CASE NARRATIVE
Client: FPM Remediations Inc
Project: Griffiss AFB Building 3
Report Number: 280-48486-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

One sample was received on 10/28/2013; the sample arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 4.1ºC.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample AOI474BF (280-48486-1) was analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The sample was analyzed on 10/29/2013.

1,2,3-Trichlorobenzene and Methylene Chloride were detected in method blank MB 280-198393/1-A at levels that were above the method detection limits but below the reporting limits. The values should be considered estimates, and have been flagged “J”. The method blank contained Methylene Chloride greater than one-half the reporting limit (RL). This is known as a common laboratory contaminant. If the associated sample reported a result above the MDL and/or RL, the result has been flagged “B”.

1,2,3-Trichlorobenzene and 1,2,4-Trichlorobenzene failed the recovery criteria low for the matrix spike (MS) of sample AOI474BF (280-48486-1) in batch 280-198398. 2-Butanone (MEK) failed the recovery criteria high for the matrix spike duplicate (MSD). Several analytes exceeded the RPD limit. The associated laboratory control sample (LCS) recoveries met acceptance criteria, and the sample results have been flagged accordingly.

The presence of the '4' qualifier in the data indicates where the analyte concentration in the unspiked sample exceeded four times the spiking amount.

No other difficulties were encountered during the VOC analysis.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample AOI474BF (280-48486-1) was analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The sample was prepared on 10/29/2013 and analyzed on 10/31/2013.

Dimethyl phthalate was detected in method blank MB 280-198371/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

Benzo(b)fluoranthene and Benzo(k)fluoranthene were unresolved due to matrix interference for sample AOI474BF (280-48486-1). The results are reported as Benzo(b)fluoranthene, and the Benzo(b)fluoranthene & Benzo(k)fluoranthene results have been “K” flagged.

No other difficulties were encountered during the SVOC analysis.

All other quality control parameters were within the acceptance limits.

CHLORINATED PESTICIDES

Sample AOI474BF (280-48486-1) was analyzed for chlorinated pesticides in accordance with EPA SW-846 Method 8081B. The sample was prepared on 10/29/2013 and analyzed on 11/02/2013.

TestAmerica Denver’s practice for the reporting of dual column data in packages requiring forms and/or raw data is to report the surrogates from both columns, and the preferred result for any given target analyte from the analyst selected column. The preferred results for target analytes and surrogates are reported as PRIMARY on the Sample Datasheets.

The continuing calibration verification (CCV) for Toxaphene associated with analytical batch 280-198855 recovered above the upper control limit. The samples associated with this CCV were non-detect for the affected analyte; therefore, the data have been flagged “Q” and reported.

The following sample required a Florisil clean-up to reduce matrix interferences: AOI474BF (280-48486-1).

No other difficulties were encountered during the pesticides analysis.

All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Sample AOI474BF (280-48486-1) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The sample was prepared on 10/29/2013 and analyzed on 11/01/2013.

TestAmerica Denver's practice for the reporting of dual column data in packages requiring forms and/or raw data is to report the surrogates from both columns, and the preferred result for any given target analyte from the analyst selected column. The preferred results for target analytes and surrogates are reported as PRIMARY on the Sample Datasheets.

The following samples underwent a sulfuric acid clean-up, via EPA Method 3665A, to reduce matrix interferences: (LCS 280-198319/4-A), (MB 280-198319/1-A), and AOI474BF (280-48486-1).

No other difficulties were encountered during the PCBs analysis.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)

Sample AOI474BF (280-48486-1) was analyzed for Total Metals (ICP) in accordance with EPA SW-846 Method 6010C. The sample was prepared on 11/08/2013 and analyzed on 11/08/2013, 11/11/2013 and 11/14/2013.

Zinc was detected in method blank MB 280-199600/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

The analysis of the ICSA solution, which is used as the interference check standard, shows results for Manganese, Strontium, and Vanadium at a level greater than the LOD for analytical batch 280-200251. We believe that the solution contains trace impurities of these elements and that the results are not due to matrix interference. These results are consistent with those found by the manufacturer of the ICSA solution. The associated sample results have been flagged "Q" for these elements.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY (CVAA)

Sample AOI474BF (280-48486-1) was analyzed for total mercury (CVAA) in accordance with EPA SW-846 Method 7471B. The sample was prepared and analyzed on 11/13/2013.

No difficulties were encountered during the mercury analysis.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Sample AOI474BF (280-48486-1) was analyzed for percent solids in accordance with EPA SW846 3550C. The sample was analyzed on 10/30/2013.

No difficulties were encountered during the % solids analysis.

All quality control parameters were within the acceptance limits.
