Re: ***National Grid***
Little Falls (Mill Street) Non-Owned Former MGP Site
NYSDEC Site No. 622034
Little Falls, New York
2024 Periodic Review Report

Dear Mr. Squire:

Enclosed for your review is the 2024 Periodic Review Report (PRR) for the National Grid Little Falls Former MGP Site. The PRR pertains to the period from August 1, 2023 through August 1, 2024 and includes a brief report and Institutional Controls/Engineering Controls (IC/EC) Certification Form.

Please feel free to contact me at 315.428.5652 if you have any questions.

Sincerely,

for SPS
Steven P. Stucker, C.P.G.
Lead Environmental Engineer

300 Erie Boulevard West, C-1

National Grid- Little Falls MGP Site (NYSDEC Site No. 622034)

Reporting Period – August 1, 2023 through August 1, 2024

I. Introduction

A. **Brief Site Summary** –

The Little Falls Former Manufactured Gas Plant (MGP) Site (the Site) is located on an approximate 1.35-acre lot, located on the south side of East Mill Street in Little Falls, New York (refer to Figure 1 Site Location Map). The Site is the western portion of an approximately 6.5-acre property currently owned by the Feldmeier Equipment, Inc. (Feldmeier). Manufactured gas was produced at the Site from approximately 1853 until 1907. The MGP was decommissioned in the early 1900's, and since then the site has been used for various industrial purposes, which include the manufacturing of furniture and stainless-steel tanks. Currently a paved parking lot and the western portion of the Feldmeier tank manufacturing building occupy the former MGP. The site was previously owned by a predecessor company of Niagara Mohawk Power Corporation.

An investigation of the Site began in 1997, to support the property transfer to Feldmeier, with a Phase I Environmental Site Assessment (ESA) and Phase II ESA (1998) which identified suspected MGP-related impacts near the historical MGP operations at the Site. As a result, National Grid implemented a site characterization (SC) and a remedial investigation (RI) at the site under a multi-site VCO with the NYSDEC between 2002 and 2006.

The RI identified that the highest concentration of constituents of concern (COCs) are primarily the volatile organic compounds (VOCs) benzene, toluene, ethylbenzene, and xylenes (collectively, BTEX), the general class of semi-volatile organic compounds (SVOCs) known as polycyclic aromatic hydrocarbons (PAHs), were localized to the locations of the former onsite gas holder. Significant MGP-related impacts were not encountered at the former offsite gas holder.

B. **Remedial Program Effectiveness** – During the reporting period (August 1, 2023 to August 1, 2024) the long-term remedial objectives were met for the site.

C. **Remedial Program Compliance** - The major elements within the Institutional Control/Engineering Control(s) (IC/EC) Plan are in compliance.

D. **Remedial Program Recommendations** - It is recommended that no changes be made to the IC/EC Plan. It is recommended that an annual Periodic Review Report (PRR) be submitted. The next PRR submittal will cover the period August 1, 2024 to August 1, 2025.

II. Site Overview

A. Site Location and Boundaries –

The Site is located on the south side of East Mill Street in Little Falls, County of Herkimer, New York (Figure 1 presents the site location map). The Site is an approximate 1.35-acre area and is bounded by East Mill Street to the north, George Lumber and Building Materials Company to the west, the Mohawk River to the south, and extends into the tank manufacturing building to the east. Currently, the property is a paved parking area, and the western portion of the Feldmeier tank manufacturing building.

B. Regulatory History and Remedy Features –

The Site was remediated in 2009 in accordance with the *Remedial Action Work Plan* (Arcadis, 2007). This PRR is being completed in compliance with Section 6.3 of the NYSDEC – approved Site Management Plan (SMP) for the project. A Deed of Restrictions and Covenants (DCR) was placed on the property in February 2018 by the Owner, and is included in Appendix A of the *Final Engineering Report* (Arcadis, 2020).

III. Evaluate Remedy Performance, Effectiveness, and Protectiveness

A. **Evaluation of Remedy Performance** – Annual visual inspections of the cover system are conducted on the Site. The remedy performance has been effective in protecting the public.

IV. IC/EC Plan Compliance Report

A. IC/EC Requirements and Compliance

1. **IC/EC Controls**

The ICs/ECs:

- Soil Cover System: Annual site inspection of the cover system includes identification of any damage to the cover. National Grid conducts quarterly inspections for internal security purposes. See Attachment 1 for the Site Inspection Forms.
- Monitoring Wells Associated with Monitored Natural Attenuation (MNA): Annual groundwater sampling of the monitoring well system will be conducted, until either water quality is consistently below NYSDEC standards, or has become asymptotic at an acceptable level over an extended period.

2. **IC/EC Goals -** Each goal is being met and/or working effectively.

3. **IC/EC Corrective Measures –** No deficiencies were noted during the site inspections.

4. **IC/EC Conclusions/Recommendations –** The EC program is in compliance and there are no recommendations for the program at this time.

5. **IC/EC Certification** – Refer to PRR Form - Attachment 2 for the certification.

V. Monitoring Plan Compliance Report – The Annual Monitoring Report was submitted to the NYSDEC on February 28, 2024. See Attachment 3 for a copy of the Annual Monitoring Report.

VI. Operation & Maintenance (O&M) Plan Compliance Report – Not Applicable

VII. Overall PRR Conclusions and Recommendations

A. **Compliance with Site Management Plan (SMP)**

1. **Requirements –** All IC/EC Plan requirements were met during this reporting period.

2. **Exposure Pathways –** There are no new completed exposure pathways resulting in unacceptable risk.

3. **Proposed Plans and Schedule to Meet Compliance –** No plan proposed.

B. **Performance and Effectiveness of the Remedy –** The remedy as described in the Site Management Plan and executed by National Grid has been effective in meeting the program goals.

C. **Future PRR Submittals** – The frequency of PRR Submittals should remain annual. Therefore, the next PRR reporting period will cover August 1, 2024 through August 1, 2025.

VIII. Additional Guidance – Not needed.

Description of Institutional Controls

Parcel	Owner	Institutional Control
	Steven P. Stucker	Ground Water Use Restriction Landuse Restriction Site Management Plan

The specific institutional controls to be implemented under the site management plan (SMP) are as follows:
1. The Site may only be used for industrial enterprises provided that the long-term institutional and engineering controls identified in the SMP are employed.
2. All engineering controls must be operated and maintained as specified in the SMP.
3. All engineering controls must be inspected at the frequency and in the manner defined in the SMP.
4. The use of groundwater underlying the Site is prohibited without necessary water quality treatment, as determined by the Department or Relevant Agency, to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the NYSDEC.
5. Groundwater and other environmental or public health monitoring must be performed as defined in the SMP.

Box 4

Description of Engineering Controls

Parcel	Engineering Control
	Cover System Monitoring Wells

Exposure to remaining MGP-related impacts in soil at the Site is prevented by a soil cover system, which comprises the existing Feldmeier manufacturing building, a concrete pad supporting a pole barn along the southern edge of the site, and an asphalt pavement covering the rest of the site.

Box 5

Periodic Review Report (PRR) Certification Statements

1. I certify by checking "YES" below that:

   a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the Engineering Control certification;

   b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and compete.

YES	NO
X	☐

2. For each Engineering control listed in Box 4, I certify by checking "YES" below that all of the following statements are true:

   (a) The Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;

   (b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;

   (c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;

   (d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and

   (e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES	NO
X	☐

IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.

A Corrective Measures Work Plan must be submitted along with this form to address these issues.

2023 Groundwater and NAPL Monitoring Results
VCO Index No. D0-0001-0011
Site No. V00470

Dear Mr. Squire:

Attached for your information is the 2023 Groundwater Monitoring Report detailing the annual groundwater monitoring event and OM&M activities conducted from January 1, 2023, to December 31, 2023, at the National Grid Little Falls (Mill Street) Site. Site activities were conducted in accordance with the NYSDEC-approved Remedial Action Work Plan (ARCADIS; 2007) and Site Management Plan (ARCADIS; 2011).

The annual groundwater samples were collected on September 28, 2023. The results of this event indicate that the groundwater quality is consistent with previous sampling events.

Please contact me at 315-428-5652 if you have any questions.

Sincerely,

for SPS

1 Introduction

1.1 Overview

Groundwater & Environmental Services, Inc. (GES) has prepared this 2023 Groundwater Monitoring Report (covering January 1, 2023 – December 31, 2023) for the Little Falls (Mill Street) Site, Little Falls, New York**.** The groundwater and non-aqueous phase liquid (NAPL) monitoring activities described in this letter were completed as part of the post-remedial monitoring activities outlined in the New York State Department of Environmental Conservation- (NYSDEC) approved Remedial Action Work Plan (RAWP) prepared by ARCADIS of New York, Inc., (ARCADIS, 2007) and the Site Management Plan (SMP) (ARCADIS, 2011). The RAWP was approved in a letter dated March 11, 2008, from Mr. Bernard Franklin of the NYSDEC to Mr. James F. Morgan of National Grid. The SMP was approved in a letter dated May 5, 2011, from the NYSDEC to National Grid.

Groundwater monitoring has been conducted at the Site in order to evaluate the effectiveness of remedial activities previously completed at the Site and to monitor long-term groundwater quality trends. Currently, groundwater sampling at the Former MGP Site is performed on an annual basis.

The following Operation, Maintenance, and Monitoring (OM&M) activities conducted during this reporting period are summarized below:

- Quarterly site inspections, including checks on the Site structures, the exterior cover system, the interior Feldmeier Building concrete slab, riverbank, groundwater monitoring wells, NAPL wells, and storm-water features that could impact the remedy.
- Quarterly groundwater elevation data.
- Annual NAPL monitoring and collection, if necessary.
- Annual groundwater sampling, analysis and data validation. Water samples are submitted to Pace Analytical Services, LLC (Pace) for laboratory analysis of target compound list (TCL) volatile organic compounds (VOCs), TCL semi-volatile organic compounds (SVOCs), and target analyte list (TAL) inorganics (including cyanide) for comparison to NYSDEC Ambient Water Quality Standards (AWQS).
- Any site maintenance that comes about as a result of the quarterly inspections.

1.2 Site Description

The Little Falls (Mill Street) Former Manufactured Gas Plant Site located in Little Falls, New York is comprised of approximately 6.5 acres of land and is currently owned by Feldmeier (refer to **Figure 1 – Site Location Map** and **Figure 2 – Site Map**). As shown on the figures, the Site is located north of the Mohawk River, east of George Lumber and Building Materials Company (George Lumber), south of East Mill Street, and west of the line of demarcation. The Site is located on the western portion of

the approximately 6.5-acre property and is occupied by a paved parking lot, and the western portion of a tank manufacturing building owned by Feldmeier. Some vegetated areas are present along the margins of the parking lot, and in the area south of the tank manufacturing building along the bank of the Mohawk River.

The remedial action plan in place at the site was substantially completed in August 2009. The Final Engineering Report (FER) was submitted to NYSDEC in October 2019, and written approval from NYSDEC was received on April 1, 2021.

2 Quarterly Site Inspections and Groundwater Monitoring Activities

2.1 Quarterly Site Inspections

GES conducted quarterly site inspections during this reporting period on March 3, June 13, September 28, and December 15, 2023.

In general, the Site is in good condition and in compliance. The exterior cover system is intact. No visible saw cutting, holes from burrowing animals, or evidence of any other intrusive activities were noted in 2023. The groundwater monitoring wells and NAPL wells are secured and operable.

It should be noted that four (4) piezometers that were part of the SMP requirements to conduct groundwater static level measurements were never located: PZ-102, PZ-103, PZ-105, and PZ-106. It is believed these piezometers have long since been removed or covered during Feldmeier site modifications (i.e., storage shed installation and/or asphalt/gravel road installation). National Grid believes there are ample groundwater wells for obtaining water table measurements and these four piezometers are not necessary. The new storage shed and existing wells were resurveyed in January 2016.

Appendix A includes the Quarterly Site Inspection Forms.

2.2 Groundwater Well Gauging

Groundwater level measurements are collected at the Site to accomplish the following:

- To determine the general groundwater flow direction on site.

Annual gauging field data is presented in **Table 1**. Based on the September 2023 groundwater level measurements, groundwater in the overburden/shallow bedrock beneath the Site flows to the south (which is consistent with the local groundwater flow direction observed during the RI and previous monitoring events). There is a groundwater depression observed near the Mohawk River near recovery well RW-3, where the groundwater is likely mimicking the drop in the bedrock surface as it approaches the Mohawk River. A potentiometric surface map for overburden/shallow bedrock groundwater developed from the September groundwater elevations is presented on **Figure 3**. Based on the September 2023 groundwater level measurements from the one deep bedrock well at the Site (well MW-101RD), an upward hydraulic gradient exists between the deep bedrock unit and the overburden/shallow rock unit at the Site, indicating that the groundwater from the deep bedrock unit likely discharges to the Mohawk River.

2.3 Annual NAPL Monitoring and Collection

Annual NAPL monitoring was conducted at on-site recovery wells RW-2, and RW-3, and monitoring wells B-MW-3, FWMW-1, FWMW-2, FWMW-3, FWMW-5, MW-101RD, MW-102R, and MW-103R. NAPL monitoring was not conducted at recovery well RW-1 due to shipping materials on top of it preventing access. NAPL observations were documented on the Site

inspection forms as presented in **Appendix A**. A summary of NAPL observations where NAPL was present from October 2011 through the 2023 monitoring event (including NAPL thickness measured for previous monitoring events) is presented below.

NAPL was not detected in during the September 2023.

Presence/Thickness of NAPL (in inches)

Well	Oct 2011	Dec 2011	June 2012	Dec 2012	Aug 2013	Dec 2013	June 2014	Oct 2015	Oct 2016	Oct 2017	Oct 2018
RW-1	NP	NP	NP	NP	NP	NP	NP	NP	NP	NP	NP

RW-2	NP	NP	NP	NP	NP
RW-3	NP	Trace	NP	0.6	NP
MW-101RD	NP	NP	NP	NP	NP

NP – NAPL was not present
NA – Not Accessible

2.4 Groundwater Well Sampling and Analysis

Groundwater samples were collected from eight (8) monitoring wells B-MW-3, FWMW-1, FWMW-2, FWMW-3, FWMW-5, MW-101RD, MW-102R, and MW-103R, on September 28, 2023. The wells were purged using a peristaltic pump. Field Measurements of pH, conductivity, turbidity, dissolved oxygen, temperature, total dissolved solids and oxidation-reduction potential were recorded using a Horiba U-52 water quality meter during sample collection. Samples were collected once field parameters stabilized. Field monitoring data and the chain-of-custody record are included in **Appendix B**.

Eight aqueous field samples, a field duplicate, and trip blank were analyzed for TCL VOCs, TCL SVOCs, and TAT inorganics. The samples were analyzed by Pace in accordance with the NYSDEC Analytical Services Protocol. The Analytical Lab Report and Data Usability Summary Report are presented in **Appendix C.** Analytical results are summarized in **Table 2**. A BTEX (benzene, toluene, ethylbenzene, xylenes) contour map is shown on **Figure 4**. A naphthalene contour map is shown on **Figure 5**.

VOCs were detected in six of the eight groundwater monitoring wells that were sampled during the September 2023 groundwater sampling event. There were detections of 1,1,1-Trichloroethane, 1,1-Dichloroethane, 1,1-Dichloroethene, benzene, bromodichloromethane, chloroform, cis-1,2-Dichloroethene, chloroethane, ethylbenzene, isopropylbenzene, trans-1,2-

Dichlorothene, trichloroethene, and vinyl chloride. SVOCs were detected in four of the eight groundwater samples collected. Detections of SVOCs include acenaphthene, acenaphthylene, anthracene, bis(2-ethylexyl)phthalate, carbazole, dibenzofuran, fluoranthene, fluorene, phenanthrene, and pyrene.

TAL inorganics were detected in all eight groundwater samples collected in September 2023. Manganese concentrations in five of the eight samples exceeded the AWQS criteria. The sample collected from FWMW-1 had an exceedance for arsenic. Mercury, silver and thallium were the only inorganics not detected in any of the groundwater samples collected. The analytical results for the inorganics as well as VOCs and SVOCs are summarized on **Table 2**.

3 Conclusions and Recommendations

3.1 Conclusions

Based on the results of the past year's activities, the following conclusions were made:

- Quarterly site inspections demonstrate that the site is in good condition and in compliance.
- Groundwater beneath the Site appears to flow in a general south direction towards the Mohawk River.
- NAPL was not detected in any monitoring well or recovery well during the September 2023 monitoring event. RW-1 was not gauged because it was covered with shipping materials.
- BTEX was detected in FWMW-1, FWMW-5, MW-101RD, MW-102R, and MW-103R. Naphthalene was not detected in any monitoring well. These detections are generally consistent with previous sampling events.

3.2 Recommendations

It is recommended that all OM&M activities continue, with the next report due in February 2025.

Field Inspection Report
Non-Owned Former MGP Site
Mill Street
Little Falls, New York

Date: 3/3/2023 Time: 9:00

Technician: PL Weather: Sunny 27

Exterior Cover System			
Soil Intrusion Activities Being Performed	YES	NO	COMMENTS:
Evidence of any Intrusive Activities	YES	NO	COMMENTS:
Evidence of Saw Cutting	YES	NO	COMMENTS:
Evidence of Excavation or Trenching	YES	NO	COMMENTS:
Burrowing Animals	YES	NO	COMMENTS:

Interior Slab (West Side of Feldmeier Building)			
Sub-Slab Activities Being Performed	YES	NO	COMMENTS:
Signs of Sub-Slab Soil Intrusive Activities	YES	NO	COMMENTS:
Evidence of Excavation or Tunneling	YES	NO	COMMENTS:

RE: Data Usability Summary Report for National Grid Mill Street, Little Falls, NY Site Data Packages Pace Job No. 30626426

Groundwater & Environmental Services, Inc. (GES) reviewed one data package (Laboratory Project Number 30626426) Pace Analytical Services, LLC. Greensburg, PA.

The report detailed the analytical results of groundwater samples collected from monitoring wells on September 28, 2023 at the Little Falls site. Eight aqueous samples and a field duplicate were analyzed for volatile organic compounds (VOCs), polyaromatic hydrocarbons (PAHs), Metals, Mercury, and Cyanide. Methodologies utilized were those of EPA 200.7, EPA 200.8, EPA 245.1 and the USEPA SW846 methods 8260C/8270D/9012B, with additional QC requirements of the NYSDEC ASP.

The data are reported as part of a complete full deliverable type B data validation. This usability report is generated from review of the following:

- Laboratory Narrative Discussion
- Custody Documentation
- Holding Times
- Surrogate and Internal Standard Recoveries
- Matrix Spike Recoveries/Duplicate (MS/MSD) Correlations
- Field Duplicate Correlations
- Laboratory Control Sample (LCS)
- Preparation/Calibration Blanks
- Calibration/Low Level Standard Responses

The items listed above which show deficiencies are discussed within the text of this narrative.

All of the other items are determined to be acceptable for the DUSR level review.

In summary, sample results are usable as reported.

The laboratory case narratives and sample identification summary forms are attached to this text, and should be reviewed in conjunction with this report.

Table 1 – Data Qualifications

Sample ID	Qualifier	Analyte	Reason for qualification
B-MW-3-0923 FD-0923 FWMW-1-0923 FWMW-2-0923 FWMW-3-0923	J-	Detected compounds	LCS recovered low, site MS/MSDs recovered within criteria. Re-analysis performed outside hold time recovered within specification and confirmed results.
FWMW-5-0923 MW-101RD-0923	UJ J-	Carbon Disulfide Cyclohexane	Low secondary source standard
MW-101RD-MS-0923 MW-101RD-MSD-0923 MW-102R-0923 MW-103R-0923.	UJ J-	2-hexanone 4-Methyl -2-Pentanonen Acetone Methylene chloride 1,2,4-Trichlorobenzene 1,2-Dibromo-3-chloropropane	Low CCV
B-MW-3/ FD	J/UJ	Aluminum Copper	Poor Field duplicate precision

Analytical Anomalies

- Methyl acetate had the secondary source verification recover high in the initial calibration. All data is ND, the possible high bias does not affect the data. No data is qualified.
- Carbon disulfide and cyclohexane had the secondary source verification recover low in the initial calibration. All data is qualified as estimated with a possible low bias.
- Multiple VOC analytes had CCVs recover low, resulting in estimated values. Qualifications are found in **Table 1.**

BTEX and TCL Volatiles by EPA 8260C/NYSDEC ASP

Samples were analyzed within hold time and instrumental tune fragmentations were within acceptance ranges. There were no positive detections in the blanks. Surrogate and internal standard recoveries were within required limits with the exception of diluted samples.

Laboratory control samples recovered within criteria.

Calibration standards show acceptable responses within analytical protocol and validation action limits with the exceptions noted previously in the analytical anomalies section.

MS/MSD results were compliant.

The blind field duplicate correlations of BMW-3 -0923, where applicable, fall within guidance limits.

SVOCs by EPA8270D/NYSDEC ASP

Holding times were met.

LCS recoveries were low for all analytes as well as the surrogate recoveries, indicating a failure for the LCS for the SVOC analysis. The MS/MSD associated with the site samples passed within criteria (high for 2,4-Dinitrophenol) for analytes and surrogates, indicating that the LCS was not representative of sample results for samples where surrogate recovery falls within criteria. Data is not qualified solely upon the low LCS recoveries. The following samples were affected by the LCS recoveries. The nonconformance required a confirmation analysis. This re-analysis was performed outside hold time for the following samples:

- B-MW-3-0923
- FD-0923
- FWMW-1-0923
- FWMW-2-0923
- FWMW-3-0923
- FWMW-5-0923
- MW-101RD-0923
- MW-101RD-MS-0923
- MW-101RD-MSD-0923
- MW-102R-0923
- MW-103R-0923.

Data from the original analysis was confirmed in the re-analysis. Compounds that recovered low in the original LCS had the concentrations confirmed in re-analysis. Positive detections are considered biased low, non-detects are confirmed as non-detects.

Instrumental tune fragmentations were within acceptance ranges.

Blanks show no contamination. Calibration standards show acceptable responses within analytical protocol and validation action limits with exceptions noted previously. Qualified data is noted in **Table 1.**

MS/MSD associated with MW-101RD reported results within criteria. No data is qualified due to MS/MSD results.

The blind field duplicate correlations of BMW-3 -0923, where applicable, fall within guidance limits.

Metals by EPA 200.7 & EPA 200.8/NYDESC ASP

The laboratory-prepared matrix spikes were not associated with the site.

The ICP Serial Dilution evaluations were analyzed utilizing samples unassociated with the site. No qualifications were required.

The laboratory duplicate was performed on a sample unassociated with the site.

The blind field duplicate correlations of BMW-3 -0923, where applicable, fall within guidance limits with the exception of aluminum and copper. Precision was calculated when both samples reported >5x the RL concentration per EPA guidance.

Total Mercury by EPA 245.1 and Total Cyanide by 9012B/ NYSDEC ASP

Review was conducted for method compliance, holding times, transcription, calculations, standard and blank acceptability, accuracy and precision, etc., as applicable to each procedure. All were found acceptable for the validated samples.

Calibration standard responses were compliant. Blanks show no detections above the reporting limits. All other laboratory spikes and duplicates of total cyanide show acceptable recoveries and/or correlations.

The blind field duplicate correlations of B-MW-3-0923, where applicable, fall within guidance limits.

Data Package Completeness

Complete NYSDEC Category B deliverables were included in the laboratory data package, all information required for validation of the data is present.

Please do not hesitate to contact me if you have comments or questions regarding this report.

VALIDATION DATA QUALIFIER DEFINITIONS

U The analyte was analyzed for, but was not detected above the level of the associated reported quantitation limit.

J The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.

J- The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased low.

J+ The analyte was positively identified; the associated numerical value is an estimated quantity that may be biased high.

UJ The analyte was analyzed for, but was not detected. The associated reported quantitation limit is approximate and may be inaccurate or imprecise.

NJ The detection is tentative in identification and estimated in value. Although there is presumptive evidence of the analyte, the result should be used with caution as a potential false positive and/or elevated quantitative value.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control limits. The analyte may or may not be present.

REPORT OF LABORATORY ANALYSIS

Pace Analytical Services, LLC
1638 Roseytown Road - Suites 2,3,4
Greensburg, PA 15601
(724)850-5600

PROJECT NARRATIVE

Project: National Grid Little Falls NY
Pace Project No.: 30626426

Method: **EPA 200.7**
Description: 200.7 Metals, Total
Client: Groundwater & Environmental Services, Inc. (Syracuse)
Date: October 23, 2023

General Information:
11 samples were analyzed for EPA 200.7 by Pace Analytical Services Long Island. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 200.7 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QC Batch: 323105

D6: The precision between the sample and sample duplicate exceeded laboratory control limits.
- DUP (Lab ID: 1649558)
  - Zinc

Additional Comments:

Batch Comments:

The post digestion spike for sample 70272673001 (PDS 1649783) did not meet acceptance criteria for Silver, Calcium, and Sodium.
- QC Batch: 323164

The serial dilution for sample 70272673001 (SD 1649784) did not meet acceptance criteria for Silver, Arsenic, Calcium, Chromium, Copper, Iron, Molybdenum, Lead, Tin, Titanium, and Zinc.
- QC Batch: 323164

PROJECT NARRATIVE

Project: National Grid Little Falls NY
Pace Project No.: 30626426

Method: **EPA 200.8**
Description: 200.8 MET ICPMS
Client: Groundwater & Environmental Services, Inc. (Syracuse)
Date: October 23, 2023

General Information:
11 samples were analyzed for EPA 200.8 by Pace Analytical Services Long Island. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 200.8 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 323106

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 70272990001,70272990002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1649565)
  - Barium
  - Copper
  - Manganese

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QC Batch: 323106

D6: The precision between the sample and sample duplicate exceeded laboratory control limits.

- DUP (Lab ID: 1649564)
  - Manganese

PROJECT NARRATIVE

Project: National Grid Little Falls NY
Pace Project No.: 30626426

Method: **EPA 8260C**
Description: 8260C MSV
Client: Groundwater & Environmental Services, Inc. (Syracuse)
Date: October 23, 2023

General Information:
12 samples were analyzed for EPA 8260C by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

QC Batch: 621581

IH: This analyte exceeded secondary source verification criteria high for the initial calibration. The reported results should be considered an estimated value.

Date: October 23, 2023

QC Batch: 621581

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30626426006

ML: Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.

- 1,1,2,2-Tetrachloroethane
- 1,1,2-Trichloroethane
- 1,1-Dichloroethane
- 1,1-Dichloroethene
- 1,2,4-Trichlorobenzene
- 1,2-Dibromo-3-chloropropane
- 1,2-Dibromoethane (EDB)
- 1,2-Dichlorobenzene
- 1,2-Dichloroethane
- 1,2-Dichloropropane
- 1,3-Dichlorobenzene
- 1,4-Dichlorobenzene
- 2-Butanone (MEK)
- 2-Hexanone
- 4-Methyl-2-pentanone (MIBK)
- Acetone
- Bromodichloromethane
- Bromoform
- Carbon disulfide
- Carbon tetrachloride
- Chlorobenzene
- Chloroform
- Cyclohexane
- Dibromochloromethane
- Dichlorodifluoromethane
- Ethylbenzene
- Isopropylbenzene (Cumene)
- Methylcyclohexane
- Methylene Chloride
- Styrene
- Toluene
- Trichlorofluoromethane
- Vinyl chloride
- cis-1,2-Dichloroethene
- cis-1,3-Dichloropropene
- trans-1,2-Dichloroethene
- trans-1,3-Dichloropropene

R1: RPD value was outside control limits.

- MSD (Lab ID: 3029618)
  - 1,1,2,2-Tetrachloroethane
  - 1,1,2-Trichloroethane
  - 1,1-Dichloroethene
  - 1,2,4-Trichlorobenzene

PROJECT NARRATIVE

Project: National Grid Little Falls NY
Pace Project No.: 30626426

Method: **EPA 8260C**
Description: 8260C MSV
Client: Groundwater & Environmental Services, Inc. (Syracuse)
Date: October 23, 2023

QC Batch: 621581

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30626426006

R1: RPD value was outside control limits.

- 1,2-Dibromoethane (EDB)
- 1,2-Dichlorobenzene
- 1,2-Dichloroethane
- 1,2-Dichloropropane
- 1,3-Dichlorobenzene
- 1,4-Dichlorobenzene
- Benzene
- Bromodichloromethane
- Bromomethane
- Carbon disulfide
- Carbon tetrachloride
- Chlorobenzene
- Chloroethane
- Chloroform
- Chloromethane
- Dibromochloromethane
- Dichlorodifluoromethane
- Ethylbenzene
- Isopropylbenzene (Cumene)
- Methyl acetate
- Methyl-tert-butyl ether
- Methylene Chloride
- Styrene
- Tetrachloroethene
- Toluene
- Trichloroethene
- Trichlorofluoromethane
- cis-1,3-Dichloropropene
- trans-1,2-Dichloroethene
- trans-1,3-Dichloropropene

Additional Comments:

Analyte Comments:

QC Batch: 621581

1c: The analyte did not meet the method recommended minimum RF.

- B-MW-3-0923 (Lab ID: 30626426001)
  - Methyl acetate
- BLANK (Lab ID: 3029615)
  - Methyl acetate
- FD-0923 (Lab ID: 30626426011)
  - Methyl acetate

PROJECT NARRATIVE

Project: National Grid Little Falls NY
Pace Project No.: 30626426

Method: **EPA 9012B**
Description: 9012B Cyanide, Total
Client: Groundwater & Environmental Services, Inc. (Syracuse)
Date: October 23, 2023

General Information:
11 samples were analyzed for EPA 9012B by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 9012B with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.
