restaurant Hospitality, LLC). LTMW-13 was installed and SS-03 was decommissioned.
- Between July 2015 and July 2016, National Grid conducted a pre-design investigation and soil treatability studies for OU 2.
- In September 2016, Groundwater and Environmental Services entered into a contract with National Grid to take over OM&M activities at the site.
- National Grid has a leasing agreement with the Excelsior Springs Banquet Hall next-door for valet-only parking. In the second quarter of 2017, a total of 335 linear feet of fencing and three (3) sliding gates were installed. During the third quarter of 2017, the concreted fence post holes were sealed with hot asphaltic sealer, as well as any other additional cracks in the asphalt cap.
- In September 2017, USEPA approved the Remedial Design for the OU 2 soil remedial action. The Final Remedial Design was issued in January 2018.
- Soil remediation was performed within OU 2 from June 2018 through September 2019 and generally included: (1) constructing an approximately 3,267 sf subsurface mat (at least 2 feet thick) and 123 lf of barrier walls (at least 2 feet wide) by jet grouting to contain DNAPL-impacted soil below Excelsior Avenue; (2) constructing approximately 2,080 sf of subsurface mat below Excelsior Avenue by in-situ soil solidification/stabilization (ISS) to complete the containment of NAPL below the roadway; (3) conducting ISS to solidify/stabilize approximately 3,829 cy of DNAPL-impacted soil in-place within the Old Red Spring parcel and part of the adjacent property; (4) removing impacted surface/near surface soil from the Old Red Spring parcel and adjacent property for offsite treatment/disposal; and (5) decommissioning the Old Red Spring well and installing a new double-cased replacement well. To facilitate remedial construction, National Grid also replaced aging City infrastructure within and immediately adjacent to the remedial limits. Approximately 100 lf of new 20-inch diameter poly-wrapped ductile iron water main were installed to replace an old (circa 1884) cast iron water main below Excelsior Avenue. In addition, approximately 260 feet of new HDPE storm sewer pipe were installed to replace a collapsing old stone culvert and connecting storm sewer piping.
- In February 2020, the USEPA approved the Remedial Design for the OU 2 groundwater remedy.
- Shortly following Remedial Action Work Plan approval by USEPA in September 2021, gypsum slurry was emplaced into 13 direct-push borings drilled in two areas of the City-owned Old Red Spring parcel as part of the enhanced anaerobic groundwater bioremediation remedy for OU 2. The gypsum slurry was comprised of approximately 2,300 pounds of gypsum and 1,600 gallons of potable water and injected into the fine-to-coarse sand interval at a depth of approximately 12 to 16 feet bgs. The gypsum slurry provides a long-lived and slow-release form of sulfate to stimulate indigenous bacteria to degrade residual dissolved hydrocarbons below the groundwater table. Gypsum slurry arrival at downgradient monitoring wells was demonstrated by groundwater monitoring performed within the first year following the gypsum

slurry emplacement. Monitoring for BTEX, PAHs, and geochemical parameters before and after the gypsum slurry emplacement provides a line of evidence for natural and enhanced anaerobic groundwater bioremediation of the hydrocarbons.

- In March 2024, new liquid phase granular activated carbon was installed in three (3) new 500-pound vessels and in one (1) existing spare vessel. The new vessels and carbon were provided by Evoqua Water Technologies. The spent media was disposed of by Capital Environmental.
-

2 Groundwater Monitoring Activities and Monthly Site Inspections

2.1 Institutional Control/Engineering Controls (IC/EC) Plan Requirements

The IC/ECs for the Site include the following:

- Declaration of Covenants and Restrictions (DCR).
- Site may only be used for industrial or commercial use.
- No consumption or use of the groundwater underlying the property.
- Future ground intrusive activities should be conducted in accordance to the SMP.
- Excavated material below the asphalt cap and stone subbase transported offsite for disposal must comply with hazardous waste regulations.
- Asphalt Cap System.
- Heavy-Duty Watertight Steel Sheeting Barrier Wall.
- Use of a groundwater extraction and treatment system to maintain hydraulic control of groundwater within the contaminant area.
- Groundwater and DNAPL monitoring.

2.2 Monthly Site Inspections

GES conducted monthly site inspections during this reporting period. These monthly inspections include checking the asphalt cap, the security fencing/gates, the wells/piezometers, the vaults, and the water treatment building system.

In general, the Site is in compliance with the SMP.

Appendix A presents the Monthly Site Inspections/System Operation Records.

2.3 Groundwater Well Gauging

Monthly groundwater level measurements are collected at the Site to accomplish the following:

- To evaluate if the groundwater within the Former MGP site containment area and Former Spa Steel containment area is overtopping the containment wall. This involves a comparison of the groundwater elevation inside the containment areas versus the containment wall height. The watertight sheet pile barrier wall was installed in accordance with the ROD and constitutes a "No Flow Boundary." Compliance with this provision of the ROD is met by maintaining hydraulic control primarily by preventing overtopping of the barrier wall.
- To determine the hydraulic conditions inside and outside of the barrier wall using well pairs installed on each side of the wall.
- To determine the general groundwater flow direction outside the containment wall.
- To ascertain hydrogeologic conditions during DNAPL monitoring at passive DNAPL collection wells (DW-01, DW-02, DW-03, DW-04, DW-05, DW-06, and DW-07).

Monthly well/piezometer gauging field data is presented in **Appendix B**. In general, site groundwater flows from northwest to southeast.

2.3.1 Hydraulic Control

Part of the remedy for the Former MGP site and Former Spa Steel site included installation of a containment cell in order to minimize or eliminate the migration of DNAPL and contaminated groundwater outside the cell. A steel sheet pile, Waterloo-type, barrier wall with watertight joints was installed into the underlying low permeability lacustrine clay unit approximately 20 ft bgs. The watertight steel sheets extended to the ground surface and are tied into a low permeability asphalt cap. The underlying clay layer, the connecting sheet walls, and the continuous asphalt cap creates a containment cell that constitutes a hydrogeologic No Flow Boundary, and enables hydraulic control of the area to be maintained and monitored.

When the groundwater elevation inside the wall is below the groundwater elevation outside the wall, any breach in the watertight containment wall would force the water to flow into the containment area (inward gradient) rather than potentially contaminated water flowing outside the wall. While some limited water infiltration may occur through the cap, walls, or upward from the lacustrine clay, groundwater inside the cell is contained and removed periodically by the onsite collection wells and pumps, which prevents overtopping of the barrier wall.

The groundwater collection/treatment system was added to supplement the hydraulic control provided by the containment cell. Pumping wells within the cell were installed to maintain groundwater at an elevation lower than the top of sheeting. Furthermore, they function to predominantly maintain the inside groundwater at an elevation lower than groundwater outside the containment cell. However, the comparison of hydraulic heads inside and outside of the "No Flow Boundary" is not technically relevant unless the heads exceed the top of the barrier wall. The "No Flow Boundary" by definition does not allow significant groundwater flow through it, and thus there is no significant hydraulic gradient across it.

The top of steel sheeting walls follows the finished asphalt cap grade, which ranges from approximately 263 to 274 feet above sea level, generally sloping from north to southeast.

Groundwater elevations within the containment cell are generally 4 to 10 ft below the top of wall. No overtopping of the wall has ever been identified.

Information on well pairs that have been installed to monitor hydraulic control is presented below:

Table 1 – Well Pairs

Well Pair	Well Pair Location	Inside Piezometer	Outside Well
#2	Southern Wall	LTMP-2A	LTMW-02
#3	Southern Wall	LTMP-03	LTMW-03
#4	Southern Wall	LTMP-04	LTMW-04
#5	Southern Wall	LTMP-05	LTMW-05
#12	Spa Steel Western Wall	LTMP-12	LTMW-12
#13	Spa Steel Northern Wall	LTMP-13	LTMW-13
#14	Eastern Wall	LTMP-14	LTMW-14
#15	Eastern Wall	LTMP-15	LTMW-15

For the monitoring events conducted in 2025, groundwater elevation data for the well pairs were added to the Hydraulic Control Trending **Table 4** to demonstrate hydraulic control over time at each of the well pairs. During this year, the data shows a lower hydraulic head inside of the barrier wall as compared to the outside of the wall for all well pairs on all gauging dates except for well pairs #2 during the January, April, May, June, July, August, November, and December gauging events, #5 during the February, August and September gauging events, #12 during the August gauging event, and #15 during the January, February, March, April, May, June, July, August, October, and November gauging events. Overall, hydraulic control inside of the barrier wall was maintained due to the fact that hydraulic heads never exceeded the top of the wall. Top of Casing elevations for the wells as well as the top of sheeting near the well pairs are presented in the plan view on **Figure 3**. **Figures 4** through **14** show profiles of each well pair with corresponding groundwater elevations compared to the steel sheet wall construction between the wells. **Table 5** provides the groundwater elevation data for monitoring wells that do not have a corresponding well pair. **Figures 15** through **18** show the groundwater elevation contours during each of the 2025 quarterly groundwater well sampling events.

2.4 Groundwater Well Sampling and Analysis

Quarterly groundwater samples were collected from the Former MGP site wells (LTMW-01, LTMW-02, LTMW-03, LTMW-04, LTMW-05, LTMW-6A, LTMW-14, and LTMW-15), and the Former Spa Steel site wells (LTMW-12 and LTMW-13). Additionally, quarterly water samples were taken from storm water manhole MH-1 , the ORS Fountain, and wells MW-EPA-01R and MW-EPA-03R. Semi-annual groundwater samples were collected from the Former Skating Rink area wells (LTMW-06, LTMW-07, LTMW-08).

The wells were purged using Well Wizard Dedicated Pumps in accordance with USEPA Low-Flow (Minimal Drawdown) Groundwater Sampling Procedures (1996). Field measurements of pH, conductivity, turbidity, dissolved oxygen; temperature, total dissolved solids, and oxidation-reduction potential were recorded using a Horiba water quality meter during well purging. Samples were collected once field parameters had been stabilized. During the sampling no odor or sheens were observed at the well locations. Well sampling field data is presented in **Appendix C**.

Environmental water samples and quality assurance (QA)/quality control (QC) aqueous samples (field duplicate, matrix spike, matrix spike duplicate, and one trip blank) were shipped to Eurofins for laboratory analysis of select PAHs via USEPA Method 8270 and BTEX via USEPA Method 8260.

The analytical data reports provided by Eurofins were validated by GES. The primary objective of the data validation was to identify any questionable or invalid laboratory processes or data. The GES data validator reviewed all QA/QC information and the actual laboratory data to confirm the laboratory was operating within the required limits and results were correctly taken from the instruments. The Data Usability Summary Reports (DUSR) including the validated laboratory data are presented as **Appendix D**. The review stated that field sample analyte values/reporting limits were all usable as reported.

During the January, April, July, and October 2025 sampling events, VOCs and PAHs were detected above the NYSDEC AWQS outside the containment area at the following locations:

- LTMW-02 (April 2025 only)
- LTMW-05 (April 2025 only)
- LTMW-07 (April and October 2025)
- MH-1

During the October 2025 monitoring event, Skating Ring well LTMW-07 exhibited anomalously high detections for several PAHs. Because this well has never displayed any significant dissolved impacts since the inception of monitoring, confirmatory samples were collected from this well on October 31, 2025 and November 18, 2025. During both October sampling events, rain events were occurring and water was ponding proximal to the wellhead, which is located at the vehicle parking area for the Spring Run Trail. The results of the November 2025 sampling event, when no rain or surface ponding was noted, indicate that there were no detections of any compound analyzed for. Other explanations for the detections of PAHs in LTMW-07 are addressed in the DUSR in **Appendix D**.

Laboratory analytical data is provided in **Table 6**. The laboratory analytical reports are provided as **Appendix E**.

The post-injection groundwater bioremediation performance monitoring in OU2 is summarized by Arcadis, and is provided as **Appendix F**.

3 Dense Non-Aqueous Phase Liquid Monitoring and Recovery

3.1 Dense Non-Aqueous Phase Liquid Well Monitoring and Recovery

Passive DNAPL wells (DW-01 through DW-07) are monitored monthly in order to document compliance with terms of the ROD with the USEPA. Each well is gauged for water level (as discussed in Section 2.2) and for the presence of DNAPL. There was no DNAPL observed during this year in any of these wells, nor has any DNAPL been detected since the inception of the Site monitoring program (starting in October 2002).

3.2 Pumping Well Dense Non-Aqueous Phase Liquid Monitoring and Recovery

Pumping wells PW-1, PW-2, PW-3, PW-4, and PW-5 (installed in 2008) have been periodically inspected for DNAPL for maintenance purposes. When DNAPL is present, it is collected via bailers or a peristaltic pump and placed in a NYSDOT-approved 55-gallon drum for offsite disposal at a National Grid-approved facility. In addition, the OWS is inspected monthly for DNAPL. Any DNAPL encountered is removed from the OWS by manually opening a valve and allowing the product to gravity flow into a container. The product is then placed in a NYSDOT-approved 55-gallon drum for offsite disposal at a National Grid-approved facility. A total of 18.3 gallons of DNAPL were collected between January and December 2025, including:

- 3.0 gallons of DNAPL removed from the OWS
- 15 gallons of DNAPL recovered from pumping well PW-5
- Pumping wells PW-1 and PW-3 each recovered 0.1 gallons of DNAPL.

The 2025 DNAPL waste manifest is provided as **Appendix G**.

DNAPL was also detected in monitoring well LTMP-13 on January 8 (1.06 ft thick), February 5 (trace), March 5 (trace), April 2 (trace), May 7 (trace), July 2 (trace), August 6 (trace), October 1 (trace), November 3 (0.01 ft thick), and December 3 (trace). LTMP-13 was inaccessible during the June 25, 2025 inspection due to a car being parked over the manway. Approximately 12-ounces of DNAPL were recovered from LTMP-13 in January 2025. LTMP-13 is an inside well and has accumulated 56 ounces of DNAPL since its installation in July 2015.

Since October 2008, the total volume of DNAPL collected from the locations listed above is 717.55 gallons. The specific breakdown of DNAPL volume (gallons) collected from October 2008 to the present is as follows:

Table 2 – Total Product Recovered

Dense Non-Aqueous Phase Liquid Volume Collected (gallons) – Since October 2008

PW-1	PW-2	PW-3	PW-4	PW-5	OWS	LTMP-13	Total
21.10	0	27.10	0	378.5	290.75	56 oz	717.55

4 Water Treatment System Operation and Maintenance

4.1 Water Treatment System Operation

Water treatment system operation consists of groundwater recovery, water treatment, and discharge of treated water to the SCSD #1 public sewer. Water treatment system O&M is conducted in accordance with the OM&M Plan (CDM Smith, 2006). Inspections of the water treatment system are conducted as part of the monthly site inspections. Specific operational data is presented in **Appendix H**.

4.1.1 Groundwater Recovery

Groundwater is recovered from five pumping wells (PW-1, PW-2, PW-3, PW-4, and PW-5 [Spa Steel site]) and pumped to the water treatment system through 1-inch HDPE pipe.

The groundwater recovery pumping system consists of wells with submersible pumps and level sensors. The groundwater recovery pumping system operates for approximately 4 hours per day. Each individual well pump cycles in batch mode within the sensor parameters. Each batch of water removed from the wells is dependent upon groundwater recharge rate, the distance between the HI (on) and LO (off) sensors, and the submersible pump rate.

The table below presents the current pumping well sensor elevations.

Table 3 – Pumping Well Sensor Elevations

Top of Casing (TOC) Elevations Are Displayed in Feet Above Mean Sea Level (amsl)

Pumping Well	Components	From TOC (ft)	TOC (ft amsl)
PW-1 Grade Elevation			265.75
PW-1	HI-HI probe	1.75	264.00
	HI probe	9.00	256.75
	LO probe	14.00	251.75
	Common probe	14.50	251.25
	Depth to pump inlet	15.00	250.75
	Depth to bottom of well	19.80	245.95
PW-2 Grade Elevation			267.14
PW-2	HI-HI probe	3.20	263.94
	HI probe	12.00	255.14
	LO probe	15.50	251.64
	Common probe	16.00	251.14
	Depth to pump inlet	16.50	250.64
	Depth to bottom of well	19.00	248.14

Pumping Well	Components	From TOC	TOC
PW-3 Grade Elevation			263.04
PW-3	HI-HI probe	2.70	260.34
	HI probe	8.00	255.04
	LO probe	14.00	249.04
	Common probe	14.50	248.54
	Depth to pump inlet	15.00	248.04
	Depth to bottom of well	18.00	245.04
PW-4 Grade Elevation			266.06
PW-4	HI-HI probe	2.80	263.26
	HI probe	10.00	256.06
	LO probe	12.50	253.56
	Common probe	13.00	253.06
	Depth to pump inlet	13.50	252.56
	Depth to bottom of well	15.60	250.46
PW-5 Grade Elevation			265.83
PW-5	HI-HI probe	2.00	263.83
	HI probe	8.00	257.83
	LO probe	12.00	253.83
	Common probe	12.50	253.33
	Depth to pump inlet	13.00	252.83
	Depth to bottom of well	21.50	244.33

The LO sensors are maintained at an elevation above each pump, to keep the pumps constantly submerged. The HI sensors are maintained at elevations near the historic groundwater elevation level to allow the pump maximum operation time for better efficiency. The HI-HI sensors are positioned above the HI sensors and well below the top of containment wall to serve as contingency measures. The HI-HI sensors activate an alarm, which calls the OM&M contractor.

4.1.2 Water Treatment System

The water treatment system is located within a metal shell building on a reinforced concrete floor with secondary containment. The system itself consists of the following components:

- OWS with water gravity overflow to the transfer tank and DNAPL drain;
- Transfer tank/pump;
- In-line chemical addition consisting of sequestering agent for iron-fouling and biocide for bio-fouling;
- Bag filters (two in series) for particle filtration; and
- GAC (three vessels in series) for VOC adsorption.

The water treatment system operates in batch mode. A transfer pump (maximum flow rate ~ 15 gpm) within the groundwater treatment building operates on level switches (located after the OWS

and transfer tank) to pump water through the treatment train before being discharged to the SCSD#1 sewer manhole connection. Typically, the transfer pump sends approximately 280 gallons of water per batch.

It should be noted that although the water treatment system has components to treat some minor volumes of DNAPL, the groundwater recovery system was not designed to pump significant volumes of DNAPL, nor is it required under the terms of the ROD. Pump failures and excessive maintenance result from pumping DNAPL from the wells. DNAPL is being manually removed, as needed, from the OWS. At this time the water treatment system does not require any repairs or modifications.

4.1.3 Treated Water Discharge

The discharge flow rate of treated water ranges between 4 and 17 gpm depending on the bag filter and the GAC back pressure. The average discharge flow rate for each month from the January through December period remained steady around 16.5 gpm. This flow rate occurs only when the system is operating in batch mode. During other periods, there is no effluent water flow.

During 2025, approximately 234,132 gallons of treated water was discharged to the SCSD#1 sewer. Since July 10, 2006, 4,254,116 gallons of treated water have been discharged to the SCSD#1 sewer. For a summary of water treatment system flow data during 2025, refer to **Appendix F**.

5 Conclusions and Recommendations

5.1 Conclusions

Based on the data collected from the Site OM&M activities during January through December 2025, the following conclusions were made:

- The gauging data indicates lower hydraulic heads exist on the inside of the barrier wall relative to the outside of the barrier wall for all well pairs except for #2, #5, #12, and #15.
- There has been no DNAPL observed in passive wells DW-01 through DW-07 in the monthly gauging/inspection events conducted since monitoring began in October 2003. DNAPL does not appear to passively flow into these wells. However, between October 2008 and the present, there have been 717.55 gallons of DNAPL collected from the active groundwater collection/treatment system. DNAPL is manually collected directly from pumping wells PW-1, PW-3, and PW-5 during maintenance cleaning activities (DNAPL has not been observed in PW-2 and PW-4). Trace amounts of DNAPL (less than 0.01 feet thick) were measured in well LTMP-13, except for in January 2025, when approximately one foot of DNAPL was observed and subsequently removed. DNAPL is also collected within the OWS during normal operation of the groundwater collection and water treatment system. It should be noted that the most significant DNAPL collected is manually removed from PW-5 (Spa Steel site Containment Area; installed 2008).
- Since October 2002, no VOCs or PAHs have been detected above the NYSDEC AWQS in any groundwater samples collected from outside the containment area as part of the monitoring program, with the exception of inconsistent and intermittent low-level detections (less than 1 ug/L) of PAHs at wells LTMW-01, LTMW-02, LTMW-03, LTMW-04, LTMW-05, LTMW-6A, LTMW-07, LTMW-12, LTMW-13, and LTMW-15. This is further evidence of the remedy's effectiveness to control groundwater hydraulically, thereby minimizing migration of contaminants outside the confined cell. The compounds that have been detected above the AWQS in monitoring wells outside the containment area include benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene.
- Since June of 2020, benzene, ethylbenzene, and several PAHs have been intermittently detected at sampling location MH-1. MH-1 is a manhole that receives storm water that flows over the asphaltic cap of the containment area. Detections of compounds over the AWQS are likely the result of vehicle parking and traffic on the cap.
- Approximately 234,132 gallons of groundwater was extracted from the five pumping wells, treated, and discharged to the SCSD#1 during 2025.
- Overall, conditions are consistent with previous monitoring years.

5.2 Certifications

For each institutional or engineering control identified for the NMPC property, OU 2, and the former skating rink and former Spa Steel properties, I certify that all of the following statements are true:

- The inspection of the properties to confirm the effectiveness of the institutional and engineering controls required by the remedial program was performed under my direction.
- The institutional control and/or engineering control employed at these properties is unchanged from the date the control was put in place, or last approved by the EPA.
- Nothing has occurred that would impair the ability of the control to protect the public health and environment.
- Nothing has occurred that would constitute a violation or failure to comply with any site management plan for this control.
- Access to the properties will continue to be provided to the EPA and NMPC to evaluate the remedy, including access to evaluate the continued maintenance of this control.
- If a financial assurance mechanism is required under the oversight document for the NMPC property, OU 2, and the former skating rink and former Spa Steel properties, the mechanism remains valid and sufficient for the intended purpose under the document.
- Use of the properties is compliant with the institutional controls.
- The engineering control systems are performing as designed and are effective.
- To the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program and generally accepted engineering practices.
- The information presented in this report is accurate and complete.

I certify that all information and statements in this certification form are true. I understand that a false statement made herein is punishable as a Class "A" misdemeanor, pursuant to Section 210.45 of the Penal Law. I, [name], of [business and address], am certifying as [NMPC or NMPC's Representative] for the NMPC property, the OU 2, the former skating rink property, and former Spa Steel property.

I certify that the New York State Education Department has granted a Certificate of Authorization to provide Professional Engineering services to the firm that prepared this Periodic Review Report.

Notes:
Delta = Water Elevation Difference between Outside and Inside Well
Positive Delta = Water Elevation in Outside Well Greater than Inside Well
LTMP = Inside Wells
LTMW = Outside Wells
TOC = Top of Casing Elevation
EL = Elevation
DTW = Depth to Water
NR = Not Recorded

RE: Data Usability Summary Report for National Grid- Saratoga Springs: Data Package Eurofins Environmental Testing, Job No. 480-226735-1

Review has been completed for the data packages generated by Eurofins Environmental Testing that pertain to monitoring well samples collected during the January 2025 sampling event at the National Grid Saratoga Springs site. Fourteen (14) aqueous samples, a matrix spike/matrix spike duplicate pair, and a field duplicate were collected from the main site. These samples were processed for volatile organic compounds benzene, toluene, ethylbenzene and xylenes (BTEX) and polycyclic aromatic hydrocarbons (PAHs). The trip blank was collected and analyzed for volatiles with the samples.

Analytical methodologies are those of the USEPA SW846 8260C and USEPA SW846 8270D with additional requirements of the NYSDEC ASP.

Complete NYSDEC Category B deliverables were included in the laboratory data package and all information required for validation of the data is present. This usability report is generated from review of the summary form information, and review of associated QC raw data. The reported summary forms have been reviewed for application of validation qualifiers, using guidance from the National Grid generic QAPP, USEPA Region 2 validation SOPs, the USEPA National Functional Guidelines for Data Review, and professional judgment, as affects the usability of the data. The following items were reviewed:

- Laboratory Narrative Discussion
- Custody Documentation
- Holding Times
- Surrogate and Internal Standard Recoveries
- Matrix Spike Recoveries/Duplicate (MS/MSD) Correlations
- Field Duplicate Correlations
- Laboratory Control Sample (LCS)
- Preparation/Calibration Blanks
- Calibration/Low Level Standard Responses
- Instrumental Tunes

All of the items were determined to be acceptable for the DUSR level review. In summary, sample results are usable, no data was qualified pursuant to this data validation.

The laboratory case narratives and sample identification summary forms are attached to this text, and should be reviewed in conjunction with this report.

Volatiles by EPA 8260D/NYSDEC ASP

Sample holding times for groundwater samples and instrumental tune fragmentations are within acceptance ranges.

Blanks show no contamination.

Surrogate and internal standard recoveries are within required limits. LCS/LCSD recoveries were within criteria and duplicate correlations fell within acceptable variance.

Calibration standards show acceptable responses within analytical protocol and validation action limits.

An MS/MSD was analyzed using LTMW-04 as the matrix. All QC elements fell within project criteria.

The blind field duplicate correlations of LTMW-02 were not calculated, as there were no positive detections reported in the original or duplicate sample.

PAHs by EPA8270E/NYSDEC ASP

Holding times were met.

Instrumental tune fragmentations are within acceptance ranges. Blanks show no contamination.

Surrogate and internal standard recoveries are within required limits. LCS/LCSD recoveries were within criteria and duplicate correlations fell within acceptable variance.

MS/MSD recoveries were within criteria and duplicate correlations fell within acceptable variance.

Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines.

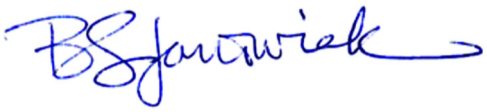
The blind field duplicate correlations of LTMW-02 were not calculated as there were no detected analytes in the original sample.

Data Package Completeness

Complete NYSDEC Category B deliverables were included in the laboratory data package, all information required for validation of the data is present.

Please do not hesitate to contact me if you have comments or questions regarding this report.

Sincerely,



Bonnie Janowiak, Ph.D., NRCC Environmental Chemist
Principal Chemist

RE: Data Usability Summary Report for National Grid- Saratoga Springs: Data Packages
Eurofins Environment Testing Job Nos. 480-228567-1 and 480-228525-1

Review has been completed for the data packages generated by Eurofins Environment Testing, Amherst, NY (Eurofins Buffalo) that pertain to monitoring well samples collected during the April 2025 sampling event at the National Grid Saratoga Springs site. Fourteen (14) aqueous samples, a matrix spike/matrix spike duplicate pair, and a field duplicate were collected from the main site, and two (2) samples were collected from the Skating Rink area. These samples were processed for volatile organic compounds benzene, toluene, ethylbenzene and xylenes (BTEX) and polycyclic aromatic hydrocarbons (PAHs). One trip blank was analyzed for volatiles with the samples

Analytical methodologies are those of the USEPA SW846 with additional requirements of the NYSDEC ASP.

Complete NYSDEC Category B deliverables were included in the laboratory data package and all information required for validation of the data is present. This usability report is generated from review of the summary form information, and review of associated QC raw data. The reported summary forms have been reviewed for application of validation qualifiers, using guidance from the National Grid generic QAPP, USEPA Region 2 validation SOPs, the USEPA National Functional Guidelines for Data Review, and professional judgment, as affects the usability of the data. The following items were reviewed:

- Laboratory Narrative Discussion
- Custody Documentation
- Holding Times
- Surrogate and Internal Standard Recoveries
- Matrix Spike Recoveries/Duplicate (MS/MSD) Correlations
- Field Duplicate Correlations
- Laboratory Control Sample (LCS)
- Preparation/Calibration Blanks
- Calibration/Low Level Standard Responses
- Instrumental Tunes
- Instrument MDLs

All the items were determined to be acceptable for the DUSR level review. In summary, sample results are usable.

The laboratory case narratives and sample identification summary forms are attached to this text and should be reviewed in conjunction with this report.

Table A

Validation Qualifiers

Sample ID	Qualifier	Analyte	Reason for qualification
LTMW-02	U at RL	Acenaphthene Acenaphthylene Anthracene Fluorene Indeno[1,2,3-cd]pyrene	Carry-over from previous sample
LTMW-02	U at reported concentration	Benzo[a]anthracene Benzo[a]pyrene Benzo[b]fluoranthene Chrysene Fluoranthene Phenanthrene Pyrene	
Field Duplicate	U at reported concentration	Acenaphthene Fluorene Naphthalene Phenanthrene	

Shipping, Storage and Preservation

Samples from the main site arrived in multiple coolers, but all within holding time requirements and within acceptable temperature ranges.

One MSD sample bottle arrived broken. No data was affected.

BTEX and TCL Volatiles by EPA 8260C/NYSDEC ASP

Sample holding times for groundwater samples and instrumental tune fragmentations are within acceptance ranges.

Blanks show no contamination.

Surrogate and internal standard recoveries are within required limits. LCS/LCSD recoveries were within criteria and duplicate correlations fell within acceptable variance.

Calibration standards show acceptable responses within analytical protocol and validation action limits.

An MS/MSD was analyzed using LTMW-04 as the matrix. All recoveries and precision data were within criteria.

The blind field duplicate correlations of LTMW-02 were not calculated, as there were no positive detections reported in the original or duplicate sample.

PAHs by EPA8270D/NYSDEC ASP

Holding times were met. Instrumental tune fragmentations are within acceptance ranges. Blanks show no contamination.

PAH analysis includes three surrogate standards. The method allows one surrogate recovery to be out of specification and not affect the data. Surrogates recovered within criteria.

Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines.

The laboratory-control spike recoveries and precision indicate the method is within laboratory control.

Matrix spike and matrix spike recoveries were within laboratory specified criteria.

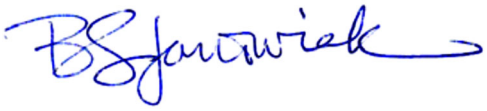
The blind field duplicate correlations of **LTMW-02** were not calculated as the low-level PAH detections are due to carry-over from the MH-1 sample. All detections are considered non-detect at the RL or the reported concentration if above RL.

Data Package Completeness

Complete NYSDEC Category B deliverables were included in the laboratory data package, all information required for validation of the data is present.

Please do not hesitate to contact me if you have comments or questions regarding this report.

Sincerely,



Bonnie Janowiak, Ph.D.,
NRCC Environmental Chemist

REVISION

The report being provided is a revision of the original report sent on 4/15/2025. The report (revision 1) is being revised due to This report is being revised to merge jobs..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/5/2025 10:00 AM and 4/9/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.7°C, 4.1°C and 4.7°C.

Receipt Exceptions
One 250ml amber glass container for the following sample was received broken or leaking: LTMW-04-MSD (480-228569-4[MSD]).

Sample shipment received on two separate days due to fedex network delay. Samples were logged under two separate jobs based on days of receipt.

Field Duplicate (480-228569-1), LTMW-02 (480-228569-2), LTMW-03 (480-228569-3), LTMW-04 (480-228569-4), LTMW-04-MS (480-228569-4[MS]), LTMW-04-MSD (480-228569-4[MSD]), LTMW-05 (480-228569-5), LTMW-12 (480-228569-6), LTMW-13 (480-228569-7), ORS (480-228569-8), MW-EPA-01R (480-228569-9) and MW-EPA-03R (480-228569-10)

Partial shipment received. Lab only received 1 out of 3 coolers, other 2 coolers are delayed in fedex network and have yet to be received as of 4/8. Only samples received will be logged at this time. Trip Blank (480-228525-1), LTMW-06A (480-228525-2), LTMW-15 (480-228525-3), LTMW-01 (480-228525-4), LTMW-14 (480-228525-5) and MH-1 (480-228525-6)

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

RE: Data Usability Summary Report for National Grid- Saratoga Springs: Data Packages Eurofins Environment Testing Job Nos. 480-230943-1

Review has been completed for the data packages generated by Eurofins Environment Testing, Amherst, NY (Eurofins Buffalo) that pertain to monitoring well samples collected during the July 2025 sampling event at the National Grid Saratoga Springs site. Fourteen (14) aqueous samples, a matrix spike/matrix spike duplicate pair, and a field duplicate were collected from the main site. These samples were processed for volatile organic compounds benzene, toluene, ethylbenzene and xylenes (BTEX) and polycyclic aromatic hydrocarbons (PAHs). One trip blank was analyzed for volatiles with the samples

Analytical methodologies are those of the USEPA SW846 with additional requirements of the NYSDEC ASP.

Complete NYSDEC Category B deliverables were included in the laboratory data package and all information required for validation of the data is present. This usability report is generated from review of the summary form information, and review of associated QC raw data. The reported summary forms have been reviewed for application of validation qualifiers, using guidance from the National Grid generic QAPP, USEPA Region 2 validation SOPs, the USEPA National Functional Guidelines for Data Review, and professional judgment, as affects the usability of the data. The following items were reviewed:

- Laboratory Narrative Discussion
- Custody Documentation
- Holding Times
- Surrogate and Internal Standard Recoveries
- Matrix Spike Recoveries/Duplicate (MS/MSD) Correlations
- Field Duplicate Correlations
- Laboratory Control Sample (LCS)
- Preparation/Calibration Blanks
- Calibration/Low Level Standard Responses
- Instrumental Tunes
- Instrument MDLs

All of the items were determined to be acceptable for the DUSR level review. In summary, sample results are usable.

The laboratory case narratives and sample identification summary forms are attached to this text and should be reviewed in conjunction with this report.

BTEX and TCL Volatiles by EPA 8260C/NYSDEC ASP

Sample holding times for groundwater samples and instrumental tune fragmentations are within acceptance ranges.

Blanks show no contamination.

Surrogate and internal standard recoveries are within required limits. LCS/LCSD recoveries were within criteria and duplicate correlations fell within acceptable variance.

Calibration standards show acceptable responses within analytical protocol and validation action limits.

An MS/MSD was analyzed using LTMW-04 as the matrix; recoveries were within criteria and duplicate correlations fell within acceptable variance.

The blind field duplicate correlations of LTMW-02 were not calculated, as there were no positive detections reported in the original or duplicate sample.

PAHs by EPA8270D/NYSDEC ASP

Holding times were met. Instrumental tune fragmentations are within acceptance ranges. Blanks show no contamination.

PAH analysis includes three surrogate standards. The method allows one surrogate recovery to be out of specification and not affect the data. There were no samples that had more than one surrogate recovery out of specification, and no qualifiers were required.

Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines.

The laboratory-control spike recoveries and precision indicate the method is within laboratory control.

Matrix spike and matrix spike recoveries were within laboratory specified criteria.

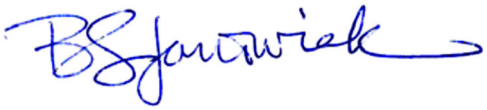
The blind field duplicate correlations of LTMW-02 were not calculated as there were no detected analytes in the original sample

Data Package Completeness

Complete NYSDEC Category B deliverables were included in the laboratory data package, all information required for validation of the data is present.

Please do not hesitate to contact me if you have comments or questions regarding this report.

Sincerely,



Bonnie Janowiak, Ph.D.
Principal Chemist
NRCC Environmental Chemist

RE: Data Usability Summary Report for National Grid- Saratoga Springs: Data Packages
Eurofins Environment Testing Job Nos. 480-233447-1, 480-233448-1

Review has been completed for the data packages generated by Eurofins Environment Testing, Amherst, NY (Eurofins Buffalo) that pertain to monitoring well samples collected during the October 2025 sampling event at the National Grid Saratoga Springs site.

Fourteen (14) aqueous samples, a matrix spike/matrix spike duplicate pair, and a field duplicate and a trip blank were collected from the main site over two days. These samples were processed for volatile organic compounds benzene, toluene, ethylbenzene and xylenes (BTEX) and polycyclic aromatic hydrocarbons (PAHs). A trip blank was analyzed for volatiles with the samples.

Three (3) aqueous samples were collected from the skating rink. These samples were processed for volatile organic compounds benzene, toluene, ethylbenzene and xylenes (BTEX) and polycyclic aromatic hydrocarbons (PAHs).

Analytical methodologies are those of the USEPA SW846 with additional requirements of the NYSDEC ASP.

Complete NYSDEC Category B deliverables were included in the laboratory data package and all information required for validation of the data is present. This usability report is generated from review of the summary form information, and review of associated QC raw data. The reported summary forms have been reviewed for application of validation qualifiers, using guidance from the National Grid generic QAPP, USEPA Region 2 validation SOPs, the USEPA National Functional Guidelines for Data Review, and professional judgment, as affects the usability of the data. The following items were reviewed:

- Laboratory Narrative Discussion
- Custody Documentation
- Holding Times
- Surrogate and Internal Standard Recoveries
- Matrix Spike Recoveries/Duplicate (MS/MSD) Correlations
- Field Duplicate Correlations
- Laboratory Control Sample (LCS)
- Preparation/Calibration Blanks
- Calibration/Low Level Standard Responses
- Instrumental Tunes

- Instrument MDLs

All of the items were determined to be acceptable for the DUSR level review. In summary, sample results are usable.

Table A

Validation Qualifiers

Sample ID	Qualifier	Analyte	Reason for qualification
All Samples	UJ	Dibenzo(a,h)anthracene indeno[1,2,3-cd]pyrene	Low CCV

The laboratory case narratives and sample identification summary forms are attached to this text, and should be reviewed in conjunction with this report.

BTEX and TCL Volatiles by EPA 8260C/NYSDEC ASP

Sample holding times for groundwater samples and instrumental tune fragmentations are within acceptance ranges.

Blanks show no contamination.

Surrogate and internal standard recoveries are within required limits. LCS/LCSD recoveries were within criteria and duplicate correlations fell within acceptable variance.

Calibration standards show acceptable responses within analytical protocol and validation action limits.

An MS/MSD was analyzed using LTMW-04 as the matrix; recoveries were within criteria and duplicate correlations fell within acceptable variance.

The blind field duplicate correlations of LTMW-02 were not calculated, as there were no positive detections reported in the original or duplicate sample.

PAHs by EPA8270D/NYSDEC ASP

Holding times were met. Instrumental tune fragmentations are within acceptance ranges. Blanks show no contamination.

PAH analysis includes three surrogate standards. The method allows one surrogate recovery to be out of specification and not affect the data. There were no samples that had more than one surrogate recovery out of specification, and no qualifiers were required.

Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines, with the exception of low recoveries for the dibenzo(a,h)anthracene and indeno[1,2,3-cd]pyrene in the CCV. Data in all samples is considered estimated with a possible low bias.

Surrogate and internal standard recoveries meet compliance criteria. LCS/LCSD recoveries were within criteria and duplicate correlations fell within acceptable variance.

Matrix spike and matrix spike recoveries were within laboratory specified criteria.

The blind field duplicate correlations of LTMW-02 were not calculated as there were no detected analytes in the original sample.

Data Package Completeness

Complete NYSDEC Category B deliverables were included in the laboratory data package, all information required for validation of the data is present.

Please do not hesitate to contact me if you have comments or questions regarding this report.

Job ID: 480-233447-1 Eurofins Buffalo

Job Narrative
480-233447-1

Receipt
The samples were received on 10/10/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.1º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E SIM: The continuing calibration verification (CCV) analyzed in batch 460-1068569 was outside the method criteria for the following analyte(s): Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 480-233448-1 Eurofins Buffalo

Job Narrative
480-233448-1

Receipt
The samples were received on 10/10/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 2.7º C, 3.0º C, 3.5º C and 4.1º C.

GC/MS VOA
Method 8260C: The following sample(s) was collected in a properly preserved vial; however, the pH was outside the required criteria when verified by the laboratory. The sample was analyzed within the 7-day holding time specified for unpreserved samples: ORS (480-233448-11).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E SIM: The continuing calibration verification (CCV) analyzed in batch 460-1068569 was outside the method criteria for the following analyte(s): Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Appendix E – Groundwater Analytical Laboratory Reports

eurofins | Environment Testing

ANALYTICAL REPORT

PREPARED FOR

Attn: Tim Beaumont
Groundwater & Environmental Services Inc
6780 Northern Boulevard
Suite 100
East Syracuse, New York 13057

Generated 1/16/2025 10:44:09 AM

JOB DESCRIPTION

Saratoga Main Site GW Wells - Quarterly

JOB NUMBER

480-226735-1

Eurofins Buffalo
10 Hazelwood Drive
Amherst NY 14228-2298

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-226735-1 Eurofins Buffalo

Job Narrative
480-226735-1

Receipt
The samples were received on 1/10/2025 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.7º C and 3.0º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Groundwater & Environmental Services Inc | Job ID: 480-226735-1

Client Sample ID: LTMW-01 | Lab Sample ID: 480-226735-1

No Detections.

Client Sample ID: LTMW-02 | Lab Sample ID: 480-226735-2

No Detections.

Client Sample ID: LTMW-03 | Lab Sample ID: 480-226735-3

No Detections.

Client Sample ID: LTMW-04 | Lab Sample ID: 480-226735-4

No Detections.

Client Sample ID: LTMW-05 | Lab Sample ID: 480-226735-5

No Detections.

Client Sample ID: LTMW-06A | Lab Sample ID: 480-226735-6

No Detections.

Client Sample ID: LTMW-12 | Lab Sample ID: 480-226735-7

No Detections.

Accreditation/Certification Summary

Client: Groundwater & Environmental Services Inc

Job ID: 480-226735-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	Total BTEX

Method Summary

Client: Groundwater & Environmental Services Inc

Job ID: 480-226735-1

Method	Method Description	Protocol	Laboratory
8260C	Volatile Organic Compounds by GC/MS	SW846	EET BUF
8270D	Semivolatile Organic Compounds (GC/MS)	SW846	EET BUF
3510C	Liquid-Liquid Extraction (Separatory Funnel)	SW846	EET BUF
5030C	Purge and Trap	SW846	EET BUF

Protocol References:

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

Login Number: 226735
List Number: 1
Creator: Wallace, Cameron

List Source: Eurofins Buffalo

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	GES
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: Tim Beaumont
Groundwater & Environmental Services Inc
6780 Northern Boulevard
Suite 100
East Syracuse, New York 13057

Generated 4/18/2025 10:40:19 AM Revision 1

JOB DESCRIPTION

Saratoga Main Site GW Wells - Quarterly

JOB NUMBER

480-228525-1

Eurofins Buffalo
10 Hazelwood Drive
Amherst NY 14228-2298

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
480-228525-1

REVISION

The report being provided is a revision of the original report sent on 4/15/2025. The report (revision 1) is being revised due to This report is being revised to merge jobs..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/5/2025 10:00 AM and 4/9/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.7°C, 4.1°C and 4.7°C.

Receipt Exceptions
One 250ml amber glass container for the following sample was received broken or leaking: LTMW-04-MSD (480-228569-4[MSD]).

Sample shipment received on two separate days due to fedex network delay. Samples were logged under two separate jobs based on days of receipt.

Field Duplicate (480-228569-1), LTMW-02 (480-228569-2), LTMW-03 (480-228569-3), LTMW-04 (480-228569-4), LTMW-04-MS (480-228569-4[MS]), LTMW-04-MSD (480-228569-4[MSD]), LTMW-05 (480-228569-5), LTMW-12 (480-228569-6), LTMW-13 (480-228569-7), ORS (480-228569-8), MW-EPA-01R (480-228569-9) and MW-EPA-03R (480-228569-10)

Partial shipment received. Lab only received 1 out of 3 coolers, other 2 coolers are delayed in fedex network and have yet to be received as of 4/8. Only samples received will be logged at this time. Trip Blank (480-228525-1), LTMW-06A (480-228525-2), LTMW-15 (480-228525-3), LTMW-01 (480-228525-4), LTMW-14 (480-228525-5) and MH-1 (480-228525-6)

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Groundwater & Environmental Services Inc | Job ID: 480-228525-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	Total BTEX

Laboratory: Eurofins Edison

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	False	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	
Samples received within 48 hours of sampling.	True	ges
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: Tim Beaumont
Groundwater & Environmental Services Inc
6780 Northern Boulevard
Suite 100
East Syracuse, New York 13057

Generated 4/15/2025 11:57:54 AM

JOB DESCRIPTION

Saratoga SA Former Skating Rink GWS

JOB NUMBER

480-228567-1

Eurofins Buffalo
10 Hazelwood Drive
Amherst NY 14228-2298

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Definitions/Glossary

Client: Groundwater & Environmental Services Inc Job ID: 480-228567-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-228567-1 Eurofins Buffalo

Job Narrative
480-228567-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 4/9/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.9°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Groundwater & Environmental Services Inc

Job ID: 480-228567-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	Total BTEX

Laboratory: Eurofins Edison

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Connecticut	State	PH-0818	09-30-26
DE Haz. Subst. Cleanup Act (HSCA)	State	N/A	01-03-26

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	ges
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

JOB DESCRIPTION

Saratoga Main Site GW Wells - Quarterly

JOB NUMBER

480-230943-1

Eurofins Buffalo
10 Hazelwood Drive
Amherst NY 14228-2298

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-230943-1 Eurofins Buffalo

Job Narrative
480-230943-1

Receipt
The samples were received on 7/10/2025 10:00 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.9º C and 3.6º C.

Receipt Exceptions

One container for the following sample was received broken or leaking: Field Duplicate (480-230943-1).

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Groundwater & Environmental Services Inc

Job ID: 480-230943-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	07-15-25

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	Total BTEX

Laboratory: Eurofins Edison

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Connecticut	State	PH-0818	09-30-26
DE Haz. Subst. Cleanup Act (HSCA)	State	N/A	01-03-26

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Northeast, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Northeast, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Northeast, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Northeast, LLC.

Possible Hazard Identification	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
Unconfirmed	☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	GES
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-233448-1 Eurofins Buffalo

Job Narrative
480-233448-1

Receipt
The samples were received on 10/10/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 2.7º C, 3.0º C, 3.5º C and 4.1º C.

GC/MS VOA
Method 8260C: The following sample(s) was collected in a properly preserved vial; however, the pH was outside the required criteria when verified by the laboratory. The sample was analyzed within the 7-day holding time specified for unpreserved samples: ORS (480-233448-11).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E SIM: The continuing calibration verification (CCV) analyzed in batch 460-1068569 was outside the method criteria for the following analyte(s): Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Accreditation/Certification Summary

Client: Groundwater & Environmental Services, Inc. Job ID: 480-233448-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	Total BTEX

Laboratory: Eurofins Edison

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-233447-1 Eurofins Buffalo

Job Narrative
480-233447-1

Receipt
The samples were received on 10/10/2025 9:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.1º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E SIM: The continuing calibration verification (CCV) analyzed in batch 460-1068569 was outside the method criteria for the following analyte(s): Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Groundwater & Environmental Services, Inc. Job ID: 480-233447-1
Project/Site: National Grid - Upstate New York OM&M

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	Total BTEX

Laboratory: Eurofins Edison

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Connecticut	State	PH-0818	09-30-26
DE Haz. Subst. Cleanup Act (HSCA)	State	N/A	01-03-26

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.1 ICE IR# SC
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	GES
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

ANALYTICAL REPORT

PREPARED FOR

Attn: Tim Beaumont
Groundwater & Environmental Services, Inc.
6780 Northern Boulevard
Suite 100
East Syracuse, New York 13057

Generated 11/7/2025 9:23:08 AM

JOB DESCRIPTION

Saratoga SA Former Skating Rink GWS

JOB NUMBER

480-234149-1

Eurofins Buffalo
10 Hazelwood Drive
Amherst NY 14228-2298

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-234149-1 Eurofins Buffalo

Job Narrative
480-234149-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The sample was received on 11/1/2025 10:45 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.0°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_SIM: The continuing calibration verification (CCV) analyzed in batch 460-1072856 was outside the method criteria for the following analyte(s): Anthracene, Indeno[1,2,3-cd]pyrene and Pyrene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Groundwater & Environmental Services, Inc. Job ID: 480-234149-1

Client Sample ID: LMTW-07 Lab Sample ID: 480-234149-1

Accreditation/Certification Summary

Client: Groundwater & Environmental Services, Inc. Job ID: 480-234149-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	Total BTEX

Laboratory: Eurofins Edison

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Connecticut	State	PH-0818	09-30-26
DE Haz. Subst. Cleanup Act (HSCA)	State	N/A	01-03-26

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	GES
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

JOB DESCRIPTION

Saratoga SA Former Skating Rink GWS

JOB NUMBER

480-234615-1

Eurofins Buffalo
10 Hazelwood Drive
Amherst NY 14228-2298

See page two for job notes and contact information.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Northeast, LLC Project Manager.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 480-234615-1 Eurofins Buffalo

Job Narrative
480-234615-1

The analytical test results presented in this report meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page, unless otherwise noted. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable. Regulated compliance samples (e.g. SDWA, NPDES) must comply with associated agency requirements/permits.

- Matrix-specific batch QC (e.g., MS, MSD, SD) may not be reported when insufficient sample volume is available or when site-specific QC samples are not submitted. In such cases, a Laboratory Control Sample Duplicate (LCSD) may be analyzed to provide precision data for the batch.
- For samples analyzed using surrogate and/or isotope dilution analytes, any recoveries falling outside of established acceptance criteria are re-prepared and/or re-analyzed to confirm results, unless the deviation is due to sample dilution or otherwise explained in the case narrative.

Receipt
The sample was received on 11/19/2025 9:00 AM. Unless otherwise noted below, the sample arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.1°C.

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
Method 8270E_SIM: The continuing calibration verification (CCV) associated with batch 460-1077004 recovered above the upper control limit for Pyrene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Groundwater & Environmental Services, Inc. Job ID: 480-234615-1

Accreditation/Certification Summary

Client: Groundwater & Environmental Services, Inc. Job ID: 480-234615-1

Laboratory: Eurofins Buffalo

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
New York	NELAP	10026	03-31-26

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8260C		Water	Total BTEX

Laboratory: Eurofins Edison

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	
Samples received within 48 hours of sampling.	True	GEI
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A

1 Introduction

This 2025 Annual Groundwater Bioremediation Performance Monitoring Report (Performance Monitoring Report) was prepared by Arcadis of New York, Inc. (Arcadis) on behalf of Niagara Mohawk Power Corporation (NMPC) to summarize the work performed and findings of the fourth annual groundwater bioremediation performance monitoring conducted in Operable Unit 2 (OU 2) of the NMPC Superfund Site in Saratoga Springs, New York (the Site; Figure 1). The monitoring summarized herein is part of the long-term monitoring program to evaluate the effectiveness of the gypsum slurry emplaced below the water table in OU 2 in September 2021 to enhance the natural degradation of dissolved hydrocarbons via anaerobic biological oxidation (ABOx). The OU 2 Project Area and surrounding properties are shown on the aerial photograph included as Figure 2.

The performance monitoring activities summarized herein were performed by Arcadis from October 8 through 14, 2025 and primarily consisted of the following:

- Collecting groundwater samples from each monitoring well in the OU 2 Project Area for laboratory analysis for manufactured gas plant- (MGP-) related constituents (benzene, toluene, ethylbenzene, and xylenes [BTEX] and polycyclic aromatic hydrocarbons [PAHs]) and/or geochemical parameters (including sulfate).
- Performing annual hydrogen sulfide gas monitoring at monitoring wells and subsurface structures (storm sewer manholes and catch basins) in OU 2 to evaluate potential accumulation of hydrogen sulfide and methane from ABOx.

The fieldwork summarized herein was implemented in accordance with United States Environmental Protection Agency- (EPA-) approved Groundwater Remedial Action Work Plan (RAWP; Arcadis, 2021) and the EPA-approved Site Management Plan for the OU 2 Project Area and Former Spa Steel Products Property (OU 2 SMP; Arcadis 2024). The fieldwork was implemented by Arcadis, except for purging and sampling of two monitoring wells (MW-EPA-01R and MW-EPA-03R) that was performed by Groundwater & Environmental Services, Inc. (GES), NMPC's operations, maintenance, and monitoring contractor for OU 1.

1.1 Plan Organization

This Performance Monitoring Report has been organized as presented in Table 1.1 below.

Table 1.1. Performance Monitoring Report Organization

Section		Purpose
Section 1 –	Introduction	Provides a brief overview of the OU 2 Project Area groundwater remedial activities.
Section 2 –	Fourth Annual Performance Groundwater Monitoring Activities	Describes the 2025 groundwater monitoring activities.
Section 3 –	Fourth Annual Performance Groundwater Monitoring Results	Summarizes the geochemical and MGP-related constituent groundwater monitoring results for the 2025 performance monitoring event.

Table 1.1. Performance Monitoring Report Organization

Section		Purpose
Section 4 –	Subsurface Gas Monitoring Activities and Results	Summarizes the subsurface gas monitoring activities and results for the 2025 performance monitoring.
Section 5 –	Summary and Conclusions	Presents the summary and conclusions for the groundwater and subsurface gas monitoring activities.
Section 6 –	Next Steps	Presents the proposed next steps for groundwater and subsurface gas monitoring.
Section 7 –	References	Presents a list of references cited in this Performance Monitoring Report.

1.2 Groundwater Bioremediation Remedy Overview

Groundwater remedial activities were implemented in OU 2 during the week of September 13, 2021, as summarized in the EPA-approved Groundwater Remedial Action Report (Groundwater RAR; Arcadis, 2023). The groundwater remedial activities were implemented to address the limited impacted subsurface soil and groundwater remaining within OU 2 following the soil remedial activities performed between June 2018 and September 2019. The soil remedial activities involved excavation, in-situ soil solidification/stabilization (ISS), and containment (in the form of a subsurface barrier wall and subsurface mat) to address soil impacted by dense non-aqueous phase liquid and associated constituents (primarily hydrocarbons) from historical MGP operations conducted nearby. The approximate limits of the ISS and containment area are shown on Figure 3. Details of the OU 2 soil remedial activities are presented in the EPA-approved OU 2 RAR (Arcadis, 2020).

As summarized in the Groundwater RAR, the groundwater remedial activities included drilling 13 injection borings via direct-push technology methods and emplacing a 15% by weight gypsum slurry (comprised of approximately 2,300 pounds of gypsum and 1,600 gallons of potable water) into the fine-to-coarse-grained sand interval at a depth of approximately 12 to 16 feet below ground surface (bgs). The gypsum slurry was emplaced in two areas extending approximately 12 lineal feet [LF] and 30 LF across the northern and southern portions of the OU 2 Project Area (respectively), as shown on Figure 3. The emplacement provided a sparingly soluble source of sulfate (calcium sulfate dihydrate) as an available electron acceptor to stimulate indigenous bacteria to degrade residual dissolved hydrocarbons below the water table. The remedial implementation objective is to sustain geochemical conditions conducive to ABOx, with the ultimate goal to decrease BTEX and PAHs concentrations via bioremediation in the area downgradient of the gypsum slurry emplacement.

A 2.5-foot radius of influence (ROI) was targeted for each injection point. Based on this ROI, injection points were spaced approximately 5 feet apart along the transects. Three injection points were installed in the northern treatment area, and ten injection points were installed in the larger southern treatment area. The injection points in the southern treatment area were staggered along two parallel injection lines such that each injection point on the hydraulically downgradient line was located approximately half the distance between two points on the hydraulically upgradient line. The injection layout resulted in treatment zone widths of approximately 5 and 10 feet in the northern and southern treatment areas, respectively.

The groundwater remedial activities were successful in that they provided a sustained source of sulfate to facilitate the enhanced anaerobic biodegradation of residual hydrocarbons in the area. Some daylighting of the gypsum slurry occurred during implementation (i.e., gypsum slurry migrating upward outside the drill rods to ground surface), but the daylighting was limited by adjusting the injection pressures and rates and performing injection in a “checkerboard” pattern, by injecting at every other boring location initially and then returning to inject at the remaining locations. A slight uplift of the ground surface was observed at one boring location during injection. Accordingly, the injection at that location was discontinued early and the ground surface quickly settled back to original level. The remaining gypsum intended for that location was instead emplaced at other nearby locations, achieving the design total gypsum slurry emplacement. Since gypsum has a low solubility, the emplaced gypsum is expected to slowly dissolve and maintain elevated concentrations of sulfate over a long period. While the dissolved sulfate will migrate hydraulically downgradient with groundwater until it is degraded by microbial processes, the slurry will remain in-place and continue to dissolve over time.

The effectiveness of sulfate emplacement and microbial enhancement is being evaluated by monitoring groundwater geochemistry and constituent concentrations hydraulically downgradient from the injection locations, in accordance with the Groundwater RAWP and OU 2 SMP. Sulfate concentrations are the primary indicator of groundwater geochemical conditions conducive to enhance biodegradation. A baseline groundwater monitoring event was conducted in June 2021 prior to the gypsum slurry emplacement, and post-emplacement groundwater samples were collected from five monitoring wells in the vicinity of the injection area on September 22, 2021 (within one week following injection). The September 2021 post-injection sulfate analytical results showed that sulfate had not yet arrived at the first line of monitoring wells downgradient from the gypsum slurry injection borings (MW-SS-08-08 and MW-EPA-07). The work performed and findings of the September 2021 monitoring event are summarized in the Groundwater RAR.

Per the Groundwater RAWP and OU 2 SMP, groundwater samples are to be collected annually from monitoring wells located hydraulically downgradient from the groundwater treatment areas (i.e., wells MW-EPA-07, MW-EPA-09, MW-EPA-10, and MW-SS-08-08, as shown on Figure 3) and one monitoring well hydraulically upgradient from the groundwater treatment areas (MW-ORS-01) and analyzed for sulfate and other geochemical parameters. In addition, groundwater samples are to be collected annually from each of the 12 monitoring wells in the OU 2 Project Area (wells MW-EPA-01R, MW-EPA-02R, MW-EPA-03R, MW-EPA-06, MW-EPA-07, MW-EPA-09, MW-EPA-10, MW-SS-08-05, MW-SS-08-08, MW-SS-09-06, MW-SS-09-07, and MW-ORS-01, as shown on Figure 3) and analyzed for BTEX and PAHs.

Hydrogen sulfide gas monitoring was also to be conducted quarterly at nearby subsurface structures and monitoring wells for the first year following sulfate emplacement. Methane gas monitoring was added to the quarterly monitoring program as outlined in January 24, 2022 e-mail correspondence from Arcadis to EPA. Subsequent gas monitoring was changed to annual (beginning in 2023) based on the quarterly gas monitoring results for 2022, as summarized in Section 4.2.2 of the Groundwater RAR. Work to be performed as part of the groundwater bioremediation performance monitoring activities is also outlined in the OU 2 SMP.

2 Fourth Annual Groundwater Bioremediation Performance Monitoring Activities

In accordance with the Groundwater RAWP and OU 2 SMP, the groundwater bioremediation performance monitoring program focuses on sulfate as the primary indicator of groundwater geochemical concentrations conducive to enhance biodegradation. Sulfate, additional geochemical parameters, and MGP-related constituents are being evaluated over time to identify potential trends.

The groundwater monitoring summarized herein was performed by Arcadis and GES (as identified above). As part of the fourth annual post-injection groundwater monitoring event performed in October 2025 (approximately four years after the gypsum slurry emplacement), groundwater samples were collected from: (1) each of the 12 monitoring wells in the OU 2 Project Area for laboratory analysis for MGP-related constituents; and (2) a subset (five) of those wells (MW-EPA-07, MW-EPA-09, MW-EPA-10, MW-SS-08-08, and MW-ORS-01) for laboratory analysis for sulfate and other geochemical parameters. Refer to Table 1 for a list of wells that were sampled during 2025 and the corresponding analyses performed on each sample. A monitoring well construction summary, which presents construction details for each existing and former monitoring wells in the OU 2 Project Area, is included as Table 2. Groundwater sampling logs for the October 2025 sampling event are presented in Attachment 1.

As part of the October 2025 monitoring event, a synoptic round of water level measurements was made at each of the 12 wells located within the OU 2 Project Area before collecting groundwater samples. The October 2025 groundwater samples were collected after purging using low-flow techniques (peristaltic or dedicated Well Wizard pump and polyethylene tubing). Field parameters consisting of pH, conductivity, dissolved oxygen (DO), oxidation reduction potential (ORP), temperature, and turbidity were monitored during purging using a water quality meter and flow-through measurement cell (e.g., Horiba U52). Following the stabilization of field parameters (three consecutive readings within the following ranges: pH of +/- 0.1; conductivity of +/-3%; DO of +/- 10% or <0.5 milligrams per liter; ORP of +/- 10 millivolts; and reduction of turbidity levels to less than 50 nephelometric turbidity units [NTUs]) at each well except MW-EPA-03R and MW-EPA-10, groundwater samples were collected via low-flow techniques and submitted to SGS North America, Inc. of Dayton, New Jersey (SGS) or Eurofins of Amherst, New York (Eurofins) for laboratory analysis. At monitoring well MW-EPA-03R, DO did not stabilize. However, 2.3 water column volumes were purged prior to sampling, which indicates that water entering the well screen was from the surrounding formation. Monitoring well MW-EPA-10 did not contain enough water in October 2025 to collect field parameters and was pumped dry. A sample was collected from groundwater that recharged into MW-EPA-10.

Groundwater samples from each monitoring well were submitted for laboratory analysis of BTEX using EPA Method 8260D and PAHs using EPA Method 8270E by selected ion monitoring (SIM). Groundwater samples from four wells hydraulically downgradient of the groundwater bioremediation area (MW-EPA-07, MW-EPA-09, MW-EPA-10, and MW-SS-08-08) and background monitoring well MW-ORS-01 were also analyzed for the following geochemical parameters unless noted otherwise below:

- Total petroleum hydrocarbons (TPH) gasoline range organics (GRO) using EPA SW-846 Method 8015D.
- TPH diesel range organics (DRO) using EPA SW-846 Method 8015D.
- Silica gel column (SGC) TPH DRO using EPA SW-846 Methods 3630C and 8015D.

- Total iron and manganese[1] using EPA SW-846 6010D.
- Alkalinity using Method SM2320 B-11.
- Sulfate using EPA Method 300/SW-846 Method 9056A.
- Sulfide using SM4500S2-F-11.
- TKN using EPA Method 351.2/LACHAT.
- Nitrate using EPA Method 353.2/SM4500NO2B.
- Total organic carbon using SM5310 B-11/14.
- Methane using Method RSK-175.

Samples from monitoring well MW-EPA-10 were also anticipated to be submitted for laboratory analysis of TKN. However, as indicated above, the well went dry during purging and a limited volume of groundwater recharged in the well. Sufficient volume was available to submit a sample for analysis of each of the geochemical parameters identified above, except TKN.

Purge water generated by the groundwater monitoring event was contained in 5-gallon buckets and transferred to the groundwater treatment building on the NMPC property for subsequent treatment.

[1] Iron and manganese are identified in the Record of Decision (ROD) as COCs and are also considered geochemical indicator parameters.

3 Fourth Annual Groundwater Bioremediation Performance Monitoring Results

The water-level data from the October 2025 monitoring event and earlier monitoring events are presented in Table 3. Water-level data indicate that the water table beneath the OU 2 Project Area generally occurs at depths ranging from approximately 4 to 12 feet bgs. The direction of horizontal groundwater flow in the OU 2 Project Area and surrounding areas is generally to the south-southeast, as indicated by the water table contour maps for October 11 and 12, 2022; September 19, 2023; October 1, 2024; and October 8, 2025 (Figure 4). This flow direction is similar to patterns observed before the ISS monolith, subsurface mat, and barrier walls were installed as part of the OU 2 soil remedial action (June 2018 to September 2019) and gypsum slurry was injected as part of the OU 2 groundwater remedial action (September 2021).

Analytical results for the groundwater samples collected as part of the October 2025 monitoring event were reported using New York State Department of Environmental Conservation (NYSDEC) Analytical Services Protocol Category B data deliverables. Copies of the laboratory analytical data reports are provided in Electronic Attachment 1. Arcadis and GES validated the analytical results in accordance with EPA National Functional Guidelines. The data usability summary reports are included in Electronic Attachment 2.

The sulfate analytical results for the October 2025 groundwater monitoring event are presented in Table 4, with comparisons to the sulfate analytical results for samples collected during previous monitoring events before and after the gypsum slurry emplacement performed as part of the enhanced anaerobic groundwater bioremediation remedy. The BTEX, PAHs, and geochemical indicator parameter (including sulfate) analytical results for the 2025 groundwater samples are presented in Table 5 with comparisons to: (1) results from previous monitoring events; (2) the NYSDEC groundwater quality standards and guidance values presented in NYSDEC Division of Water, Technical and Operational Guidance Series document titled “Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations” (TOGS 1.1.1) dated June 1998, last revised February 2023; and (3) Federal maximum contaminant levels (MCLs) presented in the EPA’s National Primary Drinking Water Regulations (EPA 2009). Sulfate analytical results are shown on Figure 5. Analytical results for BTEX and PAHs identified at concentrations above TOGS 1.1.1 standards/guidance values and Federal MCLs in groundwater samples collected from wells in OU 2 (i.e., since groundwater samples were initially collected in this area [2006 through 2025]) are shown on Figure 6. The BTEX, naphthalene, and sulfate groundwater analytical results for wells downgradient from the gypsum slurry injection area (MW-EPA-07, MW-EPA-09, MW-EPA-10, and MW-SS-08-08) and upgradient well ORS-01 since the OU 2 soil remedial action are shown on the graphs in Attachment 2.

The groundwater analytical results for geochemical indicator parameters are summarized in Subsection 3.1 below, followed by the groundwater analytical results for BTEX, PAHs, and TPH in Subsection 3.2.

3.1 Groundwater Geochemistry Performance Monitoring Results

The October 2025 groundwater monitoring event was the fourth post-injection monitoring event during which geochemical indicator parameters other than sulfate (or sulfide) were analyzed, as described in Section 2. Geochemical parameter results from the October 2025 groundwater monitoring compared to the baseline sampling (June 2021) and post-injection sulfate sampling results (September 2021, January 2022, October 2022,

September 2023, and October 2024) provide lines of evidence for natural and enhanced ABOx. Specifically, concentrations of methane, TKN, and alkalinity indicate anaerobic biodegradation of organic materials in the subsurface at each of the sampled wells, with greater activity immediately downgradient of the treatment area at monitoring wells MW-EPA-07 and MW-SS-08-08. Geochemical parameters at these wells indicated an elevated level of biological activity before gypsum emplacement. This indicated that this area has substantial potential for enhanced biodegradation with the addition of sulfate, which is a higher-energy electron acceptor relative to those used for methanogenesis. As described below, groundwater geochemical conditions were also potentially influenced by the soil remedy, which was completed in 2019. The remainder of this section focuses on: (1) concentrations of sulfate, as they are the primary indicator of groundwater geochemical conditions conducive to enhance biodegradation; and (2) iron and manganese, which were identified as constituents of concern (COCs) in EPA's 2013 OU 2 ROD and are also both naturally-occurring minerals (attributed to mineral properties in the geologic formation) and geochemical indicator parameters.

Historical concentrations of sulfate at monitoring wells upgradient and side-gradient from the treatment areas indicate background sulfate concentration variability (see Figure 5) and naturally occurring ABOx. Sulfate concentrations were identified at elevated concentrations of 310,000 parts per billion (ppb) and 248,000 ppb in May 2009 at (now decommissioned) monitoring wells MW-EPA-01 and MW-EPA-02, respectively. Sulfate was not detected (less than 5,000 ppb) during the same May 2009 monitoring event at downgradient monitoring wells MW-EPA-04, MW-EPA-07, MW-EPA-08, and MW-SS-08-08. The results indicate that sulfate naturally supports ABOx in groundwater in the OU 2 Project Area and additional biodegradation would be stimulated with the emplacement of sulfate in areas where sulfate was depleted downgradient of the historically MGP-impacted source areas.

The sulfate concentration at monitoring well MW-SS-08-08 was non-detect in May 2009 and 311,000 ppb during the following event, in July 2020 – one year after the OU 2 soil remedy was implemented. From July 2020 until the June 2021 baseline event preceding the gypsum slurry emplacement for the OU 2 groundwater remedy, sulfate concentrations showed a steadily decreasing trend to a minimum of 27,100 ppb. The trend is potentially due, at least in part, to changes in groundwater geochemistry following the OU 2 soil remedy, which took place from June 2018 to September 2019 and included ISS and jet grouting. One of the ISS and jet grout reagents was Portland cement, which contains gypsum (i.e., calcium sulfate). The Portland cement may have contributed to the elevated sulfate concentration in groundwater at MW-SS-08-08 identified following the soil remedy.

The October 2025 sulfate sampling results indicate the following:

- *MW-ORS-01 (upgradient monitoring well)*: The sulfate concentration identified in MW-ORS-01 in October 2025 was greater than the previous monitoring event and is generally consistent with sulfate concentrations following gypsum emplacement. Sulfate concentrations at this well are not necessarily expected to be influenced by groundwater treatment because the well is located upgradient of sulfate emplacement. BTEX and PAH concentrations at MW-ORS-01 are less than the TOGS 1.1.1 standards/guidance values and Federal MCLs.
- *MW-EPA-07 and MW-SS-08-08 (immediately downgradient from the injection area)*: Sulfate concentrations identified in MW-EPA-07 and MW-SS-08-08 were greater in October 2025 than the concentrations identified in these wells during the monitoring events immediately before and immediately after the gypsum slurry emplacement (June 2021 and September 2021, respectively). The results show the initial influence of sulfate emplacement, indicating that sulfate arrived at the wells within the first year following the gypsum slurry

emplacement. Sulfate concentrations greater than those measured during the baseline event are anticipated to continue at both wells.

  - At MW-EPA-07, the sulfate concentration measured in October 2025 (17,600 ppb) is approximately the same as the previous monitoring event (16,100 ppb in October 2024), but less than earlier monitoring events (59,000 ppb in September 2023 and 47,300 ppb in October 2022). However, the concentration is greater than the historical range measured at the well before the gypsum slurry emplacement (600 ppb to 1,100 ppb). The decrease in concentration from the previous events may be due to microbial utilization in the degradation of BTEX and PAHs and/or may be related to temporal variability.
  - At MW-SS-08-08, the sulfate concentration measured in October 2025 (128,000 ppb) decreased from the previous four monitoring events (199,000 ppb to 280,000 ppb from January 2022 through October 2024). The decrease in concentration from the previous events may be due to microbial utilization in the degradation of BTEX and PAHs and/or may be related to temporal variability.

- *MW-EPA-09 (sentinel well)*: The sulfate concentration identified in this well in October 2025 (114,000 ppb) increased from the previous three monitoring events (73,300 to 97,900 ppb from October 2022 through October 2024) and is within the historical range measured at the well before the gypsum slurry emplacement (55,800 to 165,000 ppb) and most likely represents naturally occurring variability. Sulfate added to the subsurface in the upgradient treatment areas will potentially be consumed before reaching this downgradient location.
- *MW-EPA-10 (sentinel well)*: Sulfate was not detected in the October 2025 sample from this well. This result is consistent with historical results for this well (previous sulfate sampling results for MW-EPA-10 were non-detect). Sulfate added to the subsurface in the upgradient treatment areas will potentially be consumed before reaching this downgradient location.

Iron and manganese continued to be identified at concentrations exceeding the 300 ppb Class GA standard (for each constituent) in the 2025 annual groundwater samples that were analyzed for iron and manganese (i.e., samples from wells MW-EPA-07, MW-EPA-09, MW-EPA-10, MS-SS-08-08, and MW-ORS-01), with the exception of manganese at MW-EPA-07 and MW-ORS-01. The concentrations in these wells were generally consistent before and after the OU 2 soil remediation and gypsum slurry emplacement for the enhanced anaerobic groundwater remediation, with some variations attributed to sample turbidity. The maximum concentrations of iron and manganese were identified in the August 2020 and October 2025 groundwater samples, respectively, from MW-EPA-10, which went dry during purging and was allowed to recover overnight before sampling. The final turbidity measurements at that well were elevated (249 and 584 NTU) before sampling in August 2020 and October 2025, respectively.

As indicated in the Groundwater RAWP, iron and manganese will be addressed by natural attenuation instead of enhanced anaerobic biodegradation. Natural attenuation is appropriate for addressing iron and manganese in groundwater, as both iron and manganese are thermodynamically favorable electron acceptors for microorganisms and provide further degradation of COCs. Once iron or manganese act as an electron acceptor, they are present in a more mobile form (which could be one reason why elevated concentrations of iron and manganese have been detected). It is not uncommon for strongly reducing geochemical conditions to result in elevated concentrations of naturally occurring iron and manganese. Then, as the groundwater migrates to where hydrocarbon impacts have attenuated and there is more ambient geochemistry with reasonable amounts of

dissolved oxygen and nitrate present, the iron and manganese can oxidize back to their more oxic state and typically precipitate out at circumneutral pH.

Upgradient well MW-ORS-01, downgradient wells MW-EPA-07 and MW-SS-08-08, and sentinel wells MW-EPA-09 and MW-EPA-10) will continue to be monitored for geochemical parameters (including sulfate, iron, and manganese, among other parameters) in accordance with the Groundwater RAWP and SMP (as described in Section 6 below).

3.2 MGP-Related Constituent Performance Monitoring Results

Decreasing concentrations of BTEX and PAHs are the ultimate goals of bioremediation in the area downgradient of the gypsum slurry emplacement. However, anaerobic biodegradation is a relatively slow process and clear decreases in concentrations in each of the MGP-related COCs are not expected during the first several post-injection performance sampling events for these constituents. The concentrations are expected to decrease in the longer term as ABOx continues to be enhanced.

BTEX and PAH concentrations were less than the TOGS 1.1.1 standards/guidance values and Federal MCLs at 7 of the 12 monitoring wells sampled in October 2025, including wells to the east (MW-EPA-01R and MW-ORS-01), to the south (MW-SS-09-07 and MW-EPA-10), and to the west (MW-EPA-02R, MW-EPA-03R, and MW-EPA-06) of the groundwater treatment areas.

Benzene, ethylbenzene, xylenes, and/or PAHs were identified at concentrations greater than TOGS 1.1.1 standards/guidance values at monitoring wells MW-EPA-07, MW-EPA-09, MW-SS-08-05, MW-SS-08-08, and MW-SS-09-06, located in the southern, and in the case of MW-SS-08-05 eastern, area of the OU 2 Project Area. The benzene concentration at MW-EPA-07 and the benzo(a)pyrene concentration at MW-SS-08-05 were also greater than the Federal MCLs during the October 2025 monitoring event. A closer look at the hydrocarbon concentrations at monitoring wells with exceedances of TOGS 1.1.1 standards/guidance values and/or Federal MCLs is provided below.

- *MW-EPA-07:* BTEX concentrations in the October 2025 sample from MW-EPA-07 were slightly higher than those identified in the October 2024 sample from this well. Naphthalene was the only PAH identified in the October 2025 sample from MW-EPA-07 at a concentration exceeding the respective TOGS 1.1.1 standard/guidance value, and the naphthalene concentration in the October 2025 sample (72.4 ppb) is the lowest concentration since the March 2008 sampling event. BTEX and PAH concentrations at MW-EPA-07 in October 2025 were also generally consistent with or less than historically measured concentrations (see Table 5 or Figure 6). As shown on the graph in Attachment 2, the total BTEX and naphthalene concentrations at MW-EPA-07 have generally decreased over the four sampling events following the gypsum slurry emplacement. Historically decreasing concentrations at this location, prior to gypsum slurry emplacement, indicate substantial natural attenuation and/or groundwater treatment as a result of the soil remediation completed in 2019. These results indicated that ABOx in groundwater in the southern portion of the Old Red Spring parcel is amenable to enhancement. In addition, although there are no regulatory criteria for TPH in the gasoline and diesel ranges (TPH GRO and SGC TPH DRO), general decreases in concentrations of these constituents at MW-EPA-07 provide an additional line of evidence for natural and enhanced ABOx.
- *MW-EPA-09:* Three PAHs (benzo[a]anthracene, benzo[a]pyrene, and benzo[b]fluoranthene) were identified in the October 2025 sample from MW-EPA-09 at estimated concentrations exceeding the TOGS 1.1.1

standards/guidance values. These PAHs have not been identified at this well previously. However, the reported concentrations are near or less than historical detection limits, which have been between 0.037 ppb and 0.048 ppb since SIM methods were first used starting in June 2021 (see Table 5). Consistent with previous sampling events, BTEX and naphthalene were not detected above laboratory detection limits in the October 2025 sample from MW-EPA-09 (refer to Table 5, Figure 6, or the graph in Attachment 2).

- *MW-SS-08-05:* Five PAHs (benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo[k] fluoranthene, and chrysene) were identified in the October 2025 sample from MW-SS-08-05 at concentrations exceeding the TOGS 1.1.1 standards/guidance values. Each of the compounds measured in 2025, except for benzo(k)fluoranthene, have historically been sporadically detected at low concentrations and have previously exceeded their respective TOGS 1.1.1 standards/guidance values. Consistent with previous sampling events, BTEX and naphthalene were not detected above laboratory detection limits in the October 2025 sample from MW-SS-08-05.
- *MW-SS-08-08:* BTEX and PAH concentrations in the October 2025 sample from MW-SS-08-08 were less than those measured during the June 2021 baseline event and subsequent annual sampling events (2022 through 2024). Per the graph in Attachment 2 or the data shown on Figure 6, the total BTEX and naphthalene concentrations at MW-SS-08-08 appear to have decreased slightly from one event to the next in the four sampling events following the gypsum slurry emplacement[2]. However, the BTEX and PAH concentrations during each of the four post-injection performance monitoring events at MW-SS-08-08 were greater than those historically measured at the well before the injection (i.e., generally non-detect), as shown on Figure 6. The increase in concentrations vs. historical concentrations at MW-SS-08-08 is attributed to the influence of the soil remedy implementation approximately 12 feet hydraulically upgradient, which is also reflected in increased sulfate concentrations before groundwater remedy implementation (as described in Section 3.1 above). The higher (although decreasing) BTEX and PAH concentrations at MW-SS-08-08 post-injection vs. pre-injection are anticipated to be temporary.
- *MW-SS-09-06:* Four PAHs (benzo[a]anthracene, benzo[k]fluoranthene, chrysene, and indeno[1,2,3-cd] pyrene) were identified in the October 2025 sample from MW-SS-09-06 at concentrations exceeding the TOGS 1.1.1 guidance values. Each constituent (except for benzo[a]anthracene) was identified at an estimated concentration. These PAHs have not been identified at this well previously. However, the reported concentrations are near or less than historical detection limits (see Table 5). BTEX and naphthalene were not detected above laboratory detection limits in the October 2025 sample from MW-SS-09-06.

[2] Because the scale of the x- and y-axis on each of the graphs in Attachment 2 are the same (i.e., to allow direct comparisons of data between locations) and because the BTEX and naphthalene concentrations are generally an order of magnitude lower at MW-SS-08-08 than MW-EPA-07, the shape of the trendline for MW-SS-08-08 is less obvious than for MW-EPA-07. The changes in concentrations at MW-SS-08-08 over the past four monitoring events are more readily apparent on Figure 6.

4 Subsurface Gas Monitoring Activities and Results

As indicated in the Groundwater RAWP, the intended biodegradation process of sulfate-reduction for enhanced ABOx might result in generation of hydrogen sulfide and the most likely place for accumulation of the gas would be in nearby subsurface structures (manholes, catch basins, monitoring wells). In addition, anaerobic biodegradation processes can produce methane, and elevated methane in groundwater has the potential to accumulate in subsurface structures at concentrations within its flammable range of 5 to 15% by volume in air. Hydrogen sulfide is heavier than air (vapor density of 1.19) and methane is lighter than air (vapor density of 0.6). Accordingly, hydrogen sulfide and methane gases may be stratified in the wells with hydrogen sulfide tending to remain at the bottom of the air column and methane tending to rise. Measurable hydrogen sulfide concentrations have only been identified at MW-EPA-07 and MW-SS-08-08 (in 2021 or 2022 during or after injection). The maximum hydrogen sulfide concentrations were just above the water table and the concentrations decreased with increasing distance above the water table (consistent with hydrogen sulfide having a vapor density greater than 1.0). Despite having a vapor density less than 1.0, methane gas was identified at lower concentrations with increasing distance above the water table. This pattern is interpreted to be the result of methane mixing with ambient air as it vents toward the surface following removal of the well plug or installation of self-venting well plugs.

Arcadis performed annual hydrogen sulfide monitoring in accordance with the EPA-approved Groundwater RAWP and OU 2 SMP in October 2025. Arcadis also field-measured the percentage of methane during the annual monitoring event. Monitoring for hydrogen sulfide and methane was conducted using a portable hand-held gas monitor to screen headspace gas inside the subsurface structures and monitoring wells. Direct measurements of lower explosive limit (LEL) were not made because an LEL sensor was swapped for the methane sensor. However, the percentage of methane measured by the gas meter provides an indication of the % LEL, which can be calculated as follows: percentage of methane divided by the LEL value of methane (i.e., 5% by volume), multiplied by 100.

Arcadis monitored gas levels from the following (as shown on Figure 3):

- Five utility manholes/catch basins in the vicinity of the injection areas (MH-1, MH-5, CB-4, CB-5, and CB-52). The manhole cover at MH-6 could not be removed during the event. Therefore, no hydrogen sulfide or methane measurements were able to be collected at the location.
- 10 monitoring wells in the vicinity of the groundwater treatment area (MW-EPA-02R, MW-EPA-06, MW-EPA-07, MW-EPA-09, MW-EPA-10, MW-SS-08-05, MW-SS-08-08, MW-SS-09-06, MW-SS-09-07, and MW-ORS-01).

The hydrogen sulfide monitoring results for the subsurface structures and monitoring wells are presented in Table 6. Hydrogen sulfide was not identified above 0.0 parts per million in any of the subsurface structures or monitoring wells during the 2025 annual monitoring.

The percentage of methane (and LEL) was zero during the 2025 annual monitoring event at each of the utility manholes/catch basins and at six of the 10 monitoring wells (MW-ORS-01, MW-EPA-02R, MW-EPA-06, MW-EPA-09, MW-SS-08-05, and MW-SS-09-07). At the four remaining monitoring wells (MW-EPA-07, MW-EPA-10, MW-SS-08-08, and MW-SS-09-06), the percentage of methane (and LEL) was greater than zero during the 2025 annual monitoring event. At these wells, the percentage of methane was greatest near the water table. At each of these wells, the percentage of methane (and LEL) concentrations were 0.0% (volume) by the time the probe was

raised up through the well and reached the top of the well casing, consistent with previous measurements at these wells.

Methane generation and distribution in the subsurface is based on several factors, including, but not limited to: (1) substrate and nutrient availability; (2) in-situ geochemical conditions; and (3) pressure differentials and preferential transport pathways. Dissolved methane is produced via anaerobic biodegradation of organic materials under strongly reducing conditions, including those expected within saturated peat intervals, as summarized in the Groundwater RAR. Where there is equilibration at the air-water interface at the bottom of the vadose zone and in monitoring well casings, elevated methane concentrations in groundwater result in elevated methane concentrations in soil vapor or the well headspace. Accumulation of methane in monitoring wells may also be affected by other factors, including the integrity of the well plug seal, permeability of the subsurface, and ground surface cover (e.g., asphalt). As groundwater moves downgradient from active anaerobic biodegradation zones (as a result of pressure gradients and lithologic controls), dissolved methane is diluted and consumed by the biological process of methane oxidation.

Arcadis evaluated the potential contribution of complete degradation of BTEX in groundwater to methane generation, as summarized in the Groundwater RAR. The results demonstrate that complete methanogenesis of concentrations of BTEX across the full range measured in OU 2 could not generate the full range of methane concentrations measured in groundwater, and this points to other sources of methane besides BTEX (e.g., peat decomposition, TPH degradation, etc.). The data suggest that anaerobic biodegradation of both the peat layer located within the screen interval of several wells and MGP-related constituents contribute to methane generation. However, since monitoring wells MW-EPA-10 and MW-SS-09-06 are located approximately 90 feet southeast and 130 feet west-southwest of the groundwater treatment areas, respectively, and BTEX and PAH concentrations in groundwater are low to non-detect, the methane gas concentrations at these wells are interpreted to be unrelated to MGP-related constituents and the gypsum slurry (sulfate) emplacement. A full description of the peat layer in relation to the monitoring wells and potential contribution of BTEX in groundwater to methane is presented in the Groundwater RAR and January 27, 2023 response to EPA and NYSDEC comments.

As indicated previously, hydrogen sulfide has historically been identified in only two wells (MW-EPA-07 and MW-SS-08-08), and it has not been identified in those wells since 2021 or 2022. Although % LEL and methane concentrations have been measured in certain groundwater monitoring wells upon removing the well covers, the data do not present a concern for the OU 2 Project Area. Further evaluation/quantification of sources contributing methane is not necessary for this remedial project because: (1) the presence and extent of methane is generally known; (2) available data show that methane concentrations in groundwater are decreasing; and (3) potential exposure pathways related to methane in the subsurface are controlled (i.e., methane has not been detected in ambient air within the OU 2 Project Area, passive vents have been installed on monitoring wells downgradient from the groundwater bioremediation treatment area, the wells are secured by locking j-plugs beneath bolt-down steel covers preventing public access, and field staff will follow the sampling procedures and safety precautions outlined in the Groundwater RAR and SMP when opening and sampling wells). Self-venting well caps were installed at MW-SS-08-08 on January 25, 2022 and at MW-EPA-07 on October 11, 2022 (after the well's steel flush-mount curb box had been raised to accommodate the new Greenbelt Downtown Connector Trail pavement elevation and sufficient space was available between the top of the well casing and curb box to install the vented cap) to prevent potential buildup of methane and hydrogen sulfide in the wells.

5 Summary and Conclusions

The monitoring data summarized herein provide evidence that the groundwater remedy implemented in September 2021, which included injecting approximately 2,300 pounds of gypsum (sulfate) in slurry form into the subsurface, is meeting the ROD objective of enhancing biodegradation. Sulfate concentrations in groundwater are the primary indicator of enhanced groundwater geochemical conditions conducive to enhance ABOx of BTEX and PAHs in groundwater at the OU 2 Project Area. The sulfate analytical data from the 2025 groundwater monitoring events show that the gypsum slurry injected into the fine-to-coarse-grained sand interval in September 2021 as part of the groundwater bioremediation remedy is dissolving and resulting in elevated sulfate concentrations within and downgradient from the injection area. The slight decrease in sulfate concentration at MW-EPA-07 and MW-SS-08-08 over the past few sampling events may indicate utilization of sulfate by microbes. However, the concentration is still sufficient to support ABOx. Additional geochemical indicator parameters (methane, TKN, and alkalinity) provide lines of evidence that ABOx is actively occurring in groundwater in the OU 2 Project Area, particularly at locations with measurable BTEX and PAH concentrations downgradient of the treatment area, and that this process is subject to enhancement with the delivery of sulfate as a higher-energy electron acceptor. ABOx is relatively slow and decreases in BTEX and PAH concentrations are anticipated in the longer term as ABOx continues to be enhanced. A slight overall decrease in total BTEX and PAH concentrations at downgradient monitoring wells MW-EPA-07 and MW-SS-08-08 was observed over the four sampling events following the gypsum slurry emplacement, and additional data are needed to evaluate potential trends.

Although stimulation of sulfate reduction with the addition of sulfate can result in hydrogen sulfide generation, no hydrogen sulfide has been identified in monitored subsurface structures (storm sewer manholes and catch basins) and monitoring wells within or near the groundwater bioremediation treatment area during the past three monitoring events (2023, 2024, and 2025). Accordingly, there appears to be little to no risk associated with hydrogen sulfide for personnel gauging or sampling the wells and for the public.

Elevated methane concentrations and % LEL values have been measured immediately above the water table at several monitoring wells in the OU 2 Project area and concentrations decreased with distance above the water table. Methane was not detected in ambient air during the annual gas monitoring event. The data suggest that anaerobic biodegradation of both the peat and MGP-related constituents contribute to methane generation. Further evaluation/quantification of sources contributing methane is not necessary for this remedial project.

6 Next Steps

A fifth round of annual post-injection groundwater performance monitoring is scheduled to be implemented in October 2026 and will include the same groundwater gauging and sampling activities implemented during the fourth annual monitoring event (water level gauging at 12 wells and collection of groundwater samples for analysis of BTEX and PAHs [each of the 12 wells] and geochemical parameters [5 wells]).

Based on more than five years of air monitoring measurements, further evaluation/quantification of sources contributing methane is not necessary and subsurface gas monitoring for hydrogen sulfide, methane, and % LEL) will be discontinued.

The results of the 2026 groundwater performance monitoring will be presented to the EPA in the next Annual Groundwater Bioremediation Performance Monitoring Report.

Table 1
Post-Gypsum Emplacement Groundwater Sampling Summary

Niagara Mohawk Power Corporation
Superfund Site - Operable Unit 2
Saratoga Springs, New York

Notes:

1. Samples were collected by Arcadis of New York, Inc. (Arcadis) on the dates identified, except for samples collected from MW-EPA-01R and MW-EPA-03R on October 2, 2024 and October 8 and 9, 2025 which were collected by Groundwater & Environmental Services, Inc. (GES).
2. DUP = Blind duplicate [corresponding sampling location is identified in brackets].
3. Samples were submitted by Arcadis to SGS North America, Inc. of Dayton, NJ for laboratory analysis of one or more of the following constituents:
   - Benzene, toluene, ethylbenzene, and xylenes (BTEX) by United States Environmental Protection Agency (USEPA) SW-846 Method 8260D.
   - Polycyclic aromatic hydrocarbons (PAHs) using USEPA SW-846 Method 8270E by selected ion monitoring (SIM).
   - Iron and manganese using USEPA SW-846 Method 6010D.
   - Sulfide using SM4500S2-F-11.
   - Sulfate using USEPA Method 300/SW-846 Method 9056A.
   - Total petroleum hydrocarbons (TPH) gasoline range organics using USEPA SW-846 Method 8015D.
   - TPH diesel range organics (DRO) using USEPA SW-846 Method 8015D.
   - Silica gel column (SGC) TPH DRO and GRO using USEPA SW-846 Methods 3630C and 8015D.
   - Geochemical parameters by:
     - Methane using method RSK-175.
     - Alkalinity using Method SM2320 B-11.
     - Nitrate using USEPA Method 353.2/SM4500NO2B.
     - Total Kjeldahl Nitrogen using USEPA Method 351.2/LACHAT.
     - Total organic carbon using SM5310 B-11/14.
4. Samples collected by GES were submitted to Eurofins of Amherst, NY for laboratory analysis of the following:
   - BTEX using USEPA SW-846 Method 8260C.
   - PAHs using USEPA SW-846 Method 8270E SIM.
5. * = Geochemical parameters designated for analysis from MW-EPA-10 on 9/22/2023 include alkalinity, nitrate, and total organic carbon.
6. ** = Geochemical parameters designated for analysis from MW-EPA-10 on 10/3/2024 include methane, alkalinity, nitrate, and total organic carbon.
7. *** = Geochemical parameters designated for analysis from MW-EPA-10 on 10/14/2025 include methane, alkalinity, nitrate, total organic carbon, and methane.
8. A check-mark (**X**) indicates analysis was conducted.

Notes:
1. Monitoring wells MW-EPA-01 and MW-EPA-03 were destroyed sometime before or during the construction of the Excelsior Springs Event Center.
2. Monitoring wells MW-EPA-02, MW-EPA-04, MW-EPA-05, and MW-EPA-08 were decommissioned on September 21, 2018 in preparation for the OU 2 soil remedial construction.
3. ft bgs = feet below ground surface.
4. NAVD = North American Vertical Datum of 1988.
5. NA = not available.
6. * = top of casing elevation is based on survey performed by Thompson-Fleming Land Surveyors, P.C. on July 20, 2020. Top of casing elevation shown differs from the elevation shown in the OU 2 Groundwater Remedial Design (Arcadis 2020), which included survey elevations measured by Land Remediation, Inc. following completion of the 2020 soil remedial action.
7. ** = top of casing elevation is based on survey performed by Rifenburg Contracting Corporation on November 16, 2022. Top of casing elevation shown differs from the elevation shown in the OU 2 Groundwater Remedial Action Report (Arcadis 2023), which included survey elevations measured by following completion of the 2022 Greenbelt Trail construction.
8. Light gray font designates wells that have been decommissioned or were destroyed.

MW-SS-08-05	East of ISS Area	05/22/09	Before	62,200
		07/07/20		5,600
		08/06/20		29,800
		10/05/20		56,400
MW-SS-09-06	Southwest of ISS Area	07/09/20	Before	95,000
		08/05/20		91,500
		10/05/20		77,200
MW-SS-09-07	West of ISS Area	08/06/20	Before	114,000
		10/05/20		101,000
Former Monitoring Wells (Lost or Decommissioned Before Groundwater Bioremediation)				
MW-EPA-01 (lost or destroyed)	East of Jet Grout Wall	05/20/09	Before	310,000
MW-EPA-02 (decommissioned 9/21/18)	Beneath Subsurface Mat	05/21/09	Before	248,000
MW-EPA-03 (lost or destroyed)	West of Jet Grout Wall	Not Sampled for Sulfate	- -	- -
MW-EPA-04 (decommissioned 9/21/18)	Immediately East of ISS Area	05/21/09	Before	<5,000
MW-EPA-05 (decommissioned 9/21/18)	Within ISS Footprint	05/21/09	Before	8,400
MW-EPA-08 (decommissioned 9/21/18)	Within ISS Footprint	05/22/09	Before	<5,000
MW-SS-05-01 (lost or destroyed)	Beneath Subsurface Mat	Not Sampled for Sulfate	- -	- -

Notes:
1. All concentrations reported micrograms per liter (µg/L), which is equivalent to parts per billion (ppb).
2. ISS = In-situ soil solidification/stabilization.
3. Values in brackets [ ] indicate a duplicate sample.
4. Gypsum slurry emplacement took place from Setptember 14-17, 2021.
5. Orange-shaded values are baseline results for samples collected three months before gypsum slurry emplacement.
6. Gray-shaded values are samples collected following gypsum slurry emplacement.
7. Results have been validated in accordance with USEPA National Functional Guidelines of October 1999.

Table 5
Groundwater Analytical Results (ppb)

Niagara Mohawk Power Corporation
Superfund Site - Operable Unit 2 Project Area
Saratoga Springs, New York

Notes:

1. Samples were collected by Arcadis of New York, Inc. on the dates indicated, except for samples collected from MW-EPA-01R and MW-EPA-03R on October 2, 2024 and October 8 and 9, 2025; which were collected by Groundwater & Environmental Sercices, Inc. (GES).
2. Samples were submitted by Arcadis to SGS North America, Inc. of Dayton, NJ for laboratory analysis of one or more of the following constituents:
   - Benzene, toluene, ethylbenzene and xylenes.(BTEX) using United States Environmental Protection Agency (USEPA) SW-846 Method 8260.
   - Polycyclic aromatic hydrocarbons (PAHs) using USEPA SW-846 Method 8270 selected ion monitoring (SIM) or Method 8310, as indicated.
   - Iron and manganese using USEPA SW-846 Method 6010.
   - Alkalinity using Standard Method SM2320 B-11.
   - Ammonia using Standard Method SM4500 NH3H.
   - Carbon dioxide, methane, and dissolved oxygen using Method RSK-175.
   - Nitrate using USEPA Method 353.2.
   - Total Kjeldahl nitrogen (TKN) using USEPA Method 351.2.
   - Orthophosphate as P using Standard Method SM4500 PE.
   - Sulfate using USEPA Method 9056.
   - Sulfide using Standard Method SM4500S2 F-11.
   - Total organic carbon (TOC) using Standard Method SM5310 B-11.
   - Total petroleum hydrocarbons (TPH) diesel range organics (DRO) using USEPA Method 8015D.
   - TPH gasoline orange organics (GRO) using USEPA Method 8015D.
   - Silica gel column (SGC) TPH DRO using USEPA Methods 3510C and 8015D.
4. Samples collected by GES were submitted to Eurofins of Amherst, NY for laboratory analysis of the following:
   - BTEX using USEPA SW-846 Method 8260C.
   - PAHs using USEPA SW-846 Method 8270E SIM.
3. Only those constituents detected in one or more samples are summarized.
4. Concentrations reported in parts per billion (ppb), which is equivalent to micrograms per liter (µg/L).
5. Field duplicate sample results are presented in brackets.
6. Data qualifiers are defined as follows:
   - < - Constituent not detected at a concentration above the reported detection limit.
   - B - Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
   - D - Compound quantitated using a secondary dilution. Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis.
   - E - Concentration exceeded the calibration range for that specific analysis.
   - J - Indicates that the associated numerical value is an estimated concentration.
   - NJ - The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.
7. New York State Department of Environmental Conservation (NYSDEC) groundwater standards/guidance values are from the NYSDEC Division of Water, Technical and Operational Guidance Series (TOGS) document titled "Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations" (TOGS 1.1.1) dated June 1998, revised April 2000 and June 2004.
8. Federal Maximum Contaminant Levels (MCLs) for drinking water presented in 40 Code of Federal Regulations, Chapter I, Subchapter D, Part 141.61, dated January 1991, updated July 1991, July 1992, and July 1994.
9. Bold font designates values that exceed the NYSDEC groundwater quality standards/guidance values.
10. Shading designates values that exceed the Federal MCLs.
11. - - = No TOGS 1.1.1 Water Quality Standard/Guidance Value or Federal MCL listed.
12. NA = Not analyzed.
13. ND = Not detected.
14. Results have been validated in accordance with USEPA National Functional Guidelines of October 1999.

Table 6
Hydrogen Sulfide, Lower Explosive Limit, and Methane Gas Measurements at Monitoring Wells, Catch Basins, and Manholes In the OU 2 Project Area

Niagara Mohawk Power Corporation
Superfund Site - Operable Unit 2 Project Area
Saratoga Springs, New York

Notes:
1. Measurements obtained by Arcadis of New York, Inc. (Arcadis) on the dates indicated above.
2. Times shown are approximate.
3. Measurement parameters are as follows: H2S = hydrogen sulfide; % LEL = percent lower explosive limit of methane.
4. ppm = parts per million.
5. - - = not available.
6. Instruments used for monitoring was an RAE QRAE or MultiRAE multi-gas meter.
7. Depth measurements are in feet relative to the top of the inner well casing.
8. * = LEL measurement coincided with startup of the drill rig adjacent to MW-SS-08-08. No subsequent elevated LEL measurements were identified during injection activities.
9. ** = The catch basin was dry and measurements were collected above the catch basin bottom.

NOTES:

1. BASE MAPPING WAS COMPILED FROM A SURVEY PERFORMED BY THOMPSON/ FLEMING LAND SURVEYORS, LLC, SARATOGA SPRINGS, NEW YORK, DATE JULY 8, 2015 AND JULY 20, 2020 AND A FIGURE PROVIDED BY CDM-SMITH TITLED 'SITE PLAN', DATED 11-03-2008 AT A SCALE OF 1"=60'.
2. STANDARDS/GUIDANCE VALUES = GROUNDWATER STANDARDS/ GUIDANCE VALUES FOR CLASS GA WATER AS PRESENTED IN THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) TECHNICAL AND OPERATION GUIDANCE SERIES DOCUMENT TITLED, "AMBIENT WATER QUALITY STANDARDS AND GUIDANCE VALUES AND GROUNDWATER EFFLUENT LIMITATIONS" (TOGS 1.1.1), DATED JUNE 1998, LAST REVISED JUNE 2004.
3. MCLs = FEDERAL MAXIMUM CONTAMINANT LEVELS (MCLs) FOR DRINKING WATER PRESENTED IN 40 CODE OF FEDERAL REGULATIONS, CHAPTER I, SUBCHAPTER D, PART 141.61, DATED JANUARY 1991, LAST REVISED JULY 1994.
4. ALL CONCENTRATIONS PRESENTED IN MICROGRAMS PER LITER (ug/L) OR PARTS PER BILLION (ppb).
5. FIELD DUPLICATE SAMPLE RESULTS ARE PRESENTED IN BRACKETS [ ].
6. B = ANALYTE WAS ALSO DETECTED IN THE ASSOCIATE METHOD BLANK AT A CONCENTRATION THAT MAY HAVE CONTRIBUTED TO THE SAMPLE RESULTS.
7. D = COMPOUND QUANTITATED USING A SECONDARY DILUTION. SURROGATE OR MATRIX SPIKE RECOVERIES WERE NOT OBTAINED BECAUSE THE EXTRACT WAS DILUTED FOR ANALYSIS.
8. E = CONCENTRATION EXCEEDED THE CALIBRATION RANGE FOR THAT SPECIFIC ANALYSIS.
9. J = INDICATES THAT THE ASSOCIATED NUMERICAL VALUE IS AN ESTIMATED CONCENTRATION.
10. JN = THE ANALYSIS INDICATES THE PRESENCE OF A COMPOUND FOR WHICH THERE IS PRESUMPTIVE EVIDENCE TO MAKE A TENTATIVE IDENTIFICATION. THE ASSOCIATED NUMERICAL VALUE IS AN ESTIMATED CONCENTRATION ONLY.
11. < = CONSTITUENT NOT DETECTED AT A CONCENTRATION ABOVE THE REPORTED DETECTION LIMIT.
12. NA = NOT ANALYZED.
13. NE = NO EXCEEDANCES.
14. BTEX = BENZENE, TOLUENE, ETHYLBENZENE, AND XYLENES.
15. PAHs = POLYCYCLIC AROMATIC HYDROCARBONS.
16. GROUNDWATER ANALYTICAL DATA HAVE BEEN VALIDATED.
17. DATA BOXES FOR WELLS THAT WERE DECOMMISSIONED OR DESTROYED ARE SHOWN IN GREY.
18. DATA IN PARENTHESIS AFTER WELL ID INDICATES SCREEN INTERVAL IN FEET BELOW GROUND SURFACE.
19. BOLD FONT INDICATES THE VALUE EXCEEDS THE TOGS 1.1.1 STANDARD/GUIDANCE VALUE.
20. SHADING INDICATES THE VALUE EXCEEDS THE FEDERAL MCL.
21. FOR CONSTITUENTS ANALYZED USING BOTH USEPA METHOD 8270C AND METHOD 8310, THE GREATEST CONCENTRATION REPORTED FROM EITHER METHOD IS DISPLAYED IN THIS FIGURE. UNLESS BOTH METHODS REPORTED A NON-DETECT VALUE, IN WHICH CASE, THE NON-DETECT FROM THE SAMPLE THAT OBTAINED THE LOWEST DETECTION LIMIT IS DISPLAYED IN THIS FIGURE.

* Purged dry 10/9/25 @ 0937, will sample tomorrow morning

* Sampled MW-11 for BTEX and filled ½ PAH bottle 10/10/25 0935 CDTW 11.43' before sampling DO 0.0, not enough to get parameters and samples

* 10/10/25 15:00 MW-EPA-10 still dry, only able to get BTEX and ½ bottle PAH samples

* 10/11/25 10:00 collected Sulfate, Sulfide, iron and manganese, Alkalinity, nitrate, TPHGRO, TOC, TPHDRO, SGCTPH Methane, samples w/ bailer, well went dry before TKN sample could be collected

CASE NARRATIVE / CONFORMANCE SUMMARY

Client:	Arcadis	**Job No:**	JE20825
Site:	Saratoga Springs, NY	**Report Date**	10/29/2025 4:44:45 P

On 10/10/2025, 4 sample(s), 1 Trip Blank(s), 0 Equip. Blank(s) and 0 Field Blank(s) were received at SGS North America Inc. (SGS) at a temperature of 4.1 °C. The samples were intact and properly preserved, unless noted below. An SGS Job Number of JE20825 was assigned to the project. The lab sample ID, client sample ID, and date of sample collection are detailed in the report's Results Summary.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** V2K694

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20825-1MS, JE20825-1MSD were used as the QC samples indicated.
- The matrix spike (MS) recovery(s) of Ethylbenzene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- The RPD(s) for the MS and MSD recoveries of Ethylbenzene are outside control limits for sample JE20825-1MSD. Outside control limits due to matrix interference.

MS Semi-volatiles By Method SW846 8270E BY SIM

Matrix: AQ **Batch ID:** OP68138A

- Sample(s) JE20825-1MS, JE20825-1MSD were used as the QC samples indicated.
- Sample(s) JE20825-4, JE20825-5 have compound(s) reported with a "B" qualifier, indicating analyte is found in the associated method blank. Detected in the Method blank but below the reporting limit level.
- The matrix spike duplicate (MSD) recovery(s) of Phenanthrene are outside control limits. Outside control limits due to matrix interference.
- The matrix spike (MS) recovery(s) of Acenaphthene, Naphthalene are outside control limits. Outside control limits due to high level in sample relative to spike amount.
- The RPD(s) for the MS and MSD recoveries of Phenanthrene are outside control limits for sample OP68138A-MSDA. Analytical precision exceeds in-house control limits.
- JE20825-1: Sample reextracted outside the holding time for confirmation.
- JE20825-3: Sample reextracted outside the holding time for confirmation.
- JE20825-3 for 2-Fluorobiphenyl: Outside control limits due to dilution.
- JE20825-5 for Benzo(b)fluoranthene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- JE20825-1 for 2-Fluorobiphenyl: Outside control limits due to dilution.
- JE20825-3 for Nitrobenzene-d5: Outside control limits due to dilution.
- JE20825-5 for Indeno(1,2,3-cd)pyrene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- JE20825-4 for Indeno(1,2,3-cd)pyrene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- JE20825-5 for Benzo(g,h,i)perylene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- JE20825-1 for Nitrobenzene-d5: Outside control limits due to dilution.
- JE20825-3 for Terphenyl-d14: Outside control limits due to dilution.
- JE20825-1 for Terphenyl-d14: Outside control limits due to dilution.
- JE20825-5 for Benzo(a)pyrene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- JE20825-5 for Benzo(k)fluoranthene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- JE20825-5 for Dibenzo(a,h)anthracene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- OP68138A-BS12 for Naphthalene: Outside of in house control limits.
- JE20825-4 for Benzo(a)pyrene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- JE20825-4 for Benzo(b)fluoranthene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- JE20825-4 for Benzo(g,h,i)perylene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- JE20825-4 for Benzo(k)fluoranthene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND
- JE20825-4 for Dibenzo(a,h)anthracene: Detected in the Method blank. Confirmation run extracted out of hold, result was ND

Matrix: AQ **Batch ID:** OP68290A

- The data for SW846 8270E BY SIM meets quality control requirements.
- JE20825-1: Sample extracted outside the holding time.Confirmation run
- JE20825-3: Sample extracted outside the holding time. Confirmation run.
- JE20825-5: Sample extracted outside the holding time. Confirmation run.
- JE20825-4: Sample extracted outside the holding time. Confirmation run.

GC Volatiles By Method RSK-175

Matrix: AQ **Batch ID:** GAA3393

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20825-1DUP were used as the QC samples indicated.

GC Volatiles By Method SW846 8015D

Matrix: AQ **Batch ID:** GKM591

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20921-1DUP, JE20921-2MS were used as the QC samples indicated.
- JE20825-5 for TPH-GRO (C6-C10): Associated CCV outside of control limits high, sample was ND.

Matrix: AQ **Batch ID:** GKM593

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20971-1MS, JE20971-2DUP were used as the QC samples indicated.

Matrix: AQ **Batch ID:** GKM598

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20825-1MS, JE20825-1MSD were used as the QC samples indicated.

GC/LC Semi-volatiles By Method SW846 8015D

Matrix: AQ **Batch ID:** OP68149

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- Sample(s) JE20825-1AMS, JE20825-1MS, JE20825-1MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Metals Analysis By Method SW846 6010D

Matrix: AQ **Batch ID:** MP57944

- All samples were digested within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20825-1MS, JE20825-1MSD, JE20825-1SDL, JE20847-4SDL were used as the QC samples for the metals analysis.

General Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP64893

- All samples were prepared within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20825-1MS, JE20825-1MSD were used as the QC samples for the Sulfate analysis.

General Chemistry By Method EPA 351.2/LACHAT

Matrix: AQ **Batch ID:** GP64753

- All samples were prepared within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20936-2MS, JE20936-2DUP were used as the QC samples for the Nitrogen, Total Kjeldahl analysis.
- The duplicate RPD(s) for Nitrogen, Total Kjeldahl are outside control limits for sample GP64753-D1. RPD acceptable due to low duplicate and sample concentrations.

General Chemistry By Method EPA 353.2/LACHAT

Matrix: AQ **Batch ID:** GP65048

- All samples were prepared within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20825-1DUP, JE20825-1MS, JE20825-3MS were used as the QC samples for the Nitrogen, Nitrate + Nitrite analysis.
- The matrix spike (MS) recovery(s) of Nitrogen, Nitrate + Nitrite are outside control limits. Spike recovery indicates possible matrix interference.

General Chemistry By Method EPA353.2/SM4500NO2B

Matrix: AQ **Batch ID:** R220191

- The data for EPA353.2/SM4500NO2B meets quality control requirements.
- JE20825-1 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ **Batch ID:** R220193

- The data for EPA353.2/SM4500NO2B meets quality control requirements.
- JE20825-5 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

Matrix: AQ **Batch ID:** R220199

- The data for EPA353.2/SM4500NO2B meets quality control requirements.
- JE20825-3 for Nitrogen, Nitrate: Calculated as: (Nitrogen, Nitrate + Nitrite) - (Nitrogen, Nitrite)

General Chemistry By Method SM2320 B-11/21

Matrix: AQ **Batch ID:** GN74665

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20825-1DUP were used as the QC samples for the Alkalinity, Total as CaCO3 analysis.
- JE20825-3 for Alkalinity, Total as CaCO3: Sample was titrated to a final pH of 4.5.
- JE20825-1 for Alkalinity, Total as CaCO3: Sample was titrated to a final pH of 4.5.
- JE20825-5 for Alkalinity, Total as CaCO3: Sample was titrated to a final pH of 4.5.

General Chemistry By Method SM4500NO2 B-11/21

Matrix: AQ **Batch ID:** GN74573

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20786-1MS, JE20786-1MSD were used as the QC samples for the Nitrogen, Nitrite analysis.

General Chemistry By Method SM4500S2- F-11/21

Matrix: AQ **Batch ID:** GN74687

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20825-1DUP were used as the QC samples for the Sulfide analysis.
- The duplicate RPD(s) for Sulfide are outside control limits for sample GN74687-D1. RPD acceptable due to low duplicate and sample concentrations.

General Chemistry By Method SM5310 B-11/14

Matrix: AQ **Batch ID:** GP64712

- All samples were prepared within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JE20901-3MS, JE20901-3MSD were used as the QC samples for the Total Organic Carbon analysis.

SGS certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting SGS's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

SGS is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. This report is authorized by SGS indicated via signature on the report cover.

(a) Outside control limits due to high level in sample relative to spike amount.
(b) Outside control limits due to matrix interference.

* = Outside of Control Limits.

Instrument Performance Check (BFB)

Job Number: JE20825
Account: BBLNYS Arcadis
Project: Saratoga Springs, NY

Sample: V2K658-BFB
Lab File ID: 2K23793.D
Instrument ID: GCMS2K
Injection Date: 09/05/25
Injection Time: 20:36

m/e	Ion Abundance Criteria	Raw Abundance	% Relative Abundance		Pass/Fail
50	15.0 - 40.0% of mass 95	82200	21.5		Pass
75	30.0 - 60.0% of mass 95	190865	50.0		Pass
95	Base peak, 100% relative abundance	381696	100.0		Pass
96	5.0 - 9.0% of mass 95	23880	6.26		Pass
173	Less than 2.0% of mass 174	947	0.25	(0.33) [a]	Pass
174	50.0 - 120.0% of mass 95	288725	75.6		Pass
175	5.0 - 9.0% of mass 174	21168	5.55	(7.33) [a]	Pass
176	95.0 - 101.0% of mass 174	278464	73.0	(96.4) [a]	Pass
177	5.0 - 9.0% of mass 176	17675	4.63	(6.35) [b]	Pass

(a) Value is % of mass 174
(b) Value is % of mass 176

IS 3 = 1,4-Difluorobenzene
IS 4 = Chlorobenzene-D5
IS 5 = 1,4-Dichlorobenzene-d4

(a) Upper Limit = + 100% of check standard area; Retention time + 0.5 minutes.
(b) Lower Limit = -50% of check standard area; Retention time -0.5 minutes.

Surrogate Recovery Summary

Job Number: JE20825
Account: BBLNYS Arcadis
Project: Saratoga Springs, NY

Method: SW846 8260D **Matrix:** AQ

Samples and QC shown here apply to the above method

Lab Sample ID	Lab File ID	S1	S2	S3	S4
JE20825-1	2K25216.D	95	91	97	90

Response via : Initial Calibration

Compound	R.T.	QIon	Response	Conc	Units	Dev(Min)
Internal Standards						
1) tert butyl alcohol-d9	3.499	65	686601	500.00	ug/L	0.00
5) pentafluorobenzene	4.810	168	693367	50.00	ug/L	0.00
50) 1,4-difluorobenzene	5.174	114	1079758	50.00	ug/L	0.00
72) chlorobenzene-d5	7.109	117	915313	50.00	ug/L	0.00
96) 1,4-dichlorobenzene-d4	8.376	152	448393	50.00	ug/L	0.00
124) pentafluorobenzene(a)	4.810	168	693367	50.00	ug/L	0.00
128) 1,4-dichlorobenzene-d4(a)	8.376	152	448393	50.00	ug/L	0.00
System Monitoring Compounds						
42) dibromofluoromethane (s)	4.528	113	300300	51.11	ug/L	0.00
Spiked Amount 50.000	Range 75 - 127		Recovery = 102.22%			
51) 1,2-dichloroethane-d4 (s)	4.881	65	399662	51.71	ug/L	0.00
Spiked Amount 50.000	Range 75 - 130		Recovery = 103.42%			
73) toluene-d8 (s)	6.122	98	1245394	49.40	ug/L	0.00
Spiked Amount 50.000	Range 80 - 120		Recovery = 98.80%			
97) 4-bromofluorobenzene (s)	7.791	95	464346	49.65	ug/L	0.00
Spiked Amount 50.000	Range 79 - 127		Recovery = 99.30%			
Target Compounds						Qvalue
2) ethanol	2.827	45	33762	184.6271	ug/L	90
3) tertiary butyl alcohol	3.547	59	16356	9.9701	ug/L	95
4) 1,4-dioxane	5.679	88	5702	49.9350	ug/L #	71
6) chlorodifluoromethane	1.762	51	19846	2.1049	ug/L	97
7) dichlorodifluoromethane	1.724	85	14647	2.1194	ug/L	91
8) chloromethane	1.913	50	16653	2.0128	ug/L	90
9) vinyl chloride	1.971	62	12934	1.9207	ug/L	90
10) 1,3-butadiene	1.987	39	13129	1.8469	ug/L	96
11) bromomethane	2.258	96	3648	1.6753	ug/L #	94
12) chloroethane	2.367	64	7161	2.0843	ug/L	88
13) trichlorofluoromethane	2.483	101	18574	2.0102	ug/L	73
14) ethyl ether	2.730	74	6422	1.9393	ug/L	92
15) acrolein	3.148	56	3695	2.0983	ug/L	73
16) freon 113	2.926	151	8553	2.0542	ug/L	91
17) 1,1-dichloroethene	2.901	61	16832	1.9054	ug/L	97
18) acetone	3.354	58	8544	7.6068	ug/L #	81
19) acetonitrile	3.698	41	34713	21.9088	ug/L	98
20) iodomethane	3.026	142	6266	1.1289	ug/L	88
21) carbon disulfide	2.946	76	29636	2.0061	ug/L	97
22) methylene chloride	3.338	84	10574	2.0723	ug/L	92
23) methyl acetate	3.441	74	3218	2.1977	ug/L #	61
24) methyl tert butyl ether	3.511	73	35033	1.9197	ug/L	82
25) trans-1,2-dichloroethene	3.457	96	10267	1.9589	ug/L	84
26) hexane	3.505	57	27248	1.9030	ug/L	94
27) di-isopropyl ether	3.765	45	45172	1.9594	ug/L	96
28) ethyl tert-butyl ether	4.013	59	38975	1.8990	ug/L	97
29) 2-butanone	4.595	72	8066	6.6871	ug/L	96
30) 1,1-dichloroethane	3.878	63	21969	2.0707	ug/L	88
31) chloroprene	3.862	53	21488	1.8650	ug/L	94
32) acrylonitrile	3.907	52	6537	1.9053	ug/L	88
33) vinyl acetate	4.013	86	2609	1.8151	ug/L #	37
34) ethyl acetate	4.457	70	2284	2.4419	ug/L #	72
35) 2,2-dichloropropane	4.315	77	17840	2.1185	ug/L	91
36) cis-1,2-dichloroethene	4.241	96	11160	1.9968	ug/L	90
37) propionitrile	4.801	54	36518m	20.0820	ug/L	
38) methyl acrylate	4.473	85	2669	2.0209	ug/L #	37
39) bromochloromethane	4.373	128	4792	2.0191	ug/L	88
40) tetrahydrofuran	4.518	71	2414	1.9892	ug/L #	86
