# Purpose of Document

The purpose of this Supplemental Investigation (SI) additional sampling, at Area of Concern (AOC) 9: Weapons Storage area (WSA) Landfill located at the former Griffiss Air Force Base is to define the source area of the chlorobenzene contamination detected at in the groundwater during the previous SI, to determine if petroleum hydrocarbon contamination is present in the areas where sheens were observed during test pit excavations, and to determine if the Aqueous Film Forming Foam (AFFF) lagoon is a source of contamination.

This quality control summary report (QCSR) presents the results of the analytical program and provides an opportunity to review the completeness and quality of the data collected. The purpose of this QCSR is to:

- Summarize sample collection, handling, and analytical procedures for the sampling investigation conducted at each site;
- Identify any deviations from the proposed sampling and analysis procedures;
- Present the analytical results for the field samples collected; and
- Discuss the results of the data quality evaluation associated with the sampling events.

Evaluation of any contaminants detected will be provided in a separate data summary report.

# 1

## Introduction

Ecology and Environment, Inc. (E & E), under contract to the United States Army Corps of Engineers (USACE), Kansas City District, Contract DACW41-99-D-9005, Task Order 0001, Work Authorization Directive (WAD) 09, conducted additional site investigation activities at AOC 9, at the former Griffiss Air Force Base (GAFB) in Rome, New York. This QCSR summarizes sampling results at Area of Concern 9.

# 2

## Data Collection, Data Management, and Quality Control Procedures

### 2.1 Sample Collection Procedures

The field investigation consisted of the collection of environmental samples in accordance with the June 2002 Final 2002 Addendum to the March 1997 Work Plan for Site Investigations of Areas of Concern (E & E 2002) (see Appendix A). There were no variances in field methodologies or deviations from planned activities that occurred during the investigation. Field Adjustment Forms are sent to all parties that received the work plan. Daily Activity Summary reports were prepared by E & E and submitted to USACE and Air Force Base Conversion Agency (AFBCA) (see Appendix B). All field activities were carried out in accordance with the approved Quality Control Plan (QCP). An E & E QC inspector visited the site once during the field activities. The field inspection form is included in Appendix F under system audits.

Methodologies used for field notebooks; sample labeling, packaging, and custody; equipment decontamination; collection of investigation-derived waste (IDW); and site survey were performed in accordance with the above referenced June 2002 Field Sampling Plan (FSP), and the March 1997 Work Plan for Site Investigations of Areas of Concern (E & E 1997) and documents referenced therein.

### 2.2 Field QA/QC Sample Requirements

Quality assurance/quality control (QA/QC) samples were collected on a site-wide basis according to the criteria established in Section 10 of Law Engineering and Environmental Services, Inc. (Law) Quality Assurance Project Plan (QAPP) (Law 1993), except as modified in E & E's QAPP addendum (E & E 1997 and 2002).

In summary, these field QA/QC sample requirements are as follows:

- Field QC duplicates collected at a frequency of 10% of the number of field samples collected;

## **2. Data Collection, Data Management, and Quality Control Procedures**

- Field QA split samples collected from the same sample points as the QC duplicate samples, at a frequency of 10% of the number of field samples collected;
- Rinsates at a frequency of 10% of the number of field samples collected were required for samples collected with non-dedicated equipment. There were no rinsates planned for this program in the FSP because the only non dedicated equipment was the backhoe bucket which did not come into contact with the actual sample.
- Matrix spike/matrix spike duplicates (MS/MSDs) for laboratory QC collected at a frequency of 20% of the samples collected;
- No ambient condition blanks were collected; and
- One trip blank was submitted for each shipment containing water samples requiring volatile organic analysis.
- A water sample (drill water) was also collected from the water tanks carrying/storing the water used for decontaminating drilling equipment.

### **2.3 Contracted Analytical Laboratories**

E & E's Analytical Services Center (ASC) in Lancaster, New York provided the laboratory analyses. QA split samples were sent to the United States Army Engineer Research and Development Center (ERDC) Quality Assurance Laboratory in Omaha, Nebraska, for analysis.

### **2.4 Sample Handling and Custody Procedures**

Field samples were collected, preserved, and transported to the appropriate laboratory according to the procedures described in the FSP. Deviations from these sample handling and custody procedures are reported under the appropriate sampling area in Section 3 of this document.

All chain-of-custody (COC) documentation associated with the collection of samples for this investigation are included in Appendix C.

## **2. Data Collection, Data Management, and Quality Control Procedures**

### **2.5 Equipment Calibration and Maintenance**

Calibration procedures for the field and laboratory instruments are presented in Sections 8.1 and 8.2 of Law's QAPP (Law 1993), except as modified by E & E's FSP and QAPP. Deviations from these calibration and maintenance procedures are reported under the appropriate sampling area in Section 3 of this document.

### **2.6 Quality Assurance Objectives**

Data uses and QA objectives were determined by E & E and are included in E & E's FSP (E & E 2002).

### **2.7 Procedures for Data Quality Evaluation**

Data quality evaluations focus on deviations from expected QC activities, problems encountered, and the acceptability of the methodologies used. Sample integrity is based on information provided on the cooler receipt form, the COC documents, statements in the laboratory case narratives, and field notebooks. The evaluation of the analytical data with respect to project- and method-specific quality objectives was performed using the results of laboratory method blank analyses, laboratory control samples (LCS), MS/MSD analyses, and surrogate recoveries, where applicable. Field duplicate data were used to evaluate the accuracy and precision of the analytical results and field sample collection methods.

The ASC prepares one data package per laboratory work order. Data validation memoranda are generated for all laboratory work orders and describe the data qualifications in detail. These memoranda contain all the details of the data quality review. Copies of all the data validation memoranda is provided in Appendix D. The key factors in the data quality review and validation procedures are highlighted for each sampling area in Section 3.

The sections that follow present the evaluation procedures used for laboratory and field QC samples.

#### **2.7.1 Laboratory Data Quality Evaluation**

The procedures used by E & E to evaluate and validate analytical data are described in Section 9.2.1 of Law's QAPP (Law 1993), except as modified by E & E's QAPP in the FSP. Data evaluation acceptance limits associated with this project are presented in Appendices L, K and M of Law's QAPP (Law 1993) as modified by E & E's QAPP addendum (E & E 2000). A senior chemist performed all data quality evaluation and qualification of the data summary tables. The data were qualified using the following documents as the basis:

## **2. Data Collection, Data Management, and Quality Control Procedures**

- United States Environmental Protection Agency (USEPA) Contract Laboratory Program *National Functional Guidelines for Organic Data Review* (USEPA 1999); and
- USEPA Contract Laboratory Program *National Functional Guidelines for Inorganic Data Review* (USEPA 1994).

Data associated with laboratory and field QC samples that meet all acceptance limits were not qualified and are considered usable as reported. Data associated with laboratory and field QC samples that exceeded some of the acceptance limits or had other analytical problems are qualified as described in Section 3.

### **2.7.2 Field Data Quality Evaluation**

QA and QC samples were collected to assess the quality of the field sampling activities. These QA/QC field samples include duplicates, splits, and rinsate blanks. The evaluation of these samples was based on completeness of data, results of rinsate blank analysis, and relative percent differences (RPDs) of field duplicate results. The evaluation criteria (RPD categories) used for field duplicates can be found in Section 4.3.1 of Law's QAPP (Law 1993).

To facilitate the comparison of the original field, QC duplicate, and QA split sample data, all samples from a common sample point were assigned the same client ID number. The QC duplicate samples were assigned a suffix of "/D," and QA split samples were assigned a suffix of "/S."

## **2.8 Data Management**

ASC laboratory data collection, data reduction, and data handling procedures are presented in the ASC's standard operating procedures (SOPs) and Laboratory QA Manual (E & E 2002a).

The laboratory stores analytical results in both electronic and hard copy formats. Hard copy data packs for each laboratory work order are validated, and qualifiers are recorded on the data pack. Validation memoranda documenting the analytical procedures and results of the data evaluation are created for all laboratory work orders. Validation memoranda and data packages associated with this investigation were sent to the USACE chemist after each validation of all data packages was completed.

All analytical results are managed electronically using the E & E's Laboratory Information Management System (LIMS). Analytical

## **2. Data Collection, Data Management, and Quality Control Procedures**

results are generally read directly off of the instruments. The data are transmitted electronically and checked as part of the data validation process. Validation qualifiers are added to the appropriate samples in the database. Analytical results are electronically transferred to a final database used to generate data summary reports.

Results for surrogate parameters are reported with the standard analytical results on the "Complete Analytical Data" tables. Other laboratory QC results, including MS/MSDs and laboratory method blanks, are reported on separate tables.

Analytical data associated with the investigation will be provided electronically to the Air Force Center for Environmental Excellence (AFCEE) in the required format for inclusion in the Environmental Resources Program Information Management System (ERPIMS). ASC will provide data to E & E in compliance with the latest version of ERPTools/Lab and E & E will subsequently provide data to AFCEE in compliance with the latest version of the ERPIMS Data Loading Handbook. ERPTools/Lab and /PC incorporate a number of automatic error checking routines to identify duplicate record sets; incorrect date/time/number formats; invalid codes; failure to complete key required data fields essential for file integrity; and field, record, and submission level validation (AFCEE 1997).

### **2.9 Location of Data**

A complete set of the analytical results are contained in the summary tables presented in Section 3 of this report. The QCSR (two copies) is forwarded to Mr. Phil Rosewicz of the USACE Kansas City District. The original data packages were forwarded to Ms. Daksha Dalal of the USACE, Kansas City District. Duplicate data packages are kept in the ASC. An electronic copy of the data is kept in the ERPIMS database at Brooks Air Force Base, Texas and in a project-specific database maintained by E & E.

# 3

## AOC 9 Sampling, Analysis, and Quality Control Results

This section describes the proposed sampling for AOC 9 and any deviations from the work plan or the QAPP, and includes a description of the data quality review on a sampling area-specific basis. Tabulations of the quality controlled analytical results are also included in this section. The appendices report supportive information, such as tables describing the proposed work (Appendix A), field quality control reports (Appendix B), COC documentation (Appendix C), validation memoranda (Appendix D), lab case narratives (Appendix E), and Systems Audit documentation (Appendix F). The data in the appendices are sorted in chronological order of the sampling events.

The samples collected at AOC 9 are summarized on Table 3-1 Sample Listing.

### 3.1 Proposed Sample Collection and Analytical Requirements

The objectives of this study are to more clearly define the source area of the chlorobenzene contamination detected in the groundwater during the spring 2000 SI, to determine if petroleum hydrocarbon contamination is present in the areas where sheens were observed during the test pit excavations, and to determine if the AFFF lagoon is a source of contamination. According to the FSP, sampling activities were to include:

- Five Geoprobe groundwater borings were to be installed at each of 11 locations for a total of 55 borings. Groundwater-screening samples were to be collected at each boring location. The Geoprobe groundwater samples were to be collected in three phases. Phase I was to consist of 25 groundwater samples (five locations) and the results were to be used to determine the locations of the 15 Phase II samples (three locations). The Phase I and II groundwater screening samples were to be analyzed for Low Level select list volatile organic compounds (VOCs) using Method SW 8260B with a 24-hour turnaround schedule. The results of the Phase I and II samples were then to be used to determine the locations of the remaining 15 Phase

### **3. AOC 9 Sampling, Analysis, and Quality Control Results**

III samples (three locations). The Phase III samples were to be analyzed for the same Low Level select list VOCs using Method SW 8260B with a standard turnaround schedule (28 days).

- Two Geoprobe soil borings were to be installed one in the up-gradient portion of the chlorobenzene source area and one on the downgradient edge of the AFFF lagoon. Three subsurface soil samples were to be collected from each of the borings. And analyzed for Target Compound List (TCL) VOCs by Method SW 8260B, TCL semivolatile organic compounds (SVOCs) by Method SW 8270C, TCL pesticides/ polychlorinated biphenyls (PCBs) by Methods SW 8081A/8082, Target Analyte List (TAL) metals/mercury by Methods SW 6010B/7470A/7471A, and percent solids by Method ASTM\_D2216.
- Two discrete depth-specific sediment samples were to be collected directly from within the AFFF lagoon and analyzed for TCL VOCs by Method SW 8260B, TCL SVOCs by Method SW 8270C, TCL pesticides/PCBs by Methods SW 8081A/8082, TAL metals/mercury by Methods SW 6010B/7471A, and percent solids by Method ASTM\_D2216.
- Five test pits were to be excavated immediately adjacent to 2000 SI test pit locations where sheens were observed. Groundwater samples were to be collected at each test pit location from the top of the water table and analyzed for TCL VOCs by Method SW 8260B, TCL by Method SVOCs SW 8270C, TCL pesticides/ PCBs by Methods SW 8081A/8082, total petroleum hydrocarbons (TPH) as diesel and TPH as gasoline using Method 8015B Mod.
- One subsurface soil sample was also to be collected from one of the five new test pits. The subsurface soil sample location and depth will be determined in the field based on organic vapor analyzer (OVA) screening results and/or visual observation of potential contamination (i.e., soil staining). The subsurface soil sample was to be analyzed for TCL VOCs by Method SW 8260B, TCL SVOCs by Method SW 8270C, TCL pesticides/PCBs by Methods SW 8081A/8082, TAL metals/mercury, by Methods SW 6010B/7471A, TPH as diesel and TPH as gasoline using Method 8015B Mod, and percent solids using Method ASTM\_D2216.

### **3. AOC Sampling, Analysis, and Quality Control Results**

- Seven trip blanks were to be prepared and analyzed for Low Level select list VOCs using Method SW 8260B.

#### **3.1.2 Sampling and Analysis Performed**

Fifty-six Geoprobe groundwater borings were installed and sampled from July 15, 2002 through July 24, 2002. Duplicate and split samples were collected from six samples and extra volumes were obtained for MS/MSD analysis from three samples. Two Geoprobe soil borings were installed and six subsurface soil samples were collected. Duplicate and split samples were collected at one sample location and extra volume for MS/MSD analysis was obtained from another sample location. Two sediment samples were collected. Extra volume for MS/MSD analysis and duplicate and split samples were collected from one sample. Five test pits were excavated and one subsurface soil and five water samples were collected. Duplicate and split samples were collected at one water and one soil sample location and extra volumes were obtained for MS/MSD analysis at one water and one soil sample location. Eight trip blanks and a drill water sample were also collected for analysis.

Table 3-1 lists the samples collected, as well as the sampling dates, sample depths, and analyses associated with the samples. (This table is a post-sampling update of the FSP table presented in Appendix A.)

- Two Geoprobe groundwater borings were eliminated from the original FSP, but three Geoprobe groundwater locations were added. There were no changes to the proposed soil Geoprobe boring, test pit, and sediment samples. There was one trip blank added. There were no changes to the proposed sample analyses required for any of the samples. All sample deviations have are noted on Table 3-1.
- A drill water sample was also collected from the water tanks carrying/storing the water used for decontaminating non-sampling Geoprobe equipment. The sample was collected because the drillers were using a new water source. The sample should have been collected directly from the source and not the tank.

#### **3.1.3 Deviations From Sample Handling and Custody Procedures**

No deviations occurred to the proposed sample handling and sample custody procedures.

### 3. AOC 9 Sampling, Analysis, and Quality Control Results

#### 3.1.4 Data Quality Evaluation

The data quality was evaluated based on sample integrity, holding times, method blank results, LCS results, MS/MSD recoveries, surrogate recoveries, and duplicate precision as outlined in Section 2.7 of this document. The correlation between original samples collected at the site and the associated field and laboratory QA/QC samples used to confirm and qualify the original samples are reported in Table 3-2.

All of the data collected from the site are reported in laboratory work orders as follows:

| Work Order | Lab |
|------------|-----|
| 0207098    | ASC |
| 0207099    | ASC |
| 0207112    | ASC |
| 0207127    | ASC |
| 0207148    | ASC |
| 0207158    | ASC |
| 0207173    | ASC |
| 0207135    | ASC |
| 0207149    | ASC |
| 0207192    | ASC |

Detailed descriptions of the data quality review are reported by lab work order in the Data Validation Memoranda provided in Appendix D.

Based on QC criteria, all data collected and analyzed from the site are usable. Data qualification for the samples from the site is discussed by method in the following sections.

##### 3.1.4.1 Test Pit and Geoprobe Groundwater Samples Method SW8260B - Low Level Select List VOCs

Trace levels of acetone and methylene chloride were detected in some blanks. The findings indicate that low-level acetone results below the PQL for all samples are likely due to background levels in the field and laboratory. Acetone present in the samples at levels 5 times the blank are flagged "U" as non-detect, but all low level acetone results should be considered as potentially due to background. There is no impact on data usability because the groundwater screening value for is 50 ppb acetone and no methylene chloride was detected in the samples.

### **3. AOC 9 Sampling, Analysis, and Quality Control Results**

Acetone, Trichlorofluoromethane, 2-Hexanone, 2-Butanone, 4-Methyl-2-pentanone, and Vinyl acetate slightly exceeded the laboratory control limits of 80 -120% in the LCS. The recoveries were generally within the method limits of 70-130%. These compounds were not detected in the associated samples except for low level acetone in which one samples was flagged "J" as estimated. The compounds are not of concern at the site. All other LCS recoveries were acceptable and therefore, there is no impact on data usability. The LCS were not reanalyzed because of the samples were 24 hour screening samples for rush analysis. There is no impact on the usability of the data for this purpose.

Several field duplicates pairs had relatively high difference between the positive results in the screening samples. The associated positive results are flagged "J" as estimated. The higher level of variability is expected in the geoprobe groundwater samples because the wells are not purged. Since the results are used to choose new locations for geoprobe and provide an overall contour of the plume, the higher variability in the results should not impact the overall usability of the data.

#### **3.1.4.2 Subsurface Soil and Sediment Samples Method SW8260B - TCL VOCs**

Trace level of acetone was detected in the method blank for the sediments. The findings indicate that low-level acetone results for all samples are likely due to background levels in the field and laboratory. Acetone present in the samples at levels 5 times the blank are flagged "U" as non-detect, but all low level acetone results should be considered as potentially due to background. There is no impact on data usability because the soil screening value for is 200 ppb acetone.

Acetone and Carbon tetrachloride slightly exceeded the laboratory control limits of 75 -125% in the LCS. The recoveries were within the method limits of 70-130%. These compounds were not detected in the associated samples except for low-level acetone, which was already flagged "U" as non-detect. Therefore, there is no impact on the usability of the data.

#### **Method SW8270B - TCL SVOCs**

All samples were analyzed within the project-specified holding time except for the re-extraction of sample AOC9-TP04/D for SVOCs five days beyond the method holding time of 14 days due to QC problems with the original analysis. All non-detect results are qualified "UJ" as estimated. There is no overall impact on data usability because the sample was a field duplicate. The field dupli-

### **3. AOC 9 Sampling, Analysis, and Quality Control Results**

cate results show good precision for all target compounds except low-level acetone that is likely due to background.

The MS/MSD recoveries were below 10% for several reactive compounds including Hexachlorocyclopentadiene and 3,3'-Dichlorobenzidine. The LCS recoveries were acceptable indicating no analytical concerns. The results indicate a significant matrix effect that appears to be attributable to the high levels of humic acids in the samples. Therefore, the PQLs for these compounds in samples with high levels of benzoic acid are flagged "UR" as non-detected. The compounds are not compounds of concern at the site and therefore the overall usability of the data are not affected. There are no analytical clean-up procedures that would improve the recovery of these compounds. The laboratory is reviewing corrective actions to increase the spiking levels of the compounds to improve recovery.

#### **Method SW8081A - TCL Pesticides**

Trace level of endrin aldehyde was detected in the method blank for the test pit soils. The findings indicate that low-level results for all samples are likely due to background levels in the field and laboratory. Endrin aldehyde present in one sample at 5 times the blank was flagged "U" as non-detect. There is no impact on data usability because there is no soil screening value this compound and there were no pesticides found at levels of concern in the samples.

Aldrin and dieldrin were flagged "J" as estimated in one of the test pit groundwater samples. The MS/MSD for the sample had low recoveries probably because of the difficulty measuring the recovery on top of high sample amounts. The impact on data usability is minor because the levels present already exceed the screening values.

#### **Method SW610B/7470A/7471A - TAL Metals/Mercury**

The sample results for antimony for several samples were flagged "U" as non-detect due to the blank levels. All values were below the PQL and were elevated to the PQL. The above qualifications will not impact data usability because the levels are not over the severe effect level screening criteria.

Manganese results were "J" flagged in the sediment samples due to slightly low MS recoveries and potential matrix effects. The sample results were near the screening value and could potentially impact the data comparison. Since one of the sediment values exceed the limits the conclusion at the site would not be impacted. Man-

### **3. AOC Sampling, Analysis, and Quality Control Results**

ganese is known to present at naturally elevated levels in the soils at the site.

Lead results are flagged "J" as estimated in the sediments because the high variability in the field duplicates. Since the highest value is below the screening value there is no impact on data usability.

#### **Other Laboratory Methods**

No problems were encountered with sample analyses for this method that required data qualification.

#### **3.1.5 Analytical Results Tables**

The complete analytical results for the groundwater from test pits, Geoprobe groundwater, the AFFF sediment, the subsurface soil samples, the drilling water and trip blanks are presented in Tables 3-3 to 3-8. Positive analytical result summaries the groundwater from test pits, Geoprobe groundwater, the AFFF sediment, and the subsurface soil samples are presented in Tables 3-9 to 3-12 respectively. Positive results for the field duplicates and project-specific MS/MSD samples that were outside QC limits are included in the Data Validation Memorandum in Appendix D on Tables 7 and 4, respectively. Method blank results and the impact of all blanks on the sample data are summarized on Table 2 of the Data Validation Memorandum in Appendix D. All the samples results qualified as part of the data review process are summarized on Table 3-13.

#### **3.1.6 Data Completeness and Representativeness**

##### **3.1.6.1 Analytical Method Problems**

No problems were noted with the analytical methods used for the samples collected.

##### **3.1.6.2 Needed QA/QC Change**

No QA/QC changes were noted for the analytical methods used for samples collected at site.

#### **3.1.7 Summary and Conclusions**

Data points were rejected for the 8 hexachloropentadiene and 3,3-Dichlorobenzidine non-detect results in sediment and soil samples collected at the site. A completeness goal of over 99.9% was achieved for analytical level III data. The analytical data meet specified QC criteria, with no any exceptions or qualifications. The data points that were qualified as estimated should be considered useable for the purposes of this project. A total of 5714 data points are associated with the site. Sample results qualified as part of the data review process are summarized on Table 3-13. Any

---

### ***3. AOC 9 Sampling, Analysis, and Quality Control Results***

other samples results that are flagged "J" as estimated are due to reported results below the PQL but above the detection limit.

 BGS :: Below ground surface.  
 D1 :: Deep Geoprobe groundwater sample (20 to 22 feet BGS).  
 D2 :: Deeper Geoprobe groundwater sample (23 to 25 feet BGS).  
 /D :: Duplicate sample.  
 Depth :: Depth interval at which sample will be collected.  
 DI :: Detonized.  
 ERDC :: U.S. Army Engineer Research and Development Center Quality Assurance Laboratory  
 FD :: Field duplicate.  
 FR :: Field split/duplicate.  
 GP :: Geoprobe.  
 GW :: Groundwater sample.  
 I :: Intermediate Geoprobe sample.  
 MS/MSD :: Matrix spike/matrix spike duplicate.

N :: Original sample.  
 PCB :: Polychlorinated biphenyls.  
 QC :: Quality control sample.  
 S1 :: Shallowest Geoprobe groundwater sample (11 to 13 feet BGS).  
 S2 :: Shallow Geoprobe groundwater sample (14 to 16 feet BGS).  
 /S :: Split sample.  
 SD :: Sediment.  
 SI :: Supplemental Investigation  
 SS :: Subsurface soil sample.  
 Stat :: Status (O= Open, T= Taken, S= Skipped).  
 SVOCs :: Semivolatile organic compounds.  
 TAL :: Target analyte list.  
 TB :: Trip blank sample.  
 TCL :: Target Compound List.  
 TP :: Test pit.  
 VOCs :: Volatile organic compound.  
 WP :: Sample in work plan (Y = yes, N= no).

**Table 3-2  
Association Between Field and QA/QC Samples from AOC 9 SI Additional Sampling,

**Key:**

AOC = Area of Concern.  
 ASC = E & E's Analytical Services Center.  
 B775 = Building 775.  
 B817 = Building 817.  
 Br = Bedrock well.  
 /D = Duplicate.  
 HP = Hydropunch sample.  
 LP6 = Landfill 6.  
 MEE = Methane, ethane, ethene.  
 MW = Monitoring well.

MS/MSD = Matrix spike/matrix spike duplicate.  
 QA = Quality assurance.  
 QC = Quality control.  
 RB = Rinsate blank.  
 /S = Split.  
 SB = Soil boring.  
 SO = Soil sample.  
 TB = Trip blank.  
 WSA = Weapons Storage Area.

## Note:

% REC = Units of %REC indicate that the compound is a surrogate spike.

## Key:

J = Estimated value. The reported value is below the quantitation limit or estimated due to variance from quality control limits.

µg/L = Micrograms per liter.

mg/L = Milligrams per liter.

PCBs = Polychlorinated Biphenyls.

SVOC's = Semivolatile Organic Compounds.

TPH = Total petroleum hydrocarbons (Diesel and gasoline organics).

U = Analyte was not detected or not present above background levels. The reported value is the quantitation limit or value elevated due to background.

UR = The PQL for this analyte is not usable. The actual PQL should be higher, but that level cannot be determined.

VOC's = Volatile Organic Compounds.

Table 3-4

Summary of Complete Analytical Results for Groundwater Samples from Temporary Geoprobe Wells, Year 2002 SI Additional Sampling, Former Griffiss Air Force Base, Rome, New York

**Table 3-4  
Summary of Complete Analytical Results for Groundwater Samples from Temporary Geoprobe Wells, Year 2002 SI Additional Sampling,  
Former Griffiss Air Force Base, Rome, New York**

---

**Note:**  
% REC = Units of %REC indicate that the compound is a surrogate spike.

**Key:**

J = Estimated value. The reported value is below the quantitation limit or estimated due to variance from quality control limits.  
JB = Estimated value that may be bias high due to laboratory or field background contamination.  
µg/L = Micrograms per liter.  
NA = Not analyzed or reported.  
U = Analyte was not detected or not present above background levels. The reported value is the quantitation limit or value elevated due to background.  
UR = The PQL for this analyte is not usable. The actual PQL should be higher, but that level cannot be determined.  
VOCs = Volatile Organic Compounds.

**Note:**

% REC = Units of %REC indicate that the compound is a surrogate spike.

**Key:**

J = Estimated value. The reported value is below the quantitation limit or estimated due to variance from quality control limits.

µg/Kg = Micrograms per kilogram.

mg/Kg = Milligrams per kilogram.

NA = Not analyzed or reported.

PCBs = Polychlorinated Biphenyls.

SVOCs = Semivolatile Organic Compounds.

U = Analyte was not detected or not present above background levels. The reported value is the quantitation limit or value elevated due to background.

UR = The PQL for this analyte is not usable. The actual PQL should be higher, but that level cannot be determined.

VOCs = Volatile Organic Compounds.

Table 3-6

Summary of Complete Analytical Results for Soil Samples, Year 2002 SI Additional Sampling,  
Former Griffiss Air Force Base, Rome, New York

**Note:**

% REC = Units of %REC indicate that the compound is a surrogate spike.

**Key:**

J = Estimated value. The reported value is below the quantitation limit or estimated due to variance from quality control limits.

JB = Estimated value that may be bias high due to laboratory or field background contamination.

µg/Kg = Micrograms per kilogram.

mg/Kg = Milligrams per kilogram.

NA = Not analyzed or reported.

PCBs = Polychlorinated Biphenyls.

SVOCs = Semivolatile Organic Compounds.

TPH = Total petroleum hydrocarbons (Diesel and gasoline organics).

U = Analyte was not detected or not present above background levels. The reported value is the quantitation limit or value elevated due to background.

UR = The PQL for this analyte is not usable. The actual PQL should be higher, but that level cannot be determined.

VOCs = Volatile Organic Compounds.

**Note:**

% REC = Units of %REC indicate that the compound is a surrogate spike.

**Key:**

J = Estimated value. The reported value is below the quantitation limit or estimated due to variance from

µg/L = Micrograms per liter.

mg/L = Milligrams per liter.

NA = Not analyzed or reported.

PCBs = Polychlorinated Biphenyls.

SVOCs = Semivolatile Organic Compounds.

TPH = Total petroleum hydrocarbons (Diesel and gasoline organics)

U = Analyte was not detected or not present above background levels. The reported value is the quantitation limit or value elevated due to background.

VOCs = Volatile Organic Compounds.

## Note:

% REC = Units of %REC indicate that the compound is a surrogate spike.

## Key:

J = Estimated value. The reported value is below the quantitation limit or estimated due to variance from quality control limits.

µg/L = Micrograms per liter.

U = Analyte was not detected or not present above background levels. The reported value is the quantitation limit or value elevated due to background.

VOC's = Volatile Organic Compounds.

Note: Shaded results exceed the most stringent screening criterion. For a full list of screening criteria see Appendix G.

Key:

AOC 9 = Area of Concern 9.

D = Duplicate sample.

J = Estimated value.

mg/L = Milligrams per liter.

NA = No criteria available.

ND = Not detected.

PCBs = Polychlorinated biphenyls.

SVOC = Semivolatile organic compound.

TP = Test pit.

TPH = Total petroleum hydrocarbons.

U = Not detected (practical quantitation limit listed).

VOC = Volatile organic compound.

µg/L = Micrograms per liter.

## Key:

AOC9 = Area of Concern 9.

ND = Duplicate sample.

D = Deep Geoprobe location.

ft = Feet.

GP = Geoprobe location.

I = Intermediate Geoprobe location.

J = Estimated value.

U = Non detected (quantitation limit listed).

S = Shallow Geoprobe location.

µg/l. = Micrograms per liter.

Note: Shaded results exceed the most stringent screening criterion. For a full list of screening criteria see Appendix G.

**Key:**

AFFF = Aqueous Film Forming Foam.

AOC 9 = Area of Concern 9.

/D = Duplicate sample.

J = Estimated value.

mg/Kg = Milligrams per kilogram.

NA = No criteria available.

PCBs = Polychlorinated biphenyls.

SD = Sediment sample.

SVOC = Semivolatile organic compound.

U = Not detected (practical quantitation limit listed).

VOC = Volatile organic compound

µg/Kg = Micrograms per kilogram.

Notes: Shaded results exceed the most stringent screening criterion. For a full list of screening criteria see Appendix G.

**Key:**

AOC 9 = Area of Concern 9.

/D = Duplicate sample.

J = Estimated value.

mg/Kg = Milligrams per kilogram.

N/A = Not analyzed for this parameter.

NA = No criteria available.

PCBs = Polychlorinated biphenyls.

SS = Soil sample.

SVOC = Semivolatile organic compound.

TP = Test pit sample.

U = Not detected (practical quantitation limit listed).

VOC = Volatile organic compound.

µg/Kg = Micrograms per kilogram.

Notes: Shaded results exceed the most stringent screening criterion. For a full list of screening criteria see Appendix G.

**Key:**

AOC 9 =Area of Concern 9.

/D =Duplicate sample.

J = Estimated value.

mg/Kg = Milligrams per kilogram.

N/A = Not analyzed for this parameter.

NA = No criteria available.

PCBs = Polychlorinated biphenyls.

SS = Soil sample.

SVOC = Semivolatile organic compound.

TP = Test pit sample.

U = Not detected (practical quantitation limit listed).

VOC = Volatile organic compound.

µg/Kg = Micrograms per kilogram.

## Key:

AFFF = Aqueous Film Forming Foam

AOC9 = Area of Concern 9.

ASC = E &amp; E's Analytical Services Center.

/D = Duplicate sample.

TP Test Pit

MW = Monitoring well.

TB = Trip blank.

# 4

## System Audits

Internal audits of the laboratory are conducted at ASC on a schedule determined by the ASC QA Coordinator. For this project, the ASC QA Coordinator did not perform an internal audit of the project-specific requirements because the work was the same the previous project and no problems were identified in that audit. The ASC has undergone external audits from the following agencies over the past year:

| Agency/Company                            | Audit Dates          | Scope of Audit                                                |
|-------------------------------------------|----------------------|---------------------------------------------------------------|
| California Department of Health Services  | June 20, 2001        | California ELAP (not NELAP)                                   |
| The Environmental Company                 | June 27, 2001        | AFCEE                                                         |
| Florida Department of Health              | August 13-14, 2001   | NELAP (extra parameters)                                      |
| SAIC                                      | August 29, 2001      | Savannah Army Depot Activity                                  |
| Jacobs                                    | October 24-25, 2001  | Project Chanute AFCEE                                         |
| New York State Department of Health       | February 12-14, 2002 | NELAP (Wastewater, drinking water, solid and hazardous waste) |
| SAIC                                      | May 1-3, 2002        | Jacobs/Tooele                                                 |
| Wisconsin Department of Natural Resources | June 18-20, 2002     | Wisconsin DNR certification                                   |
| NUCOR                                     | July 12, 2002        | Consent Decree                                                |

One field inspection was performed during the field program. Richard Watt, as QA Inspector, performed all audits and inspections. The field inspection reports are included in Appendix F. None of the findings impact data usability or indicated non-compliance with USACE requirements.

## Reference Data for Proposed Work

---

***A. Reference Data for Proposed Work***

### 3.1.5 2002 SI Additional Sampling

The objectives of this study are to more clearly define the source area of the chlorobenzene contamination detected in the groundwater during the spring 2000 SI, to determine if petroleum hydrocarbon contamination is present in the areas where sheens were observed during the test pit excavations, and to determine if the AFFF lagoon is a source of contamination. To achieve this goal, 55 Geoprobe groundwater-screening samples are proposed to be collected in the area shown to contain the highest concentrations of chlorobenzene. Groundwater at all Geoprobe locations will be vertically profiled (11 Geoprobe locations with five samples each). Each vertically profiled Geoprobe location will be sampled at 2-foot intervals beginning at the top of bedrock and progressing upwards to the water table. A 1-foot unsampled zone will remain between each of the 2-foot Geoprobe sample intervals. The Geoprobe sampling points will be located north of Perimeter Road on a 60- by 90-foot grid. The grid will surround permanent monitoring well AOC9-MW08 (see Figure 3-1).

The Geoprobe samples will be collected in three phases. Phase I will consist of 25 groundwater samples (five locations) analyzed for a select list of volatile organic compounds (VOCs) with a 24-hour turnaround schedule. Four of the five locations will be placed 30 feet from existing well AOC9-MW08 (1-upgradient, 1-downgradient, and one to each side gradient location). The fifth Phase I location will be placed 60 feet upgradient from existing well AOC9-MW08.

Results from the Phase I samples will be used to determine the locations of the 15 Phase II samples (three locations). The 15 Phase II samples will also be analyzed for a select list of VOCs with a 24-hour turnaround schedule.

The results of both the Phase I and Phase II samples will then be used to determine the locations of the remaining 15 Phase III samples (three locations). The Phase III samples will be analyzed for the same select list of VOCs with a standard turnaround schedule (28 days).

Upon completion of the Geoprobe groundwater sampling, a Geoprobe soil boring (AOC9-SS02) will be installed in the upgradient portion of the area determined to be the chlorobenzene source area. Three Subsurface soil samples will be collected from the vadose zone (2 to 4, 6 to 8, and 10 to 12 feet BGS) in an attempt to determine whether residual contamination is present above the water table. These subsurface soil samples will be analyzed for TCL VOCs.

Five additional groundwater samples and one subsurface soil sample also will be collected to determine if petroleum hydrocarbon contamination is present in the areas where sheens were observed during the 2000 SI test pit excavations. To accomplish this five additional test pits will be excavated immediately adjacent to test pit excavations TP01, TP03, TP04, TP06, and DTP04, where sheens were observed during the 2000 SI test pit excavations (see Figure 3-1). Groundwater samples will be collected at each test pit location from the top of the water table and analyzed for TCL VOCs, SVOCs, pesticides/PCBs, TPH as diesel and TPH as gasoline. In addition, one subsurface soil sample will be collected from one of the five new test pits. The subsurface soil sample location and depth will be determined in the field based on OVA screening results and/or visual observation of potential contamination (i.e., soil staining). The subsurface soil sample will be analyzed for TCL VOCs, SVOCs, pesticides/PCBs, TAL metals, mercury, and percent solids.

In addition, at the request of the NYSDEC, a Geoprobe soil boring (AOC9-SS01) will be installed on the downgradient edge of the AFFF lagoon and two discrete depth-specific (0- to 0.5-foot, and 0.5- to 2-foot) sediment samples will be collected directly from within the AFFF lagoon. Subsurface soil samples will be collected from the vadose zone (4 to 6 feet below ground surface [BGS]), the top of the water table (11 to 13 feet BGS), and immediately above the top of bedrock (23 to 25 feet BGS). All subsurface soil and sediment samples will be analyzed for TCL VOCs, SVOCs, pesticides/PCBs, TAL metals, mercury, and percent solids.

Key:

AOC = Area of Concern  
 ASC = E & E's Analytical Services Center  
 ASTM = American Society for Testing and Materials  
 D1 = Deep Geoprobe groundwater sample (20 to 22 feet BGS)  
 D2 = Deepest Geoprobe groundwater sample (23 to 25 feet BGS)  
 /D = duplicate  
 Depth = Depth interval at which sample will be collected  
 DI = Delonized  
 ERDC = U.S. Army Engineer Research and Development Center Quality Assurance Laboratory  
 FD = field duplicate  
 FR = field split/replicate  
 GP = Geoprobe  
 GW = groundwater sample  
 I = Intermediate Geoprobe sample

N = Original  
 PCB = polychlorinated biphenyls  
 QC = Quality control sample  
 S1 = Shallowest Geoprobe groundwater sample (11 to 13 feet BGS)  
 S2 = Shallow Geoprobe groundwater sample (14 to 16 feet BGS)  
 /S = split  
 SD = Sediment  
 SS = Subsurface soil sample  
 SVOCs = semivolatile organic compounds  
 TAL = Target analyte list  
 TB = Trip blank  
 TBD = to be determined  
 TCL = Target Compound List  
 TP = Test pit  
 VOCs = volatile organic compound

## Validation Memoranda

## DATA VALIDATION MEMORANDUM

DATE: August 8, 2002 (Updated October 2002)

TO: Robert Meyers, Project Manager,  
Ecology and Environment, Inc. (E & E)

FROM: Marcia Meredith Galloway, QA Officer, Buffalo

SUBJ: 2002 Addendum Site Investigation of Area of Concern 9 and  
USACE Contract DACW41-99-D-9005, Task Order 0001- WAD 9

Laboratory - Analytical Services Center (ASC) REF:

| Project                           | Lab Work Order |
|-----------------------------------|----------------|
| Griffiss AFB- WAD 09 AOC 9/PCI 20 | 0207135        |
| Griffiss AFB- WAD 09 AOC 9/PCI 20 | 0207149        |
| Griffiss AFB- WAD 09 AOC 9/PCI 20 | 0207192        |

### **DELIVERABLES**

The laboratory reports are complete as stipulated in the master Quality Assurance Project Plan (QAPP) (E & E 2000) and the site-specific QAPP for the above referenced project and site. The data validation memo findings and the potential impacts on data usability will be presented in a Quality Control Summary Report (QCSR) submitted as a separate report.

### **SAMPLE INTEGRITY**

Based on the information provided on the cooler receipt form, the samples arrived at the laboratory intact and properly preserved. Completed chain-of-custody (COC) documents are included in the laboratory report.

### **SAMPLE IDENTIFICATION**

The field samples for this laboratory data packages and related laboratory identifications (IDs) are listed on the following Table 1. Samples identified as /D are field duplicates. Project-specific matrix spike/matrix spike duplicates (MS/MSD) designated in the field as extra volume by on the COC are noted with a "\*" on Table 1. Any other samples noted as MS/MSD on Table 1 are provided as batch quality control (QC) MS/MSD. Samples identified with a matrix code of "RB" are rinsate blanks and samples identified with a matrix code of "TP" or "TS" are trip blanks. All tables are included at the end of this memo except for Table 1 Sample Listing.

**Table 1 - List of Samples Reported**

| Sample ID       | Sample Date | Matrix | Lab ID     | Lab QC | MS<br>MS | ID Corrections |
|-----------------|-------------|--------|------------|--------|----------|----------------|
| AOC9-GP48D1     | 7/18/2002   | Water  | 0207135-01 |        |          | None           |
| FIELDQC-TB9-GW4 | 7/18/2002   | Water  | 0207135-02 |        |          | None           |

## Data Validation Memo

Go to [Tables List](#)

### Holding Times

All samples were analyzed within the project-specified holding time except for the re-extraction of sample AOC9-TP04/D for SVOCs five days beyond the method holding time of 14 days. All non-detect results are qualified "UJ" as estimated as indicated on Table 6.

### LOW LEVEL VOLATILE ANALYSES (8260B)

#### Blank Summary

Laboratory method blanks and trip blanks were performed at the required frequency and no compounds were present above the PQL .

#### Surrogates

The recoveries for surrogates; 1,2-Dichloroethane-d4, 4-Bromofluorobenzene, Dibromofluoromethane, and Toluene-d8 were within acceptable QC limits for all samples.

#### Matrix Spike/Matrix Spike Duplicates (MS/MSD)

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC except that there was not enough volume to analyze the MSD for AOC9-TP03 as the sample was analyzed twice due to instrument problems. The percent recovery and RPD values were within laboratory QC limits except as noted on Table 4. The recoveries were always above 10%. No data qualification is required on the MS/MSD outliers unless significant matrix effects are indicated. The recoveries were slightly low for trichlorofluoromethane and vinyl acetate. The LCS recoveries also were slightly low for these compounds in some cases

indicating a potential analysis bias. No compounds were detected in the samples and recoveries were high enough to support detection of the compounds at the PQL. Therefore no data qualification is required.

#### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits except as noted on Table 5. Vinyl acetate, 2-butanone, and 4-methyl-2-pentanone (work order 0207192) recoveries were slightly low. These compounds were not detected in the associated samples and are not compounds of concern at the site. All other LCS recoveries were acceptable. The compound recoveries were greater than 50% and sufficient to support detection of the compounds at the PQL. Therefore no data qualification is required.

#### **Calibration**

The method calibration criteria for initial and continuing calibration were met for all samples.

Several of the quick turnaround screening samples were analyzed only once at the most appropriate dilutions to match the compound concentrations present. The sample PQLs for compounds not present in the sample will be elevated and may not be directly comparable to other compounds. Since the data are used for contouring this may have an impact on the usability of the results. The following samples were analyzed at a higher dilution.

| Client Sample ID | Dilution Factor | Minimum PQL |
|------------------|-----------------|-------------|
| AOC9-GP56I       | 5               | 10.0        |

#### **VOLATILE ANALYSES (8260B)**

##### **Blank Summary**

Laboratory method blanks and trip blanks were performed at the required frequency and no compounds were present above the PQL.

##### **Surrogates**

The recoveries for surrogates; 1,2-Dichloroethane-d4, 4-Bromofluorobenzene, Dibromofluoromethane, and Toluene-d8 were within acceptable QC limits for all samples.

##### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD were performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and relative percent difference (RPD) values were within laboratory QC limits except as noted on Table 4. The recoveries were always above 10%. No data qualification is required on the MS/MSD outliers unless significant matrix effects are indicated. The LCS recoveries were acceptable indicating no analytical concerns.

##### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits except as noted on Table 5. Acetone recoveries were high and trichlorofluoromethane (work order: 0207149) recoveries were low (work order: 0207149). Trichlorofluoromethane was not detected in the associated samples and is not a compound of concern at the site. Acetone was detected in one sample above the PQL and the result is flagged "J" as estimated. Acetone is

not a compound of concern at the site and the potential high bias is likely due to laboratory background. All other LCS recoveries were acceptable.

### **Calibration**

The method calibration criteria for initial and continuing calibration were met for all samples.

## **SEMIVOLATILE ANALYSES (8270C)**

### **Blank Summary**

Laboratory method blanks were performed at the required frequency and no compounds were present above the PQL with the exception of bis(2-ethylhexyl)phthalate found at 51.86 µg/L in method blank MB-200202030 (laboratory work order 0207149) above the MDL but below the reporting limit as indicated on Table 2. The associated samples with positive results for the compounds are shown on Table 2A for method blanks. Sample results less than 10 times the blank levels are flagged "U" as non-detect for common laboratory contaminants. Sample results less than 5 times the blank levels are flagged "U" as non-detect for all other compounds.

### **Surrogates**

The recoveries for surrogates 2,4,6-tribromophenol, 2-fluorobiphenyl, 2-fluorophenol, nitrobenzene-d5, phenol-d5, and terphenyl-d14 were within acceptable QC limits. No action is required for one surrogate recovery per fraction outside QC limits except as noted on Table 3. No action is required for one surrogate recovery per fraction outside QC limits.

Sample AOC9-SS01(20-24) had two surrogate recoveries high for acid phenols. The laboratory indicates the recoveries were high due to a large aldol condensation product peak and the sample was not re-extracted beyond holding times. No compounds were detected in the sample and no data qualification is required.

All surrogate recoveries for sample AOC9-TP04/D (laboratory work order 0207149) were low indicating an extraction problem. The sample was re-extracted five days beyond holding time and re-analyzed as indicated on Table 6. The re-extracted surrogate recoveries were acceptable and no target compounds were detected. The re-extracted sample results are reported and qualified as indicated on Table 6. Since the sample was a field duplicate and the original sample results are the same, there is limited impact on data usability.

### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and relative percent difference (RPD) values were within laboratory QC limits except as noted on Table 4. The recoveries were always above 10% except for two reactive compounds. No data qualification is required on the MS/MSD outliers unless significant matrix effects are indicated. The LCS recoveries were acceptable indicating no analytical concerns. The results for two reactive compounds indicate a potential matrix effect that produced no recovery. The associated PQLs are flagged "UR" as rejected due to matrix effects. The compounds are not a concern at the site and there is no impact on data usability.

### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits except as noted on Table 5 (high recoveries of benzo(g,h,i)perylene, indeno(1,2,3-cd)pyrene),

and dibenz(a,h)anthracene - laboratory work orders 0207135 and 0207149). Sporadic and marginal QC failures for multiple component methods do not indicate an analytical concern. The recoveries were high and the compounds were not detected in the samples, therefore no data qualification is required.

#### **Calibration**

The method calibration criteria for initial and continuing calibration were met for all samples.

### **GC VOLATILES GASOLINE RANGE ORGANICS (SW8015B Modified)**

#### **Blank Summary**

Laboratory method blanks were performed at the required frequency and no compounds were present above the PQL.

#### **Surrogates**

The recoveries for surrogate 1,2-Dichlorobenzene were within acceptable QC limits.

#### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and RPD values were within laboratory QC limits.

#### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits.

#### **Calibration**

The method calibration criteria for initial calibration and continuing calibration criteria were met.

### **DIESEL RANGE ORGANICS (SW8015B Modified)**

#### **Blank Summary**

Laboratory method blanks were performed at the required frequency and no compounds were present above the PQL.

#### **Surrogates**

The recoveries for surrogate o-Terphenyl were within acceptable QC limits.

#### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and RPD values were within laboratory QC limits.

#### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits.

### **Calibration**

The method calibration criteria for initial calibration and continuing calibration criteria were met.

### **PESTICIDES (8081A)**

#### **Blank Summary**

Laboratory method blanks were performed at the required frequency and no compounds were present above the PQL. Trace levels of endrin aldehyde were detected in the blank as indicated on Table 2. The associated samples with positive results for the compounds are shown on Table 2A for method blanks. Sample results less than 10 times the blank levels are flagged "U" as non-detect for common laboratory contaminants. Sample results less than 5 times the blank levels are flagged "U" as non-detect for all other compounds.

#### **Surrogates**

The recoveries for surrogates decachlorobiphenyl (DCB) and Tetrachloro-m-xylene (TCMX) were within acceptable QC limits for all samples except as noted on Table 3. The recovery of DCB was high in one sample, but the associated sample results were all non-detected or below the PQL and already flagged "J" as estimated.

#### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and RPD values were within laboratory QC limits except as noted on Table 4 at the end of this memo. Qualifiers were added as noted in Table 4 for aldrin and dieldrin. These compounds were the only compounds detected at high levels in the samples. The results are flagged "J" as estimated. The LCS recoveries were acceptable indicating no analytical concerns.

#### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits.

### **Calibration**

The method calibration criteria for initial and continuing calibration were met for all samples.

### **PCBs (8082)**

#### **Blank Summary**

Laboratory method blanks were performed at the required frequency and no target compounds were present at levels above or below the PQL.

#### **Surrogates**

The recoveries for surrogates DCB and TCMX were within acceptable QC limits except as noted on Table 3. For one sample batch, 200202088, the DCB recovery was slightly low in the method blank and one sample. The recovery in the LCS and other three samples was acceptable. No PCBs were detected in any of the samples. No data qualification is required unless the recovery is less 30%. The surrogate response is sufficient to support detection of PCBs at the PQL and there is no impact on data usability. For the one sample AOC9-TP04 the recovery was high, but no PCBs were detected in the samples and no data qualification is required.

#### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and RPD values were within laboratory QC limits. The LCS recoveries were acceptable indicating no analytical concerns.

#### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits.

#### **Calibration**

The method calibration criteria for initial and continuing calibration were met for all samples.

#### **METALS (6010/7000)**

##### **Blank Summary**

Laboratory method blanks were analyzed at the required frequency and had no target analytes detected above the laboratory PQL. Trace levels of selenium were found below the PQL as shown on Table 2. There were no associated samples with positive results and no data qualification required.

#### **Matrix Spike/Matrix Spike Duplicate (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and RPD values were within laboratory QC limits except as noted on Table 4 at the end of this memo. Qualifiers were added as noted in Table 4. For low recoveries, both the results and quantitation limit are flagged "J" as estimated. For high recoveries, only the positive results are flagged "J" as estimated.

#### **Laboratory Control Sample (LCS)**

The LCSs were performed at the required frequency and all recoveries were within QC limits.

#### **Calibration**

The method calibration criteria for initial calibration and continuing calibration criteria were met.

#### **FIELD DUPLICATE RESULTS**

Field duplicates were analyzed as required in the QAPP. The samples are noted on Table 1 of this memo were field duplicates. The results will be summarized on a table in the QCSR. The field duplicate QC criteria are two times the laboratory duplicate QC criteria of 20% for water samples and 35% for soil samples (i.e., 40% for water samples and 70% for solid samples). The RPD ratings are listed as "Good" if the RPD is less than field duplicate QC criteria and as "Poor" if the RPD exceeded the field duplicate QC criteria.

Field duplicate results are summarized on Table 7 below. Four sets of duplicate samples were collected and overall the precision is very good. Field duplicate results with "Poor" are flagged "J" as estimated for one set of acetone results. TICs are already flagged as estimated and no additional data qualification is required.

Table 2 - List of Positive Results for Blank Samples

| Method  | Sample ID    | Sample Type | Analyte                                   | Result | Qual | Anal Type | Units | MDL    | PQL   |

### **DELIVERABLES**

The laboratory reports are complete as stipulated in the master Quality Assurance Project Plan (QAPP) (E & E 2000) and the site-specific QAPP for the above referenced project and site. The data validation memo findings and the potential impacts on data usability will be presented in a Quality Control Summary Report (QCSR) submitted as a separate report.

### **SAMPLE INTEGRITY**

Based on the information provided on the cooler receipt form, the samples arrived at the laboratory intact and properly preserved. Completed chain-of-custody (COC) documents are included in the laboratory report.

### **SAMPLE IDENTIFICATION**

The field samples for this laboratory data packages and related laboratory identifications (IDs) are listed on the following Table 1. Samples identified as /D are field duplicates. Project-specific matrix spike/matrix spike duplicates (MS/MSD) designated in the field as extra volume by on the COC are noted with a "\*" on Table 1. Any other samples noted as MS/MSD on Table 1 are provided as batch quality control (QC) MS/MSD. Samples identified with a matrix code of "RB" are rinsate blanks and samples identified with a matrix code of "TP" or "TS" are trip blanks. All tables are included at the end of this memo except for Table 1 Sample Listing.

**Table 1 - List of Samples Reported**

| Sample ID        | Sample Date | Matrix      | Lab ID     | Lab QC | MS/MSD | ID Corrections  |

Go to [Tables List](#)

## Holding Times

All samples were analyzed within the project-specified holding time.

## **LOW LEVEL VOLATILE ANALYSES (8260B)**

### **Blank Summary**

Laboratory method blanks and trip blanks were performed at the required frequency and no compounds were present above the PQL with the exception of acetone found 32.8 µg/L in trip blank FieldQC-TB9-GW1 (laboratory work order 0207098). Methylene chloride was detected in blank MB-1465-14-2 (laboratory work order 0207148) above the MDL but below the reporting limit as indicated on Table 2. Methylene chloride was not detected in the associated samples. Acetone was detected in the samples as shown on Table 2B for field blanks. Sample results less than 10 times the blank levels are flagged "U" as non-detect for common laboratory contaminants. Sample results less than 5 times the blank levels are flagged "U" as non-detect for all other compounds.

### **Surrogates**

The recoveries for surrogates; 1,2-Dichloroethane-d4, 4-Bromofluorobenzene, Dibromofluoromethane, and Toluene-d8 were within acceptable QC limits for all samples.

### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and RPD values were within laboratory QC limits except as noted on Table 4. The recoveries were always above 10%. No data qualification is required on the MS/MSD outliers unless significant matrix effects are indicated. The LCS recoveries were acceptable indicating no analytical concerns.

### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits except as noted on Table 5. Trichlorofluoromethane (work orders: 0207112 and 0207158) and acetone (work order 0207127) recoveries were high. 2-hexanone (work orders: 0207112, 0207158, 0207173) and 4-methyl-2-pentanone (work order 0207112) recoveries were low. These compounds were not detected in the associated samples and are not compounds of concern at the site. All other LCS recoveries were acceptable. Therefore no data qualification is required.

### **Calibration**

The method calibration criteria for initial and continuing calibration were met for all samples. Several of the quick turnaround screening samples were analyzed only once at the most appropriate dilutions to match the compound concentrations present. The sample PQLs for compounds not present in the sample will be elevated and may not be directly comparable to

## Data Validation Memo

Page 5 of 15

other compounds. Since the data are used for contouring this may have an impact on the usability of the results. The following samples were analyzed at a higher dilution.

| Client Sample ID | Dilution Factor | Minimum PQL |
|------------------|-----------------|-------------|
| AOC9-GP46D2      | 2               | 10.0        |

### **VOLATILE ANALYSES (8260B)**

#### **Blank Summary**

Laboratory method blanks and trip blanks were performed at the required frequency and no compounds were present above the PQL. Acetone was detected in method blank sample MB-1449-97-1 (laboratory work order 0207099). The associated samples with positive results for the compounds are shown on Table 2A. Sample results less than 10 times the blank levels are flagged "U" as non-detect for common laboratory contaminants. Sample results less than 5 times the blank levels are flagged "U" as non-detect for all other compounds.

#### **Surrogates**

The recoveries for surrogates; 1,2-Dichloroethane-d4, 4-Bromofluorobenzene, Dibromofluoromethane, and Toluene-d8 were within acceptable QC limits for all samples.

#### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD were performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and relative percent difference (RPD) values were within laboratory QC limits except as noted on Table 4. The recoveries were always above 10%. No data qualification is required on the MS/MSD outliers unless significant matrix effects are indicated. The LCS recoveries were acceptable indicating no analytical concerns.

#### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits except as noted on Table 5. Acetone and carbon tetrachloride (work order: 0207099) and acetone (work order 0207127) recoveries were high. These compounds were not detected in the associated samples and are not compounds of concern at the site. All other LCS recoveries were acceptable. Therefore no data qualification is required.

#### **Calibration**

The method calibration criteria for initial and continuing calibration were met for all samples.

### **SEMIVOLATILE ANALYSES (8270C)**

#### **Blank Summary**

Laboratory method blanks and trip blanks were performed at the required frequency and no compounds were present above the PQL..

#### **Surrogates**

The recoveries for surrogates 2,4,6-tribromophenol, 2-fluorobiphenyl, 2-fluorophenol, nitrobenzene-d5, phenol-d5, and terphenyl-d14 were within acceptable QC limits.

#### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and relative percent difference (RPD) values were within laboratory QC limits except as noted on Table 4. The recoveries were always above 10% except for two reactive compounds. No data qualification is required on the MS/MSD outliers unless significant matrix effects are indicated. The LCS recoveries were acceptable indicating no analytical concerns. The results for two reactive compounds indicate a potential matrix effect that produced no recovery. The associated PQLs are flagged "UR" as rejected due to matrix effects. The compounds are not a concern at the site and there is no impact on data usability.

#### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits except as noted on Table 5 (high recovery indeno(1,2,3-cd)pyrene). Sporadic and marginal QC failures for multiple component methods do not indicate an analytical concern. If recoveries are high and the compounds are not detected in the samples, then no data qualification is required.

#### **Calibration**

The method calibration criteria for initial and continuing calibration were met for all samples.

## **PESTICIDES (8081A)**

### **Blank Summary**

Laboratory method blanks and trip blanks were performed at the required frequency and no compounds were present above the PQL. .

### **Surrogates**

The recoveries for surrogates decachlorobiphenyl (DCB) and Tetrachloro-m-xylene (TCMX) were within acceptable QC limits for all samples.

### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. The percent recovery and RPD values were within laboratory QC limits.

### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits.

### **Calibration**

The method calibration criteria for initial and continuing calibration were met for all samples.

## **PCBs (8082)**

### **Blank Summary**

Laboratory method blanks were performed at the required frequency and no target compounds were present at levels above or below the PQL.

### **Surrogates**

The recoveries for surrogates DCB and TCMX were within acceptable QC limits.

### **Matrix Spike/Matrix Spike Duplicates (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. No additional batch QC was reported. The percent recovery and relative percent difference (RPD) values were within laboratory QC limits except as noted on Table 4. The recoveries were always above 10%. No data qualification is required on the MS/MSD outliers unless significant matrix effects are indicated. The LCS recoveries were acceptable indicating no analytical concerns.

### **Laboratory Control Sample (LCS)**

The LCSs were analyzed at the required frequency and all recoveries were within QC limits.

### **Calibration**

The method calibration criteria for initial and continuing calibration were met for all samples.

## **METALS (6010/7000)**

### **Blank Summary**

Laboratory method blanks were analyzed at the required frequency and had no target analytes detected above the laboratory PQL. Trace levels of antimony and iron were found below the PQL as shown on Table 2. The associated samples with positive results for the compounds are shown on Table 2A. Sample results less than 5 times the blank levels are qualified "U" as non-detect.

### **Matrix Spike/Matrix Spike Duplicate (MS/MSD)**

The MS/MSD was performed at the required frequency on samples indicated on the COC as project-specific QC. The percent recovery and RPD values were within laboratory QC limits except as noted on Table 4 at the end of this memo. Qualifiers were added as noted in Table 4. For low recoveries, both the results and quantitation limit are flagged "J" as estimated. For high recoveries, only the positive results are flagged "J" as estimated.

### **Laboratory Control Sample (LCS)**

The LCSs were performed at the required frequency and all recoveries were within QC limits.

### **Calibration**

The method calibration criteria for initial calibration and continuing calibration criteria were met.

## **FIELD DUPLICATE RESULTS**

Field duplicates were analyzed as required in the QAPP. The samples are noted on Table 1 of this memo were field duplicates. The results will be summarized on a table in the QCSR. The field duplicate QC criteria are two times the laboratory duplicate QC criteria of 20% for water samples and 35% for soil samples (i.e., 40% for water samples and 70% for solid samples). The RPD ratings are listed as "Good" if the RPD is less than field duplicate QC criteria and as "Poor" if the RPD exceeded the field duplicate QC criteria.

Field duplicate results are summarized on Table 7 below. Seven sets of duplicate samples were collected and overall the precision is very good. Field duplicate results with "Poor" are flagged "J" as estimated for a few lead, chlorobenzene, 1,4-Dichlorobenzene and 1,2-Dichlorobenzene results.

Table 2 - List of Positive Results for Blank Samples

| Method  | Sample ID       | Samp Type | Analyte            | Result | Qual | Anal Type | Units | MDL     | PQL   |

Work Order No.: 0207098

Dear Mr. Thomas Ferraro,

Ecology and Environment, Inc. received 2 samples on Monday, July 15, 2002 for the analyses presented in the following report.

E & E will retain the samples addressed in this report for 30 days, unless otherwise instructed by the client. If additional storage is requested, the storage fee is \$1.00 per sample container per month, to accrue until the client authorizes sample destruction.

This report is not to be reproduced, except in full, without the written approval of the laboratory.

Sincerely,

*Tony Bogolin*

**CLIENT:** E and E Buffalo Office

**Project:** WAD 09 AOC 9/PCI 20

**Lab Order:** 0207098

## CASE NARRATIVE

### GCMS VOLATILES

A DB 624 or equivalent column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

### Sample Analysis

Acetone was detected in the trip blank at 32.8 ug/L. Bob Meyers was notified.

Sample AOC9-GP44D2 was initially analyzed undiluted with acetone and chlorobenzene above the upper calibration standard. The sample was reanalyzed at a two-fold dilution and the results merged and reported with the original analysis.

All aqueous volatile samples were determined to be at a pH of 7.

All samples were analyzed within hold time.

### Calibration and Tunes

All initial and continuing calibrations were acceptable.

### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

All internal standard area responses were acceptable.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

CLIENT: E and E Buffalo Office

Project: WAD 09 AOC 9/PCI 20

Lab Order: 0207099

## CASE NARRATIVE

### GCMS VOLATILES

A DB 624 or equivalent column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

#### Sample Analysis

All samples were analyzed within hold time.

#### Calibration and Tunes

All initial and continuing calibrations were acceptable.

#### C

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable. Acetone was present in the soil method blank above the MDL and below the reporting limit.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable for sample AFFF-SD01 except for low recoveries of vinyl acetate.

All laboratory control sample (LCS) recoveries were acceptable except acetone and carbon tetrachloride recoveries were 2% and 1% high, respectively.

All internal standard area responses were acceptable.

### GCMS SEMIVOLATILES

RESTEK (Rtx-5ms) column, which is 30-m long, 0.25-mm wide, and has a 0.5-micron film thickness, was used for the semivolatile analyses. The column contains 5% diphenyl and 95% dimethylpolysiloxane.

#### Sample Analysis

All samples were extracted and analyzed within hold time.

#### Calibration and Tunes

All initial and continuing calibrations were acceptable.

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable for sample AFFF-SD01

**CLIENT:** E and E Buffalo Office  
**Project:** WAD 09 AOC 9/PCI 20  
**Lab Order:** 0207099

## CASE NARRATIVE

except two spike recoveries were low (3,3-Dichlorobenzidine, hexachlorocyclopentadiene) and two spike recoveries were high (benzoic acid, pentachlorophenol). The corresponding MSD had the same compounds out. The following compounds had high RPD values: 3,3'-Dichlorobenzidine, hexachlorocyclopentadiene.

All laboratory control sample (LCS) recoveries were acceptable except for a high indeno(1,2,3-cd)pyrene recovery.

All internal standard area responses were acceptable.

### GC SEMIVOLATILES PESTICIDE

The columns used for analysis were a CLPesticides (column 1) and a CLPesticides II (column 2), both 30 meters long and 0.53 mm in diameter, with a 1.0 um film thickness. A 1-ul injection was performed on all samples, QC, and standards.

#### Sample Analysis

All samples were extracted and analyzed within hold time.

#### Calibrations

All initial and continuing calibrations were acceptable.

Manual integrations were not required.

#### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

### PCB

The column used for analysis was a CLPesticides, 30 meters long and 0.53 mm in diameter, with a 1.0 um film thickness. A 1-ul injection was performed on all samples, QC, and standards.

#### Sample Analysis

All samples were extracted and analyzed within hold time.

#### Calibrations

All initial and continuing calibrations were acceptable.

Manual integrations were not required.

#### QC

All surrogate recoveries were within acceptable limits.

CLIENT: E and E Buffalo Office  
Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207099

## CASE NARRATIVE

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable except for a high recovery of Aroclor 1016 in both the MS and MSD of sample AFFF-SD01.

All laboratory control sample (LCS) recoveries were acceptable.

### METALS

#### Sample Analysis

All samples were digested and analyzed within hold time.

All soil samples were diluted two or five-fold due to poor internal standard response and/or interelemental interferences.

#### Calibrations

Calibration of the ICP utilizes a zero and one non-zero standard to determine the linear equation for quantitation. A low concentration standard (PQL) is analyzed at the reporting level.

All initial and continuing calibrations were acceptable.

C

Calibration and preparation blank analyses were acceptable. Antimony and iron were present in the method blank above the MDL and below the reporting limit.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable for sample AFFF-SD- except for aluminum, antimony, calcium, iron, magnesium, manganese, potassium and silver. Aluminum and iron recoveries were affected by the elevated levels of these elements in the sample relative to the spike amount added. RPDs were high for aluminum, calcium and manganese for the MS/MSD pair.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable for sample PCI20-08 except for a high lead recovery in the MS. Lead recoveries were affected by the elevated level of this element in the sample relative to the spike amount added.

All laboratory control sample (LCS) recoveries were acceptable.

All dilution %D values were out for aluminum, iron, potassium, magnesium and manganese for sample AFFF-01 and lead for sample PCI20-NS08.

### MERCURY

#### Sample Analysis

All samples were digested and analyzed within hold time.

#### Calibrations

All initial and continuing calibrations were acceptable.

Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207099

---

## CASE NARRATIVE

### QC

All calibration and preparation blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

### GENERAL ANALYTICAL CHEMISTRY

#### Sample Analysis

All samples were analyzed within hold time.

### QC

The matrix duplicate (MD) was acceptable.

Work Order No.: 0207112

Dear Mr. Thomas Ferraro,

Ecology and Environment, Inc. received 8 samples on Tuesday, July 16, 2002 for the analyses presented in the following report.

& E will retain the samples addressed in this report for 30 days, unless otherwise instructed by the client. If additional storage is requested, the storage fee is \$1.00 per sample container per month, to accrue until the client authorizes sample destruction.

This report is not to be reproduced, except in full, without the written approval of the laboratory.

Sincerely,

  
Tony Bogdan

Project Manager

## Cooler Receipt Form

PACKAGE RECEIPT #: 10273 NUMBER OF COOLERS: 2 DATE RECEIVED: 7/16/02  
 E-1 PROJECT #: \_\_\_\_\_ PROJECT OR SITE NAME: Griffis AFB

### A. Preliminary Examination Phase

1. Did coolers come with airbill or packing slip? CIRCLE ONE  
 YES (YES) NO NA
- Enter carrier here and print airbill # below: (Circle One) FedEx Airborne Client (Other)
- Ship as high hazard or dangerous goods YES (NO) NA
2. Did cooler(s) have custody seals? (YES) YES NO NA
3. Were custody seals unbroken and intact on receipt? (YES) YES NO\* NA
4. Were custody seals dated and signed? (YES) YES NO NA
5. Sign here to acknowledge receipt of cooler(s): Kevin Oakley
- Date cooler(s) opened: 7/16/02 C-O-C numbers: \_\_\_\_\_
- Cooler(s) opened by (print): Kevin Oakley Signature: Kevin Oakley
6. Were the C-O-C forms received? (YES) YES NO\* NA
7. Was the project identifiable from the C-O-C form? (YES) YES NO\* NA
- If YES, enter the project number and name in the heading above.

Please record Temperature Blank Vial or Cooler Temperature for Each Cooler, Range (2 - 6C)\* NJDEP must be  $\leq 4C$

| AIRBILL #    | TEMP. °C   | AIRBILL #   | TEMP. °C   | AIRBILL # | TEMP. °C |
|--------------|------------|-------------|------------|-----------|----------|
| <u>10273</u> | <u>2.5</u> | <u>2052</u> | <u>4.0</u> |           |          |
|              |            |             |            |           |          |
|              |            |             |            |           |          |

Thermometer = 129 Correction Factor 7.5 \* If No or Temperature Outside of Acceptable Range, prepare a PM Notification form.

### B. Unpacking Phase

8. Was enough packing material used in cooler(s)? (YES) YES NO NA
- Type of material: ☐ Vermiculite ☒ Bubble Wrap ☐ Other
9. If required, was enough ice used? (YES) YES NO NA
- If YES, type of ice used: ☒ Wet ☐ Dry ☐ Blue ☐ Other
10. Was a temperature blank vial included inside cooler(s)? (YES) YES NO NA
- If YES, indicate temperature blank vial temperature in table above. If NO, indicate cooler temperature in table above.
11. Were all containers sealed in separate plastic bags? (YES) YES NO NA
12. Did all containers arrive unbroken and in good condition? (YES) YES NO\* NA
13. Samples stored in W Cooler before Login Phase? YES (NO) NO
- If yes, Signature In: \_\_\_\_\_ Date/Time: \_\_\_\_\_
- Signature Out: \_\_\_\_\_ Date/Time: \_\_\_\_\_

### C. Login Phase

- Samples Logged in By (print): Kevin Oakley Signature: Kevin Oakley Date: 7/16/02
14. Were all container labels complete (e.g. date, time preserved)? (YES) YES NO\* NA
15. Were all C-O-C forms filled out properly in ink and signed? (YES) YES NO\* NA
16. Did the C-O-C form agree with containers received? YES (NO) NO
17. Were the correct containers used for the tests requested? (YES) YES NO\* NA
18. Were the correct preservatives listed on the sample labels? (YES) YES NO\* NA
19. Was a sufficient sample volume sent for the tests requested? (YES) YES NO\* NA
20. Were all volatile samples received without head space? (YES) YES NO\* NA

Prepare a PM Notification form.

**Lab Order:** 0207112

### CASE NARRATIVE

Sample AOC9-GP47S2 on the chain-of-custody (COC) form was labelled as AOC9-GP46S2 on the container. The sample ID listed on the COC was used.

#### GCMS VOLATILES

A DB 624 or equivalent column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

#### Sample Analysis

Results for acetone in sample AOC9-GP45D2 do not agree between the original and diluted analysis. Both runs were reported. A field contamination source is suspected.

Samples AOC9-GP46D2, AOC9-GP47I, AOC9-GP47S2, AOC9-GP47S1 were analyzed at secondary dilution based on the information provided from the field and initial screening analysis.

All aqueous volatile samples were determined to be at a pH of 7.

All samples were analyzed within hold time.

#### Calibration and Tunes

All initial and continuing calibrations were acceptable.

#### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All laboratory control sample (LCS) recoveries were acceptable except for a high trichlorofluoromethane recovery in LCS-1458-82-1 and low 2-hexanone and 4-methyl-2-pentanone recoveries in LCS-1458-83-4.

All internal standard area responses were acceptable.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

RE: WAD 09 AOC 9/PCI 20

CostPoint ID: 001002.UK10.02.03.

Work Order No.: 0207127

Dear Mr. Thomas Ferraro,

Ecology and Environment, Inc. received 16 samples on Wednesday, July 17, 2002 for the analyses presented in the following report.

E & E will retain the samples addressed in this report for 30 days, unless otherwise instructed by the client. If additional storage is requested, the storage fee is \$1.00 per sample container per month, to accrue until the client authorizes sample destruction.

This report is not to be reproduced, except in full, without the written approval of the laboratory.

Sincerely,

Tony Bogolin

Project Manager

## Laboratory Results

NYS ELAP ID#: 10486

CLIENT: E and E Buffalo Office  
Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207127

### CASE NARRATIVE

The following vials were received with headspace:

AOC9-GP48D2 3 of 3 vials  
AOC9-GP46I/D 3 of 3 vials  
AOC9-GP45D1 3 of 3 vials  
AOC9-GP46D1 1 of 3 vials  
AOC9-GP46I 3 of 3 vials  
AOC9-GP44D1 2 of 3 vials  
AOC9-GP44I 3 of 3 vials  
AOC9-GP44I/D 3 of 3 vials  
AOC9-GP44S2 2 of 3 vials

As the samples were rush screening analysis, the analysis proceeded with the discrepancies noted.

#### CMS VOLATILES

DB 624 or equivalent column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

#### Sample Analysis

All aqueous volatile samples were determined to be at a pH of 7.

All samples were analyzed within hold time.

Samples AOC9-GP45D1, AOC9-GP45I, AOC9-GP46D1, AOC9-GP46I, AOC9-GP46I/D, AOC9-GP46S2, AOC9-GP44D1, AOC9-GP44I, AOC9-GP44I/D and AOC9-GP44S2 were analyzed at secondary dilutions based on the information provided from the field and initial screening analysis. In some cases, the results of two runs were merged and reported together.

Samples AOC9-GP45S2 and AOC9-GP45S1 were initially analyzed undiluted with chlorobenzene above the upper calibration standard. The samples were reanalyzed at a dilution and the results merged and reported with original analysis.

#### Calibration and Tunes

Initial and continuing calibrations were acceptable.

Surrogate recoveries were within acceptable limits.

Blank analyses were acceptable.

**CLIENT:** E and E Buffalo Office  
**Project:** WAD 09 AOC 9/PCI 20  
**Lab Order:** 0207127

## CASE NARRATIVE

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable for sample AOC9-GP45I except for acetone and chlorobenzene. The RPD was high for chlorobenzene for the MS/MSD pair.

All laboratory control sample (LCS) recoveries were acceptable except for a high acetone recovery in LCS-1458-85-1.

All internal standard area responses were acceptable.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

CLIENT: E and E Buffalo Office  
Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207148

### CASE NARRATIVE

#### GCMS VOLATILES

A DB 624 or equivalent column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

#### Sample Analysis

All aqueous volatile samples were determined to be at a pH of 7.

All samples were analyzed within hold time.

Sample AOC9-GP51D2 was analyzed at a secondary dilution based on the information provided from the field and initial screening analysis.

#### Calibration and Tunes

All initial and continuing calibrations were acceptable.

#### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable. Methylene chloride was present in the method blank above the MDL and below the reporting limit.

All laboratory control sample (LCS) recoveries were acceptable.

All internal standard area responses were acceptable.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. ## Laboratory Results

NYS ELAP ID#: 10486

**CLIENT:** E and E Buffalo Office  
**Project:** WAD 09 AOC 9/PCI 20  
**Lab Order:** 0207158

### CASE NARRATIVE

All vials submitted for sample AOC9-GP51I and two of the three vials for sample AOC9-GP51D1 contained headspace.

#### GCMS VOLATILES

A DB 624 or equivalent column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

#### Sample Analysis

All aqueous volatile samples were determined to be at a pH of 7.

All samples were analyzed within hold time.

Samples AOC9-GP51D1, AOC9-GP51I, AOC9-GP51S2, AOC9-GP51S1 and AOC9-GP52D2 were analyzed at secondary dilutions based on the information provided from the field and initial screening analysis.

#### Calibration and Tunes

All initial and continuing calibrations were acceptable.

#### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All laboratory control sample (LCS) recoveries were acceptable except for a low 2-hexanone recovery and a high trichlorofluoromethane recovery.

All internal standard area responses were acceptable.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. ## Cooler Receipt Form

PACKAGE RECEIPT #: 10314 NUMBER OF COOLERS: 1 DATE RECEIVED: 7/23  
 E & E PROJECT #: \_\_\_\_\_ PROJECT OR SITE NAME: Giffis AFB

### A. Preliminary Examination Phase

1. Did coolers come with airbill or packing slip? \_\_\_\_\_  
 Enter carrier here and print airbill # below: (Circle One) FedEx Airborne Client Other Independent  
 Ship as high hazard or dangerous goods \_\_\_\_\_ YES NO NA
2. Did cooler(s) have custody seals? \_\_\_\_\_ YES NO NA
3. Were custody seals unbroken and intact on receipt? \_\_\_\_\_ YES NO\* NA
4. Were custody seals dated and signed? \_\_\_\_\_ YES NO NA
5. Sign here to acknowledge receipt of cooler (s): \_\_\_\_\_  
 Date cooler(s) opened: 7/23/02 C-O-C numbers: Ken Oakley  
 Cooler(s) opened by (print): Ken Oakley Signature: Ken Oakley
6. Were the C-O-C forms received? \_\_\_\_\_ YES NO\* NA
7. Was the project identifiable from the C-O-C form? \_\_\_\_\_ YES NO\* NA  
 If YES, enter the project number and name in the heading above.

Please record Temperature Blank Vial or Cooler Temperature for Each Cooler, Range (2 - 6C)\* NJDEP must be <4C

| AIRBILL #     | TEMP. °C   | AIRBILL # | TEMP. °C | AIRBILL # | TEMP. °C |
|---------------|------------|-----------|----------|-----------|----------|
| <u>109436</u> | <u>4.0</u> |           |          |           |          |
|               |            |           |          |           |          |
|               |            |           |          |           |          |

Thermometer # 121 Correction Factor 7.5 \* If No or Temperature Outside of Acceptable Range, prepare a PM Notification form.

### B. Unpacking Phase

8. Was enough packing material used in cooler(s)? \_\_\_\_\_ YES NO NA  
 Type of material: Vermiculite Bubble Wrap Other Other
9. If required, was enough ice used? \_\_\_\_\_ YES NO NA  
 If YES, type of ice used: Wet Dry Blue Other
10. Was a temperature blank vial included inside cooler(s)? \_\_\_\_\_ YES NO NA  
 If YES, indicate temperature blank vial temperature in table above. If NO, indicate cooler temperature in table above.
11. Were all containers sealed in separate plastic bags? \_\_\_\_\_ YES NO NA
12. Did all containers arrive unbroken and in good condition? \_\_\_\_\_ YES NO\* NA
13. Samples stored in W Cooler before Login Phase? \_\_\_\_\_ YES NO  
 If yes: Signature In: \_\_\_\_\_ Date/Time: \_\_\_\_\_  
 Signature Out: \_\_\_\_\_ Date/Time: \_\_\_\_\_

### C. Login Phase

- Samples Logged in By (print): Ken Oakley Signature: Ken Oakley Date: 7/23/02
14. Were all container labels complete (e.g. date, time preserved)? \_\_\_\_\_ YES NO\* NA
15. Were all C-O-C forms filled out properly in ink and signed? \_\_\_\_\_ YES NO\* NA
16. Did the C-O-C form agree with containers received? \_\_\_\_\_ YES NO\* NA
17. Were the correct containers used for the tests requested? \_\_\_\_\_ YES NO\* NA
18. Were the correct preservatives listed on the sample labels? \_\_\_\_\_ YES NO\* NA
19. Was a sufficient sample volume sent for the tests requested? \_\_\_\_\_ YES NO\* NA
20. Were all volatile samples received without head space? \_\_\_\_\_ YES NO\* NA

# Ecology and Environment, Inc.

Analytical Services Center

## Laboratory Results

NYS ELAP ID#: 10486

CLIENT: E and E Buffalo Office  
Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207173

## CASE NARRATIVE

All vials submitted for samples AOC9-GP52I, AOC9-GP52I/D, AOC9-GP52S2, AOC9-GP53D1 and AOC9-GP54D1 and two of the three vials for sample AOC9-GP52D1 contained headspace.

### GCMS VOLATILES

A DB 624 or equivalent column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

### Sample Analysis

All aqueous volatile samples were determined to be at a pH of 7.

All samples were analyzed within hold time.

Samples AOC9-GP52S2, AOC9-GP52S1, AOC9-GP53D2, AOC9-GP53D1, were analyzed at secondary locations based on the information provided from the field and initial screening analysis.

Samples AOC9-GP52D1, AOC9-GP52I and AOC9-GP52I/D were initially analyzed undiluted with 1,4-dichlorobenzene and/or chlorobenzene above the upper calibration standard. The samples were reanalyzed at a ten-fold dilution and the results merged and reported with the original analysis.

### Calibration and Tunes

Initial and continuing calibrations were acceptable.

Surrogate recoveries were within acceptable limits.

Blank analyses were acceptable.

Laboratory control sample (LCS) recoveries were acceptable except for 2-hexanone which was low in LCS-13-93-1 and its duplicate and in LCS-1458-94-1.

Internal standard area responses were acceptable.

Verify that this data package is in compliance with the terms and conditions of the contract, both technically or completeness, for other than the conditions detailed above. Release of the data contained in this copy data package has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

RE: WAD 09 AOC 9/PCI 20

CostPoint ID: 001002.UK10.02.03.

Work Order No.: 0207135

Dear Mr. Thomas Ferraro,

Ecology and Environment, Inc. received 9 samples on Thursday, July 18, 2002 for the analyses presented in the following report.

E & E will retain the samples addressed in this report for 30 days, unless otherwise instructed by the client. If additional storage is requested, the storage fee is \$1.00 per sample container per month, to accrue until the client authorizes sample destruction.

This report is not to be reproduced, except in full, without the written approval of the laboratory.

Sincerely,

Tony Bogolin

Project Manager

Closures as note

Thermometer = 127 Correction Factor +1.5 \* If No or Temperature Outside of Acceptable Range, prepare a PM Notification form.

### B. Unpacking Phase

10. Was enough packing material used in cooler(s)? YES NO NA
- Type of material: ☒ Vermiculite ☒ Bubble Wrap ☐ Other
11. If required, was enough ice used? YES NO NA
- If YES, type of ice used: ☒ Wet ☐ Dry ☐ Blue ☐ Other
12. Was a temperature blank vial included inside cooler(s)? YES NO NA
- If YES, indicate temperature blank vial temperature in table above. If NO, indicate cooler temperature in table above.
13. Were all containers sealed in separate plastic bags? YES NO NA
14. Did all containers arrive unbroken and in good condition? YES NO NA
15. Samples stored in W Cooler before Login Phase? YES NO
- If YES, Signature In: \_\_\_\_\_ Date/Time: \_\_\_\_\_
- Signature Out: \_\_\_\_\_ Date/Time: \_\_\_\_\_

### C. Login Phase

- Samples Logged In By (print): Ken Oakley Signature: Ken Oakley Date: 7/15/02
16. Were all container labels complete (e.g. date, time preserved)? YES NO NA
17. Were all C-O-C forms filled out properly in ink and signed? YES NO NA
18. Did the C-O-C form agree with containers received? YES NO NA
19. Were the correct containers used for the tests requested? YES NO NA
20. Were the correct preservatives listed on the sample labels? YES NO NA
21. Was a sufficient sample volume sent for the tests requested? YES NO NA
22. Were all volatile samples received without head space? YES NO NA

## Laboratory Results

NYS ELAP ID#: 10486

CLIENT: E and E Buffalo Office

Project: WAD 09 AOC 9/PCI 20

Lab Order: 0207135

## CASE NARRATIVE

### GCMS VOLATILES

A DB 624 or equivalent column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

#### Sample Analysis

All aqueous volatile samples were determined to be at a pH of 7.

Sample AOC9-DW01 was analyzed as a low level screening volatile with the remainder of the samples rather than a routine 8260B. The compound list is the same. The reporting limits are lower, reflecting the 25-ml purge.

All samples were analyzed within hold time.

#### Calibration and Tunes

All initial and continuing calibrations were acceptable.

#### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable for sample AOC9-GP49I except for acetone which was high at 157% in the MS.

All laboratory control sample (LCS) recoveries were acceptable.

All internal standard area responses were acceptable.

### GCMS SEMIVOLATILES

A RESTEK (Rtx-5ms) column, which is 30 m, long, 0.25 mm wide, and has a 0.5 um film thickness was used for the semivolatile analyses. The column contains 5% diphenyl and 95% dimethylpolysiloxane.

Tentatively identified compounds (TIC's) have been generated directly from the GC/MS computer and have not undergone additional interpretation.

#### Sample Analysis

The sample was extracted and analyzed within hold time.

#### Calibration and Tunes

The initial and continuing calibrations were acceptable.

**CLIENT:** E and E Buffalo Office  
**Project:** WAD 09 AOC 9/PCI 20  
**Lab Order:** 0207135

## CASE NARRATIVE

Benzoic acid was manually integrated in the continuing calibration analyzed on 8/3//02 due to its poor peak shape. No other manual integrations were required.

**QC**  
All surrogate recoveries were within acceptable limits.

The water blank was acceptable.

All laboratory control sample (LCS) recoveries were acceptable except for high spike recoveries of benzo(g,h,i)perylene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. These compounds were not detected in the associated sample.

All internal standard area recoveries were within acceptable limits.

### GC VOLATILES

#### GASOLINE RANGE ORGANICS

An RTX-502.2 column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

**Sample Analysis**  
All samples were analyzed within hold time.

**Calibration**  
All initial and continuing calibrations were acceptable.

Manual integrations were not required.

**QC**  
All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

### GC SEMIVOLATILES

#### PESTICIDES

The columns used for analysis were a CLPesticides (column 1) and a CLPesticides II (column 2), both 30 meters long and 0.53 mm in diameter, with a 1.0 um film thickness. A 1-ul injection was performed on all samples, QC, and standards.

**Sample Analysis**  
All samples were extracted and analyzed within hold time.

**Calibrations**  
All initial and continuing calibrations were acceptable.

---

**CLIENT:** E and E Buffalo Office  
**Project:** WAD 09 AOC 9/PCI 20  
**Lab Order:** 0207135

---

## CASE NARRATIVE

Manual integrations were not required.

### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All laboratory control sample (LCS) recoveries were acceptable. The RPD was high for aldrin for the LCS/LCSD pair.

### PCB

The column used for analysis was a CLPesticides II, 30 meters long and 0.53 mm in diameter, with a 1.0 um film thickness. A 1-ul injection was performed on all samples, QC, and standards.

### Sample Analysis

All samples were extracted and analyzed within hold time.

### Calibrations

All initial and continuing calibrations were acceptable.

Manual integrations were not required.

### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

### DIESEL RANGE ORGANICS

The column used for analysis was an RTX-5, 30 meters long and 0.53 mm in diameter, with a 1.0 um film thickness. A 1-ul injection was performed on all samples, QC, and standards.

### Sample Analysis

All samples were extracted and analyzed within hold time.

### Calibrations

All initial and continuing calibrations were acceptable.

Manual integrations were not required.

### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

CLIENT: E and E Buffalo Office  
Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207135

## CASE NARRATIVE

All laboratory control sample (LCS) recoveries were acceptable. The RPD was high for the LCS/LCSD pair.

### METALS

#### Sample Analysis

All samples were digested and analyzed within hold time.

#### Calibrations

Calibration of the ICP utilizes a zero and one non-zero standard to determine the linear equation for quantitation. A low concentration standard (PQL) is analyzed at the reporting level.

All initial and continuing calibrations were acceptable.

#### QC

All calibration and preparation blank analyses were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

### MERCURY

#### Sample Analysis

All samples were digested and analyzed within hold time.

#### Calibrations

All initial and continuing calibrations were acceptable.

#### QC

All calibration and preparation blank analyses were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Work Order No.: 0207149

Dear Mr. Thomas Ferraro,

Ecology and Environment, Inc. received 8 samples on Friday, July 19, 2002 for the analyses presented in the following report.

& E will retain the samples addressed in this report for 30 days, unless otherwise instructed by the client. If additional storage is requested, the storage fee is \$1.00 per sample container per month, to accrue until the client authorizes sample destruction.

This report is not to be reproduced, except in full, without the written approval of the laboratory.

Sincerely,

  
Tony Bogolin  
Project Manager

## Cooler Receipt Form

PACKAGE RECEIPT #: 10300 NUMBER OF COOLERS: 4 DATE RECEIVED: 7/19/02  
PROJECT #: \_\_\_\_\_ PROJECT OR SITE NAME: Griffis

## A. Preliminary Examination Phase

CIRCLE ONE

1. Did coolers come with airbill or packing slip? \_\_\_\_\_

YES ☒ NO ☐ NAEnter carrier here and print airbill # below: (Circle One) FedEx Airborne Client Other E+E

Ship as high hazard or dangerous goods \_\_\_\_\_

YES ☐ NO ☒ NA

2. Did cooler(s) have custody seals? \_\_\_\_\_

YES ☒ NO ☐ NA

3. Were custody seals unbroken and intact on receipt? \_\_\_\_\_

YES ☒ NO ☐ NA

4. Were custody seals dated and signed? \_\_\_\_\_

YES ☒ NO ☐ NA

5. Sign here to acknowledge receipt of cooler (s): \_\_\_\_\_

Cooler(s) opened: 7/20/02 C-O-C numbers: \_\_\_\_\_Cooler(s) opened by (print): Kevin Oakley Signature: Kevin Oakley

6. Were the C-O-C forms received? \_\_\_\_\_

YES ☒ NO ☐ NA

7. Was the project identifiable from the C-O-C form? \_\_\_\_\_

YES ☒ NO ☐ NA

IF YES, enter the project number and name in the heading above.

Please record Temperature Blank Vial or Cooler Temperature for Each Cooler, Range (2 - 6C)\* NJDEP must be  $\leq 4C$ 

| AIRBILL #   | TEMP. °C   | AIRBILL #   | TEMP. °C   | AIRBILL #   | TEMP. °C   |
|-------------|------------|-------------|------------|-------------|------------|
| <u>1054</u> | <u>2.5</u> | <u>2054</u> | <u>3.0</u> | <u>4054</u> | <u>3.0</u> |
|             |            | <u>3054</u> | <u>3.0</u> |             |            |

Thermometer = 129 Correction Factor 7.5 \* If No or Temperature Outside of Acceptable Range, prepare a PM Notification form.

## B. Unpacking Phase

8. Was enough packing material used in cooler(s)? \_\_\_\_\_

YES ☒ NO ☐ NAType of material: ☐ Vermiculite ☒ Bubble Wrap ☐ Other

9. If required, was enough ice used? \_\_\_\_\_

YES ☒ NO ☐ NAIF YES, type of ice used: ☒ Wet ☐ Dry ☐ Blue ☐ Other

10. Was a temperature blank vial included inside cooler(s)? \_\_\_\_\_

YES ☒ NO ☐ NA

IF YES, indicate temperature blank vial temperature in table above. If NO, indicate cooler temperature in table above.

11. Were all containers sealed in separate plastic bags? \_\_\_\_\_

YES ☐ NO ☒ NA

12. Did all containers arrive unbroken and in good condition? \_\_\_\_\_

YES ☒ NO ☐ NA

13. Samples stored in W Cooler before Login Phase? \_\_\_\_\_

YES ☒ NO

If yes, Signature In: \_\_\_\_\_

Date/Time: 7/19/02 1900

Signature Out: \_\_\_\_\_

Date/Time: 7/20/02 0800

## C. Login Phase

14. Samples Logged in By (print): \_\_\_\_\_

Signature: \_\_\_\_\_

Date: 7/20/02

15. Were all container labels complete (e.g. date, time preserved)? \_\_\_\_\_

YES ☒ NO ☐ NA

16. Were all C-O-C forms filled out properly in ink and signed? \_\_\_\_\_

YES ☒ NO ☐ NA

17. Did the C-O-C form agree with containers received? \_\_\_\_\_

YES ☒ NO ☐ NA

18. Were the correct containers used for the tests requested? \_\_\_\_\_

YES ☒ NO ☐ NA

19. Were the correct preservatives listed on the sample labels? \_\_\_\_\_

YES ☒ NO ☐ NA

20. Was a sufficient sample volume sent for the tests requested? \_\_\_\_\_

YES ☒ NO ☐ NA

21. Were all volatile samples received without head space? \_\_\_\_\_

YES ☒ NO ☐ NA

Prepare a PM Notification form.

Lab Order: 0207149

### CASE NARRATIVE

#### GCMS VOLATILES

A DB 624 or equivalent column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

#### Sample Analysis

All aqueous volatile samples were determined to be at a pH of 7.

All samples were analyzed within hold time.

#### Calibration and Tunes

All initial and continuing calibrations were acceptable.

#### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable except trichlorofluoromethane was low in the water MS of sample AOC9-GW-TP03. There was not enough volume to analyze an MSD as the sample was analyzed twice due to instrument problems. Acetone and vinyl acetate were low in the soil MS/MSD of sample AOC9-TP04 with the resulting RPD high for acetone.

All laboratory control sample (LCS) recoveries were acceptable except acetone was high in the aqueous LCS-1466-5-1 and trichlorofluoromethane was low in the LCSD-1466-5-1.

All internal standard area responses were acceptable.

#### GCMS SEMIVOLATILES

A RESTEK (Rtx-5ms) column, which is 30-m long, 0.25-mm wide, and has a 0.5-micron film thickness, was used for the semivolatile analyses. The column contains 5% diphenyl and 95% dimethylpolysiloxane.

#### Sample Analysis

All samples were extracted and analyzed within hold time except for the reextraction of sample AOC9-TP04/D.

#### Calibration and Tunes

All initial and continuing calibrations were acceptable.

Manual integrations were required on some calibration verification standards because there was tailing on the Benzoic Acid peak and the computer did not properly integrate the tail.

CLIENT: E and E Buffalo Office  
Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207149

## CASE NARRATIVE

QC

All surrogate recoveries were within acceptable limits except for sample AOC9-TP04/D which had all surrogate recoveries low. The sample was reextracted 14 days past hold time with acceptable results. Both the original and reextract data are reported.

All blank analyses were acceptable. Bis(2-ethylhexyl)phthalate was present in soil method blank MB-00202030 above the MDL and below the reporting limit.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable for sample AOC9-GW-P03 except for recoveries of 3,3'-dichlorobenzidine, 4-chloroaniline, 4-nitrophenol, benzoic acid and hexachlorocyclopentadiene. RPD values were high for 1,2-dichlorobenzene, 1,4-dichlorobenzene, 4-chloroaniline, bis(2-ethylhexyl)phthalate and hexachlorocyclopentadiene. All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable for sample AOC9-TP04 except for recoveries of 3,3'-dichlorobenzidine, benzo(b)fluoranthene and indeno(1,2,3-cd)pyrene. The RPD value was high for hexachlorocyclopentadiene. All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable for sample AOC9-TP04/D except for recoveries of 3,3'-dichlorobenzidine, 4-nitroaniline and hexachlorocyclopentadiene.

All laboratory control sample (LCS) recoveries were acceptable except for high benzo(g,h,i)perylene, benzo(a,h)anthracene and indeno(1,2,3-cd)pyrene recoveries in LCSA-20020229. For LCS-200202030 : the MDL was lowered for 3,3'-dichlorobenzidine in order to record a percent recovery.

All internal standard area responses were acceptable.

### SEMIVOLATILES PESTICIDE

Two columns used for analysis were a CLPesticides (column 1) and a CLPesticides II (column 2), both 30 meters long and 0.53 mm in diameter, with a 1.0 um film thickness. A 1-ul injection was performed on all samples, QC, and standards.

Sample Analysis  
All samples were extracted and analyzed within hold time.

Calibrations  
Initial and continuing calibrations were acceptable.

Manual integrations were not required.

Surrogate recoveries were within acceptable limits except for a high recovery of the surrogate DCB in sample AOC9-TP04. Recovery was elevated due to sample matrix interferences.

Blank analyses were acceptable. Endrin aldehyde was present in soil method blank MB-200202040 above MDL and below the reporting limit.

Matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable except for low

**Lab Order:** 0207149

---

## CASE NARRATIVE

recoveries of aldrin and dieldrin in the MS/MSD of sample AOC9-GW-TP03, and a slightly high recovery of methoxychlor in the MS/MSD of sample AOC9-TP04. RPDs were high for aldrin and dieldrin in the MS/MSD of sample AOC9-GW-TP03. The RPD was high for endrin aldehyde in the MS/MSD of sample AOC9-TP04.

All laboratory control sample (LCS) recoveries were acceptable.

### PCB

The column used for analysis was a CLPesticides II, 30 meters long and 0.53 mm in diameter, with a 1.0 um film thickness. A 1-ul injection was performed on all samples, QC, and standards.

### Sample Analysis

All samples were extracted and analyzed within hold time.

### Calibrations

All initial and continuing calibrations were acceptable.

Manual integrations were not required.

### QC

All surrogate recoveries were within acceptable limits except for a high recovery of the surrogate DCB in sample AOC9-TP04. Recovery was elevated due to sample matrix interferences.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

### DIESEL RANGE ORGANICS

The column used for analysis was an RTX-5, 30 meters long and 0.53 mm in diameter, with a 1.0 um film thickness. A 1-ul injection was performed on all samples, QC, and standards.

### Sample Analysis

All samples were extracted and analyzed within hold time.

### Calibrations

All initial and continuing calibrations were acceptable.

Manual integrations were not required.

### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable except for a low

CLIENT: E and E Buffalo Office  
Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207149

## CASE NARRATIVE

recovery of diesel in the MSD of sample AOC9-TP04.

All laboratory control sample (LCS) recoveries were acceptable.

### GC VOLATILES

#### GASOLINE RANGE ORGANICS

An RTX-502.2 column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

#### Sample Analysis

All samples were analyzed within hold time.

#### Calibration

All initial and continuing calibrations were acceptable.

Manual integrations were not required.

#### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

### ETALS

#### Sample Analysis

All samples were digested and analyzed within hold time.

#### Calibrations

Calibration of the ICP utilizes a zero and one non-zero standard to determine the linear equation for quantitation. A low concentration standard (PQL) is analyzed at the reporting level.

All initial and continuing calibrations were acceptable.

#### QC

All calibration and preparation blank analyses were acceptable. Selenium was present in the soil method blank above the MDL and below the reporting limit.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable for sample AOC9-TP04 except for recoveries of aluminum, antimony and iron. Aluminum and iron were present in the sample at levels greater than four times the spike amount added. The RPD was high for iron for the MS/MSD pair.

All laboratory control sample (LCS) recoveries were acceptable.

**CLIENT:** E and E Buffalo Office  
**Project:** WAD 09 AOC 9/PCI 20  
**Lab Order:** 0207149

## CASE NARRATIVE

All serial dilution %D values were acceptable for sample AOC9-TP04 except for aluminum, calcium, iron, potassium, barium, manganese and magnesium.

### MERCURY

#### Sample Analysis

All samples were digested and analyzed within hold time.

#### Calibrations

All initial and continuing calibrations were acceptable.

### QC

All calibration and preparation blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

### GENERAL ANALYTICAL CHEMISTRY

#### Sample Analysis

All samples were analyzed within hold time.

### QC

All matrix duplicates (MD) were acceptable.

Work Order No.: 0207192

Dear Mr. Thomas Ferraro,

Ecology and Environment, Inc. received 13 samples on Wednesday, July 24, 2002 for the analyses presented in the following report.

E & E will retain the samples addressed in this report for 30 days, unless otherwise instructed by the client. If additional storage is requested, the storage fee is \$1.00 per sample container per month, to accrue until the client authorizes sample destruction.

This report is not to be reproduced, except in full, without the written approval of the laboratory.

Sincerely,

Tony Bogolin

Project Manager

## Laboratory Results

NYS ELAP ID#: 10486

CLIENT: E and E Buffalo Office  
Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207192

### CASE NARRATIVE

The chain-of-custody (COC) form lists a sample as AOC9-GP57I. However, the containers are labelled AOC9-GP5702. The sample ID listed on the COC form was used.

#### GCMS VOLATILES

A DB 624 or equivalent column and a trap packed with OV-1, Tenax, silica gel and activated charcoal was used for the volatile analysis.

#### Sample Analysis

All aqueous volatile samples were determined to be at a pH of 7.

All samples were analyzed within hold time.

Sample AOC9-GP56I was analyzed at a five-fold dilution due to the level of chlorobenzene detected.

#### Calibration and Tunes

All initial and continuing calibrations were acceptable.

C

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable except vinyl acetate was low in the MS/MSD of sample AOC9-SS01(20-24).

All laboratory control sample (LCS) recoveries were acceptable except 2-butanone, 4-methyl-2-pentanone and vinyl acetate were low in the aqueous LCS-1465-20-1 used for the screening analysis.

All internal standard area responses were acceptable.

#### MS SEMIVOLATILES

A DB-5 (Rtx-5ms) column, which is 30-m long, 0.25-mm wide, and has a 0.5-micron film thickness, was used for the semivolatile analyses. The column contains 5% diphenyl and 95% dimethylpolysiloxane.

#### Sample Analysis

Samples were extracted and analyzed within hold time.

All results (Tentatively Identified Compounds) are computer generated. No analyst interpretation was performed.

#### Calibration and Tunes

**CLIENT:** E and E Buffalo Office  
**Project:** WAD 09 AOC 9/PCI 20  
**Lab Order:** 0207192

## CASE NARRATIVE

All initial and continuing calibrations were acceptable.

A manual integration was required for benzoic acid in the continuing calibration standard analyzed on 8/03/02. The integration was needed due to the irregular peak shape.

### QC

All surrogate recoveries were within acceptable limits except sample AOC9-SS01(20-24) had very high recoveries for phenol-d5 at 259% (128% limit) and 2-fluorophenol at 162% (135% limit). These surrogate recoveries were high due to the presence of a very large aldol condensation product peak. This large peak suppressed the response of the internal standard 1,4-dichlorobenzene-d4 which is used to calculate the two surrogates. The sample was not re-extracted as the re-extract would have been past the hold time for this sample. Also, no target compounds were detected in this sample and the surrogate recoveries were high, not low.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable except the MS of sample AOC9-SS01(20-24) had high recoveries for benz(a)anthracene at 117% (116% limit) and chrysene at 117% (115% limit).

All laboratory control sample (LCS) recoveries were acceptable.

All internal standard area responses were acceptable.

### GC SEMIVOLATILES

#### PESTICIDE

The columns used for analysis were a CLPesticides (column 1) and a CLPesticides II (column 2), both 30 meters long and 0.53 mm in diameter, with a 1.0 um film thickness. A 1-ul injection was performed on all samples, QC, and standards.

#### Sample Analysis

All samples were extracted and analyzed within hold time.

#### Calibrations

All initial and continuing calibrations were acceptable.

Manual integrations were not required.

### QC

All surrogate recoveries were within acceptable limits.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

CLIENT: E and E Buffalo Office  
Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207192

## CASE NARRATIVE

### DCB

The column used for analysis was a CLPesticides II, 30 meters long and 0.53 mm in diameter, with a 1.0 um film thickness. A 1-ul injection was performed on all samples, QC, and standards.

### Sample Analysis

All samples were extracted and analyzed within hold time.

### Calibrations

All initial and continuing calibrations were acceptable.

Manual integrations were not required.

### DCB

All surrogate recoveries were within acceptable limits except for a low recovery of the surrogate DCB in sample DC9-SS01(20-24) and the method blank.

All blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

### DCB

#### Sample Analysis

Samples were digested and analyzed within hold time.

Samples were analyzed at either a two- or five-fold dilution to remove interelemental interferences. Reporting limits have been adjusted accordingly.

### Calibrations

Calibration of the ICP utilizes a zero and one non-zero standard to determine the linear equation for titration. A low concentration standard (PQL) is analyzed at the reporting level.

Initial and continuing calibrations were acceptable.

Calibration and preparation blank analyses were acceptable.

Matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable except aluminum, iron, manganese, potassium and silver. The sample amount exceeded the spike amount added by more than four times for aluminum, calcium and iron. Recoveries for manganese, potassium and silver were high. RPDs were high for aluminum and iron for the MS/MSD pair.

Laboratory control sample (LCS) recoveries were acceptable.

Serial dilution %D values were acceptable for sample AOC9-SS01(20-24) except for aluminum, calcium,

CLIENT: E and E Buffalo Office  
Project: WAD 09 AOC 9/PCI 20  
Lab Order: 0207192

## CASE NARRATIVE

iron, potassium, manganese and magnesium.

### MERCURY

#### Sample Analysis

All samples were digested and analyzed within hold time.

#### Calibrations

All initial and continuing calibrations were acceptable.

#### QC

All calibration and preparation blank analyses were acceptable.

All matrix spike/spike duplicate (MS/MSD) recoveries and RPD values were acceptable.

All laboratory control sample (LCS) recoveries were acceptable.

### GENERAL ANALYTICAL CHEMISTRY

#### Sample Analysis

All samples were analyzed within hold time.

#### QC

All matrix duplicates (MD) were acceptable.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

| <b>Additional Comments</b>                                                                                   |     |    |    |                                                                        |
| In general, very complete logs. Much sampling information that was not duplicated in log was on C-O-C forms. |     |    |    |                                                                        |

Date 7/12/02

# **DAILY QUALITY CONTROL INSPECTION CHECKLIST FOR FIELD ACTIVITIES**

**HEALTH and SAFETY (H&S)**

YES NO NA

Was the daily safety meeting held and documented?

☒ ☐ ☐

Were site contaminants of concern discussed in meeting?

☒ ☐ ☐

Were other H&amp;S aspects discussed in meeting? Note below.

☒ ☐ ☐

Were exceptions, additions, or other changes in H&amp;S procedures discussed?

☒ ☐ ☐What level(s) of protection is required in HASF for today's work sites? A B C **(D)**What level of personal protective equipment (PPE) is being worn by personnel at today's work sites? A B C **(D)**

COMMENTS Trip/fall in hummocky AOC-9 area and heat/humidity  
discussed. Use of respiratory protection during swipe sampling  
on a previous day noted (due to solvent used on swipes).

**DAILY FIELD MEETING**

YES NO NA

Was the daily meeting held by Field Team Leader and documented?

☒ ☐ ☐

Was the proposed scope of work discussed?

☒ ☐ ☐

Are work plan and subcontracts available for each field team to review if needed?

☒ ☐ ☐

COMMENTS Both logbooks reviewed contained daily objectives.  
Daily field activity report completed.

**GEOPHYSICAL SURVEY**YES NO **(NA)**

Was equipment properly set-up?

☐ ☐ ☐

Was calibration of applicable equipment conducted?

☐ ☐ ☐

Were background readings established?

☐ ☐ ☐

Have potential sources of geophysical interference been identified?

☐ ☐ ☐

Was appropriate field documentation completed?

☐ ☐ ☐

COMMENTS Task not performed.

**NEAR-SURFACE SOIL SAMPLING**YES NO **NA**

Were the sample collection points located in accordance with the work plan?

☐ ☐ ☐

Was the sampling conducted in accordance with the work plan?

☐ ☐ ☐

Were the samples collected for the correct analyses?

☐ ☐ ☐

Was the appropriate field documentation completed?

☐ ☐ ☐

Was the sample handling, preservation, and shipping performed in accordance with the work plan?

☐ ☐ ☐

COMMENTS Task not performed.

**DRILLING**

YES NO NA

Have applicable drilling permits and utility clearances been obtained for this site?

☒ ☐ ☐

Was the exclusion zone and contaminant reduction zone established around the drill rig?

☐ ☐ ☒

Was the drilling and sampling equipment decontaminated prior to use in accordance with the work plan?

☒ ☐ ☐

Was the kill switch on the drill rig tested prior to drilling?

☐ ☐ ☒

Was the SSO present during drilling operations?

☒ ☐ ☐

Was the appropriate monitoring equipment used?

☒ ☐ ☐

Was the calibration of applicable equipment conducted?

☒ ☐ ☐

Were the instrument readings recorded?

☒ ☐ ☐

Were the geologic logs and proper documentation completed by the geologist?

☒ ☐ ☐

Were the soil samples field screened?

☐ ☐ ☒

Were the soil samples collected in accordance with the work plan?

☐ ☐ ☒

Was the collection of samples documented?

☐ ☐ ☒

Were the soil samples handled, cooled, and shipped in accordance with the work plan?

☐ ☐ ☒

Were drill cuttings field screened for contamination?

☐ ☐ ☒

If the cuttings required drumming, were the drums labeled and properly staged?

☐ ☐ ☒

COMMENTS Rotary drilling not conducted, so much of above is not applicable.  
DPT rig (Mule) used to drive casing - no IDW generated / no cuttings brought  
to surface. Mule was moved location to location frequently.

**MONITORING WELL INSTALLATION**

YES NO NA

|                                                                                           |                                     |                                     |                                     |
|-------------------------------------------------------------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|
| Was the total depth of the boring measured and recorded?                                  | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Has water been added to the borehole during drilling or well installation?                | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
| Was the PVC clean?                                                                        | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Was the correct size and specification slotted screen and PVC riser placed into the well? | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |
| Was the depth of the sandpack and bentonite seal measured during construction?            | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Were the bentonite pellets allowed to hydrate?                                            | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Was protective casing (above-ground or flush-mount type) installed?                       | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Was a permanent survey marker installed in the cement pad?                                | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Was a metal identification tag installed?                                                 | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Was the well locked upon completion?                                                      | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Was a water level monitoring reference point or notch established?                        | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Was a monitoring well construction diagram completed?                                     | <input type="checkbox"/>            | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Was the well construction completed in accordance with the work plan?                     | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input type="checkbox"/>            |

COMMENTS Temporary groundwater sampling points installed. No  
permanent wells constructed.

**WELL DEVELOPMENT**YES NO **(NA)**

|                                                                                                                                    |                          |                          |                          |
|------------------------------------------------------------------------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Has an exclusion zone been properly set up around the well?                                                                        | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Was the water level and total depth of the well measured?                                                                          | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Were water quality parameters measured during development?                                                                         | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| In addition to standard volume removal, has additional volume been removed to compensate for water added during drilling (if any)? | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Was well development water screened and containerized (if necessary)?                                                              | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Was a record of the development parameters and volume of water removed kept?                                                       | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Was development completed in accordance with the work plan?                                                                        | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Was a photograph taken of the final development water?                                                                             | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Was calibration of applicable test equipment conducted?                                                                            | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

COMMENTS Task not performed**GROUNDWATER SAMPLING AT PERMANENT MONITORING WELLS**YES NO **(NA)**Was the well sampled a minimum of 14 days after grouting/  
cementing (newly installed wells)?☐ ☐ ☐

Was purge water screened and containerized (if necessary)?

☐ ☐ ☐

Were samples immediately placed inside a sample cooler with ice?

☐ ☐ ☐

Were the samples collected for the correct analyses?

☐ ☐ ☐

Were samples for dissolved metals (if any) field filtered?

☐ ☐ ☐

Was proper documentation completed for the samples collected?

☐ ☐ ☐Were samples handled, preserved, and shipped in accordance  
with the work plan?☐ ☐ ☐COMMENTS Task not performed.**SURFACE WATER/SEDIMENT SAMPLING**YES NO **(NA)**

Were sample collection points located in accordance with the work plan?

☐ ☐ ☐

Were downstream samples collected before upstream?

☐ ☐ ☐At each location, was the surface water sample collected prior to the  
sediment sample?☐ ☐ ☐

Was proper documentation completed for the samples collected?

☐ ☐ ☐Were field parameters measured and recorded for each surface  
water sample?☐ ☐ ☐

Was the sampling conducted in accordance with the work plan?

☐ ☐ ☐Were samples handled, preserved, and shipped in accordance with  
the work plan?☐ ☐ ☐COMMENTS Sediments from AOC-9 AFFF lagoon collected on a  
previous day.

**GROUNDWATER SCREENING SAMPLES AT  
TEMPORARY WELLS**

YES NO NA

Has an exclusion zone been set up around the temporary well?

☒ ☐ ☐

Was purge water screened and containerized (if necessary)?

☐ ☐ ☒Were water quality parameters measured and recorded during  
purging/sampling?☐ ☐ ☒Were turbidity of both the filtered and unfiltered metals samples  
measured and recorded?☐ ☐ ☒Were all samples handled, preserved and shipped in accordance  
with the work plan?☒ ☐ ☐

Was proper documentation completed for the samples collected?

☒ ☐ ☐

Was the sampling conducted in accordance with the work plan?

☒ ☐ ☐

COMMENTS Grab samples collected with dedicated/disposable HDPE bailers.  
Exclusion zone consisted of "Caution" tape around cluster of sample  
points. Sample info recorded in log and immediately on chain-of-custody.

**INVESTIGATION-DERIVED WASTE**YES NO **NA**

Were investigation-derived soils and groundwater field screened?

☐ ☐ ☐Was any potentially contaminated soil or groundwater (as determined  
by field screening) drummed?☐ ☐ ☐

Were all drums labeled and properly staged?

☐ ☐ ☐Was handling of investigation-derived waste performed in accordance  
with the work plan?☐ ☐ ☐

COMMENTS No sampling waste generated except solid waste  
such as gloves, used bailers, etc. This material was bagged  
for off-site disposal by E&E.

**SOIL GAS SURVEY**YES NO **NA**

Was soil gas grid set up according to the work plan?

☐ ☐ ☐Were the passive soil gas receptors labeled and installed according  
to the manufacturer's specifications?☐ ☐ ☐Were the passive soil gas receptors correctly removed, handled and  
shipped for analysis according to the manufacturer's instructions?☐ ☐ ☐

COMMENTS Task not performed.

**TEST PITS**

|                                                                     | YES                      | NO                       | NA                       |
|---------------------------------------------------------------------|--------------------------|--------------------------|--------------------------|
| Has an exclusion zone been properly set up at the test pit area?    | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Have proper H&S concerns been addressed at the test pits?           | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Was a fire extinguisher present on site?                            | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Were the subsurface conditions in the test pits properly described? | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Were the test pits properly photographed?                           | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Were the test pits properly backfilled and regraded?                | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

COMMENTS Task to be conducted 7/19/02.Location Griffiss AFB, ADC-9Date 7/18/02QC Inspector Name Rick WattQC Inspector Signature *Rick H. Watt*

General Description of Today's Scope of Work Field team (2 E&E) working with subcontractor (Zebra) to install temporary groundwater sampling points in clusters of five using Geoprobe rig. E&E then collected grab samples from each point for off-site analysis. FTL (R Heepers) assisted team, reviewed data, selected drilling locations, and packaged samples for shipment. All roles are well defined and team is very familiar with work plan and E&E SOPs. *RMW*

ecology and environment, inc.

FIELD AUDIT CHECKLIST

7/18/02

Project Name: GAFB WAD 9

Project Number: 001002.UK10

Location: Griffiss AFB, Rome, NY

E & E Personnel: R. Meyers-FTL ; Brian Cervi ; Stephanie Reynolds Smith

Presampling Procedures

1. Are routine/special sampling requirements (discussed and documented in the logbook)?  
Comments: No special requirements. Routine samples noted at time of collection.
2. Are personnel assigned as:
  - a. Sample custodian (name): S. Reynolds Smith
  - b. Team leader (name): R. Meyers
  - c. Sampler (name): B. Cervi
  - d. H&S (name): S. Reynolds Smith
3. Does the team member responsible for the following activities known how to complete them:
  - a. Sample documentation and inventory yes
  - b. Decontamination procedures yes
  - c. Photodocumentation yes
  - d. Chain-of-custody yes
  - e. Sample packaging and shipping yes
  - f. Site generated wastes yesComments:
4. Are past problems reviewed, discussed, and solutions identified and documented in the logbook?  
Comments: Noted during daily meeting and recorded on separate form.
5. Are site safety concerns covered during the meeting?  
Comments: Yes. Noted on separate form.

Sampling Procedures and Documentation

1. Is a copy of the workplan/sampling plan available so the team members understand the procedures required for sampling and sample collection? Yes.  
Comments:
2. Do team members know what to do if procedures cannot be used as identified in the sampling plan? Yes.  
Comments: Contact field team leader to discuss

ecology and environment, inc.

FIELD AUDIT CHECKLIST

7/18/02

3. Have changes in the sampling procedures been noted in the logbook?

Comments: No deviation from procedures required. Where multiple attempts to Geoprobe at a given location occurred, this was noted.

4. Does the team have the necessary equipment for collecting appropriate samples?

Comments: Yes.

5. Does the team record appropriate information at the time that the sample is collected? (i.e., sample interval, sample type, composite or grab sample, etc.)

Comments: Yes. Noted in logbook and/or directly on chain-of-custody.

6. Are sample jars kept clean during transfer of sample material?

Comments: Yes. Kept in box/cooler before use; gloves worn during sampling.

7. Are samples preserved as indicated in the sampling plan? Yes.

Comments:

8. Are there any visible signs of contamination evident on the sampling equipment? No.

Comments:

Chain-of-Custody

1. Are samples kept in a controlled area (i.e., in a locked location or with a team member) at all times?

Comments: Yes. Bottles (unused) stored in locked office.

2. Is all of the sample information (sample type, date, time, etc.) noted on the chain-of-custody?

Comments: Yes. Form kept up to date as sampling progressed.

3. Have all samplers signed the chain-of-custody form? Yes.

Comments:

4. Is the Federal Express air bill number listed on the chain-of-custody form? Yes.

Comments:

5. Has a separate team member been assigned to cross check the sample inventory and the chain-of-custody prior to shipment?

Comments: Yes. Performed by field team leader.

ecology and environment, inc.

FIELD AUDIT CHECKLIST

7/18/02

6. Is the cross check procedure noted in the logbook? *No. But process was observed*  
Comments:

7. Are the sample numbers and Federal Express bill numbers listed in the sample log or the site logbook? *No because C-O-C maintain on file at site with logbook.*  
Comments:

8. Were the labels, logbooks, and chain-of-custody form cross checked? *Yes.*  
Comments:

Quality Control Samples

1. What QC samples are required (as per sampling plan)?  
Comments: *1 dupe per 10 samples 1 MS/MSD per 20 samples  
1 split per 10 (ERDC lab) 1 trip blank per code for VOCs only*

2. What frequency must QC samples be collected?  
*See above.*

3. Are trip blanks being used? *Yes.*  
Comments:

4. Which laboratory provided trip blanks?  
*Prenmade by Analytical Services Center - discussion that day regarding contamination of premade trip blanks with acetone.*

5. Are appropriate materials used to generate QC samples? *Yes.*  
Comments: *Upon discovery of acetone-contaminated trip blanks, Field team used new bottles and deionized water for samples & QC.*

Site Generated Wastes

1. What level of protective clothing is required? *D*
2. What equipment is available on site? *TVA 1000 for organic vapors, gas tech explosimeter, water level indicator.*

ecology and environment, inc.

FIELD AUDIT CHECKLIST

3. Is the equipment calibrated daily and in accordance with appropriate procedures?  
Instrumentation calibrated before rental in shop. Gastech  
explosimeter zeroed in clean air.

4. Are calibration data recorded in appropriate logbooks?  
Comments: Calibration not necessary. Zero air check not noted.

5. Is data collected according to specific procedures and recorded in the site logbook?  
Comments: Readings recorded on chain-of-custody form for geoprobe  
waters. O<sub>2</sub> readings indoors during AOS473 swipe sampling recorded  
(TVA readings too).

Sample Packaging and Shipping

1. Describe sample packaging procedures.  
Jars taped, packaged with bubble wrap and iced (ice in Ziploc bags).

2. Is packaging done at the end of the day, or as samples are collected?  
Samples labeled, sealed, & iced at time of collection. Bubble wrap  
and additional ice added just prior to shipment.

3. Was an inventory conducted for chain-of-custody, logbook, and sample containers? Yes.  
Comments:

4. Are samples packed on ice? Yes.  
Comments:

5. Is the proper information being entered on the Federal Express form for billing purposes (i.e.,  
project number and cost code)? Yes.  
Comments:

Personnel Management

1. Is the team leader noting the time that each team member arrives and departs the site in the  
logbook? Yes.  
Comments:

2. Do the weekly time reports reflect the on-site time only? Yes.  
Comments: Time cards reflect all billable time (including a  
portion of travel).

ecology and environment, inc.

FIELD AUDIT CHECKLIST

Other Comments:

Experienced field team well versed in sampling procedures and related protocols. No gross discrepancies noted.

Field team <sup>was</sup> asked to add sample cross-check process to field logbook.

FIELD AUDITOR: Rick Watt

FIELD TEAM LEADER: Bob Meyers

DATE OF AUDIT: 7/18/02

*Rick Watt*  
*Robert A. Meyers*
