INTRODUCTION AND OBJECTIVES

An In-situ Chemical Oxidation (ISCO) Pilot Study was implemented at Site SD052-02, Building 775 at the Former Griffiss Air Force Base (AFB), Rome, New York (**Figure 1**). Injection well installation and permanganate injections were completed in the fourth quarter of 2017 with post-injection monitoring continuing into 2018. The activities and results are documented in this Technical Memorandum. The pilot study was completed in accordance with *Attachment 1 Remedial Optimization Work Plan Pilot Test at SD052-02, Building 775 On-Base Groundwater Areas of Concern, Former Griffiss AFB, New York* (Work Plan) (Bhate, October 2017).

The ISCO Pilot Study was designed to use permanent injection wells to deliver a potassium permanganate solution into the saturated zone. Per the Work Plan, the permanganate solution was intended to mostly travel in the more permeable sand and silty-sand lenses and was initially anticipated to move radially away from the injection points and establish a radius of influence (ROI) of approximately 25 feet (ft). Following injection operations, the permanganate injectate was expected to migrate downgradient in accordance with groundwater flow (Bhate, October 2017). In general, following injection, distribution of injection materials is driven by advection and dispersion (Fetter, 1980). Advection is downgradient flow with groundwater velocity. Dispersion is lateral and vertical distribution due to irregular travel pathways through porous media. Dispersion also reduces the concentration as distance from the injection location increases. Since the permanganate also reacts and degrades due to contact with organics, the concentration also decreases with distance from the injection location. The parameters governing the downgradient distribution are injection location specific but would be consistent for each injection location. Permanganate was selected as the oxidant for the study because of its known longevity in the subsurface, site specific total oxidant demand (TOD) testing, and it had been previously selected and tested at Site SD052-04, immediately southwest of Landfill 6, at Griffiss AFB (Ecology and Environment, June 2004). The original design was mass-based using the TOD analysis to determine the mass of permanganate needed for the expected treatment area.

The treatment area was assumed to be 2,500 square feet with a 20-foot thick saturated column at each injection location. The expected ROI after injection was approximately 25 feet.

The ISCO Pilot Study was implemented in 5 separate phases:

- TOD testing including soil sample collection
- Injection well installation
- Permanganate injection test
- Air sparge dispersion test
- Groundwater and soil sampling and analysis for monitoring

TOTAL OXIDANT DEMAND TESTING

TOD testing is a method of estimating the oxidant dosage required to treat a volume or mass of soil. TOD testing is not a method to evaluate the in-situ remediation effectiveness of permanganate. It is a test method to determine the minimum mass of permanganate needed to oxidize the organics present in site soils. The test does not evaluate operational remediation parameters (e.g., permanganate concentration or volume, treatment duration, or distribution). On May 24, 2017, Bhate advanced a 6.5-inch hollow-stem auger (HSA) at 775SB-100 to 70 ft below ground surface (bgs). Groundwater was encountered at 50 ft bgs. A discrete sampler was pushed from 70 to 74.5 ft and refusal was encountered at 74.5 ft bgs. A soil sample was collected from 72 to 74.5 ft bgs which was described as dark brown, silty-sand, trace gravel, stiff, and wet. The boring log is included in **Attachment 1.** The boring was backfilled to ground surface with bentonite chips and finished with 6 inches of sand. Investigation derived waste (IDW) was drummed and transported to Building B817 and later combined with soil from the injection well installations and transported to the Oneida Harkimer Solid Waste Management Authority in Boonville, New York for disposal. Copies of the non-hazardous waste manifests are included in **Attachment 2.**

The soil sample was shipped to ReSolution Partners of Madison, WI for TOD analysis. The soil sample was received on May 25, 2017, in sealable bags on ice. The sample was lightly homogenized to obtain consistent results for potential replicates and minimize any volatile loss that may contribute to the TOD. Testing conformed with procedures similar to ASTM International (ASTM, formerly American Society for Testing and Materials) 7262-10. Each sample was set up with the following series of permanganate dosages: blank (0), 0.28, 0.83, 2.8, 8.3, and 28 grams per kilogram (g/kg). The liquid used for the testing was deionized water. Each sample was reacted with a range of permanganate concentrations at ambient temperature for 48 hours, during which the sample reaction containers were occasionally agitated to expose solid particle surfaces to the permanganate.

Sample analysis was performed using a colorimeter for absorbance at 526 nanometers (nm). Residual permanganate was determined by comparing the absorbance values to a standard curve generated the same day as the sample analysis. Since this method is a colorimetric determination, any turbidity in the sample will cause a false positive in the result. Therefore, the supernatant from each reaction container was passed through a 0.45 micron filter prior to analysis to minimize turbidity.

Analysis of residual permanganate in samples with large excesses of permanganate can result in a positive bias for the TOD, because permanganate can oxidize manganese (Mn2+) to manganese dioxide (MnO2+) and MnO2+ can catalyze the further decomposition of permanganate. Therefore, the sample with the least amount of residual permanganate (likely to have the least positive bias) was used to make the TOD determination. The results indicated that 0.066 grams of potassium permanganate per kilogram of impacted soil are required to overcome the site's TOD. The report from ReSolution Partners is included as **Attachment 3**.

INJECTION WELL INSTALLATION

As shown on **Figure 2**, 12 permanent injection wells (SD052-02_IW-01 thru SD052-02_IW-09, SD052-02_IW-12, SD052-02_IW-13, and SD052-02_IW-14) were installed between October 31, 2017, and November 8, 2017. HSAs with 8-inch outside diameter were used to drill the borings for each well. Soil was logged from cuttings collected from the augers and screened using soil-headspace methods with a photoionization detector (PID). The injection wells were constructed using 2-inch diameter Schedule 40 polyvinyl chloride (PVC), threaded, 0.020-inch slotted well screen and blank casing. Lithology logs and well construction diagrams are included as **Attachments 4 and 5**. IDW was transported to the Oneida Harkimer Solid Waste Management Authority in Boonville, New York. Copies of the non-hazardous waste manifests are included in **Attachment 2**.

PERMANGANATE INJECTION

Based upon the results of the TOD study, each well was to receive 1,648 gallons of 3-percent (%) potassium permanganate solution, which equates to 412 pounds of potassium permanganate per well. Equipment, including water storage tanks, pumps, hoses, and mixing equipment was mobilized to the site on November 28, 2017. The three existing extraction wells were renamed SD052-02_IW-10 (775EW-1), SD052-02_IW-11 (775EW-1R), and SD052-02_IW-15 (775EW-3). Injections were accomplished into these three wells by gravity feeding through a hose inserted directly into the casing. Injections of the 3% potassium permanganate solution were completed in batches ranging from 148 to 250 gallons. Each batch was made by adding the batch volume of water to the mixing tank, adding the appropriate weight of potassium permanganate and mixing until the solid potassium permanganate was completely dissolved. This batch was then pumped through hoses from the tank, through a trash pump, and into the injection well. These steps were repeated until the total volume of solution was injected into the well. The entire process was repeated for each injection well.

Each well received the design volume except SD052-02_IW-14, which received only 1,005 gallons due to increased pressures during injection. The remainder of the volume from SD052-02_IW-14 was injected into SD052-02_IW-11 (actual volume injected was 660 gallons). Average flow rates ranged from 8.6 gallons per minute (gpm) at SD052-02_IW-14 to 47.1 gpm at SD052-02_IW-05. Injections were completed and equipment removed from the site on December 3, 2017. Daylighting of the solution was not observed during the injection event. A summary of the injection dates, times, flow rates, and volumes is included in **Table 1**. A total of 24,739 gallons of an approximate 3% solution of potassium permanganate (6,180 pounds of potassium permanganate) was injected into 15 wells at the site over a period of 6 days from November 28 through December 3, 2017.

PILOT TEST MONITORING ACTIVITIES

The saturated zone was monitored to assess the performance of the pilot study via groundwater samples from selected wells and soil samples from two new borings. Site monitoring wells used to evaluate the Pilot Study included 775VMW-5, 775MW-6, 775VMW-8, and 775MW-27. These wells were gauged and sampled on multiple occasions including a baseline event in November 2017 (annual Comprehensive Environmental Response, Compensation, and Liability Act [CERCLA] sampling event) followed by events in January, April, and October 2018 (annual CERCLA sampling for 2018). Groundwater samples were analyzed using United States Environmental Protection Agency (USEPA) Method 8260B for Volatile Organic Compounds (VOCs). Groundwater gauging data is shown in **Table 2** and analytical data is shown in **Table 3**. A Potentiometric Surface Map for the October 2018 data is presented in **Figure 3**. In addition, two soil borings (775-BH-1 and 775-BH-2) were drilled in September 2018 near SD052-02_IW-03 to inspect soil for the presence of permanganate and collect grab groundwater samples from the borehole. Groundwater samples were analyzed using USEPA Method 8260B for VOCs. Grab groundwater analytical data is shown in **Table4**. Analytical reports, sampling logs, and data validation reports are included in the *2017 Annual Performance Monitoring Report On-Base Groundwater Remediation Former Griffiss Air Force Base Rome, New York* (Bhate, June 2018) for the 2017 sampling and in the *Working Copy 2018 Annual Performance Monitoring Report On-Base Groundwater Remediation Former Griffiss Air Force Base Rome, New York* (Bhate, March 2019) for the 2018 sample events.

PILOT TEST MONITORING RESULTS

Baseline monitoring for the pilot test was collected in November 2017 as part of the annual sampling event for the site. Trichloroethene (TCE) concentrations in the Pilot Study wells at baseline were 32 micrograms per liter (µg/L) in 775VMW-5, 25 µg/L in 775MW-6, 19 µg/L in 775VMW-8, and 28 µg/L in 775MW-27 (**Table 3**). The first sampling event following injections was completed on January 30-31, 2018. The TCE concentrations reported in samples from the wells were similar to the baseline event at 33 µg/L (reported in a duplicate sample) in 775VMW-5, 29 µg/L in 775MW-6, 15 µg/L in 775VMW-8, and 16 µg/L in 775MW-27 (**Table 3**). No color was observed during the sampling event to indicate that permanganate had reached any of the sampled wells.

The second post-injection evaluation sampling was completed on April 19, 2018. TCE concentrations in the Pilot Study wells were similar to the previous events at 36 µg/L in 775VMW-5, 33 µg/L in 775MW-6, 16 estimated (J) µg/L in 775VMW-8, and 22 µg/L in 775MW-27 (**Table 3**). As in the first post-injection sampling event, no color was observed during the April 2018 sampling event to indicate that permanganate had reached any of the sampled wells. A purple color was observed in 775EW-1R (also called injection well SD052-02_IW-11), indicating the presence of permanganate in the injection well. TCE was not detected in the sample from this well in April 2018.

Since permanganate was not observed in downgradient monitoring wells 4 months after injection, additional investigation (an addition to the original scope) with two soil borings was undertaken. On September 6 and 7, 2018, two borings (BH-1 and BH-2) were advanced near 775MW-6 to inspect soils and collect grab groundwater samples. The two borings were drilled 10 feet and 5 feet laterally, respectively, from SD052-02_IW-03 (**Figure 2**). These locations were

placed in a direct line between S052-02_IW-03 and 775MW-6. The locations were cross-gradient from SD052-02_IW-03. Soil did not exhibit a purple color in the samples collected between 40 and 74 ft bgs in BH-1 and between 50 and 77 ft bgs in BH-2. Grab groundwater samples (BH1-10 and BH2-5), were collected from the augers on September 6 and 7, 2018, and submitted to TestAmerica for VOC analysis. Groundwater analytical data is shown in **Table 4.** Groundwater samples did not exhibit a purple tint. Additionally, one groundwater grab sample was collected from 775MW-6 and sent to TestAmerica for analysis of dissolved iron and manganese. Lithology logs of the two borings are included in **Attachment 4**. Analysis of the groundwater samples had reported TCE concentrations of 25 µg/L in BH1-10 and 56 µg/L in sample BH2-5. Manganese (dissolved) was reported in the sample from 775MW-6 at 74 J µg/L (in the duplicate). Iron (dissolved) was not detected in sample 775MW-6. Metals were analyzed to determine if oxidant could be consumed by oxidizing reduced metals. Oxidation of the manganese present at SD052-02 should not be a significant impact on the distribution of the oxidant. Analytical reports and data validation reports are included in **Attachment 6.**

The third post-injection sampling was completed as part of the annual CERCLA sampling at the site on October 23, 2018. TCE concentrations in the Pilot Study wells were: 47 J µg/L (reported in the duplicate sample) in 775VMW-5, 27 µg/L in 775MW-6, and 23 µg/L in 775VMW-8. Monitoring well 775MW-27 was not sampled because a pump was stuck in the well casing. As in the previous post-injection sampling events, no color was observed to indicate that permanganate had reached any of the sampled wells.

POST SOIL BORING CONCLUSIONS

The lack of observed permanganate in site monitoring wells in January and April 2018 and the observations made during the soil boring investigation indicated that the injection distribution or ROI was limited to less than 5 ft, the shortest distance from an injection well to the soil test borings. Although the ROI was only investigated with borings near one injection well, the lack of any permanganate observed 4 months later in any of the wells downgradient of each injection well suggests that the migration footprint of the permanganate was limited. The variable at each injection location that governs downgradient distribution is the starting cross-gradient width of the initial delivery. In other words, an injection ROI of 25 feet, as expected in the Work Plan, would generate roughly a 50-foot width of permanganate to start the downgradient distribution. Whereas, an ROI of 5 feet would generate a starting width of 10 feet. A narrow, cross-gradient initial ROI will deliver permanganate to a much narrower downgradient area than a wider starting width. The observed narrow starting width of less than 10 feet, minimized the likelihood that the path of permanganate flow would intersect downgradient monitoring wells.

Injection distribution appears to have been governed by displacement of groundwater and not injection parameters. Therefore, the injection ROI was dependent on the volume of permanganate injected (volume limited). Under these conditions, a sufficient volume of fluid must be injected to displace the groundwater within the soil matrix around the injection well. Assuming a cylinder of permanganate is created within the soil matrix around the injection well screen to a distance of the ROI, the volume needed to create an ROI can be expressed as:

$$V = \pi r^2 h (Ø)$$

In this equation, V is volume, r is the radius, h is the height, and Ø is matrix porosity.

The volume needed to generate a 5-foot ROI around a 10-foot long injection screen assuming a cylinder is created, would be: π (5 feet)^2 (10 feet) (0.30) (7.48 gallons/cubic feet) = 1,762 gallons. Each injection well received approximately 1,648 gallons of permanganate solution, suggesting an ROI of less than 5 feet could be realistic. This was confirmed by the September 2017 soil borings which did not observe permanganate at a distance of 5 feet from the injection well. The ROI was volume limited to less than 5 feet.

AIR SPARGING DISPERSION TEST

Since the injection wells still contained permanganate, A a plan was formulated to try and increase the ROI by increasing the volume of fluid injected into the well. The fluid chosen was air because it can be injected in large volumes over a short period of time. The test was designed to inject air (sparge) into several injection wells and monitor for permanganate in neighboring monitoring wells. The purpose of this test (an addition to the original scope) was to evaluate if groundwater mixing by sparging would further distribute the permanganate. Air was injected into three injection wells, SD052-02_IW-07, SD052-02_IW-03, and SD052-02_IW-14, on October 21, 2018. Adjacent monitoring wells were observed for color changes as well as the groundwater field parameters temperature, conductivity, dissolved oxygen (DO), pH, and oxidation reduction potential (ORP). Injection flow rates, pressures, and durations were varied over the course of the test in an attempt to move groundwater away from the injection well. A summary log detailing the injection variables is included in **Attachment 7**. After initiating flow, injection flow rates varied from 10 to 40 standard cubic feet per minute (scfm) at 14 to 24 pounds per square inch (psi) pressure.

During air injection, a portable YSI meter was deployed down-hole in the monitoring wells (775MW-6 or 775VMW-8) located closest to the injection well to record groundwater parameters. Monitoring well 775MW-6 is approximately 25 feet from SD052-02_IW-07 and 30 feet from SD052-02_IW-03. Monitoring well 775VMW-8 is approximately 35 feet from SD052-02_IW-14. While air injection was occurring in a particular injection well, the YSI data was recorded periodically from the closest monitoring well. The Groundwater Parameter Monitoring Log is included in **Attachment 7**.

Temperature remained relatively constant in each monitoring well during the test while conductivity, pH, and ORP fluctuated slightly but with no significant or lasting changes during the test period. However, DO at 775MW-6 increased during air injection at both SD052-02_IW-07 and SD052-02_IW-03. Increases from approximately 2 mg/L DO to over 5 mg/L DO were recorded. Conversely, during sparging of SD052-02_IW-14 the DO in monitoring well 775VMW-8 decreased from 7.16 mg/L at the start of injection to 2.40 mg/L approximately 67 minutes into the test. Periodically bailers of groundwater were extracted from the monitoring wells during the test. A purple or pink tint was not observed in the water collected; it remained clear throughout the tests. Bailers of water collected from injection wells prior to air sparging were observed to be a dark opaque purple whereas groundwater collected from the same injection well post-sparging were observed to be light purple or pink indicating that the air sparging was able to move the permanganate out of the injection well. A photo log is included as **Attachment 8**.

CURRENT SITE STATUS

TCE concentrations in the Pilot Study monitoring wells were not reduced by the injection of permanganate. Three of the four Pilot Study monitoring wells were sampled at baseline in November 2017 and again in October 2018. Changes in TCE concentrations in the Pilot Study wells from baseline to October 2018 were: 775VMW-5 (32 µg/L to 47 J µg/L), 775MW-6 (25 µg/L to 27 µg/L), and 775VMW-8 (19 µg/L to 23 µg/L).

CONCLUSIONS

The original work plan was a mass-based design. TOD analysis was used to determine the mass of permanganate needed for the expected treatment area. The treatment area was assumed to be 2,500 square feet with a 20-foot thick saturated column at each injection location. The expected ROI after injection was approximately 25 ft. The actual injection ROI was determined to be volume limited and was less than 5 feet.

The attempt to increase the distribution radius by air sparging appears to have been inadequate as color changes were not observed in neighboring monitoring wells at distances of 25 to 35 ft. The permanganate concentration at the injection wells did appear to decrease significantly after air injection based on observed color changes at the injection wells. This attempt was made 11 months after the original injection, and the concentration of permanganate within the surrounding soil matrix was unknown. It is possible that sparging increased the distribution footprint and depending upon the current permanganate concentration within the new footprint, permanganate may show up over time in monitoring wells 775MW-6 or 775VMW-8.

The volume of injectate originally proposed was 1.47% of the expected treatment area pore volume (Bhate, October 2017). The Pilot Study found that the injection radial distribution is a function of volume and dependent upon groundwater displacement. Therefore the volume injected developed a small lateral ROI that air sparge could not overcome and groundwater flow was unable to distribute the injectate in a significant manner. Full-scale implementation of permanganate injection at SD052-02 would require a complementary design between the number of injection wells and the injection volume per well due to the dependency upon displacement to generate distribution. In other words, to achieve distribution of solution across the site would require pore volume range quantities (in excess of 8 million gallons) of injectate. This is not a lithologic limitation, it is a limitation based on total pore volume. The plume covers over 4 acres and is roughly 20 feet thick. The current Conceptual Site Model is consistent with the Pilot Study results.

RECOMMENDATIONS

The Pilot Study highlighted volumetric obstacles to full-scale remediation; primarily the difficulty contacting the groundwater and saturated soil using injection. Whether the injectate is permanganate or another oxidant or biological amendments, distribution of the injectate will require pore volume range quantities in order to achieve distribution and contact with the contaminants. Logistically, pursuit of injection would require the installation of hundreds of closely spaced wells drilled to depths of 80 to 100 ft bgs in active parking areas, streets, and sidewalks. Other options such as monitored natural attenuation should be considered; particularly since the maximum TCE concentration is 47 µg/L.

Notes:

Qualifiers

J - Analyte was positively identified above the Method Detection Limit (MDL), but the concentration is below the Reporting Limit (RL).

UB - considered artifacts of blank contamination and qualified non-detected

U - The analyte was analyzed for, but not detected - numerical value is at or below the MDL

UJ - Estimated non detect flag due to a QC discrepancy

ORP - Oxidation Reduction Potential

mV - milliVolts; µg/L - micrograms per liter; mg/L - milligrams per liter

NS - not sampled

NYS - New York State

- Exceedance of the NYS Groundwater Standards or Guidance Values.

♦ - Denotes higher nominal value of duplicate sample result.

* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this COC.

- - No NYS Groundwater Standard available.

RESOLUTION PARTNERS REPORT

ReSolution Partners, LLC

June 2, 2017

Mr. Mark Stapleton
Bhate Environment & Infrastructure
445 Union Boulevard, Suite 129
Lakewood, CO 80228

Subject: Permanganate Total Oxidant Demand (TOD) Report for the Site SD052-02 Optimization - Former Griffiss Air Force Base - Rome, NY Project.

Dear Mark:

ReSolution Partners, LLC (ReSolution) is pleased to provide Bhate Environmental this report for Total Oxidant Demand (TOD) testing for the Former Griffiss AFB Project.

OBJECTIVE

The objective of the TOD study is to determine the amount of permanganate (in the form of potassium permanganate) required to oxidize natural and anthropogenic sources of organic compounds in site soil.

BACKGROUND

The constituent of interest for this project is trichloroethene. The soil sample was received on May 25, 2017 in sealable bags. The sample was lightly homogenized to obtain consistent results for potential replicates and minimize any volatile loss that may contribute to the TOD. The sample was received on ice. The sample received, description, and comments are shown in Table 1.

967 Jonathon Drive · Madison, WI · 53713

Table 1.
Sample Received for TOD Testing

Sample Name	Sample Date	Sample Matrix	Sample Comments
SD052-02_SB100(74)_0517	5/24/17	Soil	Poorly graded sand (SP), fine sand, non-plastic, brown 10YR4/3, no odor, moist.

METHODOLOGY

Testing conformed with procedures similar to ASTM 7262-10. Each sample was set up with the following series of permanganate dosages: blank (0), 0.28, 0.83, 2.8, 8.3 and 28 g/kg. The liquid used for the testing was deionized water.

Each sample was reacted with a range of permanganate concentrations at ambient temperature for 48 hours. During which period, the sample reaction containers were occasionally agitated to expose solid particle surfaces to the permanganate. The analysis was performed using a colorimeter for absorbance at 526 nm. Residual permanganate was determined by comparing the absorbance values to a standard curve generated the same day as the sample analysis.

Since this method is a colorimetric determination, any turbidity in the sample will cause a false positive in the result. Therefore, the supernatant from each reaction container was passed through a 0.45µ PTFE filter to eliminate/reduce turbidity.

Analysis of residual permanganate in samples with large excesses of permanganate can result in a positive bias for the TOD, because permanganate can oxidize Mn^{2+} to manganese dioxide and MnO^{2+} can catalyze the further decomposition of permanganate. Therefore, the sample with the least amount of residual permanganate (likely to have the least positive bias) is used to make the TOD determination.

RESULTS

The samples were set up with permanganate dosages on May 30, 2017. The analyses were performed on June 1, 2017. The TOD from the lowest positive result for permanganate is reported in Table 2.

967 Jonathon Drive · Madison, WI · 53713

Table 2.
Permanganate TOD (48 hour) Result

Sample	Dosage g/kg	TOD g/kg

Sample Delivery Details / Laboratory Receipt

Delivered Directly to Lab: _____ Shipped No.: _____

Method of Shipment: _____ Airbill Number: _____

Analytical Lab: _____ Delivery Location: _____

Lab Recipient: _____ Delivery Date/Time: _____

1.) Chain of Custody Number = date collected + custody number (e.g. 09-02-1999-01)

2.) Sample Type (SA) Codes: N = Normal Sample, TB = Trip Blank (-c) Sample. FD = Field Duplicate (-a) Samples. FR = Field Replicate (-b) Samples. EB = Equipment Blank (-d) Samples. MS = Matrix Spike, SD = Matrix Spike Duplicate. AB = Ambient Blank (-e)

3.) Sample Number: Unique sample number collected from a particular location per day, (e.g. Groundwater sample collected from MW-1 on 10/10/99 = 01, if sampled again on 10/10/99 = 02, etc.)

4.) Matrix Codes: GS = Soil Gas, WG = Groundwater, WS = Surface Water, SO = Soil, SE = Sediment, SL = Sludge, SS = Surface Soil Samples, WQ = Aqueous Blank Samples (trip, equipment, ambient, etc), SQ = Soil Blanks

5.) Sample Analysis Requested: Analytical method requested and number of containers provided for each.

6.) Quality assurance samples are assigned by date (ddmmyy) and the sample number associated with the sample (01, 02, etc) (e.g. Equipment blank collected in association with MW-1 on 10/10/99 will be designated 10109901 in the Equipment Blank Lot Control

ANALYTICAL REPORTS AND DATA VALIDATION REPORTS

Data Validation Report

This report contains the results of the review and validation of the specified data package performed by Marcia Olive, Bhate Environmental Associates, Inc., Denver, Colorado.

Introduction

This data validation report covers samples taken from Griffiss Air Force Base, New York, on January 30th and 31st, 2018. Four aqueous samples, one field duplicate, and associated quality control (QC) blanks were collected from site SD052-02 Building 775 for performance monitoring. All analyses were performed by TestAmerica Laboratories, Inc., Arvada, Colorado. The specific samples included in this validation were:

Sample Identification	Matrix	Collection Date	Lab Package	Analyses (USEPA Method Number)
775VMW-5_0118 775VMW-5_0118-a	Water	1/30/18	280-105986	VOCs (SW8260B)*
775MW-6_0118 775VMW-8_0118 775MW-27_0118		1/31/18		
775-AB_013018		1/30/18		
775-AB_013118 775-TB_013118		1/31/18		

Notes: AB – Ambient Blank; TB – Trip Blank; USEPA – United States Environmental Protection Agency; VOCs – Volatile Organic Compounds; SW – Solid Waste

*TestAmerica Denver holds both Department of Defense (DoD) Environmental Laboratory Accreditation Program (ELAP) and New York National Environmental Laboratory Accreditation Program (NELAP) certifications for method 8260B. The reporting limits for all analytes are much lower by 8260B compared to 8260C.

This data was validated against the laboratory's quality assurance (QA)/QC limits using the guidelines and practices published in the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review* (USEPA, January 2017) and per requirements of the DoD Quality Systems Manual (QSM), Version 5.0, as specified in the project-specific Quality Assurance Project Plan (QAPP).

Sample Handling and Holding Times

The samples were properly preserved and transferred under chain-of-custody to the laboratory for analysis and analyzed within the required holding times.

Method Blank

No compounds were detected in the method blank.

Blank Spike Sample (Laboratory Control Sample)/Surrogates

The laboratory control sample (LCS)/LCS duplicate (LCSD) relative percent difference (RPD) for 2-hexanone was above control limits. The LCS and LCSD recoveries were within control limits and using professional judgement; no qualification was deemed necessary.

The surrogate recoveries were within control limits.

Matrix Spike/Matrix Spike Duplicates (MS/MSD)

The MS/MSD recoveries and/or RPD, when reported, were within control limits.

Project Specific Quality Assurance/Quality Control

The RPD between the sample and duplicate were within project defined control limits.

Both ambient blanks reported detections of acetone. Only sample 775VMW-5_0118 reported a detection of acetone which was <10x the blank concentration. Acetone was qualified as non-detect, "UB", and considered an artifact of blank contamination.

Calibration Verification Data

The continuing calibration verification (CCV) was within control limits for all target analytes.

Overall Assessment of Data

The internal standard (IS) response of TBA-d9 was below acceptance criteria for sample 775MW-27_0118. This IS was not associated with any target compounds and required no qualification.

All analyses were performed, and the data met the required QC criteria except where noted. The data is 100% complete.

Summary of Qualified Results

Sample Identification	Compound	Result and Qualifier (µg/L)	Reason Code
775VMW-5_0118	Acetone	6.5 UB	AB

Notes: µg/L – micrograms per liter; AB – Ambient blank contamination

ANALYTICAL REPORT

02/14/2018

The test results in this report relate only to the samples in this report and meet all requirements of NELAC, with any exceptions noted. Pursuant to NELAP, this report shall not be reproduced except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Denver Project Manager.

The Lab Certification ID# is 4025.

Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
M	Manual integrated compound.
Q	One or more quality control criteria failed.
J	Estimated: The analyte was positively identified; the quantitation is an estimation

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

CASE NARRATIVE

Client: Bhate Environmental

Project: BRAC Eastern: Griffiss AFB, NY - SD052

Report Number: 280-105986-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT
The samples were received on 2/1/2018 at 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 5.2º C.

VOLATILE ORGANIC COMPOUNDS (GC/MS)
Samples 775VMW-5_0118 (280-105986-1), 775VMW-5_0118-a (280-105986-2), 775MW-6_0118 (280-105986-3), 775MW-27_0118 (280-105986-4), 775VMW-8_0118 (280-105986-5), 775-AB_013018 (280-105986-6), 775-AB_013118 (280-105986-7) and 775TB_013118 (280-105986-8) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 02/12/2018.

2-Hexanone exceeded the RPD limit for LCSD 280-404562/5. Each control sample meet individual %Recovery limits and there is no specific corrective action required for %RPD failures. Associated results are flagged "Q".

The internal standard (ISTD) response of TBA-d9 for the following samples was outside acceptance criteria: 775MW-27_0118 (280-105986-4), (CCVC 280-404562/29). This ISTD does not correspond to any of the requested target compounds; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Column:
105m x 0.53mm x 3.0µm
Rtx-502.2 (cat.#10910)

Carrier Gas:
hydrogen-constant pressure 11.0 psi.

Temp. Program:
40°C (hold 2 min.) to 240°C
@ 8°C/min. (hold 5 min.)

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
FID

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Date Mixed: 09-Jan-2017 **Balance:** 1128342314

Date Passed: 11-Jan-2017

Manufactured under Restek's ISO 9001:2008
Registered Quality System
Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

	Purity 98%				+/-	151.2893	µg/mL	Stressed

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Column:
60m x 0.25mm x 1.4µm
Rtx-502.2 (cat.#10916)

Carrier Gas:
helium-constant pressure 30 psi

Temp. Program:
40°C (hold 6 min.) to 240°C
@ 6°C/min. (hold 10 min.)

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
MSD

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Date Mixed: 25-Jul-2016 **Balance:** 1127510105

Date Passed: 28-Jul-2016

Manufactured under Restek's ISO 9001:2008 Registered Quality System Certificate #FM 80397

Reagent

MV-569720_00003

CERTIFIED REFERENCE MATERIAL

Certificate of Analysis

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 569720 **Lot No.:** A0118177

Description : 8260 List 1 / Std #1 MegaMix (2015)

8260 List 1 / Std #1 MegaMix (2015) 1250-62500 µg/ml, P&T Methanol, 1 ml/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : March 31, 2018 **Storage:** 0°C or colder

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Date Mixed: 21-Mar-2016 **Balance:** 1125113331

Date Passed: 28-Mar-2016

Manufactured under Restek's ISO 9001:2008 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Purity 99%

Column:
60m x 0.25mm x 1.4µm
Rtx-502.2 (cat.#10916)

Carrier Gas:
helium-constant flow 2.0 mL/min.

Temp. Program:
40°C (hold 6 min.) to 100°C
@ 6°C/min.

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
MSD

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

Date Mixed: 12-Jan-2017 **Balance:** 1127510105

Date Passed: 17-Jan-2017

Manufactured under Restek's ISO 9001:2008 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/µECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	Ethanol	100,127.0 µg/mL	+/- 586.2354 µg/mL	Gravimetric
	CAS # 64-17-5 (Lot PG0219)		+/- 2,144.8448 µg/mL	Unstressed
	Purity 99%		+/- 2,207.1354 µg/mL	Stressed

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Reagent

MV-CUS17739_00002

Certificate of Analysis

Custom Standard

Product Number: CUS-17739 **Page:** 1 of 1

Lot Number: CR-2819 **Lot Issue Date:** 19-Jun-2017 **Expiration Date:** 31-Jul-2019

This ISO Guide 34 Reference Material (RM) was manufactured and verified in accordance with ULTRA Scientific's ISO 9001 registered quality system. A review of the gravimetric preparation data by our ISO 17025 accredited laboratory serves to verify the concentration of each analyte. The true value and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed below.

Analyte	CAS#	Analyte Lot	True Value
1-chlorohexane	000544-10-5	RM04263	998.8 ± 5.0 µg/mL
2-pentanone	000107-87-9	RM03775	4020 ± 20 µg/mL
sec-butanol	000078-92-2	RM01299	30116 ± 151 µg/mL

Matrix: methanol (purge & trap grade)

Storage: Store Frozen (-25° to -10°C).

ULTRA uses balances calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z-540-1 and ISO 9001, and calibrated Class A glassware in the manufacturing of these standards.

List Source: TestAmerica Denver

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

Data Validation Report

This report contains the results of the review and validation of the specified data package performed by Marcia Olive, Bhate Environmental Associates, Inc., Denver, Colorado.

Introduction

This data validation report covers samples taken from Griffiss Air Force Base, New York, on April 19, 2018. Five aqueous samples, one field duplicate, and associated quality control (QC) blank were collected from site SD052-02 Building 775 for performance monitoring. All analyses were performed by TestAmerica Laboratories, Inc., Arvada, Colorado. The specific samples included in this validation were:

Sample Identification	Matrix	Collection Date	Lab Package	Analyses (USEPA Method Number)
775VMW-5_0418	Water	4/19/18	280-108840	VOCs (SW8260B)*
775VMW-5_0418a				
775MW-6_0418				
775VMW-8_0418				
775MW-27_0418				
775-EW-1R_0418				
775-TB_041918				

Notes: TB – Trip Blank; USEPA – United States Environmental Protection Agency; VOCs – Volatile Organic Compounds; SW – Solid Waste
*TestAmerica Denver holds both Department of Defense (DoD) Environmental Laboratory Accreditation Program (ELAP) and New York National Environmental Laboratory Accreditation Program (NELAP) certifications for method 8260B. The reporting limits for all analytes are much lower by 8260B compared to 8260C.

This data was validated against the laboratory's quality assurance (QA)/QC limits using the guidelines and practices published in the *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review* (USEPA, January 2017) and per requirements of the DoD Quality Systems Manual (QSM), Version 5.0, as specified in the project-specific Quality Assurance Project Plan (QAPP).

Sample Handling and Holding Times

The samples were properly preserved and transferred under chain-of-custody to the laboratory for analysis and analyzed within the required holding time (+/- 12 hours) with the exception of the re-analysis of sample 775VMW-8_0418. Only trichloroethene was reported from this run and was qualified as estimated, "J".

Method Blank

Methylene chloride was detected in the method blank. This common laboratory contaminant was not detected in any of the samples and required no qualification.

Blank Spike Sample (Laboratory Control Sample)/Surrogates

The laboratory control sample (LCS)/LCS duplicate (LCSD) recoveries were within control limits for all analytes.

The surrogate recovery of 1,2-dichloroethane-d4 was above control limits in samples 775VMW-8_0418 and 775EW-1R_0418. The positively identified compounds were qualified as estimated, "J".

Matrix Spike/Matrix Spike Duplicates (MS/MSD)

The MS/MSD recoveries and/or relative percent difference (RPD), when reported, were within control limits.

Project Specific Quality Assurance/Quality Control

The RPD between the sample and duplicate were within project defined control limits.

No ambient blank was collected with this data package.

Calibration Verification Data

The continuing calibration verification (CCV) for naphthalene (-20.1%) was slightly below control limits. This analyte is considered a poor performer and not detected in any sample. Therefore, using professional judgment no qualification was deemed necessary.

Overall Assessment of Data

All analyses were performed, and the data met the required QC criteria except where noted. The data is 100% complete.

Summary of Qualified Results

Sample Identification	Compound	Result and Qualifier (µg/L)	Reason Code
775VMW-8_0418	1,1,1-Trichloroethane Trichloroethene	0.29 J 16 J	Surr > HT
775EW-1R_0418	Acetone Bromoform Dibromochloromethane	18 J 12 J 0.30 J	Surr >
Notes: µg/L – micrograms per liter; HT – Hold time exceedance; Surr > - surrogate recovery above control limits

stephanie.rothmeyer@testamericainc.com
05/16/2018

The test results in this report relate only to the samples in this report and meet all requirements of NELAC, with any exceptions noted. Pursuant to NELAP, this report shall not be reproduced except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Denver Project Manager.

The Lab Certification ID# is 4025.

Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.
Q	One or more quality control criteria failed.
H	Sample was prepped or analyzed beyond the specified holding time

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

CASE NARRATIVE

Client: Bhate Environmental

Project: Griffiss AFB, NY - SD052 Performance Mon

Report Number: 280-108840-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 4/21/2018 at 8:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.6º C.

Per previous sampling events, the samples were logged for Total VOCs - SD052 QAPP List, rather than LTM QAPP list as listed on the COC. The client was notified on 4/23/18.

Per client request via email on 4/24/18, the following sample was cancelled for analysis: 775AB_041918 (280-108840-7).

VOLATILE ORGANIC COMPOUNDS (GC/MS)

Samples 775VMW-5_0418 (280-108840-1), 775VMW-5_0418a (280-108840-2), 775VMW-6_0418 (280-108840-3), 775VMW-8_0418 (280-108840-4), 775MW-27_0418 (280-108840-5), 775EW-1R_0418 (280-108840-6) and 775TB_041918 (280-108840-8) were analyzed for volatile organic compounds (GC/MS) in accordance with 8260B. The samples were analyzed on 05/03/2018 and 05/04/2018.

Methylene Chloride was detected in method blank MB 280-413691/8 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. However, because the result concentration was less than ½ the reporting limit, no corrective action was necessary.

1,2-Dichloroethane-d4 (Surr) failed the surrogate recovery criteria high for 775VMW-8_0418 (280-108840-4) and 775EW-1R_0418 (280-108840-6). These samples did not contain any target analytes associated with this surrogate; therefore, re-analysis was not performed. Associated results are flagged "Q".

Reanalysis of the following sample was performed outside of the analytical holding time due to surrogate failure: 775VMW-8_0418 (280-108840-4). The original analysis had a surrogate failure high with an associated hit; therefore, the sample was reanalyzed with passing QC. Only Trichloroethene was affected.

The continuing calibration verification (CCV) associated with batch 280-413691 recovered outside acceptance criteria, low biased, for Naphthalene. This analyte is considered a poor performer. The samples could not be re-analyzed within holding time; therefore, the data have been reported. Associated results are flagged "Q".

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Bhate Environmental
TestAmerica Job ID: 280-108840-1
Project/Site: Griffiss AFB, NY - SD052 Performance Mon

Laboratory: TestAmerica Denver

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
A2LA	DoD ELAP		2907.01	10-31-19

Analysis Method	Prep Method	Matrix	Analyte		
New York	NELAP	2	11964	04-01-19	

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Water	1,1,1,2-Tetrachloroethane
8260B		Water	1,1,1-Trichloroethane
8260B		Water	1,1,2,2-Tetrachloroethane
8260B		Water	1,1,2-Trichloroethane
8260B		Water	1,1-Dichloroethane
8260B		Water	1,1-Dichloroethene
8260B		Water	1,1-Dichloropropene
8260B		Water	1,2,3-Trichlorobenzene
8260B		Water	1,2,3-Trichloropropane
8260B		Water	1,2,4-Trichlorobenzene
8260B		Water	1,2,4-Trimethylbenzene
8260B		Water	1,2-Dibromo-3-Chloropropane
8260B		Water	1,2-Dibromoethane
8260B		Water	1,2-Dichlorobenzene
8260B		Water	1,2-Dichloroethane
8260B		Water	1,2-Dichloroethene, Total
8260B		Water	1,2-Dichloropropane
8260B		Water	1,3,5-Trimethylbenzene
8260B		Water	1,3-Dichlorobenzene
8260B		Water	1,3-Dichloropropane
8260B		Water	1,4-Dichlorobenzene
8260B		Water	2,2-Dichloropropane
8260B		Water	2-Butanone (MEK)
8260B		Water	2-Chlorotoluene
8260B		Water	2-Hexanone
8260B		Water	4-Chlorotoluene
8260B		Water	4-Isopropyltoluene
8260B		Water	4-Methyl-2-pentanone (MIBK)
8260B		Water	Acetone
8260B		Water	Benzene
8260B		Water	Bromobenzene
8260B		Water	Bromochloromethane
8260B		Water	Bromodichloromethane
8260B		Water	Bromoform
8260B		Water	Bromomethane
8260B		Water	Carbon disulfide
8260B		Water	Carbon tetrachloride
8260B		Water	Chlorobenzene
8260B		Water	Chloroethane
8260B		Water	Chloroform
8260B		Water	Chloromethane
8260B		Water	cis-1,2-Dichloroethene

Laboratory: TestAmerica Denver (Continued)

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	EPA Region	Identification Number	Expiration Date
New York	NELAP	2	11964	04-01-19

The following analytes are included in this report, but accreditation/certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Water	cis-1,3-Dichloropropene
8260B		Water	Dibromochloromethane
8260B		Water	Dibromomethane
8260B		Water	Dichlorodifluoromethane
8260B		Water	Diisopropyl ether
8260B		Water	Ethylbenzene
8260B		Water	Hexachlorobutadiene
8260B		Water	Isopropylbenzene
8260B		Water	m,p-Xylene
8260B		Water	Methyl iodide
8260B		Water	Methyl tert-butyl ether
8260B		Water	Methylene Chloride
8260B		Water	Naphthalene
8260B		Water	n-Butylbenzene
8260B		Water	N-Propylbenzene
8260B		Water	o-Xylene
8260B		Water	sec-Butylbenzene
8260B		Water	Styrene
8260B		Water	tert-Butylbenzene
8260B		Water	Tetrachloroethene
8260B		Water	Toluene
8260B		Water	trans-1,2-Dichloroethene
8260B		Water	trans-1,3-Dichloropropene
8260B		Water	Trichloroethene
8260B		Water	Trichlorofluoromethane
8260B		Water	Vinyl acetate
8260B		Water	Vinyl chloride
8260B		Water	Xylenes, Total

Date Passed: 11-Jan-2017

Manufactured under Restek's ISO 9001:2008 Registered Quality System Certificate #FM 80397

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

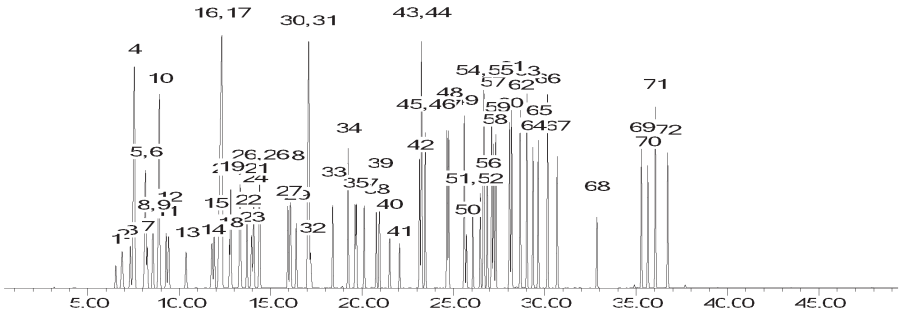
Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Column:
60m x 0.25mm x 1.4µm
Rtx-502.2 (cat.#10916)



Carrier Gas:
helium-constant pressure 30 psi

Temp. Program:
40°C (hold 6 min.) to 240°C
@ 6°C/min. (hold 10 min.)

Inj. Temp:
200°C

Det. Temp:
250°C

Det. Type:
MSD

This chromatogram represents a general set of testing conditions chosen for product acceptance. For optimal results in your lab, conditions should be adjusted for your specific instrument, method, and application.

CERTIFIED REFERENCE MATERIAL

Certificate of Analysis

ISO Guide 34 Accredited
Reference Material Producer
Certificate #3222.01

ISO/IEC 17025 Accredited
Testing Laboratory
Certificate #3222.02

FOR LABORATORY USE ONLY-READ SDS PRIOR TO USE.

This Reference Material is intended for Laboratory Use Only as a standard for the qualitative and/or quantitative determination of the analyte(s) listed.

Catalog No. : 569721.sec **Lot No.:** A0123880

Description : 8260 List 1/ Std #2 Ketones (2015)

8260 List 1/ Std #2 Ketones (2015) 12,500 µg/ml, P&T Methanol/Water (90:10), 1 ml/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : January 31, 2020 **Storage:** 0°C or colder

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Description : 8260 List 1 / Std #6 Vinyl Acetate (2015)

8260 List 1 / Std #6 Vinyl Acetate (2015) 5,000µg/mL, P&T Methanol, 1mL/ampul

Container Size : 2 mL **Pkg Amt:** > 1 mL

Expiration Date : April 30, 2018 **Storage:** 0°C or colder

Handling: This product is photosensitive.

C E R T I F I E D V A L U E S

Elution Order	Compound	Grav. Conc. (weight/volume)	Expanded Uncertainty (95% C.L.; K=2)	
1	Vinyl acetate	5,008.0 µg/mL	+/- 29.3897 µg/mL	Gravimetric
	CAS # 108-05-4.SEC (Lot F3Z5C)		+/- 302.1812 µg/mL	Unstressed
	Purity 99%		+/- 302.8985 µg/mL	Stressed

Solvent: P&T Methanol
CAS # 67-56-1
Purity 99%

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

Product Number: CUS-17739 **Page:** 1 of 1

Lot Number: CR-2819 **Lot Issue Date:** 19-Jun-2017 **Expiration Date:** 31-Jul-2019

This ISO Guide 34 Reference Material (RM) was manufactured and verified in accordance with ULTRA Scientific's ISO 9001 registered quality system. A review of the gravimetric preparation data by our ISO 17025 accredited laboratory serves to verify the concentration of each analyte. The true value and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed below.

Analyte	CAS#	Analyte Lot	True Value
1-chlorohexane	000544-10-5	RM04263	998.8 ± 5.0 µg/mL
2-pentanone	000107-87-9	RM03775	4020 ± 20 µg/mL
sec-butanol	000078-92-2	RM01299	30116 ± 151 µg/mL

Matrix: methanol (purge & trap grade)

Storage: Store Frozen (-25° to -10°C).

ULTRA uses balances calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z-540-1 and ISO 9001, and calibrated Class A glassware in the manufacturing of these standards.

4-Bromofluorobenzene Solution

Product Number: STS-110N **Page:** 1 of 1

Lot Number: CH-3248Z **Lot Issue Date:** 31-Aug-2016 **Expiration Date:** 31-Oct-2019

This ISO Guide 34 Reference Material (RM) was manufactured and verified in accordance with ULTRA's ISO 9001 registered quality system, and the analyte concentrations were verified by our ISO 17025 accredited laboratory. The true value and uncertainty value at the 95% confidence level for each analyte, determined gravimetrically, is listed below.

Analyte	CAS#	Analyte Lot	True Value
4-bromofluorobenzene	000460-00-4	RM03365	2005 ± 10 µg/mL

Matrix: methanol (methyl alcohol)

Storage: Store Frozen (-25° to -10°C).

ULTRA uses balances calibrated with weights traceable to NIST in compliance with ANSI/NCSL Z-540-1 and ISO 9001,, and calibrated Class A glassware in the manufacturing off these standards.

mv-VO-TAOH-5_00004

Reference Materials Producer
Cert #2495.01

SPEXertificate®
Certificate of Reference Material

Chemical Testing
Cert #2495.02

Catalog Number: VO-TAOH-5 **Lot No.** TS180220004

Description: Custom Organic Standard

Matrix: Methanol (Purge & Trap Grade)

Manufactured Date: 2-20-2018
Expiration Date: 8-19-2018

This **SPEXOrganics®** Certified Reference Material, CRM, is intended primarily for use as a calibration standard or quality contrc standard for organic chromatography instrumentation such as GC, GC-MS, LC, and LC-MS. It can be employed in USEPA, ASTI and other methods relevant to the certified properties listed below.

Certified Compounds:

Compound	CAS #	Labeled	Purity	Certified†	Uncertainty
Propylene oxide	75-56-9	50000 µg/mL	99%	50009 µg/mL	± 1750 µg/mL
Ethylene oxide	75-21-8	50000 µg/mL	99.8%	50027 µg/mL	± 1751 µg/mL
cis-1,4-Dichloro-2-butene	1476-11-5	1000 µg/mL	95%	1010 µg/mL	± 35 µg/mL
Tetrahydrothiophene	110-01-0	1000 µg/mL	99%	998 µg/mL	± 35 µg/mL

Final Solution Verification:

Final solution integrity verified by Gas Chromatography/Mass Spectrometry. The mass spectrum of each compound was confirmed against the NIST mass spectral database.

† Certified concentration based on gravimetric weights and corrected for the purity of the compound(s) used to prepare the standard. Analytical balance calibration is verified daily with C1 weight set #23-190006 which is registered with Atlantic Scale, traceable to NIST and NJ Division of Weights and Measures.

This CRM is guaranteed stable and accurate to within the uncertainty listed for the certified value. This includes uncertainty components due to preparation, homogeneity, short term and long term stability. During the stated period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution. For further information, contact the Sales Support Department at crmsales@spexcsp.com.

Date of Certification: 2-20-2018 Certifying Officer: Shannon Mee

Report of Certification

Catalog Number: VO-TAOH-5 **Lot No.** TS1802220004

Description: Custom Organic Standard

Matrix: Methanol (Purge & Trap Grade)

Manufactured Date: 2-20-2018

Expiration Date: 8-19-2018

This Certified Reference Material (CRM) has been prepared and certified under an ISO 9001:2008, ISO 17025:2005, and ISO Guide 34:2009 Quality System consistent with the following standards:

- ISO 9001:2008: Quality management systems - Requirements - Certified by UL-DQS
- ISO 17025:2005: General Requirements for the Competence of Testing and Calibration Laboratories - Accredited by A2LA
- ISO Guide 34:2009: General Requirements for the Competence of Reference Material Producers - Accredited by A2LA
- ISO Guide 31:2000: Reference Materials - Contents of Certificates and Labels
- ISO Guide 35:2006: Reference Materials - General and statistical principals for certification
- Guide to the Expression of Uncertainty in Measurement 1997
- EURACHEM/CITAC Guide: Qualifying Uncertainty in Analytical Measurements - Second Edition
- ASTM Guide D6362-98
- NIST Technical Note 1297
- ILAC-G12-2000: Guidelines for the requirements for the competence of reference material producers
- ISO/REMCO N280

Storage Requirements:

To ensure the stability of the product once it arrives in your laboratory, please store this product in a freezer (-35°C to -10°C). Note: Shipping condit may differ from storage conditions. The EXPIRATION DATE is calculated from the MANUFACTURED DATE using our stability data and is applicab only if the product is unopened and stored under the prescribed conditions.

Instructions for Use:

Let material come to room temperature before use. Check for precipitate and if necessary sonicate for one minute. If compounds do not dissolve a one minute then sonicate further until the product is dissolved. A clear appearance is acceptable. The minimum recommended amount that shoul removed from this vial is 5µL with a 25µL gas tight syringe. All solutions should be thoroughly mixed, by shaking, prior to use. All surfaces that con in contact with the solution must be thoroughly cleaned prior to use. Dilutions should be performed only with Class A volumetric glassware.

Material Source:

All analytes and matrix materials are obtained and verified by SPEX CertiPrep from pre-qualified vendors as per ISO guidelines. Vendor identificati are proprietary, however sources of all materials used in the preparation and testing of SPEX CertiPrep CRMs are tracked and documented. For assistance, please contact sales support at crmsales@spexcsp.com.

Method of Preparation:

Clean laboratory procedures and techniques have been used throughout the preparation. All materials, equipment, and analytical instrumentation h been qualified prior to use. The highest purity solvents and Class A / calibrated volumetrics have been used in all preparations.

Homogeneity:

The homogeneity of this CRM has been confirmed by procedures consistent with ISO 17025:2005, ISO Guide 34:2009, and ASTM D6362-98 Appe X2. Random, replicate samples of the final, packaged material have been analyzed to prove homogeneity in accordance with our internal procedur 4300 HOMOGEN-1A. This is consistent with the intended use of this CRM. The Degree of Homogeneity, as expressed as maximum between-bott variation, is 1.2%

Statistical Estimator and Confidence Limits:

The Certified value 'X' as listed on the reverse of this document is at the 95% level of confidence and can be expressed as:

- $X = x \pm U$ where X=certified value, U=expanded uncertainty, x=property value
- $U = ku_c$ where k=2 is the coverage factor at the 95% confidence level
- u_c = combined standard uncertainty obtained by combining the individual compound standard uncertainty components u_i where $u_c = \sqrt{\Sigma u_i^2}$

Legal Notice:

SPEX CertiPrep Certified Reference Materials are not for any cosmetic, drug, or household application and are to be used only by qualified individu who are trained in appropriate procedures. No claims against SPEX CertiPrep of any kind whatsoever, whether based on breach of warranty, allegc negligence, or otherwise, with respect to this Reference Material shall be greater than the purchase price. In no event shall SPEX CertiPrep be liab for any loss of profits or any incidental, special, or consequential damages.

Worklist Report

Worklist Name: 042718i **Worklist Number:** 69352
Instrument Name: VMS_G2 **Chrom Method:** AQ_VMSG2_8260
Purge Volume: 20.00 **Units:** mL
Analysis Type: VOA
Batch Directory: \\ChromNA\Denver\ChromData\VMS_G2\20180427-69352.b
Upload Directory: \\CorpTALSAPP16\280-DN-RawData\Organics\MS\VMS_G2
Run Reagent: MV-568718-D_00010 **Amount Added:** 1.000, Units: uL
Run Reagent: MV-ARCH SS A_00093 **Amount Added:** 0.800, Units: uL
