Re: Surface Water Sampling Data Summary
Former Mohican Street Manufactured Gas Plant – Operable Unit 02
Glens Falls, New York

Dear Ms. Saucier:

On behalf of National Grid, Anchor QEA Engineering, PLLC (Anchor QEA) has prepared this letter to transmit the results for surface water sampling performed in Operable Unit 02 (OU-2) at the former Mohican Street manufactured gas plant (MGP) site located in Glens Falls, New York (the Site; Figure 1). OU-2 includes the portion of the Site located in the Hudson River containing MGP-related tar deposits (Figure 2). A summary of the surface water sampling activities and results is presented below.

SURFACE WATER SAMPLING ACTIVITIES

As outlined in the approved *Project Update and Proposed Supplemental Investigations* letter (Work Plan) submitted to New York State Department of Environmental Conservation (NYSDEC) on October 9, 2015, surface water sampling was performed as part of supplemental investigations at the Site to evaluate the potential impact of dissolved contaminants from OU-2 on the Hudson River.

As described in the Work Plan, two surface water sampling events were initially planned. Accordingly, Anchor QEA completed surface water sampling events on December 17, 2015, and March 16, 2016.

After reviewing the data from the two initial sampling events, a third surface water sampling event was proposed for the summer of 2016 to evaluate if warmer water temperatures and lower river flows (compared to the first two rounds of sampling) would affect the detected concentrations of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), or polycyclic aromatic hydrocarbons (PAHs). The third surface water sampling event was proposed in a June 2, 2016 e-mail from Anchor QEA to NYSDEC. On August 10, 2016, Anchor QEA completed the third surface water sampling event.

During each sampling event, surface water samples were collected at three locations within the Hudson River—one location upstream of OU-2 (SW-1), one location within OU-2 (SW-2), and one location downstream of OU-2 (SW-3). Figure 3 shows the three surface water sampling locations.

At each sampling location, three grab samples were collected using a peristaltic pump and dedicated tubing. The surface water grab samples were collected from the following depths at each location: 1) approximately 1 foot below the water surface; 2) the middle of the water column; and 3) approximately 1 foot above the river bottom. In addition, a water quality sonde was deployed at each sampling location to measure physical parameters (i.e., pH, turbidity, dissolved oxygen, and temperature) throughout the water column. Water quality parameter data collected during the surface water sampling events is presented in Attachment A.

The surface water samples were collected in laboratory-provided sample containers and submitted to Alpha Analytical, Inc., for laboratory analysis for VOCs, PAHs, SVOCs, total suspended solids, total organic carbon, and dissolved organic carbon.

During the third (August 2016) sampling event, tar present on the river bottom was disturbed while sampling at location SW-2 (i.e., the sampling location within OU-2; Figure 3). Specifically, tar was observed on an anchor used to position the sample tubing in the water column when the anchor was brought to the surface after sampling. Attachment B presents a photograph that shows tar on the anchor. No tar or sheen was observed discharging from the sampling tubing into the sample containers during collection. In addition, no tar was observed on any sampling equipment during the other sampling events

even though the same sampling procedures were followed. It is possible that the higher water temperature during the third sampling event affected the viscosity of the tar on the river bottom (the water temperature was 25.3 degrees Celsius (°C) during the August 2016 sampling event, compared to 5.8 °C and 3.9 °C during the December 2015 and March 2016 sampling events, respectively). In accordance with the Work Plan, further assessment of the nature and extent of tar on the river bottom within OU-2 was performed via a diver survey during the week of October 17, 2016, as part of other supplemental investigation activities. The findings from the tar survey will be presented in a separate data summary report that will be submitted to NYSDEC.

Investigation-derived waste materials (i.e., sample tubing, sampling supplies, personnel protective equipment) generated during the sampling activities were collected and containerized in a labeled 55-gallon drum staged at Operable Unit 01 (OU-1) for subsequent characterization and disposal by National Grid.

SURFACE WATER SAMPLING RESULTS

Following receipt, the surface water analytical results were reviewed, tabulated, and submitted for data validation. Summaries of the validated analytical results from the December 2015 and March 2016 surface water sampling events were previously transmitted by e-mail to NYSDEC on March 17, 2016, and June 2, 2016, respectively.

Table 1 (attached) summarizes the validated analytical results from all three surface water sampling events. For comparison, Table 1 also includes corresponding NYSDEC surface water standards and guidance values (as available). The laboratory analytical data packages for each sampling event are provided in Attachment C. Data validation summary reports are provided in Attachment D.

As summarized in Table 1, the results for the surface water sampling indicate the following:

- VOCs:
  - There were no exceedances of NYSDEC surface water quality standards or guidance values for VOCs.

- SVOCs:
  - Bis(2-ethylhexyl)phthalate was the only SVOC exceeding any NYSDEC surface water quality standard or guidance value. Bis(2-ethylhexyl)phthalate was detected above the NYSDEC surface water standard in only two samples during the third sampling event (samples SW-2C and SW-3A). Bis(2-ethylhexyl)phthalate was not detected above the NYSDEC surface water standard during the first two sampling events. Bis(2-ethylhexyl)phthalate is a relatively common laboratory and field contaminant. Bis(2-ethylhexyl)phthalate is a man-made chemical that is used in the production of polyvinyl chloride and other plastics to improve flexibility.[1] Bis(2-ethylhexyl)phthalate is not commonly associated with MGP contamination. It is believed that the detections of bis(2-ethylhexyl)phthalate are likely the result of field contamination or some other source not associated with the former MGP operations.
  - No other SVOCs exceeded NYSDEC surface water quality standards or guidance values.
- PAHs:
  - No PAHs exceeded NYSDEC surface water quality standards.
  - Table 2 summarizes the PAH compounds detected at each sampling location above NYSDEC surface water guidance values. As summarized in Table 2, six individual PAH compounds exceeded NYSDEC surface water guidance values at the upstream sampling location (SW-1), while only two individual PAH compounds exceeded NYSDEC surface water guidance values at the sampling location above the tar limits in OU-2 (SW-2) and at the downstream sampling location (SW-3). These data indicate that the tar on the river bottom is not causing an increase in constituent concentrations compared to upstream and is not causing water quality exceedances above NYSDEC surface water standards or guidance values.
  - All PAH detections above NYSDEC surface water guidance values were reported as estimated concentrations (i.e., "J" qualifiers) due to the low level detections

[1] Agency for Toxic Substances & Disease: https://www.atsdr.cdc.gov/substances/toxsubstance.asp?toxid=65

(i.e., the reported concentration is less than the reporting limit but greater than the method detection limit).

- Detected naphthalene concentrations were below the NYSDEC surface water standard and guidance values. It is noted, however, that the naphthalene concentration (i.e., 0.366 micrograms per liter [µg/L]) detected during the third sampling event in sample SW-2A (from approximately 1 foot below the water surface) was higher than the naphthalene concentrations detected at the same location during first two sampling events (i.e., 0.009 µg/L and 0.00652 µg/L, both estimated concentrations). This increase in naphthalene concentration was likely associated with the disturbance of tar at this sample location (as described above).
- Total PAH concentrations in the surface water samples were consistent at each sampling location for all three sampling events, with the exception of sample location SW-2A which was higher during the third sampling event due to the detected naphthalene concentration described above.

Table 2
PAH Detections above NYSDEC Surface Water Guidance Values

PAH Compound	SW-1 (Upstream of OU-2)	SW-2 (Above Tar within OU-2)	SW-3 (Downstream of OU-2)
Benzo(a)anthracene	X	X	X
Benzo(a)pyrene	X	X	X
Benzo(b)fluoranthene	X		
Benzo(k)fluoranthene	X		
Chrysene	X		
Indeno(1,2,3-c,d)pyrene	X		

Notes:
1 X = A PAH compound was detected above one or more NYSDEC surface water guidance values.
2 All PAH compounds detected above NYSDEC guidance values were reported as estimated concentrations (i.e., with a "J" qualifier).
3 See Table 1 for PAH concentrations.

CONCLUSIONS

The following conclusions are based on evaluation of the surface water sampling data described above:

- The surface water sampling data indicate that the presence of undisturbed tar on the river bottom is not causing an increase in constituent concentrations compared to upstream and is not causing water quality exceedances above NYSDEC surface water standards or guidance values. As such, no additional surface water sampling events are warranted at this time.
- The two isolated surface water quality exceedances for bis(2-ethylhexyl)phthalate do not appear to be related to the former MGP operations.

Table 1
Surface Water Sampling Results

Notes:

Detected concentration is greater than Source of Drinking Water (surface water) screening level

Detected concentration is greater than Fish Propagation (fresh waters) screening level

Denotes value as a New York State standard; all other screening values are guidance

If a result exceeds more than one screening level, the maximum screening level highlight is applied.

Bold = Detected result

J = Estimated value
U = Compound analyzed, but not detected above detection limit
UJ = Compound analyzed, but not detected above estimated detection limit
R = Rejected

NOTES

1. HYDROGRAPHIC SURVEY PERFORMED BY HYDRO DATA, INC. ON NOVEMBER 27, 2006 AND CAN ONLY BE CONSIDERED AS INDICATING THE CONDITIONS AT THAT TIME.
2. CONTOURS ARE IN FEET AND ARE REFERENCED TO THE NATIONAL GEODETIC VERTICAL DATUM (NGVD) OF 1929 BASED ON A BENCH MARK PROVIDED BY THE CLIENT. THE MARK IS TOP OF CONCRETE WALL AT NORTHWEST CORNER OF GATE VALVE STRUCTURE. ELEVATION IS 281.09 FEET NGVD 29. HORIZONTAL COORDINATE SYSTEM SHOWN IS IN NEW YORK STATE PLANE EAST (NAD 83) FEET.
3. SHORELINE FEATURES ARE APPROXIMATE AND WERE PLOTTED FROM EXISTING DRAWINGS.
4. 2009 SURVEY PERFORMED BY OCEAN AND COASTAL CONSULTANTS ENGINEERING, P.C. DIVERS ON SEPTEMBER 15-16, 2009. SURVEYED LOCATIONS ARE APPROXIMATE (± 1 METER).

TOC/DOC - not POC as on COC. Also, COC has typo on project number, used contract project number - EMP, 12/18/15

12/20/15:
Hi Matt,

By any chance did you field filter the DOC samples into the preserved vials? The bottle order we sent for this first round had all H2SO4 preserved vials for both DOC and TOC (the system defaulted to this). If not, I think we will have to cancel the DOC, or filter and preserve volume from the 1L ambers.

We also received sample EB20151217, that was not listed on the COC. Can you confirm this will be run for TOC and PAHs?

Thank you,
Liz Porta

We did not field filter - I guess I assumed something fancy happened at the lab with that small bottle - sorry about that. I like the idea of using some of the I preserved volume just as long as we can meet MDL's for PAHs.

Yes our EB sample should be run for all analyses. I forgot to write on the COC.

Matt Cavas

12/21/15:
Hi Liz,
Could you please add the date to the sample IDs that don't have it? For example, SW-1A would become SW-1A-20151217.

Let me know if you have any questions or need anything from me!
