INTRODUCTION AND OBJECTIVES

Bhate Environmental Associates, Inc. (Bhate) was retained by the Air Force Civil Engineer Center (AFCEC), under Contract Number FA8903-16-F-0012, to conduct environmental remediation activities to achieve performance objective goals at multiple sites at the former Griffiss Air Force Base (AFB) and the former Plattsburgh AFB. Under this contract, Bhate has prepared this Technical Memorandum (Tech Memo) for the landfill areas of concern (AOCs) at Griffiss AFB, which include:

- LF001 – Landfill 1 AOC
- LF002 – Landfill 2/3 AOC
- LF003 – Landfill 7 AOC
- LF007 – Landfill 5 AOC
- LF009 – Landfill 6 AOC

The long term monitoring (LTM) program was developed for each Landfill AOC using the New York Codes of Rules and Regulations (NYCRR) Part 360 Regulations (New York State Department of Environmental Conservation [NYSDEC], December 2016). The purpose of this Tech Memo is to document LTM completed at these landfills in May and October 2019. Bhate documented previous LTM events completed under this contract in the Technical Memorandum 2018 Long Term Monitoring of Landfill Areas of Concern (Bhate, May 2019), Technical Memorandum 2017 Long Term Monitoring of Landfill Areas of Concern (Bhate, June 2018), and Technical Memorandum [Fall of 2016] Long Term Monitoring of Landfill Areas of Concern (Bhate, May 2017). All activities performed at the Landfill AOCs in 2019 are based on the elements provided in each Landfill AOC individual work plan as referenced in the following sections. Locations of the Former Griffiss AFB and the five landfill AOCs are presented on **Attachment A-Figure 1**.

All of the former Griffiss AFB landfills implemented a presumptive remedy alternative. The presumptive remedy implemented at these landfills includes the use of engineering controls, institutional controls, and monitoring. The remedial action objectives (RAOs) presented within the Record of Decisions (RODs) for the landfills are the same and have been met through implementation of the presumptive remedy. Specifically, the RAOs are:

- Consolidation of various debris and waste areas into the main landfill boundary in order to reduce the area to be capped and the potential for nearby wildlife and human populations to be exposed to the landfill mass;
- Reduce infiltration of rainwater and snowmelt water through the landfill mass in order to minimize the potential for leachate generation and groundwater contamination;
- Monitoring the groundwater and stream environment (which may include, but is not necessarily limited to, sediment, surface water, and biota) downgradient of the site; and
- Implementation of institutional controls in the form of deed restrictions of the main landfill boundary to prohibit use of the area and groundwater.

Per Title 6 of the Codes, Rules, and Regulations of New York (CRR-NY) Part 360, the gas monitoring points at LF001, LF002, and LF009 must be maintained and sampled during the post-closure period for a minimum of 30 years. Since each of these landfills have been monitored for over 5 years, modifications to sampling and analysis requirements may be requested. Under 6 CRR-NY 360, the concentration of methane and other explosive gases generated by the facility must not exceed 25 percent (%) of the lower explosive limit (LEL) for gases in structures on or off-site, excluding gas control or recovery system components; and the LEL for the gases at or beyond the property boundary. Therefore, further optimization is based upon no detection of either methane or LEL in the landfill gas vent or gas monitoring probe for at least four consecutive years.

LF001 – LANDFILL 1 AOC

LF001 (Landfill 1 AOC) is located in the northern portion of the former Griffiss AFB and is approximately 22 acres in size. **Attachment A-Figure 2** presents the LF001 (Landfill 1 AOC) site map. The wastes disposed within LF001 consisted of general refuse, hard-fill, and boiler ash, buried using trench and cover methods. An estimated 90,000 to 100,000 cubic yards (CY) of wastes were disposed of at the site from 1960 to 1973. Groundwater flow rate at LF001 is approximately 2,000 feet per year, and groundwater flows to the southwest (FPM Remediations, Inc. [FPM]/CAPE, December 2015). The ROD for LF001 was signed by the United States Environmental Protection Agency (USEPA) on June 5, 2000, which required landfill capping. In accordance with the ROD, the landfill was re-graded and capped in 2003. The cap components include a gas venting layer, a low-permeability layer, drainage layer, barrier protection layer, and a topsoil layer.

Landfill Gas Monitoring

Landfill gas monitoring is performed at LF001 (Landfill 1 AOC) to identify the presence and concentration of methane at or near the landfill. There were originally 31 gas vents installed when the landfill was capped. One vent, LF1GV-23, was abandoned in 2005 during installation of the passive gas trench (Air Force Real Property Agency [AFRPA], April 2010). The current

monitoring schedule includes gas monitoring at the following 23 remaining vents: LF1GV-01 through -14, -17 through 22, -24, -25, and -27. On October 2, 2019, Bhate completed landfill gas monitoring at LF001 (Landfill 1 AOC), including a total of 9 gas monitoring probes and 23 landfill gas vents (**Attachment B-Table 1**). During the gas sampling event at LF001 (Landfill 1 AOC), methane was detected above 0.1% in 4 of the 9 probes but not at the 23 vents.

The highest methane concentration in a gas monitoring probe was recorded at LF1GMP-4 at 56.2%. This probe is located just north of the landfill boundary near the northwestern corner of the landfill. Probes LF1GMP-02, LF1GMP-06, and LF1GMP-09 had methane concentrations measured at approximately 23.4%, 24.6%, and 0.3% respectively. Methane concentrations at the remaining monitored probes were at or below 0.1% during the October 2019 measuring event.

The methane concentration in each gas vent was recorded at < 0.1%. The locations of gas monitoring probes and gas vents are shown on **Attachment A-Figure 2**.

Landfill Inspections

Since April 2005, landfill inspections and cover maintenance have been performed at LF001 (Landfill 1 AOC). Inspections and maintenance were optimized following the Spring 2010 sampling event and are now conducted on a semiannual basis with annual landfill cover mowing (Fall). Land Use Control/Institutional Controls (LUC/ICs) were implemented in accordance with the ROD and are verified annually as part of the landfill cover inspection program. During the reporting period, landfill inspections were performed at LF001 on May 17, 2019 (Spring inspection), and October 2, 2019 (Fall inspection). The October 2019 inspection was performed in conjunction with the landfill gas monitoring. The landfill inspection reports for May and October 2019 are presented in **Attachment C**. The locations of photos taken during the two LF001 inspections are presented on **Attachment A-Figure 2**.

On October 2, 2019, standing water was observed near LF001 Vent-6. Rain had occurred that day and the previous day. A revisit to the Vent-6 area the following day showed that the water had drained. The fan on Vent 25 was found to be present but not able to spin due to the presence of a mass of sticks inside the fan that appears to have been placed there by small animals. One downed tree, observed in 2017, laying on the perimeter fence on the north side of the landfill was removed in May 2019.

Groundwater and Surface Water Sampling

Water samples are collected biennially from select locations at LF001 (Landfill 1 AOC). In July 2018, water samples were collected from five groundwater monitoring wells and three surface water locations as part of the biennial sampling (Bhate, May 2019). Samples were also scheduled to be collected from monitoring wells LF1P-5, LF1MW-5, LF1MW-6, and LF1MW-1R. However, wells LF1P-5, LF1MW-5, and LF1MW-6 are within the marsh area of Six Mile Creek and field personnel were unable to access the area due to a large amount of standing water and difficult vegetation. Although the given coordinates for well LF1MW-1R were accessible, an extensive search in 2018 and an additional search of the surrounding area in May 2019 did not locate the well. In May 2019 additional efforts were made to sample LF1P-5, LF1MW-5, and LF1MW-6 in order to complete the 2018 data set. Monitoring wells LF1P-5 and LF1MW-5 were sampled on

May 16, 2019. Monitoring well LF1MW-6 was not sampled due to the conversion, by the local beaver population, of the area surrounding the well into an extensive pond network.

Depth to water was measured in each well before purging by low-flow methods. Water samples were collected in laboratory provided containers, immediately packed on ice, and shipped to Eurofins TestAmerica, Denver (Eurofins) for analysis. Groundwater samples were analyzed for Volatile Organic Compounds (VOCs) using U.S. Environmental Protection Agency (USEPA) Method SW8260B and leachate indicators. Groundwater quality assurance/quality control (QA/QC) samples, including duplicate samples, and trip-blanks were collected to document QA/QC procedures.

Groundwater and surface water analytical results for the chemicals of concern were compared to the screening criteria found in NYCRR Title 6 Part 703.5 *Water Quality Standards Surface Waters and Groundwater,* Table 1 and the Division of Water Technical and Operational Guidance Series (1.1.1) Table 1 (NYSDEC, June 1998).

Analytical reports and Data Validation Reports are included in **Attachment D**.

Groundwater and Surface Water Analytical Results

Sampling results for selected VOC analytes, leachate indicators, and their corresponding concentrations and screening criteria exceedances for groundwater samples are presented in **Attachment B-Table 2**. One VOC analyte, benzene (detected at 1.7 micrograms per liter [µg/L]), was reported above the screening level of 1 µg/L in the groundwater sample collected from monitoring well LF1MW-5. This is similar to the range of benzene concentrations detected (1.1 µg/L to 1.8 µg/L) at LF1MW-5 since 2011 (FPM/CAPE, December 2015). The leachate parameter color is measured in platinum-cobalt units (PCU) and was also reported in exceedance of the groundwater screening criteria of 15 PCU in samples taken from monitoring wells LF1P-5 and LF1MW-5 (200 diluted [D] PCU and 150 estimated and diluted [J D] PCU, respectively). This is similar to the range of historically reported values for color at each of these wells (not detected to 160 PCU and not detected to 180 PCU, respectively) (FPM/CAPE, December 2015).

Conclusions and Recommendations

The inspections did not identify any major deficiencies that would jeopardize the integrity of the cover, and there is optimal vegetation cover present on the cap. Based on the *Final Optimization Plan for Landfill Areas of Concern Long-Term Management Program* (Bhate, November 2016), it is recommended that the frequency of landfill cap inspections continue semiannually with a limited landfill inspection in the Spring and the more comprehensive inspection in the Fall to correlate with annual mowing and landfill gas monitoring. To address the minor items identified in 2019, the following activities are recommended to be performed in 2020:

- The top fan on Vent-25 needs to be replaced due to numerous sticks that have been placed inside by animal activity.

Based on historical landfill gas monitoring coupled with the 2019 gas monitoring results, the passive gas trench along the northwest side of the landfill is operating properly. No changes are recommended at LF001 for the 2020 landfill gas monitoring locations.

The water sampling results did not identify issues which require action. The sole VOC detected in exceedance, benzene, was within one order of magnitude of the NYS Class GA Groundwater Standards and are similar to previous groundwater monitoring results. The exceedance of the leachate parameter of color is attributed to the normal design drainage of rainwater and snow melt that has percolated through the landfill cap cover soils. The percolation causes the dissolution of minerals, including iron, from the clean cover soils. The leachate exceedance is not caused by leaching of material from within the landfill itself as evidenced by the absence of VOC exceedances (or absence of increasing trends in the case of benzene) in site groundwater and surface waters as well as the absence of exceedances of other leachate parameters. Historically a Monitoring and Remediation Optimization System (MAROS) analysis has been applied to analytical data from seven groundwater samples. The current optimized sampling plan calls for five of the seven wells to be sampled. During 2018 and 2019 however, due to the beaver pond preventing the sampling of one well, only four of the five wells used in the previous MAROS analysis were sampled. Analytical results for these four wells were non-detect for all analytes, except for benzene in one well, making the MAROS analysis moot. Measures to control the beaver activities along Six Mile Creek at the toe of the landfill are recommended in 2020 so as to regain access to LF1MW-6. Following beaver control efforts, an evaluation will be made regarding the water levels and whether the current optimization of the monitoring well network is appropriate.

LF002 – LANDFILL 2/3 AOC

LF002 (Landfill 2/3 AOC) is approximately 13 acres in size and is located in the northeastern portion of the base. **Attachment A-Figure 3** presents the LF002 (Landfill 2/3 AOC) site map. The wastes at LF002 consisted of hard-fill in the southern portion of Landfill 2, on-board aircraft wastes in the northern portion of Landfill 2 and approximately 1 ton of wetted and double-bagged asbestos waste in Landfill 3, located in the eastern portion of Landfill 2. The ROD for LF002 was signed by the USEPA on June 5, 2000. In accordance with the ROD, the landfill was re-graded and capped during the summer of 2003. The cap components include a gas venting layer, a low-permeability layer, drainage layer, barrier protection layer, and a topsoil layer. LTM was initiated at LF002 in December 2003.

Landfill Gas Monitoring

Landfill gas monitoring has been performed at LF002 (Landfill 2/3 AOC) to identify the presence and concentration of methane at or near the landfill. On October 2, 2019, Bhate completed landfill gas monitoring including four gas monitoring probes and eight landfill gas vents (**Attachment B-Table 3**). Results from the gas sampling events at LF002 (Landfill 2/3 AOC) continue to show site-wide stabilization of methane concentrations. The greatest methane concentration measured at the four monitoring probes was 3.6% at GMP-05. The greatest methane concentration measured at the eight vents was 2.2% at Vent-05.

Landfill Inspections

Since April 2005, landfill inspections and cover maintenance have been performed at LF002 (Landfill 2/3 AOC). Inspections and maintenance were conducted on a quarterly basis and optimized following the Spring 2010 sampling event to a semiannual basis. Landfill cover mowing

is conducted on an annual basis (Fall). LUC/ICs have been implemented by the ROD and are verified annually as part of the landfill cover inspection program. During the reporting period, landfill inspections were performed at LF002 on May 17, 2019 (Spring inspection), and October 2, 2019 (Fall inspection). The 2019 Fall inspections were performed in conjunction with the annual landfill gas monitoring. The landfill inspection reports for May and October 2019 are presented in **Attachment C**. The location of photos taken during the LF002 inspections are presented on **Figure 3** within **Attachment A**. No animal burrows or cap damage were observed during either Spring or Fall 2019 inspection events. Standing water was not observed on the landfill cap during either inspection, despite rain preceding and during each inspection. The locks on GMP-01 and GMP-02 were replaced and the locks on each of the other GMPs that were sampled were in good working order. On May 17, 2019, downed trees and dead branches were removed from the fence line. There were no holdover maintenance items from the 2018 inspections.

Groundwater and Surface Water Sampling

Water samples are collected every 5 years from select locations at LF002 (Landfill 2/3 AOC). On May 16 and 17, 2019, water samples were collected from four groundwater monitoring wells (LF2MW2-1, LF2MW-4, -12, and -13) and three surface water locations (LF2SW-1, -2, and -3). Depth to water was measured in each well before purging by low-flow methods. Water samples were collected in laboratory provided containers, immediately packed on ice, and shipped to Eurofins for analysis. Groundwater and surface water samples were analyzed for leachate indicators. Groundwater QA/QC samples were collected to document QA/QC procedures.

Groundwater and surface water analytical results were compared to the screening criteria found in NYCRR Title 6 Part 703.5 *Water Quality Standards Surface Waters and Groundwater,* Table 1 and the Division of Water Technical and Operational Guidance Series (1.1.1) Table 1 (NYSDEC, June 1998).

Sampling field forms, laboratory analytical reports, and Data Validation Reports are included in **Attachment D**.

Groundwater and Surface Water Analytical Results

Sampling results for leachate indicators, and their corresponding concentrations and screening criteria exceedances for groundwater and surface water samples are presented in **Attachment B-Table 4**. The leachate parameter of color was reported in exceedance of the groundwater screening criteria of 15 PCU in each of the groundwater and surface water samples: 50 D PCU at LF2MW2-1; 200 D PCU at LF2MW-4; 20 PCU at LF2MW-12; 25 PCU at LF2MW-13; 150 D PCU at LF2SW-1; 75 D at LF2SW-2; and 100 D at LF2SW-3. These values are similar to the range of exceedances for color reported during the prior (2015) sampling event at the site (20 PCU to 200 PCU) (FPM/CAPE, December 2015). Additionally, the leachate parameter Total Dissolved Solids (TDS) was detected at the NYSDEC standard of 500 milligrams per liter (mg/L) in one well, LF2MW-4, and in exceedance (540 mg/L) of the standard at one sampling location, LF2MW-12. These values represent a decrease from the prior sampling round (2015) which produced two exceedances of TDS, 660 mg/L at LF2MW-12 and 5,300 mg/L at LF2MW-100 (FPM/CAPE, December 2015). The following leachate parameters were reported in exceedance of their

respective NYSDEC standards in 2015 but not during the 2019 sampling round: ammonia, Total Kjeldahl Nitrogen (TKN), bromide, and chloride (FPM/CAPE, December 2015).

Conclusions and Recommendations

The inspections did not identify any major deficiencies that would jeopardize the integrity of the cover and there is optimal vegetation cover present on the cap. No significant weather events occurred in 2019 that warranted additional inspections. The exceedance of the leachate parameters of color and TDS are attributed to the normal design drainage of rainwater and snow melt that has percolated through the landfill cap cover soils. The percolation causes the dissolution of minerals, including iron, from the clean cover soils. The leachate exceedances are not caused by leaching of material from within the landfill itself as evidenced by the absence of exceedances and the decreasing trends of other leachate parameters in site groundwater and surface waters. The following minor issue should be addressed in 2020:

- The Spring inspection should include removal of any downed trees and dead branches that have fallen on the fence line over the winter as numerous snags exist on the opposite side of the fence line.

Based on the *Final Optimization Plan for Landfill Areas of Concern Long-Term Management Program* (Bhate, November 2016), it is recommended that the frequency continue semiannually with a limited landfill inspection in the Spring and the more comprehensive inspection in the Fall to correlate with annual mowing and landfill gas monitoring. Results from the gas sampling events at LF002 (Landfill 2/3 AOC) continue to show site-wide stabilization of methane concentrations. Based upon historical data (FPM/CAPE, December 2015) and the Fall 2017 and Fall 2018 readings, GMP-03, VENT-02, and VENT-08 were eliminated from future monitoring. These locations were not monitored in 2019 and will not be sampled in 2020. Currently abandonment is not recommended in case future monitoring becomes necessary.

LF003 – LANDFILL 7 AOC AND LF007 – LANDFILL 5 AOC

LF003 (Landfill 7 AOC) is approximately 11 acres in size, was active from 1950 through 1954, and is located northeast of Runway 15/33 (**Attachment A-Figure 4**). The wastes disposed of at this landfill consisted of domestic refuse, solid waste, liquid wastes, petroleum products, and miscellaneous Base operations waste (such as airplane parts). Waste was placed into four trenches in the landfill area and subsequently burned. The ROD for LF003 (Landfill 7 AOC) was signed by the USEPA on June 6, 2000. In accordance with the ROD, the landfill was re-graded and capped in 2002. The landfill was capped with an 18-inch low permeability soil layer, covered by a 6-inch layer of topsoil, and seeded with grass (FPM/CAPE, December 2015).

LF007 (Landfill 5 AOC) is approximately 4 acres in size and is located in the south-central portion of the base (**Attachment A-Figure 5**). The waste at LF007 consisted of domestic wastes, reportedly having been burned and then buried. Approximately 18,000 CY of wastes were disposed of at the site from 1950 through 1960. The ROD for LF007 was signed by the USEPA on June 5, 2000. In accordance with the ROD, the landfill was re-graded and capped in 2002. The cap components include a low-permeability layer, drainage layer, barrier protection layer, and a topsoil layer. LTM was initiated in February 2003.

Landfill Gas Monitoring

Landfill gas monitoring is not required at LF003 (Landfill 7 AOC) or LF007 (Landfill 5 AOC).

Landfill Inspections

Since September 2003, landfill inspections and cover maintenance have been performed at LF003 (Landfill 7 AOC) and LF007 (Landfill 5 AOC). Inspections and maintenance were conducted on a quarterly basis and optimized following the Spring 2010 sampling event to a semiannual basis. Landfill cover mowing is conducted on an annual basis (Fall). LUC/ICs have been implemented by the ROD and are verified annually as part of the landfill cover inspection program. During the reporting period, landfill inspections were performed at LF003 and LF007 on May 17, 2019 (Spring inspection), and October 2, 2019 (Fall inspection). The landfill inspection reports (including photos) for May and October 2019 are presented in **Attachment C**. The location of photos taken during the LF003 and LF007 inspections are presented on **Figures 4 and 5,** respectively, within **Attachment A**. Only minor issues were noted during the 2019 inspection events at LF003 and LF007:

- At LF003, the 2-inch stainless steel well casing at monitoring well LF7MW-27 protrudes several inches higher than the outer protective casing and prevents closure of the outer casing lid.
- At LF007, the access gate located to the northwest of the landfill is being bypassed by vehicle traffic which has resulted in the creation of a new de-facto roadway that provides unauthorized access to the vicinity of the landfill. The gate being bypassed serves an access road and is not part of the landfill boundary or operation. While the gate serving the access road is being bypassed, a ditch and berm separating the access road from the landfill, remain intact and prevent vehicular traffic onto the landfill cap thus ensuring that the remedy remains protective. Additionally, the signage at the boundary of the landfill along the access road is present and conspicuous.

Groundwater and Surface Water Sampling

Water samples are collected every 5 years from select locations at LF003 (Landfill 7 AOC). On May 17, 2019, water samples were collected from six groundwater monitoring wells and two wetlands surface water locations.

Water samples are collected every 5 years from select locations at LF007 (Landfill 5 AOC). On May 14 and 15, 2019, water samples were collected from five groundwater monitoring wells and three surface water locations.

Depth to water was measured in each well before purging by low-flow methods. Water samples were collected in laboratory provided containers, immediately packed on ice, and shipped to Eurofins for analysis. Groundwater and surface water samples were analyzed for leachate indicators. Groundwater QA/QC samples were collected to document QA/QC procedures.

Groundwater and surface water analytical results were compared to the screening criteria found in New York Codes, Rules, and Regulations Title 6 Part 703.5 *Water Quality Standards Surface Waters and Groundwater,* Table 1 and the Division of Water Technical and Operational Guidance Series (1.1.1) Table 1 (NYSDEC, June 1998).

Field sampling forms, laboratory analytical reports, and Data Validation Reports are included in **Attachment D**.

Groundwater and Surface Water Analytical Results

Sampling results for leachate indicators, and their corresponding concentrations and screening criteria exceedances for groundwater and surface water samples are presented in **Attachment B-Table 5** for LF003 and in **Attachment B-Table 6** for LF007.

At LF003, the leachate parameter of color was reported at or in exceedance of the NYSDEC standard of 15 PCU in two of the six groundwater sampling locations and each of the two wetlands surface water sampling locations: 75 D PCU at LF7MW-22; 15 J PCU at LF7MW-26; 30 PCU at LF7WL-3; and 20 PCU at LF7WL-4. These values are similar to the range of exceedances for color reported during the prior (2015) sampling event at the site (20 PCU to 180 PCU) (FPM/CAPE, December 2015). The leachate parameter TDS was detected above the NYSDEC standard of 500 mg/L in one groundwater sampling location, LF7MW-22 (520 mg/L). This value represents a slight decrease from the prior sampling round (2015) which produced an exceedance of TDS of 630 mg/L at LF7MW-22 (FPM/CAPE, December 2015).

At LF007, the leachate parameter of color was reported in exceedance of the NYSDEC standard in three of the five groundwater sampling locations and two of the three surface water sampling locations: 50 D PCU at MW49D07; 100 D PCU at LF5MW-3; 130 D PCU at LF5MW-5; 25 PCU at LF5SW-2; and 20 PCU at LF5SW-3. These values are lower than the range of exceedances for color reported during the prior (2015) sampling event at the site (80 PCU to 300 PCU) (FPM/CAPE, December 2015). The leachate parameter TDS was detected at or above the NYSDEC standard of 500 mg/L in four groundwater sampling locations and each of the surface water sampling locations: 550 mg/L at LF5MW-1A; 4,700 mg/L at LF5MW-100R; 500 mg/L at MW49D07; 610 mg/L at LF5MW-3; 790 mg/L at LF5SW-1; 810 mg/L at LF5SW-2; and 800 mg/L at LF5SW-3. These values are lower than the range of exceedances for TDS reported during the prior (2015) sampling event at the site (560 mg/L to 16,000 mg/L), however exceedances were not reported in the surface water samples from 2015 (FPM/CAPE, December 2015). Additionally, the leachate parameter chloride was detected in exceedance of the NYSDEC standard of 250 mg/L at one groundwater sampling location and each of the surface water sampling locations: 2,200 D mg/L at LF5MW-100R; 300 D mg/L at LF5SW-1; 310 D mg/L at LF5SW-2; and 310 D mg/L at LF5SW-3. These values are a decrease from the exceedance reported in 2015 (10,000 mg/L at LF5MW-100R), however exceedances were not reported in the surface water samples from 2015 (FPM/CAPE, December 2015). The leachate parameter bromide was detected above the NYSDEC standard of 2 mg/L at one groundwater sampling location, LF5MW-100R at 26 D mg/L, which indicates a decrease from the reported exceedance in 2015 of 99 mg/L at the same sampling location (FPM/CAPE, December 2015).

Conclusions and Recommendations

The 2019 inspections did not identify any major deficiencies that would jeopardize the integrity of the cover at either landfill and there is optimal vegetation cover present on the caps at both LF003 and LF007. The exceedances of the leachate parameters at both landfills are attributed to the normal design drainage of rainwater and snow melt that has percolated through the landfill

cap cover soils. The percolation causes the dissolution of minerals, including iron, from the clean cover soils. The leachate exceedances are not caused by leaching of material from within the landfill itself as evidenced by the generally decreasing trend of other leachate parameters in site groundwater. However, several minor items are recommended to be addressed in 2020 as follows:

- An outer casing extension should be added to LF7MW-27, at LF003, so that the well casing is within the outer casing and the lid can be closed and locked.

Iron staining was noted during the spring 2017 inspection in and near the creek west of LF007. Similar staining was noted in water near LF001 in 2017. Investigations at LF001 in 2018 showed this staining to be associated with rainwater percolating through the landfill cover soil and draining to areas around the landfill. At LF001, design outfalls were the primary areas of staining. This same process appears to be occurring at LF007. The cover at LF007 (landfill 5) consists of an impermeable layer overlain by cover soil. Although no drain system is built into the cover as at LF001, rainwater still percolates through the cover soil, leaches minerals (including iron), and exits the cap on top of the impermeable layer. When oxidized, this water leaves red staining. Similar to LF001 and as supported by the 2019 analytical data for leachate parameters, it does not appear that landfill leachate is the cause of the iron staining noted at LF007 during the spring 2017 inspection.

No significant weather events occurred in 2019 that warranted additional inspections. Based on the *Final Optimization Plan for Landfill Areas of Concern Long-Term Management Program* (Bhate, November 2016), it is recommended that the frequency continue semiannually with a limited landfill inspection in the spring and the more comprehensive inspection in the fall to coincide with annual mowing at both LF003 and LF007.

LF009-LANDFILL 6 AOC

LF009 (Landfill 6 AOC) is approximately 15.7 acres in size and is located near the southern boundary of the base. **Attachment A-Figure 6** presents the LF009 (Landfill 6 AOC) site map. The wastes disposed at the landfill include general refuse and hard-fill that was buried and some of which was burned at the site. An estimated 38,000 to 62,000 CY of wastes were disposed at the site from 1955 to 1959. During the 1980s, although the landfill was no longer active, an unknown quantity of fuel-contaminated soil from the tank excavations at Tank Farms 1 and 3 was disposed of in the southern portion of LF009 (Landfill 6 AOC). In 1986, a clay cap was constructed over the fuel-contaminated soils area. The ROD for LF009 was signed by the USEPA on June 7, 2001, which required a landfill cap. The cap was completed in 2004 and includes a gas venting layer, a low-permeability layer, drainage layer, barrier protection layer, and a topsoil layer.

Site SD052-02 borders LF009 (Landfill 6 AOC) to the north (**Attachment A-Figure 6**), and is associated with a plume that is located downgradient of former maintenance facilities in Buildings 774 and 776, and former fuel pump house Building 775. Site SD052-04 is the LF009 (Landfill 6 AOC) trichloroethylene (TCE) Site plume, located immediately downgradient to the south of LF009 (Landfill 6 AOC). The most contaminated portion of the plume is located southwest of the landfill beneath the floodplain of Three Mile Creek. Monitoring of chlorinated VOCs in groundwater at LF009 (Landfill 6 AOC) is completed as part of remedial efforts at Site

SD052-04. The approximate groundwater flow direction is shown with an arrow on **Attachment A-Figure 6**. This direction is a change from past long term monitoring reports that have shown multiple flow directions across the landfill. These varying directions appear to show topographical surface water flow across the landfill and not groundwater flow which should be predominantly one direction. In addition, without wells through the landfill, it is impossible to know groundwater flow direction under the landfill. **Attachment A-Figure 6** reflects the generalized groundwater flow known from Site SD052-02, just upgradient of the landfill.

Landfill Gas Monitoring

Landfill gas monitoring has been performed at the site to identify the presence and concentration of methane at or near the landfill. On October 2, 2019, four scheduled landfill gas vents (LF6VENT-02, LF6VENT-03, LF6VENT-04, and LF6VENT-06) were monitored (**Attachment B-Table 7**). Methane measurements were below 0.1% at each of the vents.

Landfill Inspections

Landfill inspections and cover maintenance have been performed at the site since 2006. Inspections and maintenance were conducted on a quarterly basis and optimized following the Spring 2010 sampling event to a semiannual basis. Landfill cover mowing is conducted on an annual basis (Fall). LUC/ICs have been implemented by the ROD and are verified annually as part of the landfill cover inspection program. During the reporting period, landfill inspections were performed at LF009 on May 17, 2019 (Spring inspection), and October 2, 2019 (Fall inspection). The 2019 Fall inspection was performed in conjunction with the landfill gas monitoring. The landfill inspection reports (including photos) for May and October 2019 are presented in **Attachment C.** The location of photos taken during the LF009 inspections are presented on **Attachment A-Figure 6.**

No significant issues were observed during the 2019 inspections. There were no holdover maintenance items from the 2018 inspections.

Groundwater, Leachate, and Surface Water Sampling

Water samples are collected every 5 years from select locations at LF009 (Landfill 6 AOC). On May 15 and 16, 2019, water samples were collected from 10 groundwater monitoring wells, two leachate sample locations, and four surface water locations.

Depth to water was measured in each well before purging by low-flow methods. Water samples were collected in laboratory provided containers, immediately packed on ice, and shipped to Eurofins for analysis. Groundwater samples were analyzed for leachate indicators. Groundwater QA/QC samples were collected to document QA/QC procedures.

Analytical results were compared to the screening criteria found in New York Codes, Rules, and Regulations Title 6 Part 703.5 *Water Quality Standards Surface Waters and Groundwater,* Table 1 and the Division of Water Technical and Operational Guidance Series (1.1.1) Table 1 (NYSDEC, June 1998).

Analytical reports and Data Validation Reports are included in **Attachment D**.

Groundwater, Leachate, and Surface Water Analytical Results

Sampling results for leachate indicators, and their corresponding concentrations and screening criteria exceedances for groundwater samples are presented in **Attachment B-Table 8**.

At LF009, the leachate parameter of color was reported at or in exceedance of the NYSDEC standard of 15 PCU in five of the groundwater sampling locations, both of the leachate sampling locations, and at each of the four surface water sampling locations: 15 PCU at LF6MW-1; 75 D PCU at LF6MW-12; 20 PCU at 775VMW-18R; 30 J PCU at LF6VMW-21; 15 PCU at LF6VMW-22; 40 PCU at LF6LH-1; 30 PCU at LF6H-2; 25 PCU at LF6/TMCSW-1; 30 PCU at LF6/TMCSW-2; 40 PCU at LF6/TMCSW-3; and 50 PCU at LF6W-1. These values are significantly lower than the range of exceedances for color reported during the prior (2015) sampling event at the site (50 PCU to 500 PCU) (FPM/CAPE, December 2015). The leachate parameter TDS was detected above the NYSDEC standard of 500 mg/L in five groundwater sampling locations, one leachate sampling location, and in three of the surface water sampling locations: 1,700 mg/L at LF6MW-1; 580 mg/L at LF6MW-12; 1,500 mg/L at 775VMW-18R; 660 mg/L at LF6VMW-24; 520 mg/L at TMCMW-9; 670 mg/L at LF6H-2; 730 mg/L at LF6/TMCSW-1; 700 mg/L at LF6/TMCSW-2; and 650 mg/L at LF6/TMCSW-3. These values are lower than the range of exceedances for TDS reported during the prior (2015) sampling event at the site (550 mg/L to 2,600 mg/L) (FPM/CAPE, December 2015). The leachate parameter chloride was detected above the NYSDEC standard at three groundwater sampling locations: 680 D mg/L at LF6MW-1; 690 D mg/L at 775VMW-18R; and 290 D mg/L at LF6VMW-24. These values are lower than the range of exceedances for chloride reported during the prior (2015) sampling event at the same site wells (330 mg/L to 1,400 mg/L) (FPM/CAPE, December 2015). The leachate parameter bromide was detected just above the NYSDEC standard of 2 mg/L at one groundwater sampling location, LF6VMW-26 at 2.1 mg/L. Bromide had not been detected in exceedance of the NYSDEC groundwater standard during the prior (2015) sampling event (FPM/CAPE, December 2015). One leachate parameter, TKN, was reported in exceedance during the prior (2015) sampling round but not during the 2019 sampling event (FPM/CAPE, December 2015).

Conclusions and Recommendations

The inspections did not identify any major deficiencies that would jeopardize the integrity of the cover, and there is optimal vegetation cover on the cap. No significant weather events occurred in 2019 that warranted additional inspections. The exceedances of the leachate parameters are attributed to the normal design drainage of rainwater and snow melt that has percolated through the landfill cap cover soils. The percolation causes the dissolution of minerals, including iron, from the clean cover soils. The leachate exceedances are not caused by leaching of material from within the landfill itself as evidenced by the absence of exceedances of other leachate parameters in site groundwater and surface waters. Based on the *Final Optimization Plan for Landfill Areas of Concern Long-Term Management Program* (Bhate, November 2016), it is recommended that the frequency continue semiannually with a limited landfill inspection in the Spring and the more comprehensive inspection in the Fall to correlate with annual mowing and landfill gas monitoring. Landfill gas monitoring from 2011 to 2019 shows that methane levels were stable or absent at monitored gas probes. Based upon historical data (FPM/CAPE, December 2015) coupled with the Fall 2019 readings, Bhate recommends that landfill gas

monitoring for the Fall of 2020 continue to only include the following four LF009 vents: VENT-02, VENT-03, VENT-04, and VENT-06. This is the same recommendation presented in the 2018 Technical Memorandum LTM of Landfill AOCs (Bhate, May 2019).

Notes:

Screening Criteria: Results are compared to the New York Codes, Rules, and Regulations Title 6 Part 703.5 Water Quality Standards Surface Waters and Groundwater, Table 1 and to the New York State Department of Environmental Conservation Division of Water Technical and Operational Guidance Series (1.1.1) Ambient Water Quality Standards and Guidance Values.

* - The principal organic contaminant standard for groundwater of 5 micrograms per liter (µg/L) applies to this substance.

mg/L = milligrams per liter

U = not detected, value presented is the limit of detection

J = Estimated, the analyte was positively identified; the quantitation is an estimation

UJ = The analyte was not detected; however, the result is estimated because of discrepancies in meeting certain analyte-specific quality control criteria.

UB = Considered and artifact of blank contamination

D = Dilution

NV = No value

NA = Not analyzed

-a = Field duplicate

Shaded values are above the screening criteria.

Bold values are detected results.

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.999% pure lithium carbonate (Li_2CO_3) dissolved in high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3129a, lot #100714**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Lot Number: 1904987 **Product Number:** 5868

Manufacture Date: APR 05, 2019
Expiration Date: SEP 2020

The certified value reported is the prepared value based upon the method of preparation of the material. The uncertainty in the prepared value is estimated based upon the volumetric method of preparation. It is certified that a COD of 500 mg/L should be obtained on a 25.0 mL aliquot of this standard solution diluted to 50 mL. The manufacturing specification for this product is Chemical Oxygen Demand (COD) = 1.000 ± 0.005 mg per mL at 20°C. This is the equivalent quantity of Oxygen that this standard solution will consume, based on the reduction of a Potassium Dichromate Standard Solution under the specified conditions in the ASTM D 1252-95 test methods.

Report of Certification

This Certified Reference Material (CRM) has been prepared and certified under an ISO 9001 (certified by DQS), ISO 17025 (accredited by A2LA) and ISO 17034 (accredited by A2LA) quality system consistent with the following guides:

- ISO 9001: Quality management systems – Requirements
- ISO/IEC 17025: General requirements for the competence of testing and calibration laboratories
- ISO 17034: General requirements for the competence of reference material producers
- ISO Guide 30: Reference Materials – Selected terms and definitions
- ISO Guide 31: Reference Materials -- Contents of certificates and labels
- ISO Guide 35: Reference Materials – General and principals for certification
- Guide to the Expression of Uncertainty in Measurement, 2008
- EURACHEM/CITAC Guide: Qualifying Uncertainty in Analytical Measurement – Third Edition
- NIST Technical Note 1297

Material Source:

All analytes and matrix materials are obtained and verified by SPEX CertiPrep from pre-qualified vendors as per ISO 9001, ISO 17025, and ISO 17034 guidelines. Vendor identifications are proprietary; however, sources of all materials used in the preparation and testing of SPEX CertiPrep CRMs are tracked and documented. For further assistance, please contact Sales Support at crmsales@spexcsp.com.

Instructions for Use:

Primary usage of this CRM is in neat form or diluted serially with matrix of a purity at or greater than the purity of the original matrix solution. If dilution is required, the diluent must be compatible with all certified analytes and contain stabilizers appropriate for the period of intended use. The CRM can also be used as a spike or with a spike, again with appropriate compatibility considerations. All solutions should be thoroughly mixed, by shaking, prior to use and never pipetted directly from the bottle. Do not return excess solution to the bottle. All surfaces that come in contact with the solution must be thoroughly cleaned and leached prior to use. Dilutions should be performed only with Class A volumetric glassware. See SDS for health and safety information.

Method of Preparation:

Clean laboratory procedures and techniques have been used throughout the preparation. All materials, equipment, analytical instrumentation and personnel have been qualified prior to use. The highest purity acids applicable, 18 megohm, double deionized water, acid-leached triple-rinsed bottles (where appropriate), and Class A/calibrated volumetrics have been used in all preparations.

Homogeneity:

The homogeneity of the CRM has been confirmed by procedures consistent with ISO 17025, ISO 17034, and ASTM D6362-98 Appendix X2. Random, replicate samples of the final, packaged material have been analyzed to prove homogeneity in accordance with our internal procedure 4600-HOMOGEN-1A. Since the product is highly homogeneous, any sample size taken for analysis would be within the uncertainty budget. This is consistent with the intended use of the CRM.

Statistical Estimator and Confidence Limits:

The certified value 'X' listed on the reverse of this document is at the 95% level of confidence and can be expressed as:

- $X = x \pm U$ where X=certified value, U=expanded uncertainty, x=property value
- $U = ku_c$ where k=2 is the coverage factor at the 95% confidence level
- u_c=combined standard uncertainty obtained by combining the individual element standard uncertainty components u_i, and $u_c = \sqrt{\Sigma u_i^2}$

Certification Report:

All certified values reported were derived from the Certification Report, SPEX CertiPrep's traceability documentation, identified by the lot number of this CRM. During the stated period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution. For further assistance, please contact Sales Support at crmsales@spexcsp.com.

1. The **Certified Concentration** is the actual made-to concentration confirmed by ERA analytical verification.

2. The stated **Uncertainty** is the total propagated uncertainty at the 95% confidence interval. The uncertainty is based on the preparation of the product and includes uncertainty related to the starting material used and the volumetric and gravimetric measurements made. The method of calculating uncertainty is taken from the ISO Guide to the Expression of Uncertainty in Measurement (current version). The uncertainty applies to the product as supplied and does not take into account any required or optional dilutions and/or preparations the laboratory may perform while using this product.

3. Traceability ((% Recovery Certified Standard)/(% Recovery NIST SRM))* 100.

The traceability data shown were compiled by analyzing the ERA standards or their associated stock solutions against the applicable NIST SRMs. Where a NIST SRM is not available, the product is metrologically traceable through an unbroken chain of calibrations to NIST weights, each having stated uncertainties and utilizing measurement standards that are appropriate for the physical and/or chemical property being measured.

This standard **expires 9/2020**. The certified values are monitored and purchasers will be notified of any significant changes resulting in recertification or withdrawal of this certified reference material during the period of validity of this certificate.

This product is intended to be used as either a calibration standard or a quality control check of the entire analytical process for the analytes/matrix included in the standard.

If you have any questions or need technical assistance, please call ERA technical assistance at 1-800-372-0122 or email to info@eraqc.com

1. The **Certified Concentration** is the actual made-to concentration confirmed by ERA analytical verification.

2. The stated **Uncertainty** is the total propagated uncertainty at the 95% confidence interval. The uncertainty is based on the preparation of the product and includes uncertainty related to the starting material used and the volumetric and gravimetric measurements made. The method of calculating uncertainty is taken from the ISO Guide to the Expression of Uncertainty in Measurement (current version). The uncertainty applies to the product as supplied and does not take into account any required or optional dilutions and/or preparations the laboratory may perform while using this product.

3. Traceability ((% Recovery Certified Standard)/(% Recovery NIST SRM))* 100.

The traceability data shown were compiled by analyzing the ERA standards or their associated stock solutions against the applicable NIST SRMs. Where a NIST SRM is not available, the product is metrologically traceable through an unbroken chain of calibrations to NIST weights, each having stated uncertainties and utilizing measurement standards that are appropriate for the physical and/or chemical property being measured.

This standard **expires 6/2019**. The certified values are monitored and purchasers will be notified of any significant changes resulting in recertification or withdrawal of this certified reference material during the period of validity of this certificate.

This product is intended to be used as either a calibration standard or a quality control check of the entire analytical process for the analytes/matrix included in the standard.

Matrix: 2% HNO_3

Element	Certified Concentration & Uncertainty	Element	Certified Concentration & Uncertainty	Element	Certified Concentration & Uncertainty
Ag	100.0 ± 0.5 µg/mL	Ca	999.9 ± 5.0 µg/mL	Na	5000 ± 25 µg/mL

Bi	200.0 ± 1.0 µg/mL	Mg	4000 ± 20 µg/mL		

Intended Use: This solution is intended for use as a second source certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO Guide 34 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with QSP 6-13 Assessment of Homogeneity and Stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3), trace hydrofluoric acid (HF) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO Guide 34 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with QSP 6-13 Assessment of Homogeneity and Stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO Guides 34 and 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

  k is a coverage factor of 2, which gives a level of confidence of approximately 95%.
- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Samples should be transferred into deactivated vials for handling and storage. Restek supplies deactivated vials along with most standards packed in 2 mL ampules. Due to space constraints, Restek does not supply vials for larger volume ampules. Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions. Restek will also deactivate larger volume vials from our inventory as a custom ordered item. Contact your Restek sales or customer service representative for details.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days

Tech Tips:

Vinyl acetate is a volatile organic ester included in the target lists of several US EPA and other methods. Under acidic conditions, esters react with alcohols to form new esters (transesterification). Methanol-based mixes containing halogenated compounds are slightly acidic, so it is important to minimize exposure of vinyl acetate to mixes of halogenated compounds in methanol. For this reason, we offer vinyl acetate in individual solution, and suggest that it be introduced into the working level calibration solution immediately before use. This will minimize problems and ensure more consistent results.

General Certified Reference Material Notes

Expiration Notes:

- Expiration date valid for unopened ampul stored in compliance with the recommended conditions.
- Uncertainty, concentration, and expiration of the CRM are based on the unopened product being stored according to the recommended condition found in the storage field.

Purity Notes:

- Purity and/or chemical identity are determined by one or more of the following techniques: GC/FID, HPLC, GC/μECD, GC/MS, LC/MS, RI, and/or melting point.
- Compounds with a listed purity of less than 99% have been weight corrected to compensate for impurities and/or salts. A correction factor is used to calculate the amount of compound necessary to achieve the desired concentration of the parent compound in solution.
- Purity of isomeric compounds is reported as the sum of the isomers.
- Purity values are rounded to the nearest whole number.

Certified Uncertainty Value Notes:

- The uncertainties are determined in accordance with ISO 17034 and Guide 35. The certified combined stressed uncertainty value (includes gravimetric uncertainty, homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty and were combined using the following formula:

$$U_{combined\ stressed} = k\sqrt{U^2_{gravimetric} + U^2_{homogeneity} + U^2_{storage\ stability} + U^2_{shipping\ stability}}$$

k is a coverage factor of 2, which gives a level of confidence of approximately 95%.

- It is important to note that the shipping stability uncertainty was obtained under temperature extremes for specific time intervals; therefore, the certified combined stressed uncertainty value should only be applied to the product if it was stored at non-standard temperature conditions up to and including 7 days. Contact Restek Technical Service at www.restek.com/Contact-Us for use recommendations if your shipment was in-transit for more than 7 days at non-standard temperature conditions.
- Apply the certified combined unstressed uncertainty value if the product was received under standard shipping conditions. Apply the certified combined stressed uncertainty value if the product was received under non-standard conditions as specified below.

Label Conditions	Standard Conditions	Non-Standard Conditions
25°C Nominal (Room Temperature)	< 60°C	≥ 60°C up to 7 days
10°C or colder (Refrigerate)	< 40°C	≥ 40°C up to 7 days
0°C or colder (Freezer)	< 25°C	≥ 25°C up to 7 days

- Separate (not combined) uncertainty values for gravimetric uncertainty are also displayed on the certificate, if needed, separate homogeneity between-ampul uncertainty, storage stability uncertainty and shipping stability uncertainty values are available by contacting Restek Technical Service at www.restek.com/Contact-Us.
- The packaged amount is the minimum sample size for which uncertainty is valid. The ampules are over-filled to ensure that the minimum packaged amount can be sufficiently transferred.

Manufacturing Notes:

- Concentration is based upon gravimetric preparation using either a balance whose calibration has been verified daily using NIST traceable weights, and/or dilutions with Class A glassware.

Handling Notes:

- Stability of the unopened product, when stored in compliance with the recommended conditions, is guaranteed through the expiration displayed on the product label and certificate. Contact Restek for additional opened product stability information, with the knowledge/understanding that open product stability is subject to the specific handling and environmental conditions to which the product is exposed. For your convenience Restek supplies deactivated vials with most standards packed in 2mL ampules. Larger volume deactivated vials are available through Restek as a custom ordered item. Additionally, Restek sells DMDCS for the purpose of glassware deactivation as catalog number 31861, which includes complete instructions.
- If any undissolved material is visible inside the ampul, sonicate the unopened ampul until the material is completely dissolved.

- The Calculated Value is a value calculated from the weight of a starting material that has been certified directly vs. a National Institute of Standards and Technology (NIST) SRM/RM. See Sec 4.2 for balance traceability.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM by two independent methods Characterization of CRM by one method

Characterization of CRM/RM by Two Methods

Certified Value, $X_{CRM/RM}$, where two methods of characterization are used is the weighted mean of the two results:

$X_{CRM/RM} = [(w_a)(X_a) + (w_b)(X_b)]$

X_a = mean of Assay Method A with standard uncertainty $u_{char\ a}$

X_b = mean of Assay Method B with standard uncertainty $u_{char\ b}$

w_a and w_b = the weighting factors for each method calculated using the inverse square of the variance:

$w_a = (1/u_{char\ a})^2 / ((1/u_{char\ a})^2 + (1/u_{char\ b})^2))$

$w_b = (1/u_{char\ b})^2 / ((1/u_{char\ a})^2 + (1/u_{char\ b})^2))$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char\ a\&b} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2 in all cases at Inorganic Ventures

$u_{char\ a\&b} = [(w_a)^2\ (u_{char\ a})^2 + (w_b)^2\ (u_{char\ b})^2]^{½}$ where $u_{char\ a}$ and $u_{char\ b}$ are the square root of the sum of the squares of errors from characterization which include instrument measurement, density, NIST SRM uncertainty, weighing, and volume

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM}$ = mean of Assay Method A with standard uncertainty $u_{char\ a}$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\ (u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2 in all cases at Inorganic Ventures

$u_{char\ a}$ = square root of the sum of the squares of the errors from characterization which include instrumental measurement, density, NIST SRM uncertainty, weighing, and volume

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

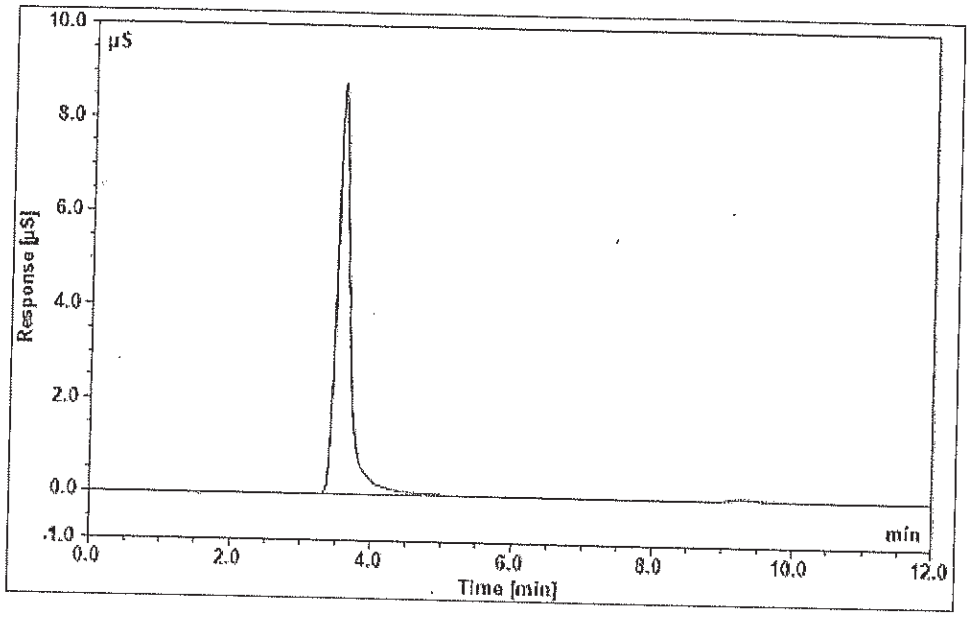
u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.



4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

November 03, 2017

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

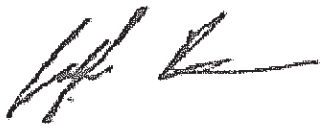
11.2 Lot Expiration Date

- November 03, 2021

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity



- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3), trace hydrofluoric acid (HF) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Packaging, Storage, Instructions For Use

Store at room temperature (15-30°C). After opening, this solution should be stored tightly capped at 2-8°C.

This certified reference material (CRM) is packaged in low density polyethylene. Allow to equilibrate to room temperature before use. Small aliquots should be poured out of the bottle rather than directly pipetted out of bottle in order to prevent contamination or premature degradation. A 1 mL sample size is recommended. Smaller sample volumes may negatively affect estimated uncertainty.

Traceability Information

Analyte Source Materials: The highest purity analyte source materials are used in the manufacture of this CRM. The actual purity is referenced above. Analyte source material purity and associated uncertainty has been analytically verified against appropriate NIST SRMs, if available.

Method: Certified concentration confirmed by HPLC analysis against an independent reference standard with n=3.

Balance: All analytical balances are calibrated on a semiannual basis by an ISO 17025 accredited calibration laboratory and are traceable to NIST. Traceable Calibration Certificate available upon request.

All balances are checked daily by an in-house standard operating procedure. The weights used for this daily verification are calibrated annually by an ISO 17025 accredited calibration laboratory and are certified traceable to NIST. Certificate of Calibration and Traceability available upon request.

Thermometer: All thermometers are NIST traceable through thermometers that are calibrated annually by an ISO 17025 accredited calibration laboratory.

Glassware: All glassware used in the manufacture of our CRMs is Class A. An in-house standard operating procedure is used to verify all glassware prior to it being placed into service. Volumetric pipetors are calibrated every four months by an ISO 17025 accredited calibration laboratory.
