1 INTRODUCTION

FPM Remediations Inc. (FPM), in association with CAPE Environmental (CAPE), has been contracted by the Air Force Civil Engineer Center (AFCEC), to perform Long Term Monitoring (LTM) at Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) sites at the former Griffiss Air Force Base (AFB), New York. The work discussed in this Annual Report will be conducted through contract number FA8903-10-D-8595-0014.

The following sections describe the 2012 site activities for the former Griffiss AFB Landfill Areas of Concern (AOCs). The site activities include landfill cap inspections and maintenance, landfill gas monitoring, and groundwater and surface water sampling.

This page is intentionally left blank.

2 LF001 LANDFILL 1 AOC

2.1 SITE BACKGROUND

Landfill 1, approximately 22 acres in size, is located in the northeastern portion of the former Griffiss AFB on the east side of Six Mile Creek, northeast of the flight line and within the Six Mile Creek Drainage Basin. The landfill is bounded by the installation boundary to the north, regulated wetlands to the east, Six Mile Creek and regulated wetlands to the west and woodlands to the south (FPM, October 2002). **Figure 2-1** illustrates the landfill boundary and the locations of monitoring wells.

The wastes deposited at Landfill 1 consisted of general refuse, hardfill, and boiler ash that was buried using trench and cover methods. An estimated 90,000-100,000 cubic yards (CY) of wastes were disposed of at the site from 1960-1973.

The groundwater flow rate at Landfill 1 is estimated to be 2,000 feet per year (LAW, December 1996). Groundwater flows to the southwest in the area of Landfill 1.

The Record of Decision (ROD) for LF001 Landfill 1 AOC was signed by the United States Environmental Protection Agency (USEPA) on June 5, 2000. In accordance with the ROD, the landfill was re-graded and capped in 2003. The cap components include a gas venting layer, a low-permeability layer, drainage layer, barrier protection layer, and a topsoil layer. LTM was initiated at LF001 in December 2003, and 5-Year Reviews were conducted in 2005 and 2010. Both 5-Year Reviews indicated that the selected remedy is protective of human health and the environment.

For readability, the hydrology setting, previous investigations, and LTM sampling plan sections have been removed from this report. These sections are provided in the 2009 Landfill AOCs LTM Report (FPM, November 2010). The following summarizes the previous LF001 LTM Network activities and Results.

2.1.1 Previous LTM Activities and Results

LTM has been performed at 11 monitoring wells (MWSAR03, LF1P-2, -3, -5, LF1MW-1R, -5, -6, -10, -11, -12 and -13) and 3 surface water locations (LF1SW-1, -2SMC, and -3) since December 2003. LF1MW-103 was added to the LTM network during the March 2004 sampling round and LF1MW-14 was added to the LTM network during the December 2004 sampling round. These sampling locations are illustrated in **Figure 2-2**. The LTM network has been sampled quarterly (routine parameters) and annually (baseline parameters) in accordance with New York State Department of Environmental Conservation (NYSDEC) Part 360 requirements. Currently, based on several rounds of sampling data, NYSDEC Part 360 baseline requirements are sampled annually. All recommendations to alter the sampling network were provided in previous Landfill AOCs LTM Reports and reviewed by the USEPA and NYSDEC.

Boron, cyanide, mercury, polychlorinated biphenyls (PCBs), pesticides, and phenols were analyzed until 2006 and were then removed from the LTM sampling network due to their low or

non-detect concentrations at the site. Volatile Organic Compounds (VOCs) currently detected above the NYS Groundwater/Surface water Standards, Criteria, and Guidance Values (SCGs) include 1,2-dichlorobenzene, 1,3-dichlorobenzene, benzene, and chlorobenzene. These exceedances only occur at monitoring wells LF1MW-11 and LF1MW-5 (benzene only) and concentrations have been stable and/or decreasing. Landfill leachate indicators previously detected above the NYS Groundwater / Surface water SCGs include ammonia, color, total dissolved solids (TDS), and total Kjeldahl nitrogen (TKN). The landfill leachate indicator detections continue to show stable trends. Metals analysis for this site continues to show levels above NYS SCGs. Metals that exceed standards include manganese, iron, sodium, aluminum, chromium, and nickel. Several of the metals (e.g., manganese, iron, sodium) are indicative of base background conditions.

Landfill gas monitoring is performed at Landfill 1 to identify the presence and concentration of methane at or near the landfill. A total of 18 gas monitoring probes and 31 landfill gas vents were monitored on a quarterly basis from October 2005 until May 2010. Landfill gas monitoring was optimized after the spring 2010 sampling round to semiannual. Results from the gas sampling events at Landfill 1 continue to show elevated methane concentrations throughout the landfill. However, methane concentrations at point of compliance (POC) gas monitoring probes (LF1GMP-13 through -17) remained at non-detectable concentrations through the fall 2011 sampling round. The absence of methane at the POC gas monitoring probes demonstrates continued protection of potential receptors. In addition, the passive gas trench installed near the northwestern perimeter of Landfill 1 to prevent methane migration into neighboring properties appears to remain an effective barrier.

Since April 2005, landfill inspections and cover maintenance have been performed at Landfill 1. Inspections and maintenance are conducted on a quarterly basis with annual landfill cover mowing (fall). Land use Control/Institutional Controls (LUC/ICs) have been implemented by the ROD and are verified annually as part of the landfill cover inspection program. The fall inspections are performed in conjunction with the Base-wide LUC/IC Site Inspections.

Previous LTM results are provided in detail in the Spring 2009 Landfill AOCs LTM Report (FPM, November 2010), Spring 2010 Landfill AOCs LTM Report (FPM, February 2012), and 2011 Landfill AOCs LTM Report (FPM/CAPE, July 2012).

2.2 LANDFILL 1 AOC – 2012 SITE ACTIVITIES

This section describes the Landfill 1 AOC site activities and monitoring data for 2012. The field activities include semiannual landfill cap inspections, semiannual landfill gas monitoring, annual groundwater and surface water sampling, and annual landfill cap mowing.

2.2.1 Landfill Cap Inspections/Maintenance

The spring 2012 inspection did not identify any major deficiencies that would jeopardize the integrity of the cover.

The fall 2012 inspection was conducted following landfill mowing. The landfill was mowed during the week of September 10, 2012. The inspection did not identify any major deficiencies that would jeopardize the integrity of the cover.

The semiannual inspection reports for spring 2012 and fall 2012 can be found in Appendix A and daily activity forms are provided in Appendix B.

2.2.2 Landfill Gas Monitoring

Landfill gas monitoring was conducted at 18 gas monitoring probes (LF1GMP-1, -2, -3, -4, -6, -8, -9, -10, -11, -12, -13, -14, -15, -16, -17, -18, -19, and -20) and 31 gas vents (LF1VENT- 1 through -31) in spring 2012 and fall 2012. Readings were collected for methane concentrations, Lower Explosive Limit (LEL), oxygen levels and carbon dioxide levels. These locations are also illustrated in **Figure 2-2**. The spring 2012 and fall 2012 monitoring results are discussed below and can be found in **Table 2-1**.

Spring 2012 landfill gas readings were taken in May 2012. LEL values equaled or exceeded 100% at seven gas monitoring probes (LF1GMP-1, -2, -3, -4, -6, -9 and -10). LEL values equaled or exceeded 100% at twenty two gas vents. The highest methane concentration reported at a gas monitoring probe was at LF1GMP-06 (52.9 parts per million (ppm)). The highest methane concentration reported at a gas vent was at LF1VENT-12 (32.6 ppm).

Fall 2012 landfill gas readings were taken in October 2012. LEL values equaled or exceeded 100% at five gas monitoring probes (LF1GMP-1, -2, -3, -6, and -9). LEL values equaled or exceeded 100% at thirteen gas vents. The highest methane concentration reported at a gas monitoring probe was at LF1GMP-06 (77.3 ppm). The highest methane concentration reported at a gas vent was at LF1VENT-10 (33.3 ppm).

Based on the 2012 landfill gas monitoring, the passive gas trench installed near the northwestern perimeter of Landfill 1 to prevent the migration of methane into neighboring properties appears to remain effective.

2.2.3 Groundwater and Surface water Monitoring

Groundwater and surface water monitoring was conducted at 12 monitoring wells (LF1P-2, -3, -5, LF1MW-1R, -5, -10, -11, -12, -13, -14, -103, and MWSAR03) and three surface water locations (LF1SW-1, -2, and -3) for leachate indicators. In accordance with the CERCLA Sites Optimization Plans (FPM/CAPE, November 2011), VOCs analysis was also conducted for monitoring wells LF1MW-5, -6, -11, -12, LF1P-2, and MWSAR03 and surface water locations LF1SW-1, -2, and -3.

The following summarizes the results for all groundwater, surface water and gas monitoring analytical data, which are presented in Table 2-2. Daily Chemical Quality Control Reports (CQCRs) completed during the June 2012 sampling round are provided in Appendix C. The complete list of analytes and the validated laboratory data are attached in Appendix D and the raw laboratory data are available in Appendix E.

2.2.3.1 Groundwater Monitoring Results

VOCs:
Benzene exceedances were reported at LF1MW-5 (1.8 µg/L) and LF1MW-11 (1.6 µg/L). 1,2-dichlorobenzene, 1,4-dichlorobenzene, and chlorobenzene exceedances were also reported at LF1MW-11. The vinyl chloride concentration was also above the NYS Groundwater Standard at MWSAR03. All exceedances were within one order of magnitude of the NYS Class GA Groundwater Standards and are similar to previous LTM results. The VOC detections at the site are illustrated in Figure 2-2.

Landfill Leachate Indicators:
Leachate indicator exceedances were reported at monitoring wells LF1MW-5, -6, -11, -12, -13, and LF1P-2. These exceedances are summarized below:

- TKN exceeded the NYS Groundwater Standard at monitoring well LF1MW-5 (2 mg/L), -11 (3B mg/L), and –LF1P-2 (1.7B mg/L). The NYS Class GA Groundwater Standard of TKN is 1 mg/L. The B data qualifier indicates that the analyte was found in an associated blank, as well as in the sample.
- Color exceeded the NYS Groundwater Standard at monitoring wells LF1MW-6 (25 platinum cobalt units (PCU)), -11 (25 PCU), -12 (25 PCU), -13 (50 PCU), and LF1P-2 (25 PCU). The NYS Class GA Groundwater Standard of color is 15 PCU.

The TKN concentrations are within an order of magnitude of previous LTM results and two of the exceedances are associated with a B data qualifier.

The color concentrations increased at each monitoring well which showed an exceedance. Similar concentrations have been detected in samples at these locations in previous LTM events.

Synoptic Results
The following summarizes the groundwater elevations (mean sea level (MSL)) for each monitoring well sampled at Landfill 1 in the June 2011 sampling round: MWSAR03 (514.78 ft), LF1P-2 (499.49 ft), LF1P-3 (504.19 ft), LF1P-5 (491.81 ft), LF1MW-1R (537.13 ft), LF1MW-5 (493.97 ft), LF1MW-6 (496.85 ft), LF1MW-10 (504.75ft), LF1MW-11 (498.68 ft), LFMW-12 (499.78 ft), LF1MW-13 (487.98 ft), LF1MW-14 (493.59 ft) and LF1MW-103 (490.32 ft). The groundwater elevations continue to indicate a southwestern groundwater flow gradient (**Figure 2-3**).

2.2.3.2 Surface Water Monitoring Results

There were no exceedances found in the surface water samples.

2.2.3.3 MAROS Analysis

The purpose of the Monitoring and Remediation Optimization System (MAROS) methodology is to recommend an improved groundwater monitoring network by applying statistical techniques to existing historical and current site analytical data. The description of MAROS methodology at Landfill 1 has been removed for readability. This information is provided in the 2009 Landfill AOC LTM Report (FPM, November 2010).

Optimization Recommendations-

The recommended MAROS sampling frequency is annual and biennial. The recommended sampling frequency per sampling location is provided in the MAROS Sampling Frequency Optimization Results worksheets provided in Appendix E.

2.2.4 Conclusions

Landfill Cap Inspections and Maintenance

The semiannual inspections have not identified any major deficiencies that would jeopardize the integrity of the cover and there is optimal vegetation cover on the cap. Inspections are also conducted following significant weather events (5-Year Storm events). No significant weather events occurred during 2012.

Landfill Gas Monitoring

Elevated methane concentrations continue to be recorded throughout the Landfill 1 AOC. However, methane concentrations at POC gas monitoring probes (LF1GMP-13 through -17) remained non-detectable through the October 2012 sampling round. The absence of methane at the POC gas monitoring probes demonstrates continued protection of potential receptors. In addition, the passive gas trench installed near the northwestern perimeter of Landfill 1 to prevent methane migration into neighboring properties appears to remain effective. The effectiveness of the system is made apparent by the gradient established between LF1GMP-4 and LF1GMP-19. LF1GMP-4 was installed between the landfill boundary and the passive gas trench (Figure 2-2); methane readings at this location have frequently exceeded the LEL. In contrast, LF1GMP-19 was installed just outside of both the landfill boundary and the passive gas trench and within 25 feet of LF1GMP-4 (Figure 2-2); methane readings at this location are consistently lower than those reported at LF1GMP-4 and in some sampling rounds orders of magnitude less.

Groundwater and Surface Water

VOC exceedances at Landfill 1 are limited to three monitoring wells, LF1MW-5 -11, and MWSAR03. LF1MW-5 and -11 have shown sustained exceedances. Figure 2-4 has been provided to illustrate the stable and/or decreasing total VOC concentrations at monitoring wells LF1MW -5 and -11 over time. Vinyl chloride has historically been detected at MWSAR03 with no discernible trend; all of the detections are within one order of magnitude of the NYS Groundwater Standard.

Landfill leachate indicators were above NYS Groundwater and Surface water Standards at LF1MW-5, -6, -11, -12, -13, and LF1P-2. The exceedances included TKN and color.

The concentrations of TKN at the overburden wells and surface water locations were comparable to previous results and below the typical range of municipal landfill leachate (Lee and Jones, 1991). This reference was used during the Baseline Study of the former Griffiss AFB Landfill AOCs and is provided in **Table 2-4**.

Color concentrations reported during the June 2012 sampling round were higher than the previous sampling round at downgradient monitoring wells LF1MW-6, -11, -12, -13, and LF1P-2. The color concentrations detected in 2012 are similar to those detected in 2011.

The alkalinity and hardness concentrations at downgradient monitoring wells ranged from 68 mg/L to 510 mg/L, and 84 mg/L to 470 mg/L, respectively. Hardness was non-detect at LF1MW-103, the LF001 LTM Network bedrock well. Alkalinity and hardness concentrations at the LF001 LTM Network monitoring wells show no trends and are stable, respectively, as shown in Figure 2-5 and Figure 2-6. Alkalinity and hardness are important indicators of the plume extent because the landfill material tends to propagate microbial activity which generates carbon dioxide. This process increases the dissolution of minerals and alkalinity which increases hardness (Baedecker and Back, 1979). The stability of these parameters suggests that the landfill plume is fairly static.

For the June 2011 sampling round, alkalinity and hardness levels throughout the LTM network exceeded the level measured in the background well, LF1MW-1R (alkalinity was 41 mg/L and hardness was 74 mg/L). The highest levels of alkalinity and hardness coincide with monitoring wells identified as historically being "downgradient from the source and within the VOC plume," as identified in previous investigations. These monitoring wells consist of LF1MW-5, -11, and LF1P-2. Alkalinity levels appear to decrease towards background levels as they approach the POC monitoring wells (LF1P-5 and -13). The concentrations of leachates indicators alkalinity and hardness are plotted in Figure 2-7.

MAROS Analysis

Utilizing the results of the LTM sampling rounds, MAROS analysis was performed for the Landfill 1 AOC LTM network. Results of the evaluation confirmed an overall decreasing/stabilizing trend of concentrations at each monitoring well for the selected target COCs and indicator parameters (1,4-dichlorobenzene, chlorobenzene, alkalinity, hardness, and TOC) (Appendix F). Results of the evaluation showed an overall increasing trend at source monitoring wells for nitrate.

Among the tail monitoring wells, the downgradient wells (LF1MW-6, -10, -12, -13, -14, LF1P-3, -5, and MWSAR03) showed overall increasing alkalinity, stable/decreasing hardness, increasing nitrate, and stable TOC.

2.3 LTM OPTIMIZATION RECOMMENDATIONS

Based on the latest LTM results, the current scope of semiannual landfill gas sampling, landfill cap inspections, annual groundwater sampling, and surface water sampling will continue. Please refer to Table 2-5 for the summary of the Landfill 1 AOC LTM Network. All previous LTM Network optimization is provided in Table 2-6.

3 LF002 LANDFILL 2/3 AOC

3.1 SITE BACKGROUND

Landfill 2/3, approximately 13 acres in size, is located on a topographic high, east of Perimeter Road near the east-central boundary of the former Griffiss AFB. The landfills are bounded by the AFB boundary on the north, east and south sides, while areas to the west, southwest and northeast have been identified as wetlands. Figure 3-1 illustrates the landfill boundary and the location of existing monitoring wells.

The wastes at Landfill 2/3 consisted of hardfill in the southern portion of Landfill 2, on-board aircraft wastes in the northern portion of Landfill 2 and approximately 1 ton of wetted and double-bagged asbestos wastes in Landfill 3, located in the eastern portion of Landfill 2. The groundwater flow rate at Landfill 2/3 is estimated at 222 feet per year (LAW, December 1996). Groundwater flow is very gradual to the southwest in the area of Landfill 2/3.

The ROD for LF002 Landfill 2/3 AOC was signed by the USEPA on June 5, 2000. In accordance with the ROD, the landfill was re-graded and capped in summer 2003. The cap components include a gas venting layer, a low-permeability layer, drainage layer, barrier protection layer, and a topsoil layer. LTM was initiated at LF002 in December 2003, and 5-Year Reviews were conducted in 2005 and 2010. Both 5-Year Reviews indicated that the selected remedy is protective of human health and the environment.

For readability, the hydrology setting, previous investigations, and LTM sampling plan sections have been removed from this report. These sections are provided in the 2009 Landfill AOCs LTM Report (FPM, November 2010).

3.1.1 Previous LTM Activities and Results

LTM has been performed at six monitoring wells (LF2MW2-1, LF2MW-4, -12, -13, -14, and -100) and three surface water locations (LF2SW-1, -2, and -3) since December 2003. These sampling locations are illustrated in Figure 3-2. The LTM network was analyzed quarterly (routine parameters) and annually (baseline parameters) for NYSDEC Part 360 requirements. All recommendations to alter the sampling network were provided in previous Landfill AOCs LTM Reports and reviewed by the USEPA and NYSDEC.

VOCs, cyanide, mercury and phenols were analyzed until 2006 and then removed from the LTM sampling network due to their low or absent concentrations at the site. Landfill leachate indicators previously detected above the NYS Groundwater/Surface water SCGs included ammonia, chloride, bromide, color, TDS, and TKN and nitrate. The landfill leachate indicator detections continue to show stable trends. TDS at LF002 has historically been detected near or below the NYS Groundwater Standard of 500 milligram/liter (mg/L) at all monitoring wells with the exception of LF2MW-100 (bedrock well). The TDS at LF2MW-100 has historically been detected above 2,000 mg/L. The TDS is higher at this well because the sampling method (bailing) produces a greater amount of suspended solids in the sample. All TDS exceedances are within one order of magnitude of the TDS standard.

Metals analysis for this site continues to show levels above NYS Groundwater SCGs. Metals that exceed SCGs exceedance include barium, manganese, iron, sodium, aluminum, chromium, and nickel. Several of the metals (e.g., manganese, iron, and sodium) are indicative of base background conditions.

Landfill gas monitoring has been performed at Landfill 2/3 to identify the presence and concentration of methane at or near the landfill. A total of nine gas monitoring probes and 14 landfill gas vents were monitored on a quarterly basis from October 2005 until May 2010. Landfill gas sampling was optimized after the spring 2010 sampling round and is now sampled semiannually. Results from the gas sampling events at Landfill 2/3 continue to show site-wide stabilization of methane concentrations.

Since April 2005, landfill inspections and cover maintenance have been performed at Landfill 2/3. Inspections and maintenance are conducted on a quarterly basis with annual landfill cover mowing (fall). LUC/ICs have been implemented by the ROD and are verified quarterly as part of the landfill cover inspection program. The fall inspections are performed in conjunction with the Base-wide LUC/IC Site Inspections.

The debris pile identified in the 2009 sampling event was removed in March 2012 in association with Area of Interest (AOI) 474. The Draft Final Site Debris Removal and Soil Sampling Report for AOI 474 is undergoing regulatory review (FPM/CAPE, October 2012).

Previous LTM results are provided in detail in the Spring 2009 Landfill AOCs LTM Report (FPM, November 2010), Spring 2010 Landfill AOCs LTM Report (FPM, February 2012), and 2011 Landfill AOCs LTM Report (FPM/CAPE, July 2012).

3.2 LANDFILL 2/3 AOC – 2012 SITE ACTIVITIES

This section describes the Landfill 2/3 AOC site activities and monitoring data for 2012. The field activities include semiannual landfill cap inspections, semiannual landfill gas monitoring, annual landfill cap mowing, and biennial groundwater and surface water sampling. Groundwater and surface water sampling was not conducted in 2012.

3.2.1 Landfill Cap Inspections/Maintenance

The spring 2012 inspection did not identify any major deficiencies that would jeopardize the integrity of the cover.

The fall 2011 inspection was conducted following landfill mowing. The landfill was mowed during the week of September 10, 2012. The inspection did not identify any major deficiencies that would jeopardize the integrity of the cover.

The semiannual inspection reports for spring 2012 and fall 2012 can be found in Appendix A. Daily activity forms are provided in Appendix B.

3.2.2 Landfill Gas Monitoring

Landfill gas monitoring was performed at Landfill 2/3 to identify the presence and concentration of methane at or near the landfill (NYSDEC, November 1999). Landfill gas monitoring was conducted at nine gas monitoring probes (LF2GMP-1 through -9) and fourteen gas vents (LF2VENT- 1 through -14) in May 2012 and October 2012, for methane concentrations, LEL, oxygen levels and carbon dioxide levels. The semiannual Landfill 2/3 gas results can be found in Table 3-1.

Spring 2012 landfill gas readings were taken in May 2012. LEL values equaled or exceeded 100% at one gas monitoring probes (LF1GMP-6). The methane concentration reported at LF1GMP-6 was 12.9 ppm. LEL values did not equal or exceed 100% at any of the gas vents.

Fall 2012 landfill gas readings were taken in October 2012. LEL values equaled or exceeded 100% at one gas monitoring probes (LF1GMP-2). The methane concentration reported at LF1GMP-2 was 8.4 ppm. LEL values did not equal or exceed 100% at any of the gas vents.

3.2.3 Conclusions

Landfill Cap Inspections and Maintenance

The semiannual inspections have not identified any major deficiencies that would jeopardize the integrity of the cover and there is optimal vegetation cover on the cap. Inspections are also conducted following significant weather events (5-Year Storm events). There were no significant weather events in 2012.

Landfill Gas Monitoring

Results from the spring 2012 and fall 2012 landfill gas monitoring events continue to show site-wide stabilization of methane concentrations at Landfill 2/3. Elevated methane was detected at two gas monitoring probes. LEL values equaled or exceeded 100% at gas monitoring probe LF2GMP-6 during the spring 2012 sampling event, but not doing the fall 2012 sampling event. LEL values equaled or exceeded 100% at gas monitoring probe LF2GMP-2 during the fall 2012 sampling event. The LEL at these locations were above 100%; however, the concentrations have shown a declining trend in the latest monitoring events throughout the site. Additionally, the lack of methane exceedances at perimeter gas monitoring probes suggests that methane is not migrating off the property.

3.3 LTM OPTIMIZATION RECOMMENDATIONS

Based on the latest LTM results, the current scope of semiannual landfill gas monitoring, landfill cap inspections, biennial groundwater sampling, and biennial surface water sampling will continue. Please refer to Table 3-4 for the summary of the Landfill 2/3 AOC LTM Network. All previous LTM Network optimization is provided in Table 3-5.

4 LF003 LANDFILL 7 AOC

4.1 SITE BACKGROUND

Landfill 7, approximately 11 acres, is located northeast of the main runway, south of Perimeter Road and south of the Suspected Fire Training Area. **Figure 4-1** illustrates the landfill boundary and the locations of existing monitoring wells.

The wastes at Landfill 7 consisted of domestic refuse, solid waste, liquid wastes, petroleum products, and miscellaneous Base operations waste (such as airplane parts), which were placed into four trenches in the landfill area and subsequently burned. Landfill 7 was active from 1950-1954. The groundwater flow rate at LF003 is estimated to be 445 feet per year (LAW, December 1996). Groundwater flow at Landfill 7 is in a general south-southwest direction.

The ROD for LF003 Landfill 7 AOC was signed by the USEPA on June 6, 2000. In accordance with the ROD, the landfill was re-graded and capped in 2002. The cap components include a low-permeability layer, drainage layer, barrier protection layer, and a topsoil layer. LTM was initiated in February 2003, and 5-Year Reviews were conducted in 2005 and 2010. Both 5-Year Reviews indicated that the selected remedy is protective of human health and the environment.

For readability, the hydrology setting, previous investigations, and LTM sampling plan sections have been removed from the report. These sections are provided in the 2009 Landfill AOCs LTM Report (FPM, November 2010).

4.1.1 Previous LTM Activities and Results

LTM was performed at eight monitoring wells (LF7W-22, -23, -26, -27, -28, -29, -30, and -100) and two wetland surface water locations (LF7WL-3 and -4) in February 2003. These sampling locations are illustrated in **Figure 4-2**. The LTM network was analyzed quarterly (routine parameters) and annually (baseline parameters) for NYSDEC Part 360 requirements. Currently, based on several rounds of sampling data, only metals are analyzed on an annual basis. All recommendations to alter the sampling network were provided in previous Landfill AOCs LTM Reports and reviewed by the USEPA and NYSDEC.

VOCs, mercury, PCBs and all leachate indicators were removed from the Landfill 7 LTM network analysis list in spring 2006, due to their low or absent concentrations at the site. Landfill leachate indicators previously detected above the NYS Groundwater / Surface water SCGs included color, TDS, and TKN. The landfill leachate indicators detections at monitoring wells and surface water sampling locations showed stable trends before the analysis was removed from the LTM network in 2006. Metals analysis for this site continues to show levels above NYS Groundwater SCGs. Metals in exceedance include magnesium, manganese, iron, sodium, aluminum, chromium, and nickel. Several of the metals, including manganese, iron, and sodium are indicative of base background conditions.

Since September 2003, landfill inspections and cover maintenance have been performed at Landfill 7. Inspections and maintenance are conducted on a quarterly basis with annual landfill

cover mowing (fall). LUC/ICs have been implemented by the ROD and are verified quarterly as part of the landfill cover inspection program. The fall inspections are performed in conjunction with the Base-wide LUC/IC Site Inspections.

Previous LTM results are provided in detail in the Spring 2009 Landfill AOCs LTM Report (FPM, November 2010), Spring 2010 Landfill AOCs LTM Report (FPM, February 2012), and 2011 Landfill AOCs LTM Report (FPM/CAPE, July 2012).

4.2 LANDFILL 7 AOC – 2012 SITE ACITIVITIES

This section describes the Landfill 7 AOC site activities and monitoring data for 2012. The site activities include semiannual landfill cap inspections, biennial groundwater and surface water sampling, and annual landfill cap mowing. Groundwater and surface water sampling was not conducted in 2012.

4.2.1 Landfill Cap Inspections/Maintenance

The spring 2012 inspection did not identify any deficiencies that would jeopardize the integrity of the cover.

The fall 2012 inspection was conducted following landfill mowing. The landfill was mowed during the week of September 10, 2012. The inspection did not identify any deficiencies that would jeopardize the integrity of the cover.

The semiannual inspection reports for spring 2012 and fall 2012 can be found in Appendix A and daily activity forms are provided in Appendix B.

4.3 CONCLUSIONS

Landfill Cap Inspections and Maintenance

The semiannual inspections have not identified any major deficiencies that would jeopardize the integrity of the cover and there is optimal vegetation cover on the cap. Inspections are also conducted following significant weather events (5-Year Storm events). No significant weather events occurred in 2012.

4.4 LTM OPTIMIZATION RECOMMENDATIONS

Based on the latest LTM results, the current scopes of semiannual landfill gas monitoring, landfill cap inspections, biennial groundwater sampling, and biennial surface water sampling will continue. Please refer to Table 4-1 for the summary of the Landfill 7 AOC LTM Network. All previous LTM Network optimization is provided in Table 4-2.

5 LF007 LANDFILL 5 AOC

5.1 SITE BACKGROUND

Landfill 5 encompasses approximately 4 acres and is located in the south-central portion of the former Base, south of Patrick Square, immediately southwest of the unpaved access road and east of Three Mile Creek. Figure 5-1 illustrates the landfill boundary together with the location of existing monitoring wells.

The waste at Landfill 5 consisted of domestic wastes, reportedly having been burned and then buried. Approximately 18,000 CY of wastes were disposed of at the site from 1950-1960. During the Remedial Investigation (RI), groundwater flow rates were estimated to be 114 feet per year (LAW, December 1996). Principal groundwater flow directions at Landfill 5 are to the west in the area bordering the northern part of the landfill and to the southwest in the central and southern parts of the landfill.

The ROD for LF007 Landfill 5 AOC was signed by the USEPA on June 5, 2000. In accordance with the ROD, the landfill was re-graded and capped in 2002. The cap components include a low-permeability layer, drainage layer, barrier protection layer, and a topsoil layer. LTM was initiated in February 2003, and 5-Year Reviews were conducted in 2005 and 2010. Both 5-Year Reviews indicated that the selected remedy is protective of human health and the environment.

For readability, the hydrology setting, previous investigations, and LTM sampling plan sections have been removed from the report. These sections are provided in the 2009 Landfill AOCs LTM Report (FPM, November 2010).

5.1.1 Previous LTM Activities and Results

LTM was performed at five monitoring wells (LF5MW-1A, -3, -5, -100R, and MW49D07) and three surface water locations (LF5SW-1, -2, and -3) since February 2003. These sampling locations are illustrated in Figure 5-2. The LTM network was analyzed quarterly (routine parameters) and annually (baseline parameters) for NYSDEC Part 360 Parameters and VOCs. Currently, based on several rounds of sampling data, only metals are analyzed on an annual basis. All recommendations to alter the sampling network were provided in previous Landfill AOCs LTM Reports and reviewed by the USEPA and NYSDEC.

VOC and PCB analysis conducted at the site has not shown any detections above SCGs at the overburden monitoring wells or surface water sampling locations. PCB exceedances were reported at LF5MW-100R (bedrock well) in 2005 and 2006. No PCBs were detected at this location in 2007 and 2008. Landfill leachate indicators previously detected above the NYS Groundwater / Surface water SCGs included ammonia, bromide, chloride, color, nitrate, sulfate, TDS, and TKN. The landfill leachate indicators detections showed stable trends before the analysis was removed from the LTM network in 2006. Metals analysis for this site showed levels above NYS Groundwater SCGs. Metals detected above SCGs include manganese, iron, sodium, aluminum, chromium, and nickel. Several of the metals (e.g., manganese, iron, and sodium) are indicative of base background conditions.

Landfill inspections and cover maintenance have been performed at Landfill 5 since September 2003. Inspections and maintenance are conducted on a quarterly basis with annual landfill cover mowing (fall). LUC/ICs have been implemented by the ROD and are verified quarterly as part of the landfill cover inspection program. The fall inspections are performed in conjunction with the Base-wide LUC/IC Site Inspections.

Previous LTM results are provided in detail in the Spring 2009 Landfill AOCs LTM Report (FPM, November 2010), Spring 2010 Landfill AOCs LTM Report (FPM, February 2012), and 2011 Landfill AOCs LTM Report (FPM/CAPE, July 2012).

The site activities include semiannual landfill cap inspections, biennial groundwater and surface water sampling, and annual landfill cap mowing. Groundwater and surface water sampling was not conducted in 2012.

5.2.1 Landfill Cap Inspections/Maintenance

The spring 2012 inspection did not identify any deficiencies that would jeopardize the integrity of the cover.

The fall 2012 inspection was conducted following landfill mowing. The landfill was mowed during the week of September 10, 2012. The inspection did not identify any deficiencies that would jeopardize the integrity of the cover.

The semiannual inspection reports for spring 2012 and fall 2012 can be found in Appendix A and daily activity forms are provided in Appendix B.

5.2.2 Conclusions

Landfill Cap Inspections and Maintenance

The semiannual inspections have not identified any major deficiencies that would jeopardize the integrity of the cover and there is optimal vegetation cover on the cap. Inspections are also conducted following significant weather events (5-Year Storm events). No significant weather events occurred in 2012.

5.3 LTM OPTIMIZATION RECOMMENDATIONS

Based on the latest LTM results, the current scopes of semiannual landfill cap inspections and biennial groundwater and surface water sampling will continue. Please refer to Table 5-1 for the summary of the Landfill 5 AOC LTM Network. All previous LTM Network optimization is provided in Table 5-2.

6 LF009 LANDFILL 6 AOC

6.1 SITE BACKGROUND

Landfill 6 is an unlined landfill comprising approximately 15.7 acres located near the southern boundary of the former Griffiss AFB, between Perimeter Road and Three Mile Creek (TMC). The southern edge of the landfill is bound by a dirt access road. Figure 6-1 illustrates the landfill boundary and the locations of existing monitoring wells.

The wastes at Landfill 6 consisted of general refuse and hardfill that was buried and some of which was burned at the site. An estimated 38,000-62,000 CY of wastes were disposed at the site from 1955-1959. During the 1980s, although the landfill was no longer active, an unknown quantity of fuel-contaminated soil from the tank excavations at Tank Farms 1 and 3 was disposed of in the southern portion of Landfill 6. In 1986, a clay cap was constructed over the fuel-contaminated soils area. The groundwater flow rate at Landfill 6 is estimated to be 37 feet per year (LAW, December 1996). Groundwater flows south-southwest toward TMC at Landfill 6.

The ROD for LF009 Landfill 6 AOC was signed by the USEPA on June 7, 2001. In accordance with the ROD, the landfill was re-graded and capped in 2004. The cap components include a gas venting layer, a low-permeability layer, drainage layer, barrier protection layer, and a topsoil layer. A portion of the fill material used at Landfill 6 consisted of soil/debris from various on-base projects, including: approximately 52,600 CY of material from the TMC restoration project, approximately 3,000 CY of cobbles from the Apron 1 biopile remediation project and approximately 2 CY of soil from the Rainbow Creek remediation project. LTM was initiated in June 2006 and Five-Year Reviews were conducted in 2005 and 2010.

For readability, the hydrology setting, previous investigations, and LTM sampling plan sections have been removed from the report. These sections are provided in the 2009 Landfill AOCs LTM Report (FPM, November 2010).

6.1.1 Previous LTM Activities and Results

LTM was performed at 19 monitoring wells (775VMW-10, -18R, -20R, LF6MW-1, -12, LF6VMW-10R2, -17D, -17S, -18, -19, -20, -21, -22, -23, -24, -25, -26, TMCMW-9 and TMC-USGS-2), three surface water locations (LF6SW-1, -2, -3), and one wetland sampling location (LF6W-1) since June 2006. As recommended by the NYSDEC, landfill leachate sampling locations LF6LH-1 and -2 were added to the LF6 LTM network in December 2006. These sampling locations are illustrated in Figure 6-2. The LTM network was analyzed quarterly (routine parameters) and annually (baseline parameters) for NYSDEC Part 360 requirements. All recommendations to alter the sampling network were provided in previous Landfill AOCs LTM Reports and reviewed by the USEPA and NYSDEC.

VOCs currently detected above the NYS Groundwater/ Surface water SCGs include TCE and cis-1,2 dichloroethene. Exceedances occur at monitoring wells 775VMW-10, LF6MW-12, and LF6VMW-26. Landfill leachate indicators previously detected above the NYS Groundwater / Surface water SCGs included chloride, color, TDS, and TKN. The landfill leachate indicators

detections continue to show stable trends. Metals analysis for this site continues to show levels above NYS Groundwater SCGs. Metals in exceedance include manganese, magnesium, iron, sodium, aluminum, chromium, and nickel. Several of the metals (e.g., manganese, iron, sodium) are indicative of base background conditions.

Landfill gas monitoring has been performed at Landfill 6 to identify the presence and concentration of methane at or near the landfill. A total of 13 gas monitoring probes and 16 landfill gas vents were monitored on a quarterly basis from October 2005 until October 2009. Landfill gas sampling was optimized after the October 2009 sampling round and is now sampled semiannually. Results from the gas sampling events at Landfill 6 showed elevated methane concentrations throughout the landfill, but these levels have declined. Methane has not been detected on Landfill 6 since the fall 2009 gas monitoring round.

Since July 2006, landfill inspections and cover maintenance have been performed at Landfill 6. Inspections and maintenance are conducted on a quarterly basis with annual landfill cover mowing (fall). LUC/ICs have been implemented by the ROD and are verified quarterly as part of the landfill cover inspection program. The fall inspections are performed in conjunction with the Base-wide LUC/IC Site Inspections.

Previous LTM results are provided in detail in the Spring 2009 Landfill AOCs LTM Report (FPM, November 2010), Spring 2010 Landfill AOCs LTM Report (FPM, February 2012), and 2011 Landfill AOCs LTM Report (FPM/CAPE, July 2012).

6.2 LANDFILL 6 AOC – 2012 SITE ACTIVITIES

This section describes the Landfill 6 AOC site activities and monitoring data for 2012. The field activities include semiannual landfill cap inspections, semiannual landfill gas monitoring, annual landfill cap mowing, and annual groundwater and surface water sampling.

6.2.1 Landfill Cap Inspections/Maintenance

The spring 2012 inspection did not identify any major deficiencies that would jeopardize the integrity of the cover.

The fall 2012 inspection was conducted following landfill mowing. The landfill was mowed during the week of September 10, 2012. The inspection did not identify any deficiencies that would jeopardize the integrity of the cover.

The semiannual inspection reports for spring 2012 and fall 2012 can be found in Appendix A and daily activity forms are provided in Appendix B.

6.2.2 Landfill Gas Monitoring

Landfill gas monitoring was conducted at 13 gas monitoring probes (LF6GMP-1 through -13) and sixteen gas vents (LF6VENT-1 through -16) in May 2012 and October 2012 for methane

concentrations, LEL, oxygen concentrations and carbon dioxide concentrations. The semiannual Landfill 6 gas results are presented in Table 6-1.

Landfill gas readings were taken in May 2012. There were no LEL values that equaled or exceeded 100% at any of the thirteen gas monitoring probes or the fourteen gas vents. There were no methane concentrations recorded at any of the gas monitoring probes or the gas vents.

Landfill gas readings were also taken in October 2012. There were no LEL values that equaled or exceeded 100% at any of the thirteen gas monitoring probes. LEL values equaled or exceeded 100% at one gas vent (LF6VENT-4). The methane concentration at LF6VENT-4 was 8.1 ppm. Methane was also detected at gas vents LF6VENT-2, and -3 at concentrations of 1.7 ppm and 0.8 ppm, respectively.

6.2.3 Groundwater and Surface Water Monitoring

Groundwater and surface water monitoring was conducted in June 2011 at 19 monitoring wells (LF6MW-1, -12, LF6VMW-10R2, -17S, -17D, -18, -19, -20, -21, -22, -23, -24, -25, -26, 775VMW-10, -18R, -20R, TMCMW-9 and TMC-USGS-2), two leachate locations (LF6LH-1 and -2), one wetland location (LF6W-1) and three surface water locations (LF6SW-1, -2 and -3) for landfill leachate indicators. Additionally, VOC analysis was performed at monitoring wells 775VMW-10, LF6VMW-12, -24, -25, -26, and TMCMW-9, surface water locations LF6SW-1, -2, -3, wetland sample LF6W-1.

The following summarizes the results for all groundwater, surface water and gas monitoring analytical data, which are presented in Table 6-2. Daily CQCRs completed during the June 2012 sampling round is provided in Appendix B. The complete list of analytes and the validated laboratory data are attached in Appendix C and the raw laboratory data are available in Appendix D.

6.2.3.3 MAROS Analysis

The purpose of the MAROS methodology is to recommend an improved groundwater monitoring network by applying statistical techniques to existing historical and current site analytical data. The description of MAROS methodology at Landfill 6 has been removed for readability. This information is provided in the 2009 Landfill AOC LTM Report (FPM, November 2010).

The following summarizes the results of the Mann-Kendall test. Linear Regression was used to confirm any trend reported by the Mann-Kendall test. 6.2.4 Conclusions

Landfill Cap Inspections and Maintenance

The semiannual inspections have not identified any major deficiencies that would jeopardize the integrity of the cover and there is optimal vegetation cover on the cap. Inspections are also conducted following significant weather events (5-Year Storm events). No significant weather events occurred in 2012.

Landfill Gas Monitoring

Methane was not detected at any of the gas monitoring probes or vents during the spring 2012 gas sampling rounds. In the fall 2012 gas sampling round, one gas vent showed a LEL value exceeding 100%. LF6VENT-4, located in the center of the landfill, showed a methane concentration of 8.1 ppm. Two vents in the vicinity of LF6VENT-4 also showed methane detects; however LEL values were well below 100%. No methane detections were reported at any of the other gas vents or gas monitoring probes.

Groundwater and Surface Water

As listed in the final Remedial Action (RA) Work Plan (WP) (Parsons, July 2008), the selected remedy for the Landfill 6 trichloroethene (TCE) Site is enhanced bioremediation. This process is intended to increase biodegradation of the groundwater contaminants by injecting a vegetable oil emulsion into the ground upgradient of monitoring well LF6MW-12. The vegetable oil emulsion accelerates the natural breakdown of the chemicals, reducing the concentration of contaminants. To assess the effectiveness of the injections, semiannual performance sampling is conducted independent from the Landfill 6 LTM sampling. Performance monitoring reports are issued independently of this report.

The relatively high concentrations of cis-1,2-DCE and TCE found at monitoring wells LF6MW-12 and LF6VMW-26 do not appear to be directly impacting downgradient surface water locations along Three Mile Creek. TCE detections were recorded at surface water sampling locations LF6SW-1 and -2, but they were one-time occurrences with concentrations well below their respective reporting limits. Daughter compounds associated with the breakdown of TCE

have not been detected at any of the three surface water sampling locations since surface water sampling began in July 2006. The total VOC concentration trends for monitoring wells within or adjacent the TCE plume (LF6MW-12, LF6VMW-23, -24, -25, -26, and TMCMW-9) are presented in Figure 6-4. The TCE plume is illustrated in Figure 6-2.

Landfill leachate indicators were above NYS Groundwater and Surface Water Standards at 775VMW-18R, LF6MW-1, -12, LF6VMW-24, -25, -26, and TMCMW-9. The exceedances included chloride, TDS, and TKN.

All concentrations of leachate indicators at the overburden wells and surface water locations were comparable to previous results and below the typical range of municipal landfill leachate (Lee and Jones, 1991). This reference was used during the Baseline Study of the former Griffiss AFB Landfill AOCs and is provided in Table 2-4. The leachate indicators at 775VMW-18R, LF6MW-1, -12, LF6VMW-24, -25, -26, and TMCMW-9 are not believed to be associated with landfill leachate. 775VMW-18R, LF6MW-1 are upgradient wells. The leachate indicators at LF6MW-12, LF6VMW-24, and TMCMW-9 are believed to be associated with the Building 775 and Landfill 6 TCE plume. LF6MW-12 is located within the plume and LF6VMW-24 and TMCMW-9 are located adjacent to the plume. This plume is addressed under the On-Base Groundwater Operable Unit (SD052).

The alkalinity and hardness concentrations were reported from 4 mg/L to 470 mg/L, and 74 mg/L to 460 mg/L, respectively. The alkalinity and hardness concentrations at monitoring wells in the LF6 LTM Network showed sporadic trends as shown in Figure 6-5 (alkalinity) and 6-6 (hardness). Alkalinity and hardness are important indicators of the plume extent because the landfill material tends to propagate microbial activity which generates carbon dioxide. This process increases the dissolution of minerals and alkalinity which increases hardness (Baedecker and Back, 1979).

For the June 2012 sampling round, hardness levels throughout the LTM network were similar to the levels measured in the background/upgradient wells. The concentrations of leachates indicators alkalinity and hardness are plotted in Figure 6-7.

MAROS Analysis

Utilizing the results of the LF009 LTM sampling rounds (June 2006 through June 2012) MAROS analysis was performed (See Table 6-3). Results of the evaluation showed an overall decreasing/stabilizing trend at source monitoring wells 775VMW-10 and LF6MW-12for alkalinity TOC, hardness, and nitrogen. Results showed an overall increasing/stabilizing trend at source monitoring well LF6VMW-26. This monitoring well is located downgradient groundwater flow to LF6MW-12.

Among the tail monitoring wells, the upgradient wells (775VMW-18R, -20R, LF6MW-1, and LF6VMW-21) showed overall increasing alkalinity, decreasing hardness, no trend for nitrate, and stable TOC. The downgradient wells (LF6VMW-17S, -17D, -18, -19, and -20) showed overall decreasing alkalinity, decreasing hardness, increasing nitrate, and decreasing/stable TOC. The wells adjacent to the Landfill 6 TCE plume (LF6VMW-10R2, -22, -23, -24, -25, and

TMCMW-9) showed overall decreasing/stable alkalinity, increasing hardness, increasing nitrate, and stable TOC.

6.3 LTM OPTIMIZATION RECOMMENDATIONS

Based on the latest LTM results, the current scopes of semiannual landfill gas sampling, landfill cap inspections, annual groundwater sampling, and annual surface water sampling will continue. Please refer to Table 6-4 for the summary of the Landfill 6 AOC LTM Network. All previous LTM Network optimization is provided in Table 6-5.

Due to the proximity of surface water sampling location LF1SW-2 (Landfill 1 AOC LTM network) to sediment/ surface water sampling location SMCFSS-2 (Six Mile Creek AOC LTM network), the sampling locations were combined into one location. The list of analytes sampled for at this combined location (LF1SW-2SMC) is the union of the Landfill 1 AOC target analytes list and the Six Mile Creek target analytes list.

1 Target analytes are based on 6 NYCRR Part 360, Subpart 2, Appendix A.
2 Analyses only performed in baseline sampling. (Unless otherwise specified, parameters are analyzed on a routine/quarterly basis).
3 Landfill gas parameters will be collected in the field with a portable gas analyzer.

Slopes 2% min., 33% max. No significant ponding	Overall condition of the slopes is very good (Photo 6). No significant erosion was noted on the slopes.
Cover Vegetation Thick, no stress	Overall density of the cover vegetation is adequate (Photo 10). No thin spots were noted. Early spring vegetation shows good growth.
Leachate Breakouts Active seeps Staining, probable source	Significant iron staining was observed at drainage outfalls near gas monitoring probe LF1GMP-3 and -20 (Photos 7 and 9).
Vectors Holes from burrowing	There were no holes or burrows observed on or around the landfill cap.
Drainage Grass-lined swales Rip-Rap reinforced areas	Drainage swale, drainage points, and rip-rap areas in good working condition (Photo 12).

Institutional Controls Signs Deed restriction violations	Overall, signs are in good condition (Photo 14). No deed restrictions/ violations have been noted.
Monitoring Wells/ Gas Probes Protective casings/ Surface seals	Monitoring wells/gas probes in good working condition (Photos 13 and 15).
Gas Vents Integrity of piping Insect screens	Gas vents are in good working condition (Photos 8 and 11).
Security Fencing/Gates	Security fencing and gates are in good working condition (Photo 1).

Comments/Follow Up Needs:

Although water has dropped in the beaver pond created on Six Mile Creek, it appears beavers remain (Photo 4). Water levels will continue to be monitored throughout the spring. The roadway leading into Landfill 1 has been repaired and is in good working condition. (Photos 2 and 3).

GENERAL NOTES:

MISSING SAMPLES

None. All samples documented on the chain of custody were received by the laboratory.

BLANKS

Whenever blanks, including method, ambient, equipment, and trip, contained low levels of contaminants (between the DL and LOQ), the laboratory and/or data verifier qualified the subject results with a "J" flag. Since no qualification of associated field samples are required for blanks less than half the LOQ, no further action was taken in such instances.

MS/MSD

For several analytes, the lab performed matrix spike/matrix spike duplicate sample (MS/MSD) analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the MS/MSD sample criterion.

DUPLICATES

For several analytes, the lab performed duplicate analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the duplicate sample criterion.

VOLATILE ORGANIC COMPOUNDS (VOCs)

- No QA/QC exceedances were encountered for the VOCs analyses.

WET CHEMISTRY ANALYTES

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The UFP QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (20% for aqueous samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

The following table summarizes the RPDs of field duplicate sample set LF1M1316UA/UC.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/L)	Field Dup Result (mg/L)	LOQ (mg/L)	RPD or ±difference	Flag Applied	Rationale
LF1M1316UA	LF1M1316UC	Ammonia	0.14 B	0.21 B	0.10	0.07	None	Difference < 2xLOQ
LF1M1316UA	LF1M1316UC	TKN	1.1 B	1.4 B	1.0	0.3	None	Difference < 2xLOQ
LF1M1316UA	LF1M1316UC	COD	10 U	8.6 J	20	1.4	None	Difference < 2xLOQ
LF1M1316UA	LF1M1316UC	Bromide	0.13 J	0.13 J	0.50	0	None	Difference < 2xLOQ
LF1M1316UA	LF1M1316UC	Chloride	14	13	0.50	7.4	None	RPD < 20%
LF1M1316UA	LF1M1316UC	Sulfate	6.7	6.9	5.0	0.2	None	Difference < 2xLOQ
LF1M1316UA	LF1M1316UC	TOC	2.2	2.0	1.0	9.5	None	RPD < 20%
LF1M1316UA	LF1M1316UC	Color	45	50	5.0	10.5	None	RPD < 20%
LF1M1316UA	LF1M1316UC	Alkalinity	200	200	5.0	0	None	RPD < 20%
LF1M1316UA	LF1M1316UC	Hardness	190	180	5.0	5.4	None	RPD < 20%
LF1M1316UA	LF1M1316UC	TDS	220	220	10	0	None	RPD < 20%

Corrective Action: No qualifiers were applied to the results for samples LF1M1316UA/UC, since all RPDs and differences were within control limits.

- The following blank sample analyses indicated blank contaminants present at concentrations equal to or greater than half the limit of quantitation (LOQ). The Blank ID, detected contaminant, and concentration are listed.

Blank ID	Analyte	Concentration (mg/L)	LOQ (mg/L)	Samples Affected
062112UE	Ammonia	0.12	0.10	LF1P0317UA, LF1M1316UA, LF1M1316UC
	TKN	0.78 J	1.0	LF1P0213UA, LF1P0317UA, LF1M1111UA, LF1M1316UA, LF1M1316UC

The purpose of laboratory, equipment or trip blank analysis is to determine the existence and magnitude of contamination resulting from lab or field activities. If contamination is found in blanks the associated sample results for these analytes may be considered suspect. As per the QAPP, based on the blank contaminants present above half the LOQ, results for the specific analytes in the associated environmental samples are qualified with a "B" flag. However, in accordance with the EPA National Functional Guidelines and consistent with the QAPP, the "B" flag is **not** applied for sample results that are greater than five times (5x) the blank concentration. Thus the "B" flag is only applied to those samples for which the sample result is positive and less than five times (5x) the blank concentration.

Corrective Action: "B" flags were applied to the ammonia and TKN results for the field samples listed, since the associated results were less than 5x the blank concentration.

DATA USABILITY RESULTS

VOCs

Based on the evaluation of all information in the analytical data groups, the results of the samples for VOCs are highly usable with the data qualifiers as noted. Using the verification approach as presented above, the results for all above samples are 100% usable.

WET CHEMISTRY ANALYTES

Based on the evaluation of all information in the analytical data groups, the results of the samples for wet chemistry analytes are highly usable with the data qualifiers as noted. Using the verification approach as presented above, the results for all above samples are 100% usable.

AFCEE SUMMARY

CASE NARRATIVE
Client: FPM Remediations Inc
Project: Griffiss AFB LF1 LTM
Report Number: 280-30335-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

ANALYTICAL METHODS

The analytical test methods and QA/QC requirements used for the sample analyses were per methods as specified in the DOD QSM, version 4.2, with project-specific modifications as listed in the project-specific QAPP. The analytical methods employed included SW-846: Volatile Organic Compounds (VOC) by Method SW8260B, Total Organic Carbon (TOC) by Method SW 9060A, Total Dissolved Solids by Method SM 2540C, Total Alkalinity by Method SM 2320B, Anions by Method SW9056, Ammonia by Method 350.1, Total Kjeldahl Nitrogen by Method 351.2, Color by Method SM 2120B, Hardness (as calcium carbonate) by Method SM 2340C, Chemical Oxygen Demand (COD) by Method 410.4, and Biochemical Oxygen Demand (BOD) by Method SM 5210B.

VERIFICATION GUIDANCE

The analytical work was performed by TestAmerica Laboratories, Inc. in accordance with the DOD QSM, version 4.2, and QC requirements of the respective analytical methods and of the project-specific QAPP. The data usability analysis was based on the reviewer's professional judgment and on an assessment of how this data would fare with respect to the DOD QSM, and the criteria as listed in the project-specific QAPP.

QA/QC CRITERIA

The following QA/QC criteria were reviewed, as applicable and available:

- Method detection limits (DLs) and limits of quantitation (LOQs)
- Holding times, sample preservation and storage
- Second source calibration verification summary
- Initial and Continuing calibration summaries
- Method blanks
- Field duplicate results
- Matrix spike/matrix spike duplicate (MS/MSD) analysis
- Laboratory control samples (LCS)
- Results reported between DL and LOQ (J-flag)
- MS tune performance
- Ambient, equipment, and trip blanks (as applicable)
- Surrogate spike recoveries
- Internal standard areas counts and retention times

- Sample storage and preservation
- Data system printouts
- Qualitative and quantitative compound identification
- Chain-of-custody (COC)
- Case narrative and deliverables compliance

The items listed above were in compliance with DOD QSM, version 4.2, and project-specific QAPP criteria and protocols with exceptions discussed in the text below. The data have been verified according to the procedures outlined above and qualified accordingly.

GENERAL NOTES:

MISSING SAMPLES

None. All samples documented on the chain of custody were received by the laboratory.

BLANKS

Whenever blanks, including method, ambient, equipment, and trip, contained low levels of contaminants (between the DL and LOQ), the laboratory and/or data verifier qualified the subject results with a "J" flag. Since no qualification of associated field samples are required for blanks less than half the LOQ, no further action was taken in such instances.

DUPLICATES

For several analytes, the lab performed duplicate analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the duplicate sample criterion.

VOLATILE ORGANIC COMPOUNDS (VOCs)

- Laboratory performance on individual samples is established by means of spiking all samples prior to analysis with surrogate compounds and assessing the percent recoveries. The following table summarizes QC exceedances for surrogate recoveries. The sample ID, percent recovery, and QC limits are listed.

Sample ID	Surrogate	%Rec	QC Limits (%)	Flag Applied	Rationale
062512UE	Toluene-d8	***124***	85-120	None	%Rec > UCL; associated results non-detect

For VOCs, if the recoveries for one or more surrogates are outside control limits, corrective action shall be implemented: the sample shall be reextracted and reanalyzed. If the corrective action is ineffective in resolving the exceedance, then all analytes associated with the surrogate fraction in that sample are qualified. For samples with surrogate recoveries greater than the upper control limit, positive sample results are considered estimated (flagged "J"). For samples with surrogate recoveries greater than 10% but less than the lower control limit, positive results are considered estimated (flagged "J") and non-detect results are considered estimated (flagged "UJ"). For samples with surrogate recoveries less than 10%, the results are rejected for the analytes. However, using professional judgment, no corrective action and/or flagging is required for minimal exceedances (i.e., within 1% of the control limits).

Corrective Action: According to the case narrative, sample 062512UE was not re-extracted since the recovery was above the upper control limit. Using professional judgment, no flagging was deemed necessary since the exceedance indicates a positive bias and all results were non-detect.

WET CHEMISTRY ANALYTES

- The laboratory performed duplicate analyses on various wet chemistry analytes.
  Corrective Action: No corrective action was required since all associated RPD exceedances (i.e., the RPD exceeded 15%) were for results below the reporting limit.

- The following table summarizes QC exceedances of the matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and/or RPDs for parent samples LF1M1030UA/UC. The spike analytes, MS recoveries, MSD recoveries, spike recovery QC limits, and RPDs and their QC limit between the MS and MSD are listed.

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices. Generally, these data alone cannot be used to evaluate the precision and accuracy of individual samples. A matrix spike and matrix spike duplicate analysis is an aliquot of sample spiked with known concentrations of all the analytes in the method. According to the QAPP, the MS/MSD result is used to assess whether the sample matrix may bias the results. Exceedances of either percent recovery (%Rec) control limits of spike concentrations or relative percent difference (RPD) control limits between the MS and MSD results, according to the QAPP require a "J" (matrix effect) qualifier for the specific analyte in all samples collected from the same site matrix as the parent. However, due to the varied nature of environmental samples, such as locations, depths, physical characteristics (dissolved and suspended solids, turbidity, pH, organic content, etc.), it is difficult to assign one set of MS/MSD sample analysis as truly representative of an entire site matrix. Therefore, based on the definition of this type of QA/QC sample, using professional judgment it is deemed inappropriate to qualify more than the actual parent sample due to a percent recovery or RPD exceedance. This approach is in accordance with the EPA National Functional guidelines, which states that the MS/MSD results are not used alone to qualify the entire data package, however, can be used in conjunction with other QC criteria to determine the need for some qualification of the data. Using professional judgment, no corrective action and/or flagging is deemed required for minimal exceedances (i.e., within 1% of the control limits).

Corrective Action: As discussed above, "J" flags were applied to the associated results for ammonia and TKN in the parent samples only. For orthophosphate, the exceedance indicated a positive bias, so no qualifiers were applied since the associated results were non-detect.

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The UFP QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (20% for aqueous samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

The following table summarizes the RPDs of field duplicate sample set LF1M1030UA/UC.

LF1M1030UA	LF1M1030UC	Sulfate	6.0	6.0	5.0	0	None	Difference < 2xLOQ
LF1M1030UA	LF1M1030UC	TOC	0.69 J	0.78 J	1.0	0.09	None	Difference < 2xLOQ
LF1M1030UA	LF1M1030UC	Alkalinity	230	230	5.0	0	None	RPD < 20%
LF1M1030UA	LF1M1030UC	Hardness	220	210	5.0	4.7	None	RPD < 20%
LF1M1030UA	LF1M1030UC	TDS	240	240	10	0	None	RPD < 20%

Corrective Action: "J" qualifiers were applied to the chloride results for samples LF1M1030UA/UC, since the total difference exceeded twice the LOQ ("J" qualifiers had already been assigned to the results since they were less than the LOQ but greater than the DL). All other RPDs and differences were within control limits.

- The following blank sample analyses indicated blank contaminants present at concentrations equal to or greater than half the limit of quantitation (LOQ). The Blank ID, detected contaminant, and concentration are listed.

Blank ID	Analyte	Concentration (mg/L)	LOQ (mg/L)	Samples Affected
062512UE	Ammonia	0.078 J	0.10	LF1P0525UA, LF1M1030UA, LF1M1030UC, LF1M1212UA, MWSAR0324UA

The purpose of laboratory, equipment or trip blank analysis is to determine the existence and magnitude of contamination resulting from lab or field activities. If contamination is found in blanks the associated sample results for these analytes may be considered suspect. As per the QAPP, based on the blank contaminants present above half the LOQ, results for the

specific analytes in the associated environmental samples are qualified with a "B" flag. However, in accordance with the EPA National Functional Guidelines and consistent with the QAPP, the "B" flag is **not** applied for sample results that are greater than five times (5x) the blank concentration. Thus the "B" flag is only applied to those samples for which the sample result is positive and less than five times (5x) the blank concentration.

Corrective Action: "B" flags were applied to the ammonia results for the field samples listed, since the associated results were less than 5x the blank concentration.

CASE NARRATIVE
Client: FPM Remediations Inc
Project: Griffiss AFB LF1
Report Number: 280-30425-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
Ten samples were received on 06/26/2012; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 1.6°C, 3.4°C, and 1.3°C.

GENERAL NOTES:

MISSING SAMPLES

None. All samples documented on the chain of custody were received by the laboratory.

BLANKS

Whenever blanks, including method, ambient, equipment, and trip, contained low levels of contaminants (between the DL and LOQ), the laboratory and/or data verifier qualified the subject results with a "J" flag. Since no qualification of associated field samples are required for blanks less than half the LOQ, no further action was taken in such instances.

MS/MSD

For several analytes, the lab performed matrix spike/matrix spike duplicate sample (MS/MSD) analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the MS/MSD sample criterion.

DUPLICATES

For several analytes, the lab performed duplicate analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the duplicate sample criterion.

VOLATILE ORGANIC COMPOUNDS (VOCs)

- No QA/QC exceedances were encountered for the VOCs analyses.

WET CHEMISTRY ANALYTES

- According to the case narrative, the following analytes were analyzed at initial dilutions:

Analyte	Sample	Dilution
BOD	LF1M01R11UA	1:5

The dilution results only are reported and are used in data verification as representing original results.

- The following blank sample analyses indicated blank contaminants present at concentrations equal to or greater than half the limit of quantitation (LOQ). The Blank ID, detected contaminant, and concentration are listed.

Blank ID	Analyte	Concentration (mg/L)	LOQ (mg/L)	Samples Affected
062612UE	Ammonia	0.10	0.10	LF1M01R11UA, LF1M1411UA, LF1SW0101UA, LF1SW0301UA
	TKN	0.82 J	1.0	LF1M01R11UA, LF1M1411UA, LF1SW0101UA, LF1SW02SMC01UA, LF1SW0301UA

The purpose of laboratory, equipment or trip blank analysis is to determine the existence and magnitude of contamination resulting from lab or field activities. If contamination is found in blanks the associated sample results for these analytes may be considered suspect. As per the QAPP, based on the blank contaminants present above half the LOQ, results for the specific analytes in the associated environmental samples are qualified with a "B" flag. However, in accordance with the EPA National Functional Guidelines and consistent with the QAPP, the "B" flag is **not** applied for sample results that are greater than five times (5x) the blank concentration. Thus the "B" flag is only applied to those samples for which the sample result is positive and less than five times (5x) the blank concentration.

Corrective Action: "B" flags were applied to the ammonia and TKN results for the field samples listed, since the associated results were less than 5x the blank concentration.

DATA USABILITY RESULTS

VOCs

Based on the evaluation of all information in the analytical data groups, the results of the samples for VOCs are highly usable with the data qualifiers as noted. Using the verification approach as presented above, the results for all above samples are 100% usable.

WET CHEMISTRY ANALYTES

Based on the evaluation of all information in the analytical data groups, the results of the samples for wet chemistry analytes are highly usable with the data qualifiers as noted. Using the verification approach as presented above, the results for all above samples are 100% usable.

AFCEE SUMMARY

All data in Job # 280-30455-1 are valid and usable with qualifications as noted in the data review.

CASE NARRATIVE
Client: FPM Remediations Inc
Project: Griffiss AFB LF1 LTM
Report Number: 280-30455-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
Nine samples were received on 06/27/2012; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 0.8°C and 2.4°C.

Relinquished By information was not present on the associated chain-of-custody. The client was notified of this discrepancy via email on 06/27/2012.

All quality control parameters were within the acceptance limits.

ANIONS
Samples LF1M01R11UA (280-30455-1), LF1M1411UA (280-30455-2), LF1M10318UA (280-30455-3), LF1SW0101UA (280-30455-4), LF1SW02SMC01UA (280-30455-5), LF1SW0301UA (280-30455-6), and 062612UE (280-30455-7) were analyzed for anions in accordance with EPA SW-846 Method 9056. The samples were analyzed on 06/27/2012.

No difficulties were encountered during the anions analyses.

All quality control parameters were within the acceptance limits.

BIOCHEMICAL OXYGEN DEMAND
Samples LF1M01R11UA (280-30455-1), LF1M1411UA (280-30455-2), LF1SW0101UA (280-30455-4), LF1SW02SMC01UA (280-30455-5), LF1SW0301UA (280-30455-6), and 062612UE (280-30455-7) were analyzed for Biochemical Oxygen Demand in accordance with SM20 5210B. The samples were analyzed on 06/27/2012.

Biochemical Oxygen Demand was detected in method blank SCB 280-125739/9 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

Sample LF1M01R11UA (280-30455-1) required a dilution prior to analysis. The LOQ, LOD, and DL have been adjusted accordingly.

No other difficulties were encountered during the BOD analyses.

All other quality control parameters were within the acceptance limits.

TestAmerica Job #280-30435-1

Laboratory:	TestAmerica Laboratories, Inc.
Sample Matrix:	Water
Number of Samples:	1
Analytical Protocol:	DOD QSM, version 4.2, as per project-specific UFP QAPP
Data Reviewer:	Connie van Hoesel
Sample Date:	June 22, 2012

LIST OF DATA VERIFICATION SAMPLES

This verification report pertains to the following environmental samples and corresponding QC samples:

Sample ID	Date	QC Samples	Date
LFVM2348QA	6/22/12		

Notes:

Refer to attached chain-of-custody for detailed sampling information and sample specific analyses requested.

QA – Primary environmental samples

DELIVERABLES

The data deliverable report was per requirements of the DOD QSM, version 4.2, as specified in the project-specific QAPP. The report consisted of the following major sections: lab attachment letter, case narrative, chain-of-custody, lab qualifier definitions, analytical results (sheet 2) based on analytical batch, calibration summaries, method blank summaries, laboratory control sample summaries, matrix spike/matrix spike duplicate summaries, holding time forms, performance checks, surrogate and internal standard recoveries, as applicable.

ANALYTICAL METHODS

The analytical test methods and QA/QC requirements used for the sample analyses were per methods as specified in the DOD QSM, version 4.2, with project-specific modifications as listed in the project-specific QAPP. The analytical methods employed included SW-846: Volatile Organic Compounds (VOC) by Method SW8260B.

VERIFICATION GUIDANCE

The analytical work was performed by TestAmerica Laboratories, Inc. in accordance with the DOD QSM, version 4.2, and QC requirements of the respective analytical methods and of the project-specific QAPP. The data usability analysis was based on the reviewer's professional judgment and on an assessment of how this data would fare with respect to the DOD QSM, and the criteria as listed in the project-specific QAPP.

QA/QC CRITERIA

The following QA/QC criteria were reviewed, as applicable and available:

- Method detection limits (DLs) and limits of quantitation (LOQs)
- Holding times, sample preservation and storage
- Second source calibration verification summary
- Initial and Continuing calibration summaries
- Method blanks
- Field duplicate results
- Matrix spike/matrix spike duplicate (MS/MSD) analysis
- Laboratory control samples (LCS)
- Results reported between DL and LOQ (J-flag)
- MS tune performance
- Ambient, equipment, and trip blanks (as applicable)
- Surrogate spike recoveries
- Internal standard areas counts and retention times
- Sample storage and preservation
- Data system printouts
- Qualitative and quantitative compound identification
- Chain-of-custody (COC)
- Case narrative and deliverables compliance

The items listed above were in compliance with DOD QSM, version 4.2, and project-specific QAPP criteria and protocols with exceptions discussed in the text below. The data have been verified according to the procedures outlined above and qualified accordingly.

GENERAL NOTES:

MISSING SAMPLES

None. All samples documented on the chain of custody were received by the laboratory.

SAMPLE LABELING

It was noted that there was a discrepancy between the sample label on the container and the sample ID listed on the COC for sample LFVMW2348QA. The laboratory logged the sample in per the COC, and notified the client.

BLANKS

Whenever blanks, including method, ambient, equipment, and trip, contained low levels of contaminants (between the DL and LOQ), the laboratory and/or data verifier qualified the subject results with a "J" flag. Since no qualification of associated field samples are required for blanks less than half the LOQ, no further action was taken in such instances.

VOLATILE ORGANIC COMPOUNDS (VOCs)

- There were no QA/QC exceedances for the VOCs analyses.

DATA USABILITY RESULTS

VOCs

Based on the evaluation of all information in the analytical data groups, the results of the samples for VOCs are highly usable with the data qualifiers as noted. Using the verification approach as presented above, the results for all above samples are 100% usable.

AFCEE SUMMARY

All data in Job # 280-30435-1 are valid and usable with qualifications as noted in the data review.

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

One sample was received on 06/26/2012; the sample arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 1.6°C.

A sample ID discrepancy was noted between the information listed on the chain-of-custody and the container label for TA Denver samples 280-30435-1. The chain-of-custody lists the sample ID as LFVMW2348QA, while the container labels list the sample ID as LF6VMW2348QA. The Sample Technician was able to determine the identity of the sample by comparing the sample collection time on the COC with the sample collection time on the sample container label. The sample ID was logged per the chain-of-custody. The client was notified on June 26, 2012.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample LFVM2348QA (280-30435-1) was analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The sample was analyzed on 07/02/2012.

No difficulties were encountered during the VOC analysis.

All quality control parameters were within the acceptance limits.

DELIVERABLES

The data deliverable report was per requirements of the DOD QSM, version 4.2, as specified in the project-specific QAPP. The report consisted of the following major sections: lab attachment letter, case narrative, chain-of-custody, lab qualifier definitions, analytical results (sheet 2) based on analytical batch, calibration summaries, method blank summaries, laboratory control sample summaries, matrix spike/matrix spike duplicate summaries, holding time forms, performance checks, surrogate and internal standard recoveries, as applicable.

ANALYTICAL METHODS

The analytical test methods and QA/QC requirements used for the sample analyses were per methods as specified in the DOD QSM, version 4.2, with project-specific modifications as listed in the project-specific QAPP. The analytical methods employed included SW-846: Total Organic Carbon (TOC) by Method SW 9060A, Total Dissolved Solids by Method SM 2540C, Total Alkalinity by Method SM 2320B, Anions by Method SW9056, Ammonia by Method 350.1, Total Kjeldahl Nitrogen by Method 351.2, Color by Method SM 2120B, Hardness (as calcium carbonate) by Method SM 2340C, and Chemical Oxygen Demand (COD) by Method 410.4.

VERIFICATION GUIDANCE

The analytical work was performed by TestAmerica Laboratories, Inc. in accordance with the DOD QSM, version 4.2, and QC requirements of the respective analytical methods and of the project-specific QAPP. The data usability analysis was based on the reviewer's professional judgment and on an assessment of how this data would fare with respect to the DOD QSM, and the criteria as listed in the project-specific QAPP.

QA/QC CRITERIA

The following QA/QC criteria were reviewed, as applicable and available:

- Method detection limits (DLs) and limits of quantitation (LOQs)
- Holding times, sample preservation and storage
- Second source calibration verification summary
- Initial and Continuing calibration summaries
- Method blanks
- Field duplicate results
- Matrix spike/matrix spike duplicate (MS/MSD) analysis
- Laboratory control samples (LCS)
- Results reported between DL and LOQ (J-flag)
- MS tune performance
- Ambient, equipment, and trip blanks (as applicable)
- Surrogate spike recoveries
- Internal standard areas counts and retention times
- Sample storage and preservation

- Data system printouts
- Qualitative and quantitative compound identification
- Chain-of-custody (COC)
- Case narrative and deliverables compliance

The items listed above were in compliance with DOD QSM, version 4.2, and project-specific QAPP criteria and protocols with exceptions discussed in the text below. The data have been verified according to the procedures outlined above and qualified accordingly.

GENERAL NOTES:

MISSING SAMPLES

None. All samples documented on the chain of custody were received by the laboratory.

BLANKS

Whenever blanks, including method, ambient, equipment, and trip, contained low levels of contaminants (between the DL and LOQ), the laboratory and/or data verifier qualified the subject results with a "J" flag. Since no qualification of associated field samples are required for blanks less than half the LOQ, no further action was taken in such instances.

MS/MSD

For several analytes, the lab performed matrix spike/matrix spike duplicate sample (MS/MSD) analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the MS/MSD sample criterion.

DUPLICATES

For several analytes, the lab performed duplicate analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the duplicate sample criterion.

WET CHEMISTRY ANALYTES

- According to the case narrative, the following analytes were analyzed at initial dilutions:

Analyte	Sample	Dilution
Chloride	LF6VM1850QA, LF6VM1926QA, LF6VM2068QA	1:5

The dilution results only are reported and are used in data verification as representing original results.

- The following blank sample analyses indicated blank contaminants present at concentrations equal to or greater than half the limit of quantitation (LOQ). The Blank ID, detected contaminant, and concentration are listed.

Blank ID	Analyte	Concentration (mg/L)	LOQ (mg/L)	Samples Affected
061812QE	Ammonia	0.098 J	0.10	LF6VM10R230QA, LF6VM1850QA, LF6VM1926QA, LF6VM2068QA, LF6VM2175QA, LF6VM2235QA, LF6VM2235QC
	TKN	0.60 J	1.0	LF6VM10R230QA, LF6VM1850QA, LF6VM1926QA, LF6VM2068QA, LF6VM2175QA, LF6VM2235QA, LF6VM2235QC
	Hardness	3.2 J	5.0	None; all field results greater than 5x blank concentration

The purpose of laboratory, equipment or trip blank analysis is to determine the existence and magnitude of contamination resulting from lab or field activities. If contamination is found in blanks the associated sample results for these analytes may be considered suspect. As per the QAPP, based on the blank contaminants present above half the LOQ, results for the specific analytes in the associated environmental samples are qualified with a "B" flag. However, in accordance with the EPA National Functional Guidelines and consistent with the QAPP, the "B" flag is **not** applied for sample results that are greater than five times (5x) the blank concentration. Thus the "B" flag is only applied to those samples for which the sample result is positive and less than five times (5x) the blank concentration.
Corrective Action: "B" flags were applied to the ammonia and TKN results for the field samples listed, since the associated results were less than 5x the blank concentration.

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The UFP QAPP requires qualification of data for field duplicates

criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (20% for aqueous samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

The following table summarizes the RPDs of field duplicate sample set LF6VM2235QA/QC.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/L)	Field Dup Result (mg/L)	LOQ (mg/L)	RPD or ±difference	Flag Applied	Rationale
LF6VM2235QA	LF6VM2235QC	Ammonia	0.11 B	0.19 B	0.10	0.08	None	Difference < 2xLOQ

LF6VM2235QA	LF6VM2235QC	Sulfate	18	17	5.0	1	None	Difference < 2xLOQ
LF6VM2235QA	LF6VM2235QC	TOC	0.63 J	0.59 J	1.0	0.09	None	Difference < 2xLOQ
LF6VM2235QA	LF6VM2235QC	Alkalinity	180	180	5.0	0	None	RPD < 20%
LF6VM2235QA	LF6VM2235QC	Hardness	310	200	5.0	***43.1***	None	RPD > 20%
LF6VM2235QA	LF6VM2235QC	TDS	230	230	10	0	None	RPD < 20%

Corrective Action: "J" qualifiers were applied to the hardness results for samples LF1VM2235QA/QC, since the RPD exceeded 20%. All other RPDs and differences were within control limits.

DATA USABILITY RESULTS

WET CHEMISTRY ANALYTES

Based on the evaluation of all information in the analytical data groups, the results of the samples for wet chemistry analytes are highly usable with the data qualifiers as noted. Using the verification approach as presented above, the results for all above samples are 100% usable.

CASE NARRATIVE
Client: FPM Remediations Inc
Project: Griffiss AFB LF6 LTM
Report Number: 280-30184-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

The samples were analyzed on 06/29/2012.

Ammonia was detected in method blank MB 280-126205/20 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for batch 280-126205, performed on sample LF6VM10R230QA (280-30184-1), were outside control limits for Ammonia. The associated laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) recoveries met acceptance criteria, and the sample results have been flagged accordingly.

No other difficulties were encountered during the ammonia analyses.

All other quality control parameters were within the acceptance limits.

GENERAL NOTES:

MISSING SAMPLES

No 40 mL HCL-preserved VOA vials were received for sample LF6VM2348QA, so the analysis could not be performed.

SAMPLE LABELING

It was noted that there was a discrepancy between the sample label on the container and the sample ID listed on the COC for sample LF6VM2449QA. Per FPM's request, the laboratory logged the sample in per the sample label.

BLANKS

Whenever blanks, including method, ambient, equipment, and trip, contained low levels of contaminants (between the DL and LOQ), the laboratory and/or data verifier qualified the subject results with a "J" flag. Since no qualification of associated field samples are required for blanks less than half the LOQ, no further action was taken in such instances.

MS/MSD

For several analytes, the lab performed matrix spike/matrix spike duplicate sample (MS/MSD) analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the MS/MSD sample criterion.

VOLATILE ORGANIC COMPOUNDS (VOCs)

- According to the case narrative, in the following continuing calibration verification (CCV), analytes exhibited the following exceedances:

Type of Calibration Exceedance Affected Analytes	%D/ %RSD	AFCEE QC Limit	Flag Applied	Rationale
CCV 280-126144/3				
1,2-Dichloroethane-d4	***-22.4***	±20	None	%D < upper control limit; all associated surrogate recoveries within control limits

Corrective Action: According to the case narrative, the laboratory's SOP allows for 6 analytes to be outside limits, so this exceedance had no impact on the reporting of the data. Using professional judgment, this exceedance did not have any impact on associated data since all surrogate recoveries were within control limits. No flagging is deemed necessary.

WET CHEMISTRY ANALYTES

- According to the case narrative, the following analytes were analyzed at initial dilutions:

Analyte	Sample	Dilution
Bromide, nitrate, nitrite, fluoride, nitrate-nitrite, orthophosphate, sulfate	LF6M0168QA, LF6M0168QC	1:2
Chloride	LF6M0168QA, LF6M0168QC	1:50
Chloride	775VM1095QA, 775VM20R110QA, TMCM0919QA	1:5
Chloride	775VM18R90QA, LF6VM2449QA	1:10
Sulfate	TMCM0919QA	1:5

The dilution results only are reported and are used in data verification as representing original results.

- The following table summarizes QC exceedances of the matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and/or RPDs for parent samples LF6M0168QA/QC. The spike analytes, MS recoveries, MSD recoveries, spike recovery QC limits, and RPDs and their QC limit between the MS and MSD are listed.

Parent Sample: LF6M0168QA/QC

Spike Compounds	MS %Rec	MSD %Rec	QAPP QC Limits	RPD % (QAPP limit 20%)	Flag Applied	Rationale
Ammonia	***78***	***78***	90-110	0	J	%Rec outside QC limits
TKN	84	87	77-115	3	None	%Rec within QAPP control limits

Data for matrix spike/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices. Generally, these data alone cannot be used to evaluate the precision and accuracy of individual samples. A

matrix spike and matrix spike duplicate analysis is an aliquot of sample spiked with known concentrations of all the analytes in the method. According to the QAPP, the MS/MSD result is used to assess whether the sample matrix may bias the results. The recommended frequency of analysis is one MS/MSD per 20 samples. Exceedances of either percent recovery (%Rec) control limits of spike concentrations or relative percent difference (RPD) control limits between the MS and MSD results, according to the QAPP require a "J" (matrix effect) qualifier for the specific analyte in all samples collected from the same site matrix as the parent. However, due to the varied nature of environmental samples, such as locations, depths, physical characteristics (dissolved and suspended solids, turbidity, pH, organic content, etc.), it is difficult to assign one set of MS/MSD sample analysis as truly representative of an entire site matrix. Therefore, based on the definition of this type of QA/QC sample, using professional judgment it is deemed inappropriate to qualify more than the actual parent sample due to a percent recovery or RPD exceedance. This approach is in accordance with the EPA National Functional guidelines, which states that the MS/MSD results are not used alone to qualify the entire data package, however, can be used in conjunction with other QC criteria to determine the need for some qualification of the data. Using professional judgment, no corrective action and/or flagging is deemed required for minimal exceedances (i.e., within 1% of the %Rec control limits).

Corrective Action: "J" qualifiers were added to the associated ammonia results in parent samples LF6M0168QA/QC only. No exceedances were noted for TKN, since the laboratory had applied different control limits for the MS/MSD %Rec than those listed in the QAPP. Note that the "J" flag for TKN in sample LF6M0168QA was retained since the results were less than the LOQ.

- The following blank sample analyses indicated blank contaminants present at concentrations equal to or greater than half the limit of quantitation (LOQ). The Blank ID, detected contaminant, and concentration are listed.

Blank ID	Analyte	Concentration (mg/L)	LOQ (mg/L)	Samples Affected
061912QE	Ammonia	0.073 J	0.10	LF6M0168QA, LF6M0168QC, 775VM1095QA, 775VM20R110QA, LF6VM2449QA, TMCM0919QA
	TKN	0.64 J	1.0	LF6M0168QA, LF6M0168QC, 775VM1095QA, 775VM18R90QA, 775VM20R110QA, LF6VM2449QA, LF6VM2544QA, TMCM0919QA

The purpose of laboratory, equipment or trip blank analysis is to determine the existence and magnitude of contamination resulting from lab or field activities. If contamination is found in blanks the associated sample results for these analytes may be considered suspect. As per

the QAPP, based on the blank contaminants present above half the LOQ, results for the specific analytes in the associated environmental samples are qualified with a "B" flag. However, in accordance with the EPA National Functional Guidelines and consistent with the QAPP, the "B" flag is **not** applied for sample results that are greater than five times (5x) the blank concentration. Thus the "B" flag is only applied to those samples for which the sample result is positive and less than five times (5x) the blank concentration.
Corrective Action: "B" flags were applied to the ammonia and TKN results for the field samples listed, since the associated results were less than 5x the blank concentration.

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The UFP QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (20% for aqueous samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

  The following table summarizes the RPDs of field duplicate sample set LF6M0168QA/QC.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/L)	Field Dup Result (mg/L)	LOQ (mg/L)	RPD or ±difference	Flag Applied	Rationale

CASE NARRATIVE
Client: FPM Remediations Inc
Project: Griffiss AFB LF6 LTM
Report Number: 280-30235-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
Eleven samples were received on 06/20/2012; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 4.4 °C, 3.4 °C, and 5.0 °C.

Samples LF6M0168QS and LF6M0168QD were logged as the MS/MSD with the same sample ID, LF6M0168QA, as its parent sample. The client was notified on June 20, 2012.

MS/MSD is not performed for the following analyses: TDS, Color, Alkalinity, and BOD. The client was notified on June 20, 2012.

A sample ID discrepancy was noted between the information listed on the chain-of-custody and the container label for TA Denver samples 280-30235-6. The chain-of-custody lists the sample ID as LF6VM24499QA, while the container labels list the sample ID as LF6VM2449QA. The Sample Technician was able to determine the identity of the sample by comparing the sample collection time on the COC with the sample collection time on the sample container label. As requested by the client on 06/22/2012, the sample ID was logged per the sample container label. The client was notified on June 20, 2012.

MS/MSD analyses were requested and performed on sample LF6M0168QA (280-30235-1).

As instructed by the client, samples requesting BOD analysis have not been reported as the QC for the batch did not pass for an unknown reason. Samples will be recollected and resubmitted at a later date.

VOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples 775VM1095QA (280-30235-3), LF6VM2449QA (280-30235-6), LF6VM2544QA (280-30235-7), TMCM0919QA (280-30235-8), 061912QE (280-30235-9), 061912QF (280-30235-10) and 061912QR (280-30235-11) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 06/29/2012.

Methylene Chloride was detected in method blank MB 280-126144/7 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

The following compound was outside control limits in the continuing calibration verification (CCV) associated with batch 280-126144: 1,2-Dichloroethane-d4 (Surr). The compound is not classified as a Calibration Check Compound (CCC) in the reference method, and the laboratory defaults to in-house and/or project-specific criteria for evaluation. Due to the large number of analytes contained in the CCV, the laboratory's SOP allows for 6 analytes to be outside limits; therefore, the data have been reported.

Refer to the QC report for details.

No other difficulties were encountered during the VOC analyses.

All other quality control parameters were within the acceptance limits.

QE – Equipment Blank

DELIVERABLES

The data deliverable report was per requirements of the DOD QSM, version 4.2, as specified in the project-specific QAPP. The report consisted of the following major sections: lab attachment letter, case narrative, chain-of-custody, lab qualifier definitions, analytical results (sheet 2) based on analytical batch, calibration summaries, method blank summaries, laboratory control sample summaries, matrix spike/matrix spike duplicate summaries, holding time forms, performance checks, surrogate and internal standard recoveries, as applicable.

ANALYTICAL METHODS

The analytical test methods and QA/QC requirements used for the sample analyses were per methods as specified in the DOD QSM, version 4.2, with project-specific modifications as listed in the project-specific QAPP. The analytical methods employed included: Biochemical Oxygen Demand (BOD) by Method SM 5210B.

VERIFICATION GUIDANCE

The analytical work was performed by TestAmerica Laboratories, Inc. in accordance with the DOD QSM, version 4.2, and QC requirements of the respective analytical methods and of the project-specific QAPP. The data usability analysis was based on the reviewer's professional judgment and on an assessment of how this data would fare with respect to the DOD QSM, and the criteria as listed in the project-specific QAPP.

QA/QC CRITERIA

The following QA/QC criteria were reviewed, as applicable and available:

- Method detection limits (DLs) and limits of quantitation (LOQs)
- Holding times, sample preservation and storage
- Second source calibration verification summary
- Initial and Continuing calibration summaries
- Method blanks
- Field duplicate results
- Matrix spike/matrix spike duplicate (MS/MSD) analysis
- Laboratory control samples (LCS)
- Results reported between DL and LOQ (J-flag)
- MS tune performance
- Ambient, equipment, and trip blanks (as applicable)
- Surrogate spike recoveries
- Internal standard areas counts and retention times
- Sample storage and preservation
- Data system printouts
- Qualitative and quantitative compound identification
- Chain-of-custody (COC)
- Case narrative and deliverables compliance

The items listed above were in compliance with DOD QSM, version 4.2, and project-specific QAPP criteria and protocols with exceptions discussed in the text below. The data have been verified according to the procedures outlined above and qualified accordingly.

GENERAL NOTES:

MISSING SAMPLES

None. All samples documented on the chain of custody were received by the laboratory.

BLANKS

Whenever blanks, including method, ambient, equipment, and trip, contained low levels of contaminants (between the DL and LOQ), the laboratory and/or data verifier qualified the subject results with a "J" flag. Since no qualification of associated field samples are required for blanks less than half the LOQ, no further action was taken in such instances.

WET CHEMISTRY ANALYTES

- There were no QA/QC exceedances for the BOD analyses.

DATA USABILITY RESULTS

WET CHEMISTRY ANALYTES

Based on the evaluation of all information in the analytical data groups, the results of the samples for wet chemistry analytes are highly usable with the data qualifiers as noted. Using the verification approach as presented above, the results for all above samples are 100% usable.

AFCEE SUMMARY

All data in Job # 280-30661-1 are valid and usable with qualifications as noted in the data review.

CASE NARRATIVE
Client: FPM Remediations Inc
Project: Griffiss AFB LF6 LTM
Report Number: 280-30661-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

Ten samples were received on 07/03/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 2.3°C.

The sample collection date and sample collection time for samples 280-30661-2 through 280-30661-7 were logged per the chain-of-custody, as this information was not present on the associated sample container labels. The client was notified on July 3, 2012.

A sample ID discrepancy was noted between the information listed on the chain-of-custody and the container label for TA Denver samples 280-30661-7. The chain-of-custody lists the sample ID as LF6VM24499QA, while the container labels list the sample ID as LF6VM2449QA. The Sample Technician was able to determine the identity of the sample by comparing the sample collection time on the COC with the sample collection time on the sample container label. The sample ID was logged per the chain-of-custody. The client was notified on July 3, 2012.

BIOCHEMICAL OXYGEN DEMAND

Samples 775VM1095QA (280-30661-1), LF6VM10R230QA (280-30661-2), LF6VM1850QA (280-30661-3), LF6VM1926QA (280-30661-4), LF6VM2068QA (280-30661-5), LF6VM2175QA (280-30661-6), LF6VM24499QA (280-30661-7), LF6VM2544QA (280-30661-8), TMCM0919QA (280-30661-9) and 070212QE (280-30661-10) were analyzed for Biochemical Oxygen Demand in accordance with SM20 5210B. The samples were analyzed on 07/03/2012.

No difficulties were encountered during the BOD analyses.

All quality control parameters were within the acceptance limits.

VERIFICATION GUIDANCE

The analytical work was performed by TestAmerica Laboratories, Inc. in accordance with the DOD QSM, version 4.2, and QC requirements of the respective analytical methods and of the project-specific QAPP. The data usability analysis was based on the reviewer's professional judgment and on an assessment of how this data would fare with respect to the DOD QSM, and the criteria as listed in the project-specific QAPP.

QA/QC CRITERIA

The following QA/QC criteria were reviewed, as applicable and available:

- Method detection limits (DLs) and limits of quantitation (LOQs)
- Holding times, sample preservation and storage
- Second source calibration verification summary
- Initial and Continuing calibration summaries
- Method blanks
- Field duplicate results
- Matrix spike/matrix spike duplicate (MS/MSD) analysis
- Laboratory control samples (LCS)
- Results reported between DL and LOQ (J-flag)
- MS tune performance
- Ambient, equipment, and trip blanks (as applicable)
- Surrogate spike recoveries
- Internal standard areas counts and retention times

- Sample storage and preservation
- Data system printouts
- Qualitative and quantitative compound identification
- Chain-of-custody (COC)
- Case narrative and deliverables compliance

The items listed above were in compliance with DOD QSM, version 4.2, and project-specific QAPP criteria and protocols with exceptions discussed in the text below. The data have been verified according to the procedures outlined above and qualified accordingly.

GENERAL NOTES:

MISSING SAMPLES

No 40 mL HCL-preserved VOA vials were received for sample LF6VM2348QA, so the analysis could not be performed.

SAMPLE LABELING

It was noted that there was a discrepancy between the sample label on the container and the sample ID listed on the COC for sample 062012QR. The laboratory logged the sample in per the COC, and notified FPM.

BLANKS

Whenever blanks, including method, ambient, equipment, and trip, contained low levels of contaminants (between the DL and LOQ), the laboratory and/or data verifier qualified the subject results with a "J" flag. Since no qualification of associated field samples are required for blanks less than half the LOQ, no further action was taken in such instances.

MS/MSD

For several analytes, the lab performed matrix spike/matrix spike duplicate sample (MS/MSD) analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the MS/MSD sample criterion.

VOLATILE ORGANIC COMPOUNDS (VOCs)

- According to the case narrative, sample LF6VM2650QA required a 1:4 dilution after original results were above the calibration curve for cis-1,2-DCE only. Use diluted sample results for this compound only. Original sample results are modified accordingly.

- One of the two 40 mL vials for the sample 062012QR contained headspace greater than 6 mm, according to the case narrative. Sufficient volume remained to proceed with the requested analysis.
  Corrective Action: Using professional judgment, no qualification is considered necessary.

- Laboratory performance on individual samples is established by means of spiking all samples prior to analysis with surrogate compounds and assessing the percent recoveries. The following table summarizes QC exceedances for surrogate recoveries. The sample ID, percent recovery, and QC limits are listed.

Sample ID	Surrogate	%Rec	QC Limits (%)	Flag Applied	Rationale
LF6VM2650QA	Toluene-d8	***192***	85-120	None	%Rec > UCL; associated results less than the LOQ
	1,2-Dichloroethane-d4	***149***	70-120	None	%Rec > UCL; associated results less than the LOQ
	4-Bromofluorobenzene	***178***	75-120	None	%Rec > UCL; associated results less than the LOQ
	Dibromofluoromethane	***168***	85-115	None	%Rec > UCL; associated results less than the LOQ

For VOCs, if the recoveries for one or more surrogates are outside control limits, corrective action shall be implemented: the sample shall be reextracted and reanalyzed. If the corrective action is ineffective in resolving the exceedance, then all analytes associated with the surrogate fraction in that sample are qualified. For samples with surrogate recoveries greater than the upper control limit, positive sample results are considered estimated (flagged "J"). For samples with surrogate recoveries greater than 10% but less than the lower control limit, positive results are considered estimated (flagged "J") and non-detect results are considered estimated (flagged "UJ"). For samples with surrogate recoveries less than 10%, the results are rejected for the analytes. However, using professional judgment, no corrective action and/or flagging is required for minimal exceedances (i.e., within 1% of the control limits).

Corrective Action: According to the case narrative, sample LF6VM2650QA was not re-extracted since the recovery was above the upper control limit and all associated results were less than the LOQ. Using professional judgment, no flagging was deemed necessary since the exceedance indicates a positive bias and all results were less than the LOQ.

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The UFP QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (20% for aqueous samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

  The following table summarizes the RPDs of field duplicate sample set LF6VM2650QA/QC.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (µg/L)	Field Dup Result (µg/L)	LOQ (µg/L)	RPD or ±difference	Flag Applied	Rationale
LF6VM2650QA	LF6VM2650QC	cis-1,2-DCE	100	89	4.0	11.6	None	RPD < 20%

  Corrective Action: No "J" qualifiers were applied since all RPDs and differences were within control limits.

- The following blank sample analyses indicated blank contaminants present at concentrations equal to or greater than half the limit of quantitation (LOQ). The Blank ID, detected contaminant, and concentration are listed.

Blank ID	Analyte	Concentration (mg/L)	LOQ (mg/L)	Samples Affected
062012QE	Acetone	8.0 J	10	None, all associated results non-detect

  The purpose of laboratory, equipment or trip blank analysis is to determine the existence and magnitude of contamination resulting from lab or field activities. If contamination is found in blanks the associated sample results for these analytes may be considered suspect. As per the QAPP, based on the blank contaminants present above half the LOQ, results for the specific analytes in the associated environmental samples are qualified with a "B" flag. However, in accordance with the EPA National Functional Guidelines and consistent with the QAPP, the "B" flag is **not** applied for sample results that are greater than five times (5x) the blank concentration. Thus the "B" flag is only applied to those samples for which the sample result is positive and less than five times (5x) the blank concentration.
  Corrective Action: No "B" flags were applied to the acetone results for any field samples, since the associated results were less than 5x the blank concentration.

WET CHEMISTRY ANALYTES

- According to the case narrative, the following analytes were analyzed at initial dilutions:

Analyte	Sample	Dilution
Chloride	LF6M1246QA,	1:5

Analyte	Sample	Dilution
	LF6VM2650QA, LF6VM2650QC, LF6SW0301QA	
BOD	LF6M1246QA	1:10

The dilution results only are reported and are used in data verification as representing original results.

- The following blank sample analyses indicated blank contaminants present at concentrations equal to or greater than half the limit of quantitation (LOQ). The Blank ID, detected contaminant, and concentration are listed.

Blank ID	Analyte	Concentration (mg/L)	LOQ (mg/L)	Samples Affected
062012QE	Ammonia	0.071 J	0.10	LF6M1246QA, LF6VM17D48QA, LF6VM17S15QA, LF6VM2348QA, LF6VM2650QA, TMCUM0227QA, LF6SW0301QA

The purpose of laboratory, equipment or trip blank analysis is to determine the existence and magnitude of contamination resulting from lab or field activities. If contamination is found in blanks the associated sample results for these analytes may be considered suspect. As per the QAPP, based on the blank contaminants present above half the LOQ, results for the specific analytes in the associated environmental samples are qualified with a "B" flag. However, in accordance with the EPA National Functional Guidelines and consistent with the QAPP, the "B" flag is **not** applied for sample results that are greater than five times (5x) the blank concentration. Thus the "B" flag is only applied to those samples for which the sample result is positive and less than five times (5x) the blank concentration.
Corrective Action: "B" flags were applied to the ammonia and TKN results for the field samples listed, since the associated results were less than 5x the blank concentration.

- Field duplicate samples, which are collected at the same location and at the same time using identical collection, handling, and analytical procedures, are used to assess precision of the sample collection process. The UFP QAPP requires qualification of data for field duplicates criterion if the duplicate samples contain detected compounds with concentrations above 5x the LOQ and the relative percent differences (RPDs) between the duplicate sample results exceed RPD control limits (20% for aqueous samples). If either the parent or the duplicate sample is less than 5x the LOQ, then the difference between the parent and duplicate sample

must be less than 2x the LOQ. "J" flags for detects and "UJ" flags for non-detects are required per the QAPP for any exceedances.

The following table summarizes the RPDs of field duplicate sample set LF6VM2650QA/QC.

Sample ID, Normal	Sample ID, Field Duplicate	Analyte	Normal Result (mg/L)	Field Dup Result (mg/L)	LOQ (mg/L)	RPD or ±difference	Flag Applied	Rationale

LF6VM2650QA	LF6VM2650QC	TDS	510	510	10	0	None	RPD < 20%

Corrective Action: "J" qualifiers were applied to the ammonia results for samples LF6VM2650QA/QC, since the difference exceeded twice the LOQ. All other RPDs and differences were within control limits.

CASE NARRATIVE
Client: FPM Remediations Inc
Project: Griffiss AFB LF6 LTM
Report Number: 280-30282-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
Eleven samples were received on 06/21/2012; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 4.7°C, 4.3°C, and 3.1°C.

The 40mL HCl preserved VOA vials for sample LF6VM2348QA (280-30282-4) requesting 8260B analysis, were not received at the laboratory; therefore the requested 8260B analysis could not be performed. The client was notified on June 21, 2012.

One of the two 40mL VOA vials received for sample 062012QR (280-30282-11) was received at the laboratory with a bubble >6mm in diameter. Sufficient volume remained to proceed with the requested analysis. The client was notified on June 21, 2012.

Sample ID, date, and time discrepancies were noted between the information listed on the chain-of-custody and the container label for TA Denver sample 280-30282-9. The chain-of-custody lists the sample ID as 062012QE, with a collection date of 06/20/2012, and, a collection time of 16:15, while the container labels list the sample ID as 061912QE, with a collection date of 06/19/2012, and a collection time of 1600. The sample ID, collection date, and collection time were logged per the chain-of-custody. The client was notified on June 21, 2012.

The sample collection dates and sample collection times were logged per the chain-of-custody for samples LF6VM17D48QA (280-30282-2), LF6VM17S15QA (280-30282-3), LF6VM2348QA (280-30282-4), and TMCUM0227QA (280-30282-7), as this information was not present on the sample container labels. The client was notified on June 21, 2012.

VOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples LF6M1246QA (280-30282-1), LF6VM2650QA (280-30282-5), LF6VM2650QC (280-30282-6), LF6SW0301QA (280-30282-8), 062012QE (280-30282-9), 062012QF (280-30282-10) and 062012QR (280-30282-11) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 07/02/2012 and 07/03/2012.

Samples LF6M1246QA (280-30282-1 and LF6VM2650QC (280-30282-6) required dilutions prior to analysis. The LOQ, LOD, and DL have been adjusted accordingly.

The 1,2-Dichloroethane-d4, 4-Bromofluorobenzene, Dibromofluoromethane, and Toluene-d8 surrogate recoveries for the following sample was outside control limits: LF6VM2650QA (280-30282-5). All analytes associated to this surrogate were non-detect, with the exception of trans-1,2-Dichloroethene which was less than one half the reporting limit; therefore, re-extraction and/or reanalysis were not performed.

No other difficulties were encountered during the VOC analyses.

All other quality control parameters were within the acceptance limits.

COLOR
Samples LF6M1246QA (280-30282-1), LF6VM17D48QA (280-30282-2), LF6VM17S15QA (280-30282-3), LF6VM2348QA (280-30282-4), LF6VM2650QA (280-30282-5), LF6VM2650QC (280-30282-6), TMCUM0227QA (280-30282-7), LF6SW0301QA (280-30282-8) and 062012QE (280-30282-9) were analyzed for color in accordance with SM20 2120B - Colorimetric. The samples were analyzed on 06/21/2012.

No difficulties were encountered during the color analyses.

QA/QC CRITERIA

The following QA/QC criteria were reviewed, as applicable and available:

- Method detection limits (DLs) and limits of quantitation (LOQs)
- Holding times, sample preservation and storage
- Second source calibration verification summary
- Initial and Continuing calibration summaries
- Method blanks
- Field duplicate results
- Matrix spike/matrix spike duplicate (MS/MSD) analysis
- Laboratory control samples (LCS)
- Results reported between DL and LOQ (J-flag)
- MS tune performance
- Ambient, equipment, and trip blanks (as applicable)
- Surrogate spike recoveries
- Internal standard areas counts and retention times

- Sample storage and preservation
- Data system printouts
- Qualitative and quantitative compound identification
- Chain-of-custody (COC)
- Case narrative and deliverables compliance

The items listed above were in compliance with DOD QSM, version 4.2, and project-specific QAPP criteria and protocols with exceptions discussed in the text below. The data have been verified according to the procedures outlined above and qualified accordingly.

GENERAL NOTES:

MISSING SAMPLES

None. All samples documented on the chain of custody were received by the laboratory.

BLANKS

Whenever blanks, including method, ambient, equipment, and trip, contained low levels of contaminants (between the DL and LOQ), the laboratory and/or data verifier qualified the subject results with a "J" flag. Since no qualification of associated field samples are required for blanks less than half the LOQ, no further action was taken in such instances.

MS/MSD

For several analytes, the lab performed matrix spike/matrix spike duplicate sample (MS/MSD) analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the MS/MSD sample criterion.

DUPLICATES

For several analytes, the lab performed duplicate analyses for various field samples. However, these samples were not requested by the client in the chain-of-custody; therefore, no action was taken for the duplicate sample criterion.

VOLATILE ORGANIC COMPOUNDS (VOCs)

- Laboratory performance on individual samples is established by means of spiking all samples prior to analysis with surrogate compounds and assessing the percent recoveries. The following table summarizes QC exceedances for surrogate recoveries. The sample ID, percent recovery, and QC limits are listed.

Sample ID	Surrogate	%Rec	QC Limits (%)	Flag Applied	Rationale
LF6SW0201QA	Dibromofluoromethane	***83***	85-115	UJ	%Rec < LCL; associated results non-detect

For VOCs, if the recoveries for one or more surrogates are outside control limits, corrective action shall be implemented: the sample shall be reextracted and reanalyzed. If the corrective action is ineffective in resolving the exceedance, then all analytes associated with the surrogate fraction in that sample are qualified. For samples with surrogate recoveries greater than the upper control limit, positive sample results are considered estimated (flagged "J"). For samples with surrogate recoveries greater than 10% but less than the lower control limit, positive results are considered estimated (flagged "J") and non-detect results are considered estimated (flagged "UJ"). For samples with surrogate recoveries less than 10%, the results are rejected for the analytes. However, using professional judgment, no corrective action and/or flagging is required for minimal exceedances (i.e., within 1% of the control limits).

Corrective Action: According to the case narrative, sample LF6SW0201QA was re-analyzed since the recovery of one of the surrogates was below the lower control limit. The results confirmed the original results, so only the original results were reported. Using professional judgment, "UJ" flags were assigned to associated results since the exceedance indicates a negative bias and all results were non-detect.

WET CHEMISTRY ANALYTES

- According to the case narrative, the following analytes were analyzed at initial dilutions:

Analyte	Sample	Dilution
Chloride	LF6SW0101QA, LF6SW0201QA	1:5

The dilution results only are reported and are used in data verification as representing original results.

- The laboratory performed duplicate analyses on various wet chemistry analytes.
  Corrective Action: No corrective action was required since all associated RPD exceedances (i.e., the RPD exceeded 15%) were for results below the reporting limit.

- The case narrative mentioned that for the BOD analysis, the initial BOD for one of the aliquots used to calculate final BOD reported an initial dissolved oxygen (DO) concentration outside the range of 6.5-9.0 mg/L. The reported value was 9.72 mg/L.

Corrective Action: Using professional judgment, a "J" qualifier was deemed appropriate to indicate that the result may be considered estimated. This initial DO concentration is indicative of supersaturated conditions for the barometric pressure and temperature of the sample, which would result in a positive bias. Although there was no indication of mishandling of the samples by the laboratory, the "J" qualifier was assigned to be conservative.

- The following blank sample analyses indicated blank contaminants present at concentrations equal to or greater than half the limit of quantitation (LOQ). The Blank ID, detected contaminant, and concentration are listed.

Blank ID	Analyte	Concentration (mg/L)	LOQ (mg/L)	Samples Affected
062112UE (from TestAmerica Job #280-30335-1)	Ammonia	0.12	0.10	LF6SW0101QA, LF6SW0201QA, LF6LH0101QA, LF6LH0201QA
	TKN	0.78 J	1.0	LF6SW0101QA, LF6SW0201QA, LF6LH0101QA, LF6LH0201QA

The purpose of laboratory, equipment or trip blank analysis is to determine the existence and magnitude of contamination resulting from lab or field activities. If contamination is found in blanks the associated sample results for these analytes may be considered suspect. As per the QAPP, based on the blank contaminants present above half the LOQ, results for the specific analytes in the associated environmental samples are qualified with a "B" flag. However, in accordance with the EPA National Functional Guidelines and consistent with the QAPP, the "B" flag is **not** applied for sample results that are greater than five times (5x) the blank concentration. Thus the "B" flag is only applied to those samples for which the sample result is positive and less than five times (5x) the blank concentration.

Corrective Action: "B" flags were applied to the ammonia and TKN results for the field samples listed, since the associated results were less than 5x the blank concentration.

DATA USABILITY RESULTS

VOCs

Based on the evaluation of all information in the analytical data groups, the results of the samples for VOCs are highly usable with the data qualifiers as noted. Using the verification approach as presented above, the results for all above samples are 100% usable.

WET CHEMISTRY ANALYTES

Based on the evaluation of all information in the analytical data groups, the results of the samples for wet chemistry analytes are highly usable with the data qualifiers as noted. Using the verification approach as presented above, the results for all above samples are 100% usable.

AFCEE SUMMARY

CASE NARRATIVE

Client: FPM Remediations Inc

Project: Griffiss AFB LF6 LTM

Report Number: 280-30334-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
Four samples were received on 06/21/2012; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 2.0°C, 3.2°C, and 3.8°C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)
Samples LF6SW0101QA (280-30334-1) and LF6SW0201QA (280-30334-2) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 07/02/20

The percent recovery for surrogate Dibromofluoromethane (83%) failed the surrogate recovery criteria (85-115%) low for sample LF6SW0201QA (280-30334-2). Re--analysis was performed with concurring results. The original analysis has been reported. All analytes associated to this surrogate were non-detect. Data was flagged accordingly.

No other difficulties were encountered during the VOC analyses.

All other quality control parameters were within the acceptance limits.

COLOR
Samples LF6SW0101QA (280-30334-1), LF6SW0201QA (280-30334-2), LF6LH0101QA (280-30334-3) and LF6LH0201QA (280-30334-4) were analyzed for color in accordance with SM20 2120B - Colorimetric. The samples were analyzed on 06/22/2012.

No difficulties were encountered during the color analyses.

All quality control parameters were within the acceptance limits.

ALKALINITY
Samples LF6SW0101QA (280-30334-1), LF6SW0201QA (280-30334-2), LF6LH0101QA (280-30334-3) and LF6LH0201QA (280-30334-4) were analyzed for Alkalinity in accordance with SM20 2320B. The samples were analyzed on 06/23/2012.

All quality control parameters were within the acceptance limits.

HARDNESS
Samples LF6SW0101QA (280-30334-1), LF6SW0201QA (280-30334-2), LF6LH0101QA (280-30334-3) and LF6LH0201QA (280-30334-4) were analyzed for hardness in accordance with SM20 2340C. The samples were analyzed on 07/17/2012.

No difficulties were encountered during the hardness analyses.

All quality control parameters were within the acceptance limits.

TOTAL DISSOLVED SOLIDS
Samples LF6SW0101QA (280-30334-1), LF6SW0201QA (280-30334-2), LF6LH0101QA (280-30334-3) and LF6LH0201QA (280-30334-4) were analyzed for total dissolved solids in accordance with SM20 2540C. The samples were analyzed on 06/27/2012.

Constant weight was not achieved after 3 drying cycles for the following TDS samples of batch 125751: LF6LH0101QA (280-30334-3), LF6SW0101QA (280-30334-1), LF6SW0201QA (280-30334-2).

No other difficulties were encountered during the TDS analyses.

All quality control parameters were within the acceptance limits.

AMMONIA
Samples LF6SW0101QA (280-30334-1), LF6SW0201QA (280-30334-2), LF6LH0101QA (280-30334-3) and LF6LH0201QA (280-30334-4) were analyzed for ammonia in accordance with EPA Method 350.1. The samples were analyzed on 07/07/2012.

No difficulties were encountered during the ammonia analyses.

All quality control parameters were within the acceptance limits.

TOTAL KJELDAHL NITROGEN
Samples LF6SW0101QA (280-30334-1), LF6SW0201QA (280-30334-2), LF6LH0101QA (280-30334-3) and LF6LH0201QA (280-30334-4) were analyzed for total kjeldahl nitrogen in accordance with EPA Method 351.2. The samples were prepared on 07/12/2012 and analyzed on 07/13/2012.

Nitrogen, Kjeldahl was detected in method blank MB 280-127752/3-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

No other difficulties were encountered during the TKN analyses.

All other quality control parameters were within the acceptance limits.

DELIVERABLES

The data deliverable report was per requirements of the DOD QSM, version 4.2, as specified in the project-specific QAPP. The report consisted of the following major sections: lab attachment letter, case narrative, chain-of-custody, lab qualifier definitions, analytical results (sheet 2) based on analytical batch, calibration summaries, method blank summaries, laboratory control sample summaries, matrix spike/matrix spike duplicate summaries, holding time forms, performance checks, surrogate and internal standard recoveries, as applicable.

ANALYTICAL METHODS

The analytical test methods and QA/QC requirements used for the sample analyses were per methods as specified in the DOD QSM, version 4.2, with project-specific modifications as listed in the project-specific QAPP. The analytical methods employed included: Biochemical Oxygen Demand (BOD) by Method SM 5210B.

VERIFICATION GUIDANCE

The analytical work was performed by TestAmerica Laboratories, Inc. in accordance with the DOD QSM, version 4.2, and QC requirements of the respective analytical methods and of the project-specific QAPP. The data usability analysis was based on the reviewer's professional judgment and on an assessment of how this data would fare with respect to the DOD QSM, and the criteria as listed in the project-specific QAPP.

QA/QC CRITERIA

The following QA/QC criteria were reviewed, as applicable and available:

- Method detection limits (DLs) and limits of quantitation (LOQs)
- Holding times, sample preservation and storage
- Second source calibration verification summary
- Initial and Continuing calibration summaries
- Method blanks
- Field duplicate results
- Matrix spike/matrix spike duplicate (MS/MSD) analysis
- Laboratory control samples (LCS)
- Results reported between DL and LOQ (J-flag)
- MS tune performance
- Ambient, equipment, and trip blanks (as applicable)
- Surrogate spike recoveries
- Internal standard areas counts and retention times
- Sample storage and preservation
- Data system printouts
- Qualitative and quantitative compound identification
- Chain-of-custody (COC)
- Case narrative and deliverables compliance

The items listed above were in compliance with DOD QSM, version 4.2, and project-specific QAPP criteria and protocols with exceptions discussed in the text below. The data have been verified according to the procedures outlined above and qualified accordingly.

GENERAL NOTES:

MISSING SAMPLES

None. All samples documented on the chain of custody were received by the laboratory.

BLANKS

Whenever blanks, including method, ambient, equipment, and trip, contained low levels of contaminants (between the DL and LOQ), the laboratory and/or data verifier qualified the subject results with a "J" flag. Since no qualification of associated field samples are required for blanks less than half the LOQ, no further action was taken in such instances.

MS/MSD

Sample volume was sent to the laboratory for sample LF6M0168QA; however, MS/MSD is not performed for BOD, so the samples were not logged in.

WET CHEMISTRY ANALYTES

- There were no QA/QC exceedances for the BOD analyses.

DATA USABILITY RESULTS

WET CHEMISTRY ANALYTES

Based on the evaluation of all information in the analytical data groups, the results of the samples for wet chemistry analytes are highly usable with the data qualifiers as noted. Using the verification approach as presented above, the results for all above samples are 100% usable.

AFCEE SUMMARY

All data in Job # 280-30750-1 are valid and usable with qualifications as noted in the data review.

CASE NARRATIVE

Client: FPM Remediations Inc

Project: Griffiss AFB LF6 LTM

Report Number: 280-30750-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
Seven samples were received on 07/06/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.7 °C.

MS/MSD volume was received for sample lF6M0168 (280-30750-1); however, MS/MSD is not performed for BOD and was not logged.

CASE NARRATIVE
Client: FPM Remediations Inc
Project: Griffiss AFB LF1
Report Number: 280-30425-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

Ten samples were received on 06/26/2012; the samples arrived in good condition, properly preserved and on ice. The temperatures of the coolers at receipt were 1.6ºC, 3.4ºC, and 1.3ºC.

MS/MSD analyses were requested and performed on sample LF1M1030UA (280-30425-4). Please note: MS/MSD are not performed for the following analyses: TDS, Color, Alkalinity, and BOD.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples LF1M0526UA (280-30425-2), LF1M0620UA (280-30425-3), LF1M1030UA (280-30425-4), LF1M1030UC (280-30425-5), LF1M1212UA (280-30425-6), MWSAR0324UA (280-30425-7), 062512UE (280-30425-8), 062512UF (280-30425-9), and 062512UR (280-30425-10) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 07/05/2012.

The Toluene-d8 surrogate failed the recovery criteria high for sample 062512UE (280-30425-8) at 124%, with an upper limit of 120%. This sample did not contain any associated target analytes; therefore, reanalysis was not performed. The analytes associated to this surrogate have been flagged “Q”.

No other difficulties were encountered during the VOC analyses.

All other quality control parameters were within the acceptance limits.

AMMONIA

Samples LF1P0525UA (280-30425-1), LF1M0526UA (280-30425-2), LF1M0620UA (280-30425-3), LF1M1030UA (280-30425-4), LF1M1030UC (280-30425-5), LF1M1212UA (280-30425-6), MWSAR0324UA (280-30425-7), and 062512UE (280-30425-8) were analyzed for ammonia in accordance with EPA Method 350.1. The samples were analyzed on 07/09/2012.

Ammonia was detected in method blank MB 280-127015/109 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

Ammonia was detected in method blank MB 280-127015/20 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

The matrix spike / matrix spike duplicate (MS/MSD) for batch 280-127015, performed on sample LF1M1030UA (280-30425-4), were outside control limits. The associated laboratory control sample/laboratory control sample duplicate (LCS/LCSD) recoveries met acceptance criteria, and the sample results have been flagged accordingly.

No other difficulties were encountered during the ammonia analyses.

All other quality control parameters were within the acceptance limits.

TOTAL KJELDAHL NITROGEN

Samples LF1P0525UA (280-30425-1), LF1M0526UA (280-30425-2), LF1M0620UA (280-30425-3), LF1M1030UA (280-30425-4), LF1M1030UC (280-30425-5), LF1M1212UA (280-30425-6), MWSAR0324UA (280-30425-7), and 062512UE (280-30425-8) were analyzed for total kjeldahl nitrogen in accordance with EPA Method 351.2. The samples were prepared on 07/17/2012 and analyzed on 07/19/2012.

Nitrogen, Kjeldahl was detected in method blank MB 280-128145/3-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for TKN batch 280-128608, performed on sample LF1M1030UA (280-30425-4), were outside control limits. The associated laboratory control sample/laboratory control sample duplicate (LCS/LCSD) recoveries met acceptance criteria, and the sample results have been flagged accordingly.

No other difficulties were encountered during the TKN analyses.

All other quality control parameters were within the acceptance limits.

CHEMICAL OXYGEN DEMAND

Samples LF1P0525UA (280-30425-1), LF1M0526UA (280-30425-2), LF1M0620UA (280-30425-3), LF1M1030UA (280-30425-4), LF1M1030UC (280-30425-5), LF1M1212UA (280-30425-6), MWSAR0324UA (280-30425-7), and 062512UE (280-30425-8) were analyzed for chemical oxygen demand in accordance with EPA Method 410.4.
