The absorptive type silencer is the classic dissipative design, deriving its noise control properties from the basic fact that noise energy is effectively "absorbed" by various types of fibrous packing materials. More technically, as sound waves pass through the spaces between the tightly-packed small-diameter fibers of the absorptive material, the resulting viscous friction dissipates the sound energy as small amounts of heat.

Absorptive silencers are very effective on high frequency noise (500–8,000 Hz). At frequencies above and below this range, attenuation performance progressively diminishes.

Since noise is absorbed by the packing media, absorptive silencers do not rely on internal baffles, tubes or other restrictive devices to achieve noise reduction. Consequently, absorptive silencers generally employ "straight-through" or similar internal designs which impose very little air flow restriction.

General Information

Absorptive Silencers

U5 Series (page 3.2)
Highly efficient straight-through silencer available in pipe sizes ½"–6". Attenuation characteristics equivalent to SU5 Series.

U2 Series (page 3.3)
Moderately efficient straight-through silencer available in pipe sizes 5"–30". For better performance, use SU3, SU4, SU5, or U5 Series.

SU5 Series (page 3.4–3.5)
Highest efficiency full flow annular type silencer. Available in pipe sizes 4"–60". Larger sizes available based on application.

SU4 Series (page 3.4–3.5)
Annular type silencer with performance one grade below the SU5 Series. Available in pipe sizes 8"–60". Larger sizes available based on application.

SU3 Series (page 3.4–3.5)
Annular type silencer with performance one grade below the SU4 Series. Available in pipe sizes 8"–60" and larger.

Sizing Information, Pressure Drop Data

The flow area through the silencer must be sufficient to accommodate the maximum flow without imposing excessive pressure drop. The following instructions enable the selection of the proper silencer size and determination of actual pressure drop. These instructions assume air as the flowing gas. For other gases, density and other corrections may be necessary—contact Universal Silencer for assistance.

Data required:
air flow rate (actual CFM)
temperature (°F)
pressure (psig)
maximum pressure drop (inches of water)

1 Determine maximum velocity.

$$V = 4005\sqrt{\left(\frac{\Delta P}{c}\right)\left(\frac{14.7}{P+14.7}\right)\left(T+460\right)}$$

V = air or gas velocity, ft/min (see note 1)
ΔP = maximum pressure drop, inches of water
c = silencer pressure drop coefficient (see Table 1)
T = air temperature, °F (see note 2)
P = operating pressure, psig (If at atmospheric pressure, pressure ratio is unity and may be omitted from equation. If P exceeds 15 psig, contact Universal Silencer for recommendations.)

2 Determine flow area required.

$$A = \frac{Q}{V}$$

A = flow area required, ft²
Q = air flow rate (actual CFM)

$$\text{Actual } CFM = (\text{Standard CFM})\left(\frac{14.7}{P+14.7}\right)\left(\frac{T+460}{530}\right)$$

3 From Table 2, select size with flow area equal to or greater than that calculated.

4 Determine actual gas velocity in ft/min.

$$V\,\text{actual} = \frac{Q}{A}$$

A = flow area from Table 2

5 Determine actual pressure drop.

$$\Delta P = c\left(\frac{V\,\text{actual}}{4005}\right)^2\left(\frac{530}{T+460}\right)\left(\frac{P+14.7}{14.7}\right)$$

c =silencer pressure drop coefficient (see Table 1)

1 Pressure Drop Coefficients

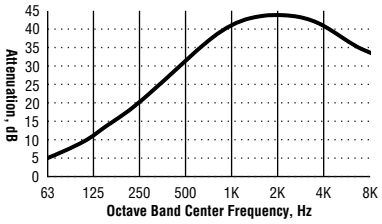
Silencer Series	Pressure Drop Coefficient *(C)*
U5, U2	.25
SU5	.75
SU3, SU4	.85

2 Flow Area Size

Flow Area (ft²)	Diameter Size (in)	Flow Area (ft²)	Diameter Size (in)
0.0014	½	2.6	22
0.0031	¾	3.1	24
0.0055	1	3.7	26
0.012	1½	4.3	28
0.022	2	4.9	30
0.034	2½	5.6	32
0.049	3	6.3	34
0.067	3½	7.1	36
0.087	4	7.9	38
0.136	5	8.7	40
0.196	6	9.6	42
0.349	8	10.6	44
0.55	10	11.5	46
0.79	12	12.6	48
1.07	14	15.9	54
1.4	16	19.6	60
1.8	18	23.8	66
2.2	20	28.3	72

Notes

1 Since self noise and aerodynamic noise generation increase with velocity, absorptive silencers are usually sized for 4,000–8,000 ft/min. In no case should the velocity exceed 15,000 ft/min, regardless of pressure drop allowed.



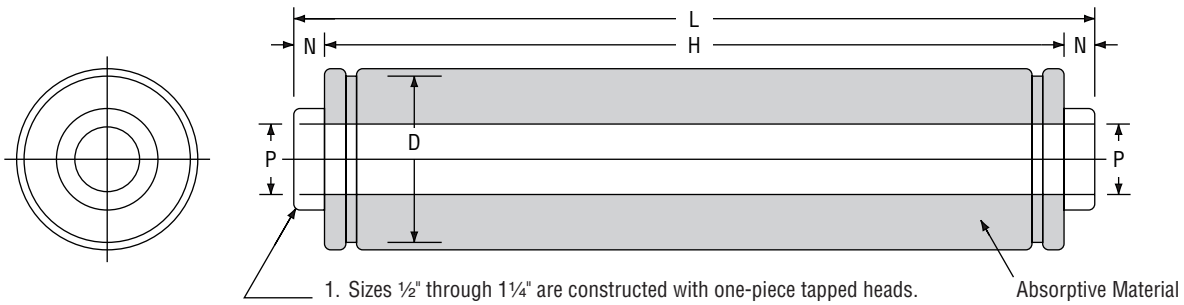
2 Typical attenuation curves indicate the characteristics of the silencer series and are neither a minimum nor a guarantee for an individual silencer. Individual silencer performance can be affected by sound source characteristics including pure tones, flow velocity, adjacent piping, and temperature.

∴ See pages 1.1–1.3 for ordering information | www.universalsilencer.com

U5 Series

Straight-Through Absorptive Silencer

Typical Attenuation Curve



The U5 Series is a premium, straight-through, absorptive silencer. It provides excellent noise attenuation due to its very high length to diameter ratio. It is especially well suited for inlet service on small rotary positive or centrifugal blowers or the discharge of vacuum pumps. Mild steel construction with enamel paint.

Note
U5 series standard paint and acoustical packing are suitable for 325°F.

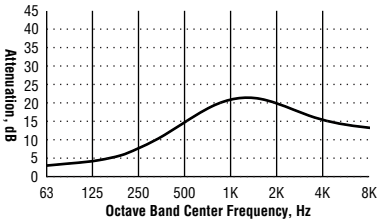
Common Applications

- rotary positive/centrifugal blowers
- vacuum pump discharge
- air valves and cylinders
- small low-pressure vents
- high frequency noise sources

1. Sizes ½" through 1¼" are constructed with one-piece tapped heads. The tapped opening is approximately flush with the end on the shell.
2. Sizes ½" through 4": female NPT pipe connections.
3. Sizes 5" and 6": 125#/150# ANSI drilled flanges.

See pages 1.1–1.3 for ordering information | www.universalsilencer.com

Straight-Through Absorptive Silencer



Model	Part	P	D	L	N	H	Weight
U5-½	11-150-AA	½	3¼	8	—	8	2
U5-¾	11-170-AA	¾	3¼	11	—	11	3
U5-1	11-101-AA	1	3¼	14	—	14	3

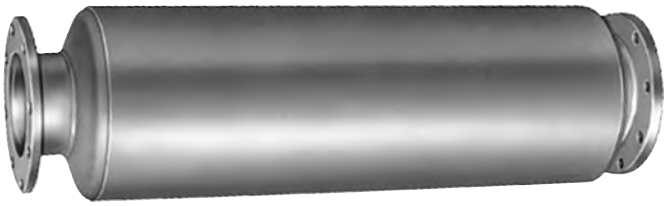
U5-3	11-103-AA	3	6⅝	36½	½	35½	20
U5-4	11-104-AA	4	8	48⅞	⅛	48¾	40
U5-5	11-105-AA	5	10	57	3	51	60
U5-6	11-106-AA	6	12	63	3	57	100

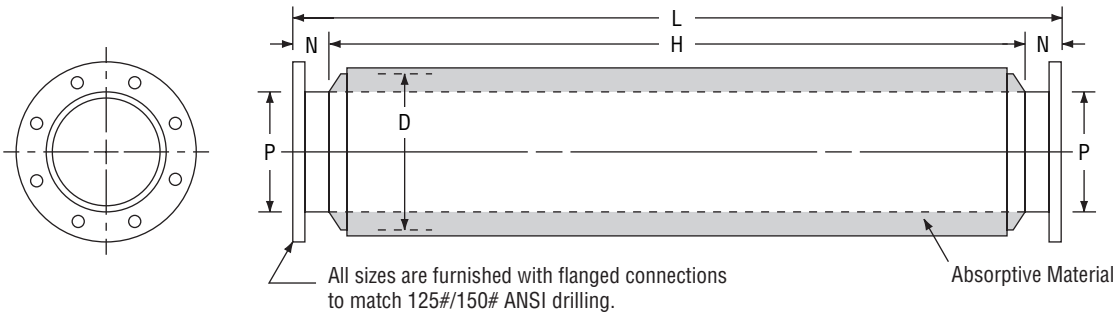
U2 Series

Straight-Through Absorptive Silencer

The U2 Series is an economical straight-though silencer for applications requiring lower-degree noise attenuation. It is fundamentally similar to the U5 Series, but has lesser attenuation due to its relatively low length to diameter ratio. Mild steel construction, primer-coated exterior.



Typical Attenuation Curve



Note:
U2 series standard paint and acoustical packing are suitable for 325°F.

Common Applications

- intermediate size rotary positive blower inlet
- centrifugal blower inlet or discharge
- intermediate size dry vacuum pump discharge
- gas turbine inlet
- high-speed centrifugal compressor inlet
- high frequency noise sources

See pages 1.1–1.3 for ordering information | www.universalsilencer.com

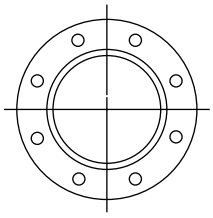
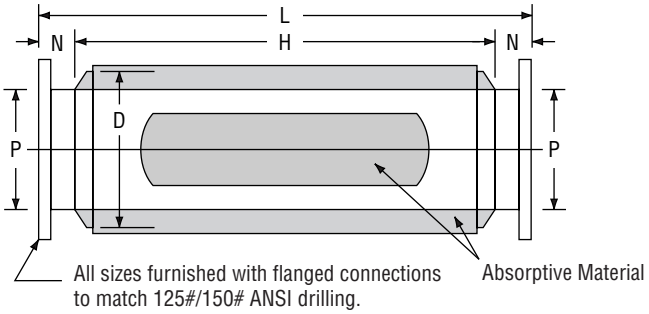
SU Series



Annular Flow Absorptive Silencer



Note:
SU Series standard paint and acoustical packing are suitable for 325°F.

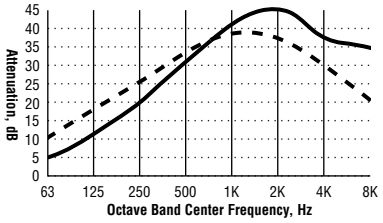
Common Applications

- inlet and discharge of high-speed, low-pressure centrifugal compressors and blowers (discharge P < 15 psig)
- industrial fan inlet and discharge
- high-pressure centrifugal compressors inlet
- gas turbine inlet
- dry vacuum pump discharge
- some low-pressure vents (< 15 psig)
- high-frequency noise sources
- inlet of turbocharged reciprocating engines

See pages 1.1–1.3 for ordering information | www.universalsilencer.com

SU5 Series

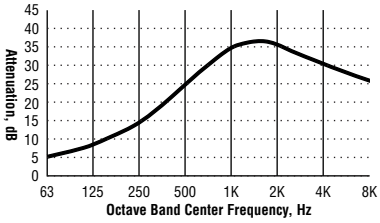
The SU5 Series is our highest grade standard absorptive silencer. Its design consists of two concentric perforated cylinders lined with acoustical pack, forming an annular flow path. This design features full blocked-line-of-sight, while providing full flow area for low resistance. Mild steel construction, primer-coated exterior.



SU4 Series

The SU4 Series provides lower attenuation, ranking just below the SU5 Series. The design of this unit features a bullet centered in the flow tube to provide annular flow path and partial blocked-line-of-sight. Pressure drop is only slightly greater than the SU5. Mild steel construction, primer-coated exterior.

SU3 Series



The SU3 Series is the most economical of Universal Silencer's three grades of annular design silencers. Its design is nearly identical to the SU4, including annular flow path and partial blocked-line-of-sight. Pressure drop coefficient is the same as for the SU4 Series. Mild steel construction, primer-coated exterior.

Warranty, Service & Repair

To register your product with the manufacturer, fill out the enclosed warranty card and return it immediately to:

Flowline Inc.
10500 Humbolt Street
Los Alamitos, CA 90720.

If for some reason your product must be returned for factory service, contact Flowline Inc. to receive a Material Return Authorization number (MRA) first, providing the following information:

1. Part Number, Serial Number
2. Name and telephone number of someone who can answer technical questions related to the product and its application.
3. Return Shipping Address
4. Brief Description of the Symptom
5. Brief Description of the Application

Once you have received a Material Return Authorization number, ship the product prepaid in its original packing to:

Flowline Factory Service
MRA _____
10500 Humbolt Street
Los Alamitos, CA 90720

To avoid delays in processing your repair, write the MRA on the shipping label. Please include the information about the malfunction with your product. This information enables our service technicians to process your repair order as quickly as possible.

FLOWLINE®

Compact Junction Box
LC05 / LC06 Series
Owner's Manual

Version 5.0A

Manual # LC900003 5/99

WARRANTY

Flowline warrants to the original purchaser of its products that such products will be free from defects in material and workmanship under normal use and service for a period which is equal to the shorter of one year from the date of purchase of such products or two years from the date of manufacture of such products.

This warranty covers only those components of the products which are non-moving and not subject to normal wear. Moreover, products which are modified or altered, and electrical cables which are cut to length during installation are not covered by this warranty.

Flowline's obligation under this warranty is solely and exclusively limited to the repair or replacement, at Flowline's option, of the products (or components thereof) which Flowline's examination proves to its satisfaction to be defective. FLOWLINE SHALL HAVE NO OBLIGATION FOR CONSEQUENTIAL DAMAGES TO PERSONAL OR REAL PROPERTY, OR FOR INJURY TO ANY PERSON.

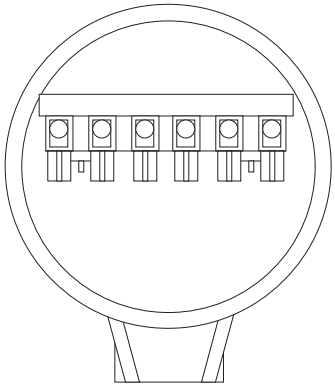
This warranty does not apply to products which have been subject to electrical or chemical damage due to improper use, accident, negligence, abuse or misuse. Abuse shall be assumed when indicated by electrical damage to relays, reed switches or other components. The warranty does not apply to products which are damaged during shipment back to Flowline's factory or designated service center or are returned without the original casing on the products. Moreover, this warranty becomes immediately null and void if anyone other than service personnel authorized by Flowline attempts to repair the defective products.

Products which are thought to be defective must be shipped prepaid and insured to Flowline's factory or a designated service center (the identity and address of which will be provided upon request) within 30 days of the discovery of the defect. Such defective products must be accompanied by proof of the date of purchase.

Flowline further reserves the right to unilaterally wave this warranty and to dispose of any product returned to Flowline where:

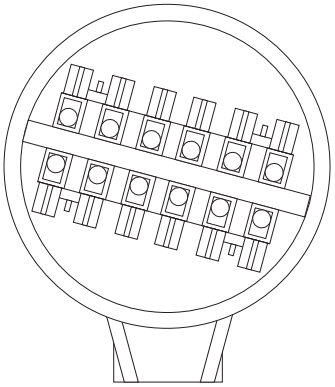
a. There is evidence of a potentially hazardous material present with product.
b. The product has remained unclaimed at Flowline for longer than 30 days after dutifully requesting disposition of the product.

THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE OF THIS WARRANTY. This warranty and the obligations and liabilities of Flowline under it are exclusive and instead of, and the original purchaser hereby waives, all other remedies, warranties, guarantees or liabilities, express or implied. EXCLUDED FROM THIS WARRANTY IS THE IMPLIED WARRANTY OF FITNESS OF THE PRODUCTS FOR A PARTICULAR PURPOSE OR USE AND THE IMPLIED WARRANTY OF MERCHANT ABILITY OF THE PRODUCTS.



This warranty may not be extended, altered or varied except by a written instrument signed by a duly-authorized officer of Flowline, Inc.

SPECIFICATIONS



Step One

Sensor Input:	LC05: 1-6 sensors LC06: 1-3 sensors
Terminal strip:	LC05: 12 pole socket LC06: 6 pole socket

SAFETY PRECAUTIONS

Step Two

⚠ About this Manual:

PLEASE READ THE ENTIRE MANUAL PRIOR TO INSTALLING OR USING THIS PRODUCT. This manual includes information on the Compact Junction Boxes from Flowline: LC05-1001, LC05-1051, LC06-1001 and LC06-1051. Please refer to the part number located on the sensor label to verify the exact model which you have purchased. Many aspects of installation and use are similar between the models.

⚠ User's Responsibility for Safety:

Flowline manufactures several models of controller, with different mounting and switching configurations. It is the user's responsibility to determine if a compact junction box is appropriate for the application, install it properly, perform tests of the installed system, and maintain all components.

⚠ Electrical Shock Hazard:

When the cap of the housing is removed, it may be possible to contact components that carry high voltage, causing serious injury or death. All power to the circuits in the terminal strip should be turned OFF prior to working on the installation. If it is necessary to make adjustments during powered operation, use extreme caution and use only insulated tools. Making adjustments to powered systems is not recommended. Wiring should be performed by qualified personnel in accordance with all applicable national, state, and local electrical codes.

⚠ Install In a Dry Location:

While the compact junction box is liquid-resistant when installed properly, it is not designed to be immersed. It should be mounted in such a way that it does not normally come into contact with fluid. Its housing is made out of PP (polypropylene). Refer to an industry reference such as the Compass Corrosion Guide to ensure that compounds that may splash onto the housing will not damage it. Such damage is not covered by the warranty.

⚠ Application

The LC05-1001 junction box is commonly used for the local termination of multiple level switches installed on Smart Trak. The LC06-1001 junction box is commonly used for the local termination of a single level or flow switch. Combine these junction boxes with any switch or fitting assembly to complete your compact switch.

INTRODUCTION

Step Three

Make a Fail-Safe System:

Design a fail-safe system that accommodates the possibility of relay or power failure. If power is cut off to the controller, it will de-energize the relay. Make sure that the de-energized state of the relay is the safe state in your process. For example, if controller power is lost, a pump filling a tank will turn off if it is connected to the Normally Open side of the relay.

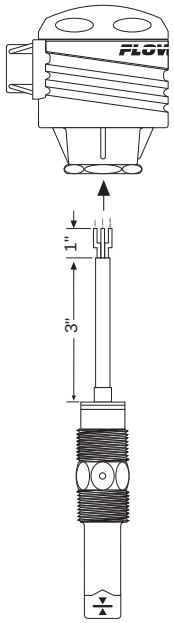
⚠ All power to the system must be off before installing the housing.

⚠ IMPORTANT: Do not strip more than .25" of insulation from any wire that will be connected to the terminal strip. Longer un-insulated wire may contact the terminal strip panel, causing a short circuit leading to system failure.

⚠ All wiring between a controller and sensors should be in conduit. The power entrance of the terminal strip housing is a standard 1/2" NPT female fitting that will attach to standard electrical conduit, either plastic or metal, as specified by local codes. Keep in mind that the housing may have to be unscrewed from the sensor for periodic cleaning of the sensor. For this reason the use of flexible conduit, providing enough slack for easy access, is recommended.

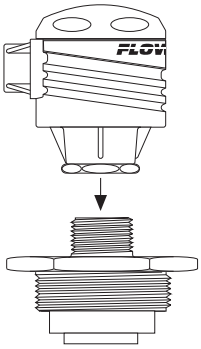
⚠ Use caution when installing the conduit. Excessive tightening may break the fitting. Such damage is not covered by the warranty.

⚠ In some cases, additional user-provided components may need to be attached to the terminals. If so, make sure that both wires or components entering the terminal are secure after the screws are tightened.



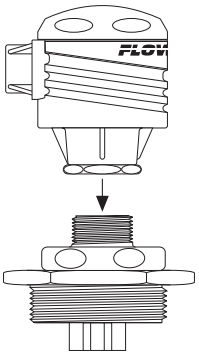
INSTALLATION

Step Four

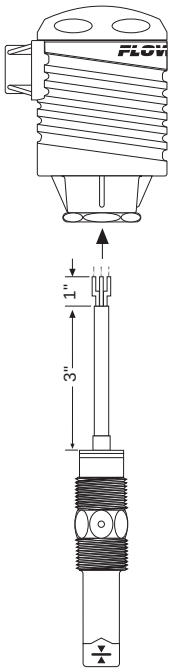


3/4" NPT Mounting Thread

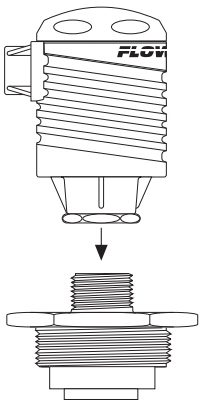
Installation of the compact relay controller takes advantage of the 3/4" NPT thread located on its base. This makes the controller fully compatible with any of Flowline's level switches or Smart Trak™ or Switch Pak™ mounting systems.



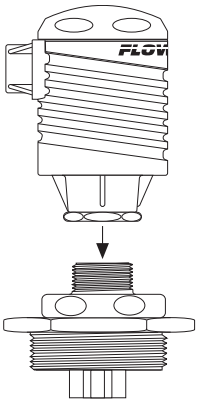
LC06 to Switch



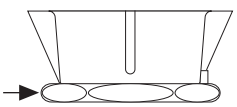
LC06 to Switch Pak



LC06 to Smart Trak



LC05 to Switch



LC05 to Switch Pak

LC05 to Smart Trak

Always tighten the controller from the wrench flat located on the swivel base. Never tighten from the body of the controller.

Step Five

Capsule Pressure Gauges
Plastic Case / Low Cost Design
Type 611.13

Applications

- For gaseous, dry and non aggressive media.
- Medical, vacuum, environmental, HVAC and filter monitoring.

Special features

- Compact design
- Plastic case
- Low ranges from 0/25” H2O (60 mbar)
- Maximum range 0/400” H2O (1000 mbar)

Capsule Pressure Gauge Model 611.13

Description

Nominal Sizes
2” & 2.5” (50 & 63 mm)

Accuracy class
± 2.5% of span

Scale Ranges
0/25 to 0/400 “H2O (0/60 to 0/1000 mbar)
or other equivalent units of pressure or vacuum

Working Pressure
Steady: Full scale value
Fluctuating: 90% of full scale value

Operating Temperature
Ambient: -4°F to +140°F (-20°C to +60°C)
Medium: +140°F (+60°C)

Temperature effect
When temperature of the pressure element deviates from reference temperature (+70°F / +20°C): max. ±0.6%/18°F

Weather protection
IP 53 per EN 60 529 / IEC 529

WIKA
Part of your business

Standard features

Pressure connection
Material: copper alloy
Lower mount (LM) or center back mount (CBM)
1/4" NPT (male), 14 mm wrench flats

Pressure element
Material: Beryllium copper (CuBe2)

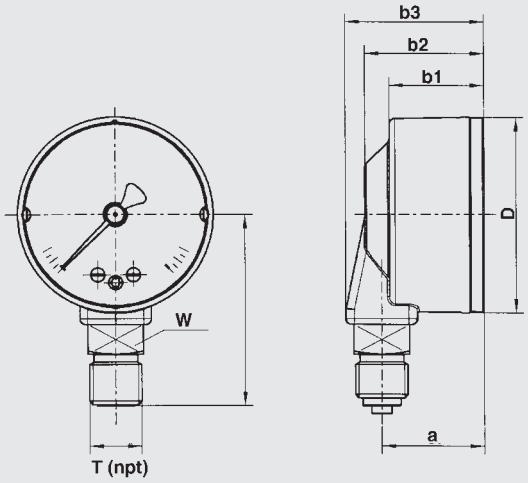
O-ring
NBR (Perbunan)

Movement
Copper alloy

Dial
White aluminum with black numberals

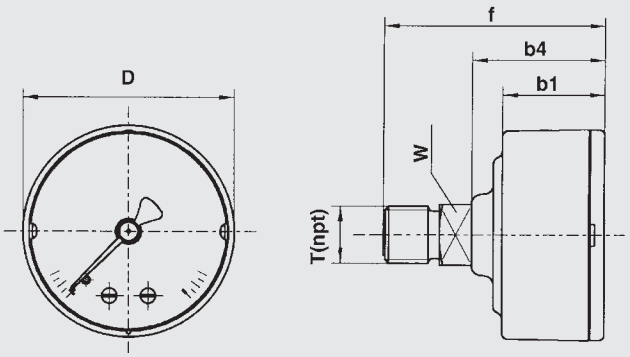
Pointer
Black aluminum

Case
Plastic, black



Window
Acrylic, snapped-in

Optional extras



- Other pressure connection
- Under & overpressure safety
- Accuracy ±1.6% of span
- Zero adjustment screw on dial
- Black painted steel case (Type 611.23)
- Restrictor

Dimensions

Lower mount (LM) connection

Center back mount (CBM) connection

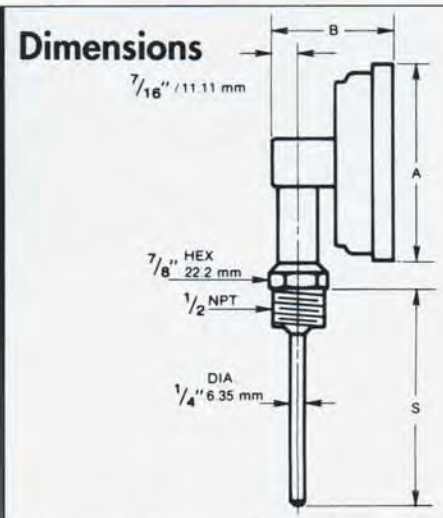
SPECIFICATIONS



CASE	The entire case assembly is of Type 304 Stainless Steel. To insure a moisture proof unit, the heavy glass face is securely gasketed with the case and bezel assembly, hermetically sealed.
STEM ASSEMBLY	The stem and fixed thread connection is fabricated of stainless steel. All welded construction insures complete corrosion resistance. Series BM, RBM and VBM stem diameter is 1/4" and for 2" dials the fixed thread is 1/4" NPT, 3" & 5" dials are 1/2" NPT.
BIMETALLIC ELEMENT	The sensitive, precision formed bimetallic element is accurately calibrated to meet certified temperature standards. The Helix assembly is silicone damped against vibration. Silicone fluid increases the speed of responses due to more rapid heat transfer from stem to bimetallic element.
DIAL	Heavy gauge aluminum with hard surface white matte finish to reduce glare. Black graduation lines and numerals.
ACCURACY	Accurate within 1% of scale range.
SEPARABLE SOCKETS	Separable sockets are available in all materials for direct attachment to the fixed stems.

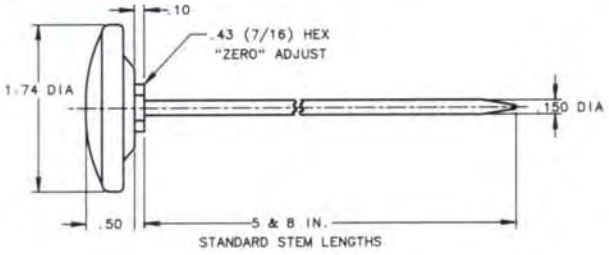
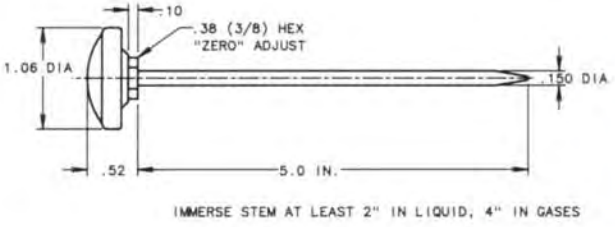
Weiss Series RBM and VBM Silicone Filled Bimetal Thermometers are offered for those applications where severe vibration is a condition. The silicone filling dampens and lubricates the internal parts which reduces pointer flutter and prolongs instrument life. The silicone allows more rapid temperature response.

MODEL
134 & PT

These versatile all stainless steel Bimetal Thermometers are specifically designed for general testing.





Model 134

Model PT

Dimensions

MODEL 134

1-3/4" diameter head, .150" diameter stem and 8" stem length (5" stem length also available).

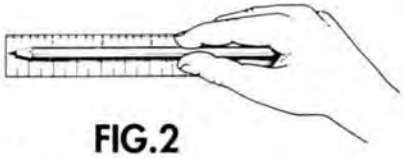
Thermowell Conversion Kit

Designed to permit installation of Weiss Bimetal Thermometer in existing mercury-in-glass industrial thermometer thermowells.

Easy To Determine Stem Length

Measure exiting well depth by inserting a small diameter rod (or pencil will do) into well until it reaches the bottom (Fig.1). Using your thumb as the index, remove rod and measure distance from end of rod to the index point (Fig.2). Use selector table to determine thermometer stem length to fit well.

FIG.1



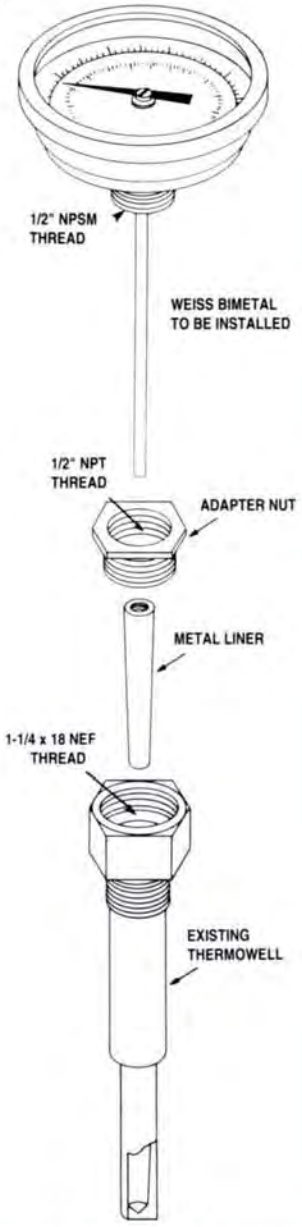


FIG.2

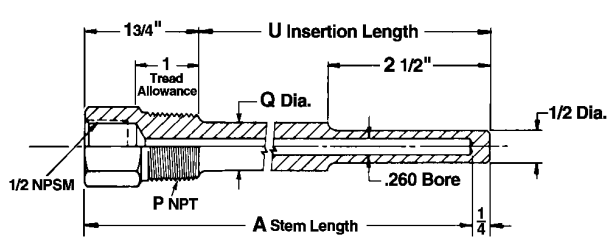
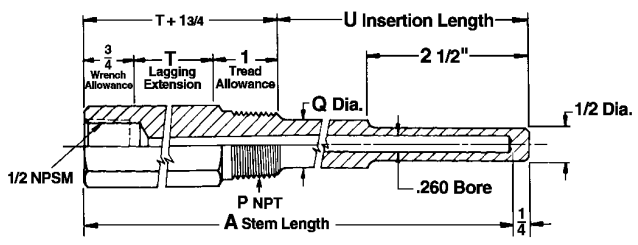
Assemble Adapter/Install Thermometer

Drop or push metal liner into well, thread adapter nut into well and tighten, install Weiss Bimetal Thermometer. Note: As with any thermowell, a small amount of graphite and oil on the lower 2" of the stem will improve response time.



Stem Length Selection Table



Nominal Stem Length	3-1/2"	6"	8"	9"	10"	12"	18"	24"
Well Depth	4-1/2"	6-1/2"	8-1/2"	9-1/2"	10-1/2"	12-1/2"	18-1/2"	24-1/2"
Bimetal Stem Length	4"	6"	*8"	9"	*10"	12"	18"	24"

* Non-standard stem length thermometer available with prompt delivery.

• Satisfactory for continuous service up to 800°F or 425°C. Can be used for intermittent service from 800-1000°F or 425-500°C.
* Minimum stem length for these Ranges is 4". ** Minimum stem length is 4" Straight and Vari-angle Form.

Series DS-300 Flow Sensors

Installation and Operating Instructions Flow Calculations

Series DS-300 Flow Sensors are averaging pitot tubes that provide accurate, convenient flow rate sensing. When purchased with a Dwyer Capsuhelic® for liquid flow or Magnehelic® for air flow, differential pressure gage of appropriate range, the result is a flow-indicating system delivered off the shelf at an economical price. Series DS-300 Flow Sensors are designed to be inserted in the pipeline through a compression fitting and are furnished with instrument shut-off valves on both pressure connections. Valves are fitted with 1/8″ female NPT connections. Accessories include adapters with 1/4″ SAE 45° flared ends compatible with hoses supplied with the Model A-471 Portable Capsuhelic® kit. Standard valves are rated at 200°F (93.3°C). Where valves are not required, they can be omitted at reduced cost. Series DS-300 Flow Sensors are available for pipe sizes from 1″ to 10″.

INSPECTION

Inspect sensor upon receipt of shipment to be certain it is as ordered and not damaged. If damaged, contact carrier.

INSTALLATION

General - The sensing ports of the flow sensor must be correctly positioned for measurement accuracy. The instrument connections on the sensor indicate correct positioning. The side connection is for total or high pressure and should be pointed upstream. The top connection is for static or low pressure.

Location - The sensor should be installed in the flowing line with as much straight run of pipe upstream as possible. A rule of thumb is to allow 10 - 15 pipe diameters upstream and 5 downstream. The table below lists recommended up and down piping.

PRESSURE AND TEMPERATURE

Maximum: 200 psig (13.78 bar) at 200°F (93.3°C).

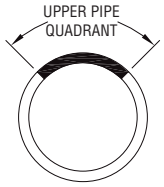
Upstream and Downstream Dimensions in Terms of Internal Diameter of Pipe*

Upstream Condition	Minimum Diameter of Straight Pipe		
	Upstream		Downstream
	In-Plane	Out of Plane	
One Elbow or Tee	7	9	5
Two 90° Bends in Same Plane	8	12	5
Two 90° Bends in Different Plane	18	24	5
Reducers or Expanders	8	8	5
All Valves**	24	24	5

* Values shown are recommended spacing, in terms of internal diameter for normal industrial metering requirements. For laboratory or high accuracy work, add 25% to values.

** Includes gate, globe, plug and other throttling valves that are only partially opened. If valve is to be fully open, use values for pipe size change. **CONTROL VALVES SHOULD BE LOCATED AFTER THE FLOW SENSOR.**

DWYER INSTRUMENTS, INC.
P.O. BOX 373 • MICHIGAN CITY, INDIANA 46361, U.S.A.
Phone: 219/879-8000 **www.dwyer-inst.com**
Fax: 219/872-9057 **e-mail: info@dwyer-inst.com**

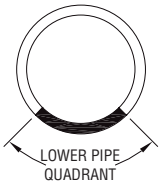


POSITION

Be certain there is sufficient clearance between the mounting position and other pipes, walls, structures, etc, so that the sensor can be inserted through the mounting unit once the mounting unit has been installed onto the pipe.

Flow sensors should be positioned to keep air out of the instrument connecting lines on liquid flows and condensate out of the lines on gas flows. The easiest way to assure this is to install the sensor into the pipe so that air will bleed into, or condensate will drain back to, the pipe.

For Air or Gas Flow



Install in upper quadrant of pipe

Condensate drains back to pipe

For Liquid or Steam Flow

Install in lower quadrant of pipe

Air bleeds back to pipe

INSTALLATION

1. When using an A-160 thred-o-let, weld it to the pipe wall. If replacing a DS-200 unit, an A-161 bushing (1/4˝ x 3/8˝) will be needed.

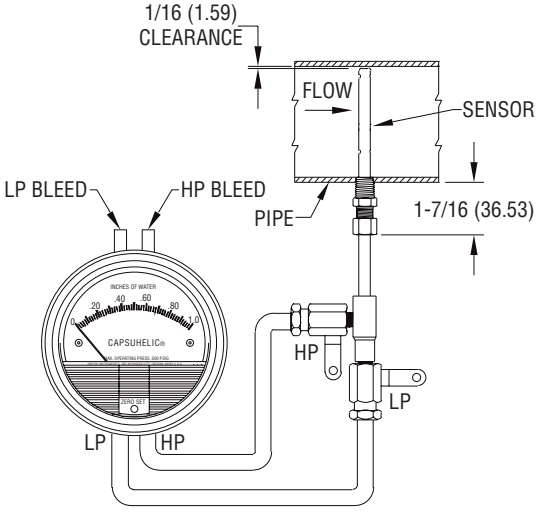
2. Drill through center of the thred-o-let into the pipe with a drill that is slightly larger than the flow sensor diameter.

3. Install the packing gland using proper pipe sealant. If the packing gland is disassembled, note that the tapered end of the ferrule goes into the fitting body.

4. Insert sensor until it bottoms against opposite wall of the pipe, then withdraw 1/16˝ to allow for thermal expansion.

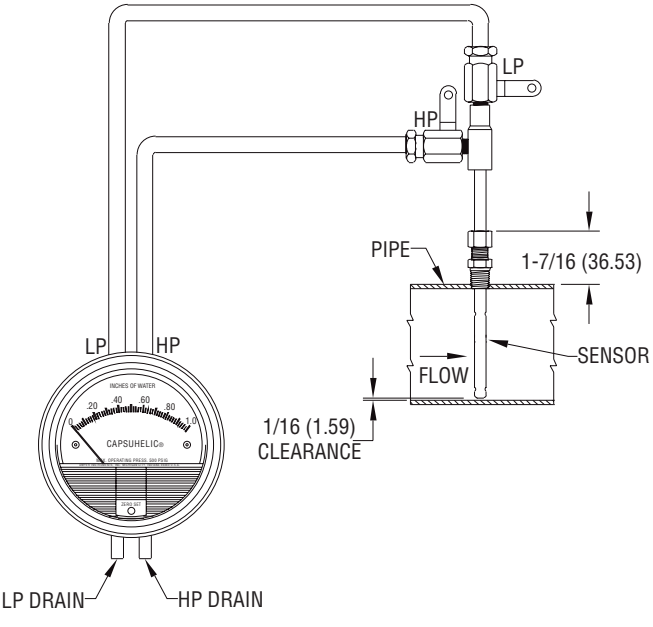
5. Tighten packing gland nut finger tight. Then tighten nut with a wrench an additional 1-1/4 turns. Be sure to hold the sensor body with a second wrench to prevent the sensor from turning.

INSTRUMENT CONNECTION

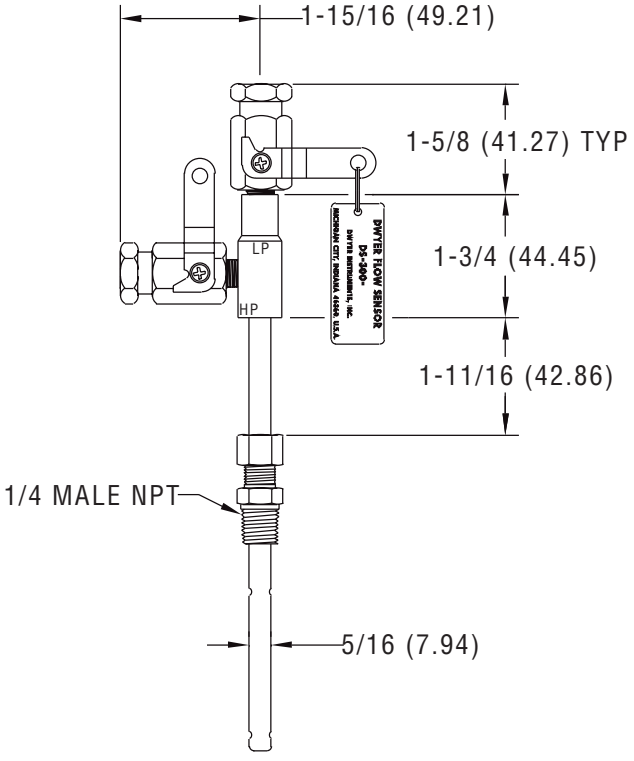


Connect the slide pressure tap to the high pressure port of the Magnehelic® (air only) or Capsuhelic® gage or transmitting instrument and the top connection to the low pressure port.

See the connection schematics below.



Bleed air from instrument piping on liquid flows. Drain any condensate from the instrument piping on air and gas flows.



Open valves to instrument to place flow meter into service. For permanent installations, a 3-valve manifold is recommended to allow the gage to be zero checked without interrupting the flow. The Dwyer A-471 Portable Test Kit includes such a device.

Water Flow

Air or Gas Flow

Flow Calculations and Charts

The following information contains tables and equations for determining the differential pressure developed by the DS-300 Flow Sensor for various flow rates of water, steam, air or other gases in different pipe sizes.

This information can be used to prepare conversion charts to translate the differential pressure readings being sensed into the equivalent flow rate. When direct readout of flow is required, use this information to calculate the full flow differential pressure in order to specify the exact range of Dwyer Magnehelic® or Capsuhelic® gage required. Special ranges and calculations are available for these gages at minimal extra cost. See bulletins A-30 and F-41 for additional information on Magnehelic® and Capsuhelic® gages and DS-300 flow sensors.

For additional useful information on making flow calculations, the following service is recommended: Crane Valve Co. Technical Paper No. 410 “Flow of Fluids Through Valves, Fittings and Pipe.” It is available from Crane Valve Company, www.cranevalve.com.

Using the appropriate differential pressure equation from Page 4 of this bulletin,calculate the differential pressure generated by the sensor under normal operating conditions of the system. Check the chart below to determine if this value is within the recommended operating range for the sensor. Note that the data in this chart is limited to standard conditions of air at 60°F (15.6°C) and 14.7 psia static line pressure or water at 70°F (21.1°C). To determine recommended operating ranges of other gases, liquids an/or operating conditions, consult factory.

Note: the column on the right side of the chart which defines velocity ranges to avoid. Continuous operation within these ranges can result in damage to the flow sensor caused by excess vibration.

Pipe Size (Schedule 40)	Flow Coefficient “K”	Operating Ranges Air @ 60°F & 14.7 psia (D/P in. W.C.)	Operating Ranges Water @ 70°F (D/P in. W.C.)	Velocity Ranges Not Recommended (Feet per Second)
1	0.52	1.10 to 186	4.00 to 675	146 to 220
1-1/4	0.58	1.15 to 157	4.18 to 568	113 to 170
1-1/2	0.58	0.38 to 115	1.36 to 417	96 to 144
2	0.64	0.75 to 75	2.72 to 271	71 to 108

6	0.71	0.64 to 11	2.31 to 40	15 to 23
8	0.67	0.10 to 10	0.37 to 37	9.5 to 15
10	0.70	0.17 to 22	0.60 to 79	6.4 to 10

FLOW EQUATIONS

1. Any Liquid

$$Q\ (GPM) = 5.668 \times K \times D^2 \times \sqrt{\Delta P / S_f}$$

2. Steam or Any Gas

$$Q\ (lb/Hr) = 359.1 \times K \times D^2 \times \sqrt{p \times \Delta P}$$

3. Any Gas

$$Q\ (SCFM) = 128.8 \times K \times D^2 \times \sqrt{\frac{P \times \Delta P}{(T + 460) \times S_s}}$$

DIFFERENTIAL PRESSURE EQUATIONS

1. Any Liquid

$$\Delta P\ (in.\ WC) = \frac{Q^2 \times S_f}{K^2 \times D^4 \times 32.14}$$

2. Steam or Any Gas

$$\Delta P\ (in.\ WC) = \frac{Q^2}{K^2 \times D^4 \times p \times 128{,}900}$$

3. Any Gas

$$\Delta P\ (in.\ WC) = \frac{Q^2 \times S_s \times (T + 460)}{K^2 \times D^4 \times P \times 16{,}590}$$

Technical Notations

The following notations apply:

ΔP = Differential pressure expressed in inches of water column
Q = Flow expressed in GPM, SCFM, or PPH as shown in equation
K = Flow coefficient— See values tabulated on Pg. 3.
D = Inside diameter of line size expressed in inches.

For square or rectangular ducts, use: $D = \sqrt{\frac{4 \times \text{Height} \times \text{Width}}{\pi}}$

P = Static Line pressure (psia)
T = Temperature in degrees Fahrenheit (plus 460 = °Rankine)
p = Density of medium in pounds per square foot
S_f = Sp Gr at flowing conditions
S_s = Sp Gr at 60°F (15.6°C)

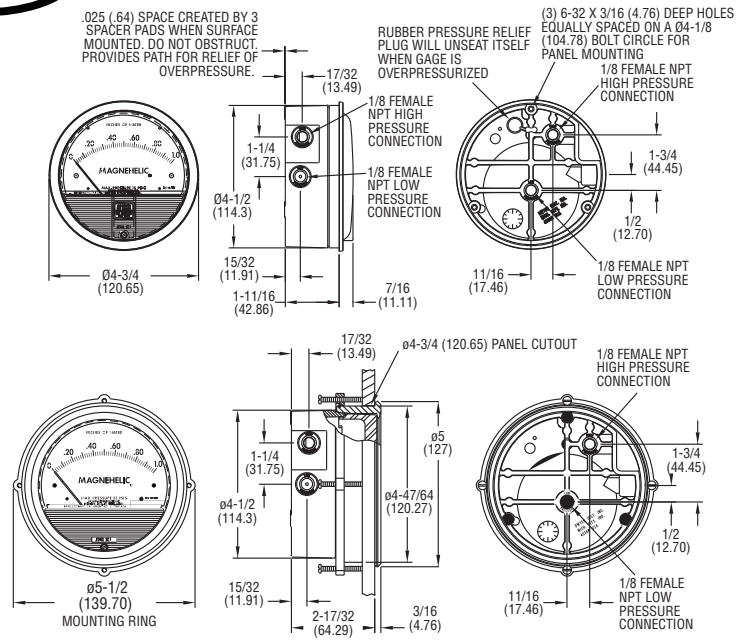
SCFM TO ACFM EQUATION

$$SCFM = ACFM \times \left(\frac{14.7 + PSIG}{14.7}\right) \left(\frac{520^*}{460 + °F}\right)$$

$$ACFM = SCFM \times \left(\frac{14.7}{14.7 + PSIG}\right) \left(\frac{460 + °F}{520}\right)$$

$$\text{POUNDS PER CUBIC FOOT STD.} = \text{POUNDS PER CUBIC FOOT ACT.} \times \left(\frac{14.7}{14.7 + PSIG}\right) \left(\frac{460 + °F}{520^*}\right)$$

$$\text{POUNDS PER CUBIC FOOT ACT.} = \text{POUNDS PER CUBIC FOOT STD.} \times \left(\frac{14.7 + PSIG}{14.7}\right) \left(\frac{520^*}{460 + °F}\right)$$



1 Cubic foot of air = 0.076 pounds per cubic foot at 60° F (15.6°C) and 14.7 psia.

Bulletin A-27

Magnehelic® Differential Pressure Gage

**The blowout plug is not used on models above 180 inches of water pressure, medium or high pressure models, or on gages which require an elastomer other than silicone for the diaphragm.*

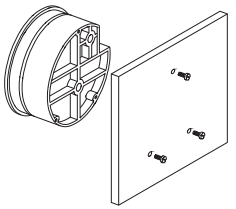
STANDARD GAGE ACCESSORIES: Two 1/8″ NPT plugs for duplicate pressure taps, two 1/8″ pipe thread to rubber tubing adapters and three flush mounting adapters with screws.

MP AND HP GAGE ACCESSORIES: Mounting ring and snap ring retainer substituted for 3 adaptors, 1/4" compression fittings replace 1/8" pipe thread to rubber tubing adaptors.

OVERPRESSURE PROTECTION: Standard Magnehelic® Differential Pressure Gages are rated for a maximum pressure of 15 psig and should not be used where that limit could be exceeded. Models employ a rubber plug on the rear which functions as a relief valve by unseating and venting the gage interior when over pressure reaches approximately 25 psig (excludes MP and HP models). To provide a free path for pressure relief, there are four spacer pads which maintain .023″ clearance when gage is surface mounted. Do not obstruct the gap created by these pads.

SPECIFICATIONS

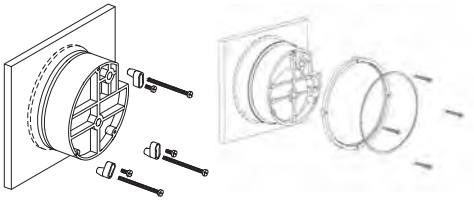
Service: Air and non-combustible, compatible gases. (Natural Gas option available.)
Wetted Materials: Consult factory.
Housing: Die cast aluminum case and bezel, with acrylic cover. (MP model has polycarbonate cover).
Accuracy: ±2% of full scale (±3% on - 0, -100 Pa, -125 Pa, 10MM and ±4% on -00, - 00N, -60 Pa, -6MM ranges), throughout range at 70°F (21.1°C).
Pressure Limits: -20″ Hg to 15 psig.† (-0.677 bar to 1.034 bar); MP option: 35 psig (2.41 bar), HP option: 80 psig (5.52 bar).
Overpressure: Relief plug opens at approximately 25 psig (1.72 bar), standard gages only. The blowout plug is not used on models above 180 inches of water pressure, medium or high pressure models, or on gages which require an elastomer other than silicone for the diaphragm.
Temperature Limits: 20 to 140°F (-6.67 to 60°C). *Low temperature models available as special option.
Size: 4″ (101.6 mm) diameter dial face.
Mounting Orientation: Diaphragm in vertical position. Consult factory for other position orientations.
Process Connections: 1/8″ female NPT duplicate high and low pressure taps - one pair side and one pair back.
Weight: 1 lb 2 oz (510 g), MP & HP 2 lb 2 oz (963 g).



†For applications with high cycle rate within gage total pressure rating, next higher rating is recommended. See Medium and High pressure options.

Note: May be used with hydrogen when ordering Buna-N diaphragm. Pressure must be less than 35 psi.

INSTALLATION



Select a location free from excessive vibration and where the ambient temperature will not exceed 140°F (60°C). Also, avoid direct sunlight which accelerates discoloration of the clear plastic cover. Sensing lines may be run any necessary distance. Long tubing lengths will not affect accuracy but will increase response time slightly. Do not restrict lines. If pulsating pressures or vibration cause excessive pointer oscillation, consult the factory for ways to provide additional damping.
All standard Magnehelic® Differential Pressure Gages are calibrated with the diaphragm vertical and should be used in that position for maximum accuracy. If gages are to be used in other than vertical position, this should be specified on the order. Many higher range gages will perform within tolerance in other positions with only rezeroing. Low range models of 0.5" w.c. plus 0.25" w.c. and metric equivalents must be used in the vertical position only.

SURFACE MOUNTING

Locate mounting holes, 120° apart on a 4-1/8" dia. circle. Use No. 6-32 machine screws of appropriate length.

FLUSH MOUNTING

Provide a 4-9/16" dia. (116 mm) opening in panel. Provide a 4-3/4" dia. (120 mm) opening for MP and HP models. Insert gage and secure in place with No. 6-32 machine screws of appropriate length, with adapters, firmly secured in place.

PIPE MOUNTING

To mount gage on 1-1/4" - 2" pipe, order optional A-610 pipe mounting kit.

TO ZERO GAGE AFTER INSTALLATION

Set the indicating pointer exactly on the zero mark, using the external zero adjust screw on the cover at the bottom. Note that the zero check or adjustment can only be made with the high and low pressure taps both open to atmosphere.

OPERATION

Positive Pressure: Connect tubing from source of pressure to either of the two high pressure ports. Plug the port not used. Vent one or both low pressure ports to atmosphere.
Negative Pressure: Connect tubing from source of vacuum or negative pressure to either of the two low pressure ports. Plug the port not used. Vent one or both high pressure ports to atmosphere.
Differential Pressure: Connect tubing from the greater of two pressure sources to either high pressure port and the lower to either low pressure port. Plug both unused ports.
When one side of the gage is vented in dirty, dusty atmosphere, we suggest an A-331 Filter Vent Plug be installed in the open port to keep inside of gage clean.

A. For portable use of temporary installation use 1/8" pipe thread to rubber tubing adapter and connect to source of pressure with flexible rubber or vinyl tubing.
B. For permanent installation, 1/4" O.D., or larger, copper or aluminum tubing is recommended.

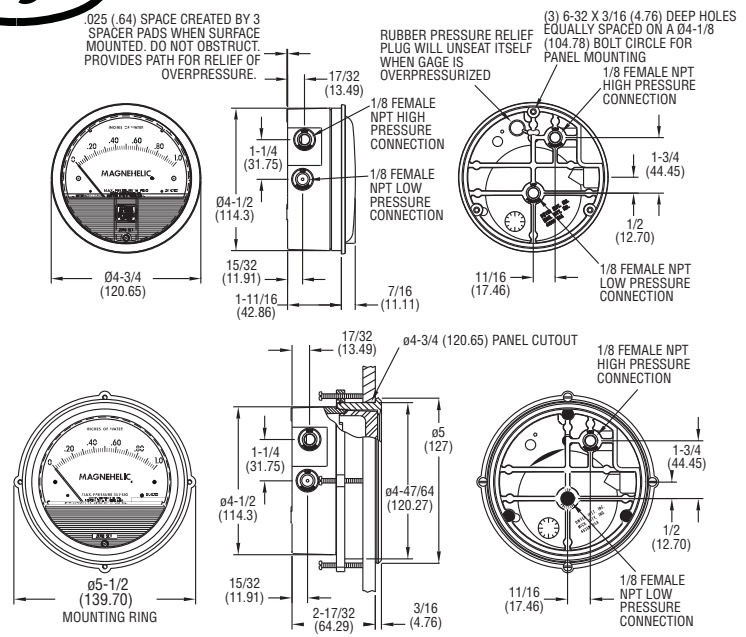
MAINTENANCE

No lubrication or periodic servicing is required. Keep case exterior and cover clean. Occasionally disconnect pressure lines to vent both sides of gage to atmosphere and re-zero. Optional vent valves should be used in permanent installations. The Series 2000 is not field serviceable and should be returned if repair is needed (field repair should not be attempted and may void warranty). Be sure to include a brief description of the problem plus any relevant application notes. Contact customer service to receive a return goods authorization number before shipping.

WARNING

Attempted field repair may void your warranty. Recalibration or repair by the user is not recommended.

TROUBLE SHOOTING TIPS



Gage won't indicate or is sluggish.

1. Duplicate pressure port not plugged.
2. Diaphragm ruptured due to overpressure.
3. Fittings or sensing lines blocked, pinched, or leaking.
4. Cover loose or "O"ring damaged, missing.
5. Pressure sensor, (static tips, Pitot tube, etc.) improperly located.
6. Ambient temperature too low. For operation below 20°F (-7°C), order gage with low temperature, (LT) option.

Magnehelic® Differential Pressure Gage
INSTRUCCIONES Y LISTA DE PARTES

(El tapón de goma no es usado en los modelos sobre 180 pulgadas de presión de agua, modelos de presión media o alta, o en instrumentos que requieren un elastizado en cualquier otro material que no sea silicona para el diafragma.)

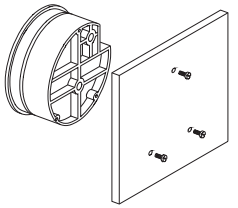
Accesorios: Tapones 1/8" NPT para las conexiones duplicadas, dos adaptadores de rosca 1/8" NPT a tubo de goma; y tres adaptadores para montaje al ras y tornillos.

Accesorios para Los Modelos MP y HP: El anillo de montaje y el retensor del anillo de presión son substituidos por 3 adaptadores, accesorios de compresión de 1/4" remplazan a los adaptadores de rosca 1/8" a tubo de goma.

Protección Para Sobrepresión: Los Manómetros Diferenciales Magnehelic Estándar están clasificados para una presión máxima de 15 psi y no se deberían de usar donde el límite puede excederse. Los modelos emplean un tapón de goma en el trasero que funciona como una válvula de alivio desmontándose y ventilando el interior del instrumento cuando la sobrepresión alcanza aproximadamente 25 psig. (Los modelos MP y HP son excluidos) Para proveer un camino libre para el alivio de presión, el instrumento viene con rodilleras que mantienen un espacio de .023" cuando el instrumento es montado en superficie. No bloque el espacio creado por estas rodilleras.

† Para aplicaciones con alto ciclo de velocidad dentro de la clasificación de presión total del instrumento, la próxima clasificación mas alta es recomendada. Vea las opciones de media y alta presión.

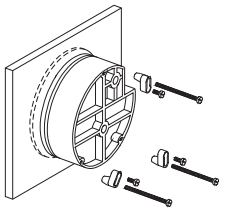
El instrumento puede ser usado con hidrogeno cuando se ordena con diafragma de Buna-N. La presion tiene que ser menos de 35 psi.



ESPECIFICACIONES

Servicio: aire y gases no combustibles, gases compatibles. (ópcion disponible para uso con gas natural).
Materiales Mojados: Consulte con la fábrica.
Carcasa: Caja y anillo de retención de aluminio fundido a presión con tapadera de acrílico. (El modelo MP tiene la tapadera de policarbonato.)
Exactitud: ±2% de fondo de escala a 21 °C
Mod. 2000-0 ±3%; Mod. 2000-00 ±4%
Límite de Presión: -20 Hg. a 15 psig. † (-0.677 bar a 1,034 bar); opción MP: 35 psig (2.41 bar), opción HP: 80 psig (5.52 bar).
Sobrepresión: El tapón de alivio se abre aproximadamente a los 25 psig, modelos estandard únicamente. El tapón de goma no es usado en los modelos sobre 180 pulgadas de presión de agua, modelos de presión media o alta, o en instrumentos que requieren un elastizado en cualquier otro material que no sea silicio para el diafragma.
Límite de Temperatura: -6.67 a 60ºC. * Modelos de baja temperatura disponibles como opción especial.
Dimensiones: diám. 120,65 mm x 55,6 prof.
Orientación de Montaje: El diafragma debe ser usado solo en posición vertical. Consulte con la fábrica para otras orientaciones de posición.
Conexiones: 1/8" NPT para alta y baja presión, duplicadas (atrás, a los lados).
Peso: 510 g, MP y HP 963 g.

Instalacíon



Seleccione un lugar libe de exceso de vibraciones, y donde la temperatura ambiente no supere los 60°C. Evite luz solar directa, para evitar decoloración de la cubierta plástica. Las conexiones de proceso pueden tener cualquier longitud sin afectar la exactitud, pero pueden extender el tiempo de respuesta del instrumento. Si hay pulsación de presión o vibración, consulte a fábrica sobre medios de amortiguación.
Los MAGNEHELIC han sido calibrados con el diafragma vertical, y deben ser usados en esas condiciones. Para otras posiciones, se debe especificar en la orden de provisión. Los de rango elevado pueden ser usados en diversas posiciones, pero se debe reajustar el cero. Los modelos de la serie 2000-00 y equivalentes métricos deben ser usados solo verticalmente.

Montaje en Superficie

Perfore tres orificios separados 120° sobre una circunferencia de 105 mm de diám. y sostenga el instrumento con tres tornillos 6-32 de long. apropiada.

Montaje alineado

Perfore un circulo de 115 mm de diám. en el panel, y sostenga el instrumento mediante los.

Montaje Sobre Pipa

Para montar el instrumento sobre pipas de 32 a 50 mm de diám., ordene el adaptador opcional A-610.

Puesta a Cero Después de Instalar

Deje las conexiones de presión abiertas a atmósfera y ajuste a cero desde tornillo del panel frontal.

Operacion

Presión Positiva: Conecte la tubería desde la fuente de presión a cualquiera de las dos conexiones de alta presión (HIGH), bloqueando la no usada; Las conexiones de baja (LOW) presión pueden dejarse uno o los dos abiertos a la atmósfera.
Presión Negativa: Repita el procedimiento anterior, conectado en este caso las conexiones de baja presión (LOW). Deje las otras conexiones abiertas.
Presión diferencial: Conecte el tubo correspondiente a la presión más positiva al cualquiera de los conectores de alta presión (HIGH) bloqueando el no usado, y la más baja presión o presión negativa (vacío) al conector de baja presión (LOW). Puede usarse cualquier conector de cada par, dejando siempre uno bloqueado. Si se deja una conexión abierta a la atmósfera, se recomienda el uso de un filtro tipo A-331 en el lugar correspondiente para mantener limpio el interior del instrumento. Para uso portable, o instalación temporaria, uso adapta dores para rosca de tubo de 1/89 a tubo flexible, y conecte a proceso mediante una tubería de goma, o equivalente. Para instalación permanente, se recomienda el uso de tubo de cobre o aluminio de por lo menos 1/4" de diám. exterior.

No se requiere mantenimiento específico alguno, ni lubricación. Periódicamente, desconecte el instrumento, ventee la presión acumulada, y reajuste el cero. Para instalaciones permanentes, se debe usar un juego de válvulas de montaje permanente para el venteo.
El instrumento de Serie 2000 no puede ser re parado en el campo y debería de ser regresado si reparos son necesarios (Reparos en el campo no deben de ser intentados y pueden cancelar la garantía.). Asegurarse de incluir una descripción breve del problema más cualquier notas pertinentes a la aplicación para devolución de productos antes de enviar el instrumento.

Cuidado! : La recalibración en campo puede invalidar la garantía. No se recomienda la recalibracion por parte del usuario. En caso necesario envie el instrumento con transporte pago a:

Localización De Fallas

• *El instrumento no indica, o es lento en reacción.*
1. Conexión duplicada abierta.
2. Diafragma roto por sobrepresión.
3. Tubería de conexión perforada, con pérdidas o pinchazos.
4. Anillo de retención flojo, u "O " ring dañado.
5. Conexión a proceso indebida o inadecuada.
6. Temperatura muy baja. Para este caso ordene tipos LT (baja temperatura).

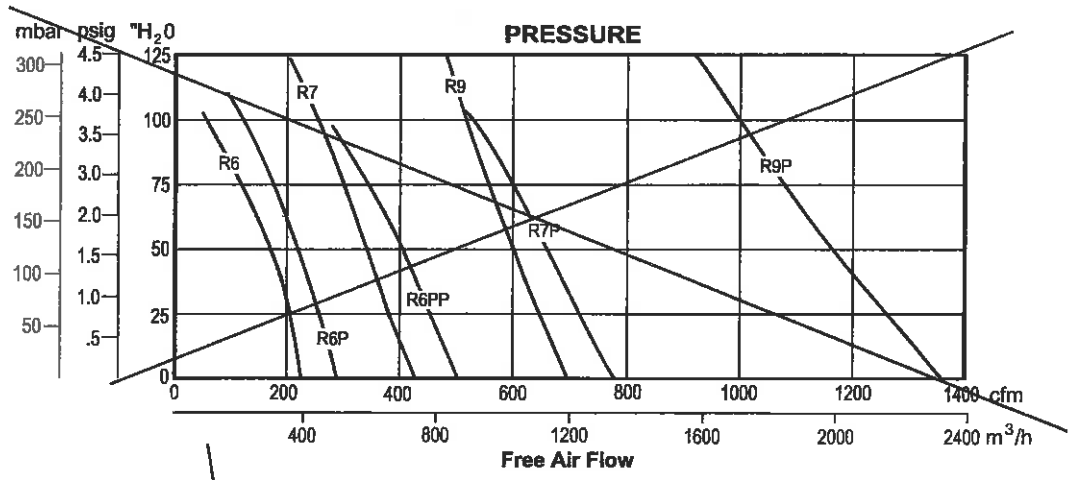
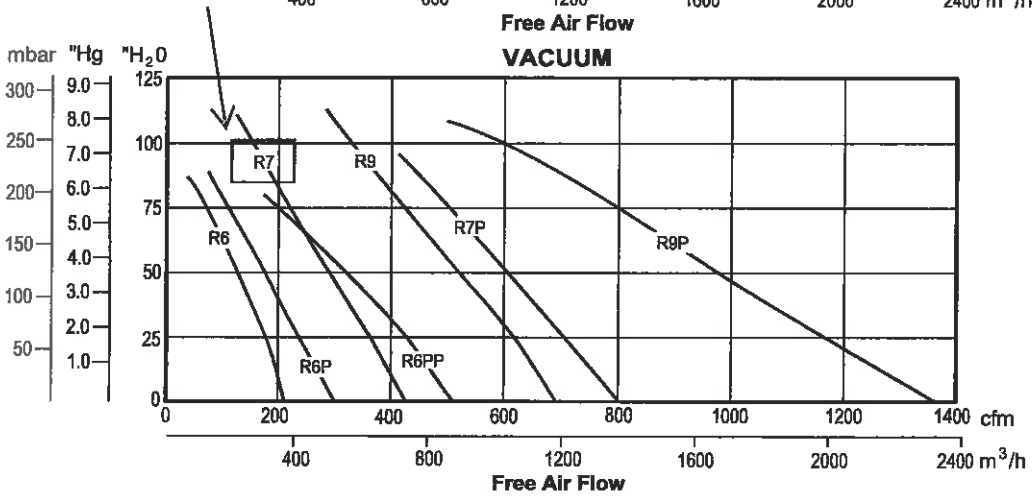
Buildings 785 and 786 Bill of Materials

System Component	Characteristics
Blower TEFC 10 HP electric motor (GAST® Model R7100A-3)	Maximum flow: 420 SCFM, Maximum Vacuum: 110 inch w.g.
60 gallon Moisture Knockout Vessel High Level Alarm Switch (Flotect® Model L6)	Required to avoid moisture impact on blower. When moisture knockout vessel reaches maximum volume, high level alarm switch is initiated. Equipped with manual bottom drain.
Inline Particulate Filter (Solberg® Model CT-235P 3" NPT)	An inlet filter is required to avoid the negative impact of soil particles present in the extracted vapor.
Air Dilution Gate Valve (Dilution Filter Model FS-19P-150)	An air dilution valve is required to adjust the systems applied vacuum.
Vacuum Relief Valve (Kunkle® Model 215V)	A vacuum relief valve is required to avoid damage to the blower in the event the flow is obstructed.
Horizontal Well Manifold (3 inch PVC)	Two point manifold with individual ball valves to control flow rate and vacuum per each horizontal well.
Gauges: Analog Dial Bimetal Thermometers, WIKA® Low Vacuum Gauges, Ashcroft® Low Pressure Gauge, Magnehelic® Differential Pressure Gauges, Pitot Tubes (Series DS-300 Flow Sensors)	Outlet temperature gauge before and after vapor treatment, inlet vacuum gauge before and after filter, outlet pressure gauge, and two flow meters, vacuum gauges and temperature gauges on each leg of manifold.
Control Panel	Input voltage: 460V, 3 phase power, HOA Switch, motor starter with adjustable thermal overload protection, high level alarm light, motor circuit breaker and main disconnect.
Vapor After Treatment	Two air purification canisters (G3-S) with 140 pounds granular activated carbon installed to treat vapor extracted from the soil.
Heat Exchanger (Model ACA® 6302-3)	Air cooled heat exchanger creates optimal influent temperatures for efficient absorption through granular activated carbon treatment.
Enclosure: wooden shed 8 ft X 12 ft. Heater: 3,000 - 4,000 watt electric heater, TPI model HF684TC.	System will be located in unheated former airplane hangar and needs to be enclosed with lights, heater, insulation, and outlet.

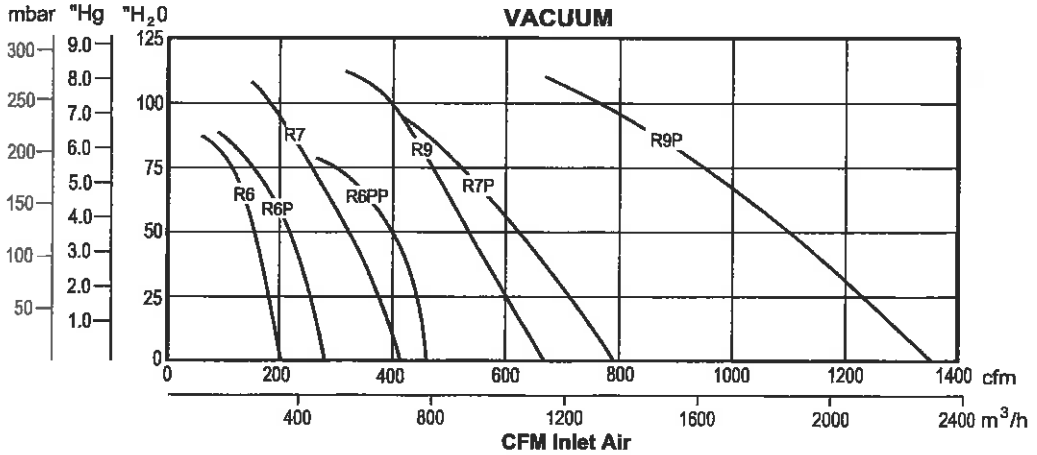


SECTION 1:



MAJOR SYSTEM COMPONENTS

Performance Curves - Mid Range for Pressure/Vacuum



Motor mounted series R6, R6P, R6PP, R7, R7P, R9, R9P

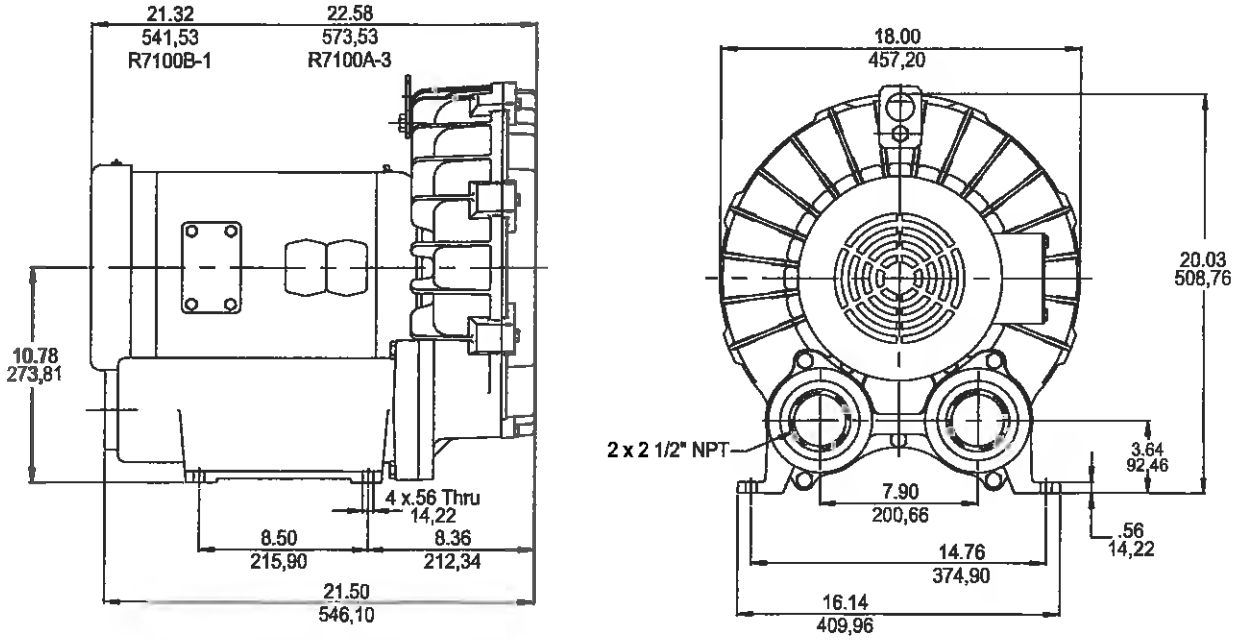
Performance at 60 Hz

Gast advertises blower performance in Free Air Flow, or air subjected to only atmospheric pressure. (See above curves)
Some blower manufacturers advertise vacuum performance in CFM Inlet Air - measurement of the suction of air at a specific temperature at the inlet port and a specific discharge pressure at the exhaust port, which can be perceived as enhanced performance over Free Air Flow rated blowers. Therefore, we are also providing the following vacuum performance for Gast blowers in CFM Inlet Air for comparison to other blower manufacturer's advertising.

®Registered Trademark/™Trademark of Gast Manufacturing Inc., Copyright ©2001 Gast Manufacturing Inc. All rights reserved.

R7 SERIES
MODELS R7100A-3, R7100B-1

MAX. PRESSURE – 125" H_2O (60 Hz), 115" H_2O (50 Hz)
MAX. VACUUM – 110" H_2O (60 Hz), 90" H_2O (50 Hz)
MAX. AIR FLOW – 420 CFM (60 Hz), 350 CFM (50 Hz)



PRODUCT FEATURES

- Rugged construction, low maintenance
- Oilless operation
- UL and CSA approved TEFC motors with permanently sealed ball bearings
- IP54 rated enclosure on motors
- Aluminum impeller; cast iron cover and housing
- Can be mounted in any plane
- Inlet and outlet have internal muffling

RECOMMENDED ACCESSORIES

- Pressure gauge AE133A
- Inlet filter AJ126G (pressure)
- Vacuum gauge AE134
- Vacuum gauge for monitoring inlet filter restriction AJ497
- Pressure/vacuum relief valve AG258
- Silencer for vacuum relief valve AJ121D
- Inline filter AJ151H (vacuum)
- External muffler for additional silencing AJ121G
- Liquid separator RMS400 (vacuum)

Q. What happens to the noise when I locate two blowers close together?

A. If the blowers are of the same design they produce sound frequencies that are close together. These may cause a "beating" change in volume of the blower noise. This is because the units are not synchronized. If two small blowers are needed this change in volume can be reduced by moving tham further apart. With larger blowers a dual blower with two blowers on one motor will solve this problem.

Q. What causes the noise relief valves make?

A. Air rush through the valve.

Q. How do I control relief valve or bleed off valve noise?

A. Attach AJ121 series silencer on the port of the relief valve that is open to atmosphere.

Contact Gast at 616-926-6171 or www.gastmfg.com with any further questions you may have on reducing blower noise in your application.

Blower Sound Levels of Gast Blowers

Data is highest sound level out of 4 places around the blower at 1 meter.

Data represents average of several units run at nominal voltage.

Lowest to highest maximum dba level throughout performance range is shown.

Readings at other than the maximum around the blower at 1 meter may be from 2 to 10 dba less than data shown.

Readings taken in a laboratory sound room that does not reflect much noise.

Note: For comparison purposes, some blower manufacturers show sound data from 1–1/2 meters instead of from 1 meter; also, some blower manufacturers show an "average" sound level across performance instead of the full range between minimum and maximum sound levels; either of these methods will provide different and usually lower sound levels compared to Gast's sound level method.

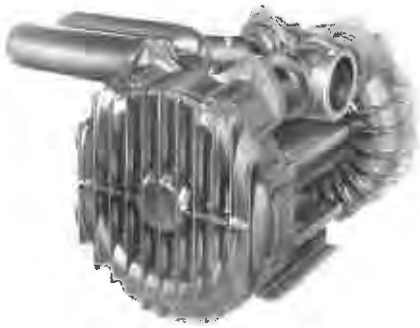
PART NO. 70 - 6000 F2-200 (REV-K)

STANDARD REGENAIR BLOWER



OPERATION & MAINTENANCE MANUAL

Model R1 Shown

Model R6P350A Shown

Model R7P Shown

Thank you for purchasing this Gast product. It is manufactured to the highest standards using quality materials. Please follow all recommended maintenance, operational and safety instructions and you will receive years of trouble free service.

⚠ WARNING

PLEASE READ THIS MANUAL COMPLETELY BEFORE INSTALLING AND USING THIS PRODUCT. SAVE THIS MANUAL FOR FUTURE REFERENCE AND KEEP IN THE VICINITY OF THE PRODUCT.

General information

This manual does not apply to:

- SDR Series blowers without motors
- Blowers powered with Explosion Proof Motors

Product Use Criteria:

- Pump only clean, dry air.
- Operate at -20°F - 104°F (-29°C - 40°C).
- Protect unit from dirt & moisture.
- Do not pump flammable or explosive gases or use in an atmosphere that contains such gases.
- Protect all surrounding items from exhaust air. This exhaust air can become very hot.
- Corrosive gases and particulate material will damage unit. Water vapor, oil-based contaminants or other liquids must be filtered out.
- The blower must be installed with the properly sized inlet and inline filters, gauges and relief valves to protect the product from dirt and over-heating.
- Consult your Gast Distributor/Representative before using at high altitudes.

GAST® A Unit of IDEX Corporation

ISO 9001 & 14001 CERTIFIED

Your safety and the safety of others is extremely important.

We have provided many important safety messages in this manual and on your product. Always read and obey all safety messages.

This is the safety alert symbol. This symbol alerts you to hazards that can kill or hurt you and others. The safety alert symbol and the words "DANGER" and "WARNING" will precede all safety messages. These words mean:

DANGER

You will be killed or seriously injured if you don't follow instructions.

WARNING

You can be killed or seriously injured if you don't follow instructions.

All safety messages will identify the hazard, tell you how to reduce the chance of injury, and tell you what can happen if the safety instructions are not followed.

INSTALLATION

WARNING

Electrical Shock Hazard

Disconnect electrical power at the circuit breaker or fuse box before installing this product.

Install this product where it will not come into contact with water or other liquids.

Install this product where it will be weather protected.

Electrically ground this product.

Failure to follow these instructions can result in death, fire or electrical shock.

Correct installation is your responsibility. Make sure you have the proper installation conditions and that installation clearances do not block air flow.

Blocking air flow over the product in any way can cause the product to overheat.

The blower must be installed with the properly sized inlet filter, gauge and relief valve to protect the product from dirt and over-heating.

Mounting

The single impeller blower should be oriented with the shaft in a horizontal position, unless the model's product features state otherwise. The dual impeller models must be mounted with the shaft in a horizontal position. Mounting the product to a stable, rigid operating surface and using shock mounts will reduce noise and vibration.

Rotation

From the motor side of the blower, check that the blower is rotating clockwise. (The motor side is marked with an arrow on most models.) Proper rotation can also be checked by the air flow at the IN and OUT ports. On blowers powered by a 3-phase motor, incorrectly connecting any two power lines can reverse direction.

Plumbing

Remove any foreign material (burrs, chips, welding drops, slag, pipe cuttings, excess sealant, sand or lime) from plumbing.

Check motor mounting and rotation before connecting to plumbing. Inlet and outlet ports are not designed to support plumbing.

Remove plugs from the IN and OUT ports. Use a small amount of pipe thread lubricant when connecting plumbing to protect the aluminum blower threads. Connect with pipe and fittings that are the same size or larger than the product's threaded ports. When installing two blowers in parallel, use plumbing that is two whole pipe sizes larger in diameter than that of the blower. Be sure to connect the intake and exhaust plumbing to the correct inlet and outlet ports.

Plumbing to remove the hot discharge air of larger blowers may be required to help maintain proper room ambient temperature. Use a relief valve to discharge excess air into the atmosphere. If the blower will be operated at 125mbar (50" H_2O) or higher, metal pipe is required for hot exhaust air.

Accessories

Install two vacuum gauges, one before and one after filter, to monitor restriction through filters. As filters become clogged, performance efficiency will be reduced. Filters should be checked periodically and replaced when necessary. See page 7 for installation.

Install a relief valve to avoid changes in pressure or vacuum that can cause overloading of large blowers. Install an intake filter with a relief valve to prevent foreign material from entering blower if blower is used in a vacuum application in a dirty environment. In applications where there is high humidity or liquids being used in the process, install a moisture separator.

See Recommended Accessories on pages 7-9 or consult your Gast Distributor/Representative for additional filter and accessories recommendations. Do Not install check valves that close with a strong spring. The recommended check valves (page 7) provide minimal pressure drop, positive sealing and are resistant to the high discharge temperatures of large blowers.

Motor Installation

It is your responsibility to contact a qualified electrician and assure that the electrical installation is adequate and in conformance with all national and local codes and ordinances.

Select fuses, motor protective switches or thermal protective switches to provide protection. Fuses act as short circuit protection for the motor, not as protection against overload. Incoming line fuses must be able to withstand the motor's starting current. Motor starters with thermal magnetic overload or circuit breakers protect motor from overload or reduced voltage conditions. Motors without automatic restart require thermal protection or magnetic over-current cutout to prevent motor overloading from one phase in a 3-phase circuit, high starting frequency or jammed blower.

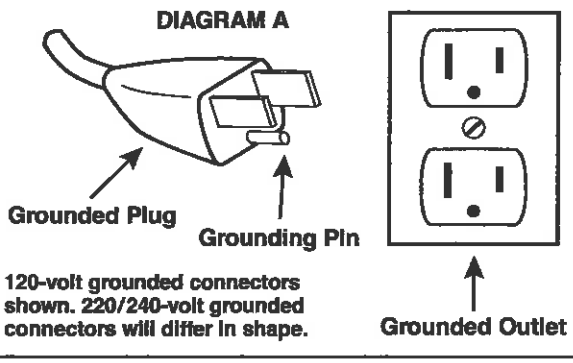
The power required will rise as differential pressure increases. The wiring diagram attached to the product or on page 6 of this manual provides required electrical information. Large motors have two diagrams, one for 50Hz wiring specifications and the other for 60Hz wiring specifications. Check that the power source is correct to properly operate the dual-voltage motor. If additional information is required, please consult your Gast Distributor/Representative.

Electrical Connection

⚠ WARNING

Electrical Shock Hazard

This product must be properly grounded.



Do not modify the plug provided. If it will not fit the outlet, have the proper outlet installed by a qualified electrician.

If repair or replacement of the cord or plug is necessary, do not connect the grounding wire to either flat blade terminal. The wire with insulation that is green or green with yellow stripes is the grounding wire.

Check the condition of the power supply wiring. Do not permanently connect this product to wiring that is not in good condition or is inadequate for the requirements of this product.

Failure to follow these instructions can result in death, fire or electrical shock.

DIAGRAM A

120-volt grounded connectors shown. 220/240-volt grounded connectors will differ in shape.

Model with a power supply cord:
This product must be grounded. For either 120-volt or 220/240-volt circuits connect power supply cord grounding plug to a matching grounded outlet. **Do not use an adapter.** (See DIAGRAM A)

In the event of an electrical short circuit, grounding reduces the risk of electric shock by providing an escape wire for the electric current. This product may be equipped with a power supply cord having a grounding wire with an appropriate grounding plug. The plug must be plugged into an outlet that is properly installed and grounded in accordance with all local codes and ordinances.

Check with a qualified electrician or serviceman if the grounding instructions are not completely understood, or if you are not sure whether the product is properly grounded. Do not modify the plug provided. If it will not fit the outlet, have the proper outlet installed by a qualified electrician.

Model that is permanently wired:
This product must be connected to a grounded, metallic, permanent wiring system, or an equipment grounding terminal or lead on the product.

Power supply wiring must conform to all required safety codes and be installed by a qualified person. Check that supply voltage agrees with that listed on product nameplate.

Extension cords:
Use only a 3-wire extension cord that has a 3-blade grounding plug. Connect extension cord plug to a matching 3-slot receptacle. **Do not use an adapter.** Make sure your extension cord is in good condition. Check that the gage wire of the extension cord is the correct size wire to carry the current this product will draw.

An undersized cord is a potential fire hazard, and will cause a drop in line voltage resulting in loss of power causing the product to overheat. The following table indicates the correct size cord for length required and the ampere rating listed on the product nameplate. **If in doubt, use the next heavier gage cord. The smaller the gage number, the heavier the wire gage.**

Minimum gage for extension cords

Amps	Volts	Length of cord in feet								
	120v	25	50	100	150	200	250	300	400	500
	240v	50	100	200	300	400	500	600	800	1000
0-2		18	18	18	16	16	14	14	12	12
2-3		18	18	16	14	14	12	12	10	10

OPERATION

⚠ WARNING

Injury Hazard

Install proper safety guards as needed to prevent any close contact with blower suction area.

Keep fingers and objects away from openings and rotating parts.

Product surfaces become very hot during operation, allow product surfaces to cool before handling.

Air stream from product may contain solid or liquid material that can result in eye or skin damage, wear proper eye protection.

Wear hearing protection. Sound level from some models may exceed 85 dBA.

Failure to follow these instructions can result in burns, eye injury or other serious injury.

It is your responsibility to operate this product at recommended pressures or vacuum duties and room ambient temperatures. Do not operate R4P or larger size blowers without air flowing through the blower. Do not throttle discharge or suction pipe to reducer capacity. Throttle will increase differential pressure causing increasing power absorption and working temperatures.

Start Up

Operate blower for an hour and then check:

1. **Ambient temperature** – Check room and discharge air temperatures. Increased room temperatures may require stronger ventilation especially for larger blowers. Exhaust air should not exceed 215°F (102°C) for all blowers less than 3.5 Hp. Exhaust air should not exceed 275°F (135°C) for all blowers above 3.5 Hp.
2. **Working pressure and vacuum values** – Adjust relief valve pressure or vacuum setting, if needed.
3. **Motor current** – Check that supply current matches recommended current rating on product nameplate.
4. **Electrical overload cutout** – Check that current matches rating on product nameplate.

If motor fails to start or slows down significantly under load, shut off and disconnect from power supply. Check that the voltage is correct for motor and that motor is turning in the proper direction.

FOR BLOWERS WITH GREASE FITTINGS

Hours of Service Per Year	Relubrication Intervals
5,000	3 years
Continual Normal Service	1 year
Seasonal Service (motor idle for 6 months or more)	1 year at beginning of season
Continuous-high ambients, dirty or moist applications	6 months

Check that all external accessories such as relief valves and gauges are not damaged before re-operating product.

MAINTENANCE

⚠ WARNING

Electrical Shock Hazard

Disconnect electrical power supply cord before performing maintenance on this product.

Some motors are thermally protected and will automatically re-start when protector resets.

If product is hard wired into system, disconnect electrical power at the circuit breaker or fuse box before performing maintenance on this product.

Failure to follow these instructions can result in death, fire or electrical shock.

If the product is supplied with an electric power chord, protect it from twisting, cuts and abrasion. When not in use, store in a clean dry place

⚠ WARNING

Injury Hazard

Product surfaces become very hot during operation, allow product surfaces to cool before handling.

Air stream from product may contain solid or liquid material that can result in eye or skin damage, wear proper eye protection.

Failure to follow these instructions can result in burns, eye injury or other serious injury.

It is your responsibility to regularly inspect and make necessary repairs to this product in order to maintain proper operation. Make sure that pressure and vacuum is released from product before starting maintenance.

Check filter elements and noise absorbing foam used in mufflers and clean motor and blower after first 500 hours of operation. Replace filter elements and determine how frequently mufflers should be checked during future operation. This one procedure will help assure the product's performance and service life.

When there is an increase in the differential pressure across the inlet filter it is beginning to clog with dirt. Replace the cartridge when the filter will not come clean.

Small motor bearings (less than 5.5 Hp) never need to be greased. Larger motor bearings (greater than 5.5 Hp) have alemite grease fittings. Use a grease gun and apply one or two strokes of Exxon POLYREX® grease to the fittings to lubricate larger motor bearings.

WARRANTY

Gast finished products, when properly installed and operated under normal conditions of use, are warranted by Gast to be free from defects in material and workmanship for a period of twelve (12) months from the date of purchase from Gast or an authorized Gast Representative or Distributor. In order to obtain performance under this warranty, the buyer must promptly (in no event later than thirty (30) days after discovery of the defect) give written notice of the defect to Gast Manufacturing Incorporated, PO Box 97, Benton Harbor Michigan USA 49023-0097 or an authorized Service Center (unless specifically agreed upon in writing signed by both parties or specified in writing as part of a Gast OEM Quotation). Buyer is responsible for freight charges both to and from Gast in all cases.

This warranty does not apply to electric motors, electrical controls, and gasoline engines not supplied by Gast. Gast's warranties also do not extend to any goods or parts which have been subjected to misuse, lack of maintenance, neglect, damage by accident or transit damage.

THIS EXPRESS WARRANTY EXCLUDES ALL OTHER WARRANTIES OR REPRESENTATIONS EXPRESSED OR IMPLIED BY ANY LITERATURE, DATA, OR PERSON. GAST'S MAXIMUM LIABILITY UNDER THIS EXCLUSIVE REMEDY SHALL NEVER EXCEED THE COST OF THE SUBJECT PRODUCT AND GAST RESERVES THE RIGHT, AT ITS SOLE DISCRETION, TO REFUND THE PURCHASE PRICE IN LIEU OF REPAIR OR REPLACEMENT.

GAST WILL NOT BE RESPONSIBLE OR LIABLE FOR INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND, however arising, including but not limited to those for use of any products, loss of time, inconvenience, lost profit, labor charges, or other incidental or consequential damages with respect to persons, business, or property, whether as a result of breach of warranty, negligence or otherwise. Notwithstanding any other provision of this warranty, BUYER'S REMEDY AGAINST GAST FOR GOODS SUPPLIED OR FOR NON-DELIVERED GOODS OR FAILURE TO FURNISH GOODS, WHETHER OR NOT BASED ON NEGLIGENCE, STRICT LIABILITY OR BREACH OF EXPRESS OR IMPLIED WARRANTY IS LIMITED SOLELY, AT GAST'S OPTION, TO REPLACEMENT OF OR CURE OF SUCH NONCONFORMING OR NON-DELIVERED GOODS OR RETURN OF THE PURCHASE PRICE FOR SUCH GOODS AND IN NO EVENT SHALL EXCEED THE PRICE OR CHARGE FOR SUCH GOODS. GAST EXPRESSLY DISCLAIMS ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE WITH RESPECT TO THE GOODS SOLD. THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTIONS SET FORTH IN THIS WARRANTY, notwithstanding any knowledge of Gast regarding the use or uses intended to be made of goods, proposed changes or additions to goods, or any assistance or suggestions that may have been made by Gast personnel.

Unauthorized extensions of warranties by the customer shall remain the customer's responsibility.

CUSTOMER IS RESPONSIBLE FOR DETERMINING THE SUITABILITY OF GAST PRODUCTS FOR CUSTOMER'S USE OR RESALE, OR FOR INCORPORATING THEM INTO OBJECTS OR APPLICATIONS WHICH CUSTOMER DESIGNS, ASSEMBLES, CONSTRUCTS OR MANUFACTURES.

This warranty can be modified only by authorized Gast personnel by signing a specific, written description of any modifications.

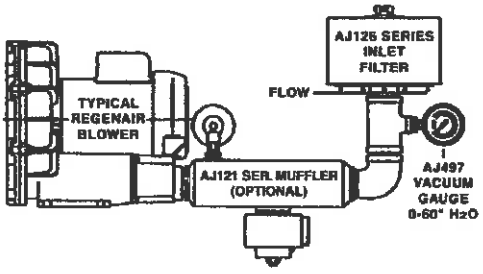
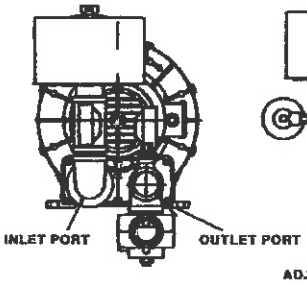
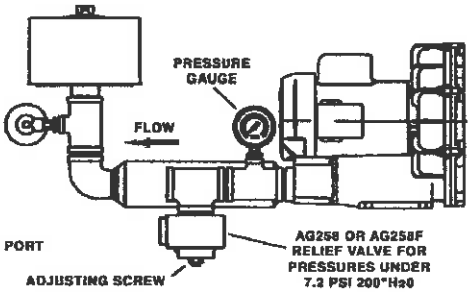
RECOMMENDED ACCESSORIES

The following diagrams are only suggested configurations for these accessories. These accessory configurations may vary depending upon a particular unit's application.

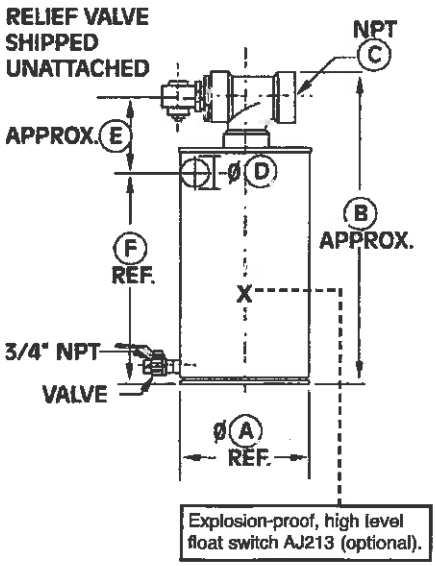


VACUUM ACCESSORIES





PRESSURE ACCESSORIES



MOISTURE SEPARATOR (FOR VACUUM)

This moisture separator removes liquids from the gas stream in a vacuum process. This helps protect the blower from corrosion and the build up of mineral deposits.

For Model Number	R3, R4, R5	R4, R4H, R4P, R5	R4H, R4M, R5, R6, R6P, R6PS,	R4M, R6, R6P, R6PP, R7, R7P, R7S, R9, R9S

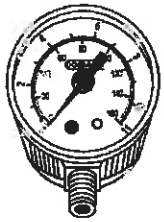
Maximum vacuum allowed: 22" Hg.



HORIZONTAL SWING TYPE CHECK VALVE

This check valve prevents backwash of fluids from entering the blower and air back-streaming. The check valve can be mounted to discharge or inlet either vertically or horizontally. The check valve will open with 3" of water pressure or vacuum.

EXPLODED PRODUCT VIEW

TROUBLESHOOTING CHART

Problem	Reason	Remedy
Increased sound.	Noise absorbing foam is damaged. Impeller rubbing inside.	Replace foam. Send unit to a Gast Authorized Service Facility.
Excessive vibration.	Damaged impeller. Motor and/or impeller are dirty.	Replace impeller. Clean motor and impeller periodically.
Ambient and exhaust temperature increases.	Motor and/or blower are dirty. Filters dirty.	Clean motor and blower periodically. Replace filters.
Decreased inlet air pressure	Inlet air filter is clogged.	Clean inlet filter. Replace cartridge.
Unit is very hot.	Wrong wiring. Low voltage. Inlet air filter is clogged. Motor and/or blower are dirty. Operating at too high a pressure or vacuum.	Check wiring. Supply proper voltage. Clean inlet filter. Replace cartridge. Clean motor and blower periodically. Install a relief valve and pressure or vacuum gauge.
Unusual sound.	Impeller is damaged or dirty. Bearing going bad.	Clean or replace impeller. Send unit to a Gast Authorized Service Facility.
Motor overload	Low voltage.	Check power source. Check wire size and wire connections.
Unit does not start.	Incorrect electrical connection or power source. Impeller is damaged.	Check wiring diagram, circuit fusing and circuit capacity. Clean or replace impeller. Install proper filtration.

COMPACT "T" STYLE VACUUM FILTERS
"CT Series" 2" - 6" FPT

SOLBERG®

- **Compact Design**
- **Multi-Stage Filtration**
- **Quick Change Out**
- **Vacuum Tested**

BENEFITS

- **Compact** design for space restrictions; **Minimal** service area needed
- **Integrated Inlet Baffle**
- Inlet is above the element to **Extend** element life and maintenance intervals
- "T" style design **Minimizes** piping requirements
- "Drop-Down" housing for easy servicing and containment of particles
- Cast aluminum head **Resists** corrosion
- Pressure differential ports standard for monitoring
- Casting has 4 unthreaded tap holes for mounting bracket
- **Vacuum level**: Typically $1x10^{-3}$ mmHg ($1.3x10^{-3}$ mbar)
- Swing Bolts on 5" & 6" sizes for additional strength

OPTIONS (Inquires Encouraged)

- Various media alternatives
- **See Through Bottom for Visual Inspection Now available for 3" and 4" housings!**
- Swing Bolts for 2" - 4" Sizes

Solberg – Discover the Possibilities

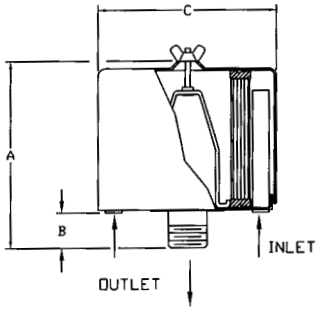
Small Compact Filter Silencers
w/ Standard Filter Design
"FS" Series 1/2" - 3" MPT

APPLICATIONS & EQUIPMENT

- Industrial & Severe Duty
- Piston Compressors
- Screw Compressors
- Blowers - Side Channel & P.D.
- Hydraulic Breathers – fine filtration
- Engines
- Construction\Contractor Industry
- Workshop
- Medical\Dental Industry
- Pneumatic Conveying
- Waste Water Aeration
- Nailers and Staplers
- Vacuum Vent Breathers

FEATURES & SPECIFICATIONS

- Polyester: 99%+ removal efficiency standard to 5 micron
- Paper: 99%+ removal efficiency standard to 2 micron
- Fully drawn weatherhood - no welds to rust or vibrate apart
- Tubular silencing design - tube is positioned to maximize attenuation and air flow while minimizing pressure drop
- Durable carbon steel construction with baked enamel finish and powder coated weatherhood
- Interchangeable media: Polyester, Paper, HEPA
- Several element sizes available per given connection (safety factor)
- Temp (continuous): min -15°F (-26°C) max 220°F (104°C)
- Filter change out differential: 10"-15" H_2O over initial delta P
- Pressure drop graphs available upon request



OPTIONS (Inquiries Encouraged)

- 1/8" tap holes
- Pressure Drop Indicator
- Available in ***Stainless Steel***
- Epoxy coated housings
- Various media available
- Special connections, BSPT

Section A

INTRODUCTION

The purpose of this manual is instruction on the proper assembly and care of Solberg inlet vacuum filters.

WARNING

This manual must be read and thoroughly understood before using and caring for this air filter. Failure to comply could result in explosion, product/system contamination or personal injury.

This manual should be used as a supplement to the user's understanding of the proper care needed to maintain a safe and dependable air filter. It is the responsibility of the user to interpret and explain all instructions to persons who do not read or understand English BEFORE they are allowed to maintain and use this filter.

This manual should be readily available to all operators responsible for operation and maintenance of the vacuum inlet filters.

We thank you for selecting products from Solberg Manufacturing, Inc. We are confident that our superior filter designs will exceed your application requirements.

Section B

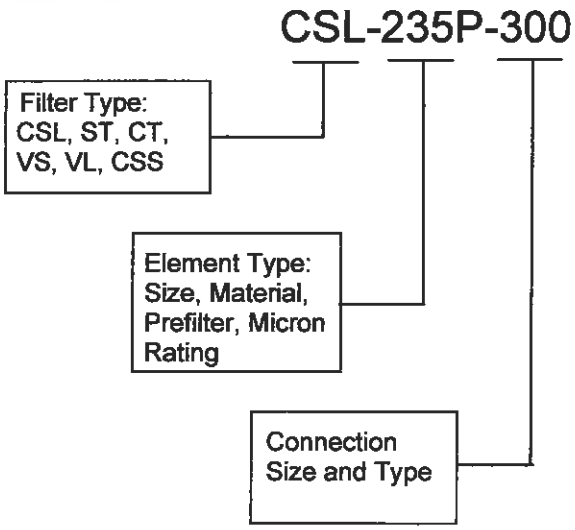
GENERAL INFORMATION

1. Identification of Solberg Vacuum Inlet Filters.

All Solberg inlet vacuum air filters should have an identification label/nameplate that gives the following information:

Assembly Model #
Replacement Element #

(The exception is OEM supplied units. In this case please enter the OEM part numbers below.)



Solberg Manufacturing, Inc., 1151 Ardmore Itasca, IL 60143 USA
Ph: 630.773.1363 Fax: 630.773.0727 Email: sales@solbergmfg.com Web: www.solbergmfg.com

Fill in the actual nameplate data from your new Solberg inlet filter(s):

No.	Filter Model Number	Replacement Element
1		
2		
3		
4		
5		

Table 1

The model number designates the filter type, the original element configuration and housing connection size. For example, the following part number identifies the filter as being a 'CSL' design filter with a 235 element with prefilter and 3" MPT connection size:

2. Filtration Rules of Thumb

General: For peak output performance from a compressor, blower, vacuum pump, engine, or any other machine that consumes air, one must have clean, unrestricted air. Proper filtration can help stabilize the working environment within rotating equipment even when the external conditions may be quite severe. A critical component in creating the right working conditions is filter sizing. With the properly sized filter, equipment will run smoothly over its entire expected operating life.

A major factor in filtration and filter sizing is air velocity through the filter media. Generally, the slower the velocity of air through a media the higher the filter

efficiency and, conversely, the lower the pressure drop. Therefore, the primary goal in filter sizing is to optimize the velocity of air through the media (sometimes called face velocity).

Rule of Thumb #1: Always begin with the filter cartridge requirements when sizing a filter. Once the appropriate element has been selected then move on to the housing requirements.

Rule of Thumb #2: Always ask or specify a filter based on a micron rating **with** filtration efficiencies. As an example, stating a requirement for a 1-micron filter is misleading because no efficiency rating has been specified. A 1-micron filter at 95-% efficiency may be less efficient than a 5-micron filter at 99% efficiency. For proper air system performance in light and industrial duty environments, a filter with a minimum of 99% filtration efficiency at 5 microns is required.

Rule of Thumb #3: Size your filter correctly by understanding the impact air velocity through a media has on efficiency and pressure drop. Maintain the suggested Air-to-Media ratios listed below based on the external environment listings and Filtration efficiency needs.

Filtration Efficiency Requirements (99+% efficiency)	**Environmental Conditions**	**Air to Media Ratio**	
Industrial Grade 2-micron **Paper**	Industrial Duty (clean, office/warehouse-like)	30 CFM/ft^2	$(51m^3/h)/cm^2$
	Severe Duty (workshop, factory-like)	15 CFM/ft^2	$(25.5m^3/h)/cm^2$
	Extreme Duty (Foundry, Construction-like)	10 CFM/ft^2	$(17m^3/h)/cm^2$
Industrial Grade 5-micron **Polyester**	Industrial Duty (clean, office/warehouse-like)	50 CFM/ft^2	$(85m^3/h)/cm^2$
	Severe Duty (workshop, factory-like)	40 CFM/ft^2	$(68m^3/h)/cm^2$
	Extreme Duty (Foundry, Construction-like)	25 CFM/ft^2	$(42.5m^3/h)/cm^2$
Industrial Grade 1-micron **Polyester**	Severe Duty (Foundry, Construction-like)	10 CFM/ft^2	$(17m^3/h)/cm^2$
Industrial Grade 0.3-micron **HEPA** Glass @ 99.97% efficiency	Industrial Duty (clean office/warehouse-like)	10 CFM/ft^2	$(17m^3/h)/cm^2$
	Severe Duty (workshop, factory-like)	7 CFM/ft^2	$(12m^3/h)/cm^2$
	Extreme Duty (Foundry, Construction-like)	5 CFM/ft^2	$(8.5m^3/h)/cm^2$

Table 2

Solberg Manufacturing, Inc., 1151 Ardmore Itasca, IL 60143 USA
Ph: 630.773.1363 Fax: 630.773.0727 Email: sales@solbergmfg.com Web: www.solbergmfg.com

Rule of Thumb #4: Pressure drop is also caused by the dirt holding capacity of the element. As the element fills up with dirt, the pressure drop increases. It is important to document the pressure drop across a given filter when it is new and then clean or replace it when the pressure drop increases by 10" to 15" / 250-380mm H_2O from the original reading.

Rule of Thumb #5: The inlet connection greatly influences the overall pressure drop of the filter system. To minimize the restriction contributed by an inlet filter, a velocity of 6,000 ft/min (10200m^3/h) or less is suggested through the outlet pipe. The table below lists the suggested flows based on pipe size:

Pipe Size (inches)	Max Airflow		Pipe Size (inches)	Max Airflow		Pipe Size (inches)	Airflow	
1/4"	6 CFM	10m^3/h	1 ¼"	60 CFM	102m^3/h	6"	1,100 CFM	1870m^3/h
3/8"	8 CFM	14m^3/h	1 ½"	80 CFM	136m^3/h	8"	1,800 CFM	3060m^3/h
1/2"	10 CFM	17m^3/h	2"	135 CFM	230m^3/h	10"	3,300 CFM	5610m^3/h
3/4"	20 CFM	34m^3/h	2 ½"	195 CFM	332m^3/h	12"	4,700 CFM	7990m^3/h
1"	35 CFM	60m^3/h	3"	300 CFM	510m^3/h	14"	6,000 CFM	10200m^3/h
			4"	520 CFM	884m^3/h			
			5"	800 CFM	1360m^3/h			

Table 3 **Note: This information is for general use only. A qualified engineer must properly design each system.*

4. Element Cleaning

Some types of Solberg inlet filter elements can be cleaned and reused. However, damage can occur to an element during cleaning so it is imperative that care is taken during disassembly, cleaning and re-assembly. Damaged elements can allow particulate bypass, which will damage rotating equipment.

A. ***Polyester Element***: The polyester element may be washed in warm soapy water, vacuumed, gently blown out or replaced. The element should be dry before reinstallation.
B. ***Paper Element***: The paper element may be lightly blown with low pressure air. It is disposable and in most cases should be replaced with a new element.
C. ***Polyurethane Prefilter***: The prefilter may be washed as a sponge or replaced to give the element a longer service life.
D. ***Epoxy Coated Wire Mesh and Stainless Steel Wire Mesh Elements***: Cleaning instructions similar to polyester, except mild solvents may be used.
E. ***Activated Carbon Element***: Not cleanable
F. ***Polypropylene Element***: Cleaning instructions similar to polyester
G. ***Nomex Cloth Element***: Cleaning instructions similar to polyester

If you are not confident that the integrity of the element was maintained during cleaning, it is recommended that a new element be installed. Also, spare parts such as gaskets, wingnuts and washers can be supplied upon request.

Section C

PROCEDURES

1. **Installation.**

   A. Maximum inlet gas stream temperature for most Solberg inlet vacuum filter products is 220°F / 105°C. Temperatures in excess of this could cause damage to elements, media and elastomers.

   B. Direction of flow is typically from the outside of the element to the inside of the element. Most products have arrows indicating direction of flow on inlet and outlet ports.

   C. Ensure that pipe/flange connections are adequately sealed so the potential for leaks is reduced to a minimum.

2. **Disconnecting canister top from canister base.**

   A. ST/CT/Small CSL: Release wire-form clips or loosen wing nut on "claw" bolts.

   B. Large CSL: Loosen wing nut or hex head on T-bolts.

   C. CSS: Twist upper housing to release.

   D. VS/VL: Remove V-clamp by loosening Hex Nut or T-bolt and releasing.

   E. Lift off canister top.

3. **Removing element for service/maintenance.**

   A. Remove retaining hex head/wing-nut and washer carefully, and then remove element. Some elements will have a top plate that should also be removed.

   B. Clean sealing surfaces of housing, top & base plates, and element endcaps so that they are free of dirt or any other particulate.

WARNING

Failure to comply with these instructions may result in system or pump contamination.

4. **Securing Element.**

   A. Place new or cleaned element evenly on base plate. Be sure element seats properly on base and there is no dirt or particulate present on sealing surfaces.

   B. Place top plate (if necessary) on element by centering on tap bolt.

   C. Secure washer and wing nut to end cap (or top plate) and tap bolt. Element must be tightly secured. Note: DO NOT over tighten!

WARNING

Defective installation may cause system or pump contamination. Use only genuine Solberg replacement parts.

5. **Securing canister top to canister base.**

   A. Make sure all surfaces are free from dust and other particulate.

   B. Hemisphere o-ring must rest evenly along canister/casting base o-ring groove.

   C. ST/CT/Small CSL: Hold canister housing against o-ring or sealing ring on main filter head. Re-fasten wire-form clips or "claw" bolts.

   D. Large CSL: Replace housing top plate. Feed T-bolts into corresponding slots and tighten evenly around perimeter. Note: Do NOT over tighten!

   E. VS/VL: Secure V-clamp by disconnecting hex nut or T-bolt portion and placing V-clamp along the diameter of canister o-ring groove. Fasten T-bolt and secure tightly. V-CLAMP LEGS MUST REST UNIFORMLY ALONG ENTIRE O-RING GROOVE.

   F. CSS: Reassemble top housing to bottom housing by aligning tabs and turning into place.

Section D

MAINTENANCE RECOMMENDATIONS

1. Pressure drop readings are recommended to have an effective air filter. Always document initial pressure drop during start-up when element is clean. Replacement cartridge is needed when system experiences 10" to 15" / 250-380mm H_2O higher pressure drop above the initial reading. Refer to page 4 for instructions.

2. Always check replacement cartridge gaskets to insure they are adhered uniformly along the end caps during handling. If not, contact Solberg Manufacturing, Inc. immediately. Do not modify or change from Solberg specified parts!

3. Always check inlets/outlets, element base and its components when replacing element to insure cleanliness. Wipe clean if necessary.

4. Operate only when a proper seal exists.

5. VS/VL: Never operate without absolute assurance that V-clamp is secured correctly along entire diameter of canisters. Check along V-clamp for wear. Replace if any distortion occurs due to handling and usage.

Models 215V and 337

KUNKLE

Model 215V is Non-code Vacuum and Model 337 is ASME Section VIII, Air/Gas Vacuum, 'UV' National Board Certified, Safety Valves. PED Certified for Non-Hazardous Gas.

Features

- **Large nozzle design** provides high capacity.
- **Flat bronze valve seats are lapped** for optimum performance.
- **Warn ring offers easy adjustability** for precise opening with minimum pre-open or simmer and exact blowdown control.
- **Pivot between disc and spring** corrects misalignment and compensates for spring side thrust.

Model Descriptions

- **Model 337 has 'pull-ring' lift device** for easy manual testing.
- **Every valve is 100% tested/inspected** for pressure setting, blowdown and leakage.
- **All adjustments are factory sealed** to prevent tampering or disassembly.

Option

- SS trim. (nozzle and disc) (Variation 03)

Applications

- Protection of low to medium pressure high volume blowers, compressors and pneumatic conveying systems.
- Bulk hauling trailers/equipment.
- Light gauge tanks.
- Protection of high volume vacuum pumps and conveying systems.

Vacuum Limits

Model 215V:
2-inch HG
to 29-inch HG
[67.7 to 982 mbarg]
-20° to 406°F [-29° to 208°C]

Pressure and Temperature Limits

Model 337:
1 to 60 psig [0.07 to 4.1 barg]
-20° to 406°F [-29° to 208°C]

INSTRUMENTATION

Model L6 FLOTECT® Float Switch

Specifications - Installation and Operating Instructions

Explosion-Proof; UL and CSA Listed -
Class I, Groups *A, B, C, & D
Class II, Groups E, F & G
Directive 94/9/EC (ATEX) Compliant for CE Ex
II 2 G EEx d IIC T6 Process Temp≤75°C
*(Group A, stainless steel body only)

SPECIFICATIONS

Service: Liquids compatible with wetted materials.

Wetted Materials:

Float: Solid polypropylene or 304 **SS.**

Lower Body: Brass or 303 SS.

Magnet: Ceramic.

External Float Chamber (Tee): Matches lower body choice of brass or 303 SS.

Other: Lever Arm, Spring, Pin, etc.: 301 SS.

Temperature Limit: -4 to 220°F (-20 to 105°C) Standard, MT high temperature option 400°F (205°C)(MT not UL, CSA or ATEX). ATEX compliant AT option ambient temperature -4 to 167°F (-20 to 75°C) process temperature: -4 to 220°F (-20 to 105°C).

Pressure Limits: See next page.

Enclosure Rating: Weatherproof and Explosion-proof. Listed with UL and CSA for Class I, Groups A, B, C and D; Class II, Groups E, F, and G. (Group A on stainless steel body models only).CE 0344 Ex II 2 G EEx d IIC T6 Process Temp≤75°C. EC-Type Certificate No.: KEMA 04ATEX2128

Switch Type: SPDT snap switch standard, DPDT snap switch optional.

Electrical Rating: UL models: 5A @ 125/250 VAC (V~). CSA and ATEX models: 5A @ 125/250 VAC (V~); 5A res., 3A ind. @ 30 VDC (V⎓). MV option: .1A @ 125 VAC (V~). MT option: 5A @125/250 VAC (V~). [MT option not UL, CSA or ATEX].

Electrical Connections: UL models: 18 AWG, 18" (460 mm) long. ATEX/CSA models: terminal block.

Upper Body: Brass or 303 SS.

Conduit Connection: 3/4" male NPT standard, 3/4" female NPT on junction box models.

Process Connection: 1" male NPT on models without external float chamber, 1" female NPT on models with external float chamber.

Mounting Orientation: Horizontal with index arrow pointing down.

Weight: Approximately 1 lb (.5 kg) without external float chamber, 1.75 lb (.8 kg) with external float chamber.

Specific Gravity: See next page.

Example	L6	EP	B	B	S	3	B	MT		L6EPB-B-S-3-B-MT level switch; brass upper housing, brass lower housing, brass tee with Polypropylene spherical float, SPDT snap switch, and high temperature option

S-S-3-S			X	X	X	X	

INSTALLATION

Unpack switch and remove any packing material found inside lower housing or float chamber.

Switch must be installed with body in a horizontal plane and arrow on side pointing down.

If switch has an external float chamber (tee), connect it to vertical sections of 1" NPT pipe installed outside vessel walls at appropriate levels. If unit has no external float chamber, it must be mounted in a 1" NPT half coupling welded to the vessel wall. The coupling must extend through the wall.

Inspect and clean wetted parts at regular intervals.

ELECTRICAL CONNECTIONS

Connect wire leads in accordance with local electrical codes and switch action required. N.O. contacts will close and N.C. contacts will open when liquid level causes float to rise. They will return to "normal" condition on decreasing liquid level. Black = common, Blue = N.O. and Red = N.C.

For units supplied with both internal and external grounds the ground screw inside the housing must be used to ground the control. The external ground screw is for supplementary bonding when allowed or required by local code. Some CSA listed models are furnished with a separate green ground wire. Such units must be equipped with a junction box, no supplied but available on special order.

EC-Type Certificate Installation Instructions:

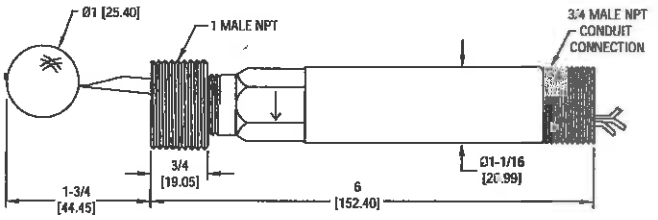
Cable Connection

The cable entry device shall be certified in type of explosion protection flameproof enclosure "d", suitable for conditions of use and correctly installed. For ambient temperatures over 70°C, cable and cable glands suitable for at least 90°C shall be used.

Conduit Connection

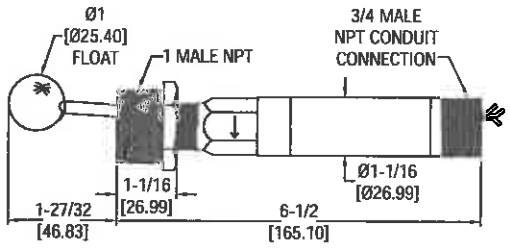
An EEx d certified sealing device such as a conduit seal with setting compound shall be provided immediately to the entrance of the valve housing. For ambient temperatures over 70°C, the wiring and setting compound in the conduit seal shall be suitable for at least 90°C.

Note: ATEX units only: The temperature class is determined by the maximum ambient and or process temperature. Units are intended to be used in ambient of -20°C≤ Tamb ≤75°C. Units may be used in process temperatures up to 105°C providing the enclosure and switch body temperatures do not exceed 75°C. The standard Temperature Class is T6 Process Temp ≤75°C.



All wiring, conduit and enclosures must meet applicable codes for hazardous areas. Conduits and enclosures must be properly sealed. For outdoor or other locations where temperatures vary widely, precautions should be taken to prevent condensation inside switch or enclosure. Electrical components must be kept dry at all times.

CAUTION: To prevent ignition of hazardous atmospheres, disconnect the device from the supply circuit before opening. Keep assembly tightly closed when in use.



MAINTENANCE

Inspect and clean wetted parts at regular intervals. The cover should be in place at all times to protect, the internal components from dirt, dust and weather and to maintain hazardous location ratings. Disconnect device from the supply circuit before opening to prevent ignition of hazardous atmosphere. Repairs to be conducted by Dwyer Instruments, Inc. Units in need of repair should be returned to the factory prepaid.

Limited Warranty: The Seller warrants all Dwyer instruments and equipment to be free from defects in workmanship or material under normal use and service for a period of one year from date of shipment. Liability under this warranty is limited to repair or replacement F.O.B. factory of any parts which prove to be defective within that time or repayment of the purchase price at the Seller's option provided the instruments have been returned, transportation prepaid, within one year from the date of purchase. All technical advice, recommendations and services are based on technical data and information which the Seller believes to be reliable and are intended for use by persons having skill and knowledge of the business, at their own discretion. In no case is Seller liable beyond replacement of equipment F.O.B. factory or the full purchase price. This warranty does not apply if the maximum ratings label is removed or if the instrument or equipment is abused, altered, used at ratings above the maximum specified, or otherwise misused in any way.

THIS EXPRESS LIMITED WARRANTY IS IN LIEU OF AND EXCLUDES ALL OTHER REPRESENTATIONS MADE BY ADVERTISEMENTS OR BY AGENTS AND ALL OTHER WARRANTIES, BOTH EXPRESS AND IMPLIED. THERE ARE NO IMPLIED WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE FOR GOODS COVERED HEREUNDER.

Buyers Remedies: THE BUYER'S EXCLUSIVE AND SOLE REMEDY ON ACCOUNT OF OR IN RESPECT TO THE FURNISHING OF NON-CONFORMING OR DEFECTIVE MATERIAL SHALL BE TO SECURE REPLACEMENT THEREOF AS AFORESAID. THE SELLER SHALL NOT IN ANY EVENT BE LIABLE FOR THE COST OF ANY LABOR EXPENDED ON ANY SUCH MATERIAL OR FORM ANY SPECIAL, DIRECT, INDIRECT OR CONSEQUENTIAL DAMAGES TO ANYONE BY REASON OF THE FACT THAT IT SHALL HAVE BEEN NON-CONFORMING OR DEFECTIVE.

Type 1490 Low Pressure Diaphragm Gauge

- *Glass-filled polysulfone case material, won't rust or dent*
- *Beryllium copper diaphragm*
- *Brass socket*
- *Wetted materials of beryllium copper, brass, polysulfone and RTV silicone*

The Ashcroft® Type 1490 low pressure diaphragm gauge is designed to measure pressure from 10 in. H_2O to 15 psi, both positive and negative pressures. This gauge uses a very sensitive diaphragm capsule to measure low pressure and vacuum. The gauge is specifically designed for use whenever the pressure medium is a gas that is not corrosive to beryllium copper, brass, polysulfone and RTV silicone. The polysulfone case is suitable for intermittent or continuous service on natural gas provided a .013 throttle plug is installed in the socket. Typical applications are, but not limited to, vacuum pumps, gas leak detectors, air compressors, air filters, gas burners, gas measurement, vacuum ovens, suction regulators and respirators.

PRODUCT SPECIFICATIONS

Model Number:	1490
Accuracy:	±2-1-2% full scale (Grade A, ASME B40.100)
Ranges:	10 in. H_2O through 15 psi including vac. and compound
Dial Size:	2½″ and 3½″ diameter
Case Material:	Black, glass filled polysulfone
Socket Material:	Brass
Movement:	Brass
Sensing Element:	Beryllium copper diaphragm
Wetted Material:	Beryllium copper, brass, polysulfone and RTV silicone
Window:	Polycarbonate, quarter turn bayonet style mounting
Dial:	Aluminum, white background, black figures and intervals.
Pointer:	Black, aluminum, fixed
Connection Size:	⅛ NPT (01) ¼ NPT (02) ⅛″ tubing hose barb (HD) 3⁄16″ tubing hose barb (HE) ¼″ tubing hose barb (HF) ¼″ O.D. polytube hose barb (HG) 10-32 2B female thread (HH)
Connection Location:	Lower (L) Center Back (B) Top (T) 3 o'clock (D) 9 o'clock (E)
Operating Temperature:	–20 to 180°F
Proof Pressure:	150% of range
Burst Pressure:	Up to 5 psi = 50 psi Greater than 5 psi = 100 psi

OPTIONAL FEATURES

1% Accuracy:	XAN
Dial Marking:	XDA
Stainless Steel Tag:	XNH
Paper Tag:	XNN
Throttle Plug:(1)(3)	XTU
Throttle Screw:(4)	XTS
U-clamp:(2)	XUC
FlutterGuard™:	XZY

(1) A throttle plug must be installed in the socket whenever the gauge is used for intermittent or continuous service on natural gas.
(2) U-clamp furnished when hose barb or female thread is specified.
(3) Throttle plug not available with hose barb or female thread connections.
(4) .020 throttle screw available with HH connection only.

All specifications are subject to change without notice.
All sales subject to standard terms and conditions.

Capsule Pressure Gauges
Plastic Case / Low Cost Design
Type 611.13

Applications

- For gaseous, dry and non aggressive media.
- Medical, vacuum, environmental, HVAC and filter monitoring.

Special features

- Compact design
- Plastic case
- Low ranges from 0/25” H2O (60 mbar)
- Maximum range 0/400” H2O (1000 mbar)

Capsule Pressure Gauge Model 611.13

Description

Nominal Sizes
2” & 2.5” (50 & 63 mm)

Accuracy class
± 2.5% of span

Scale Ranges
0/25 to 0/400 “H2O (0/60 to 0/1000 mbar)
or other equivalent units of pressure or vacuum

Working Pressure
Steady: Full scale value
Fluctuating: 90% of full scale value

Operating Temperature
Ambient: -4°F to +140°F (-20°C to +60°C)
Medium: +140°F (+60°C)

Temperature effect
When temperature of the pressure element deviates from reference temperature (+70°F / +20°C): max. ±0.6%/18°F

Weather protection
IP 53 per EN 60 529 / IEC 529

WIKA
Part of your business

Standard features

Pressure connection
Material: copper alloy
Lower mount (LM) or center back mount (CBM)
1/4" NPT (male), 14 mm wrench flats

Pressure element
Material: Beryllium copper (CuBe2)

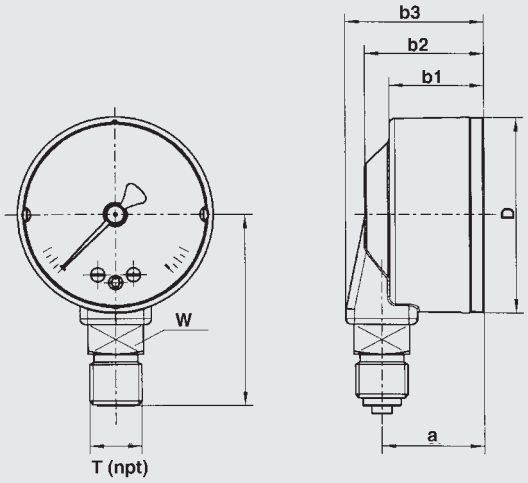
O-ring
NBR (Perbunan)

Movement
Copper alloy

Dial
White aluminum with black numberals

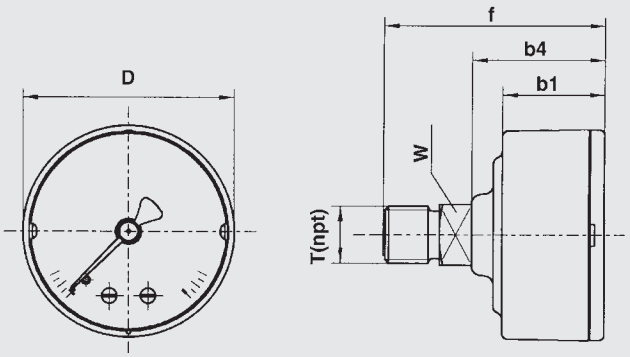
Pointer
Black aluminum

Case
Plastic, black



Window
Acrylic, snapped-in

Optional extras



- Other pressure connection
- Under & overpressure safety
- Accuracy ±1.6% of span
- Zero adjustment screw on dial
- Black painted steel case (Type 611.23)
- Restrictor

Dimensions

Lower mount (LM) connection

Center back mount (CBM) connection

Series DS-300 Flow Sensors

Installation and Operating Instructions Flow Calculations

Series DS-300 Flow Sensors are averaging pitot tubes that provide accurate, convenient flow rate sensing. When purchased with a Dwyer Capsuhelic® for liquid flow or Magnehelic® for air flow, differential pressure gage of appropriate range, the result is a flow-indicating system delivered off the shelf at an economical price. Series DS-300 Flow Sensors are designed to be inserted in the pipeline through a compression fitting and are furnished with instrument shut-off valves on both pressure connections. Valves are fitted with 1/8" female NPT connections. Accessories include adapters with 1/4" SAE 45° flared ends compatible with hoses supplied with the Model A-471 Portable Capsuhelic® kit. Standard valves are rated at 200°F (93.3°C). Where valves are not required, they can be omitted at reduced cost. Series DS-300 Flow Sensors are available for pipe sizes from 1" to 10".

INSPECTION

Inspect sensor upon receipt of shipment to be certain it is as ordered and not damaged. If damaged, contact carrier.

INSTALLATION

General - The sensing ports of the flow sensor must be correctly positioned for measurement accuracy. The instrument connections on the sensor indicate correct positioning. The side connection is for total or high pressure and should be pointed upstream. The top connection is for static or low pressure.

Location - The sensor should be installed in the flowing line with as much straight run of pipe upstream as possible. A rule of thumb is to allow 10 - 15 pipe diameters upstream and 5 downstream. The table below lists recommended up and down piping.

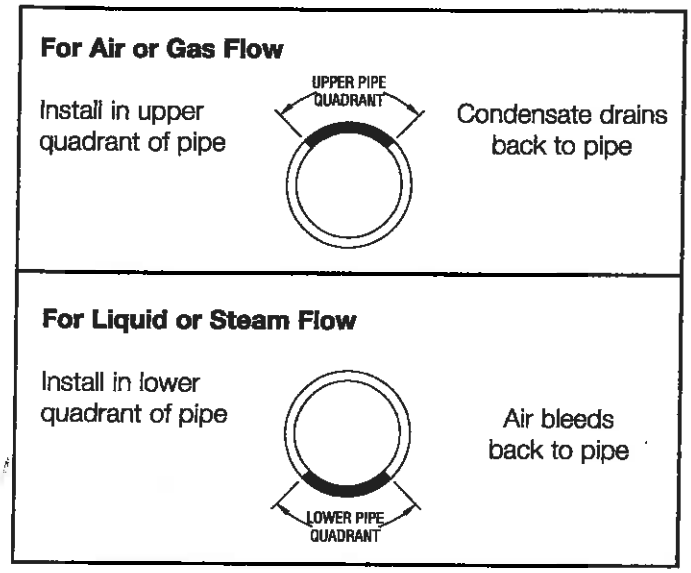
PRESSURE AND TEMPERATURE

Maximum: 200 psig (13.78 bar) at 200°F (93.3°C).

Upstream and Downstream Dimensions in Terms of Internal Diameter of Pipe*

Upstream Condition	Minimum Diameter of Straight Pipe		
	Upstream		Downstream
	In-Plane	Out of Plane	
One Elbow or Tee	7	9	5
Two 90° Bends in Same Plane	8	12	5
Two 90° Bends in Different Plane	18	24	5
Reducers or Expanders	8	8	5
All Valves**	24	24	5

* Values shown are recommended spacing, in terms of internal diameter for normal industrial metering requirements. For laboratory or high accuracy work, add 25% to values.



** Includes gate, globe, plug and other throttling valves that are only partially opened. If valve is to be fully open, use values for pipe size change. **CONTROL VALVES SHOULD BE LOCATED AFTER THE FLOW SENSOR.**

DWYER INSTRUMENTS, INC.
P.O. BOX 373 • MICHIGAN CITY, INDIANA 46361, U.S.A.
Phone: 219/879-8000 www.dwyer-inst.com
Fax: 219/872-9057 e-mail: info@dwyer-inst.com

POSITION

Be certain there is sufficient clearance between the mounting position and other pipes, walls, structures, etc, so that the sensor can be inserted through the mounting unit once the mounting unit has been installed onto the pipe.

Flow sensors should be positioned to keep air out of the instrument connecting lines on liquid flows and condensate out of the lines on gas flows. The easiest way to assure this is to install the sensor into the pipe so that air will bleed into, or condensate will drain back to, the pipe.

INSTALLATION

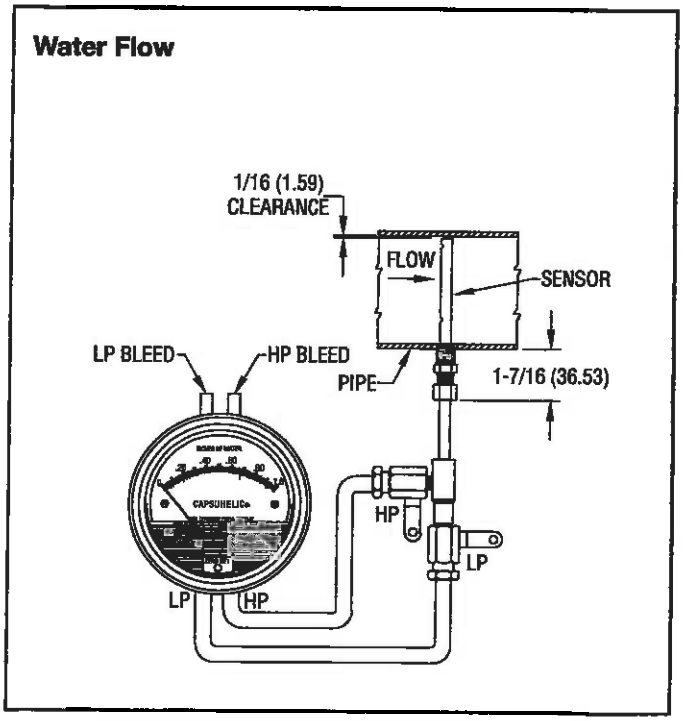
1. When using an A-160 thred-o-let, weld it to the pipe wall. If replacing a DS-200 unit, an A-161 bushing (1/4" x 3/8") will be needed.

2. Drill through center of the thred-o-let into the pipe with a drill that is slightly larger than the flow sensor diameter.

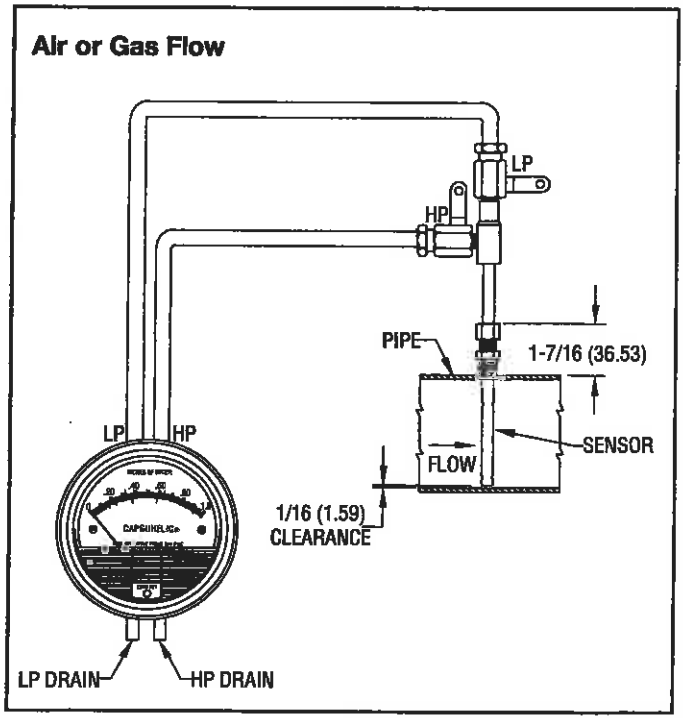
3. Install the packing gland using proper pipe sealant. If the packing gland is disassembled, note that the tapered end of the ferrule goes into the fitting body.

4. Insert sensor until it bottoms against opposite wall of the pipe, then withdraw 1/16" to allow for thermal expansion.

5. Tighten packing gland nut finger tight. Then tighten nut with a wrench an additional 1-1/4 turns. Be sure to hold the sensor body with a second wrench to prevent the sensor from turning.



INSTRUMENT CONNECTION



Connect the slide pressure tap to the high pressure port of the Magnehelic® (air only) or Capsuhelic® gage or transmitting instrument and the top connection to the low pressure port.

See the connection schematics below.

Bleed air from instrument piping on liquid flows. Drain any condensate from the instrument piping on air and gas flows.

Open valves to instrument to place flow meter into service. For permanent installations, a 3-valve manifold is recommended to allow the gage to be zero checked without interrupting the flow. The Dwyer A-471 Portable Test Kit includes such a device.

FLOW EQUATIONS

1. Any Liquid

$$Q\ (GPM) = 5.668 \times K \times D^2 \times \sqrt{\Delta P / S_f}$$

2. Steam or Any Gas

$$Q\ (lb/Hr) = 359.1 \times K \times D^2 \times \sqrt{p \times \Delta P}$$

3. Any Gas

$$Q\ (SCFM) = 128.8 \times K \times D^2 \times \sqrt{\frac{R \times \Delta P}{(T + 460) \times S_s}}$$

DIFFERENTIAL PRESSURE EQUATIONS

1. Any Liquid

$$\Delta P\ (in.\ WC) = \frac{Q^2 \times S_f}{K^2 \times D^4 \times 32.14}$$

2. Steam or Any Gas

$$\Delta P\ (in.\ WC) = \frac{Q^2}{K^2 \times D^4 \times p \times 128{,}900}$$

3. Any Gas

$$\Delta P\ (in.\ WC) = \frac{Q^2 \times S_s \times (T + 460)}{K^2 \times D^4 \times P \times 16{,}590}$$

Technical Notations

The following notations apply:

ΔP = Differential pressure expressed in inches of water column
Q = Flow expressed in GPM, SCFM, or PPH as shown in equation
K = Flow coefficient— See values tabulated on Pg. 3.
D = Inside diameter of line size expressed in inches.

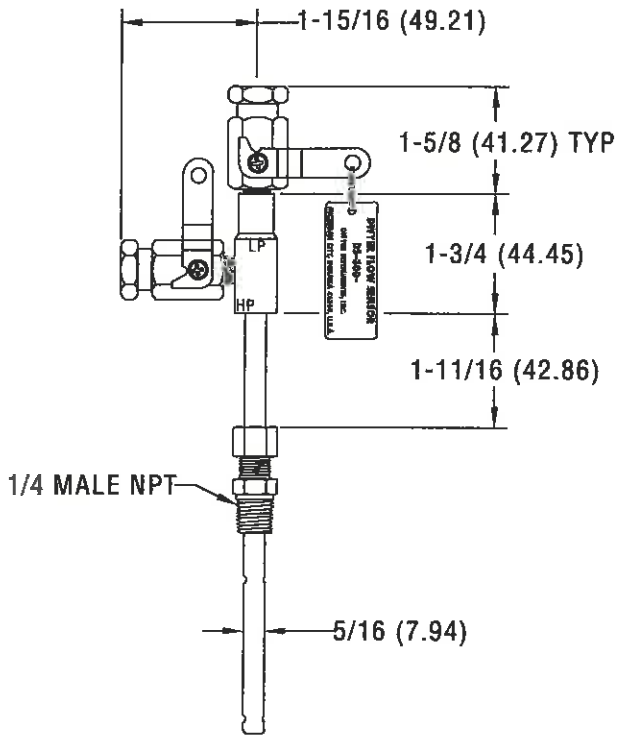
For square or rectangular ducts, use: $D = \sqrt{\frac{4 \times \text{Height} \times \text{Width}}{\pi}}$

P = Static Line pressure (psia)
T = Temperature in degrees Fahrenheit (plus 460 = °Rankine)
p = Density of medium in pounds per square foot
S_f = Sp Gr at flowing conditions
S_s = Sp Gr at 60°F (15.6°C)

SCFM TO ACFM EQUATION

$$SCFM = ACFM \times \left(\frac{14.7 + PSIG}{14.7}\right) \left(\frac{520^*}{460 + °F}\right)$$

$$ACFM = SCFM \times \left(\frac{14.7}{14.7 + PSIG}\right) \left(\frac{460 + °F}{520}\right)$$



$$\text{POUNDS PER CUBIC FOOT STD.} = \text{POUNDS PER CUBIC FOOT ACT.} \times \left(\frac{14.7}{14.7 + PSIG}\right) \left(\frac{460 + °F}{520^*}\right)$$

$$\text{POUNDS PER CUBIC FOOT ACT.} = \text{POUNDS PER CUBIC FOOT STD.} \times \left(\frac{14.7 + PSIG}{14.7}\right) \left(\frac{520^*}{460 + °F}\right)$$

1 Cubic foot of air = 0.076 pounds per cubic foot at 60° F (15.6°C) and 14.7 psia.
* (520°= 460 + 60°) Std. Temp. Rankine

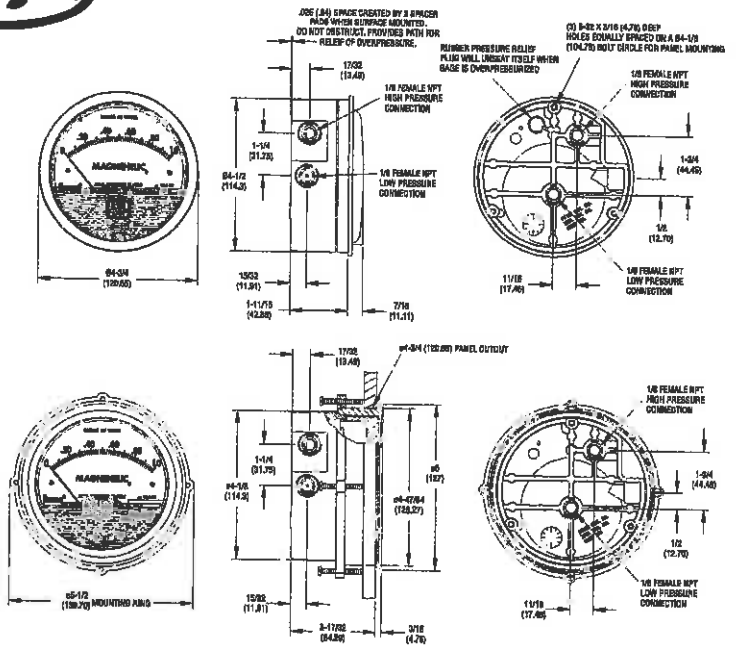
Flow Calculations and Charts

The following information contains tables and equations for determining the differential pressure developed by the DS-300 Flow Sensor for various flow rates of water, steam, air or other gases in different pipe sizes.

This information can be used to prepare conversion charts to translate the differential pressure readings being sensed into the equivalent flow rate. When direct readout of flow is required, use this information to calculate the full flow differential pressure in order to specify the exact range of Dwyer Magnehelic® or Capsuhelic® gage required. Special ranges and calculations are available for these gages at minimal extra cost. See bulletins A-30 and F-41 for additional information on Magnehelic® and Capsuhelic® gages and DS-300 flow sensors.



For additional useful information on making flow calculations, the following service is recommended: Crane Valve Co. Technical Paper No. 410 "Flow of Fluids Through Valves, Fittings and Pipe." It is available from Crane Valve Company, www.cranevalve.com.

Using the appropriate differential pressure equation from Page 4 of this bulletin,calculate the differential pressure generated by the sensor under normal operating conditions of the system. Check the chart below to determine if this value is within the recommended operating range for the sensor. Note that the data in this chart is limited to standard conditions of air at 60°F (15.6°C) and 14.7 psia static line pressure or water at 70°F (21.1°C). To determine recommended operating ranges of other gases, liquids an/or operating conditions, consult factory.

Note: the column on the right side of the chart which defines velocity ranges to avoid. Continuous operation within these ranges can result in damage to the flow sensor caused by excess vibration.

Pipe Size (Schedule 40)	Flow Coefficient "K"	Operating Ranges Air @ 60°F & 14.7 psia (D/P in. W.C.)	Operating Ranges Water @ 70°F (D/P in. W.C.)	Velocity Ranges Not Recommended (Feet per Second)
1	0.52	1.10 to 186	4.00 to 675	146 to 220
1-1/4	0.58	1.15 to 157	4.18 to 568	113 to 170
1-1/2	0.58	0.38 to 115	1.36 to 417	96 to 144
2	0.64	0.75 to 75	2.72 to 271	71 to 108
2-1/2	0.62	1.72 to 53	6.22 to 193	56 to 85
3	0.67	0.39 to 35	1.43 to 127	42 to 64
4	0.67	0.28 to 34	1.02 to 123	28 to 43
6	0.71	0.64 to 11	2.31 to 40	15 to 23
8	0.67	0.10 to 10	0.37 to 37	9.5 to 15
10	0.70	0.17 to 22	0.60 to 79	6.4 to 10

Magnehelic® Differential Pressure Gage

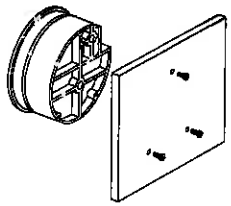
**The blowout plug is not used on models above 180 inches of water pressure, medium or high pressure models, or on gages which require an elastomer other than silicone for the diaphragm.*

STANDARD GAGE ACCESSORIES: Two 1/8" NPT plugs for duplicate pressure taps, two 1/8" pipe thread to rubber tubing adapters and three flush mounting adapters with screws.

MP AND HP GAGE ACCESSORIES: Mounting ring and snap ring retainer substituted for 3 adaptors, 1/4" compression fittings replace 1/8" pipe thread to rubber tubing adaptors.

OVERPRESSURE PROTECTION: Standard Magnehelic® Differential Pressure Gages are rated for a maximum pressure of 15 psig and should not be used where that limit could be exceeded. Models employ a rubber plug on the rear which functions as a relief valve by unseating and venting the gage interior when over pressure reaches approximately 25 psig (excludes MP and HP models). To provide a free path for pressure relief, there are four spacer pads which maintain .023" clearance when gage is surface mounted. Do not obstruct the gap created by these pads.

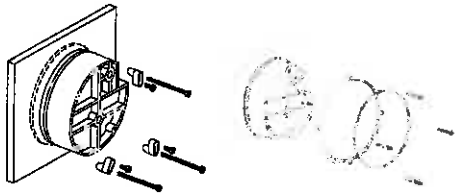
SPECIFICATIONS



Service: Air and non-combustible, compatible gases. (Natural Gas option available.)
Wetted Materials: Consult factory.
Housing: Die cast aluminum case and bezel, with acrylic cover. (MP model has polycarbonate cover).
Accuracy: ±2% of full scale (±3% on - 0, -100 Pa, -125 Pa, 10MM and ±4% on -00, - 00N, -60 Pa, -6MM ranges), throughout range at 70°F (21.1°C).
Pressure Limits: -20" Hg to 15 psig.† (-0.677 bar to 1.034 bar); MP option: 35 psig (2.41 bar), HP option: 80 psig (5.52 bar).
Overpressure: Relief plug opens at approximately 25 psig (1.72 bar), standard gages only. The blowout plug is not used on models above 180 inches of water pressure, medium or high pressure models, or on gages which require an elastomer other than silicone for the diaphragm.
Temperature Limits: 20 to 140°F (-6.67 to 60°C). *Low temperature models available as special option.
Size: 4" (101.6 mm) diameter dial face.
Mounting Orientation: Diaphragm in vertical position. Consult factory for other position orientations.
Process Connections: 1/8" female NPT duplicate high and low pressure taps - one pair side and one pair back.
Weight: 1 lb 2 oz (510 g), MP & HP 2 lb 2 oz (963 g).

†For applications with high cycle rate within gage total pressure rating, next higher rating is recommended. See Medium and High pressure options.
Note: May be used with hydrogen when ordering Buna-N diaphragm. Pressure must be less than 35 psi.

INSTALLATION



Select a location free from excessive vibration and where the ambient temperature will not exceed 140°F (60°C). Also, avoid direct sunlight which accelerates discoloration of the clear plastic cover. Sensing lines may be run any necessary distance. Long tubing lengths will not affect accuracy but will increase response time slightly. Do not restrict lines. If pulsating pressures or vibration cause excessive pointer oscillation, consult the factory for ways to provide additional damping.
All standard Magnehelic® Differential Pressure Gages are calibrated with the diaphragm vertical and should be used in that position for maximum accuracy. If gages are to be used in other than vertical position, this should be specified on the order. Many higher range gages will perform within tolerance in other positions with only rezeroing. Low range models of 0.5" w.c. plus 0.25" w.c. and metric equivalents must be used in the vertical position only.

SURFACE MOUNTING

Locate mounting holes, 120° apart on a 4-1/8" dia. circle. Use No. 6-32 machine screws of appropriate length.

FLUSH MOUNTING

Provide a 4-9/16" dia. (116 mm) opening in panel. Provide a 4-3/4" dia. (120 mm) opening for MP and HP models. Insert gage and secure in place with No. 6-32 machine screws of appropriate length, with adapters, firmly secured in place.

PIPE MOUNTING

To mount gage on 1-1/4" - 2" pipe, order optional A-610 pipe mounting kit.

TO ZERO GAGE AFTER INSTALLATION

Set the indicating pointer exactly on the zero mark, using the external zero adjust screw on the cover at the bottom. Note that the zero check or adjustment can only be made with the high and low pressure taps both open to atmosphere.

OPERATION

Positive Pressure: Connect tubing from source of pressure to either of the two high pressure ports. Plug the port not used. Vent one or both low pressure ports to atmosphere.
Negative Pressure: Connect tubing from source of vacuum or negative pressure to either of the two low pressure ports. Plug the port not used. Vent one or both high pressure ports to atmosphere.
Differential Pressure: Connect tubing from the greater of two pressure sources to either high pressure port and the lower to either low pressure port. Plug both unused ports.
When one side of the gage is vented in dirty, dusty atmosphere, we suggest an A-331 Filter Vent Plug be installed in the open port to keep inside of gage clean.

A. For portable use of temporary installation use 1/8" pipe thread to rubber tubing adapter and connect to source of pressure with flexible rubber or vinyl tubing.
B. For permanent installation, 1/4" O.D., or larger, copper or aluminum tubing is recommended.

MAINTENANCE

No lubrication or periodic servicing is required. Keep case exterior and cover clean. Occasionally disconnect pressure lines to vent both sides of gage to atmosphere and re-zero. Optional vent valves should be used in permanent installations. The Series 2000 is not field serviceable and should be returned if repair is needed (field repair should not be attempted and may void warranty). Be sure to include a brief description of the problem plus any relevant application notes. Contact customer service to receive a return goods authorization number before shipping.

WARNING

Attempted field repair may void your warranty. Recalibration or repair by the user is not recommended.

TROUBLE SHOOTING TIPS

Gage won't indicate or is sluggish.

1. Duplicate pressure port not plugged.
2. Diaphragm ruptured due to overpressure.
3. Fittings or sensing lines blocked, pinched, or leaking.
4. Cover loose or "O"ring damaged, missing.
5. Pressure sensor, (static tips, Pitot tube, etc.) improperly located.
6. Ambient temperature too low. For operation below 20°F (-7°C), order gage with low temperature, (LT) option.

Bulletin A-27

Magnehelic© Differential Pressure Gage

INSTRUCCIONES Y LISTA DE PARTES

(El tapón de goma no es usado en los modelos sobre 180 pulgadas de presión de agua, modelos de presión media o alta, o en instrumentos que requieren un elastizado en cualquier otro material que no sea silicona para el diafragma.)

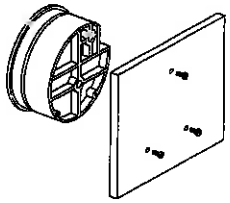
Accesorios: Tapones 1/8" NPT para las conexiones duplicadas, dos adaptadores de rosca 1/8" NPT a tubo de goma; y tres adaptadores para montaje al ras y tornillos.

Accesorios para Los Modelos MP y HP: El anillo de montaje y el retensor del anillo de presión son substituidos por 3 adaptadores, accesorios de compresión de 1/4" remplazan a los adaptadores de rosca 1/8" a tubo de goma.

Protección Para Sobrepresión: Los Manómetros Diferenciales Magnehelic Estándar están clasificados para una presión máxima de 15 psi y no se deberían de usar donde el límite puede excederse. Los modelos emplean un tapón de goma en el trasero que funciona como una válvula de alivio desmontándose y ventilando el interior del instrumento cuando la sobrepresión alcanza aproximadamente 25 psig. (Los modelos MP y HP son excluidos) Para proveer un camino libre para el alivio de presión, el instrumento viene con rodilleras que mantienen un espacio de .023" cuando el instrumento es montado en superficie. No bloque el espacio creado por estas rodilleras.

ESPECIFICACIONES

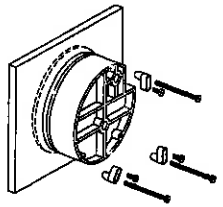
Servicio: aire y gases no combustibles, gases compatibles. (opcion disponible para uso con gas natural).
Materiales Mojados: Consulte con la fábrica.
Carcasa: Caja y anillo de retención de aluminio fundido a presión con tapadera de acrílico. (El modelo MP tiene la tapadera de policarbonato.)
Exactitud: ±2% de fondo de escala a 21 °C
Mod. 2000-0 ±3%; Mod. 2000-00 ±4%
Límite de Presión: -20 Hg. a 15 psig. † (-0.677 bar a 1,034 bar); opción MP: 35 psig (2.41 bar), opción HP: 80 psig (5.52 bar).
Sobrepresión: El tapón de alivio se abre aproximadamente a los 25 psig, modelos estandard únicamente. El tapón de goma no es usado en los modelos sobre 180 pulgadas de presión de agua, modelos de presión media o alta, o en instrumentos que requieren un elastizado en cualquier otro material que no sea silicio para el diafragma.
Límite de Temperatura: -6.67 a 60°C. * Modelos de baja temperatura disponibles como opción especial.
Dimensiones: diám. 120,65 mm x 55,6 prof.
Orientación de Montaje: El diafragma debe ser usado solo en posición vertical. Consulte con la fábrica para otras orientaciones de posición.
Conexiones: 1/8" NPT para alta y baja presión, duplicadas (atrás, a los lados).
Peso: 510 g, MP y HP 963 g.



† Para aplicaciones con alto ciclo de velocidad dentro de la clasificación de presión total del instrumento, la próxima clasificación mas alta es recomendada. Vea las opciones de media y alta presión.

El instrumento puede ser usado con hidrogeno cuando se ordena con diafragma de Buna-N. La presion tiene que ser menos de 35 psi.

Instalacion



Seleccione un lugar libe de exceso de vibraciones, y donde la temperatura ambiente no supere los 60°C. Evite luz solar directa, para evitar decoloración de la cubierta plástica. Las conexiones de proceso pueden tener cualquier longitud sin afectar la exactitud, pero pueden extender el tiempo de respuesta del instrumento. Si hay pulsación de presión o vibración, consulte a fábrica sobre medios de amortiguación.
Los MAGNEHELIC han sido calibrados con el diafragma vertical, y deben ser usados en esas condiciones. Para otras posiciones, se debe especificar en la orden de provisión. Los de rango elevado pueden ser usados en diversas posiciones, pero se debe reajustar el cero. Los modelos de la serie 2000-00 y equivalentes métricos deben ser usados solo verticalmente.

Montaje en Superficie

Perfore tres orificios separados 120° sobre una circunferencia de 105 mm de diám. y sostenga el instrumento con tres tornillos 6-32 de long. apropiada.

Montaje alineado

Perfore un circulo de 115 mm de diám. en el panel, y sostenga el instrumento mediante los.

Montaje Sobre Pipa

Para montar el instrumento sobre pipas de 32 a 50 mm de diám., ordene el adaptador opcional A-610.

Puesta a Cero Después de Instalar

Deje las conexiones de presión abiertas a atmósfera y ajuste a cero desde tornillo del panel frontal.

Operacion

Presión Positiva: Conecte la tubería desde la fuente de presión a cualquiera de las dos conexiones de alta presión (HIGH), bloqueando la no usada; Las conexiones de baja (LOW) presión pueden dejarse uno o los dos abiertos a la atmósfera.
Presión Negativa: Repita el procedimiento anterior, conectado en este caso las conexiones de baja presión (LOW). Deje las otras conexiones abiertas.
Presión diferencial: Conecte el tubo correspondiente a la presión más positiva al cualquiera de los conectores de alta presión (HIGH) bloqueando el no usado, y la más baja presión o presión negativa (vacío) al conector de baja presión (LOW). Puede usarse cualquier conector de cada par, dejando siempre uno bloqueado. Si se deja una conexión abierta a la atmósfera, se recomienda el uso de un filtro tipo A-331 en el lugar correspondiente para mantener limpio el interior del instrumento. Para uso portable, o instalación temporaria, uso adapta dores para rosca de tubo de 1/89 a tubo flexible, y conecte a proceso mediante una tubería de goma, o equivalente. Para instalación permanente, se recomienda el uso de tubo de cobre o aluminio de por lo menos 1/4" de diám. exterior.

No se requiere mantenimiento específico alguno, ni lubricación. Periódicamente, desconecte el instrumento, ventee la presión acumulada, y reajuste el cero. Para instalaciones permanentes, se debe usar un juego de válvulas de montaje permanente para el venteo.
El Instrumento de Serie 2000 no puede ser re parado en el campo y debería de ser regresado si reparos son necesarios (Reparos en el campo no deben de ser intentados y pueden cancelar la garantía.). Asegurarse de incluir una descripción breve del problema más cualquier notas pertinentes a la aplicación para devolución de productos antes de enviar el instrumento.

Cuidado! : La recalibración en campo puede invalidar la garantía. No se recomienda la recalibracion por parte del usuario. En caso necesario envie el instrumento con transporte pago a:

Localización De Fallas

• El instrumento no indica, o es lento en reacción.
1. Conexión duplicada abierta.
2. Diafragma roto por sobrepresión.
3. Tubería de conexión perforada, con pérdidas o pinchazos.
4. Anillo de retención flojo, u "O " ring dañado.
5. Conexión a proceso indebida o inadecuada.
6. Temperatura muy baja. Para este caso ordene tipos LT (baja temperatura).

American Industrial Heat Transfer Inc.®

Manufacturer of Quality Heat Exchangers

ACA SERIES

AIR COOLED

AFTERCOOLERS

For Compressed Gas or Vapor

- Computer Selection.
- Low pressure drop available.
- Standard ports NPT, optional ANSI flange.
- Operating temperature of 400° F & pressure of 150PSI.
- Custom designs to fit your needs.
- Cools: Air, Compressors, Blowers, Steam vapors, Pneumatic systems, Vapor recovery systems etc...

note: AIHTI reserves the right to make reasonable design changes without notice.

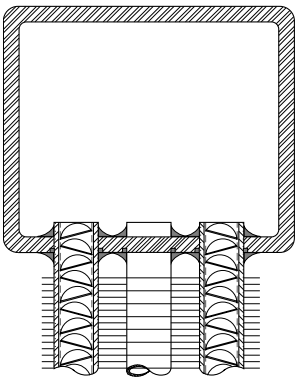
ACA - 3181 through ACA - 4362



Brazed Core Construction

Air coolers are an essential part of any compressed air system, by cooling the air, and condensing water vapor into a liquid state for removal. When air is compressed, the compression induces heat into both the air and the water entrained in the air.
The American Industrial ACA series heat exchanger cools air with air, making it a simple inexpensive way to cool when compared to other water-cooled or refrigerant cooled systems. The unique compact brazed fin/tube design provides efficient cooling and low maintenance under the warmest environmental conditions. By using an ACA series air-cooled after cooler, machine tools will recieve cooler dryer air, provide longer trouble free life, experience less down time, and be cost effective to operate on a continuous basis.

SUPERIOR COOLING FINS

Copper tubes are mechanically bonded to highly efficient aluminum cooling fins. Die-formed fin collars provide a durable precision fit for maximum heat transfer. Custom fin design forces air to become turbulent and carry heat away more efficiently than old flat fin designs.

TANKS

State-of-the-art high temperature brazing method insures permanent bond and positive contact of tube to manifold, eliminating leaks and providing maximum service life.

CONSTRUCTION MATERIALS & RATINGS

Standard Construction Materials		Standard Unit Ratings	
Tubes	Copper	Operating Pressure	150 psig
Fins	Aluminum	Operating Temperature	400 °F
Cabinet & Pipes	Steel	Consult factory for optional materials and ratings.	
Fan Guard	Zinc Plated Steel

Compressed Air

Normally air compressors have airflow rates based upon the horsepower. Rotary Screw compressors normally discharge air at 180 °f - 200 °f, prior to after-cooling. Reciprocating compressors normally discharge air at 250 °f - 275 °f, prior to after-cooling. Compressors are rated in CFM or cubic feet per minute of free air at inlet conditions. For practical purpose we will use sea level at 68 °f and 36% relative humidity as a norm. Altitude, differing ambient conditions with respect to temperature and humidity will all affect heat exchanger performance to a degree. Moisture content in air actually increases the Btu/hr load requirement for cooling air by adding an additional condensing load to the gas load requirement. As air rapidly cools, moisture in the compressed air stream will condense and separate into droplets, the more humidity present the more condensation will occur.

Sizing

The performance curves provided are for air. However, gases other than air may be applied to this cooler with respect to compatibility by applying a correction factor. Please take time to check the operating specifications thoroughly for material compatibility, pressure, and size before applying an American Industrial heat exchanger into your system.

Terms

Approach Temperature is the desired outlet temperature of the compressed gas minus the inlet ambient air temperature of the external air flowing over the coil.
SCFM (Standard Cubic Feet per Minute)
A cubic foot of air at 68 °f, 14.696 psia, & 36% relative humidity, per minute.
CFM (Cubic Feet per Minute)
Air at inlet atmospheric conditions.
ACFM (Actual Cubic Feet per Minute)
Air at current pressure, temperature, & humidity conditions without reference to a standard.

To Determine the Heat Load

If the heat load (Btu/hr) is unknown a value can be calculated based upon system operational requirements. To properly calculate the heat load (Btu/hr) to be rejected, several items must be known with certainty (see below).

- Flow rate SCFM (standard cubic feet pr minute)
- Type of gas and its makeup.
- System inlet pressure to the heat exchanger.
- Ambient temperature where the heat exchanger will be located (hotest condition).
- Temperature of the gas at the heat exchanger inlet.
- Temperature of the gas desired at heat exchanger outlet.
- Maximum acceptable pressure loss or cooled gas.

Using The Chart

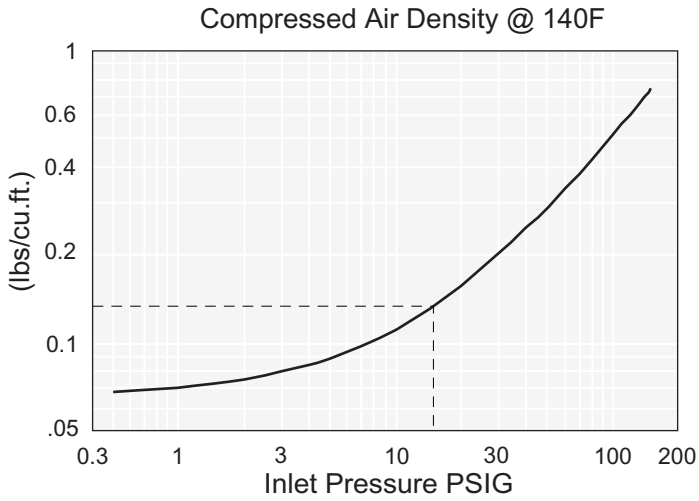
American Industrial has created a quick reference chart for selecting ACA heat exchangers for Rotary Screw compressors (see page 214) [This chart offers basic information based upon compressor horsepower and average airflow rates. To properly use the chart, select the compressor horsepower at the left or the air flow rate. Next select the approach to ambient that is desired. Where the two columns intersect is shown the proper ACA model number.]

Using The Graphs

American Industrial provides performance graphs for ease of model selection. The following calculation examples (page 213), illustrate formulas to determine model selection sizes. It should be noted that there are some assumptions made when applying the basic principles for calculation in the formula. Altitude, humidity, materials, pressures, etc... all contribute to the final selection. Contact American Industrial for more detailed calculation.

Selection

The selection process is important, many considerations should be made when selecting a heat exchanger. Once the proper Fs requirement is calculated, it is time to apply the data to the graph and make a selection.
1) Find the Flow rate in SCFM located at the bottom of the graph. Follow the graph line up until it matches the calculated Fs from your calculations. If the point falls just above one of the model graphed lines, select the next larger size. If the point is on a line select it as your choice.
2) Check carefully the pressure differential. Units with operating pressures from 70+ psig will have no greater than 2.0 psid within the published flow range. For lower inlet pressure see the pressure drop curves for more detail.
3) Calculate a Nozzle size using the nozzle size calculation to verify your selection has the proper port sizes for your required inlet pressure.



Formula: Nozzle Calculation

$$\text{Nozzle Size} = \sqrt{\frac{\left[\frac{(\text{SCFM} \times 4.512)}{(270{,}000 \times d)} \times 144\right]}{.7854}}$$

All numbers in equation are constants except for SCFM and (d) "density".

Example:
Flow rate = 200 SCFM
Pressure = 15 psig
Density = (d) from Compressed Air Density Graph

$$\sqrt{\frac{\left[\frac{(200 \times 4.512)}{(270{,}000 \times .14)} \times 144\right]}{.7854}} = 2.09\text{" or (2" Nozzle)}$$

Examples: (Note: All air flow rates must be converted to SCFM)

Application 1 Air Rotary Screw Compressor

Determine the heat load "Q" =Btu/hr — $Q = [SCFM \times CF \times (T_1 - T_2)]$ or $[350 \times 1.13 \times 105^{o}] = 41{,}528$ Btu/hr

T_1 = Inlet gas temperature: 200°f

T_2 = Outlet gas temperature: Ambient + 10°f= (95°f) — Determine the Fs = $\frac{Btu/hr}{T_2 - T_a}$ or $\frac{41{,}528}{10}$ = **4,153 Fs** Refer to graph example on page 215

T_a = Ambient temperature: 85°f

Airflow rate: 350 SCFM

PSIG = Operating Pressure 100 psig

CF = Correction factor: 1.13 — $CF = (.0753 \times S \times C \times 60)$ or $(.0753 \times 1.0 \times .25 \times 60) = 1.13$

S = Specific gravity with air being 1.0

C = Specific heat (Btu/Lb °f): .25

Model Selection - ACA-4362

$$\sqrt{\frac{\left[\frac{(350 \times 4.512)}{(270{,}000 \times .50)} \times 144\right]}{.7854}} = 1.46\text{" or (1.5" minimum nozzle)}$$

Application 2 Methane Gas

Determine the heat load "Q" = Btu/hr — $Q = [SCFM \times CF \times (T_1 - T_2)]$ or $[500 \times 1.428 \times 210^{o}] = 149{,}940$ Btu/hr

T_1 = Inlet gas temperature: 300°f

T_2 = Outlet gas temperature: 90°f — Determine the Fs = $\frac{Btu/hr}{T_2 - T_a}$ or $\frac{149{,}940}{30}$ = **4,998 Fs** Refer to graph example on page 215

T_a = Ambient temperature: 60°f

Gas flow rate: 500 SCFM

PSIG = Operating pressure: 150 psig

CF = Correction factor: 1.428 — $CF = (.0753 \times S \times C \times 60)$ or $(.0753 \times .55 \times .575 \times 60) = 1.428$

S = Specific gravity with air being 1.0: .55

C = Specific heat (Btu/Lb °f)

Model Selection - ACA-6421

$$\sqrt{\frac{\left[\frac{(500 \times 4.512)}{(270{,}000 \times .74)} \times 144\right]}{.7854}} = 1.44\text{" or (1.5" minimum nozzle)}$$

Application 3 Low Pressure Blower

Determine the heat load "Q" = Btu/hr — $Q = [SCFM \times CF \times (T_1 - T_2)]$ or $[76 \times 1.13 \times 150^{o}] = 12{,}882$ Btu/hr

T_1 = Inlet gas temperature: 250°f

T_2 = Outlet gas temperature: 100°f — Determine the Fs = $\frac{Btu/hr}{T_2 - T_a}$ or $\frac{12{,}882}{10}$ = **1,288 Fs** Refer to graph example on page 215

T_a = Ambient temperature: 90°f

CF = Correction Factor: 1.13

PSIG = Operating pressure: 2 psig — To Convert

Airflow rate: 90 ACFM — $ACFM \text{ to } SCFM = \frac{ACFM \times (PSIG + 14.7) \times 528}{(T_1 + 460) \times 14.7} = \frac{90 \times 16.7 \times 528}{710 \times 14.7} = 76$ SCFM

S = Specific gravity with air being 1.0

C = Specific heat (Btu/lb °f): .25

△P = 5" water column or less (example pg. 220)

Model Selection - ACA-3302

$$\sqrt{\frac{\left[\frac{(76 \times 4.512)}{(270{,}000 \times .075)} \times 144\right]}{.7854}} = 1.76\text{" or (2.0" minimum nozzle)}$$

Pressure Drop (see page 220 for graphs)

Since gas is compressible the density of the gas changes from one temperature or pressure to the next. While the mass flow rate may not change, the pressure differential across the heat exchanger will change dramatically from high (70-125 psig) to low (1-5 psig) pressure. A low pressure condition requires larger carrying lines to move flow than does the same gas rate under a higher pressure. At lower pressures the differential pressure across the heat exchanger can be quite high compared to the same flow rate at a higher pressure. For that reason it is suggested that the pressure differential graphs on page 220 be consulted prior to making your final selection.

The ACA series heat exchanger is designed to be easily modified to accept larger port sizes in the event your system pressure requires larger nozzles. Consult our engineering department for more exacting information regarding pressure differential issues.

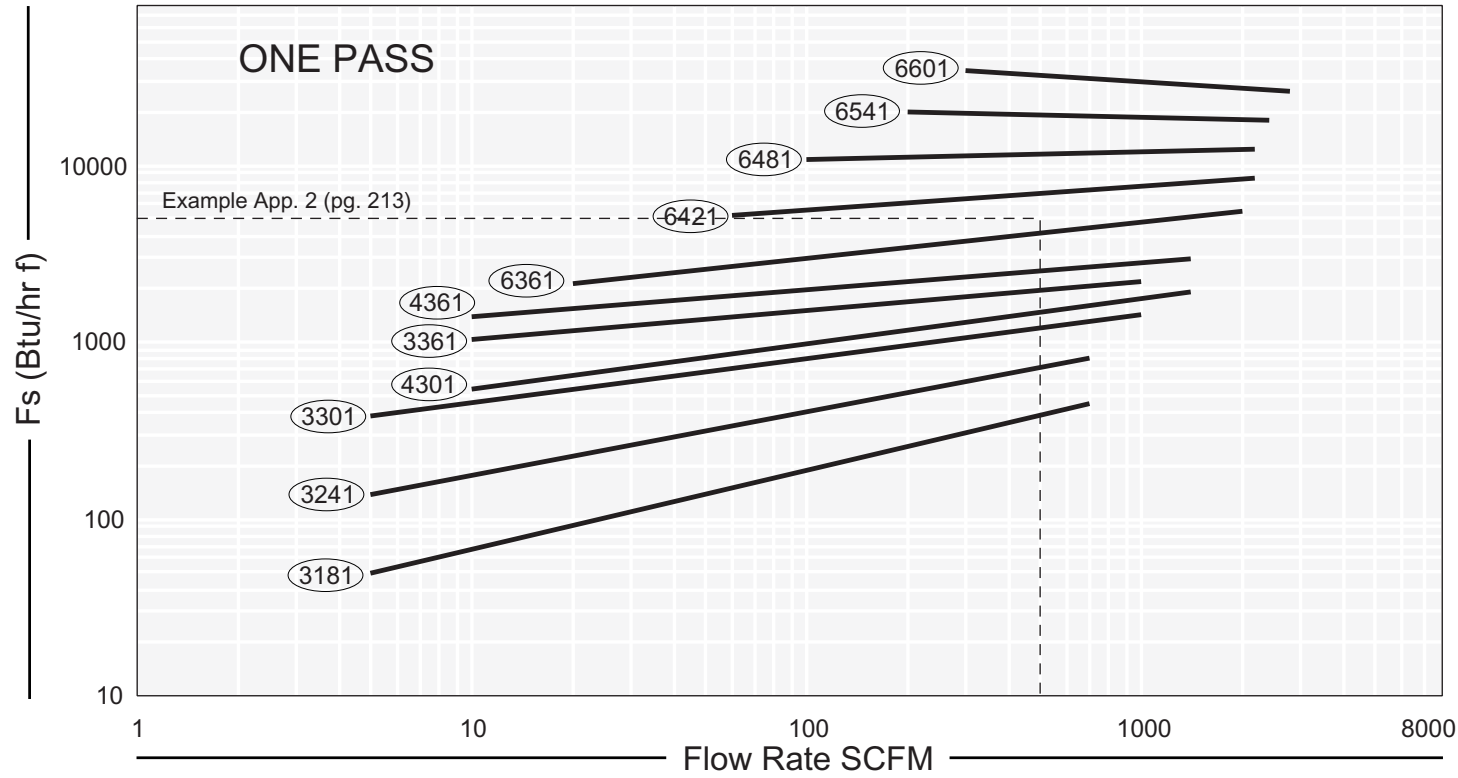
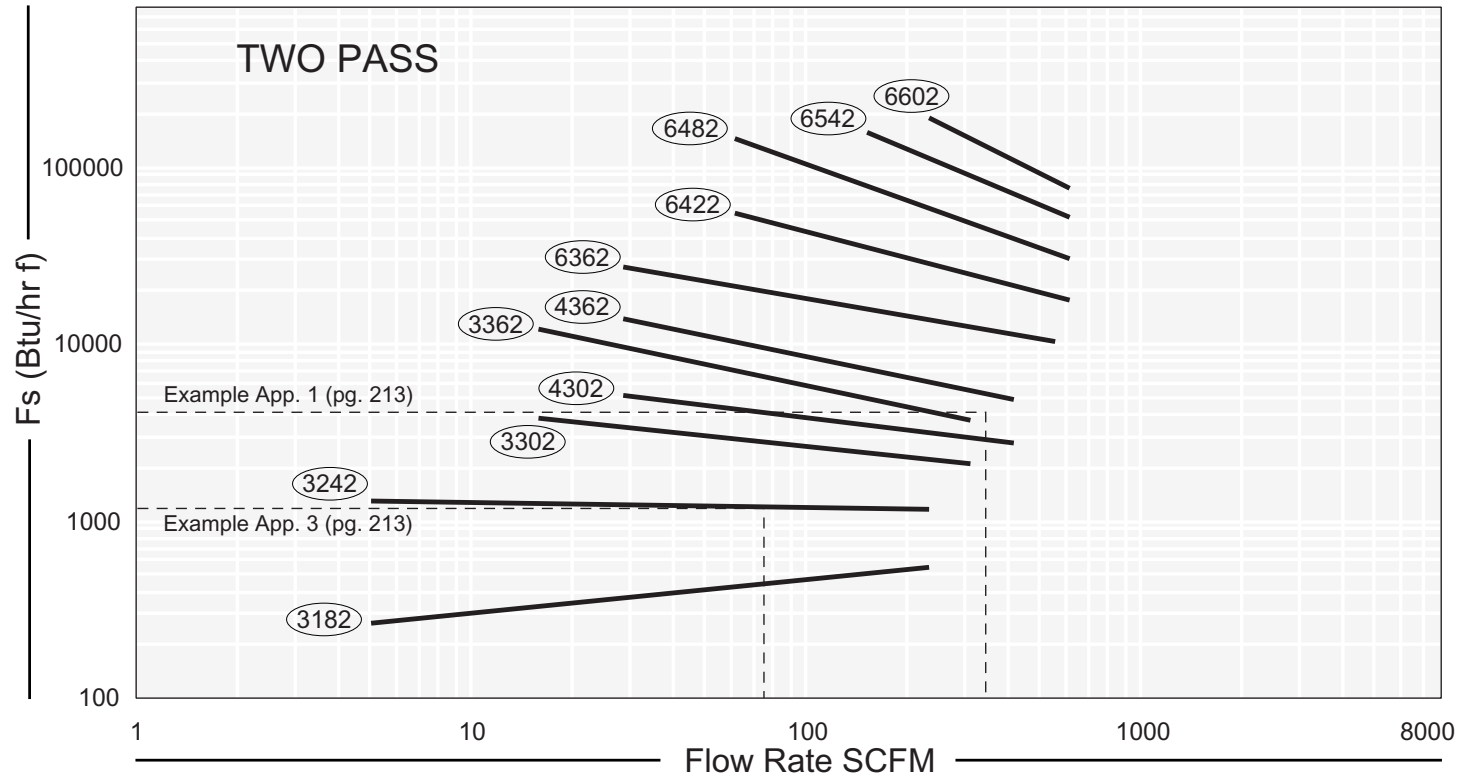
X = Epoxy (core & cabinet)

Using the performance graphs (page 215)



The Flow vs. Fs graph is calculated based upon SCFM units.



To convert volumetric Actual Cubic Feet per Minute (ACFM) into Standard Cubic Feet per Minute (SCFM) see page 213 application 3.

To select a model, locate the flow rate in SCFM located at the bottom of the graph. Proceed upward on the graph until the SCFM flow rate intersects with the calculated Fs. The curve closest, on or above the intersection point is the proper selection.

Using the one pass graph or two-pass graph depends upon pressure differential, flow, and performance requirements. The actual surface area for one or two pass units is the same. However, the airflow velocity in the tubes increases with the number of passes giving slightly higher pressure differentials and better cooling performance.

ELECTRIC MOTOR NOTES:

1) Motor electrical ratings are an approximate guide and may vary between motor manufacturers. Consult ratings on motor data plate prior to installation and operation.

2) Explosion proof, high temperature, severe duty, chemical, IEC, Canadian Standards Association, and Underwriters Laboratory recognized motors are available upon request.

3) American Industrial reserves the right to enact changes to motor brand, type and ratings regarding horsepower, RPM,FLA,and service factor for standard products without notice. All specific requirements will be honored without change.

4) Fan rotation is clockwise when facing the motor shaft.

5) The above motors contain factory lubricated shielded ball bearings (no additional lubrication is required).

6) **Abbreviation Index**
TEFC.....Totally Enclosed, Fan Cooled
EXP.....Explosion Proof

COMMON DATA

Model	Air Flow		Sound Level dB(A) @ 7ft	Weight		Serviceable Core
	CFM	m^3/s		w/ motor	w/o motor	
ACA-3181/2	1550	0.731	72	131	111	NO
ACA-3241/2	2900	1.36	76	154	134	NO
ACA-3301/2	4450	2.10	76	184	160	NO
ACA-4301/2	4450	2.10	76	211	187	NO
ACA-6301/2	4450	2.10	76	343	305	YES
ACA-3361/2	6350	2.99	79	243	205	NO
ACA-4361/2	6350	2.99	79	289	251	NO
ACA-6361/2	10500	4.95	91	402	342	YES
ACA-6421/2	14300	6.75	87	636	443	YES
ACA-6481/2	18700	8.82	88	753	560	YES
ACA-6541/2	23350	11.02	91	938	691	YES
ACA-6601/2	29300	13.83	91	1104	835	YES

NOTES:

TEFC = Totally Enclosed, Fan Cooled

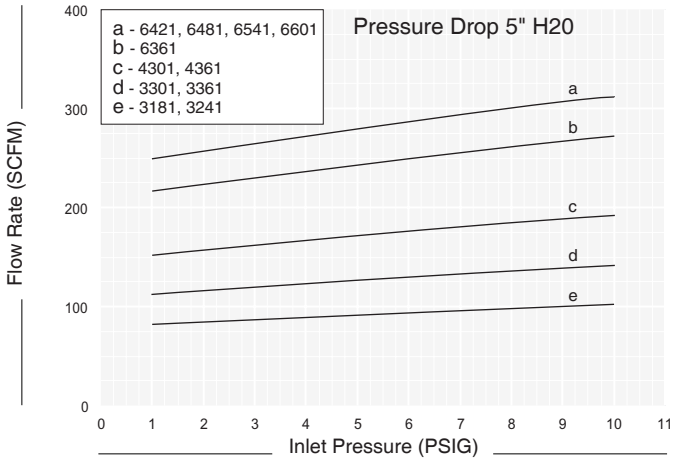
To estimate the sound level at distances other than 7 feet (2.1 meters) from the cooler, add 6 db for each halving of distance, or substract 6 db for each doubling of the distance.

Example:
The Sound Level of the ACA-3181/2 is 72 dB at 7ft. At 3.5ft (7ft x 0.5 = 3.5ft) the sound level is 66 dB (72dB - 6dB = 66dB). At 14ft (7ft x 2 = 14ft) the sound level is 78dB (72dB + 6dB = 78dB).

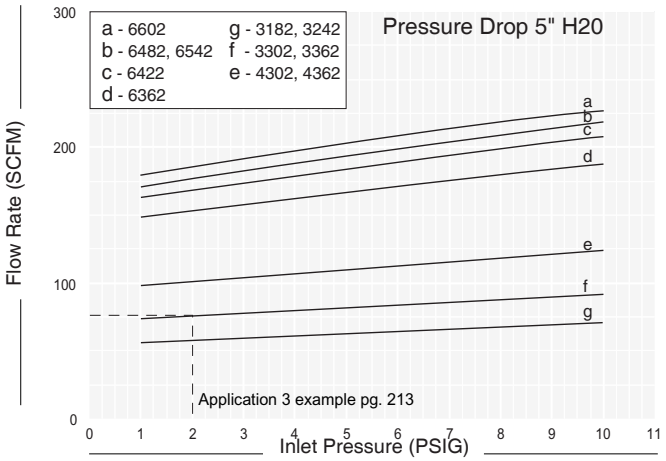
Pressure Drop Graphs (see page 220)

Each graph represents a specific pressure drop at differing flow rates and inlet pressures. The four graphs for each model series size represents the more popular milestone pressure differentials commonly applied.

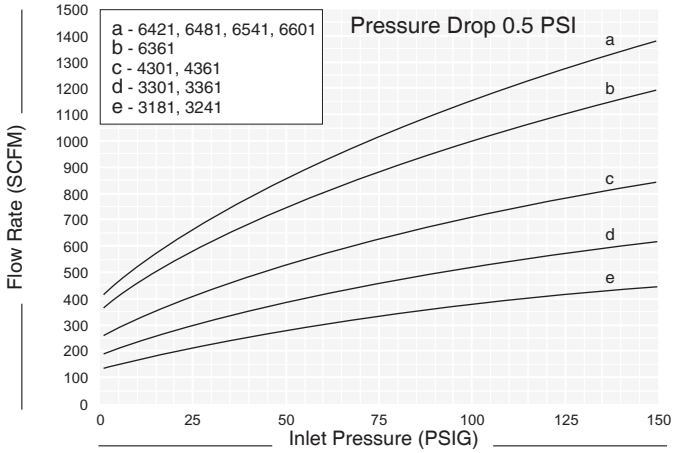
To use the graphs for selection purposes follw the steps below.



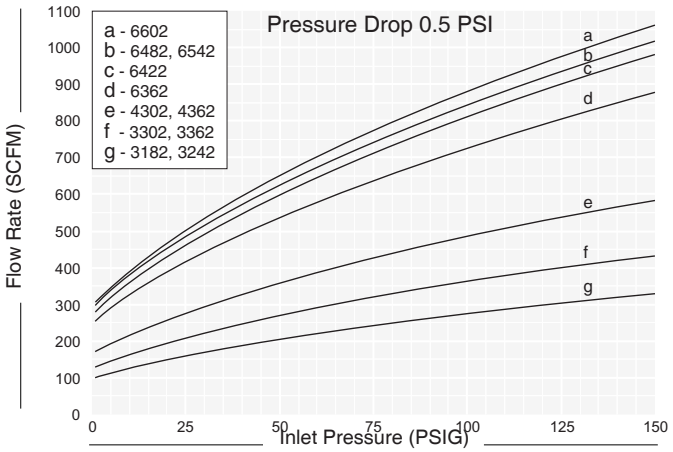
1) Locate the operating pressure at the bottom of the desired pressure drop chart.
2) Locate the flow rate in SCFM at the left end of the chart.
3) Follow the "Pressure" line vertically and the "Flow" line horizontally until they cross, note the location.
4) The curve on, or closest above will be exact or less pressure drop than requested and suitable for the application.
5) There may be several units shown above the intersection point, all of which will produce less than the desired pressure drop at the required flow.



Example: Application 3 Low Pressure Blower



Flow = 76 SCFM
Operating pressure = 2 PSIG
Initial selection from graph page 215 = ACA-3302
Desired pressure drop = 5" H2O or less. (USE the "Pressure Drop 5" H20" curves page 220)
From the pressure drop graph, page 220. Acceptable choice - ACA-3302 is on the line, ACA-3242 is well below the line. The ACA-3302 meets the pressure drop requirement, but exceeds the capacity requirement. However, even though the ACA-3242 exceeds 5" of water pressure drop, other considerations should be made prior to selection such as unit physical size, cost, availability, and port size.



note: AIHTI reserves the right to make reasonable design changes without notice.

PIPING HOOK UP

Receiving:

a) Inspect unit for any shipping damage before uncrating. Indicate all damages to the trucking firms' delivery person and mark it on the receiving bill before accepting the freight. Make sure that the core and fan are not damaged. Rotate the fan blade to make sure that it moves freely. The published weight information located in this brochure is approximate. True shipment weights are determined at the time of shipping and may vary. Approximate weight information published herein is for engineering approximation purposes and should not be used for exact shipping weight. *Since the warranty is based upon the unit date code located on the model identification tag, removal or manipulation of the identification tag will void the manufacturers warranty.*

b) When handling the ACA heat exchanger, special care should be taken to avoid damage to the core and fan. All units are shipped with wood skids for easy forklift handling

c) Standard Enamel Coating: American Industrial provides its standard products with a normal base coat of oil base air cure enamel paint. The enamel paint is applied as a temporary protective and esthetic coating prior to shipment. While the standard enamel coating is durable, American Industrial does not warrantee it as a long-term finish coating. It is strongly suggested that a more durable final coating be applied after installation or prior to long-term storage in a corrosive environment to cover any accidental scratches, enhance esthetics, and further prevent corrosion. It is the responsibility of the customer to provide regular maintenance against chips, scratches, etc... and regular touch up maintenance must be provided for long-term benefits and corrosion prevention.

Installation:

a) American Industrial recommends that the equipment supplied should be installed by qualified personal who have solid understanding of system design, pressure and temperature ratings, and piping assembly. Verify the service conditions of the system prior to applying any ACA series cooler. If the system pressure or temperature does not fall within the parameters on ACA rating tag located on the heat exchanger, contact our factory prior to installation or operation.

b) In order for the heat exchanger to properly function, installation should be made with minimum airflow obstruction distance of not less than twenty (20) inches on both fan intake and exiting side of the heat exchanger.

c) Process piping should be as indicated above with the process flow entering into the upper port and exiting out the lower port (see illustration). This configuration will allow for condensate moisture to drain completely from the equipment. It is recommended that an air separator or automatic drip leg be applied to the outlet side of the heat exchanger to trap any moisture that develops.

d) Flow line sizes should be sized to handle the appropriate flow to meet the system pressure drop requirements. If the nozzle size of the heat exchanger is smaller than the process line size an increased pressure differential at the heat exchanger may occur.

e) ACA series coolers are produced with both brazed ACA-3181 through ACA-4362, and serviceable core® ACA-6301 through ACA-6602 style coils. A brazed construction coil does not allow internal tube access. A serviceable core® will allow full accessibility to the internal tubes for cleaning and maintenance. ACA series coolers are rated for 150 PSIG working pressure, and a 400^{o}f working temperature.

f) Special Coatings: American Industrial offers as customer options, Air-Dry Epoxy, and Heresite (Air-Dry Phenolic) coatings at additional cost. American Industrial offers special coatings upon request, however American Industrial does not warrantee coatings to be a permanent solution for any equipment against corrosion. It is the responsibility of the customer to provide regular maintenance against chips, scratches, etc... and regular touch up maintenance must be provided for long-term benefits and corrosion prevention.

g) Electric motors should be connected only to supply source of the same characteristics as indicated on the electric motor information plate. Prior to starting, verify that the motor and fan spin freely without obstruction. Check carefully that the fan turns in the correct rotation direction normally counter clockwise from the motor side (fan direction arrow). Failure to operate the fan in the proper direction could reduce performance or cause serious damage to the heat exchanger or other components. Fan blades should be rechecked for tightness after the first 100 hours of operation.

Maintenance

Regular maintenance intervals based upon the surrounding and operational conditions should be maintained to verify equipment performance and to prevent premature component failure. Since some of the components such as, motors, fans, load adapters, etc... are not manufactured by American Industrial maintenance requirements provided by the manufacture must be followed.

a) Inspect the entire heat exchanger and motor/fan assembly for loosened bolts, loose connections, broken components, rust spots, corrosion, fin/coil clogging, or external leakage. Make immediate repairs to all affected areas prior to restarting and operating the heat exchanger or its components.

b) Heat exchangers operating in oily or dusty environments will often need to have the coil cooling fins cleaned. Oily or clogged fins should be cleaned by carefully brushing the fins and tubes with water or a non-aggressive degreasing agent mixture (Note: Cleaning agents that are not compatible with copper, brass, aluminum, steel or stainless steel should not be used). A compressed air or a water stream can be used to dislodge dirt and clean the coil further. Any external dirt or oil on the electric motor and fan assembly should be removed. Caution: Be sure to disconnect the electric motor from its power source prior to doing any maintenance.

c) In most cases it is not necessary to internally flush the coil. In circumstances where the coil has become plugged or has a substantial buildup of material, flushing the coil with water or a solvent may be done. Flushing solvents should be non-aggressive suitable for the materials of construction. Serviceable Core® models can be disassembled and inspected or cleaned if required.

d) Most low horsepower electric motors do not require any additional lubrication. However, larger motors must be lubricated with good quality grease as specified by the manufacture at least once every 6-9 months or as directed by the manufacture. T.E.F.C. air ventilation slots should be inspected and cleaned regularly to prevent clogging and starving the motor of cooling air. To maintain the electric motor properly see the manufactures requirements and specifications.

e) Fan blades should be cleaned and inspected for tightness during the regular maintenance schedule when handling a fan blade care must be given to avoid bending or striking any of the blades. Fan blades are factory balanced and will not operate properly if damaged or unbalanced. Damaged fan blades can cause excessive vibration and severe damage to the heat exchanger or drive motor.

Replace any damaged fan with an American industrial suggested replacement.

f) ACA heat exchanger cabinets are constructed using 7ga. through 18ga. steel that may be bent back into position if damaged. Parts that are not repairable can be purchased through American Industrial.

g) Coil fins that become flattened can be combed back into position. This process may require removal of the coil from the cabinet.

h) It is not advisable to attempt repairs to brazed joints of a brazed construction coil unless it will be done by an expert in silver solder brazing. Brazed coils are heated uniformly during the original manufacturing process to prevent weak zones from occurring. Uncontrolled reheating of the coil may result in weakening of the tube joints surrounding the repair area. In many instances brazed units that are repaired will not hold up as well to the rigors of the system as will a new coil. American Industrial will not warranty or be responsible for any repairs done by unauthorized sources. Manipulation in any way other than normal application will void the manufactures warranty.

i) Units containing a Serviceable Core® have bolted manifold covers that can be removed for cleaning or repair purposes.

Servicing Sequence

American Industrial has gone to great lengths to provide components that are repairable. If the ACA unit requires internal cleaning or attention the following steps will explain what must be done to access the internal tubes. Be sure to order gasket kits or repair parts prior to removal and disassembly to minimize down time.

a) To clean the internal tubes first remove all connection pipes from the unit.

b) Be sure the unit is drained of all water etc...

c) Place the ACA unit in an area that it can be accessed from all sides.

d) Remove the manifold cover bolts and hardware and place them into a secure place.

e) The manifold covers are tightly compressed and may need some prying to separate them from the gasket, physically remove the cover assemblies from both sides.

f) The tubes are now accessible for cleaning. We suggest a mild water-soluble degreaser be used with a brush. Tubing I.D. is .325 a plastic bristle brush on a rod will work best for cleaning the tubes. Steel brushes should be avoided since the steel is harder than the copper tubing and may heavily score the tubes if used.

g) If there are any leaking tubes you may plug them be forcing a soft metal plug into the hole and tapping it tight. You may in some cases weld the leaking tube shut however, care should be taken since excessive heat may cause surrounding tube joints to loosen and leak.

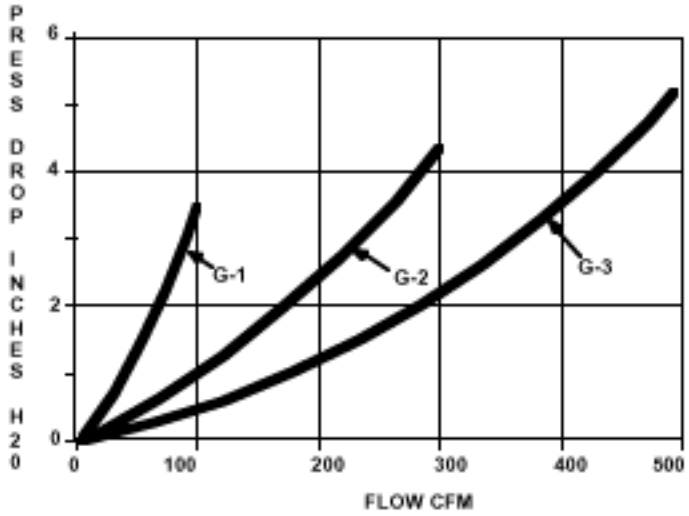
CARBTROL®

AIR PURIFICATION CANISTERS 140-200 LB. ACTIVATED CARBON

G-1
G-2
G-3



The CARBTROL "G" Canisters handles flows up to 500 CFM.

FEATURES

- High activity carbon.
- Epoxy lined steel or polyethylene construction.
- Acceptable for transport of hazardous spent carbon.
- Side drain for removal of accumulated condensate.
- Low pressure drop.
- PVC internal piping.
- High temperature (180°F) steel units available.

APPLICATIONS

- Soil vapor remediation
- Air stripper exhausts
- Tank vents
- Exhaust hoods
- Work area purification
- Sewage plant odor control

SAFETY

Certain chemical compounds in the presence of activated carbon may oxidize, decompose or polymerize. This could result in temperature increases sufficient to cause ignition of the activated carbon or adsorbed material. If a compounds reaction with activated carbon is unknown, appropriate tests should be considered.

1 INTRODUCTION

FPM Remediations, Inc. (FPM) has been contracted by the Air Force Center for Engineering and the Environment (AFCEE) to perform a Sub-Slab Vapor Mitigation (SSVM) pilot study at the former Griffiss Air Force Base (AFB) in Rome, NY. The purpose of this SSVM pilot study is to support the design for full scale implementation at Building 774, 776, 785 and 786. These sites were investigated as part of the Soil Vapor Intrusion (SVI) Survey at the On-base Groundwater Areas of Concern performed between October and December 2006 by Ecology and Environment Engineering P.C. (EEEPC).

Sites included in this Report are Building 785 and 786 which are located within the former Griffiss AFB. These sites are industrial/commercial and are not intended for future residential use. All current and future receptors at the sites are therefore industrial/commercial workers. The site use is currently restricted to industrial/commercial use via deed/lease restrictions.

1.1 Description of Pilot Study

The pilot study addressed the SVI of chlorinated solvents at the sites. The pilot study was conducted in accordance with provisions of the Contract # FA8903-04-D-8687, Delivery Order # 0017. The goals and objectives of the SSVM pilot study were to determine which type of system would be optimal for long term operation along with the evaluation of effectiveness of each system's performance. This Pilot Study Report is prepared for the Building's 785 and 786 pilot study SSVM systems. Please refer to Figure 1-1 for Buildings 785 and 786 locations.

To illustrate how this SSVM pilot study operated the following highlights the overall objectives, components, and constraints of the Building's 785 and 786 SSVM systems.

The objectives of the SSVM systems were:

- To provide soil vapor extraction (SVE) for Building 785 utilizing two vertical SSVM systems; to evaluate the functional limitations of the two vertical SSVM systems at Building 785 and to evaluate SSVM to protect potential future human receptors,
- To provide SVE for Building 786 utilizing a horizontal SSVM system; to mitigate SVI sources at Building 786 through providing SSVM and to evaluate SSVM to protect potential future human receptors.
- Identifying usability of vertical wells versus horizontal wells for permanent installation,
- To evaluate chlorinated solvent mitigation due to the SSVM systems, and
- To collect data that support full-scale system design.

Systems designs and evaluation criteria was based on the Draft-Final SSVM Pilot Study Work Plan (WP) (FPM, October 2010). This Report also consulted the United States Army Corps of Engineers (USACE) Engineering Manual 1110-1-4001 (USACE, June 2002), specifically

chapter 4 “Bench-and Pilot-Scale Testing for Soil Vapor Extraction and Bioventing” and Assumptions and Screening Levels for Soil Vapor Intrusion Evaluation (FPM, October 2007).

Components of the SSVM system included:

- Two vertically-installed SSVM systems at Building 785 with vacuum blower and associated piping and controls,
- A horizontally-installed SSVM system at Building 786 with vacuum blower and associated piping and controls,
- Vapor treatment system using activated carbon, and
- Vapor monitoring points (VMPs) to evaluate chlorinated solvent changes resulting from SSVM system operation.

Given the above objectives and components of the SSVM systems, the following evaluation criterion were used:

1. Design and performance of vertical/horizontal SSVM wells determined through stepped rate test.
2. Ability of vertical/horizontal SSVM wells to depressurize building slabs. Determined through vacuum radius of influence (ROI) test.
3. Understanding the transport and mitigation of chlorinated solvents. Determined through VMP sub-slab sampling and compare to previous results from SVI evaluation.
4. Identifying the effectiveness of SVE and treatment. Determined through influent vapor sampling from the extraction wells and effluent vapor sampling after activated carbon treatment.
5. Identifying feasibility of each design based on industrial/commercial use of Building 785 and Building 786.

2 SITE INFORMATION

2.1 Buildings 785 and 786 Site Location and History

Buildings 785 and 786 are located on the Apron 2 Chlorinated Plume Site (SD-52-01) at the former Griffiss AFB in Rome, NY (Figure 2-1). Buildings 785 and 786 are 28,251-square-ft, unoccupied, and unheated airplane hangers. The buildings are largely open with several first and second floor offices in the southwest corners of the buildings. Building 785 and 786 were built in 1959 and were taken out of service in 1995 after the former Griffiss AFB was closed. The buildings are built on a 13.5 to 14-inch thick, unsealed concrete slab. Cracks in the concrete floors were repaired and painted. Two large trenches exist in the buildings; one along the large aircraft bay doors on the southeast side of the building and a smaller trench along the overhead door on the northwest side of the buildings. All heating and air handling equipment is in a state of disrepair and assumed inoperable. The buildings are poorly sealed due to broken windows, doors left ajar and holes observed in the sheet metal outer covering of the building. According to drilling logs from the site, silty sand and gravelly sands are the predominant lithology encountered. Groundwater monitoring wells are currently present in Building 785 and outside in the vicinity of both buildings.

2.1.1 Groundwater Investigation

An extensive groundwater investigation has occurred surrounding Building 785 and Building 786, which is now in the long-term monitoring (LTM) phase. This investigation has been well documented in the pilot study work plan (FPM, October 2010). There are three primary contaminants in the plumes that exceed New York State Department of Environmental Conservation (NYSDEC) Class GA Groundwater Standards: trichloroethylene (TCE) and its breakdown products cis-1,2-dichloroethylene (DCE) and vinyl chloride (VC). The southern plume is commingled with several petroleum fuel plumes originating from Apron 2 fueling system. At locations where chlorinated solvents and fuel contaminants are commingled, significant reductive dechlorination is occurring, therefore the remedy emplace is natural attenuation. The most recent LTM groundwater sampling results have shown TCE detections up to 34.8 micro gram per liter (µg/L) at monitoring well 782VMW-105B, cis-1-2-DCE detections up to 43.4 µg/L at monitoring well 782VMW-78 and VC detections up to 39.5 µg/L at monitoring well 782VMW-4 (FPM, January 2011).

2.1.2 2006 SVI Evaluation

EEEPC performed an SVI Evaluation in 2006 at the Apron 2 Chlorinated plume. Buildings 782, 783, 784, 785, and 786 were evaluated. No detection exceeding screening levels was reported for Buildings 782, 783, and 784, so SVI was not deemed a concern for these buildings. Sub-slab sampling at the Apron 2 Chlorinated Plume Site indicates that tetrachloroethylene (PCE), TCE and chloroform are present in the sub-slab vapor beneath Buildings 785 and 786 at

concentrations above the AF screening levels. Indoor air sampling indicates that PCE and TCE are present, but at concentrations below the AF screening levels. No chloroform was reported in the indoor air. TCE was detected consistently in groundwater samples from wells within the groundwater contamination plume. PCE was never detected in groundwater. Chloroform exceedances of the NYSDEC Class GA Groundwater Standards were reported in the March 2009 sampling round in virtually all monitoring wells at Building 786, due to a reported water line break which leaked drinking water for a significant time at the site. The chloroform exceedances have shown a decreasing trend after the leak was repaired. SVI evaluation sample locations are shown on Figure 2-1 and SVI evaluation results are provided in Table 1, SVI Results Table.

This SVI survey was reviewed by the Air Force Real Property Agency (AFRPA), NYSDEC, New York State Department of Health (NYSDOH) and USEPA and during discussions among these parties, a plan for additional sampling was established, which was then implemented by FPM in April and May 2008 (FPM, April 2008).

2.1.3 Building 785 SVI Results 2008

Sub-slab sampling in 2006 and 2008 at the Apron 2 Chlorinated Plume Site indicates that chloroform and TCE are present in the sub-slab vapor beneath Building 785 at concentrations above the screening levels; indoor air sampling indicates that these contaminants are present, but at concentrations below the screening levels.

Sub-slab vapor sampling results for the 2006 sampling event showed exceedances for TCE of 11,000 micrograms per cubic meter ($\mu g/m^3$) at 785SSV-1. The April 2008 sampling round data were lower at this location (identical to two orders of magnitude lower) than those reported for the 2006 sampling round data. TCE exceedances of the sub-slab vapor screening levels were reported for sub-slab vapor locations 785SSV-2 and -6 at 430 and 2,200 $\mu g/m^3$, respectively.

2.1.4 Building 786 SVI Results 2008

Sub-slab sampling in 2006 and 2008 at the Apron 2 Chlorinated Plume Site indicates that PCE, and TCE are present in the sub-slab vapor beneath Building 786 at concentrations above the screening levels; indoor air sampling indicates that these contaminants are present, but at concentrations below the screening levels.

TCE was detected beneath Building 786 at concentrations ranging from 4,700 to 81,000 $\mu g/m^3$ in 2006 and PCE was detected at 2,200 $\mu g/m^3$at location 786SSV-1. Sub-slab vapor sampling results for the April 2008 sampling round were lower but within the same order of magnitude as those reported for the 2006 sampling round. Only TCE exceeded the sub-slab vapor screening levels at sampling locations 1, 2, 5, and 6 locations for the 2008 sampling ranging from 1,500 to

19,000 $\mu g/m^3$. Generally, small petroleum detections were reported in all samples, but none exceeded the sub-slab screening levels.

This page is intentionally left blank.

3 INSTALLATION OF SSVM SYSTEMS

3.1 Building 785 System

This system is illustrated on Figure 3-1.

3.1.1 Vertical Wells

Two vertical SSVM wells (785SSVM-1 and 785SSVM-2) were installed as extraction wells on September 16, 2010 and September 14, 2010, respectively. These vertical SSVM wells were constructed of a 5-ft screen, from 5 to 10 ft below ground surface (bgs), of 0.010-slot size, 2-inch diameter Schedule 40 poly-vinyl chloride (PVC) with a 5-ft riser to grade. The wells were installed by the vertical Hollow Stem Augering (HSA) method using a vertical drilling rig and typical HSA tooling. Drilling logs were recorded and are available in Appendix A.

3.1.2 Blower and Accessories

The two vertical extraction wells were connected inline with a regenerative blower, including all blower components The blower model was capable of achieving a maximum flow rate of 90 cubic feet per minute (cfm) and a maximum vacuum of 48 inches of water (inch w.g.). Blower components included control panel, vacuum relief valve, air dilution valve with filter, vacuum and temperature gauges, inline filter, muffler, and 55 gallon moisture knockout tank. The blower and accessories configuration is shown in Figure 3.1.2.

3.1.3 VMPs

The VMPs were strategically installed on September 15, 2010, to assist the ROI test, where 785VMP-1, -2 and -3 were respectively 10 feet (ft), 20 ft and 30 ft off the 785SSVM-1 well axis and respectively 45ft, 65ft and 20 ft off the 785SSVM-2 well axis. The VMPs contain three screened intervals of depth, a shallow (2 to 2.5 ft bgs), a medium (5 to 5.5 ft bgs) and a deep (10 to 10.5 ft bgs). Drilling logs were recorded and are available in Appendix A.

3.1.4 Vapor Treatment

The regenerative blower was connected inline with a vapor after treatment system consisting of one activated carbon drum.

3.2 Building 786 System

This system is illustrated in Figure 3-1.

3.2.1 Horizontal Well

For this pilot study, one horizontal well was installed to evaluate coverage and effectiveness. Horizontal wells are expected to offer more SSVM coverage than vertical wells. One horizontal SSVM well (786SSVM-1) was installed as an extraction well. This horizontal extraction well was constructed of a 160-ft screen at a depth of 10 ft bgs, of 0.010-slot size, 3-inch diameter Schedule 40 PVC. The well was installed November 15 through November 23, 2010, using directional drilling pull method. During installation, rod number (15 ft increments), depth and pitch were recorded to track the spatial location of the bore hole. Figure 3.2.1 shows a cross sectional view of the bore hole path.

Once installation was completed the well was developed using high pressured water and a cleaning solution as described in the Pilot Study WP (FPM, October 2010). The returned development water was containerized in a frac tank and sampled for full list volatile organic compounds (VOCs). The result data attached in Appendix B shows all results below the reporting limit. Therefore Rome Water Pollution Control Facility (RWPCF) was contacted to receive approval for discharge into the sanitary sewer system. The discharge event occurred over the course of 4 days (December 16, 17, 20, and 21, 2010) totaling 3,500 gallons of development water. All documentation is attached in Appendix B.

3.2.2 Blower and Accessories

The horizontal extraction well was connected inline with a regenerative blower, including all blower components. The blower model was capable of achieving a maximum flow rate of 420 cfm and a maximum vacuum of 110 inch w.g. Blower components included control panel, vacuum relief valve, air dilution valve with filter, vacuum and temperature gauges, flow meter, inline filter, muffler, and 60 gallon moisture knockout tank. The blower and accessories was designed and built by Air Energy, Incorporated, where the provided figure is shown as Figure 3.2.2.

3.2.3 VMPs

The VMPs were strategically installed January 13 through 14, 2011, to assist the ROI test, where 786VMP-1, -2 and -3 were respectively 15 ft, 30 ft and 45 ft off the 786SSVM-1 well axis with design placement considering the middle of the well screen, beginning of the well screen and end of the well screen, respectively. The VMPs contain three intervals of depth, a shallow (2 to 2.5 ft bgs), a medium (5 to 5.5 ft bgs) and a deep (10 to 10.5 ft bgs). Drilling logs were recorded and are available in Appendix A.

3.2.4 Vapor Treatment

The regenerative blower was connected inline with a vapor after treatment system consisting of one activated carbon drum.

This page is intentionally left blank.

4 EVALUATION OF CRITERION

The SSVM Pilot Study report focused on the chlorinated solvent contamination in the vicinity of Buildings 785 and 786. This section of the report evaluates the criterion used to meet the goals and objectives of the SSVM pilot study which were to determine the type of system that would be optimal for long term operation along with the effectiveness of which the systems perform.

4.1 Building 785 System

4.1.1 Stepped Rate Test

This test was performed on October 27th, 2010, the field form is attached in Appendix C. The stepped rate test was referenced from the USACE, Engineering Manual 1110-1-4001 (USACE, June 2002). This test is performed to determine the relationship between applied vacuum and the resulting flow rate from an extraction well. This data assists in the design and performance of blower selection to establish vacuums needed to achieve subsurface flow. The stepped rate test was performed on the Building 785 system evaluation of vertical well 785SSVM-2.

The results from the stepped rate test are shown in the graphs, Figure 4.1.1 and Figure 4.1.1 (2). The first graph depicts the minimum flow rate at 4 actual CFM (acfm) with a vacuum of 4 inch w.g. The minimum was obtainable when the air dilution valve was fully opened. The valve was then closed with 1/2 turn revolutions each step. When the valve was fully closed the air flow rate directly from subsurface flow, was the maximum achievable at 27 acfm, with a vacuum of 40 inch w.g. The next graph, Figure 4.1.1 (2), depicts the specific capacity of 785SSVM-2. The specific capacity evaluates well efficiencies at various vacuum/flow conditions. The flow rate was divided by the wellhead vacuum. The downward slop of the curve depicts the frictional loss in the screen due to vapor velocity. The frictional loss is expected to become greater as vacuum increases.

4.1.2 Vacuum Radius of Influence Test

The vacuum ROI test is an empirical approach to determine the outer boundaries of which the building slab is effectively being depressurized to enhance volatilization and extraction of the contaminants in the soil. Sufficient vacuum has been determined to be 0.1 inch w.g. The ROI assists in the design and placement of extraction wells because there should be an overlap in the ROI completely covering the entire building slab.

The ROI test was performed on 785SSVM-1 on October 6th, 2010. The ROI test was performed as a constant rate test. The constant rate measured at the well head was a flow rate of 26 acfm and a vacuum of 40 in w.g. After 300 minutes of operation, the vacuum at the well head increased to 42 inch w.g. The ROI test as performed on 785SSVM-2 on November 4th, 2011.

This test was also performed as a constant rate test. The constant rate measured at the well head was a flow rate of 22 acfm and a vacuum of 34 in w.g.

The VMPs were used as vacuum measurement points, where a Magnehelic® gauge was used for vacuum readings. For each test the vacuum was measured incrementally with time.

The figures, Figure 4.1.2 and 4.1.2(2) depict the results from the ROI test. Figure 4.1.2, ROI test on 785SSVM-1, shows sufficient vacuum at all VMPs. 785VMP-2S was on the threshold of having a sufficient vacuum. This shallow VMP is placed in the building however next to the boundary where the concrete slab meets the unsealed soil. There is vacuum loss due to air being pulled from the least path of resistance. Figure 4.1.2(2), ROI test on 785SSVM-2, shows sufficient vacuum at all VMPs except for 785VMP-2S. There is vacuum loss due to the same scenario described above. From this data an effective ROI can be interpreted as 65 ft where the concrete slab is contiguous, and 20 ft where the concrete slab is in boundary with unsealed soil. The ROI test assists in the design and placement of the extraction wells.

4.1.3 VMP Sub-Slab Sampling

The Draft-Final SSVM Pilot Study WP (FPM, October 2010) specifies a set of sampling events to evaluate sub-slab vapor mitigation. All results are located in Table 2, SSVM Pilot Study Results Table. A baseline sample was collected prior to system start-up at each newly installed VMP location. This baseline sample provides comparison data to the 1 week burn in and 2 month sampling event. The baseline sampling event was on October 6, 2010 with results of TCE above the sub-slab vapor screening level at 785VMP-2 and -3 (1300 and 3600 $\mu g/m^3$ respectively). 785VMP-1 had results for TCE below sub-slab vapor screening level at 370 $\mu g/m^3$**.**

After the baseline sample the SVE system was started for evaluation during start up and burn in phase. 785SSVM-1 was the only extraction well that received applied vacuum for this initial start up and burn in phase. After 12 days of operation another sampling event occurred on October 18, 2010 where TCE vapor results indicated a decreasing trend. 785VMP-3 had results for TCE vapor above screening level at 940 $\mu g/m^3$. 785VMP-1 had a result for TCE below sub-slab vapor screening level at 1.4 $\mu g/m^3$. TCE was not detected in 785VMP-2.

785SSVM-1 extraction well was operated for a total of 3 weeks and turned off. Following the operation of 785SSVM-1, 785SSVM-2 extraction well was operated for 3 weeks and the last sampling event occurred on December 2, 2010. The results continued to indicate a decreasing trend where all results were below screening levels. 785VMP-1, -2, and -3 indicated results for TCE respectively at 6 $\mu g/m^3$, 15 $\mu g/m^3$ and 170 $\mu g/m^3$.

All sampling events were documented on soil gas sampling field forms and recorded on a Chain of Custody (COC) for tracking. The field forms are located in Appendix C, the raw lab data is located in Appendix D, and the validated data is located in Appendix E.

4.1.4 Vapor Treatment Sampling

The effectiveness of the vertical extraction wells at removing soil gas vapors from the sub-surface and the ability to treat the soil gas vapors with activated carbon is evaluated based on influent and effluent sampling. An influent sample was collected during the initial start up of 785SSVM-1 extraction well, on October 6, 2010, where the sample was grabbed before carbon treatment. There were high photoionization detector (PID) levels associated with this sample (58 ppm), and the designated laboratory (Centek Laboratories, LLC) informed FPM that during sample analysis a high level of methyl ethyl ketone was detected above the set calibration curve, therefore analytical results were unobtainable. Methyl ethyl ketone is from PVC glue which was used during the construction of the Building 785 vertical SVE system. An effluent sample was collected on the same date, where the sample was grabbed after carbon treatment. The analytical results indicated all results below screening levels; however methyl ethyl ketone and TCE were detected at 130 $\mu g/m^3$ and 7.3 $\mu g/m^3$ respectively.

All sampling events were documented on soil gas sampling field forms and recorded on a Chain of Custody (COC) for tracking. The field forms are located in Appendix C, the raw lab dated is located in Appendix D, and the validated data is located in Appendix E.

4.1.5 Feasibility of Design

Building 785 is used by the county airport for commercial and industrial purposes. The purposes include storage of heavy equipment and salt and sand for winter melt. There is heavy traffic within the building. Constraints on the SSVM design included the current / future use of the building.

The pilot study provided achievable ROI from the vertical extraction wells. During the ROI test it was observed that a vertical extraction well screened from 5 to 10 ft bgs achieved a ROI of 65 ft where the concrete slab is contiguous, and 20 ft where the concrete slab is in boundary with unsealed soil. Therefore design and placement was configured as shown in Figure 3-1. A total of 12 vertical extraction wells are needed to adequately depressurize the building slab with interlocking ROI. To ensure the same activities can be performed by the county airport that currently exist in the building, the design and install of the vertical extraction wells would include underground trenching so all valves and headers are buried.

4.2 Building 786 System

4.2.1 Stepped Rate Test

This test was performed on January 19, 2011 where the field form is attached in Appendix C. The stepped rate test was referenced from the USACE, Engineering Manual 1110-1-4001 (USACE, June 2002). This test is performed to determine the relationship between applied vacuum and the resulting flow rate from an extraction well. This data assists in the design and performance of blower selection to establish vacuums needed to achieve subsurface flow. The stepped rate test was performed on the Building 786 system evaluation of extraction well 786SSVM-1.

The results from the stepped rate test are shown in the graphs, Figure 4.2.1 and Figure 4.2.1 (2). The first graph depicts a minimum flow rate at 90.5 actual CFM (acfm) with a vacuum of 40 inch w.g. The minimum was obtainable when the air dilution valve was fully opened. The valve was then closed with 1/2 turn revolutions each step. When the valve was fully closed the air flow rate directly from subsurface flow, was the maximum achievable at 161.4 acfm, with a vacuum of 78.5 inch w.g. The next graph, Figure 4.2.1 (2), depicts the specific capacity of 786SSVM-1. The specific capacity evaluates well efficiencies at various vacuum/flow conditions. The flow rate was divided by the wellhead vacuum. The downward slop of the curve depicts the frictional loss in the screen due to vapor velocity. The frictional loss is expected to become greater as vacuum increases.

4.2.2 Vacuum Radius of Influence Test

The vacuum ROI test is an empirical approach to determine the outer boundaries of which the building slab is effectively being depressurized to enhance volatilization and extraction of the contaminants in the soil. Sufficient vacuum has been determined to be 0.1 inch w.g. The ROI assists in the design and placement of extraction wells because there should be an overlap in the ROI completely covering the entire building slab.

The ROI test was performed on 786SSVM-1 on January 21, 2011. The ROI test was performed as a constant rate test. The constant rate measured at the well head was a flow rate of 167.7 acfm and a vacuum of 78 in w.g. This observed maximum flow rate was slightly higher then the observed maximum flow rate during the stepped rate test.

The VMPs were used as vacuum measurement points, where a magnehelic® gauge was used for vacuum readings. For each test the vacuum was measured incrementally with time.

The figure, Figure 4.2.2 depicts the results from the ROI test. The ROI test on 786SSVM-1 shows sufficient vacuum at VMP-1 and -3. VMP-3 was the worse case scenario where the VMP was placed at the end of the well screen off axis by 45 ft. VMP-2 did not show sufficient vacuum. Discussion concluded that VMP-2 did not show sufficient vacuum attributed to

building construction, including cracks in the slab. From this data an effective ROI can be interpreted at 45 ft or greater (more than sufficient vacuum was observed at 45 ft).

4.2.3 VMP Sub-Slab Sampling

The Draft-Final SSVM Pilot Study WP (FPM, October 2010) specifies a set of sampling events to evaluate sub-slab vapor mitigation. All results are located in Table 2, SSVM Pilot Study Results Table. A baseline sample was collected prior to system start-up at each newly installed VMP location. The baseline sampling event was on January 18, 2011 with results of TCE above the sub-slab vapor screening level at 786VMP-1, -2 and -3 (4,900, 740, and 2,200 µg/m^3 respectively). 786VMP-1 also had results above the sub-slab vapor screening level for of PCE at 140 µg/m^3.

After the baseline sample the SVE system was started for evaluation during start up and burn in phase. The start up during the cold month of January resulted in a component in the SVE system called the moisture knock-out tank to freeze, thus constricting flow. Therefore the system was shut off and an enclosure was built around the blower unit and accessories, including a heater with a thermostat. The pilot study was completed at that time due to time constraints and no other sampling events were conducted.

All sampling events were documented on soil gas sampling field forms and recorded on a COC for tracking. The field forms are located in Appendix C, the raw lab data is located in Appendix D, and the validated data is located in Appendix E.

4.2.4 Vapor Treatment Sampling

The effectiveness of the horizontal extraction well at removing soil gas vapors from the sub-surface and the ability to treat the soil gas vapors with activated carbon is evaluated based on influent and effluent sampling. An influent sample was collected during the initial start up of 786SSVM-1 extraction well, on January 21, 2011, where the sample was grabbed before carbon treatment. Analytical results showed both TCE (27,000 µg/m^3) and PCE (600 µg/m^3) above sub-slab vapor screening levels. An effluent sample was collected on the same date, where the sample was grabbed after carbon treatment. The analytical results indicated all results below screening levels; however TCE and PCE were detected at 29 µg/m^3 and 1.0 µg/m^3 respectively.

All sampling events were documented on soil gas sampling field forms and recorded on a COC for tracking. The field forms are located in Appendix C, the raw lab data is located in Appendix D, and the validated data is located in Appendix E.

4.2.5 Feasibility of Design

Building 786 is used by the county airport for commercial and industrial purposes. The purposes include storage of heavy equipment and miscellaneous tooling. There is heavy traffic within the building. Constraints on the SSVM design included the use of the building.

The pilot study provided achievable ROI from the horizontal extraction well. During the ROI test it was observed that a horizontal extraction with a 160 ft screen at 10 ft bgs achieved a ROI of 45 ft or greater. The width of the building is 120 ft; therefore a ROI of 60 ft would be adequate to depressurize the entire building slab. Based on the effectiveness of one horizontal extraction well, the current design and placement is considered sufficient. The horizontal well design does not interfere with the current use of the building because all piping and valving is buried underground.

4.3 Conclusion and Recommendations

The Pilot Study was a successful evaluation of the potential for SVE systems to mitigate sub-slab soil gas vapors and protect human receptors from SVI. The results of this Pilot Study support the design for full scale implementation of SVE systems at Buildings 774, 776, 785 and 786. Full scale SVI mitigation at these buildings is recommended through sub-slab depressurization using horizontal wells. The systems will include a regenerative blower capable of having a flow rate of 1 cfm per screened foot and a vacuum to adequately overcome the vacuum drop of the entire system. The systems will also include vapor treatment with activated carbon.

The horizontal well design is favorable based on use of the buildings. All buildings have industrial/commercial use. Building 785 and 786 are witness to heavy vehicle traffic while Buildings 774 and 776 are office settings. One horizontal well proved sufficient at Building 786 and this is recommended for Building 785. For Building 774 and 776, it is recommended that building footprints are considered for design configuration to determine the number and placement of horizontal wells to be installed.

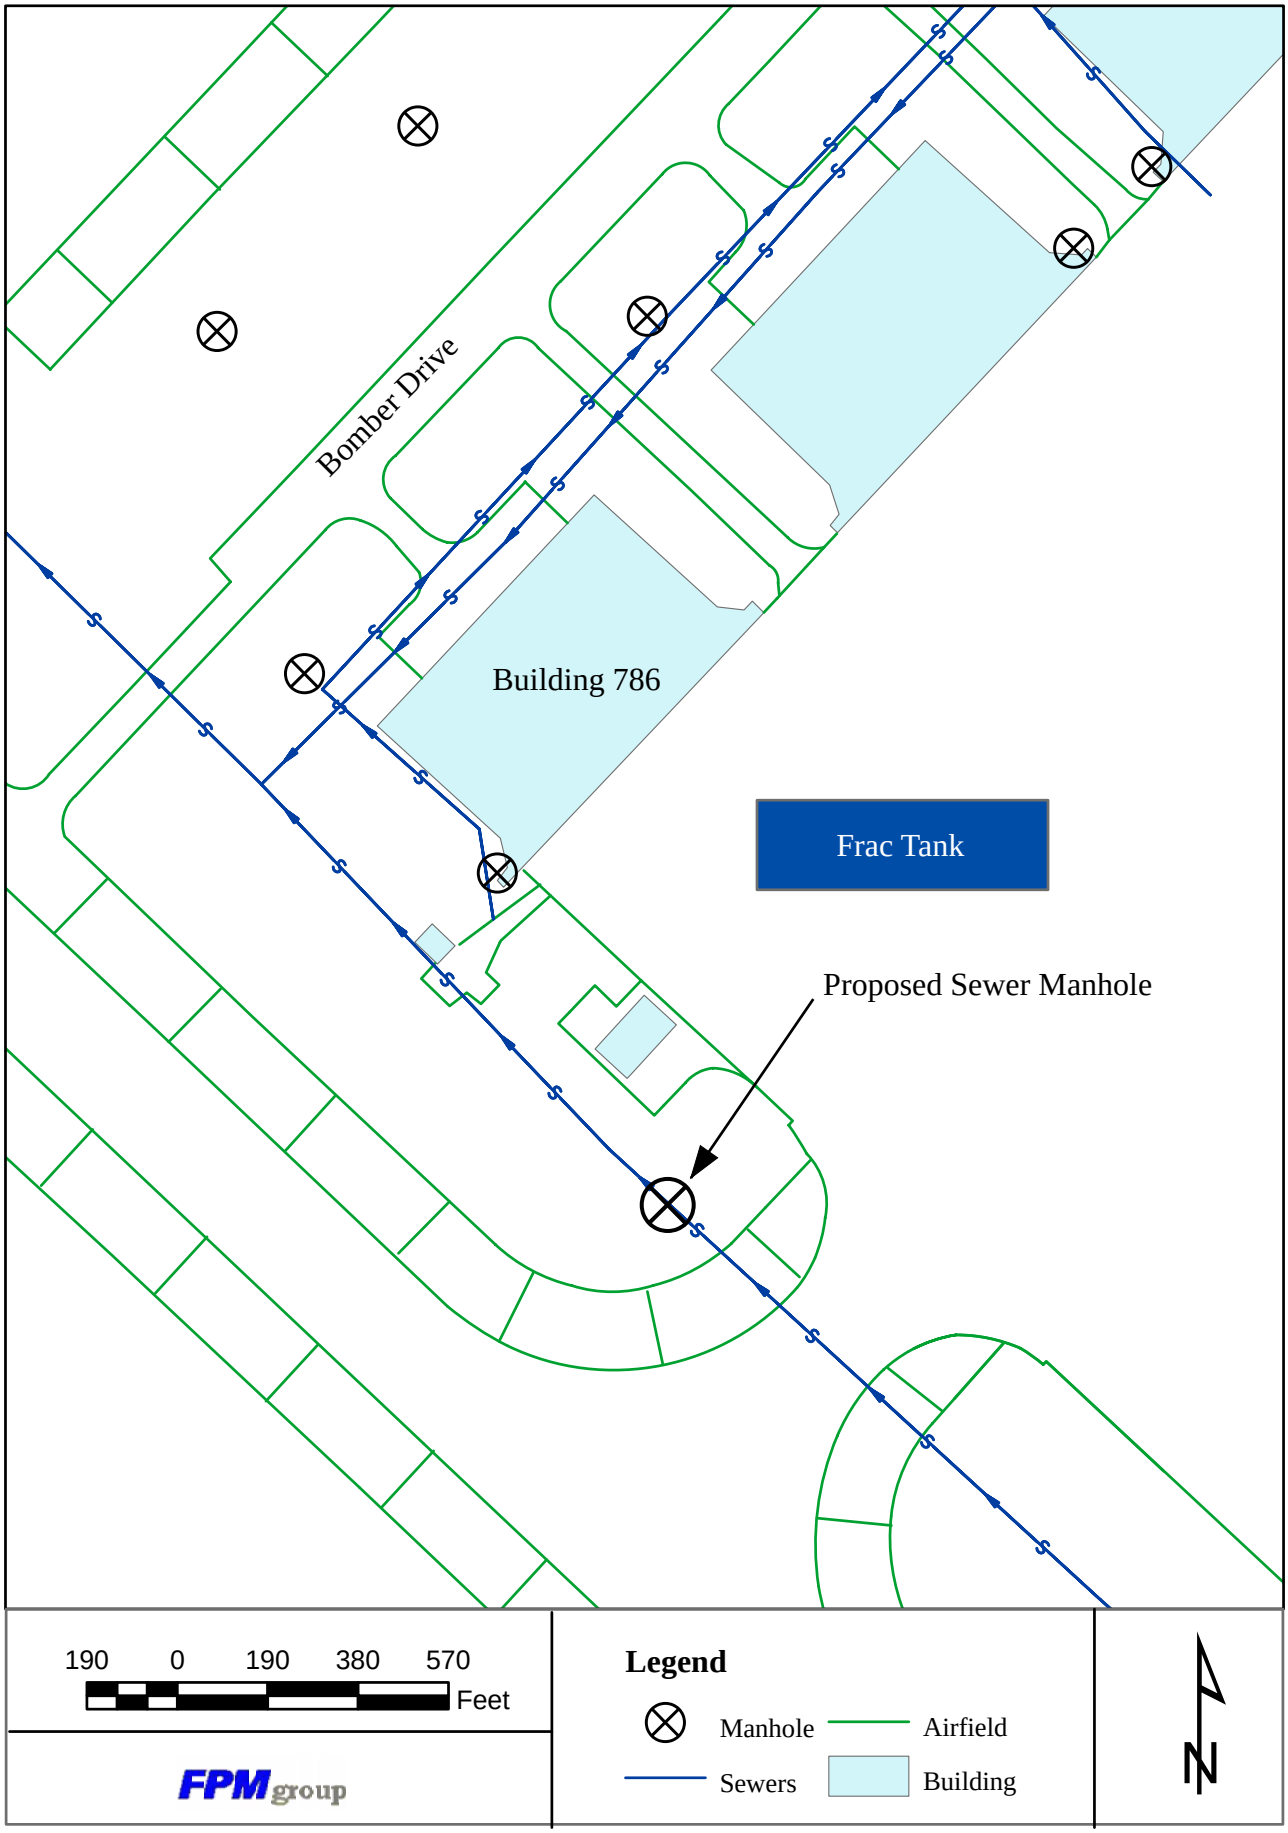
RE: Drilling Development Water Discharge Request at Building 786 (nosedock 5) Griffiss Business and Technology Park, Rome, New York.

FPM is requesting the temporary discharge of drilling development water from the Building 786 horizontal well installment to the sewer system on Griffiss Business and Technology Park that connects to the City of Rome Water Pollution Control Facility. The horizontal well was installed at 10 feet below grade, as part of a soil vapor extraction system. This site has been monitored for over 10 years, and the known contaminant in the groundwater (approximately 16 ft below grade) is trichloroethylene. There was no reported contamination in the soil.

The proposed discharge will be conducted using a trash pump/frac tank system. Drilling development water was pumped into the frac tank to serve as a settling basin for suspended solids including bentonite (used as drilling mud). Proposed, the water then will be pumped into a sewer system manhole. An estimated 3,500 gallons of development water is planned on being discharged in one event. If necessary, a silt bag can be utilized to eliminate all suspended solids.

Attached are raw lab data for full list VOCs (8260) and sampling chain of custody. Also included is a figure showing the Building 786 location including the proposed sewer manhole.



If you have any questions or require additional information, please call me at 315-336-7721 ext. 212, or e-mail me at k.mattice@fpm-group.com.

Sincerely,

Katrina J. Mattice

RE: Permission to discharge FRAC tank water. Con tract # 1000-0817

Dear Ms. Mattice,

After a review of sampling date submitted by email on December 13, 2010, permission is herby granted to discharge this wastewater water under the following conditions:

1. Water is discharged to designated manhole south, of FRAC tank, and you inform the POTW of time of discharge.

2. Provision is made so that grit, rocks, sand, or silt is not pumped into sanitary sewer.

3. Cost to discharge is $0.04 per gallon.

4. Permission may be rescinded at any time if the POTW determines discharge may affect treatment plant process, violates any sewer use ordinance, EPA or DEC regulations.

If you have any questions please or comments please call 315-339-7775 ext 222, or email me at bclifford@romecitygov.com

Sincerely,

Bruce Clifford

RE: Drilling Development Water Discharge Amount at Building 786 (nosedock 5) Griffiss Business and Technology Park, Rome, New York.

FPM discharged a total amount of 3,500 gallons of development water. The event was over a course of 4 days (December 16, 17, 20 and 21). The invoice PO number is 1000-08-17. The invoice can be sent directly to Katrina Mattice at the above address.

Attached for convenience are raw lab data for full list VOCs (8260) and sampling chain of custody.

If you have any questions or require additional information, please call me at 315-336-7721 ext. 212, or e-mail me at k.mattice@fpm-group.com.

Sincerely,

Katrina Mattice

RE: FRAC tank water discharge. PO # 1000-08-17

Dear Ms. Mattice,

Letter dated December 27, 2010 reported a discharge of 3,500 gallons of development water from FRAC tank located near building 786 or nose dock # 5. The discharge event occurred on 12/16, 17, 20, and 21, 2010.

The cost to discharge is $0.04 per gallon for a total of $140.00.

Enclosed is invoice in the amount of $140.00.

If you have any questions please or comments please call 315-339-7775 ext 222, or email me at bclifford@romecitygov.com

Sincerely,

Bruce Clifford
IPP Coordinator

RE: B785 SSVM Sampling

Dear Katrina Mattice:

Centek Laboratories, LLC received 7 sample(s) on 10/8/2010 for the analyses presented in the following report.

I certify that this data package is in compliance with the terms and conditions of the Contract, both technically and for completeness. Release of the data contained in this hardcopy data package and/or in the computer readable data submitted has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Centek Laboratories performs all analyses according to EPA, NIOSH or OSHA-approved analytical methods. Centek Laboratories is dedicated to providing quality analyses and exceptional customer service. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the case narrative. All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

We do our best to make our reporting format clear and understandable and hope you are thoroughly satisfied with our services. Please contact your client service representative at (315) 431-9730 or myself, if you would like any additional information regarding this report.

Thank you for using Centek Laboratories. This report can not be reproduced except in its entirety, without prior written authorization.

Sincerely,

Russell J. Pellegrino
Technical Director

Disclaimer: The test results and procedures utilized, and laboratory interpretations of the data obtained by Centek as contained in this report are believed by Centek to be accurate and reliable for sample(s) tested. In accepting this report, the customer agrees that the full extent of any and

all liability for actual and consequential damages of Centek for the services performed shall be equal to the fee charged to the customer for the services as liquidated damages.

CASE NARRATIVE

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the corrective action report(s). All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination. Samples were analyzed using the methods outlined in the following references:

Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999.

Trip Blank added to COC per client request.
Removed samples 4&5 due to matix interference from PVC glue

See Corrective Action: [2034] Continuing Calibration did not meet criteria.
See Corrective Action: [2035] LCS and LCSD did not meet criteria.
See Corrective Action: [2036] Surrogate did not meet criteria.
See Corrective Action: [2037] Continuing Calibration did not meet criteria.
See Corrective Action: [2038] LCS did not meet criteria.

Centek Laboratories, LLC

Corrective Action Report

Date Initiated: 12-Oct-10 **Corrective Action Report ID:** 2034

Initiated By: Russell Pellegrino **Department:** MSVOA

Corrective Action Description

CAR Summary: Continuing Calibration did not meet criteria.

Description of Nonconformance: Continuing calibration did not meet criteria on 10/12/10 for carbon disulfide, methyl tert-butyl ether & 1,2,4-trichlorobenzene. The compounds in question were more sensitive. The results may be biased high for carbon disulfide. All other compounds in question were not detected for the associated samples.

Description of Corrective Action: Since the results may be biased high for carbon disulfide, the next analysis may require a new system calibration. All sets of data submitted.

Performed By: Russell Pellegrino **Completion Date:** 13-Oct-10

Client Notification

Client Notification Required: No **Notified By:**

Comment:

Quality Assurance Review

Nonconformance Type: Deficiency

Further Action required by QA: At this time no further corrective action taken. All sets of data submitted. Recalibrate the system if compounds continue outside criteria.

Approval and Closure

Technical Director / Deputy Tech. Dir.: Russell Pellegrino Jr — Russell Pellegrino — Close Date: 14-Oct-10

QA Officer Approval: Nick Scala — QA Date: 13-Oct-10

Centek Laboratories, LLC

Corrective Action Report

Date Initiated: 12-Oct-10 **Corrective Action Report ID:** 2035

Initiated By: Russell Pellegrino **Department:** MSVOA

Corrective Action Description

CAR Summary: LCS and LCSD did not meet criteria.

Description of Nonconformance: ALCS1UG-101210 did not meet criteria for methyl tert-butyl ether, 1,2,4-trimethylbenzene, 4-ethyltoluene, isopropyl alcohol, 1,2,4-trichlorobenzene & styrene. ALCS1UGD-101210 did not meet criteria for several % recoveries and RPD'S.The compounds were more sensitive. All other QC met criteria for the compounds of interest with the exception of methyl tert-butyl ether & 1,2,4-trichlorobenzene. However, these two compounds in question were not detected for the associated samples.The LCS 6 Liter canister was independent of the 6 Liter continuing calibration canister.

Description of Corrective Action: Since the LCS & LCSD 6 Liter canister was independent of the 6 Liter continuing calibration canister and all other QC met criteria for the compounds of interest with the exception of methyl tert-butyl ether & 1,2,4-trichlorobenzene , no corrective action taken at this time. If results continue to be outside established limits then recalibrate system. All sets of data submitted.

Performed By: Russell Pellegrino **Completion Date:** 13-Oct-10

Corrective Action Report

Date Initiated: 13-Oct-10 **Corrective Action Report ID:** 2036

Initiated By: Russell Pellegrino **Department:** MSVOA

Corrective Action Description

CAR Summary: Surrogate did not meet criteria.

Description of Nonconformance: Surrogate was high and did not meet criteria for samples C1010018-001DL90 & 002DL90. Based on the chromatographic evidence this is most likely due to matrix interference.

Description of Corrective Action: Samples were analyzed at the 1x concentration with results meeting criteria.

BOTTLE ORDER

2003

16-Nov-10

SHIPPED TO:

Company: FPM Group
Contact: Daniel
Address: 584 Phoenix Drive
Rome, NY 13441
Phone: (315) 336-7721
Quote ID: 0
Project:

Submitted By:

Ship Date: 9/30/2010
VIA: Courier (Centek)
Due Date: 10/4/2010

Bottle Code	Bottle Type	TEST(s)	QTY
MC1000CC	1L Mini-Can	1ug/m3 w/ 0.25ug/M3 CT-TCE-VC	8

Can / Reg ID	Description
215	1.4L Mini-Can - 1121
142	1L Mini-Can - 1116
223	1L Mini-Can - 1185
243	1L Mini-Can - 1175
248	1L Mini-Can - 1180
493	1L Mini-Can - 1385
552	1L Mini-Can - 120
553	1L Mini-Can - 121
467	1L Mini-Can - 1371
558	1L Mini-Can - 126

Comments: 8 1L w/ QG + trip for griffins must be there by 10am Monday SEND FEDEX OVERNIGHT WAC 092010 E-G

GC/MS VOLATILES-WHOLE AIR

METHOD TO-15

GC/MS-Whole Air Calculations

Relative Response Factor (RRF)

$$RRF = \frac{Ax * Cis}{Ais * Cx}$$

where: Ax = area of the characteristic ion for the compound being measured
Ais = area of the characteristic ion for the specific internal standard of the compound being measured
Cx = concentration of the compound being measured (ppbv)
Cis = concentration of the internal standard (ppbv)

Percent Relative Standard Deviation (%RSD)

$$\% RSD = \frac{\text{Standard deviation of RRF values} * 100}{\text{mean RRF}}$$

Percent Difference (%D)

$$\%D = \frac{(RRFc - \text{mean } RRFi) * 100}{\text{mean } RRFi}$$

where: RRFc = relative response factor from the continuing calibration
mean RRFi = mean relative response factor from the initial calibration

Sample Calculations

$$ppbv = \frac{Ax * Is * Df}{Ais * RRF}$$

where: Ax = area of the characteristic ion for the compound being measured
Ais = area of the characteristic ion for the specific internal standard of the compound being measured
Is = Concentration of the internal standard injected (ppbv)
RRF= relative response factor for the compound being measured
Df = Dilution factor

Title : TO-15 VOA Standards for 5 point calibration
Last Update : Tue Nov 09 13:47:37 2010
Response via : Initial Calibration

#3
Freon 12
Concen: 0.45 ppb
RT: 2.92 min Scan# 26
Delta R.T. -0.04 min
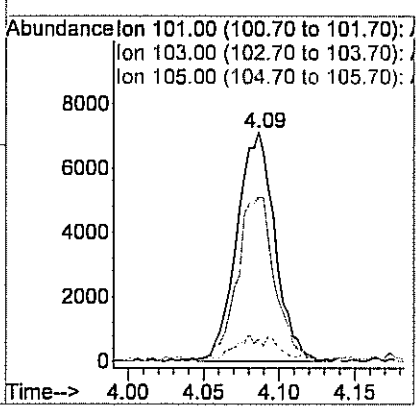
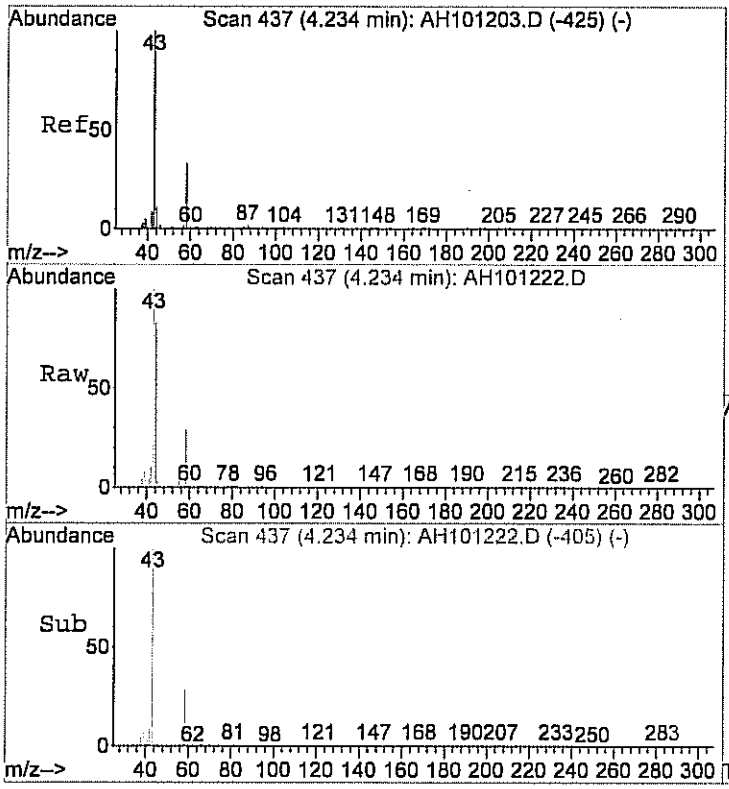
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 85 Resp: 43114

Ion	Ratio	Lower	Upper
85	100		
87	33.4	12.7	52.7

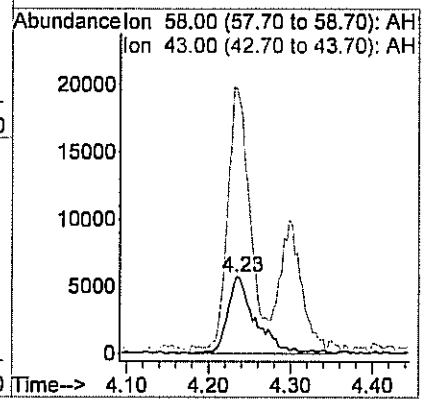


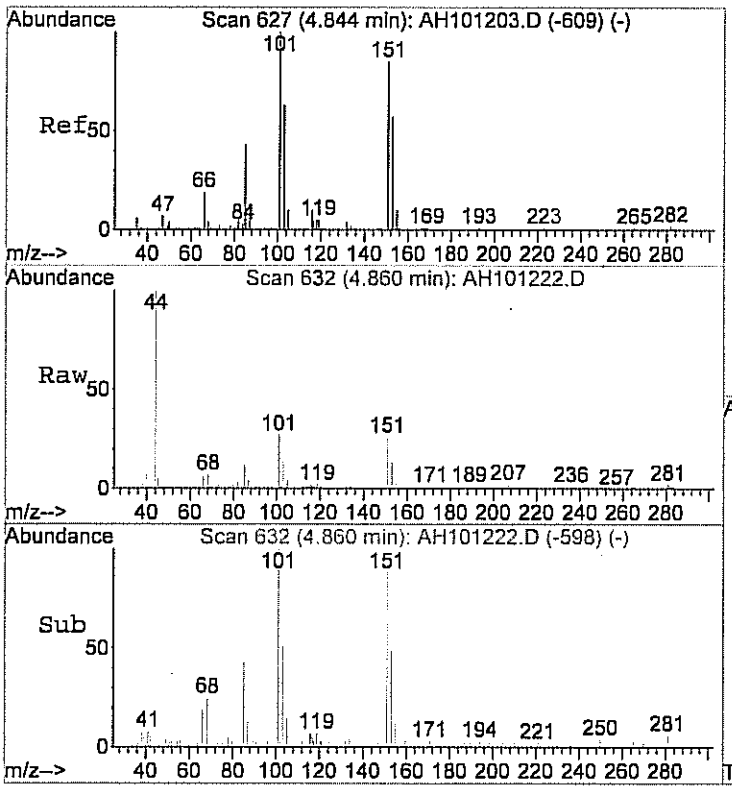


#11
Freon 11
Concen: 0.27 ppb
RT: 4.09 min Scan# 391
Delta R.T. -0.04 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion:101 Resp: 12485

Ion	Ratio	Lower	Upper
101	100		
103	70.9	44.6	84.6
105	13.0	0.0	31.1

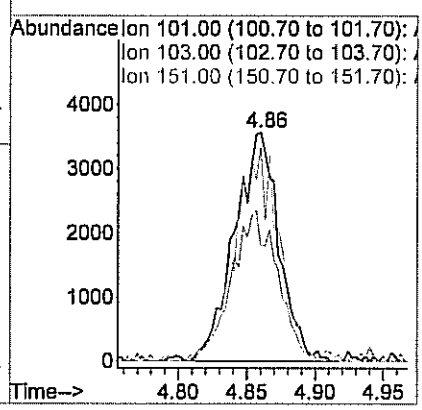


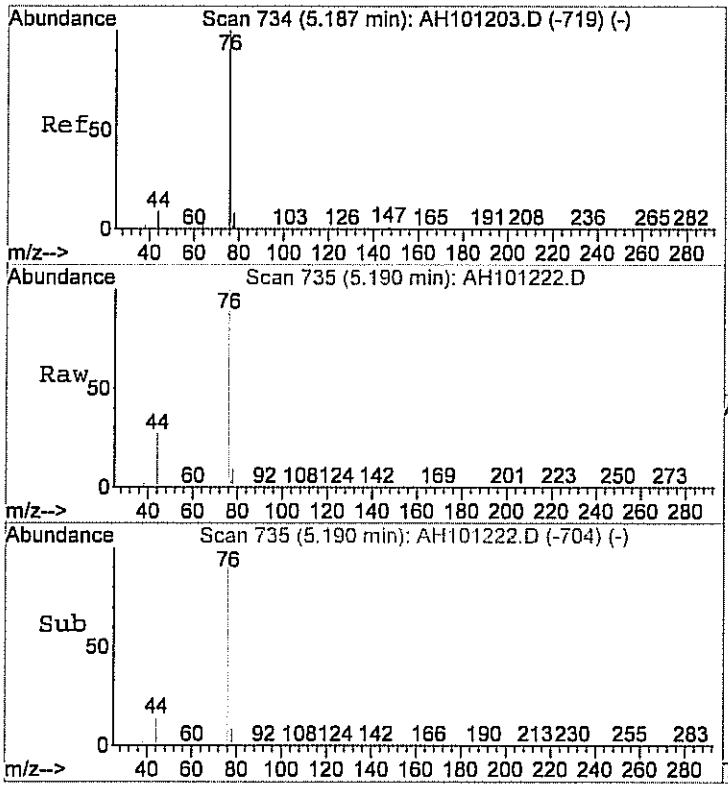


#12
Acetone
Concen: 2.32 ppb
RT: 4.23 min Scan# 437
Delta R.T. -0.05 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 58 Resp: 13649

Ion	Ratio	Lower	Upper
58	100		
43	413.1	37.6	97.6#

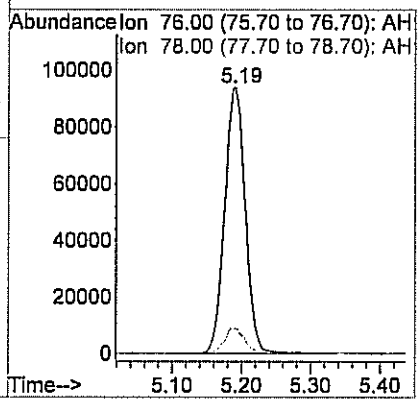


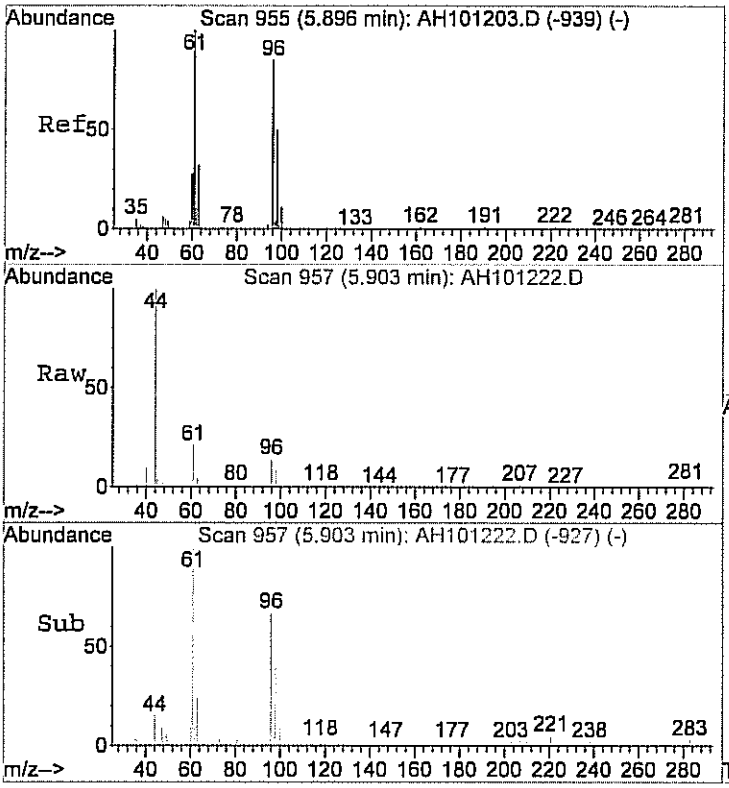


#15
Freon 113
Concen: 0.21 ppb
RT: 4.86 min Scan# 632
Delta R.T. -0.04 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion:101 Resp: 8011

Ion	Ratio	Lower	Upper
101	100		
103	68.3	44.8	84.8
151	95.2	65.3	105.3

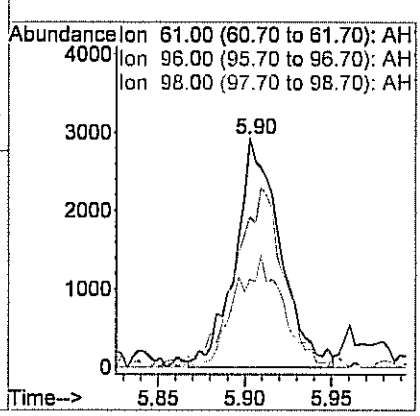


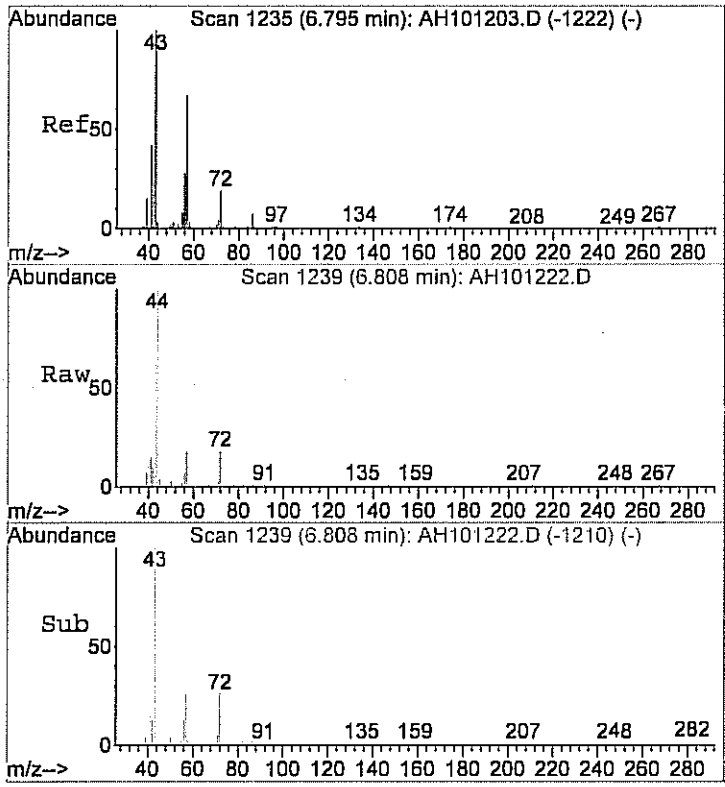


#18
Carbon disulfide
Concen: 5.38 ppb
RT: 5.19 min Scan# 735
Delta R.T. -0.05 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 76 Resp: 193604

Ion	Ratio	Lower	Upper
76	100		
78	9.9	0.0	30.6

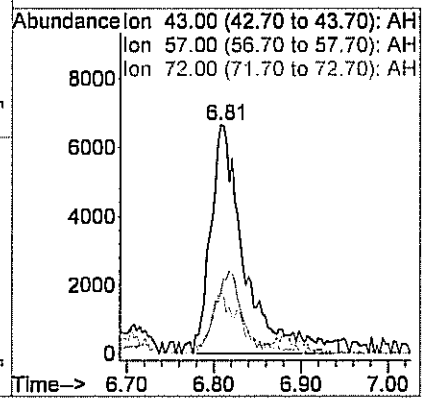


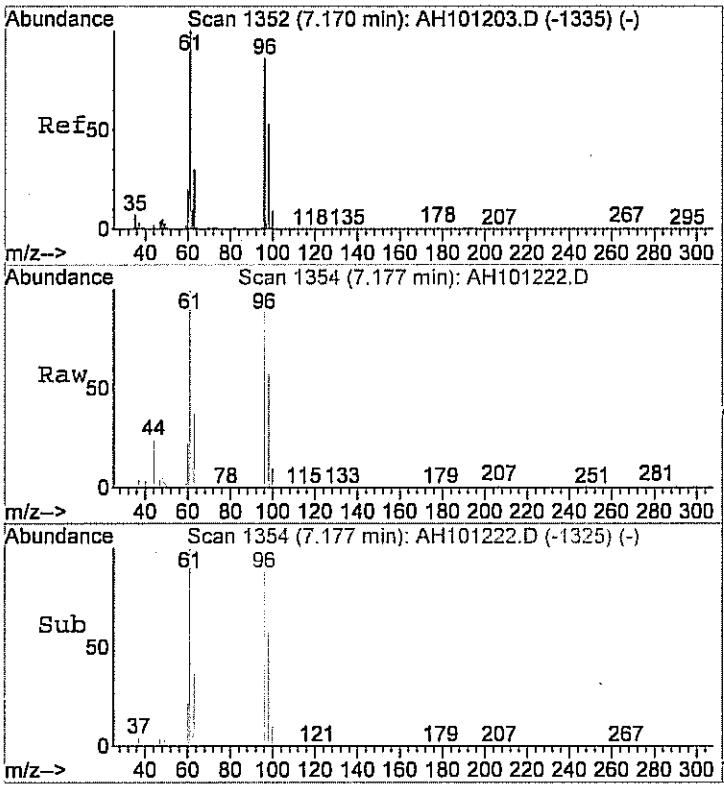


#19
trans-1,2-dichloroethene
Concen: 0.17 ppb
RT: 5.90 min Scan# 957
Delta R.T. -0.05 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 61 Resp: 5273

Ion	Ratio	Lower	Upper
61	100		
96	83.5	60.6	100.6
98	51.9	32.3	72.3

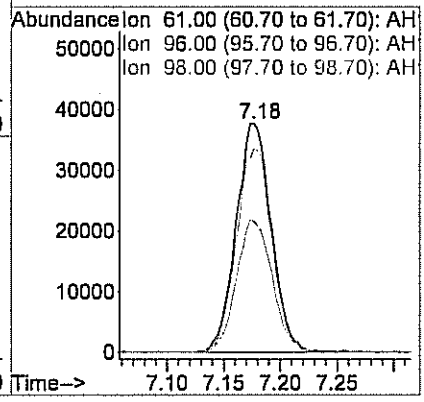


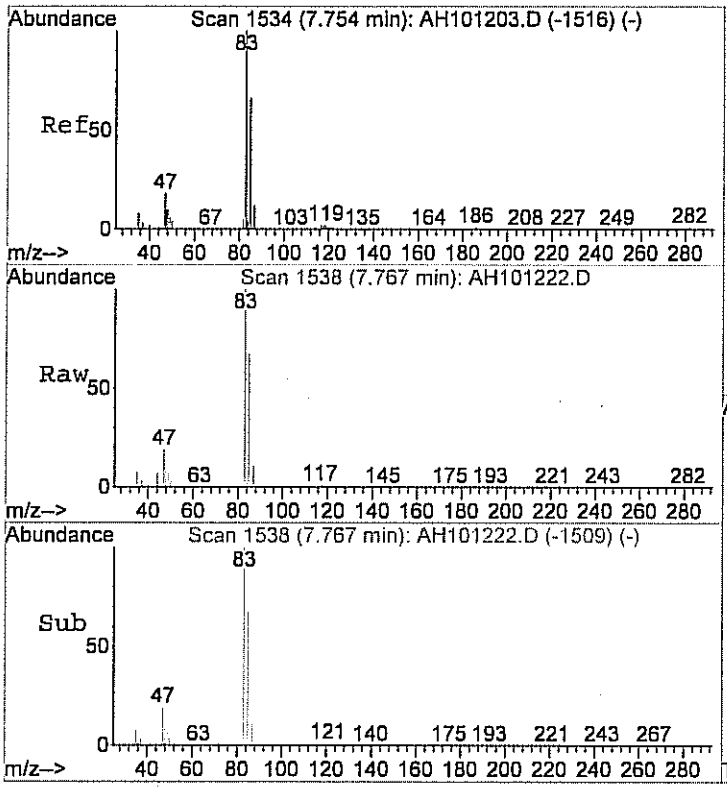


#23
Methyl Ethyl Ketone
Concen: 0.44 ppb
RT: 6.81 min Scan# 1239
Delta R.T. -0.06 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 43 Resp: 18263

Ion	Ratio	Lower	Upper
43	100		
57	34.2	40.7	80.7#
72	23.8	0.0	39.3

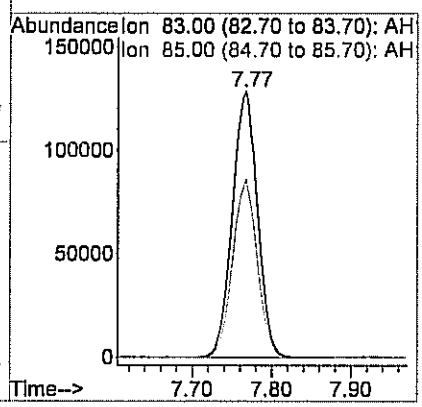


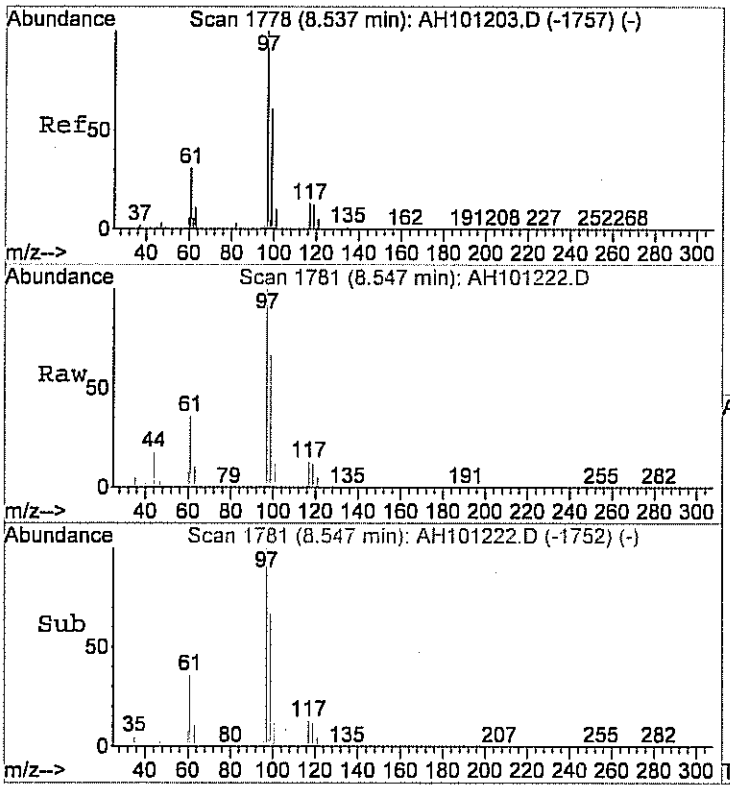


#24
cis-1,2-dichloroethene
Concen: 2.52 ppb
RT: 7.18 min Scan# 1354
Delta R.T. -0.06 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 61 Resp: 81449

Ion	Ratio	Lower	Upper
61	100		
96	91.3	70.1	110.1
98	59.0	37.9	77.9

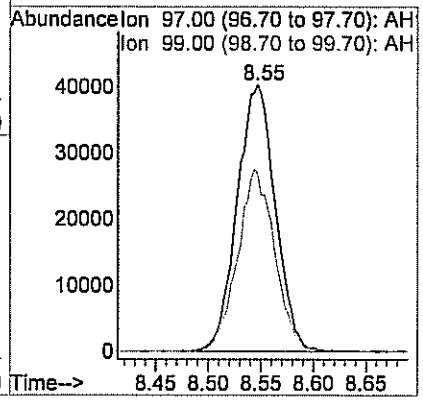


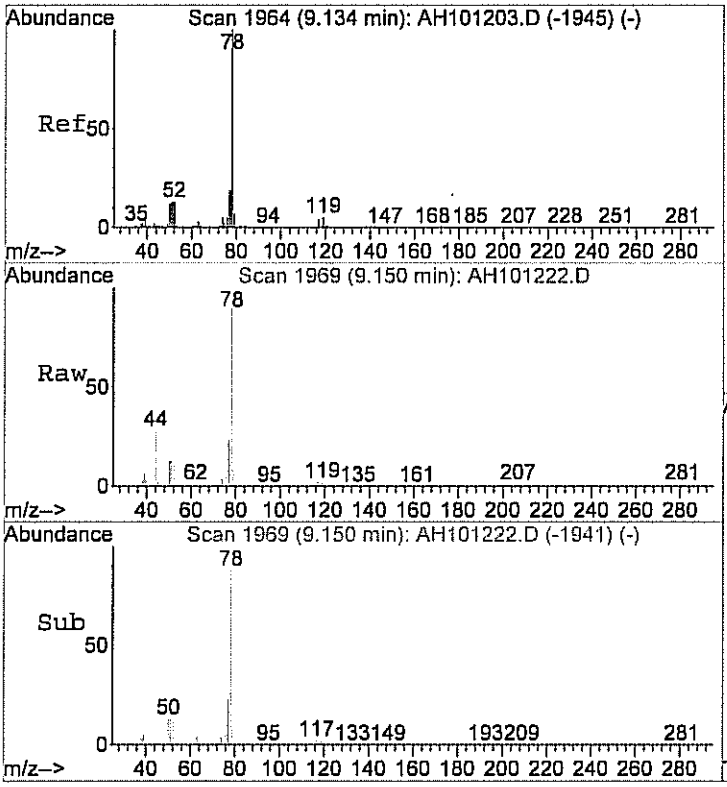


#27
Chloroform
Concen: 4.22 ppb
RT: 7.77 min Scan# 1538
Delta R.T. -0.06 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 83 Resp: 283339

Ion	Ratio	Lower	Upper
83	100		
85	66.1	45.2	85.2

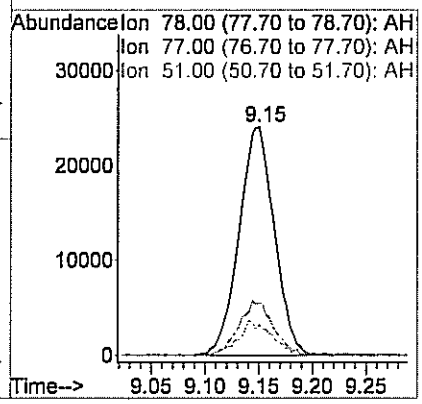


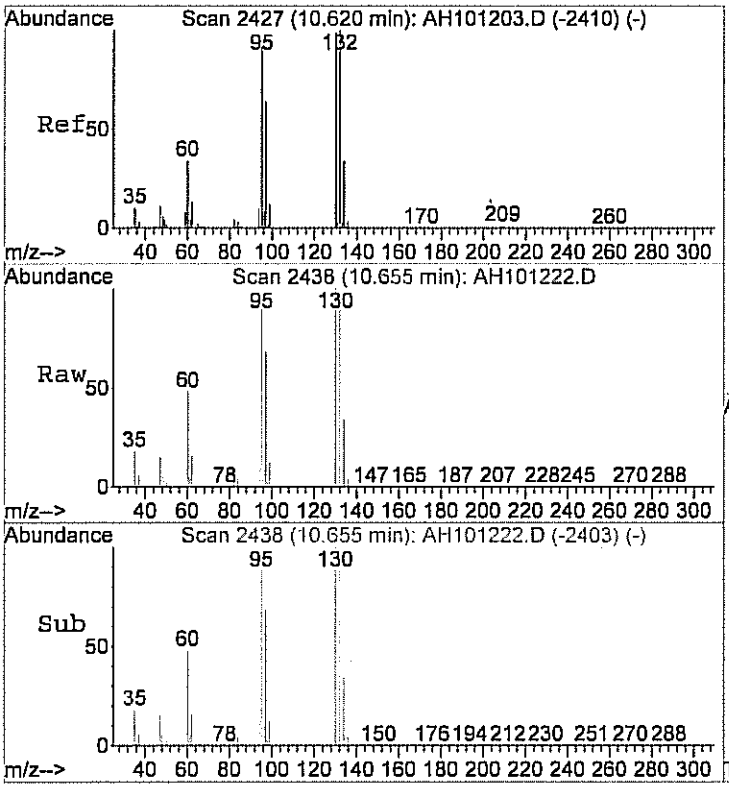


#31
1,1,1-trichloroethane
Concen: 2.01 ppb
RT: 8.55 min Scan# 1781
Delta R.T. -0.06 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 97 Resp: 101459

Ion	Ratio	Lower	Upper
97	100		
99	65.9	43.5	83.5

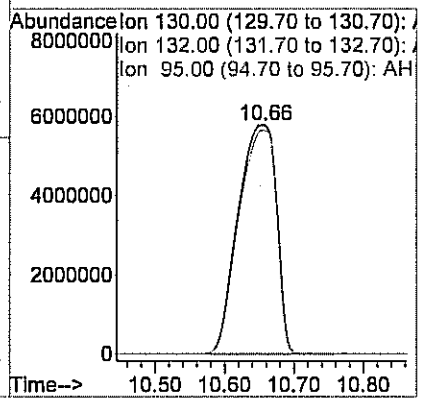


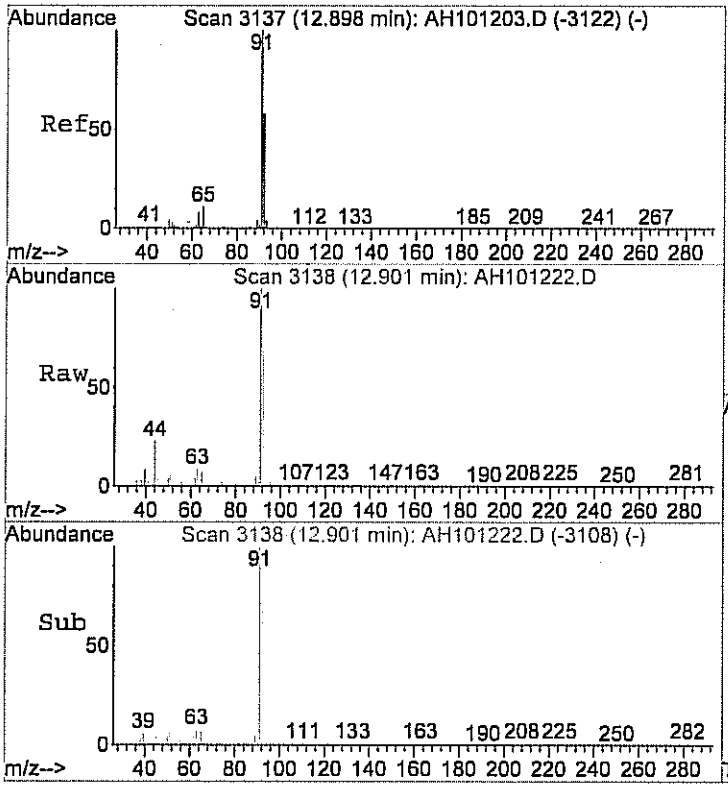


#34
Benzene
Concen: 0.67 ppb
RT: 9.15 min Scan# 1969
Delta R.T. -0.06 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 78 Resp: 55310

Ion	Ratio	Lower	Upper
78	100		
77	23.5	2.0	42.0
51	14.5	0.0	34.0

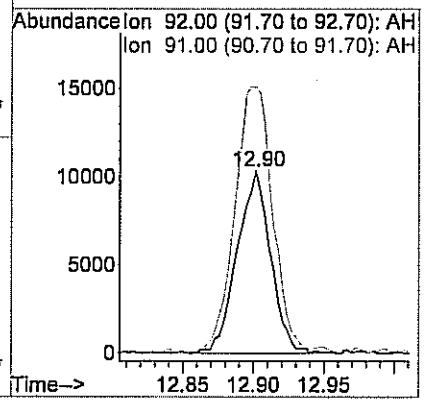


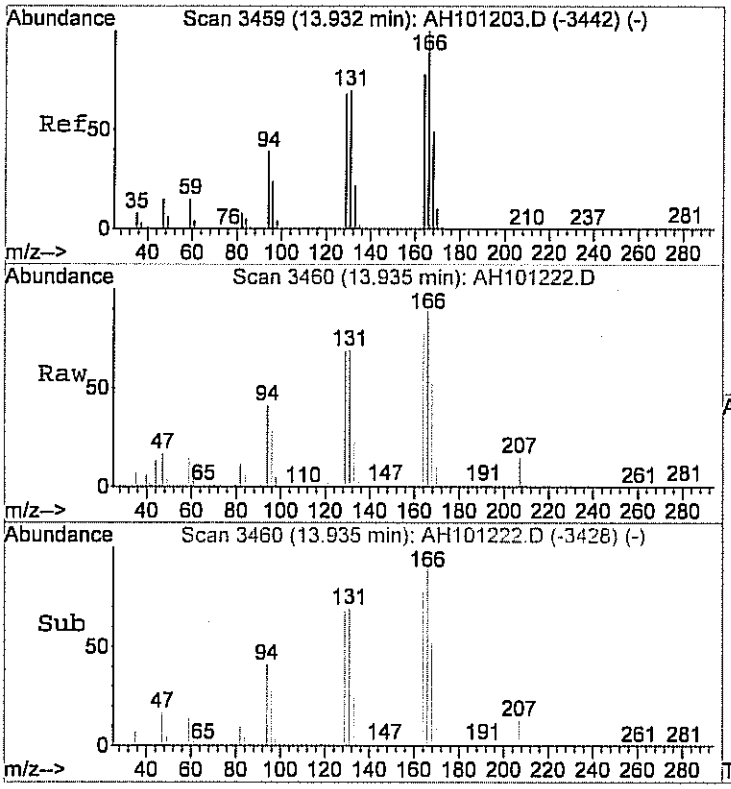


#38
Trichloroethene
Concen: 430.03 ppb
RT: 10.66 min Scan# 2438
Delta R.T. -0.04 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion:130 Resp:22385931

Ion	Ratio	Lower	Upper
130	100		
132	97.0	78.8	118.8
95	94.5	75.3	115.3

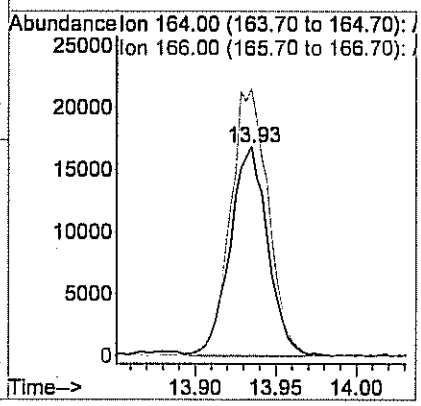


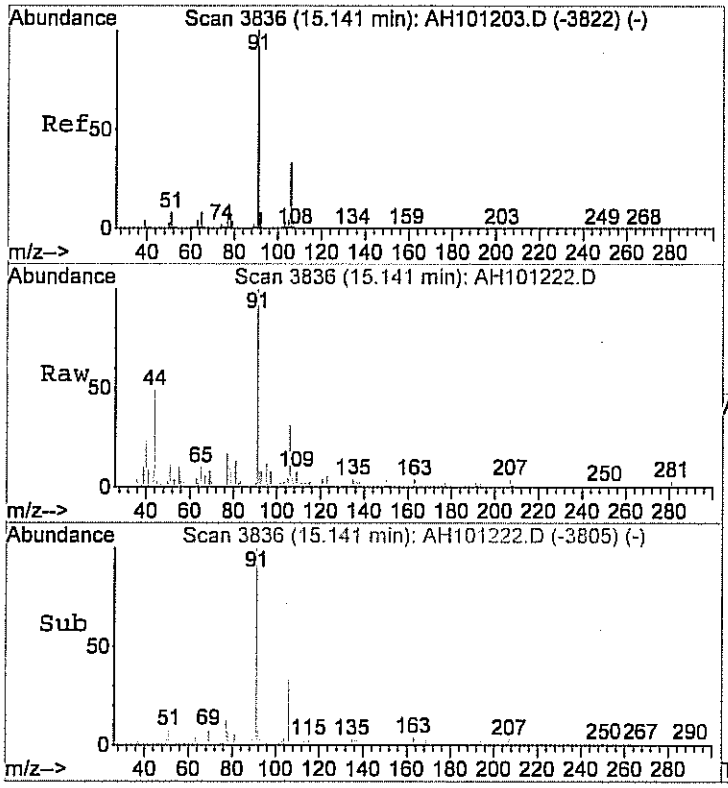


#45
Toluene
Concen: 0.36 ppb
RT: 12.90 min Scan# 3138
Delta R.T. -0.05 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 92 Resp: 16985

Ion	Ratio	Lower	Upper
92	100		
91	164.7	154.6	194.6

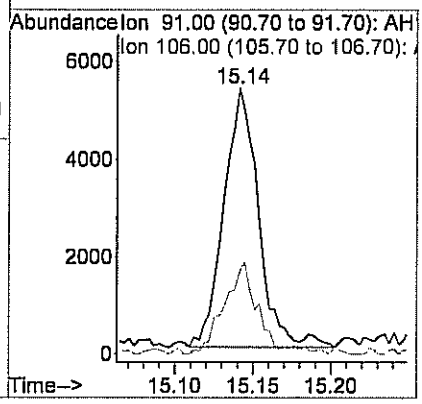


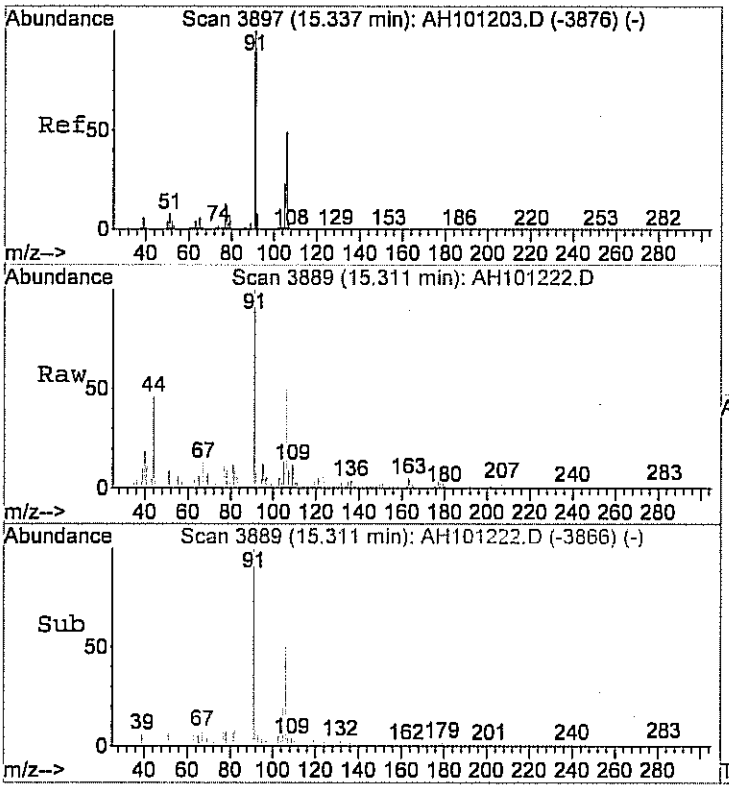


#50
Tetrachloroethylene
Concen: 0.51 ppb
RT: 13.93 min Scan# 3460
Delta R.T. -0.05 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion:164 Resp: 27334

Ion	Ratio	Lower	Upper
164	100		
166	128.6	108.6	148.6

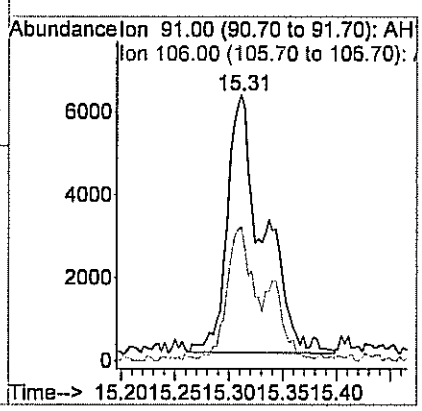


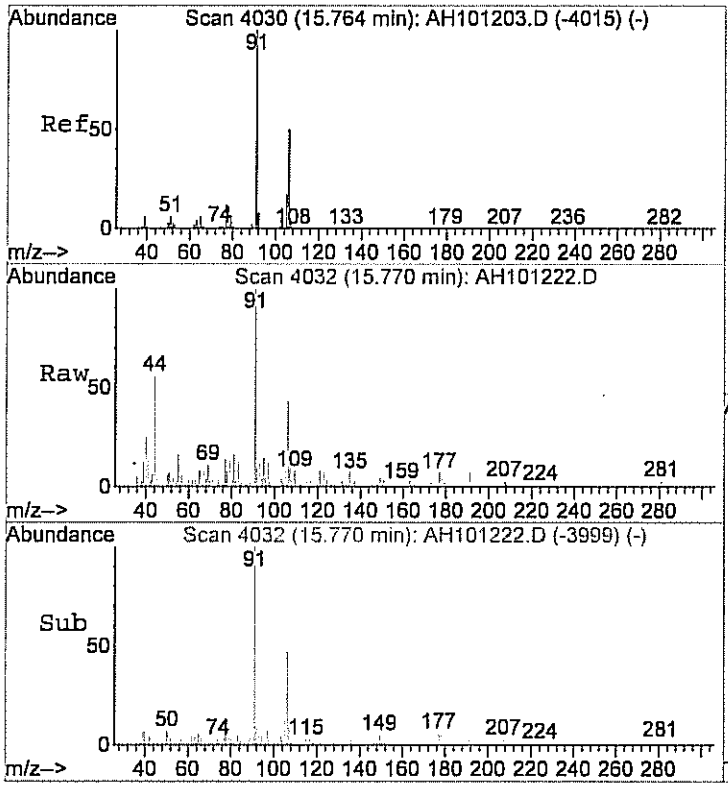


#52
Ethylbenzene
Concen: 0.10 ppb
RT: 15.14 min Scan# 3836
Delta R.T. -0.05 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 91 Resp: 8206

Ion	Ratio	Lower	Upper
91	100		
106	35.0	11.1	51.1

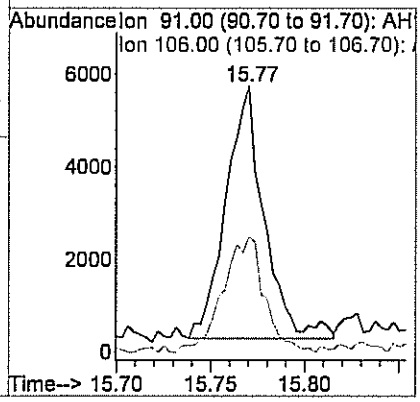


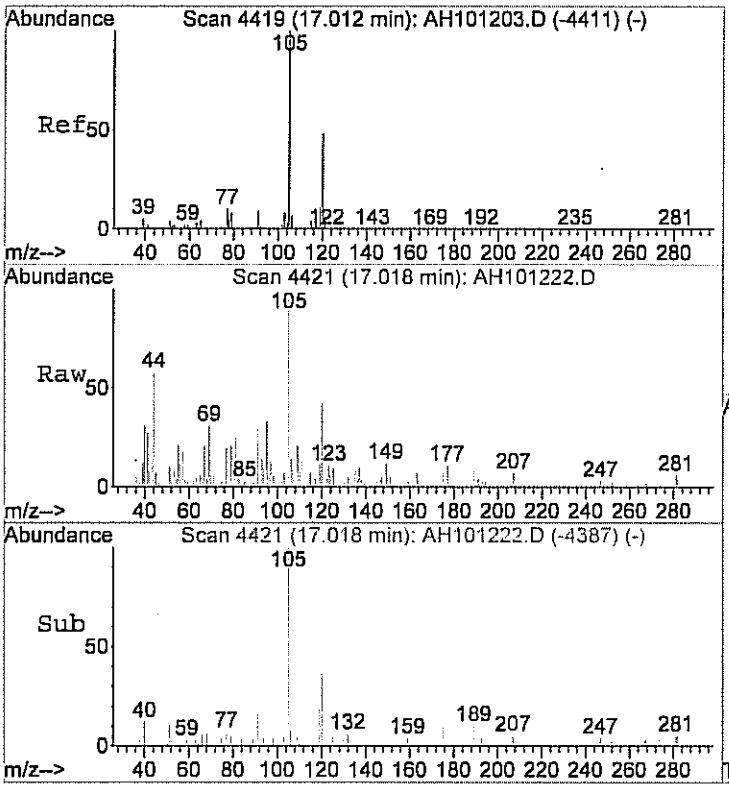


#53
m&p-xylene
Concen: 0.22 ppb
RT: 15.31 min Scan# 3889
Delta R.T. -0.08 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 91 Resp: 14403

Ion	Ratio	Lower	Upper
91	100		
106	54.6	29.1	69.1

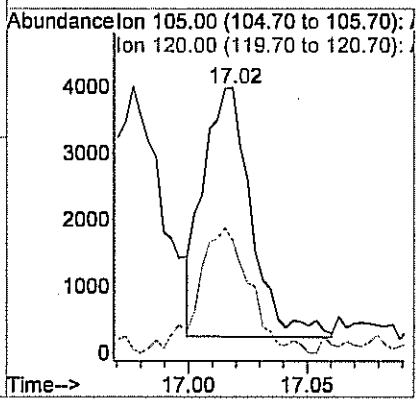


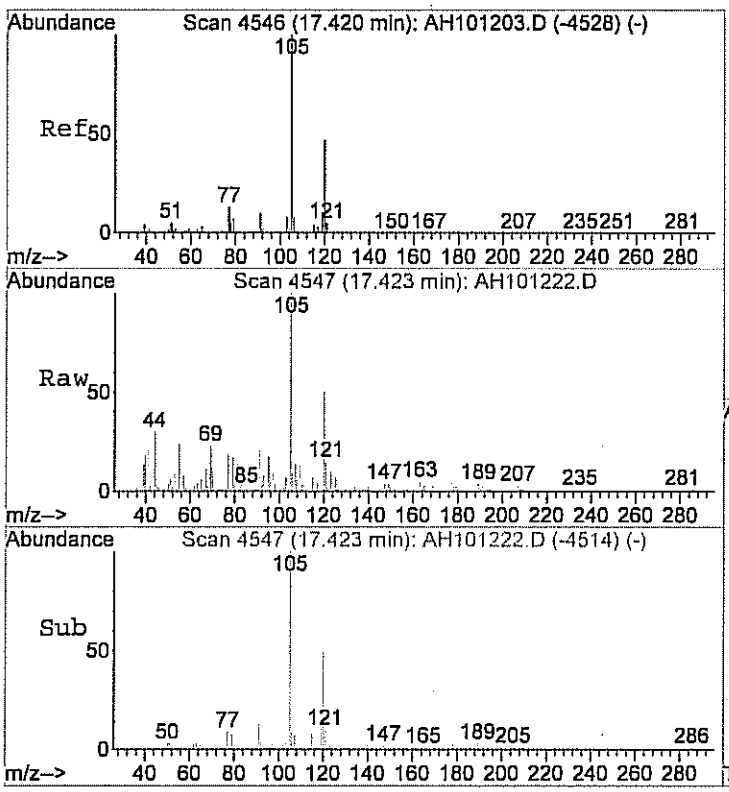


#56
o-xylene
Concen: 0.11 ppb
RT: 15.77 min Scan# 4032
Delta R.T. -0.04 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion: 91 Resp: 7759

Ion	Ratio	Lower	Upper
91	100		
106	49.2	27.4	67.4

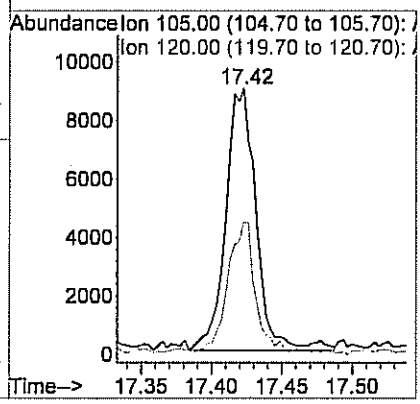




#60
1,3,5-trimethylbenzene
Concen: 0.10 ppb
RT: 17.02 min Scan# 4421
Delta R.T. -0.04 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion:105 Resp: 5256

Ion	Ratio	Lower	Upper
105	100		
120	54.4	27.6	67.6



#61
1,2,4-trimethylbenzene
Concen: 0.36 ppb
RT: 17.42 min Scan# 4547
Delta R.T. -0.04 min
Lab File: AH101222.D
Acq: 12 Oct 2010 9:36 pm

Tgt Ion:105 Resp: 13534

Ion	Ratio	Lower	Upper
105	100		
120	48.0	24.3	64.3

RE: B785 SSVM Sampling

Dear Katrina Mattice:

Centek Laboratories, LLC received 5 sample(s) on 10/20/2010 for the analyses presented in the following report.

I certify that this data package is in compliance with the terms and conditions of the Contract, both technically and for completeness. Release of the data contained in this hardcopy data package and/or in the computer readable data submitted has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the case narrative. All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

Centek Laboratories is distinctively qualified to meet your needs for precise and timely volatile organic compound analysis. We perform all analyses according to EPA, NIOSH or OSHA-approved analytical methods. Centek Laboratories is dedicated to providing quality analyses and exceptional customer service. Samples were analyzed using the methods outlined in the following references:

Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999.

Analytical results relate to samples as received at laboratory. We do our best to make our reporting format clear and understandable and hope you are thoroughly satisfied with our services.

Please contact your client service representative at (315) 431-9730 or myself, if you would like any additional information regarding this report.

Thank you for using Centek Laboratories. This report can not be reproduced except in its entirety, without prior written authorization.

Sincerely,

Russell Pellegrino
Technical Director

Disclaimer: The test results and procedures utilized, and laboratory interpretations of the data obtained by Centek as contained in this report are believed by Centek to be accurate and reliable for sample(s) tested. In accepting this report, the customer agrees that the full extent of any and all liability for actual and consequential damages of Centek for the services performed shall be equal to the fee charged to the customer for the services as liquidated damages.

BOTTLE ORDER

2019

07-Dec-10

SHIPPED TO:

Company: FPM Group
Contact: Katrina Mattice
Address: 584 Phoenix Drive
Rome, NY 13441
Phone: (315) 336-7721
Quote ID: 0
Project:

Submitted By:

Ship Date: 10/13/2010
VIA: FedEx
Due Date: 10/14/2010

Bottle Code	Bottle Type	TEST(s)	QTY
MC1000CC	1L Mini-Can	1ug/M3 by Method TO15	3

Can / Reg ID	Description
95	1L Mini-Can - 1087
186	Time-Set Reg - 657
231	1L Mini-Can - 1193
249	Time-Set Reg - 687
367	1L Mini-Can - 1316
436	Time-Set Reg - 815
463	1L Mini-Can - 1366

Comments: 3 1L @ 24 hrs. Incl. Trip blank. WAC 100410

GC/MS VOLATILES-WHOLE AIR

Centek Laboratories,LLC

GC/MS-Whole Air Calculations

Relative Response Factor (RRF)

$$RRF = \frac{Ax * Cis}{Ais * Cx}$$

where: Ax = area of the characteristic ion for the compound being measured
Ais = area of the characteristic ion for the specific internal standard of the compound being measured
Cx = concentration of the compound being measured (ppbv)
Cis = concentration of the internal standard (ppbv)

Percent Relative Standard Deviation (%RSD)

$$\% RSD = \frac{\text{Standard deviation of RRF values} * 100}{\text{mean RRF}}$$

Percent Difference (%D)

$$\%D = \frac{(RRFc - \text{mean RRFi}) * 100}{\text{mean RRFi}}$$

where: RRFc = relative response factor from the continuing calibration
mean RRFi = mean relative response factor from the initial calibration

Sample Calculations

$$ppbv = \frac{Ax * Is * Df}{Ais * RRF}$$

where: Ax = area of the characteristic ion for the compound being measured
Ais = area of the characteristic ion for the specific internal standard of the compound being measured
Is = Concentration of the internal standard injected (ppbv)
RRF= relative response factor for the compound being measured
Df = Dilution factor

RE: B785 SSVM Sampling

Dear Katrina Mattice:

Centek Laboratories, LLC received 4 sample(s) on 12/3/2010 for the analyses presented in the following report.

I certify that this data package is in compliance with the terms and conditions of the Contract, both technically and for completeness. Release of the data contained in this hardcopy data package and/or in the computer readable data submitted has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Centek Laboratories performs all analyses according to EPA, NIOSH or OSHA-approved analytical methods. Centek Laboratories is dedicated to providing quality analyses and exceptional customer service. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the case narrative. All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

We do our best to make our reporting format clear and understandable and hope you are thoroughly satisfied with our services. Please contact your client service representative at (315) 431-9730 or myself, if you would like any additional information regarding this report.

Thank you for using Centek Laboratories. This report can not be reproduced except in its entirety, without prior written authorization.

Sincerely,

Russell J. Pellegrino
Technical Director

Disclaimer: The test results and procedures utilized, and laboratory interpretations of the data obtained by Centek as contained in this report are believed by Centek to be accurate and reliable for sample(s) tested. In accepting this report, the customer agrees that the full extent of any and

all liability for actual and consequential damages of Centek for the services performed shall be equal to the fee charged to the customer for the services as liquidated damages.

CASE NARRATIVE

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the corrective action report(s). All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination. Samples were analyzed using the methods outlined in the following references:

Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999.

See Corrective Action: [2060] LCSD did not meet criteria.

Centek Laboratories, LLC

Corrective Action Report

Date Initiated: 07-Dec-10 **Corrective Action Report ID:** 2060

Initiated By: Russell Pellegrino **Department:** MSVOA

Corrective Action Description

CAR Summary: LCSD did not meet criteria.

Description of Nonconformance: ALCS1UGD-120710 did not meet criteria for several RPD's and % recoveries. The compounds in question were more sensitive. All other QC met criteria for the compounds of interest. The LCS 6 Liter canister was independent of the 6 Liter continuing calibration canister.

Description of Corrective Action: Since all other QC met criteria for the compounds in question and the LCS 6 Liter canister was independent of the 6 Liter continuing calibration canister, no corrective action taken at this time. If results continue to be outside established limits then a new LCS stock standard will be analyzed. All sets of data submitted.

Performed By: Russell Pellegrino **Completion Date:** 08-Dec-10

Client Notification

Client Notification Required: No **Notified By:**

Comment:

Quality Assurance Review

Nonconformance Type: Deficiency

Further Action required by QA: At this time no further corrective action taken. If results continue to be outside acceptable limits then a new LCS stock standard will be analyzed. All sets of data submitted.

Approval and Closure

Technical Director / Deputy Tech. Dir.: Russell Pellegrino **Close Date:** 09-Dec-10

QA Officer Approval: Nick Scala **QA Date:** 08-Dec-10

GC/MS-Whole Air Calculations

Relative Response Factor (RRF)

$$RRF = \frac{Ax * Cis}{Ais * Cx}$$

where: Ax = area of the characteristic ion for the compound being measured
Ais = area of the characteristic ion for the specific internal standard of the compound being measured
Cx = concentration of the compound being measured (ppbv)
Cis = concentration of the internal standard (ppbv)

Percent Relative Standard Deviation (%RSD)

$$\% RSD = \frac{\text{Standard deviation of RRF values} * 100}{\text{mean RRF}}$$

Percent Difference (%D)

$$\%D = \frac{(RRFc - \text{mean RRFi}) * 100}{\text{mean RRFi}}$$

where: RRFc = relative response factor from the continuing calibration
mean RRFi = mean relative response factor from the initial calibration

Sample Calculations

$$ppbv = \frac{Ax * Is * Df}{Ais * RRF}$$

where: Ax = area of the characteristic ion for the compound being measured
Ais = area of the characteristic ion for the specific internal standard of the compound being measured
Is = Concentration of the internal standard injected (ppbv)
RRF= relative response factor for the compound being measured
Df = Dilution factor

GC/MS VOLATILES-WHOLE AIR

RE: B785SSVM Sampling

Dear Katrina Mattice:

Centek Laboratories, LLC received 6 sample(s) on 1/25/2011 for the analyses presented in the following report.

I certify that this data package is in compliance with the terms and conditions of the Contract, both technically and for completeness. Release of the data contained in this hardcopy data package and/or in the computer readable data submitted has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the case narrative. All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

Centek Laboratories is distinctively qualified to meet your needs for precise and timely volatile organic compound analysis. We perform all analyses according to EPA, NIOSH or OSHA-approved analytical methods. Centek Laboratories is dedicated to providing quality analyses and exceptional customer service. Samples were analyzed using the methods outlined in the following references:

Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999.

Analytical results relate to samples as received at laboratory. We do our best to make our reporting format clear and understandable and hope you are thoroughly satisfied with our services.

Please contact your client service representative at (315) 431-9730 or myself, if you would like any additional information regarding this report.

Thank you for using Centek Laboratories. This report can not be reproduced except in its entirety, without prior written authorization.

Sincerely,

Russell Pellegrino
Technical Director

Disclaimer: The test results and procedures utilized, and laboratory interpretations of the data obtained by Centek as contained in this report are believed by Centek to be accurate and reliable for sample(s) tested. In accepting this report, the customer agrees that the full extent of any and all liability for actual and consequential damages of Centek for the services performed shall be equal to the fee charged to the customer for the services as liquidated damages.

Centek Laboratories, LLC Terms and Conditions

Sample Submission

All samples sent to Centek Laboratories should be accompanied by our Request for Analysis Form or Chain of Custody Form. A Chain of Custody will be provided with each order shipped for all sampling events, or if needed, one is available at our website www.CentekLabs.com. Samples received after 3:00pm are considered to be a part of the next day's business.

Sample Media

Samples can be collected in an canister or a Tedlar bag. Depending on your analytical needs, Centek Laboratories may receive a bulk, liquid, soil or other matrix sample for headspace analysis.

Blanks

Every sample is run with a surrogate or tracer compound at a pre-established concentration. The surrogate compound run with each sample is used as a standard to measure the performance of each run of the instrument. If required, a Minican can be provided containing nitrogen to be run as a trip blank with your samples.

Sampling Equipment

Centek Laboratories will be happy to provide the canisters to carry-out your sampling event at no charge. The necessary accessories, such as regulators, tubing or personal sampling belts, are also provided to meet your sampling needs. The customer is responsible for all shipping charges to the client's destination and return shipping to the laboratory. Client assumes all responsibility for lost, stolen and any dameges of equipment.

Turn Around time (TAT)

Centek Laboratories will provide results to its clients in one business-week by 6:00pm EST after receipt of samples. For example, if samples are received on a Monday they are due on the following Monday by 6:00pm EST. Results are faxed or emailed to the requested location indicated on the Chain of Custody. Non-routine analysis may require more than the one business-week turnaround time. Please confirm non-routine sample turnaround times.

Reporting

Results are emailed or faxed at no additional charge. A hard copy of the result report is mailed within 24 hours of the faxing or emailing of your results. Cat "B" like packages are within 3-4

weeks from time of analysis. Standard Electronic Disk Deliverables (EDD) is also available at no additional charge.

Payment Terms

Payment for all purchases shall be due within 30 days from date of invoice. The client agrees to pay a finance charge of 1.5% per month on the overdue balance and cost of collection, including attorney fees, if collection proceedings are necessary. You must have a completed credit application on file to extend credit. Purchase orders or checks information must be submitted for us to release results

Rush Turnaround Samples

Expedited turn around times is available. Please confirm rush turnaround times with Client Services before submitting samples.

Applicable Surcharges for Rush Turnaround Samples:
Same day TAT = 200%
Next business day TAT by Noon = 150%
Next business day TAT by 6:00pm = 100%
Second business day TAT by 6:00pm = 75%
Third business day TAT by 6:00pm = 50%
Fourth business day TAT by 6:00pm = 35%
Fifth business day = Standard

Statement of Confidentiality

Centek Laboratories, LLC is aware of the importance of the confidentiality of results to many of our clients. Your name and data will be held in the strictest of confidence. We will not accept business that may constitute a conflict of interest. We commonly sign Confidential Nondisclosure Agreements with clients prior to beginning work. All research, results and reports will be kept strictly confidential. Secrecy Agreements and Disclosure Statements will be signed for the client if so specified. Results will be provided only to the addressee specified on the Chain of Custody Form submitted with the samples unless law requires release. Written permission is required from the addressee to release results to any other party.

Limitation on Liability

Centek Laboratories, LLC warrants the test results to be accurate to the methodology and sample type for each sample submitted to Centek Laboratories, LLC. In no event shall Centek Laboratories, LLC be liable for direct, indirect, special, punitive, incidental, exemplary or consequential damages, or any damages whatsoever, even if Centek Laboratories, LLC has been previously advised of the possibility of such damages whether in an action under contract, negligence, or any other theory, arising out of or in connection with the use, inability to use or performance of the information, services, products and materials available from the laboratory or this site. These limitations shall apply notwithstanding any failure of essential purpose of any limited remedy. Because some jurisdictions do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of liability for consequential or incidental damages, the above limitations may not apply to you. This is a comprehensive limitation of liability that applies to all damages of any kind, including (without limitation) compensatory, direct, indirect or consequential damages, loss of data, income or profit and or loss of or damage to property and claims of third parties.

See Corrective Action: [2093] LCSD did not meet criteria.

Centek Laboratories, LLC

Corrective Action Report

Date Initiated: 25-Jan-11 **Corrective Action Report ID:** 2092

Initiated By: Russell Pellegrino **Department:** MSVOA

Corrective Action Description

CAR Summary: IS did not meet criteria.

Description of Nonconformance: IS was high and did not meet criteria for samples C1101031-001 - 004. Based on the chromatographic evidence this is most likely due to matrix interference.

Description of Corrective Action: Samples were analyzed further as dilutions with results meeting criteria.

Performed By: Russell Pellegrino **Completion Date:** 28-Jan-11

Client Notification

Client Notification Required: No **Notified By:**

Comment:

Quality Assurance Review

Nonconformance Type: Deficiency

Further Action required by QA: No further corrective action taken. All sets of data submitted

Approval and Closure

Technical Director / Deputy Tech. Dir.: Russell Pellegrino Close Date: 30-Jan-11

QA Officer Approval: Nick Scala QA Date: 29-Jan-11

Last Updated BY russ2 Updated: 19-Feb-2011 11:54 AM Reported: 19-Feb-2011 11:54 A

Centek Laboratories, LLC

Corrective Action Report

Date Initiated: 27-Jan-11 **Corrective Action Report ID:** 2093

Initiated By: Russell Pellegrino **Department:** MSVOA

Corrective Action Description

CAR Summary: LCSD did not meet criteria.

Description of Nonconformance: ALCS1UGD-012711 did not meet criteria for RPD and % recoveries for several compounds. The LCSD did not reproduce. All other QC met criteria for the compounds of interest. The LCS 6 Liter canister was independent of the 6 Liter continuing calibration canister.

Description of Corrective Action: Since all other QC met criteria for the associated samples and the LCS 6 Liter canister was independent of the 6 Liter continuing calibration canister, no corrective action taken at this time. If results continue to be outside established limits then a new LCS stock standard will be analyzed. All sets of data submitted.

Performed By: Russell Pellegrino **Completion Date:** 28-Jan-11

GC/MS-Whole Air Calculations

Relative Response Factor (RRF)

$$RRF = \frac{Ax * Cis}{Ais * Cx}$$

where: Ax = area of the characteristic ion for the compound being measured
Ais = area of the characteristic ion for the specific internal standard of the compound being measured
Cx = concentration of the compound being measured (ppbv)
Cis = concentration of the internal standard (ppbv)

Percent Relative Standard Deviation (%RSD)

$$\% RSD = \frac{\text{Standard deviation of RRF values} * 100}{\text{mean RRF}}$$

Percent Difference (%D)

$$\% D = \frac{(RRFc - \text{mean RRFi}) * 100}{\text{mean RRFi}}$$

where: RRFc = relative response factor from the continuing calibration
mean RRFi = mean relative response factor from the initial calibration

Sample Calculations

$$ppbv = \frac{Ax * Is * Df}{Ais * RRF}$$

where: Ax = area of the characteristic ion for the compound being measured
Ais = area of the characteristic ion for the specific internal standard of the compound being measured
Is = Concentration of the internal standard injected (ppbv)
RRF= relative response factor for the compound being measured
Df = Dilution factor

#12
Acetone
Concen: 4.22 ppb
RT: 4.23 min Scan# 435
Delta R.T. -0.00 min
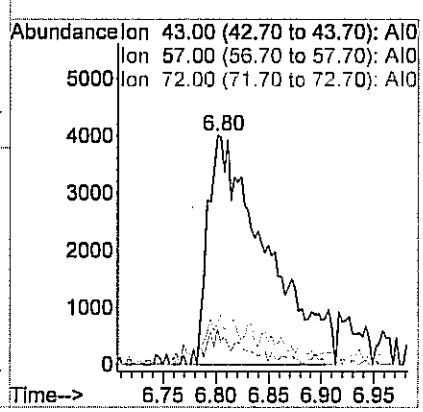
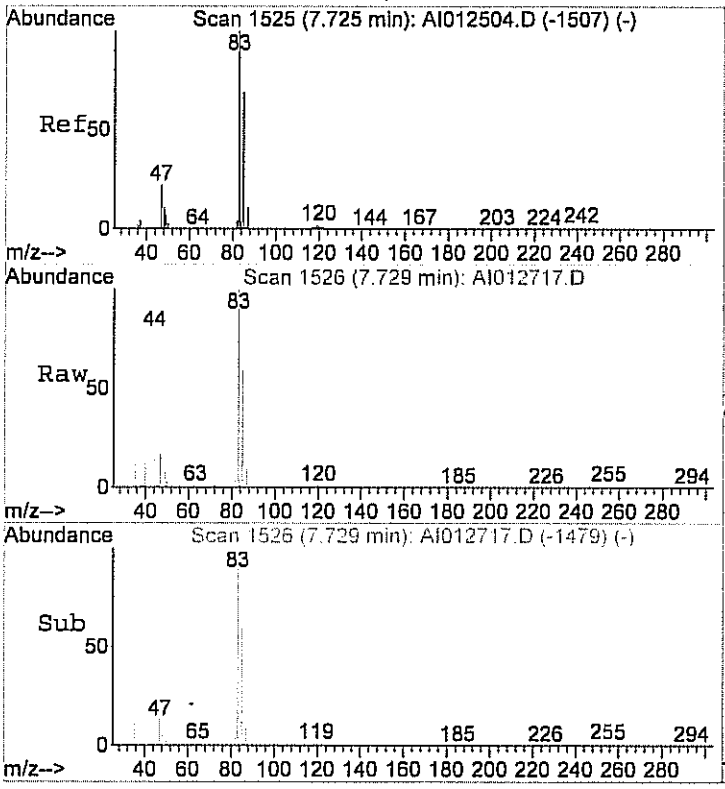
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion: 58 Resp: 19185

Ion	Ratio	Lower	Upper
58	100		
43	368.0	329.0	389.0

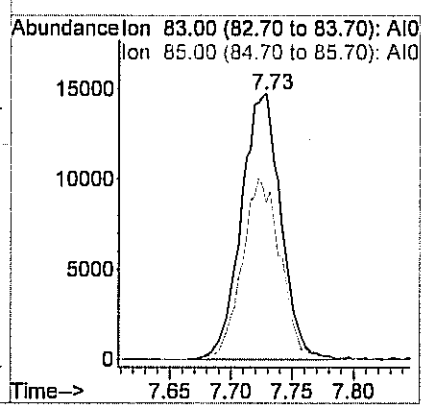


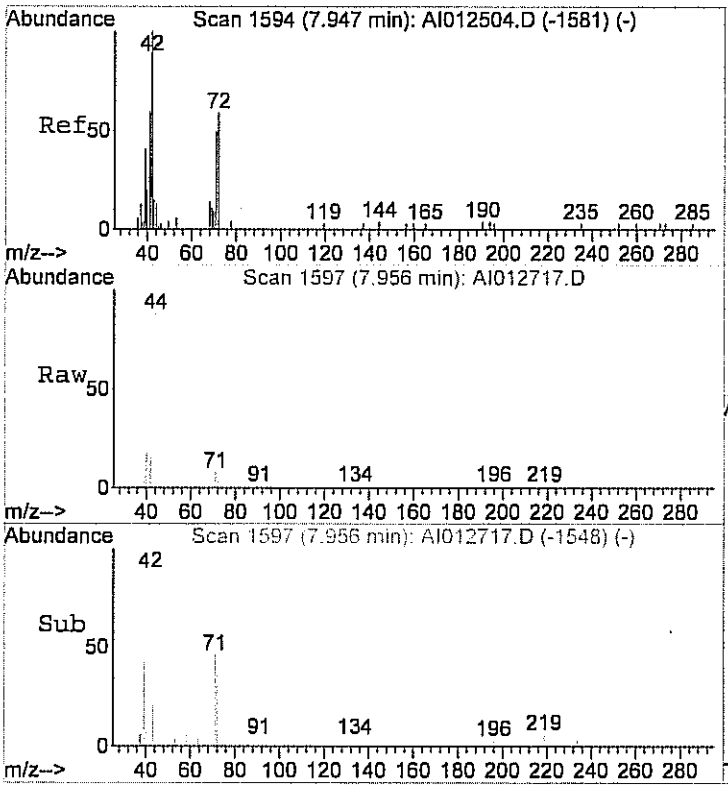


#23
Methyl Ethyl Ketone
Concen: 0.63 ppb
RT: 6.80 min Scan# 1237
Delta R.T. 0.01 min
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion: 43 Resp: 15387

Ion	Ratio	Lower	Upper
43	100		
57	8.9	37.8	77.8#
72	22.2	1.1	41.1

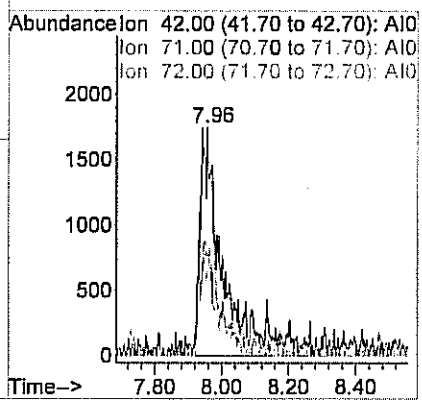


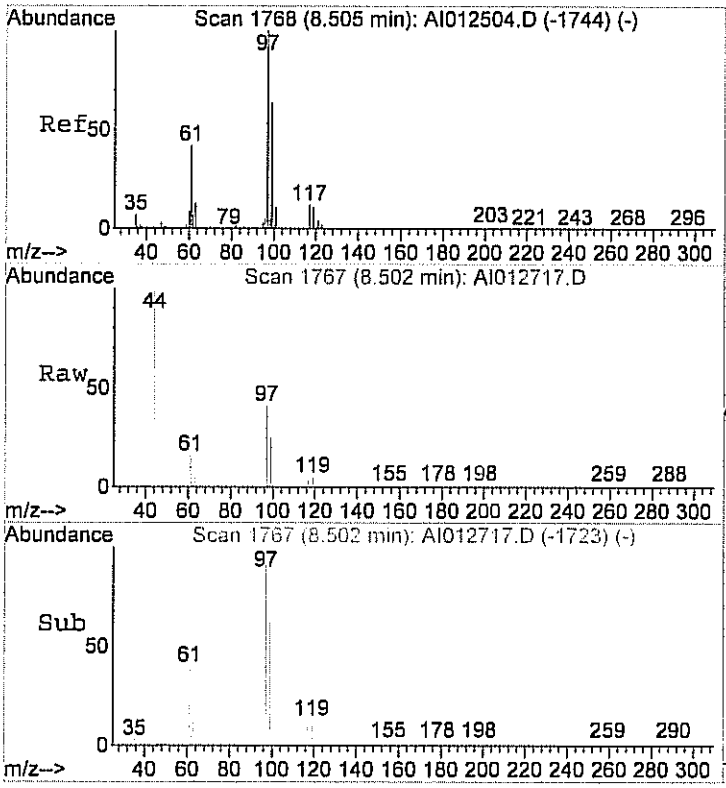


#27
Chloroform
Concen: 0.94 ppb
RT: 7.73 min Scan# 1526
Delta R.T. -0.00 min
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion: 83 Resp: 33107

Ion	Ratio	Lower	Upper
83	100		
85	66.8	46.5	86.5

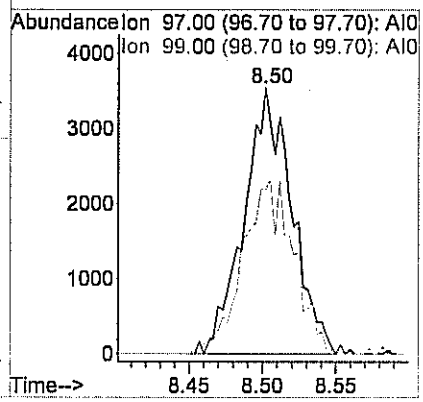


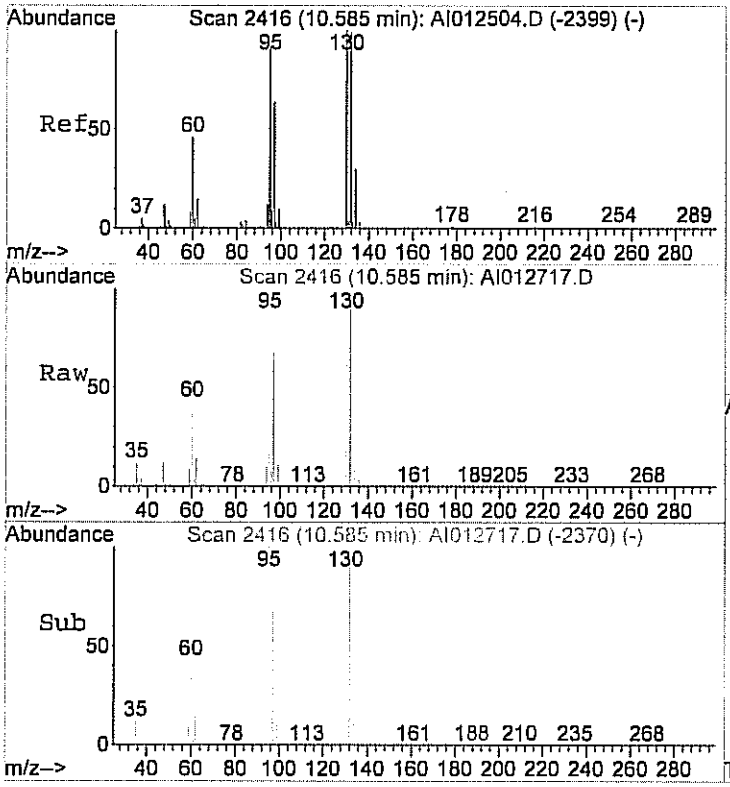


#28
Tetrahydrofuran
Concen: 1.20 ppb m
RT: 7.96 min Scan# 1597
Delta R.T. 0.01 min
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion: 42 Resp: 8910

Ion	Ratio	Lower	Upper
42	100		
71	36.4	37.9	77.9#
72	33.1	38.0	78.0#

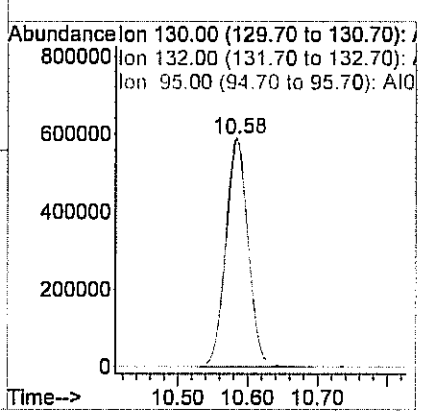


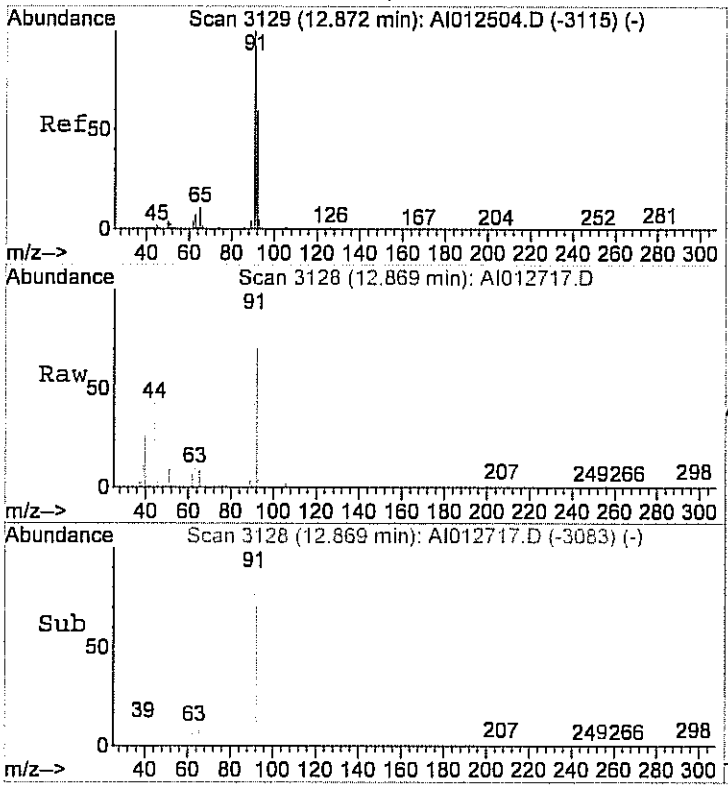


#31
1,1,1-trichloroethane
Concen: 0.28 ppb
RT: 8.50 min Scan# 1767
Delta R.T. -0.01 min
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion: 97 Resp: 7969

Ion	Ratio	Lower	Upper
97	100		
99	69.8	45.4	85.4

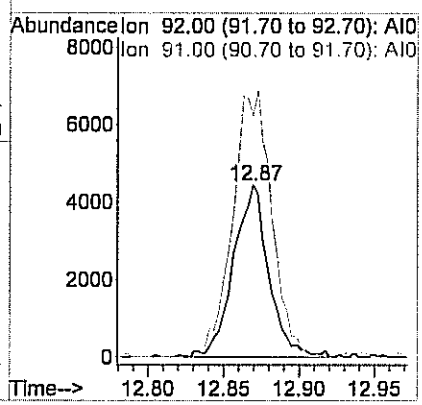


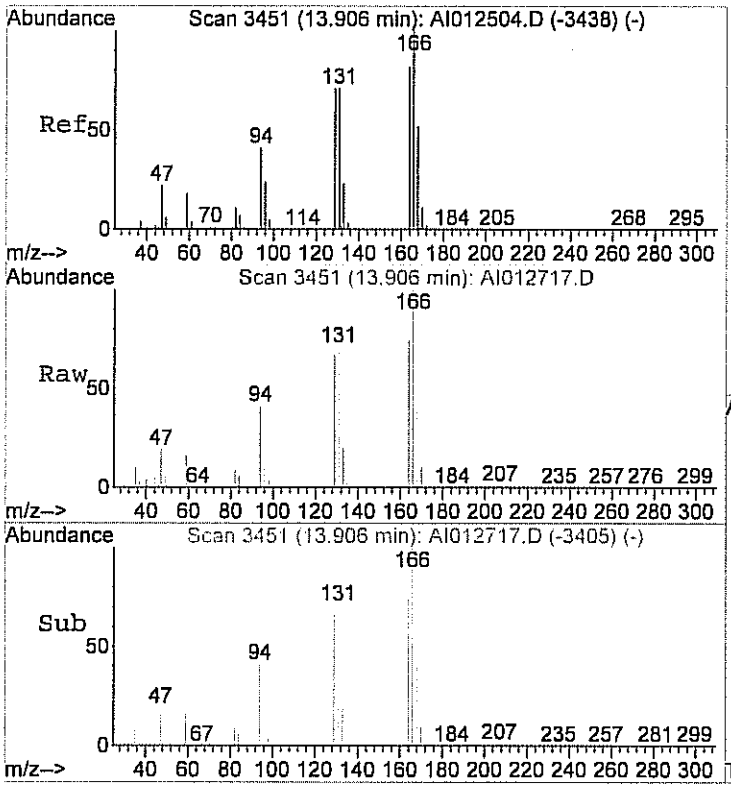


#38
Trichloroethene
Concen: 67.80 ppb
RT: 10.58 min Scan# 2416
Delta R.T. -0.00 min
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion:130 Resp: 1309324

Ion	Ratio	Lower	Upper
130	100		
132	97.9	77.0	117.0
95	99.8	70.8	110.8

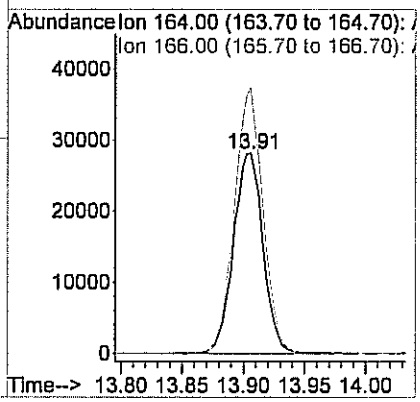


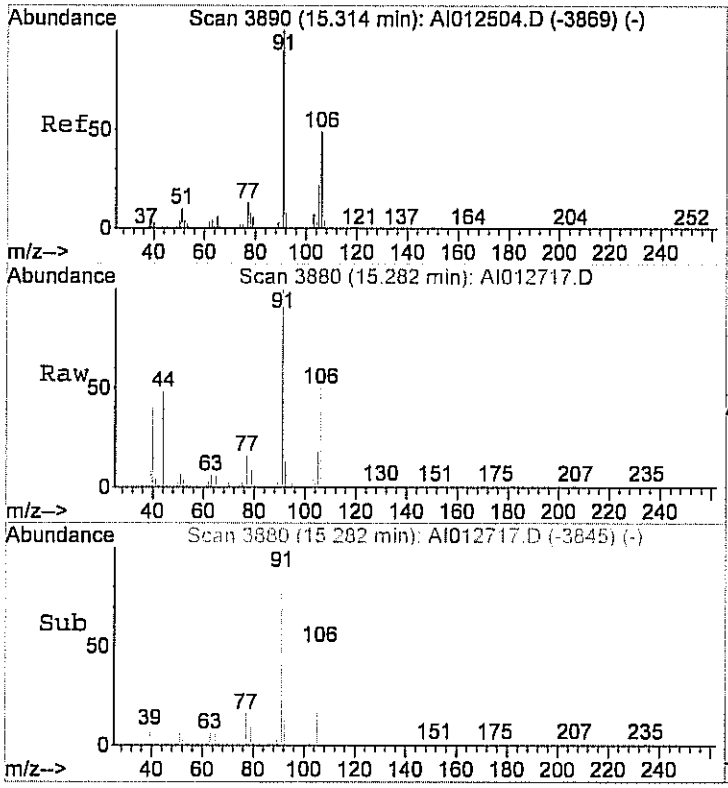


#45
Toluene
Concen: 0.41 ppb
RT: 12.87 min Scan# 3128
Delta R.T. -0.01 min
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion: 92 Resp: 7197

Ion	Ratio	Lower	Upper
92	100		
91	172.2	150.0	190.0

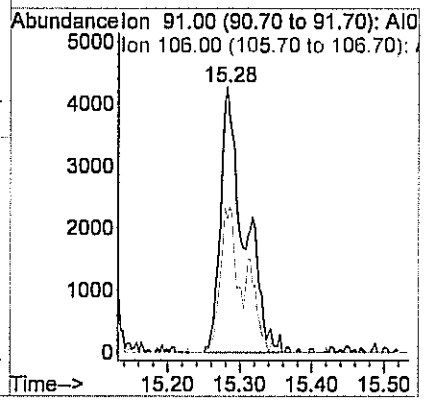


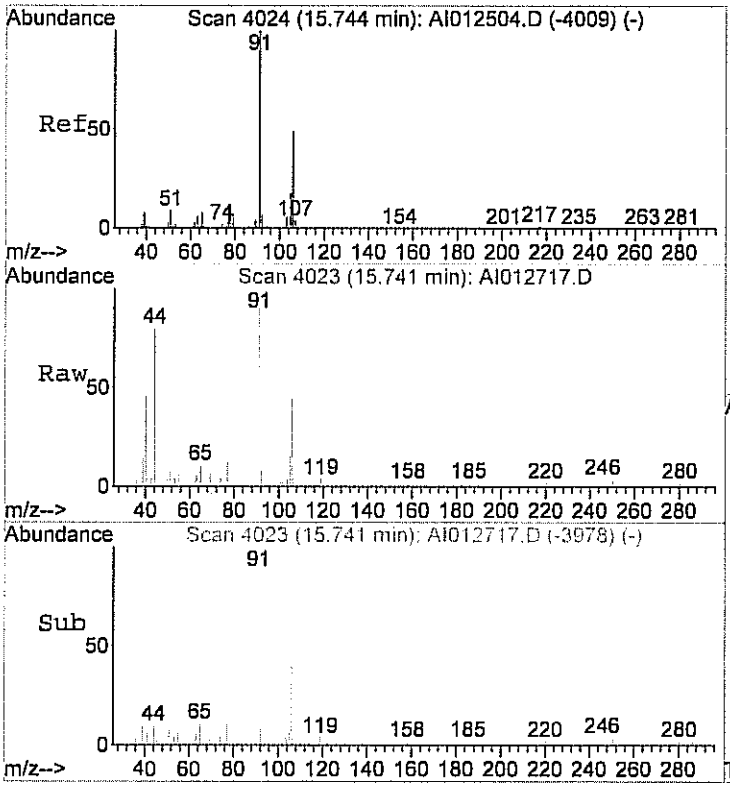


#50
Tetrachloroethylene
Concen: 2.35 ppb
RT: 13.91 min Scan# 3451
Delta R.T. -0.00 min
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion:164 Resp: 47092

Ion	Ratio	Lower	Upper
164	100		
166	128.6	109.0	149.0

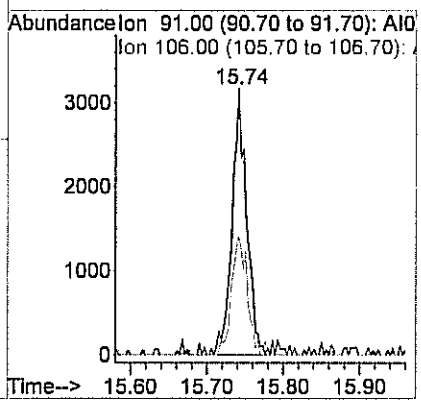


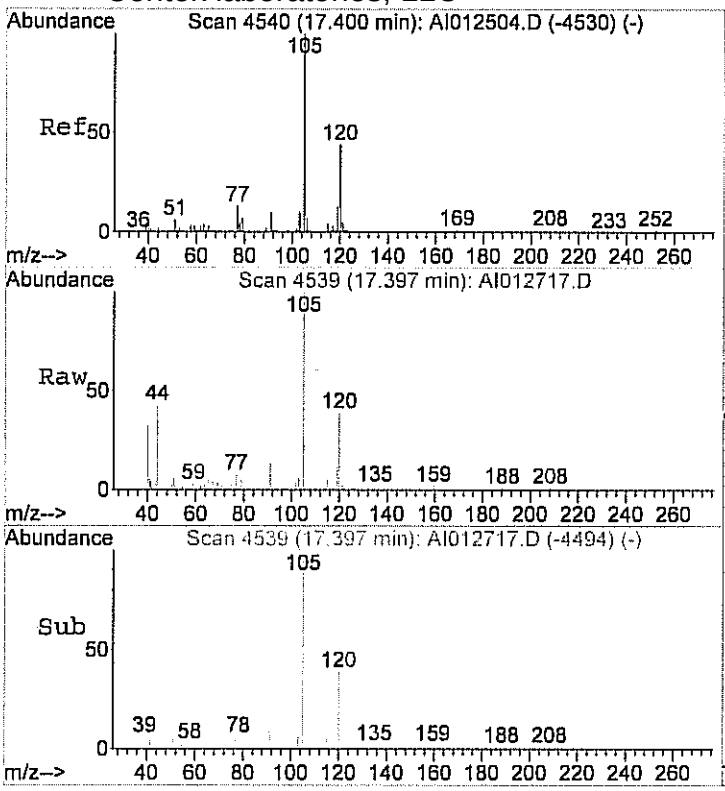


#53
m&p-xylene
Concen: 0.36 ppb m
RT: 15.28 min Scan# 3880
Delta R.T. -0.04 min
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion: 91 Resp: 9876

Ion	Ratio	Lower	Upper
91	100		
106	0.0	29.9	69.9#

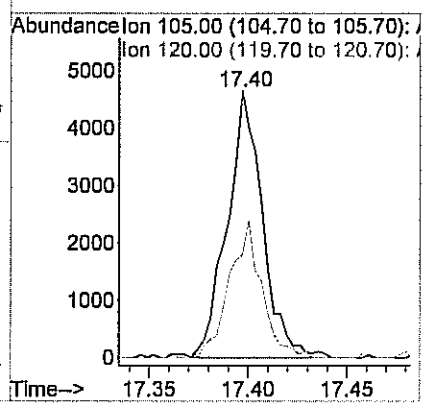




#56
o-xylene
Concen: 0.14 ppb m
RT: 15.74 min Scan# 4023
Delta R.T. -0.01 min
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion: 91 Resp: 4551

Ion	Ratio	Lower	Upper
91	100		
106	0.0	29.0	69.0#



#61
1,2,4-trimethylbenzene
Concen: 0.27 ppb
RT: 17.40 min Scan# 4539
Delta R.T. -0.01 min
Lab File: AI012717.D
Acq: 27 Jan 2011 7:03 pm

Tgt Ion:105 Resp: 5750

Ion	Ratio	Lower	Upper
105	100		
120	47.4	27.0	67.0

Appendix H
Gaussian Plume Model Calculations

Dispersion involves the horizontal and vertical spreading of a pollutant plume as it moves away from the source. The spreading is most commonly described using the *Gaussian plume* model. The physical features of the model are shown in Figure 1 using a three dimensional *x-y-z* coordinate system.

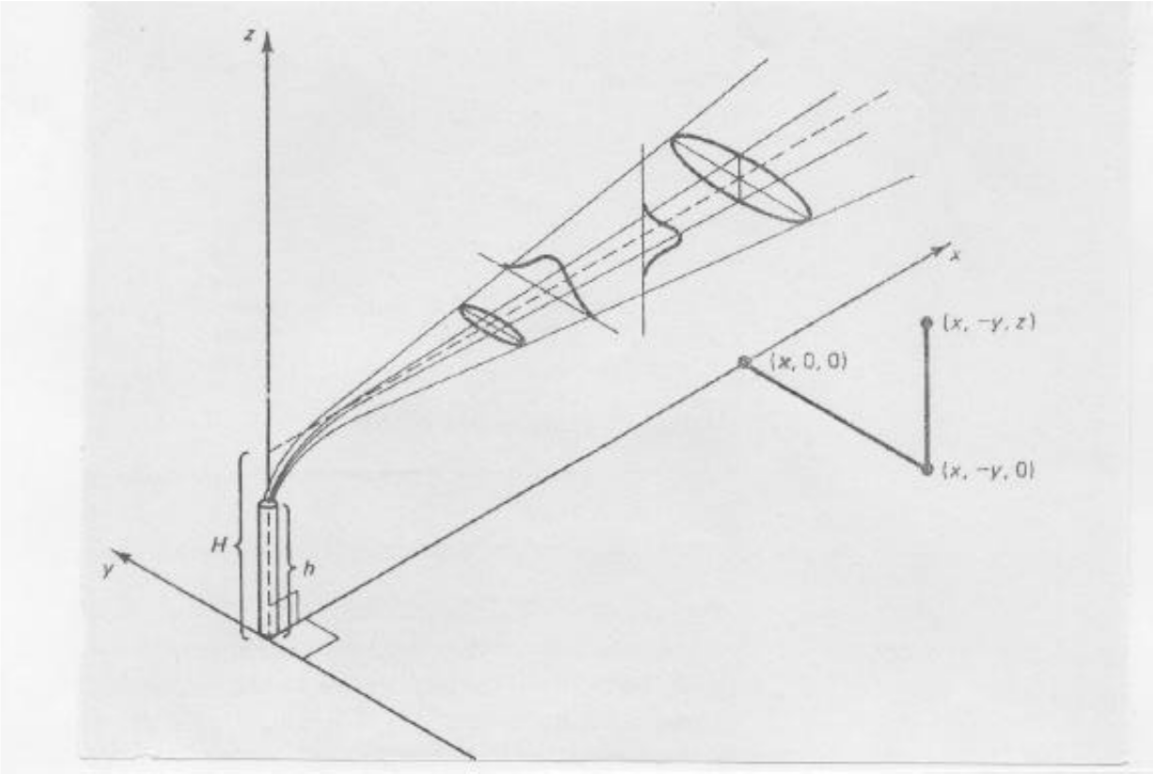

Figure 1 Plume Coordinates For *Gaussian Dispersion Model*

The model can estimate the downwind configuration of the plume and hence concentrations of emitted pollutants at specific locations of interest. The selected application of the model is presented as follows.

The location of the maximum ground-level concentration along the plume centerline and originating from a stack with an effective height H, with no reflections from the ground, is

$$\sigma z = 0.707H \qquad \text{Equation 1}$$

The ground-level concentration at some distance along the plume centerline and originating from a stack with an effective height H, with no reflections from the ground, is

$$Cx, 0 = \frac{Qge^{(-0.05)(\frac{H}{\sigma z})^2}}{\pi V \sigma z \sigma y} \qquad \text{Equation 2}$$

The *Gaussian dispersion coefficients*, σz *and* σy, are taken from Figures 2 and 3 for the atmospheric stability conditions defined in Table 1.

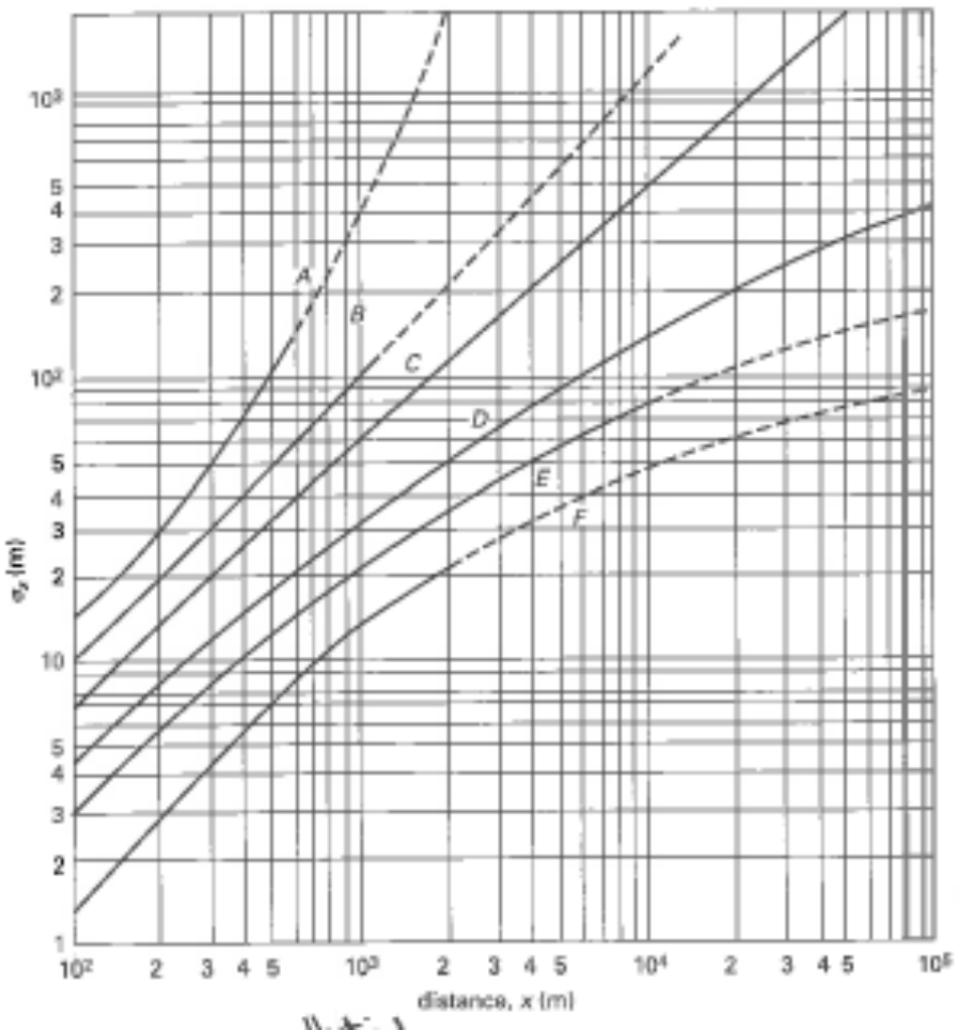

Figure 2 *Gaussian Dispersion Coefficient, σz,* for vertical plume concentration at downwind distance, x

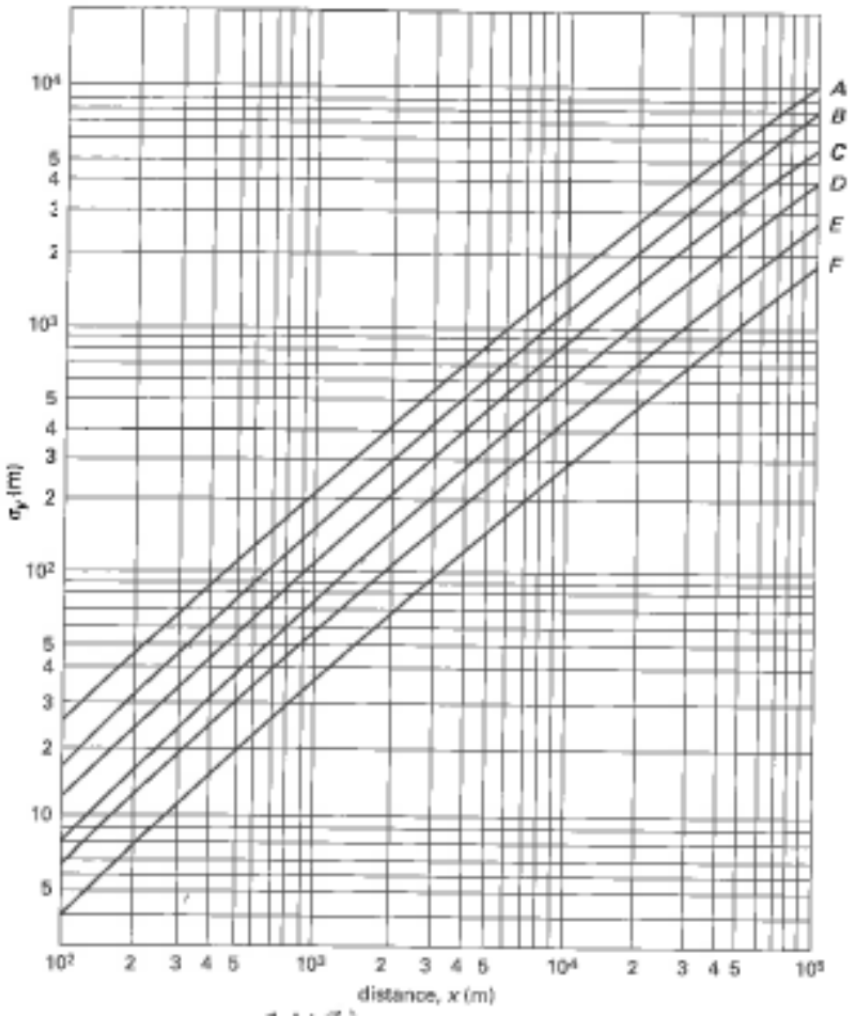

Figure 3 *Gaussian Dispersion Coefficient, σy*, for horizontal plume concentration at downwind distance, x

surface wind speed at 10 m (m/s)	day: incoming solar radiation			night: cloud cover	
	strong	moderate	slight	mostly overcast	mostly clear
class[6]	1	2	3	4	5
< 2	A	A-B	B	E	F
2–3	A-B	B	C	E	F
3–5	B	B-C	C	D	E
5–6	C	C-D	D	D	D
>6	C	D	D	D	D

Table 1 Atmospheric Stability Categories

Problem 1, Comment 31:

Trichloroethylene vapors are emitted from the Building 774 and 776 SSVM system at a flow $Qg = 39.9\ \mu g/s$ through a stack with an effective height of $H = 2.3\ m$. The wind speed at effective stack height is $V = 1.3\ m/s$, and atmospheric stability conditions are class F (most stable). (a) What is the maximum ground level concentration? (b) What is its location along the plume centerline?

Solution:

(a) Use Equation 1 to find the location of maximum ground level concentration;

$$\sigma z = 0.707H$$
$$= (0.707)(2.3\ m)$$
$$= 1.63\ m$$

(b) From Figure 2 with $\sigma z = 1.63\ m$ and a curve for stability class F, $x = 110\ m$. From Figure 3 with $x = 110\ m$ and a curve for stability class F, $\sigma y = 3.0\ m$.

Therefore, from equation 2;

$$Cx,0 = \frac{Qge^{(-0.05)(\frac{H}{\sigma z})^2}}{\pi\mu\sigma z\sigma y}$$

$$C110{,}0 = \frac{(39.9\ \frac{\mu g}{s})e^{(-0.05)(\frac{2.3\ m}{1.63\ m})^2}}{\pi\left(1.3\frac{m}{s}\right)(1.63m)(3.0m)}$$
$$= 3.8\ \mu g/m^3$$

Problem 2, Comment 40:

Trichloroethylene vapors are emitted from the Building 785 and 786 SSVM system at a flow $Qg = 54.6\ \mu g/s$ through a stack with an effective height of $H = 2.6\ m$. The wind speed at effective stack height is $V = 1.3\ m/s$, and atmospheric stability conditions are class F (most stable). (a) What is the maximum ground level concentration? (b) What is its location along the plume centerline?

Solution:

(a) Use Equation 1 to find the location of maximum ground level concentration;

$$\begin{aligned} \sigma z &= 0.707H \\ &= (0.707)(2.6\ m) \\ &= 1.84\ m \end{aligned}$$

(b) From Figure 2 with $\sigma z = 1.84\ m$ and a curve for stability class F, $x = 130\ m$. From Figure 3 with $x = 130\ m$ and a curve for stability class F, $\sigma y = 4.5\ m$.

Therefore, from equation 2;

$$Cx,0 = \frac{Qge^{(-0.05)(\frac{H}{\sigma z})^2}}{\pi\mu\sigma z\sigma y}$$

$$C130{,}0 = \frac{(54.6\ \frac{\mu g}{s})e^{(-0.05)(\frac{2.6\ m}{1.84\ m})^2}}{\pi\left(1.3\frac{m}{s}\right)(1.84m)(4.5m)}$$

$$= 3.0\ \mu g/m^3$$
