Environmental

2/24/2004

To: Brett Gorham, COR/NYD/USACE
From: Rich Hamlin, Conti Environmental Project Superintendent

Contract: DACA41-01-D-0004
Former Griffiss Air Force Base

Contractor: Conti Environment & Infrastructure
Subject: Pump Station Performance Test Analytical Results

On 03 November 2003 Conti Environment & Infrastructure along with it's affiliate EA Engineering, conducted a performance test of the pump stations located along the leachate collection trench which is down gradient of Landfill 1 located at the former Griffiss Air Force Base in Rome NY.

Attached please find analytical summaries of the testing that was conducted as well as a brief description of the process for the test.

CC: Joe Wojnas, USACE Project Engineer

EA Project No. 30002.04.0012

MEMORANDUM

TO: Mr. Luis Sejjido, P.E, Conti Environmental, Inc.
FROM: Chris Canonica, P.E., EA Engineering, P.C.
SUBJECT: Pump Station Performance Test Analytical Results

TEST CONDITIONS

The pump station performance test began at 10 AM on 3 November 2003 and was terminated at 9 AM on 4 November 2003 after approximately 250,000 gal of water was pumped at an average flow rate of 180 gpm into the onsite storage tank (Figure 1). Weather conditions were overcast with minor precipitation and temperatures ranging from 40-50° Farenheit.

ANALYTICAL SAMPLING ACTIVITIES

EA Engineering, P.C. performed 3 sampling events during the pump station performance test: at the beginning (10:00 AM; 3 November 2003), at the approximate midpoint (5:00 PM; 3 November 2003), and after the completion of the pump station performance test (10:00 AM, 4 November 2003)¹. Each sampling event lasted approximately 6 hours and included collecting a sample from each of the 7 pump stations and the combined influent to the storage tank. The stations were sampled in the same order during each sampling event. In addition, duplicate, triplicate, and MS/MSD samples were also collected in accordance with the methods outlined in the FSP/SAP and the frequency outlined in the QAPP (EA 2003).

Prior to sample collection, field measurements of temperature, pH, Eh, specific conductivity, turbidity, and dissolved oxygen were collected. Groundwater samples were analyzed in accordance with baseline parameters detailed in NYSDEC NYCRR Part 360-2.11(d)(6), using the analytical test methods detailed in Table 1. Total metals were collected during each of the sampling events. In addition, filtered samples were collected during the second sampling event and analyzed for dissolved metals.

¹ During the third round of sampling, the combined influent sample was collected prior to completion of the pump performance test (5:25 AM).

ANALYTICAL RESULTS

Table 2A provides a summary of the minimum/maximum concentration of each parameter detected above the New York State Ambient Water Quality Class GA (groundwater) Standards and Guidance Values² at each pumping station. Table 2 B provides a summary of the concentration of each parameter detected above the New York State Ambient Water Quality Class C (surface water) Standards and Guidance Values at each fen sampling location.

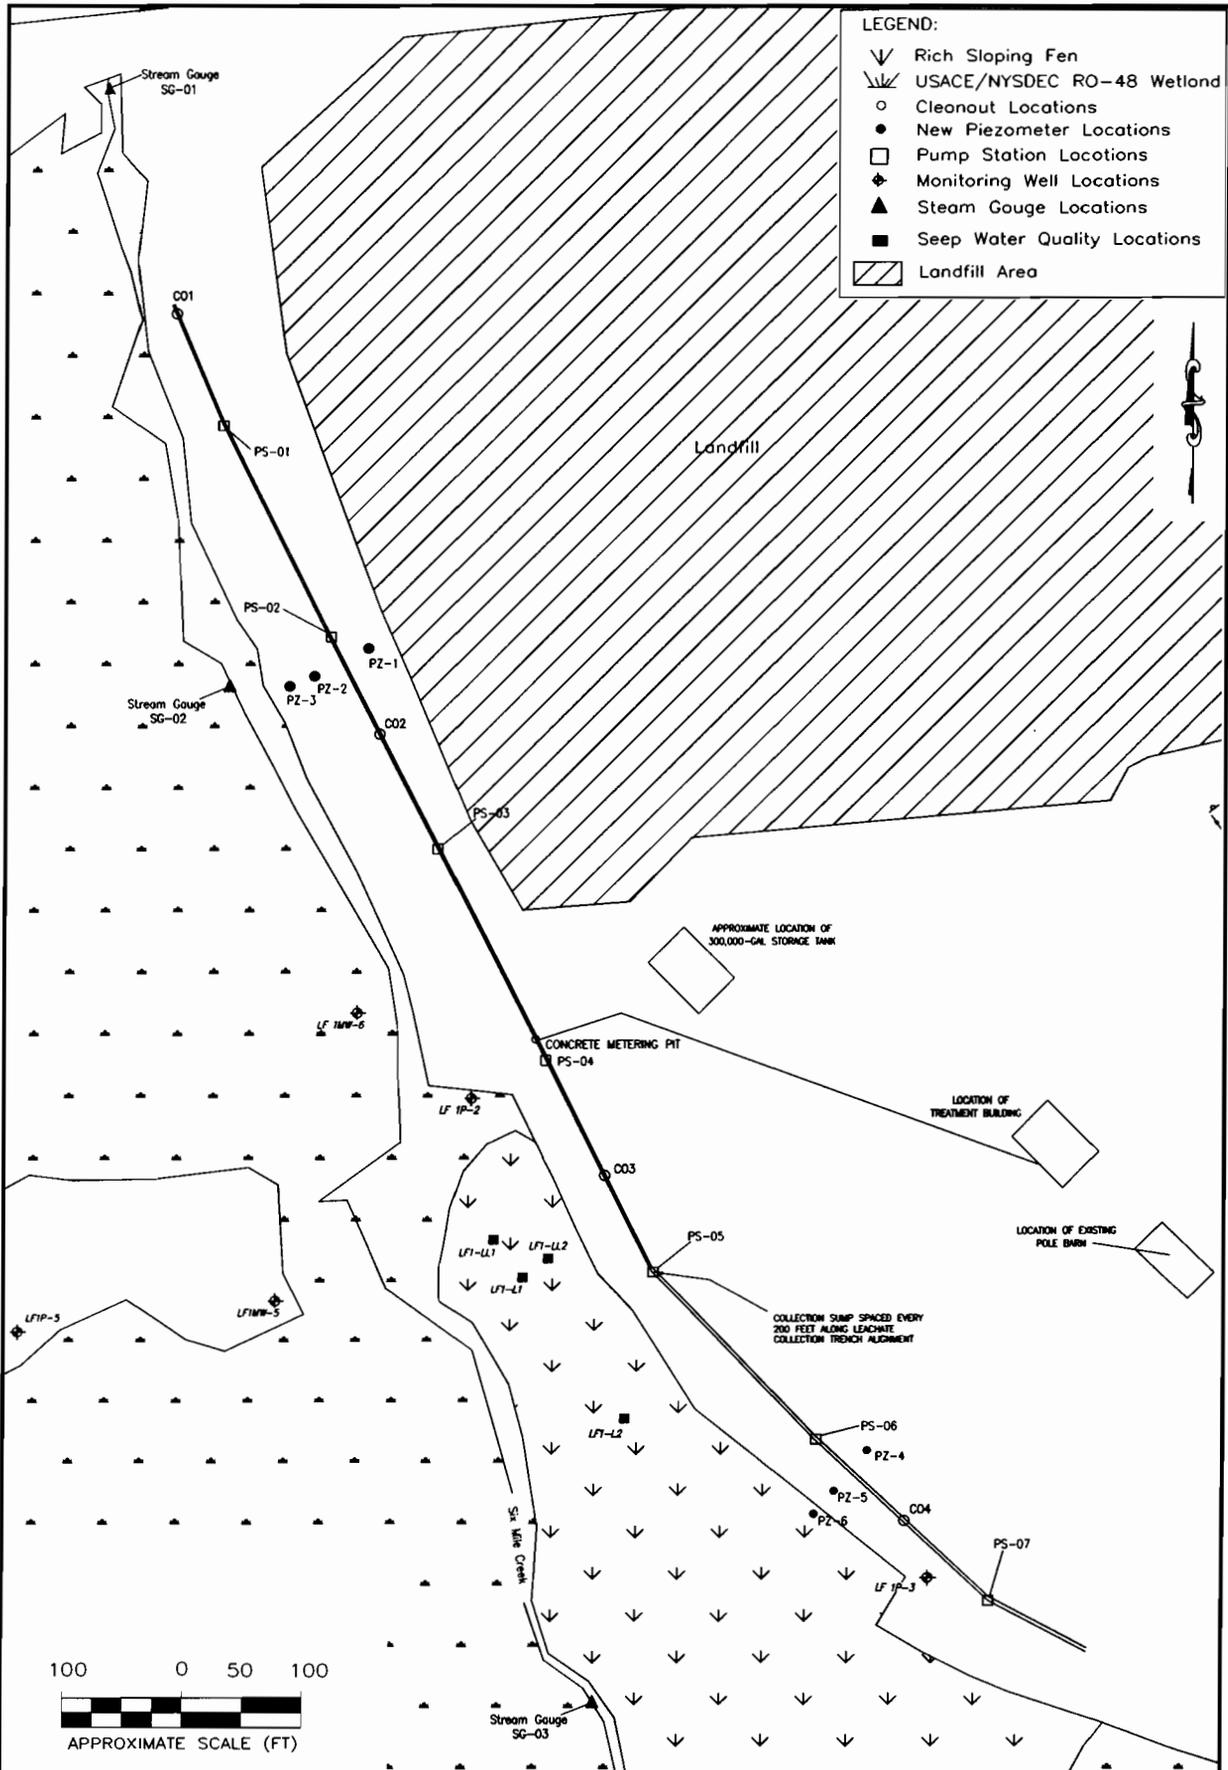

Comprehensive lists of the analytical results for compounds detected at each pumping station, the combined influent samples, and the fen sampling locations³ are provided in Tables 3 and 4. The results have been compared to New York State Ambient Water Quality Class GA (groundwater) and Class C (surface water) Standards and Guidance Values⁴ (NYS AWQS), values provided in the New York State Department of Environmental Conservation, Division of Water permit⁵ (NYSDEC permit limit), and EPA National Primary/Secondary Drinking Water Standards (MCL). Tables 5 and 6 provide reference values for calculated Class C NYS AWQS standards or guidance values. These calculations are based on formulas provided in the reference document and are calculated based on values (i.e., pH and hardness) specific to each location and each event.

² New York State Department of Environmental Conservation. 1998. Division of Water Technical and Operational Guidance Series (1.1.1), Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations.

³ Analytical sampling at the fen locations was performed on 31 October 2003.

⁴ New York State Department of Environmental Conservation. 1998. Division of Water Technical and Operational Guidance Series (1.1.1), Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations.

⁵ New York State Department of Environmental Conservation, Division of Water, Permit 6-33-006, issued 15 July 2003.

NOTE:									
(a) NYSDEC, Division of Water, Permit 6-33-006, issued 15 July 2002.									
(b) EPA National Primary Drinking Water Standards (MCL).									
(c) EPA National Secondary Drinking Water Standards.									
(f) Filtered results for second round sampling.									
Dashes (--) = No value established or not applicable.									
Bold = Analyte was detected above the NYS AWQS or guidance value.									
U = Analyte was Not detected.									
B; J = Analyte was detected, but concentration was below the laboratory reporting limit.									
E = Indicates an estimated value because of the presence of interference.									
P = This flag is used for a pesticide/Arcolor target analyte when there is greater than 25% difference for detected concentration between the two GC columns. The lower of the two values is reported on Form I and flagged with an "P".									
* = Standard is a calculated value.									
** = Standard is a calculated value (see tables 4 and 5 for specific analyte).
