Comments: There are three O&M Programs associated with this site. The Early Warning Monitoring System (EWMS) is a semi-annual monitoring program that monitors groundwater and surface water between the site and the Luther Forest water supply well field. Work Element I, the site drinking water treatment system, is an air stripper that provides groundwater treatment for water used by the Malta Test Station. Monitoring includes quarterly sampling of influent and effluent. Work Element II is a groundwater monitoring program that incorporates the EWMS data and influent data for Work Element I to track VOC concentrations over time and to monitor natural attenuation and degradation. Reports are sent to USEPA / NYSDEC. This is an NPL site. Vic Cardona, Central Office, has been coordinating the remedial side of this project for DEC. O&M Plans were finalized early in 1998. The Region gets copies of reports. O&M has not been officially transferred to the region.
