NON-CONFORMANCE SUMMARY

Job#: A06-3047

STL Project#: NY5A9393.3
Site Name: Ecology and Environment NYSDEC Standby

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-3047
Sample Cooler(s) were received at the following temperature(s); 4@4.2 °C
All samples were received in good condition.

GC Extractable Data

For method 8082, the recovery of the surrogate Decachlorobiphenyl for all samples and batch QC was outside project established quality control limits (low) but within laboratory quality control limits. The recovery of surrogate Tetrachloro-m-xylene is within both project and laboratory quality control limits for all samples and batch QC with the exception of sample NM-MW-01-GW. No further corrective action was required.

For method 8082, Aroclor 1260, 1254, 1016, and Decachlorobiphenyl exhibited a percent difference result of greater than 15% in the continuing calibration verification. No further corrective action was taken as all field samples are non-detect for these analytes.

Metals Data

The analyte Beryllium was detected in several of the CCB's at a level above the project established reporting limit. The requested reporting limit for Beryllium is below STL's standard reporting limit and, therefore, no corrective action has been taken for any anomalous detections. It must be noted that results reported below STL's standard reporting limit may result in false positive/false negative results, less accurate quantitation and potential misidentification at the lower concentrations.

The recovery of sample NM-MW-03-GW Matrix Spike exhibited a result above the quality control limits for Manganese. The recoveries of sample NM-MW-03-GW Matrix Spike Duplicate exhibited results above the quality control limits for Iron and Manganese. The sample result is more than four times greater than the spike added. The LFB was acceptable.

The recovery of sample NM-MW-03-GW Post Spike exhibited a result below the quality control limits for Manganese. However, the LFB was acceptable.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
1	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
*	Indicates the spike or duplicate analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

NON-CONFORMANCE SUMMARY

Job#: A06-3047

STL Project#: NY5A9393.3
Site Name: Ecology and Environment NYSDEC Standby

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-3047
Sample Cooler(s) were received at the following temperature(s); 4@4.2 °C
All samples were received in good condition.

GC Extractable Data

For method 8082, the recovery of the surrogate Decachlorobiphenyl for all samples and batch QC was outside project established quality control limits (low) but within laboratory quality control limits. The recovery of surrogate Tetrachloro-m-xylene is within both project and laboratory quality control limits for all samples and batch QC with the exception of sample NM-MW-01-GW. No further corrective action was required.

For method 8082, Aroclor 1260, 1254, 1016, and Decachlorobiphenyl exhibited a percent difference result of greater than 15% in the continuing calibration verification. No further corrective action was taken as all field samples are non-detect for these analytes.

Metals Data

The analyte Beryllium was detected in several of the CCB's at a level above the project established reporting limit. The requested reporting limit for Beryllium is below STL's standard reporting limit and, therefore, no corrective action has been taken for any anomalous detections. It must be noted that results reported below STL's standard reporting limit may result in false positive/false negative results, less accurate quantitation and potential misidentification at the lower concentrations.

The recovery of sample NM-MW-03-GW Matrix Spike exhibited a result above the quality control limits for Manganese. The recoveries of sample NM-MW-03-GW Matrix Spike Duplicate exhibited results above the quality control limits for Iron and Manganese. The sample result is more than four times greater than the spike added. The LFB was acceptable.

The recovery of sample NM-MW-03-GW Post Spike exhibited a result below the quality control limits for Manganese. However, the LFB was acceptable.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Number of Times Edited : 5
Number of Times Calibrated : 371
Description: NEW 7 PT AR 1016/1260 CURVE FOR INST.#14 11/30/05

Global Sample Information
Default Sample Volume : 1.000 uL
Quantitation Units : ng
Void Time : 0.000 min
Correct amounts during calibration : Yes
Convert unknowns to concentration units : Yes
Reject outliers during calibration : No

Processed by: 12/1/05
Reviewed by: DEC 1 2005

An External Standard calibration will be used
Unknown peaks will be quantitated using a response factor of 1.000000e+06
First peak will be relative retention reference

Component Information
TMX
Component Type : Single Peak Component
Retention Time : 1.833 min
Search Window : 3.00 s, 0.00 %
Reference Component :
Find peak closest to expected RT in window
Calibrating Area versus Amount using a 1st Order Fit
Curve will ignore the origin
Amounts will not be scaled prior to the regression
Weighting factor for the regression: 1
Component standard purity percentage : 100.0000%

Number of Times Calibrated : 317
Description: NEW 7 PT AR 1016/1260 CURVE FOR INST. #14 11/30/05

Global Sample Information
Default Sample Volume : 1.000 uL
Quantitation Units : ng
Void Time : 0.000 min
Correct amounts during calibration : Yes
Convert unknowns to concentration units : Yes
Reject outliers during calibration : No

An External Standard calibration will be used
Unknown peaks will be quantitated using a response factor of 1.000000e+06
First peak will be relative retention reference

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-3143
Sample Cooler(s) were received at the following temperature(s); 6 @ 2.0 °C
All samples were received in good condition.

GC Extractable Data

For method 8082, the recovery of surrogate Decachlorobiphenyl in the Matrix Spike Blank is outside of established quality control limits. The recovery of surrogate Tetrachloro-m-xylene is within quality control limits therfore no further corrective action is required.

Metals Data

The analyte Beryllium was detected in the ICB's and CCB's at levels above the project established reporting limit. The requested reporting limit for Beryllium is below STL's standard reporting limit and, therefore, no corrective action has been taken for any anomalous detections. It must be noted that results reported below STL's standard reporting limit may result in false positive/false negative results, less accurate quantitation and potential misidentification at the lower concentrations.

The CCV, analyzed at (20:36), exhibited results above the quality control limits for Copper. However, the samples were bracketed by compliant CCV's, therefore, no corrective action was necessary.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

DATA QUALIFIER PAGE

These definitions are provided in the event the data in this report requires the use of one or more of the qualifiers. Not all qualifiers defined below are necessarily used in the accompanying data package.

ORGANIC DATA QUALIFIERS

ND or U	Indicates compound was analyzed for, but not detected.
J	Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
C	This flag applies to pesticide results where the identification has been confirmed by GC/MS.
B	This flag is used when the analyte is found in the associated blank, as well as in the sample.
E	This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at the secondary dilution factor.
N	Indicates presumptive evidence of a compound. This flag is used only for tentatively identified compounds, where the identification is based on the Mass Spectral library search. It is applied to all TIC results.
P	This flag is used for CLP methodology only. For Pesticide/Aroclor target analytes, when a difference for detected concentrations between the two GC columns is greater than 25%, the lower of the two values is reported on the data page and flagged with a "P".
A	This flag indicates that a TIC is a suspected aldol-condensation product.
1	Indicates coelution.
*	Indicates analysis is not within the quality control limits.

INORGANIC DATA QUALIFIERS

ND or U	Indicates element was analyzed for, but not detected. Report with the detection limit value.
J or B	Indicates a value greater than or equal to the instrument detection limit, but less than the quantitation limit.
N	Indicates spike sample recovery is not within the quality control limits.
S	Indicates value determined by the Method of Standard Addition.
E	Indicates a value estimated or not reported due to the presence of interferences.
H	Indicates analytical holding time exceedance. The value obtained should be considered an estimate.
*	Indicates the spike or duplicate analysis is not within the quality control limits.
+	Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995.

NON-CONFORMANCE SUMMARY

Job#: A06-3143

STL Project#: NY5A9393.3
Site Name: Ecology and Environment NYSDEC Standby

General Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-3143
Sample Cooler(s) were received at the following temperature(s); 6 @ 2.0 °C
All samples were received in good condition.

GC Extractable Data

For method 8082, the recovery of surrogate Decachlorobiphenyl in the Matrix Spike Blank is outside of established quality control limits. The recovery of surrogate Tetrachloro-m-xylene is within quality control limits therfore no further corrective action is required.

Metals Data

The analyte Beryllium was detected in the ICB's and CCB's at levels above the project established reporting limit. The requested reporting limit for Beryllium is below STL's standard reporting limit and, therefore, no corrective action has been taken for any anomalous detections. It must be noted that results reported below STL's standard reporting limit may result in false positive/false negative results, less accurate quantitation and potential misidentification at the lower concentrations.

The CCV, analyzed at (20:36), exhibited results above the quality control limits for Copper. However, the samples were bracketed by compliant CCV's, therefore, no corrective action was necessary.

****

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Description: NEW 7 PT. 1016/1260 CURVE FOR INST #19 3/14/06

Global Sample Information

Default Sample Volume	: 1.000 uL
Quantitation Units	: ng
Void Time	: 0.000 min
Correct amounts during calibration	: Yes
Convert unknowns to concentration units	: Yes
Reject outliers during calibration	: No

Processed by: MAR 22 2006

Reviewed by: 3/23/06

An External Standard calibration will be used
Unknown peaks will be quantitated using a response factor of 1.000000e+06
First peak will be relative retention reference

Component Information

TMX

Component Type : Single Peak Component
Retention Time : 1.779 min
Search Window : 3.00 s, 0.00 %
Reference Component :
Find peak closest to expected RT in window
Use Average Calibration Factor (Area / Amount)
Component standard purity percentage : 100.0000%

User Values

Label	:

Description: NEW 7 PT 1016/1260 CURVE FOR INST #19 3/14/06

Global Sample Information

Default Sample Volume	: 1.000 uL
Quantitation Units	: ng
Void Time	: 0.000 min
Correct amounts during calibration	: Yes
Convert unknowns to concentration units	: Yes
Reject outliers during calibration	: No

Processed by: MAR 22 2006

Reviewed by: 3/23/06

An External Standard calibration will be used
Unknown peaks will be quantitated using a response factor of 1.000000e+06
First peak will be relative retention reference

Component Information

TMX

Component Type	: Single Peak Component
Retention Time	: 1.555 min
Search Window	: 3.00 s, 0.00 %
Reference Component	:

Find peak closest to expected RT in window
Use Average Calibration Factor (Area / Amount)
Component standard purity percentage : 100.0000%

User Values

Label	:

METHOD 8082 - POLYCHLORINATED BIPHENYLS
ANALYSIS DATA SHEET

Client No.

Matrix Spike Blank

Lab Name: STL Buffalo Contract: _____

Lab Code: RECNY Case No.: _____ SAS No.: _____ SDG No.: _____

Matrix: (soil/water) WATER Lab Sample ID: A6B1590401

Sample wt/vol: 1000.00 (g/mL) ML Lab File ID: 19B48001.TX0

% Moisture:_____ decanted: (Y/N) N Date Samp/Recv: _____ _____

Extraction: (SepF/Cont/Sonc/Soxh): SEPF Date Extracted: 03/26/2006

Concentrated Extract Volume: 10000 (uL) Date Analyzed: 03/27/2006

Injection Volume: 1.00 (uL) Dilution Factor: 1.00

GPC Cleanup: (Y/N) N pH: 5.00 Sulfur Cleanup: (Y/N) N

COVER PAGE - INORGANIC ANALYSIS DATA PACKAGE

Contract: NY04-571 SDG No.: A06-3143

Lab Code: STLBFLO Case No.: SAS No.:

SOW No.:

Sample ID.	Lab Sample No.
NM-MW-06-GW	A6314301
NM-MWDEC-GW	A6314305
NM-MWMPI-01-GW	A6314302
NM-MWMPI-02-GW	A6314303
NM-MWMPI-04-GW	A6314304

Were ICP interelement corrections applied? Yes/No YES

Were ICP background corrections applied? Yes/No YES

If yes-were raw data generated before application of background corrections? Yes/No NO

Comments:

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on floppy diskette has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Signature: Tony Bogolin Name: Tony Bogolin

Date: 4/10/06 Title: Project Manager
