1 Introduction

Ecology and Environment Engineering, P.C. (EEEPC), together with Parsons Infrastructure & Technology Group, Inc. (Parsons), under contract to the United States Army Corps of Engineers (USACE), Kansas City District, Contract No. W912DQ-06-D-0012, performed an Additional Predesign Investigation (PDI) at the On-Base Groundwater (OBGW) Area of Concern 9 (AOC 9) at the former Griffiss Air Force Base (Griffiss AFB) in Rome, New York.

1.1 Purpose of Investigation

The Additional AOC 9 PDI was conducted in order to better define both the suspected contaminant source areas for potential excavation and the extent of groundwater contamination upgradient (east northeast) of Building 913 detected during the Predesign Investigation 2 performed by Parsons (Parsons 2007). This information will be used in the remedy selection and remedial design for the site.

1.2 Site Description and Groundwater Contamination Summary

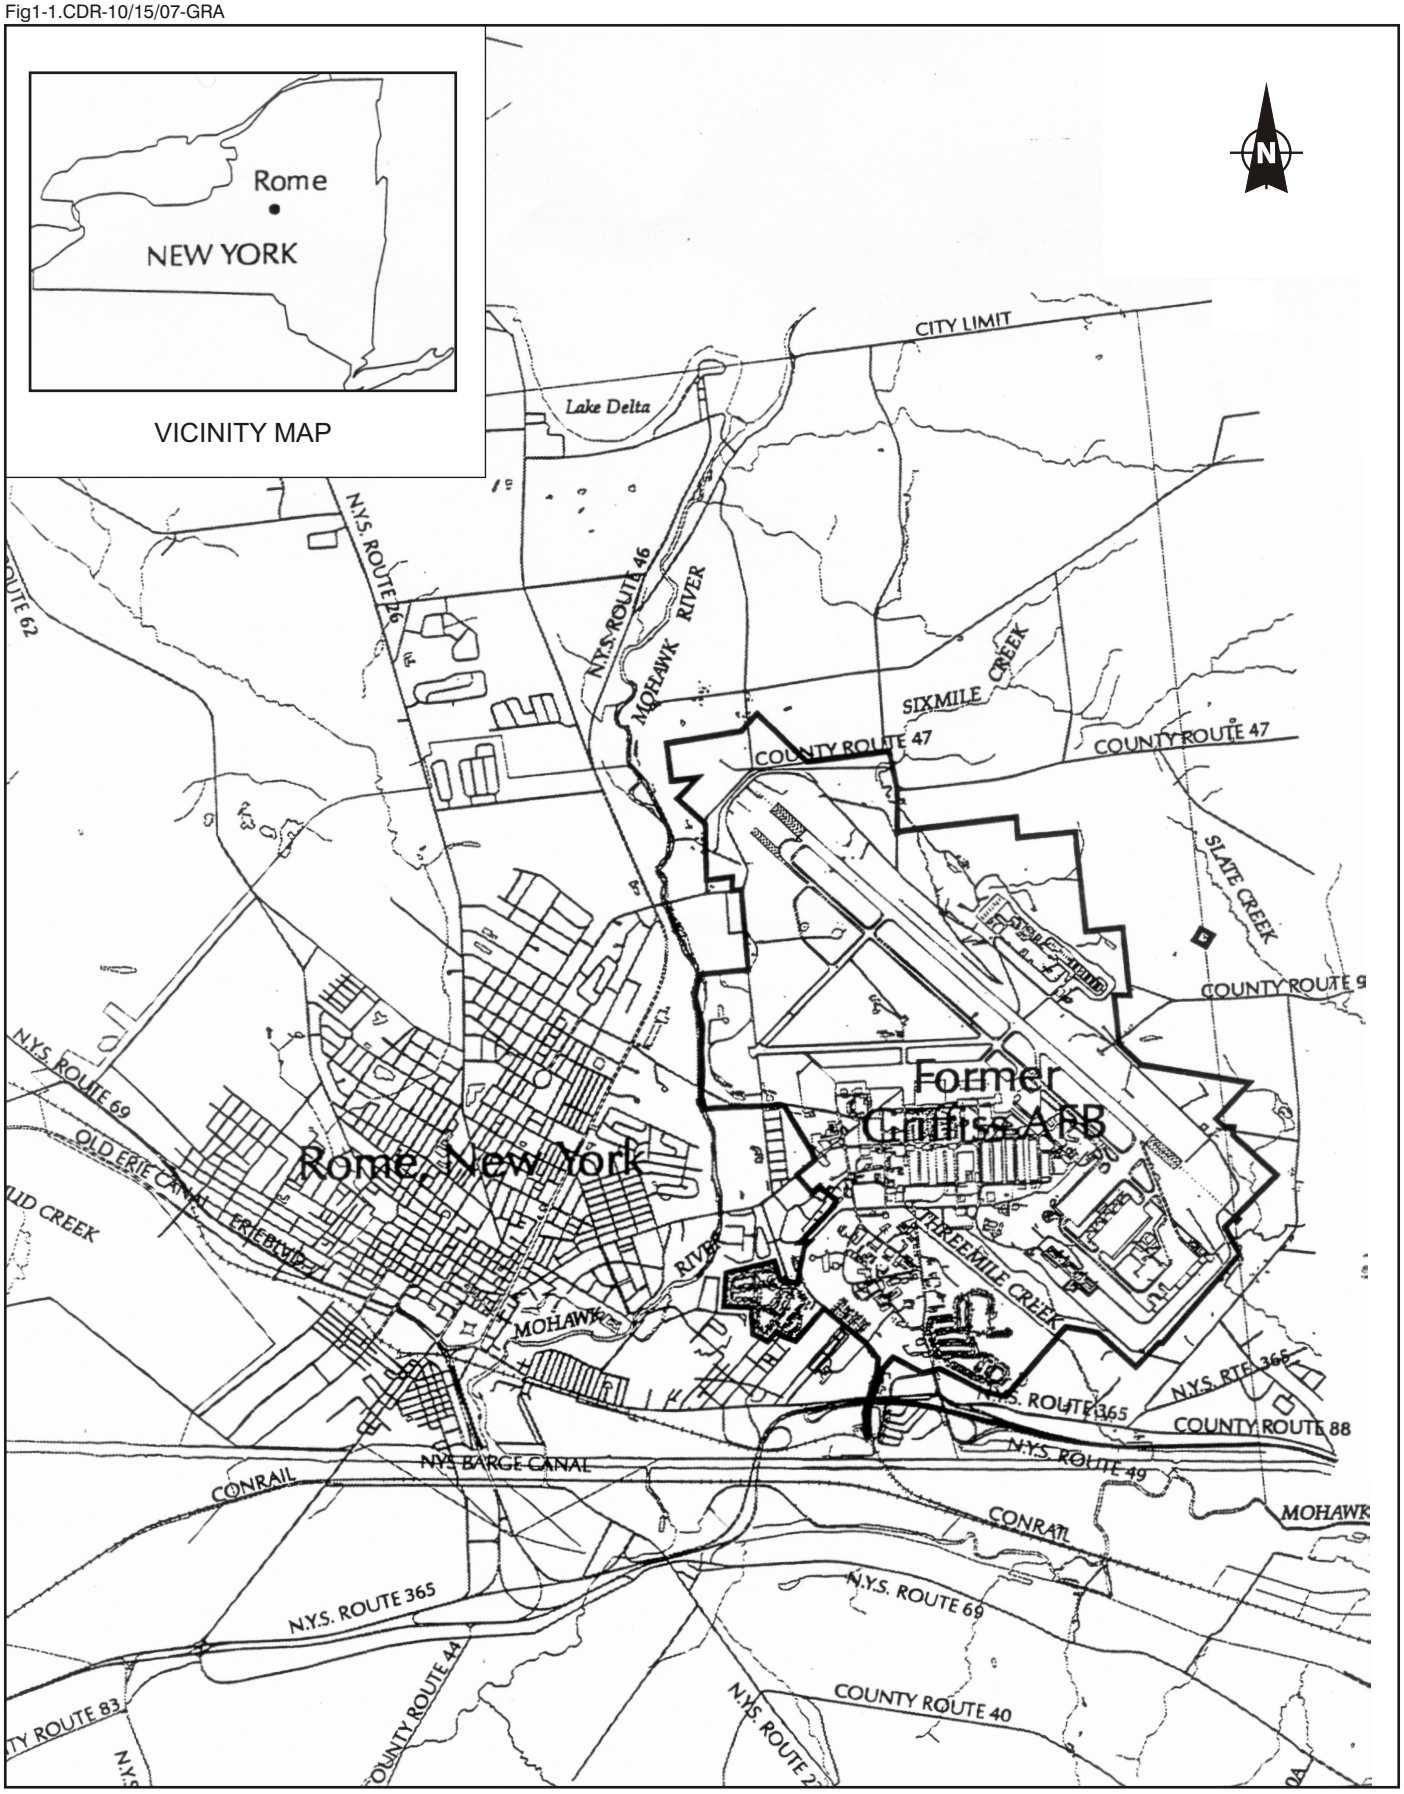
1.2.1 AOC 9

AOC 9 is located on the north side of the main runway extending from the former weapons storage area (WSA) south to Six Mile Creek (see Figure 1-1). Buildings in the area include weapons storage bunkers (Buildings 912 and 913), a weapons maintenance facility (Building 917), and a hazardous material storage shed (Building 915). From 1943 to 1957, this area was used as a base landfill. Much of the landfill material was removed from the area in the 1950s as the WSA was constructed. The primary contaminant exceeding NYSDEC Class GA Groundwater Standards at this site is chlorobenzene (CB), with 1,2-dichlorbenzene, 1,4-dichlorobenzene, perchloroethylene (PCE), trichloroethene (TCE), dichloroethene (DCE), and vinyl chloride (VC) also exceeding Class GA Groundwater Standards by at least one order of magnitude. In September 2004, the maximum CB concentration of 1,320 parts per billion (ppb) was recorded in Geoprobe Well GP44S2, which is located approximately 100 feet north of Perimeter Road. Four predesign monitoring wells (AOC9-MW14 through MW17) were installed and groundwater was sampled during the PDI in October/November 2006. Analytical results obtained from monitoring well AOC9-MW14 (1,989 ppb total VOC concentration), which is located approximately 150 feet downgradient of Building 913, indicated that a source existed upgradient (see Figure 1-2).

Between February and April 2007, 25 temporary wells (TW18 through TW43) were installed during the PDI 2 work to evaluate if a CB plume/source was present upgradient of monitoring well MW-14.

The results of the PDI 2 investigation at AOC 9 indicated that a potential source of CB was present upgradient of Building 913. AOC9-TW39 (approximately 280 feet northeast of MW-14) and AOC9-TW32 (80 feet upgradient of MW 14) have concentrations of CB of 14,400 ppb and 8,580 ppb, respectively (Parsons 2007).

The contaminated aquifer north of Perimeter Road is composed of silty-fine to medium-grained sands with little coarse sand with discontinuous gravel seams. North of Perimeter Road, the aquifer is found in an interval from approximately 3 to 28 feet below ground surface (BGS). South of Perimeter Road there is less overburden and the aquifer extends from 1 to 18 feet BGS. A thin till layer above the Utica Shale bedrock underlies the aquifer, but contamination has not been detected in the bedrock.



1.3 Proposed Remedial Design Summary

The following briefly describes the formerly proposed remedial actions to be implemented at AOC 9.

As described in the Final Feasibility Study (FS) (E & E 2004), in situ chemical oxidation using Fenton's reagent was the proposed remedy at AOC 9. Performance monitoring and long-term monitoring was proposed using a total of nine wells. Monitoring was anticipated to extend for 10 years beyond the final oxidation injection.

Based on the results of the PDI 2 investigation at AOC 9, and the findings presented in this document, Parsons Infrastructure & Technology Group, Inc. is currently reevaluating remedial options for AOC 9. In addition, the FS for AOC 9 will be revised, and a proposed plan and record of decision will be prepared for AOC 9. Designs will be finalized and described in detail in future submittals.

2 AOC 9-Investigation Activities

This section discusses the field activities performed during the Additional AOC 9 PDI. The work performed at AOC 9 described in this report was performed in accordance with the Final Work Plan for Additional AOC 9 Predesign Investigation (EEEPC 2007b), and Final Work Plan for Phase 2 of the Additional AOC 9 Pre-design Investigation (EEEPC 2007a). The Additional AOC 9 PDI field activities were performed in two phases. The initial phase (Phase 1) of the investigation was conducted in June 2007. Following a review of the data generated during Phase 1, the Air Force Real Property Agency (AFRPA), USACE, and the Parsons team agreed that Phase 2 of the investigation should be performed. Phase 2 of the Additional AOC 9 PDI was conducted in September and October, 2007.

2.1 Scope of Work

AOC 9 contains a mixed plume of CB and TCE as well as their breakdown products. Investigation activities included drilling and installation of temporary monitoring wells, purging and sampling of temporary monitoring wells, drilling and sampling of soil borings, and test pit excavations. Prior to initiation of field activities, utilities clearance was performed by contacting New York Underground Facilities Protection Organization (UFPO) at 1-800-962-7962. The USACE and AFRPA were notified that UFPO was contacted. UFPO representatives visited the site to clear areas for subsurface work in which drilling/excavating activities were planned. All groundwater samples were analyzed for volatile organic compounds (VOCs) using United States Environmental Protection Agency (USEPA) Method SW8260. Analyses were performed by Life Sciences Laboratories, Inc. (LS), of East Syracuse, New York, a laboratory approved by both the New York State Environmental Laboratory Accreditation Program (ELAP) for this analytical method, and the National Environmental Laboratory Accreditation Program (NELAP). In general, reporting limits of 1 ppb were used for all VOC compounds. Several soil and groundwater samples collected required dilutions based on levels of target compounds present.

The following subsections describe the work performed at AOC 9. Photos of soil cores obtained while installing soil borings and of the test pit excavations are included in Appendix A.

2.1.1 Temporary Monitoring Well Installation

Fifty-six temporary groundwater monitoring wells (TW42, TW44 through TW52, TW54, TW54B, TW56 through TW62, TW65 through TW77, and TW78 through TW103) and one piezometer (PZ-1) were installed between June 11, 2007, and September 24, 2007, to better define the contaminant plume and measure groundwater elevations (see Figure 2-1). Temporary monitoring wells (TWs) were installed at depths ranging from 4.4 to 27.4 BGS and constructed with either a 5-foot or a 10-foot (1-inch diameter, 0.01-inch slot) prepacked PVC screen. TWs TW42 through TW97 were installed with 10-foot screens placed across the center of the water column. TWs TW98 through TW103 were installed with a 5-foot screen placed across the top of the water column to provide analytical data from the top of the water column. Well construction details are provided in Table 2-1.

2.1.2 Groundwater Sampling

Groundwater screening samples were collected from TW41, TW43 and all new TWs, and analyzed with either a 24 hour or a 7 day turn-around time (TAT) by Life Sciences Laboratory, located in East Syracuse, New York. In addition, a water sample was collected from the drainage system lift station located at the northwest corner of Building 917. Groundwater screening samples were analyzed for VOCs (USEPA Method SW8260), in accordance with the Field Sampling Plan Long-Term Monitoring Program, Revision 3.0 (FPM 2005). Prior to collection of the groundwater screening samples, a minimum of three well volumes of groundwater was purged from each TW. The TWs were purged with either a dedicated bailer and/or peristaltic pump and dedicated tubing. Field parameters (turbidity, pH, temperature, and conductivity) were collected and recorded during purging; however, collection of the screening samples was not dependent on stabilization of the field parameters. The completed groundwater sampling forms are provided in Appendix B and a list of samples collected is provided in Table 2-3. Static water levels were also measured and recorded for each new TW as well as existing monitoring wells on site (see Tables 2-1 and 2-2).

2.1.3 Soil Boring Installation and Sampling

Forty two soil borings (SB01 through SB42 were installed to Geoprobe refusal and soil samples were collected to assess the extent of soil contamination (see Figures 2-1 and 3-2). Appendix C contains the Geotechnical logs generated for each soil boring. A list of samples collected is provided in Table 2-3. Continuous soil cores were collected from each soil boring using the Geoprobe Macrocore System. Soil cores were screened in the field with a photo ionization detector (PID) and flame ionization detector (FID) (see Table 3-3). Generally, two soil samples were collected and analyzed for VOCs (USEPA Method SW8260) from each soil boring. In a small number of soil borings either poor soil core recovery or shallower than expected geoprobe refusal prevented the collection of the two planned samples. The first soil sample was collected to characterize the most contaminated intervals based on field FID/PID readings, and the second was collected from the first interval beneath the zone of contamination, which did not exhibit

significantly elevated FID/PID readings. In addition, seven of the soil borings (SB26 through SB32) also had a third soil sample collected from above the contaminated zone and/or the water table and analyzed for VOCs. These seven additional samples were collected to characterize the fill materials (primarily sand and gravel) present above the water table and associated zone of contamination.

Soil boring SB40 was installed at the same location as SB12, which had the highest total VOCs concentration (1,600 parts per million [ppm]) detected in soil during the June 2007 sampling event (see Figure 3-2). A single composite soil sample was collected from SB40. This soil sample is a composite of the entire zone of contamination encountered, based on FID/PID readings, and was analyzed for full Toxicity Characteristic Leaching Procedure (TCLP) parameters for potential landfill acceptance purposes. Analytical results from the composite soil sample collected from SB40 are provided in Appendix I.

2.1.4 Test Pit Excavation

Three Test Pits (TP-1 through TP-3) were excavated at AOC 9 on October 16, 2007 (see Figure 2-1). The test pits were excavated with a track-mounted excavator, capable of excavating to 15 feet BGS. No PID readings above background were detected in the breathing zones of the personnel observing the excavations or the equipment operator during any of the excavation activities, or from the soils excavated from TP-1 or TP-2. Soils excavated from TP-3 did exhibit elevated PID readings (7.0 to 20.1 ppm) from soils excavated between 4 and 7 feet BGS. The contaminated soil was segregated with plastic sheeting to allow it to be placed back into the test pit at the depth from which it was removed. Care was taken to segregate the various surface (fill) and subsurface (sand) materials encountered by stockpiling the materials separately. Upon completion, the excavations were backfilled in reverse order with the soils removed, (e.g., soil removed last will be backfilled first). The site surfaces were then returned to original grade.

Test pit dimensions, along with a lithologic description, were recorded by the EEEPC project engineer on the Trench Logs provided in Appendix D. Photographs taken to provide photodocumentation of the test pit excavations are provided in Appendix A.

TP-1 was excavated approximately 5 feet north of temporary monitoring well TW52, in the bottom of the drainage ditch, east of Building 913 in order to collect a subsurface soil sample from this area. TP-1 is the only test pit from which a soil sample was collected. TP-1 was excavated to a final length of approximately 12 feet and a total depth of approximately 6.5 feet. TP-1 Soil sample AOC9-TP1-6.5' was collected and analyzed for VOCs (USEPA Method SW8260) from immediately below the water table at a depth of 6.5-feet bgs.

The location of TP-2 was chosen because it is an area of lower levels of contamination, that based on geologic logs generated during the previous sampling event,

is similar (i.e., contains fill material on the mound adjacent to Building 913, sand beneath the adjacent drainage ditch, and road base to the north) to the area surrounding SB01 and SB12, which contain the highest levels of contamination detected in the soil, and therefore is representative of the various materials found at AOC 9.

The TP-2 excavation was approximately 47 feet long and 13 feet deep and extended from the location of soil boring SB41 southwest onto the mound adjacent to Building 913. TP-2 was excavated to observe the stability of the exposed excavation wall, both above and below the water table.

TP-3 was excavated at the location of soil boring SB36, at which Geoprobe refusal was encountered five times during soil boring drilling activities at depths of six to eight feet BGS. The purpose of TP-3 was to determine the cause of the Geoprobe refusals at this location.

2.2 Site Survey

Ground surveys were performed by LaFave, White & McGivern LS, PC in July and October 2007 to obtain horizontal locations and vertical elevations of new temporary monitoring wells and soil borings. The ground survey utilized the existing benchmarks located on the Griffiss Air Force Base and is in the New York Central North American Datum of 1983 (NAD 83) State Plane coordinate system. Horizontal measurements and vertical measurements were obtained to an accuracy of 0.001 feet and 0.01 feet, respectively. Survey results are shown in Section 2 and 3 figures in this report. The survey data is provided in Appendix E.

2.3 Equipment Decontamination

Equipment decontamination was performed in accordance with the work plans (EEEPC 2007a and 2007b). The Geoprobe rig and all appurtenances were decontaminated by the drilling subcontractor with high-pressure steam prior to arrival to the site. All equipment was decontaminated again upon arrival to the site to remove road dirt only. Moreover, the subcontractor decontaminated all the equipment with high-pressure steam prior to leaving the site. Decontamination of all down hole Geoprobe rods was performed in accordance with the work plans prior to and after each temporary well and soil boring location.

The excavator used to excavate test pits TP-1 through TP-3 was decontaminated by the drilling subcontractor with high-pressure steam prior to arrival to the site. All equipment was decontaminated again upon arrival to the site to remove road dirt only. Moreover, the subcontractor decontaminated all the equipment with high-pressure steam prior to leaving the site.

2.4 Investigation-Derived Waste (IDW)

Investigation-derived soils and water were screened in the field using a FID to determine whether these wastes were contaminated. In accordance with the work plans (EEEPC 2007a and 7b), because FID readings were less than 5 ppm for all

purge water and decontamination water, the water was discharged to the ground surface adjacent to the location at which it was generated. All soils removed during soil boring installation were also screened with the FID. All soils from which FID readings greater than 5 ppm were obtained, were containerized in one 55-gallon drum, labeled, and temporarily staged behind Building 913. The soil drum will be properly disposed of along with any IDW generated during the remediation of AOC 9.

2.5 Quality Assurance/Quality Control

Quality Assurance/Quality Control (QA/QC) samples were collected for each site in accordance with the work plans (EEEPC 2007a and 2007b). Analytical data has been validated for samples collected as part of this investigation. Raw data and the Data Usability Summary Report (DUSR) are presented in Appendices F and G, respectively. USACE personnel were present to observe temporary monitoring well drilling/installation and sampling, soil boring drilling/sampling, and Test pit excavation activities.

Field QC samples included three groundwater and four soil duplicates, and nine trip blanks. Duplicate samples provide insight as to the homogeneity of the sample matrix and establish a degree of confidence that the sample represents site conditions. Field duplicates were collected at the rate of one duplicate per 20 original samples (5%). The field duplicates showed good precision, except for 1,4-dichlorobenzene in the field duplicate of AOC9-SB18-1(8.5) and 1,3,5-trimethylbenzene for the field duplicate of AOC9-SB24-1(12.5). Considering the complex matrix of the soil samples, the two outliers do not indicate problems with analytical or sampling techniques.

Trip blanks were collected to establish that the transport of sample canisters to and from the field did not result in the contamination of the sample from external sources. Trip blanks were included in each shipment of ground water samples. Trip blank results are discussed in the DUSRs in Appendix G. Methylene chloride was detected at trace levels in five of the trip blanks. 1,4-Dichlorobenzene was detected at trace levels in two trip blanks. Similar concentrations of 1,4-dichlorobenzene were detected in samples AOC9-TW52-GW, AOC9-TW98-GW, AOC9-TW99-GW, AOC9-TW101-GW, AOC9-TW102-GW and AOC9-TW103-GW and were qualified as 'U - not detected'. The methylene chloride results for sample AOC9-TW99-GW were also qualified based on the associated trip blank. Methylene chloride is a common laboratory contaminant and was detected at similar concentrations in several of the laboratory method blanks. 1,4-Dichlorobenzene is not a common laboratory contaminant, but concentrations detected in the trip blanks were not significant and do not indicate contamination concerns.

Matrix spike/spike duplicate (MS/MSD) samples were collected for groundwater samples AOC9-TW47-GW, AOC9-TW60-GW, AOC9-TW86-GW, and for soil samples AOC9-SB11-1(11.5), AOC9-SB16-1(15.5), AOC9-SB23-2(15.5) and

AOC9-SB39-01. Recovery outliers are summarized in the DUSRs in Appendix G. Groundwater MS/MSD recoveries were acceptable except for several high recoveries for sample AOC9-TW47-GW. Low recoveries for several compounds were reported for the soil MS/MSD analyses.

The poor recoveries are due to interferences from the target compounds present and potential matrix effects. The high concentration of target compounds in parent samples produced lower spike recoveries with a low bias. The associated results are flagged "J" as bias low and estimated. The other sample results were qualified because the impacts appeared to be sample-specific and related to the higher concentration of target compounds, and the need to analyze the sample at a dilution. Associated laboratory control samples were acceptable, confirming matrix effects as the cause of poor recoveries.

2.6 Work Plan Deviations

Deviations from the work plans (EEEPC 2007a and 2007b) are documented on Field Adjustment Forms (see Appendix H) and presented below:

- Three test pits were excavated at AOC 9, as described in Section 2.1.4 of this report, instead of the single test pit described in the work plan (EEEPC 2007a). The additional test pit excavations were approved by USACE.

Note:
TW = Monitoring well installed as temporary 1-inch well. Other monitoring wells (MWs) listed are permanent 2-inch wells.
AOC9-TW18 through AOC9-TW41 and AOC9-TW43 were installed during AOC9 PreDesign Investigation 2 (PDI 2).
* Water levels collected on September 27, 2007.

Key:
AMSL = Above mean sea level.
BGS/ags = Below ground surface/Above ground surface.
ft = Feet.

3 Additional AOC 9 Predesign Investigation Findings

This section discusses the results from the additional investigation conducted at AOC 9 at the former Griffiss AFB in Rome, New York described in Section 2.

Similar to previous predesign investigations performed at AOC 9, the Additional AOC 9 PDI groundwater data is compared to both the New York State Department of Environmental Conservation (NYSDEC), Technical and Operational Guidance No. 1.1.1: Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations (NYSDEC 1998) and the USEPA National Primary Drinking Water Standards (USEPA 2006) as screening criteria. Soil sample data are compared to the NYSDEC, 6NYCRR Part 375-6 Remedial Program Soil Cleanup Objectives, Final, Dec. 14, 2006 Unrestricted Use of Soil Cleanup Objectives (see Tables 3-1 and 3-2).

3.1 Groundwater Sampling

Groundwater screening samples were collected from temporary monitoring wells; TW41, TW43, and all new TWs (TW42, and TW44 through TW103), and analyzed with either a 24-hour or a 7-day TAT by Life Sciences Laboratory, located in East Syracuse, New York. In addition, a water sample (AOC9-LS-GW) was collected from the drainage system lift station located at the northwest corner of Building 917. The purpose of collecting the water samples was to better define the contaminant plume and assist in locating contaminant source areas. The water samples were collected between June 11 and 21 2007, and on September 24, 2007, immediately after the installation of the temporary wells.

Groundwater samples were collected from temporary monitoring wells screened predominately in very fine to medium grained sand at depths ranging from 4.4 to 27.4 feet BGS and constructed with either a 5-foot or a 10-foot (1-inch diameter, 0.01-inch slot) prepacked PVC screen. Temporary wells TW42 through TW97 were installed with 10-foot screens placed across the center of the water column, which varies from approximately 10 feet in thickness at TW97 south of the primary mound adjacent to Building 913 up to 15 feet in thickness at TW 40, installed through the secondary mound located north of the primary mound, and TW32 installed south of the primary mound. Temporary wells TW98 through TW103 were installed across the interface of the sand and overlying fill material (silt, sand and gravel) interface, with a 5-foot screen placed across the top of the

water column to provide analytical data from the top of the water column. Each sample was analyzed for VOCs as described in Section 2. A summary of the positive analytical results for the groundwater samples is presented in Table 3-1. Figure 3-1 shows the locations of the newly installed TWs and updated total volatile organic compound (VOC) contaminant contours based on the analytical data obtained during this investigation.

Thirty-three VOCs, including 1, 2-dichlorobenzene (DCB); 1, 4-dichlorobenzene; CB; TCE; PCE; and several compounds containing benzene, toluene, ethylbenzene, and xylene (BTEX) were detected in several of the groundwater samples collected at this site (see table 3-1). Twenty-two of the contaminants were detected in at least on sample at concentrations exceeding NYSDEC Groundwater standards. The highest total VOC concentrations were detected during this investigation in temporary wells TW45 (3,100 ppb), TW71 (3,300 ppb), and TW100 (3,400 ppb). Temporary wells TW100 and TW71 are located within 70 feet of TW39, which was the area with the highest levels of contamination detected during the PDI 2 investigation (21,610 ppb), and TW45 is located downgradient TW39 and TW100.

The two highest levels of total VOC groundwater contamination detected on site to date are TW39 (21,610 ppb) and TW32 (12,105.5 ppb), sampled during the PDI 2 investigation (Parsons 2007).

The completed groundwater sampling forms are provided in Appendix B, a complete list of all samples collected is provided in Table 2-3, a summary of the positive analytical results for the groundwater samples is presented in Table 3-1, and Figure 3-1 shows the locations of the newly installed TWs with updated total VOC contaminant. In addition, Figures 3-3 through 3-5 provide cross sections of the current study area, which include both the screened intervals of the TWs included, overburden stratigraphy, water table, and the total VOC concentrations detected in each TW.

3.1.1 Groundwater Elevation Measurements

Upon completion of the installation and sampling of the 25 PDI 2 temporary wells (TW 18 through TW41 and TW43), and the first 50 additional AOC 9 PDI temporary wells (TW42, TW44 through TW52, TW54, TW54B, TW56 through TW62, TW65 through TW77, and TW78 through TW97), a complete round of static water levels were measured and recorded for each new TW as well as all existing monitoring wells on site (see Tables 2-1 and 2-2). These water levels were then used to generate a groundwater contour map. Subsequently, five additional TWs (TW 98 through TW103) and one piezometer (PZ1) were installed, both to collect additional groundwater samples (except PZ1) and to collect additional water level measurements from the area southeast of TW32. A second complete round of water level measurements was not collected following installation of TWs TW98 through TW103, however, the water levels taken from the new TWs was used to

refine groundwater elevation contours around TW92 and TW99, and on groundwater contour map (see Figure 2-2).

Groundwater flow is generally to the southwest at AOC 9, flowing from Building 917 towards Building 913, then around the mounded area extending from TW 92 to TW98, and returning to a southwesterly flow direction downgradient of monitoring well AOC9-MW08.

3.2 Subsurface Soil Sampling

Eighty-five subsurface soil samples were collected using the Geoprobe Macro-Core System from 42 soil borings (SB01 through SB42), and one subsurface soil sample was collect directly from the bucket of the excavator while excavating test pit TP-2 (see Figure 3-2). All subsurface soil samples were analyzed with either a 24 hour or a 7-day TAT by Life Sciences Laboratory, located in East Syracuse, New York. The purpose of collecting the soil samples was to determine both the horizontal and vertical extent of contamination within the subsurface soil for evaluation of potential remedial alternatives, and assist in locating contaminant source areas. The soil samples were collected between June 20 and 27, and September 25 and 27, from the soils borings, and on October 16, 2007 from test pit PT-2.

Thirty-seven different VOCs were detected in at least one subsurface soil sample collected during this investigation (see Table 3-2). Twelve of the contaminants (1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene (mesitylene), 1,2-DCB, 1,3-DCB, 1,4-DCB, CB, ethylbenzene, naphthalene, n-butylbenzene, n-propylbenzene, sec-butylbenzene, and toluene) were detected in at least one sample at concentrations exceeding NYSDEC soil cleanup objectives. The highest total VOC concentrations were detected during this investigation in soil borings SB01 (1,100 ppm) and SB12 (1,600 ppm), both of which are located in the suspected source area in Area A on Figure 3-2. In addition, Area B contained elevated total VOC concentrations at SB 15 (770 ppm), SB31 (810 ppm), and SB27 (850 ppm), indicating that secondary source areas are likely present within the mound adjacent to Building 913. All of the most contaminated soil samples collected were collected from a zone of fine discolored (gray/brown to black) sand which ranges in thickness from approximately 2.5 feet at SB03, up to 8 feet at SB27 and averages approximately 3 to 6 feet thick beneath the mound adjacent to Building 913. This discolored zone also consistently provided the highest FID/PID field readings, often exhibited a sheen, and has an old fuel/solvent odor.

In addition, the first/shallowest soil sample collected from seven soil boring locations (AOC9-SB26-01 through AOC9-SB32-01) were collected from above the water table at various depth intervals within the fill material, of which the primary mound adjacent to Building 913 is composed. These samples were collected at depths ranging from 4.15 feet BGS to 12.45 feet BGS, from zones which exhibited the highest FID/PID readings obtained within the fill material. Total VOC concentrations obtained for these samples ranged from a low of .0049 ppb at

SB27 to a high of 0.17 ppb at SB28, indicating that the fill material above the water table does not contain elevated levels of contaminants at these locations.

3.2.1 Overburden Geology

The overburden geology of the study area (area south and east of Building 913) consists primarily three distinct overburden layers. Figures 3-3 through 3-5 provide a generalized view of the depth and extent of the overburden layers and Figure 2-1 presents the locations of the cross sections.

The uppermost layer is a layer of fill material which appears to have been set in place during construction of the WSA. The fill consists of rounded gravel and brown very fine to coarse sand with varying amounts of silt. This layer ranges in thickness from the maximums observed at soil borings SB15 (17 feet) and SB35 (13.4 feet), to the average thickness of approximately 7 to 10 feet beneath the majority of the site, to not being present beneath the drainage ditches surrounding the primary mound (located southeast of Building 913). The fill layer is situated above the water table across the majority of the site, however, it does extend up to 3 to 4 feet beneath the water table at the SB15 location and extending northeast of SB01.

The second overburden layer, in which the shallow aquifer is present, is composed of very fine-to-medium grained, stratified, brown sand. The sand layer extends down from the bottom of the fill layer and/or the bottom of the drainage ditch surrounding the primary mound, to the till layer overlying the Utica Shale bedrock. The sand layer appears to be naturally deposited, and ranges in thickness from 15 to 20 feet under the majority of the site (between SB01 and SB02) to a minimum of approximately 5 feet at the SB15 location, and thins out extending northeast from SB01 were in ranges from 8 to 12 feet in thickness. Within this shallow aquifer there is a zone of discolored (gray/brown to black) sand.

Beneath the sand layer a layer of gray glacial till and weathered shale is present overlying the Utica Shale bedrock. The till is composed primarily of gravel, sand, silt and clay with some shale fragments. The till is generally dense and moist, and much lower water content than the overlying sand layer. Although the drilling equipment (Geoprobe) was unable to completely penetrate the till layer, based on the depths successfully drilled into the till, the till is estimated to be a minimum of 5 feet thick beneath the site.

In addition to the three primary overburden layers discussed above, a zone of gray/black fill with a strong fuel/solvent odor, composed of fine-to-coarse gravel with little sand and silt, approximately 40 feet long and 40 feet wide, is located between soil borings SB01, SB09, and SB 12. SB01 and SB12 contain the highest levels of total VOCs obtained to date within the soil samples collected, 1,100 ppm and 1,600 ppm, respectively (see Figures 3-2 and 3-3).

A small zone of brown very fine to coarse sand and gravel, approximately 5 feet thick, is also present extending from soil boring SB42 approximately 75 feet northeast towards SB13.

Lastly, during excavation of test pit TP-3 at the location of soil boring SB-36, at which the Geoprobe refusal was encountered five times during soil boring drilling activities at depths of 6 to 8 feet BGS, a small area of firmly cemented gravel (calcareous cement) was encountered. This area appears to be less than 30 feet in diameter, as it was not encountered while drilling any other nearby soil borings or temporary wells. According to the Surficial Geologic Map of New York (Hudson-Mohawk Sheet), these deposits are glacial Kame deposits (deposition adjacent to ice), which are relatively common in central New York (NYSGS 1987). The kame deposit was encountered at approximately 6 feet BGS and became more solidly cemented with depth.

3.3 Test Pit Excavation Observations

Three test pits (TP-1 through TP-3) were excavated at AOC 9 on October 16, 2007 (see Figure 2-1).

Test pit dimensions, along with a lithologic description, were recorded by the EEEPC project engineer on the Trench Logs provided in Appendix D. Photographs taken of the test pit excavations are provided in Appendix A.

TP-1 was excavated approximately 5 feet north of temporary monitoring well TW52, in the bottom of the drainage ditch, east of Building 913 in order to collect a subsurface soil sample from this area. TP-1 is the only test pit from which a soil sample was collected. Analytical results of the soil sample collected are included in Section 3.2 (subsurface soil sampling).

TP-2 was excavated to observe the stability of the exposed excavation wall, both above and below the water table. Based on field observations of the USACE, Parsons, and EEEPC engineers, the side walls collapsed when the excavation reached about 2 feet into the water table.

TP-3 was excavated at the location of soil boring SB36 to observe the cause of the Geoprobe refusals at this location. As described in Section 3.2.1, a relatively small/isolated kame deposit of cement gravel was found to be the cause of the Geoprobe refusals at this location.

(1) New York State Department of Environmental Conservation, Technical and Operational Guidance #1.1.1: Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, 1998.

Bolded and shaded values exceed screening criteria. Bolded values are postive results.

Key:

J = Estimated.

µg/L = microgram per liter.

ND = No volatiles detected in this sample.

R = Temporary well re-sampled with disposable bailer.

U = The analyte was analyzed for by not detected. The associated value is the reporting limit.

UJ = Estimated/not detected.

(1) New York State Department of Environmental Conservation, 6NYCRR Part 375-6 Remedial Program Soil Clenaup Objectives, Draft, Dec. 14, 2006 Unrestricted Use of Soil Cleanup Objectives. "NA" indicates no applicable criteria.

Bolded and shaded values exceed screening criteria. Bolded values are postive results.

Key:
ND = No volatiles detected in this sample.
J = Estimated.
mg/Kg = Miligram per kilogram.
U = The analyte was analyzed for by not detected. The associated value is the reporting limit.
UJ = Estimated/not detected.

Groundwater Sample Log

Project: Groundwater Treatability Study
Site: Former Griffiss Air Force Base
Well No.: AOC9-LS-GW (VAULT)
Sample Date: 6/12/07
Sampling Device: QED T1200 bladder pump
Alkalinity (mg/L as $CaCO_3$): NA
Ferrous Iron (mg/L): NA
Initial Water Level (Feet TOIC): _____
Final Water Level (feet TOIC): _____
Casing Type: PVC

Sample ID: AOC9-LS-GW
Sample Time: 0943
Sample Tubing: QED teflon-lined polyethylene
Phenolphthalein Alkalinity (mg/L): NA
Sample Turbidity (NTUs): 1.80
Well Depth (feet TOIC): _____
Screen Interval (feet BGS): _____
Casing Inner Diameter (inches): _____
Initial OVA Reading (ppm): _____

* Grab Water Sample From Leach Field/AFFF Pond overflow Lift Station adjacent to B917

Time	pH	Temperature (°C)	Conductivity (µs/cm)	Turbidity (NTUs)	~~DO~~ (mg/L)	ORP (mV)	~~Water~~ Level (ft TOIC)	Vol (gal)	Comments
1038	7.83	13.4	312.9	1.80		75	0		

Key:
BGS = Below ground surface.
°C = Degrees centigrade.
$CaCO_3$ = Calcium carbonate.
DO = Dissolved oxygen.
mg/L = Milligrams per liter
mV = Millivolts.
NTU = Nephelometric turbidity unit.
ORP = Redox potential.
ppm = Parts per million.
PVC = Polyvinyl chloride.
TOIC = Top of inner (PVC) casing.

Project: Groundwater Treatability Study
Site: Former Griffiss Air Force Base
Well No.: AOC9-TW82
Sample Date: 6/15/07
Sampling Device: QED T1200 bladder pump
Alkalinity (mg/L as $CaCO_3$): NA
Ferrous Iron (mg/L): NA
Initial Water Level (Feet TOIC): 11.72
Final Water Level (feet TOIC):
Casing Type: PVC

Sample ID: AOC9-TW82-GW
Sample Time: 0901
Sample Tubing: QED teflon-lined polyethylene
Phenolphthalein Alkalinity (mg/L): NA
Sample Turbidity (NTUs): 113
Well Depth (feet TOIC): 24.88
Screen Interval (feet BGS):
Casing Inner Diameter (inches):
Initial OVA Reading (ppm): 61 ppm

Time	pH	Temperature (°C)	Conductivity (µs/cm)	Turbidity (NTUs)	~~DO~~ (mg/L)	ORP (mV)	~~Water~~ Level (ft TOIC)	VOL (GAL) Comments
0839	7.66	10.5	227.1	>1000		-96	0	61 ppm at well
0844	7.67	10.7	213.3	>1000		-52	0.52	head.

RE: Analytical Results

Order No.: 0706054, 0706067, 0706077

Dear Robert Meyers:

Life Science Laboratories, Inc. received samples from 6/12/2007 through 6/14/2007 for the analyses presented in the following report.

Very truly yours,
Life Science Laboratories, Inc.

Monika Santucci

Laboratory Report

Project Management Case Narrative

INTRODUCTION/ANALYTICAL RESULTS

This report summarizes the laboratory results for samples from Ecology & Environment, Inc., for the Griffiss AFB - Rome, NY project.

CONDITION UPON RECEIPT/CHAIN OF CUSTODY

The cooler(s) were received intact. When the cooler(s) were received by the laboratory, the sample custodian(s) opened and inspected the shipment(s) for damage and custody inconsistencies. Chains of custody documenting receipt are presented in the chain of custody section. Each sample was assigned a unique laboratory number and a custody file created. The samples were placed in a secured walk-in cooler and signed in and out by the chemists performing the tests. The sign out record, or lab chronicle, is presented in the chain of custody section.

Discrepancies noted upon receipt are listed on the sample receipt checklist in the chain of custody section. The temperatures of the coolers ranged from -1.8°C to -0.6°C.

METHODOLOGY

The following methods were used to perform the analyses:

PARAMETER	METHOD	REFERENCE
Volatile Organics	8260B	1

1) Test Methods for Evaluating Solid Wastes, SW-846 Third Edition, Final Update III, December 1996 (including the QC requirements specified in AFCEE 4.0 + variances).

QUALITY CONTROL

QA/QC results are summarized in the Laboratory Report.

RAW DATA

The raw data is not requested for this report. Life Science Laboratories, Inc. will keep the raw data on file.

Total # of pages in this report: _____

GC/MS Volatile Organics Case Narrative

Client:	E & E
Project/Order:	Griffiss AFB
Work Order #:	0706054, 0706067, 0706077
Methodology:	8260B

Analyzed/Reviewed by (Initials/Date): Angela Z 6/22/07

Supervisor/Reviewed by (Initials/Date): JW 6-22-07

QA/QC Review (Initials/Date): CR 6-22-07

File Name: G:\Narratives\MSVoa\0706054msvnar.doc

GC/MS Volatile Organics
The GC/MS Volatile instruments used a Restek Rtx-VMS, 40 m x 0.18 mm ID capillary column and a Vocarb 3000 trap.

Holding Times and Sample Preservation
All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements. Samples had a pH of < 2.

Laboratory Control Sample
The following compound(s) did not meet laboratory control sample recovery criteria:

LCS No.	Compound	Corrective Action
LCS-9963	Acetone	1
LCSD-9963	Several	1,2

1 The recovery exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

2 The primary LCS met acceptance limits except acetone. No corrective action was taken.

MS/MSD/MSB
The following compound(s) did not meet matrix spike/matrix spike duplicate percent recovery and/or RPD criteria:

Sample Description	Sample #	Compound	% REC	RPD	Corrective Action
AOC9-TW47-GW	0706054-005AMS/MSD	Several	X		1

1 The recovery exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. The recovery for this compound in the associated LCS and/or duplicate LCS was within acceptance limits. No corrective action was taken.

Client: E & E
Project/Order: Griffiss AFB
Work Order #: 0706054, 0706067, 0706077
Methodology: 8260B

Surrogate Standards
All surrogate standard recoveries met method and/or project specific QC criteria.

Internal Standards
All internal standard areas met method and/or project specific QC criteria.

Calibrations
The following continuing calibration compound(s) exceeded method percent drift and/or RRF criteria:

Calibration ID	Instrument	Compound	%D	RRF	Corrective Action
CCV-9902	MS#3	Acetone	-20.6		1
CCV-9908	MS#3	Chloroethane	-20.8		1
CCV-9963	MS#3	Acetone	-23.5		1
		1,2-Dichloroethane	-23.4		1
CCV-9993	MS#3	Acetone	-20.6		1
		2,2-Dichloropropane	-20.9		1
		1,2-Dichloroethane	-24.7		1
		1,1,2,2-Tetrachloroethane	-21.3		1

1 The recovery marginally exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. This excursion is allowed by project variance. No corrective action was taken.

Preparation Blanks
All preparation blanks met method and/or project specific QC criteria.

Miscellaneous
JP-10 was reported in samples where significant concentrations were detected.

Project: GRIFFISS AFB
RE: Analytical Results Order No.: 0706110, 0706127

Dear Robert Meyers:

Life Science Laboratories, Inc. received samples on 6/20/2007 and 6/21/2007 for the analyses presented in the following report.

Very truly yours,
Life Science Laboratories, Inc.

Monika Santucci

Laboratory Report

Project Management Case Narrative

INTRODUCTION/ANALYTICAL RESULTS

This report summarizes the laboratory results for samples from Ecology & Environment, Inc., for the Griffiss AFB - Rome, NY project.

CONDITION UPON RECEIPT/CHAIN OF CUSTODY

The cooler(s) were received intact. When the cooler(s) were received by the laboratory, the sample custodian(s) opened and inspected the shipment(s) for damage and custody inconsistencies. Chains of custody documenting receipt are presented in the chain of custody section. Each sample was assigned a unique laboratory number and a custody file created. The samples were placed in a secured walk-in cooler and signed in and out by the chemists performing the tests. The sign out record, or lab chronicle, is presented in the chain of custody section.

No discrepancies were noted upon receipt.. The temperatures of the coolers were 2.2°C and -1.6°C.

METHODOLOGY

The following methods were used to perform the analyses:

PARAMETER	METHOD	REFERENCE
Volatile Organics	SW8260B	1
Percent Moisture	ASTM D2216	1

1) Test Methods for Evaluating Solid Wastes, SW-846 Third Edition, Final Update III, December 1996 (including the QC requirements specified in AFCEE 4.0 + variances).

QUALITY CONTROL

QA/QC results are summarized in the Laboratory Report.

RAW DATA

The raw data is not requested for this report. Life Science Laboratories, Inc. will keep the raw data on file.

Total # of pages in this report: _____

GC/MS Volatile Organics Case Narrative

Client:	E & E
Project/Order:	Griffiss AFB
Work Order #:	0706110, 0706127
Methodology:	8260B

Analyzed/Reviewed by (Initials/Date): Angela S / JJ 7/5/07

Supervisor/Reviewed by (Initials/Date): JW 7-9-07

QA/QC Review (Initials/Date): [illegible] 7/9/07

File Name: G:\Narratives\MSVoa\0706110msvnar.doc

GC/MS Volatile Organics

The GC/MS Volatile instruments used a Restek Rtx-502.2, 105 m x 0.53 mm ID and Restek Rtx-VMS, 40 m x 0.18 mm ID capillary column, both with a Vocarb 3000 trap.

Holding Times and Sample Preservation

All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements. Samples were preserved.

Laboratory Control Sample

The following compound(s) did not meet laboratory control sample recovery criteria:

LCS No.	Compound	Corrective Action
LCSD-10023	Chloroethane	1
LCS-10091	Naphthalene	1
LCS/LCSD-10171	Naphthalene	1
LCSD-10171	1,2-Dibromo-3-chloropropane	2

1 The recovery exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

2 The recovery marginally exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

Surrogate Standards

The following sample(s) did not meet surrogate recovery criteria:

Sample Description	Sample #	Surrogate	Corrective Action
AOC9-SB01-2 DL	0706110-002A	4-Bromofluorobenzene	1
AOC9-SB01-3	0706110-003A	4-Bromofluorobenzene	2
AOC9-SB03-1	0706127-002A	4-Bromofluorobenzene	3
		Toluene-d8	3
AOC9-SB04-2	0706127-005A	4-Bromofluorobenzene	4
AOC9-SB05-1	0706127-006A	4-Bromofluorobenzene	3

Client: E & E
Project/Order: Griffiss AFB
Work Order #: 0706110, 0706127
Methodology: 8260B

1 The recovery exceeded the upper control limit, indicating a high bias. All surrogate recoveries met acceptance criteria in the undiluted analysis. No corrective action was taken.

2 The recovery met acceptance criteria when reanalyzed at the same dilution. Both sets of data are reported. No further corrective action was taken.

3 The recovery exceeded the upper control limit, indicating a high bias. Samples were initially diluted for screening purposes and were subsequently reanalyzed at appropriate dilutions (1X). All surrogates met acceptance criteria in the initial (diluted) analysis. Both sets of data are reported. No further corrective action was taken.

4 The recovery was confirmed by analysis of the sample at the same dilution. Matrix interference is suspected. Both sets of data are reported. No further corrective action was taken.

Internal Standards
The internal standard area for the following sample(s) did not meet abundance criteria:

Sample Description	Sample #	Internal Standard	Corrective Action
AOC9-SB01-3	0706110-003A	1,4-Dichlorobenzene-d4	1
AOC9-SB03-2	0706127-003A	1,4-Dichlorobenzene-d4	2
AOC9-SB04-2	0706127-005A	1,4-Dichlorobenzene-d4	2
		Chlorobenzene-d5	1

1 The recovery met acceptance criteria when reanalyzed at the same dilution. Both sets of data are reported.

2 The recovery was confirmed by analysis of the sample at the same dilution. Matrix interference is suspected. Both sets of data are reported. No further corrective action was taken.

Calibrations
The following initial calibration verification compounds exceeded method percent deviation criteria:

Calibration ID	Instrument	Compound	%D	RRF	Corrective Action
ICV-10081	MS#2	Dichlorodifluoromethane	-34.9		1

1 The recovery exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken

The following continuing calibration compounds exceeded method percent drift and/or RRF criteria:

Calibration ID	Instrument	Compound	%D	RRF	Corrective Action
CCV-10015	MS#3	Dichlorodifluoromethane	33.1		1

Client: E & E
Project/Order: Griffiss AFB
Work Order #: 0706110, 0706127
Methodology: 8260B

Calibration ID	Instrument	Compound	%D	RRF	Corrective Action
		Chloroethane	-36.0		2
		Trichlorofluoromethane	-25.9		2
CCV-10016	MS#3	Several			2
CCV-10023	MS#3	Dichlorodifluoromethane	30.0		1
		Chloroethane	-76.3		2
		Trichlorofluoromethane	-51.1		2
		Tetrachloroethene	22.6		1
CCV-10171	MS#3	Several			2

1 The recovery exceeded the lower control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

2 The recovery exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

Preparation Blanks
All preparation blanks met method and/or project specific QC criteria.

Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
Custody seals intact on shipping container/cooler?	Yes ☑	No ☐	Not Present ☐
Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
Chain of custody present?	Yes ☑	No ☐	
Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
Chain of custody agrees with sample labels?	Yes ☑	No ☐	
Samples in proper container/bottle?	Yes ☑	No ☐	
Sample containers intact?	Yes ☑	No ☐	
Sufficient sample volume for indicated test?	Yes ☑	No ☐	
All samples received within holding time?	Yes ☑	No ☐	
Container/Temp Blank temperature in compliance?	Yes ☑	No ☐	
Water - VOA vials have zero headspace?	Yes ☐	No ☐	No VOA vials submitted ☑
Water - pH acceptable upon receipt?	Yes ☐	No ☐	Not Applicable ☑

Laboratory Report

Project Management Case Narrative

INTRODUCTION/ANALYTICAL RESULTS

This report summarizes the laboratory results for samples from Ecology & Environment, Inc., for the Griffiss AFB - Rome, NY project.

CONDITION UPON RECEIPT/CHAIN OF CUSTODY

The cooler(s) were received intact. When the cooler(s) were received by the laboratory, the sample custodian(s) opened and inspected the shipment(s) for damage and custody inconsistencies. Chains of custody documenting receipt are presented in the chain of custody section. Each sample was assigned a unique laboratory number and a custody file created. The samples were placed in a secured walk-in cooler and signed in and out by the chemists performing the tests. The sign out record, or lab chronicle, is presented in the chain of custody section.

No discrepancies were noted upon receipt. The temperature of the cooler was 2.2°C.

METHODOLOGY

The following methods were used to perform the analyses:

PARAMETER	METHOD	REFERENCE
Volatile Organics	8260B	1

1) Test Methods for Evaluating Solid Wastes, SW-846 Third Edition, Final Update III, December 1996 (including the QC requirements specified in AFCEE 4.0 + variances).

QUALITY CONTROL

QA/QC results are summarized in the Laboratory Report.

RAW DATA

The raw data is not requested for this report. Life Science Laboratories, Inc. will keep the raw data on file.

Total # of pages in this report: _____

GC/MS Volatile Organics Case Narrative

Client:	E & E
Project/Order:	Griffiss AFB
Work Order #:	0706129
Methodology:	8260B

Analyzed/Reviewed by (Initials/Date): 7-3-07

Supervisor/Reviewed by (Initials/Date): 7-3-07

QA/QC Review (Initials/Date): 7/3/07

File Name: G:\Narratives\MSVoa\0706129msvnar.doc

GC/MS Volatile Organics
The GC/MS Volatile instruments used a Restek Rtx-VMS, 40 m x 0.18 mm ID capillary column and a Vocarb 3000 trap.

Holding Times and Sample Preservation
All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements. Samples had a pH of < 2.

Laboratory Control Sample
All spike recoveries met method and/or project specific QC criteria.

Surrogate Standards
All surrogate standard recoveries met method and/or project specific QC criteria.

Internal Standards
All internal standard areas met method and/or project specific QC criteria.

Calibrations
All initial calibrations met method and/or project specific QC criteria.

The following continuing calibration compound(s) exceeded method percent drift and/or RRF criteria:

Calibration ID	Instrument	Compound	%D	RRF	Corrective Action
CCV-10095	MS 01	Tetrachloroethene	-22.1		1
		(m+p)-Xylene	-22.1		1
		o-Xylene	-21.1		1
CCV-10137	MS 01	Chlorobenzene	-23.4		2
		Tetrachloroethene	-27.7		1
		(m+p)-Xylene	-23.8		1
CCV-10163	MS 01	Several	X		1
		Chlorobenzene	-23.3		2

Client:	E & E
Project/Order:	Griffiss AFB
Work Order #:	0706129
Methodology:	8260B

1 The recovery exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

2 The recovery exceeded the upper control limit and was detected above the PQL/RL in the associated samples. No corrective action was taken.

Preparation Blanks

All preparation blanks met method and/or project specific QC criteria.

RE: Analytical Results Order No.: 0706136, 0706146

Dear Robert Meyers:

Life Science Laboratories, Inc. received samples on 6/22/2007 and 6/25/2007 for the analyses presented in the following report.

Very truly yours,
Life Science Laboratories, Inc.

Monika Santucci

Laboratory Report

Project Management Case Narrative

INTRODUCTION/ANALYTICAL RESULTS

This report summarizes the laboratory results for samples from Ecology & Environment, Inc., for the Griffiss AFB - Rome, NY project.

CONDITION UPON RECEIPT/CHAIN OF CUSTODY

The cooler(s) were received intact. When the cooler(s) were received by the laboratory, the sample custodian(s) opened and inspected the shipment(s) for damage and custody inconsistencies. Chains of custody documenting receipt are presented in the chain of custody section. Each sample was assigned a unique laboratory number and a custody file created. The samples were placed in a secured walk-in cooler and signed in and out by the chemists performing the tests. The sign out record, or lab chronicle, is presented in the chain of custody section.

No discrepancies were noted upon receipt.. The temperatures of the coolers were -3.2°C and -0.2°C.

METHODOLOGY

The following methods were used to perform the analyses:

PARAMETER	METHOD	REFERENCE
Volatile Organics	SW8260B	1
Percent Moisture	ASTM D2216	1

1) Test Methods for Evaluating Solid Wastes, SW-846 Third Edition, Final Update III, December 1996 (including the QC requirements specified in AFCEE 4.0 + variances).

QUALITY CONTROL

QA/QC results are summarized in the Laboratory Report.

RAW DATA

The raw data is not requested for this report. Life Science Laboratories, Inc. will keep the raw data on file.

Total # of pages in this report: 311

GC/MS Volatile Organics Case Narrative

Client:	E & E
Project/Order:	Griffiss AFB
Work Order #:	0706136, 0706146
Methodology:	8260B

Analyzed/Reviewed by (Initials/Date): JD 7-11-07

Supervisor/Reviewed by (Initials/Date): JD 7-11-07

QA/QC Review (Initials/Date): MP 7/11/07

File Name: G:\Narratives\MSVoa\0706136vnar.doc

GC/MS Volatile Organics
The GC/MS Volatile instruments used a Restek Rtx-502.2, 105 m x 0.53 mm ID and a Restek Rtx-VMS, 40 m x 0.18 mm ID capillary column, both with a Vocarb 3000 trap.

Holding Times and Sample Preservation
All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements. Samples were preserved.

Laboratory Control Sample
The following compound(s) did not meet laboratory control sample recovery criteria:

LCS No.	Compound	Corrective Action
LCS-10091	Naphthalene	1

1 The recovery exceeded the upper control limit and was not detected above the PQL/RL in associated samples. Sample results may be biased high. No corrective action was taken.

MS/MSD/MSB
The following compound(s) did not meet matrix spike/matrix spike duplicate percent recovery criteria:

Sample Description	Sample #	Compound	%REC	RPD	Corrective Action
AOC9-SB11-1(11.5')	0704146-001B	1,4-Dichlorobenzene	X		1
		Chlorobenzene	X		1

1 The recovery for this compound in the associated LCS was within acceptance limits. The concentration of the analyte in the sample was greater than the concentration of the analyte spiked, which may have biased recoveries. No corrective action was taken.

Surrogate Standards
The following sample(s) did not meet surrogate recovery criteria:

Client: E & E
Project/Order: Griffiss AFB
Work Order #: 0706136, 0706146
Methodology: 8260B

Sample Description	Sample #	Surrogate	Corrective Action
AOC9-SB06-1 (7.5')	0706136-001A	Toluene-d8	1
		4-Bromofluorobenzene	1
AOC9-SB07-2 (12.5')	0706136-004A	Toluene-d8	1
		4-Bromofluorobenzene	1
AOC9-SB07-2 (12.5') DL	0706136-004ADL	4-Bromofluorobenzene	1
AOC9-SB08-1 (9.0'), DL	0706136-005A/005ADL	Toluene-d8	1
		4-Bromofluorobenzene	1
AOC9-SB09-1 (11.5'), RA	0706136-006A/006ARA	Toluene-d8	1
		4-Bromofluorobenzene	1
AOC9-SB10-1 (16.5')	0706136-008A	4-Bromofluorobenzene	1
AOC9-SB10-1 (16.5') DL	0706136-008ADL	Toluene-d8	1
		4-Bromofluorobenzene	1
AOC9-SB11-1 (11.5')	0706146-001B	4-Bromofluorobenzene	1
AOC9-SB11-1 (11.5') DL	0706146-001BDL	Toluene-d8	1
AOC9-SB12-1 (12')	0706146-003B	4-Bromofluorobenzene	1
AOC9-SB12-1 (12') DL	0706146-003BDL	Dibromofluoromethane	1
		Toluene-d8	1
		4-Bromofluorobenzene	1
AOC9-SB12-1/D (12')	0706146-004B	4-Bromofluorobenzene	1
AOC9-SB12-1/D (12') DL	0706146-004B DL	Dibromofluoromethane	1
		4-Bromofluorobenzene	1
MB-5630	MB-5630	Toluene-d8	2

1 Most samples were reanalyzed at a higher dilution to confirm failures. Matrix interference is suspected. No corrective action was taken.

2 The recovery marginally exceeded the upper control limit and no target analytes were detected. No corrective action was taken.

Internal Standards
All internal standard areas met method and/or project specific QC criteria.

Calibrations
The following initial calibration verification compound exceeded method percent deviation criteria:

Calibration ID	Instrument	Compound	%D	RRF	Corrective Action
ICV-10081	MS#2	Dichlorodifluoromethane	-34.9 %		1

1 The recovery exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

Client: E & E
Project/Order: Griffiss AFB
Work Order #: 0706136, 0706146
Methodology: 8260B

The following continuing calibration compound(s) exceeded method percent drift and/or RRF criteria:

Calibration ID	Instrument	Compound	%D	RRF	Corrective Action
CCV-10057	MS1	1,1,2,2-Tetrachloroethane	25.0		2
CCV-10059	MS3	Dichlorodifluoromethane	22.5		2
		Chloroethane	-64.6		3
		Trichlorofluoromethane	-42.6		3
CCV-10077	MS1	2,2-Dichloropropane	26.1		1
		1,2-Dibromo-3-chloropropane	23.6		2
CCV-10095	MS1	Tetrachloroethene	-22.1		3
		(m+p)-Xylene	-22.1		3
		o-Xylene	-22.1		3

1 The recovery exceeded the lower control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

2 The recovery marginally exceeded the lower control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

3 The recovery exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

Preparation Blanks
The following compound(s) were detected in the following preparation blank(s):

Preparation Blank	Compound	Concentration	Corrective Action
MB-10069	Methylene chloride	0.00253 mg/Kg	1
MB-10091	Methylene chloride	0.00365 mg/Kg	1

1 This analyte is a common lab contaminant and the concentration is less than the RL.

Project: GRIFFISS AFB
RE: Analytical Results Order No.: 0706159, 0706165

Dear Robert Meyers:

Life Science Laboratories, Inc. received samples on 6/26/2007 and 6/27/2007 for the analyses presented in the following report.

Very truly yours,
Life Science Laboratories, Inc.

Monika Santucci

Laboratory Report

Project Management Case Narrative

INTRODUCTION/ANALYTICAL RESULTS

This report summarizes the laboratory results for samples from Ecology & Environment, Inc., for the Griffiss AFB - Rome, NY project.

CONDITION UPON RECEIPT/CHAIN OF CUSTODY

The cooler(s) were received intact. When the cooler(s) were received by the laboratory, the sample custodian(s) opened and inspected the shipment(s) for damage and custody inconsistencies. Chains of custody documenting receipt are presented in the chain of custody section. Each sample was assigned a unique laboratory number and a custody file created. The samples were placed in a secured walk-in cooler and signed in and out by the chemists performing the tests. The sign out record, or lab chronicle, is presented in the chain of custody section.

No discrepancies were noted upon receipt.. The temperatures of the coolers ranged from -1.2°C to 5.2°C.

METHODOLOGY

The following methods were used to perform the analyses:

PARAMETER	METHOD	REFERENCE
Volatile Organics	SW8260B	1
Percent Moisture	ASTM D2216	1

1) Test Methods for Evaluating Solid Wastes, SW-846 Third Edition, Final Update III, December 1996 (including the QC requirements specified in AFCEE 4.0 + variances).

QUALITY CONTROL

QA/QC results are summarized in the Laboratory Report.

RAW DATA

The raw data is not requested for this report. Life Science Laboratories, Inc. will keep the raw data on file.

Total # of pages in this report: 398

GC/MS Volatile Organics Case Narrative

Client:	E & E
Project/Order:	Griffiss AFB
Work Order #:	0706159, 0706165
Methodology:	8260B

Analyzed/Reviewed by (Initials/Date): 7-12-07

Supervisor/Reviewed by (Initials/Date): 7-12-07

QA/QC Review (Initials/Date): 7/12/07

File Name: G:\Narratives\MSVoa\0706159msvnar.doc

GC/MS Volatile Organics
The GC/MS Volatile instruments used a Restek Rtx-502.2, 105 m x 0.53 mm ID and Restek Rtx-VMS, 40 m x 0.18 mm ID capillary column, both with a Vocarb 3000 trap.

Holding Times and Sample Preservation
All samples were prepared and analyzed within the method and/or QAPP specified holding time requirements except: AOC9-SB20-1 (11.5') RA [0706165-001ARA]. Samples were preserved.

Laboratory Control Sample
The following compound(s) did not meet laboratory control sample recovery criteria:

LCS No.	Compound	Corrective Action
LCS-10091	Naphthalene	1
LCS-10157	1,2-Dibromo-3-chloropropane	2
	Naphthalene	1
LCS/LCSD-10171	Naphthalene	2
LCSD-10171	1,2-Dibromo-3-chloropropane	2
LCS/LCSD-10188	Several	2,3
LCS/LCSD-10273	Dichlorodifluoromethane	2

1 The recovery exceeded the upper control limit and was detected above the PQL/RL in some associated samples. No corrective action was taken.

2 The recovery exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

3 The recovery exceeded the lower control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

MS/MSD/MSB
The following compounds did not meet matrix spike/matrix spike duplicate percent recovery and/or RPD criteria:

Client: E & E
Project/Order: Griffiss AFB
Work Order #: 0706159, 0706165
Methodology: 8260B

Sample Description	Sample #	Compound	% REC	RPD	Corrective Action
AOC9-SB16-1 (15.5')	0706159-007AMS/MSD	Several	X		1
AOC9-SB23-2 (15.5')	0706165-008A MS/MSD	Naphthalene	X		1
		1,2-Dibromo-3-chloropropane	X		1

1 The recovery exceeded the upper and lower control limit and some were detected above the PQL/RL in the associated sample. No corrective action was taken.

2 The recovery exceeded the upper and lower control limit the analyte was detected above the PQL/RL in the associated sample. No corrective action was taken.

Surrogate Standards
There were numerous surrogate standard recovery failures in the SDG. Matrix effects are suspected. Samples were reanalyzed at the same or higher dilution to confirm recovery or demonstrate a reduction in matrix effects on recovery. Both sets of data are reported. No further corrective action was taken.

Internal Standards
There were numerous internal standard recovery failures in the SDG. Matrix effects are suspected. Samples were reanalyzed at the same or higher dilution to confirm recovery or demonstrate a reduction in matrix effects on recovery. Both sets of data are reported. No further corrective action was taken.

Calibrations
The following continuing calibration compound(s) exceeded method percent drift and/or RRF criteria:

Calibration ID	Instrument	Compound	%D	RRF	Corrective Action
CCV-10157	MS#3	Chloroethane	-29.9		1
		1,2-Dibromo-3-chloropropane	-27.8		1
		1,2,4-Trichlorobenzene	-20.8		1
		Naphthalene	-47.1		2
		1,2,3-Trichlorobenzene	-24.8		1
CCV-10171	MS#3	Several	X		1
CCV-10251/10252	MS#2	Chloroethane	-24.1		1
		2-Chlorotoluene	-24.1		1
		4-Chlorotoluene	-22.5		1
CCV-10188		Several			1,3
CCV-10274	MS#2	Dichlorodifluoromethane	28.5		3
		Acetone	-25.9		1

Client: E & E
Project/Order: Griffiss AFB
Work Order #: 0706159, 0706165
Methodology: 8260B

Calibration ID	Instrument	Compound	%D	RRF	Corrective Action
		1,1,2,2-Tetrachloroethane	-20.7		1
		n-Propylbenzene	-23.2		2
		2-Chlorotoluene	-25.8		1
		4-Chlorotoluene	-24.2		1
CCV-10273	MS#3	Several			3

1 The recovery exceeded the upper control limit and was not detected above the PQL/RL in the associated samples. This excursion is allowed by project variance. No corrective action was taken.

2 The recovery exceeded the upper control limit and was detected above the PQL/RL in the associated samples. No corrective action was taken.

3 The recovery exceeded the lower control limit and was not detected above the PQL/RL in the associated samples. No corrective action was taken.

Initial Calibration Verification
The following initial calibration verification compound(s) exceeded method percent drift and/or RRF criteria:

ICV ID	Instrument	Compound	%D	RRF	Corrective Action
ICV-10081	MS#2	Dichlorodifluoromethane	-34.9		2
ICV-10253	MS#3	4-Methyl-2-pentanone	29.1		1
		Dichlorodifluoromethane	-67.9		2

1 The associated initial calibration verification also demonstrates a sensitivity loss for this analyte. The analyte met acceptance criteria in the LCS and was not detected in the associated samples. No corrective action was taken.

2 The associated initial calibration verification also demonstrates a sensitivity gain for this analyte. The analyte met acceptance criteria in the LCS and was not detected in the associated samples. No corrective action was taken.

Preparation Blanks
The following compound(s) were detected in the following preparation blank(s):

Preparation Blank	Compound	Concentration	Corrective Action
MB-10157	Methylene Chloride	3.42	1

1 This analyte is a common laboratory contaminant and the concentration is less than the PQL/RL. The method or QAPP does not require corrective action.

To: Monika Santucci
Subject: Griffis Naphthalene

Monika,

Just to make it official. You do not need to reanalyze sample SB21-2 based on the naphthalene CCV response. Please report the result you have with qualification.

Thank you,

Barb Krajewski
