### **2.1 Sample Collection**

During this reporting period, unfiltered groundwater samples were collected on October 16<sup>th</sup> and 17<sup>th</sup>, 2013 from the Early Warning Monitoring System (EWMS) in accordance with:

- 1) Operations and Maintenance Manual for Remedial Work Element II - Ground Water, ERM Northeast, Inc., January 22, 1998, (O&M-GW),
- 2) Five-Year Review Report, Malta Rocket Fuel Area Superfund Site, United States Environmental Protection Agency (EPA), September 24, 2004, including a table titled "Proposed Modifications to Groundwater and Surface Water Sampling Regimes at the Malta Rocket Fuel Area Site", a letter from GE to the USEPA dated October 26, 2004,
- 3) Addendum No. 1, Operations and Maintenance Manual, Remedial Work Element II-Groundwater, Malta Rocket Fuel Area Site, General Electric Company, January 31, 2005,
- 4) Five-Year Review Report, Malta Rocket Fuel Area Superfund Site, EPA, August 27, 2009, and
- 5) EPA letter dated December 1, 2011, Modification to the Groundwater Monitoring Program and subsequent correspondence with General Electric Company.

According to the documents referenced above, the following samples were collected to evaluate groundwater conditions:

- Samples were collected from monitoring wells DGC-3S, DGC-4S, 10S, 11D, 13S, 13D, MW-1, MW-4, M-24DR, M-25D, M-26S, M-26D, M-27D, M-28S and M-29D and analyzed for volatile organic compounds (VOC) and Trichloroethene (TCE) breakdown product ethane (**Figure 1**).
- Samples were collected from surface water locations SW-A, SW-B, SW-D, SW-E, SW-F and SW-G and analyzed for VOC's and TCE breakdown product ethane.
- Samples from wells 13D, M-27D and surface water SW-B were analyzed for unfiltered total chromium and unfiltered hexavalent chromium.
- A blind duplicate sample was collected from well M-27D for VOCs, chromium, and hexavalent chromium. A second blind duplicate sample was collected from well M-28S for VOCs. Trip blanks were also analyzed.
- Monitoring wells MW-4, M-26S, M-26D, and M-28S were sampled for hydrazine, 1,1-

Designated sampling locations were analyzed by ALS Environmental in Rochester, New York for VOCs according to USEPA Method OLC-02.1, ethane by Method RSK 175, total chromium by Method 6010C and hexavalent chromium by Method 7196A. Eurofins in Lancaster, Pennsylvania analyzed the hydrazines by modified Method 8315A.

Results of the October 2013 semi-annual EWMS sampling event are summarized in **Table 1**. The laboratory reports are presented in **Appendix A**. The data validation reports are included in **Appendix B**. A summary of analytical results from 1987 through this reporting period for samples collected at locations currently included in the EWMS sampling program is provided in **Tables 2, 3, and 4**. In accordance with the O&M-GW, time versus concentration plots for carbon tetrachloride at monitoring well M-27D are included as **Figure 2**. **Figure 3** includes a comparison of simulated versus observed concentrations of carbon tetrachloride at monitoring well M-27D.

## ***2.2 Chromium Analytical Results***

Chromium was detected in monitoring well 13D at an estimated concentration of 8.0 µg/l. No detectable concentrations of unfiltered total chromium and hexavalent chromium were reported at the method detection limit for all other sample locations (13D, M-27D, SW-B) during the reporting period. The New York State Ground Water Standard (NYSGWS) for total chromium and hexavalent chromium is 50 µg/l.

## ***2.3 VOC Analytical Results***

Carbon tetrachloride was detected in monitoring wells 11D, 13S, M-25D, M-27D, M-28S and M-29D, at concentrations of, 6.0 µg/l, 3.7 µg/l, 25 µg/l, 1.6 µg/l, 4.7 µg/l, and 18 µg/l, respectively. In addition, carbon tetrachloride was detected at estimated concentrations in monitoring wells 10S, 13D, and M-24DR at 0.20 µg/l, 0.77 µg/l, and 0.67 µg/l respectively. All other sample locations were non-detect for carbon tetrachloride during the reporting period. The time versus concentration plot for carbon tetrachloride in well M-27D is presented in **Figure 2**. The NYSGWS for carbon tetrachloride is 5 µg/l.

Chloroform was detected at estimated concentrations in monitoring wells 10S, 11D, M-25D, M-28S and M-29D at concentrations of 0.65 µg/l, 0.55 µg/l, 1.2 µg/l, 0.26 µg/l, and 0.63 µg/l, respectively. The NYSGWS for chloroform is 7 µg/l. All other sample locations were non-detect for chloroform during the reporting period.

TCE was detected in monitoring wells 11D, 13S, M-24DR, M-25D, M-27D, M-28S, and M-29D at concentrations of 1.4 µg/l, 2.9 µg/l, 2.8 µg/l, 57 µg/l, 6 µg/l, 8.1 µg/l and 23 µg/l respectively. The NYSGWS for TCE is 5 µg/l. TCE was not detected at the other sample locations during this reporting period.

#### ***2.4 Comparison of Observed VOC Concentrations to Simulation Results***

Carbon tetrachloride and TCE concentrations detected during this monitoring period were compared to the results from the contaminant fate and transport modeling reported in Appendix A of the O&M-GW. The comparison was performed for carbon tetrachloride in monitoring well M-27D (**Figure 3**). As shown in **Figure 3**, the simulated carbon tetrachloride results are higher than the observed concentrations.

#### ***2.5 Hydrazine Analytical Results***

Hydrazine was not detected at monitoring wells MW-4, M-26S, and M-28S.

## **3.0 INSTITUTIONAL CONTROLS**

---

O&M activities for remedial Work Element IV, Institutional Controls, are conducted on an annual basis. Visual inspections of the Environmental Restriction Zone (ERZ) are conducted during each of the semi-annual groundwater sampling events. The property owners are interviewed regarding known activities being performed within the ERZ on an annual basis (Fall).

### ***3.1 Sampling and Survey Results***

On October 16 and 17, 2013, as part of the semi-annual EWMS sampling program, site conditions in the environmental restriction zone ERZ were inspected to determine if any changes or property development occurred, specifically the installation of new groundwater wells. The inspections were conducted in the following areas of the site:

- Proximate to the surface water sampling locations and monitoring well locations, as well as long the access roads and wooded paths leading to these locations
- Proximate to building 15 at the MRFA site

### ***3.2 Interviews with Property Owners***

Telephone interviews were conducted with the following representatives regarding the ERZ:

- Kevin Hunt representing New York State Energy Research and Development Authority (NYSERDA) was interviewed on December 23, 2013.
- Kevin King representing the Town of Malta was interviewed on January 7, 2014.
- Jon Dawes representing Luther Forest Technology Campus Economic Development Corporation (LFTCDC) was interviewed on December 9, 2013.
- Patrick Hewlett representing Global Foundries was interviewed on November 27, 2013.

Interview logs documenting the conversation with each of the property representatives are included in **Appendix C**.

Mr. Hunt from the NYSERDA stated that he was not aware of any new groundwater usage, or other actions within the ERZ. Mr. Hunt also stated that NYSERDA had provided other interested parties the Environmental Restriction Easements and the Declaration of Restrictive Covenants.

Mr. King from the Town of Malta stated that he was not aware of any new groundwater usage, within the ERZ. He stated that their water supply is now piped from the upper Hudson River.

Mr. Dawes stated that he was aware of ongoing construction by Global Foundries facility. Mr. Dawes was not aware of any new groundwater usage or other actions within the ERZ.

Mr. Hewlett from Global Foundries stated that he was not aware of any new groundwater usage within the ERZ

## REPORT QUALIFIERS AND DEFINITIONS

- U Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).
- B Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E Organics- Concentration has exceeded the calibration range for that specific analysis.
- D Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- + Correlation coefficient for MSA is <0.995.
- N Inorganics- Matrix spike recovery was outside laboratory limits.
- N Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S Concentration has been determined using Method of Standard Additions (MSA).
- W Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P Concentration >40% (25% for CLP) difference between the two GC columns.
- C Confirmed by GC/MS
- Q DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X See Case Narrative for discussion.
- MRL Method Reporting Limit. Also known as:
- LOQ Limit of Quantitation (LOQ)  
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
- MDL Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
- LOD Limit of Detection. A value at or above the MDL which has been verified to be detectable.
- ND Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

Sample Matrix: Water

Service Request: R1307796  
Project Number: 149850  
Date Received: 10/17/13

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier IV deliverables. When appropriate to the method, method blank and LCS results have been reported with each analytical test.

### Sample Receipt

Samples were collected on 10/16/13 and received at ALS on 10/17/13 at a cooler temperature of 0.9°C in good condition except as noted on the cooler receipt and preservation check form. The samples were stored in a refrigerator at 1 - 6 °C upon receipt at the laboratory.

### Volatile Organics

Samples were analyzed for a site specific list of Volatile Organics by CLP Method OLC 2.1.

All Tuning criteria for BFB were within QC limits.

All the initial calibration and continuing calibration criteria were met for all analytes.

All Internal Standard Areas and surrogate standard recoveries were within QC limits.

The LCS recoveries were all acceptable.

Site specific QC was not requested on these samples.

The Method Blanks associated with these samples were free of contamination.

No analytical or QC problems were encountered.

### RSK-175

Samples were analyzed for Ethane by Method RSK-175M.

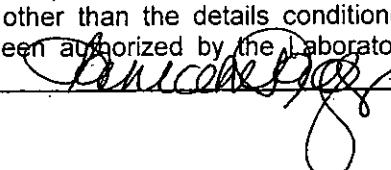

All the initial and continuing calibration criteria were met for all analytes.

The LCS recoveries were all acceptable.

Site specific QC was not requested on these samples.

The Method Blanks associated with these samples were free of contamination.

No other analytical or QC problems were encountered.

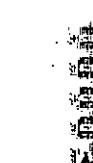

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the details conditioned above. Release of the data contained in this data package has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

## REPORT QUALIFIERS AND DEFINITIONS

- U** Analyte was analyzed for but not detected. The sample quantitation limit has been corrected for dilution and for percent moisture, unless otherwise noted in the case narrative.
- J** Estimated value due to either being a Tentatively Identified Compound (TIC) or that the concentration is between the MRL and the MDL. Concentrations are not verified within the linear range of the calibration. For DoD: concentration >40% difference between two GC columns (pesticides/Aroclors).
- B** Analyte was also detected in the associated method blank at a concentration that may have contributed to the sample result.
- E** Inorganics- Concentration is estimated due to the serial dilution was outside control limits.
- E** Organics- Concentration has exceeded the calibration range for that specific analysis.
- D** Concentration is a result of a dilution, typically a secondary analysis of the sample due to exceeding the calibration range or that a surrogate has been diluted out of the sample and cannot be assessed.
- \* Indicates that a quality control parameter has exceeded laboratory limits. Under the "Notes" column of the Form I, this qualifier denotes analysis was performed out of Holding Time.
- H** Analysis was performed out of hold time for tests that have an "immediate" hold time criteria.
- # Spike was diluted out.
- +** Correlation coefficient for MSA is <0.995.
- N** Inorganics- Matrix spike recovery was outside laboratory limits.
- N** Organics- Presumptive evidence of a compound (reported as a TIC) based on the MS library search.
- S** Concentration has been determined using Method of Standard Additions (MSA).
- W** Post-Digestion Spike recovery is outside control limits and the sample absorbance is <50% of the spike absorbance.
- P** Concentration >40% (25% for CLP) difference between the two GC columns.
- C** Confirmed by GC/MS
- Q** DoD reports: indicates a pesticide/Aroclor is not confirmed ( $\geq 100\%$  Difference between two GC columns).
- X** See Case Narrative for discussion.
- MRL** Method Reporting Limit. Also known as:  
**LOQ** Limit of Quantitation (LOQ)  
The lowest concentration at which the method analyte may be reliably quantified under the method conditions.
- MDL** Method Detection Limit. A statistical value derived from a study designed to provide the lowest concentration that will be detected 99% of the time. Values between the MDL and MRL are estimated (see J qualifier).
- LOD** Limit of Detection. A value at or above the MDL which has been verified to be detectable.
- ND** Non-Detect. Analyte was not detected at the concentration listed. Same as U qualifier.

## Quality Control Summary

Client Name: Shaw Env & Infrastructure, Inc  
Reported: 10/30/13 at 01:18 PM

Group Number: 1427527

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

All Inorganic Initial Calibration and Continuing Calibration Blanks met acceptable method criteria unless otherwise noted on the Analysis Report.

< less than - The number following the sign is the limit of quantitation, the smallest amount of analyte which can be reliably determined using this specific test.

> greater than

**ppm** parts per million - One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter per liter of gas.

**ppb** parts per billion

**Dry weight basis** Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture. All other results are reported on an as-received basis.

**Data Qualifiers:**

**C** – result confirmed by reanalysis.

**J** - estimated value – The result is  $\geq$  the Method Detection Limit (MDL) and < the Limit of Quantitation (LOQ).

**U.S. EPA CLP Data Qualifiers:**

**Organic Qualifiers**

- A** TIC is a possible aldol-condensation product
- B** Analyte was also detected in the blank
- C** Pesticide result confirmed by GC/MS

- \* Duplicate analysis not within control limits
- + Correlation coefficient for MSA  $<0.995$

**Analytical test results meet all requirements of NELAC unless otherwise noted under the individual analysis.**

Measurement uncertainty values, as applicable, are available upon request.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

Times are local to the area of activity. Parameters listed in the 40 CFR part 136 Table II as "analyze immediately" are not performed within 15 minutes.

RE: Validation of GE MRFA Malta Site Data Packages  
ALS Sub Nos. R1307796 and R1307836

Dear Mr. Neumann:

Review has been completed for the data package generated by ALS/CAS that pertains to groundwater samples collected 10/16/13 and 10/17/13 at the GE Malta Site. Twenty-one samples, two field duplicates, cooler blanks, and trip blanks were processed for site-specific low level volatiles and ethane. Three of those samples and one field duplicate were also analyzed for total and hexavalent chromium. Methodologies utilized include those of the USEPA OLC02.1, EPA CLP ILM, RSK 175, and USEPA SW846 method 7196.

Data validation was performed with guidance from the USEPA CLP National Functional Guidelines for Organic and Inorganic Data Review and the USEPA Region 2 SOPs HW-2 and HW-6, with consideration for the specific methodologies. The following items were reviewed:

- \* Data Completeness
- \* Custody Documentation
- \* Holding Times
- \* Surrogate and Internal Standard Recoveries
- \* Matrix Spike Recoveries/Duplicate Correlations
- \* Field Duplicate Correlations
- \* Preparation/Calibration Blanks
- \* Control Spike/Laboratory Control Samples
- \* Instrumental Tunes
- \* Calibration/Low Level Standards
- \* Instrument IDLs
- \* ICP Serial Dilutions
- \* Method Compliance
- \* Sample Result Verification

The items showing deficiencies are discussed in the following sections of this report. All others were found to be acceptable as outlined in the above-mentioned validation procedures, and as applicable for the methodology. Unless noted specifically in the following text, reported results are substantiated by the raw data, and generated in compliance with protocol requirements.

**In summary**, sample processing was conducted primarily with compliance to protocol requirements and with adherence to quality criteria. Sample results are usable either as reported, or with minor qualification as estimated. This is discussed in the following analytical sections.

Copies of laboratory identification summaries and the laboratory case narratives are attached to this text, and should be reviewed in conjunction with this report. Laboratory sample results forms are also submitted, reflecting the qualifiers in red ink.

#### **Chain-of-Custody**

M-27D was reported by the laboratory as "MW-27D".

The relinquish entries do not include the date and time. There are no relinquish entries on the first page of the custodies associated with samples collected 10/17/13.

The custody forms do not indicate the preservation or the number of containers. Raw preparation and instrument logs show proper pHs.

#### **Low Level Volatile Analyses**

Matrix spikes of M-27D and M-28S show recoveries and duplicate correlations within the laboratory acceptance ranges and validation guidelines for the twelve evaluated analytes.

Volatile blind field duplicate correlations for M-27D and M-28S are within validation guidelines.

1,2-Dibromo-3-chloropropane, acetone and 2-butanone exhibit low relative response factors (RRFs) (inherent with the methodology) in all of the project calibration standards. The usability of those data is evidenced by spike recoveries, instrument sensitivity, and calibration standard responses, but the reporting limits and detected values for those compounds in the samples and trip/cooler blanks should be considered estimated ("UJ" or "J" qualifiers), possibly biased low.

The other calibration standard responses are acceptable.

Although the matrix spikes were processed beyond the holding time from laboratory receipt (VTSR), the samples were received only one day after collection, rather than the allowed timeframe of two days, the overall time from collection is acceptable, and there is no perceived effect on the accuracy and precision values.

Sample holding times were met, and surrogate and internal standard responses are within required limits.

M-25D was analyzed at initial dilution due to target analyte concentrations. This resulted in elevated reporting limits for analytes not detected in those samples.

### **Ethane Analyses**

Instrument performance was compliant, holding times were met, and blanks show no contamination.

Matrix spikes and duplicates of M-27D and M-28S show recoveries and correlations within laboratory acceptance ranges.

The blind field duplicate evaluations of M-28S and M-27D show acceptable correlations.

### **Total Chromium Analyses**

The matrix spike/lab duplicate accuracy and precision determinations were performed on M-27D, and show recovery and duplicate correlation within recommended limits.

The field duplicate evaluation for M-27D also produced a good correlation.

The serial dilution evaluation of M-27D is not applicable due to low sample concentration.

Instrument performance was acceptable. Reported results are substantiated by the raw data, and generated in compliance with required protocols. Quality control parameter results meet validation requirements.

### **Hexavalent Chromium Analyses**

Review was conducted for method compliance, holding times, transcription, calculations, standard and blank acceptability, accuracy and precision, etc., as applicable to the procedure. All were found to be acceptable unless noted below.

Matrix spike/laboratory duplicate accuracy and precision determinations were performed on M-27D, and show recoveries and duplicate correlation within laboratory acceptance ranges.

The field duplicate correlation for M-27D was within validation guidelines.

Reported results are substantiated by the raw data, and generated in compliance with required protocols. Holding times were met, and blanks show no contamination.

Please do not hesitate to contact me if questions or comments arise during your review of this report.

Very truly yours,

  
Judy Harry

## **VALIDATION DATA QUALIFIER DEFINITIONS**

- U** The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.
- J** The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
- UJ** The analyte was not detected. The associated reported quantitation limit is an estimate and may be inaccurate or imprecise.
- NJ** The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.
- R** The data are unusable. The analyte may or may not be present.
- EMPC** The results do not meet all criteria for a confirmed identification. The quantitative value represents the Estimated Maximum Possible Concentration of the analyte in the sample.
