SUBJECT: Final 2022 Annual Performance Monitoring Report On-Base Groundwater Remediation, Former Griffiss Air Force Base, Rome, New York. December 2023

Accompanying this letter, please find the following document for the former Griffiss Air Force Base.

- Final 2022 Annual Performance Monitoring Report On-Base Groundwater Remediation, Former Griffiss Air Force Base, Rome, New York (December 2023)

This report has the following recommendations presented as follows:

Site SD052-01:

- Groundwater and surface sampling should proceed on a biennial basis to next occur in Fall 2024 at the following locations
  - upgradient/source area monitoring well 782VMW-105B
  - source area monitoring well 782VMW-81
  - downgradient/toe of plume area monitoring well 782VMW-121
  - cross-gradient monitoring well AP2MW-3
  - downgradient area monitoring well 782VMW-101
  - Six Mile Creek surface water sampling location 782SW-115

Site SD052-02:

- Groundwater sampling should proceed on a biennial basis to next occur in Fall 2024 at the following locations:
  - upgradient monitoring wells 775VMW-4 and 775VMW-5

    - mid-plume monitoring wells 775MW-6 and 775VMW-8
    - downgradient monitoring wells 775VMW-9, 775VMW-10, and 775-MW20
    - downgradient sentry monitoring well 775-VMW20R
- Replacement of security lock on monitoring well 775-VMW20R

Site SD052-04:

- Groundwater and surface water sampling should proceed on a biennial basis to next occur in Fall 2024 at the following locations:
    - upgradient monitoring wells LF6TW-34, LF6TW-33, and LF6TW-35
    - hotspot monitoring wells LF6MW-12, LF6MW-16, LF6MW-17, and LF6MW-20
    - downgradient monitoring wells LF6TW-36, LF6TW-38, LF6VMW-26, LF6MW-39, LW6VMW 13R, and LF6MW-13RD
    - Three Mile Creek surface water sampling location LF6-SW1PM

Site SD052-05:

- Groundwater sampling should proceed on a biennial basis to next occur in Fall 2024 at the following locations:
    - source area/head of plume monitoring wells 817MW-2, 817MW-3, WSAMW-18, and WSAMW-16
    - mid-plume monitoring wells WSAMW-19 and WSAMW-17
    - downgradient monitoring wells WSAMW-23, WSAMW-21, and WSAMW-9
- Due to lack of contaminants observed in groundwater at WSAMW-9, surface water sampling from Six Mile Creek is not recommended

Site SS062:

- Groundwater and surface water sampling should proceed on a biennial basis to next occur in Fall 2024 at the following locations:
    - upgradient monitoring well AOC9MW-18
    - source area monitoring well AOC9MW-19
    - mid-plume monitoring wells AOC9MW-14 and AOC9MW-15
    - downgradient/plume monitoring wells AOC9MW-17 and AOC9MW-07
    - Six Mile Creek surface water sampling locations AOC9-SW02 and AOC9-SW03

1 INTRODUCTION

Environmental Chemical Corporation and team member Bhate Environmental Associates, Inc. (Bhate) were retained by the Air Force Civil Engineer Center (AFCEC), under Contract Number FA8903-20-D-0001, to conduct environmental remediation activities at the former Griffiss Air Force Base (AFB) in Rome, New York. This Performance Monitoring (PM) Report has been prepared as part of the ongoing PM conducted at the following Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) sites at former Griffiss AFB:

- SD052-01: Apron 2 Chlorinated Plume (Buildings 785 and 786)
- SD052-02: Building 775(Buildings 774 and 776)
- SD052-04: Landfill 6 Trichloroethene (TCE) Site
- SD052-05: Building 817/Weapon Storage Area (WSA)
- SS062: Area of Concern (AOC) 9 WSA Landfill

The above sites are within the former Griffiss AFB in Rome, New York (**Figure 1-1**). This report presents and assesses site activities and groundwater/surface water monitoring data from the 2022 PM sampling at these CERCLA sites. A summary of Remedial Action Objectives (RAOs) for these sites are provided in **Table 1-1**. Select representative monitoring well results are evaluated using trend charts. Bhate performed the sampling as detailed in previous annual reports and in accordance with the Final Basewide Uniform Federal Policy – Quality Assurance Project Plan (UFP-QAPP) for Long Term Monitoring (LTM) (Bhate, April 2022).

Site SD052-01 was last sampled in the year 2021 and will be sampled biennially in conjunction with the other On-Base Groundwater (OBGW) sites next in 2024. The sampling schedules for sites SD052-02, SD052-04, SD052-05, and SS062 are biennial and were last sampled in 2020. All sites will next be sampled in 2024. Discussion of the 2022 sampling results includes comparison to the prior event sampling results.

1.1 Objectives

The objective of PM is to maintain compliance with the Record of Decision (ROD) (Air Force Real Property Agency [AFRPA], December 2008) requirement to "evaluate effectiveness of the remedy" through "long-term monitoring of the groundwater plume and treatment performance during implementation." Groundwater data is also used to support decision making and assessment of the implemented remedies. This report contains the following required information:

- Analytical summary tables for current and historical reporting (**Appendix A**)
- Summary (field forms) of field sampling and other activities (**Appendix B**)
- Data assessment information including data validation reports (**Appendix C**) and raw laboratory results (**Appendix D**)
- Updated contaminant plume maps and groundwater elevation contour maps
- Summary of analytical results

- Trend charts

The above requirements are addressed in the following site-specific sections. Each site-specific section contains the following subsections:

- Site Background
- Remedial Action Summary
- PM Sampling Plan
- PM Results
- Analysis and Discussion
- Conclusions
- Recommendations

1.2 Procedures and Report Organization

The 2022 PM sampling was conducted in accordance with the Final Basewide UFP-QAPP for LTM (Bhate, April 2022) and any sampling plan modifications made following regulatory approval of the annual OBGW report recommendations. Field activities were conducted from August 23 through August 29, 2022.

Depth to water measurements were collected from sampled monitoring wells prior to initiating purging to calculate groundwater elevations and potentiometric surfaces and during low-flow purging to monitor for drawdown. Groundwater samples from monitoring wells were collected with a peristaltic pump with new and disposable low-density polyethylene and silicone tubing.

During purging, water passed through a water quality instrument equipped with a flow-through cell for measurement of field parameter stabilization including oxidation reduction potential (ORP), dissolved oxygen (DO), potential of hydrogen (pH), temperature, specific conductivity, and turbidity. Surface water samples were collected via grab method (no pump) and water quality parameters recorded by submerging the water quality instrument probes directly into the water body.

For evaluation purposes, where established, all analytical data was screened against the New York State Department of Environmental Conservation (NYSDEC), Division of Water *Technical and Operational Guidance Series (TOGS) (1.1.1), Table 1 New York State Ambient Water Quality Standards and Guidance Values*, (NYSDEC, June 1998), and *Addendum to June 1998 Division of Water and Technical and Operational Guidance Series (TOGS) No. 1.1.1* (NYSDEC, April 2000).; referred to as NYSDEC AWQ S/GV in this document.

Laboratory analyses included the following performed in accordance with site-specific requirements:

- volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260D
- dissolved gasses (methane, ethane, ethene) by Method RSK-175

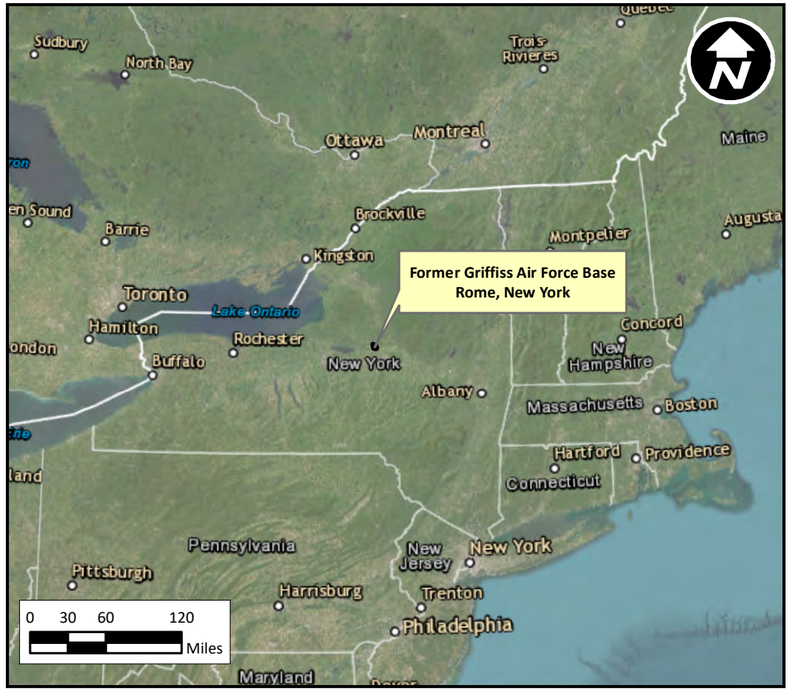
- dissolved organic carbon (DOC) and total organic carbon (TOC) by USEPA Method 9060A
- anions (chloride, nitrate, and/or sulfate) by USEPA Method 9056A

Laboratory analyses were performed by SGS North America Inc., in Orlando, Florida. All data validation was performed by Environmental Synectics, Inc. Field quality assurance (QA) and quality control (QC) samples (i.e., field duplicates, trip blanks, matrix spike [MS]/matrix spike duplicate [MSD]) were collected by the field team to document field QA/QC.

The following provides a description of data qualifiers used by the laboratory:

- D – The reported value is from a dilution.
- U – The analyte was analyzed for but was not detected.
- J – The analyte was positively identified; the result was detected above the method detection limit, but the concentration was below the reporting limit as an estimated value.
- UJ – The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific QC criteria.

It should be noted that it is infrequent but not unusual for the laboratory detection/quantitation limit for a particular analyte to be above the screening criteria due to required sample dilution. This should have no impact on the quality or usability of the data because, when this occurs, the magnitude of the exceedance will be considered in conjunction with the intended use of the data to determine its overall impact upon decision making. The detection and quantitation limits in the project UFP-QAPP and laboratory reports represent current and the best available limits for the analytical method and are consistent with Department of Defense Quality System Manual guidelines. Non-detect results are reported to the limit of detection and detected results are reported down to the detection limit.



Representative tables and figures are included at the end of each site section. Analytical Summary Tables are provided in **Appendix A**. Groundwater and surface water sample collection forms are provided in **Appendix B**. Laboratory data validation reports are provided in **Appendix C**. Laboratory data analytical packages are provided in **Appendix D**.

Table 1-1 Site Remedial Action Objectives

Site	RAO
SD052-01: Apron 2 Chlorinated Plume (Buildings 785 and 786)	• Achieve the cleanup goals for contaminants of concern (COCs) based on NYSDEC AWQ S/GV. • Prevent human exposure to groundwater through groundwater use restrictions until cleanup goals are achieved. • Prevent contaminated groundwater from the site from adversely impacting surface water in Six Mile Creek (SMC), which is defined as surface water concentrations above performance indicators (NYSDEC AWQ S/GV of 2 micrograms per liter [µg/L] for vinyl chloride [VC]). • Prevent development and use of the property for residential housing, elementary and secondary schools, childcare facilities, and playgrounds.
SD052-02: Building 775 (Buildings 774 and 776)	• Achieve the cleanup goals for COCs based on NYSDEC AWQ S/GV. • Prevent human exposure to groundwater through groundwater use restrictions until cleanup goals are achieved. • Prevent contaminated groundwater from the site from adversely impacting surface water in Three Mile Creek, which is defined as surface water concentrations above performance indicators (NYSDEC AWQ S/GV of 5 µg/L for cis-1,2-dichloroethene [DCE] and 2 µg/L for VC). • Prevent development and use of the property for residential housing, elementary and secondary schools, childcare facilities, and playgrounds.
SD052-04: Landfill 6 TCE Site	• Achieve the cleanup goals for COCs based on NYSDEC AWQ S/GV. • Prevent human exposure to groundwater through groundwater-use restrictions until cleanup goals are achieved. • Prevent contaminated groundwater from the site from adversely impacting surface water in Three Mile Creek, which is defined as surface water concentrations above performance indicators (NYSDEC AWQ S/GV of 5 µg/L for cis-1,2-DCE and 2 µg/L for VC). • Prevent intrusive work or other activities that will impact the effectiveness of the landfill closure and post-closure activities. • Prevent development and use of the property for residential housing, elementary and secondary schools, childcare facilities, and playgrounds.
SD052-05: Building 817/ WSA	• Achieve the cleanup goals for COCs based on NYSDEC AWQ S/GV. • Prevent human exposure to groundwater through groundwater use restrictions until cleanup goals are achieved. • Prevent contaminated groundwater from the site from adversely impacting surface water in SMC which is defined as surface water concentrations above performance indicators (NYSDEC AWQ S/GV of 5 µg/L for cis-1,2-DCE and 2 µg/L for VC). • Prevent development and use of the property for residential housing, elementary and secondary schools, childcare facilities, and playgrounds.

Site	RAO
SS062: AOC 9 WSA Landfill	• Achieve the cleanup goals for COCs based on NYSDEC AWQ S/GV. • Prevent potential unacceptable human risk associated with exposure to groundwater through groundwater use restrictions until AOC 9 cleanup goals are achieved. • Prevent contaminated groundwater from the AOC 9 Site from adversely impacting surface water in SMC, which is defined as surface water concentrations above performance indicators (NYSDEC AWQ S/GV for 23 COCs). • Prevent the potential for unacceptable human risk under CERCLA associated with exposure to soil vapor until the AOC 9 groundwater cleanup goals are achieved.

2 SD052-01 APRON 2 CHLORINATED PLUME (BUILDINGS 785 AND 786)

2.1 Site Background

Site SD052-01 is an approximately 2,800 feet long and 500 feet wide chlorinated volatile organic compound (CVOC) plume in the Apron 2 area. This plume appears to originate in the area of the nosedock wash wastewater system near Building 786 (FPM Remediations, Inc. [FPM], April 2004) (**Figure 2-1**). Use of chlorinated solvents probably occurred in all nosedock facilities and multiple small sources could exist along floor drains, sewer lines, and oil water separators (FPM, February 2016). There are three primary contaminants exceeding NYSDEC AWQ S/GV at Site SD052-01 identified as COCs: TCE; cis-1,2-DCE; and VC. The CVOC plume was co-mingled with several former, but currently closed petroleum fuel contaminant plumes, including site SS064, originating from the Apron 2 fueling system resulting in significant reductions of TCE and cis-1,2-DCE via anaerobic biodegradation (FPM, April 2004).

The contaminated aquifer, as described in the 2004 Remedial Investigation (RI) (FPM, April 2004), is encountered at a depth of 9 to 25 feet below ground surface (bgs) with the shallow depth occurring in the vicinity of SMC. The aquifer is composed of several well-defined layers including a silty-sand layer in the upper 5 feet; a 5- to 15-foot thick coarse sand and gravel layer in the middle of the aquifer; and a 15- to 20-foot thick layer of till composed of fine sand, silt, and gravel resting on the shale bedrock. The total aquifer thickness ranges from 45 feet in the source areas to less than 20 feet in the downgradient areas near SMC. Although the site has a relatively flat gradient, the high hydraulic conductivity of gravel layers has produced an estimated average groundwater velocity of 106 feet per year (FPM, August 2006). This velocity seems reasonable given the manner in which the 2,800-foot long CVOC plume has migrated.

Monitored natural attenuation (MNA) with institutional controls and LTM is the selected remedy as detailed in the Final ROD for the OBGW AOC (SD052-01) (AFRPA, December 2008). In the southern plume, VC had migrated eastward to monitoring well 782VMW-101 near SMC (FPM, June 2015); however, aerobic degradation of VC is occurring near the leading edge of the plume. **Figure 2-1** presents the site and monitoring well locations.

2.2 Remedial Action Summary

In accordance with the Final ROD, the Final Remedial Action Work Plan (RAWP) (Parsons Government Services [Parsons], July 2008) specifies MNA as the selected remedy for site SD052-01 using the ongoing physical, chemical, and natural biological process to reduce the contaminants within the aquifer. This selected remedy is based on previous investigations and studies, which determined that natural attenuation is occurring at this site.

In June 2017, an enhanced reductive dechlorination (ERD) pilot study in accordance with the Remedial Optimization Work Plan (Bhate, March 2017) was completed to evaluate enhancing the MNA with additional substrate and bioaugmentation. Implementation of the ERD pilot study included injections of emulsified vegetable oil (EVO), an inoculum of Dehalococcoides (DHC) culture, and buffer into the groundwater via seven direct-push technology (DPT) injection

locations. Injection points 782IP-01 through 782IP-07 were advanced near monitoring wells 782VMW-81 and 782VMW-105B. A summary of the pilot study ERD injections can be found in the 2017 PM Report (Bhate, June 2018).

The Final 2018 PM Report (Bhate, October 2019) recommended terminating the operation of horizontal sparge well AP2HW-1 (**Figure 2-1**) as it was not integral to site cleanup. AP2HW-1 was associated with the petroleum spill site SS064, which was closed in 2015 (NYSDEC, September 2015). The sparge system continued to operate after closure of site SS064 as an optional contingency to prevent the SD052-01 VOC plume from reaching SMC. AP2HW-1 was part of a two well system that included horizontal sparge well 789HW-1, associated with petroleum spill site SS067. Approval was obtained during the July 2019 Base Realignment and Closure (BRAC) Cleanup Team meeting for shut down of both wells. Operation of the system fully ceased on July 31, 2019.

2.3 PM Sampling Plan

The 2022 PM sampling was conducted to monitor the progress of MNA and included sampling from five monitoring wells (AP2MW-3, 782VMW-81, 782VMW-101, 782VMW-105B, and 782VMW-121) and one surface water location (782SW-115) as shown on **Figure 2-1**. All samples were analyzed for VOCs.

2.4 PM Results

The 2022 PM analytical data for site COCs, and other commonly detected VOCs have been compared to prior sampling results as summarized below and in **Table 2-1**. Water quality parameters (ORP, DO, and pH) are also presented in **Table 2-1**. Monitoring well results are presented below from the upgradient/head of the contaminant plume from the source area in the vicinity of Building 786 to the downgradient/toe of the contaminant plume (approximately 2,800 feet) towards SMC; well locations are shown on **Figure 2-1**. The approximate CVOC plume based on August 2022 analytical results is depicted on **Figure 2-2**. Additional historical information is provided in the Final 2021 PM Report (Bhate, December 2022).

Depth to water measurements and calculated groundwater elevations are provided in **Table 2-2** The potentiometric surface map is included as **Figure 2-3**.

- Monitoring well 782VMW-105B: TCE (9.7 µg/L) and cis-1,2-DCE (9.2 µg/L) were detected above NYSDEC AWQ S/GV (5 µg/L for both) in 2022, both analytes were non-detect in 2021; VC was non-detect in 2022 consistent with 2021 reporting.
- Monitoring well 782VMW-81: TCE was non-detect in 2022 consistent with 2021 reporting; cis-1,2-DCE (5.7 µg/L) was detected above NYSDEC AWQ S/GV in 2022 representing a decrease from 2021 results (28.3 µg/L); VC was non-detect in 2022 representing a decrease from 2021 results (4.6 µg/L).
- Monitoring well 782VMW-121: TCE and cis-1,2-DCE were non-detect in 2022 consistent with 2019 reporting (most recent from this location); VC (20.5 J µg/L normal/19.5 µg/L field duplicate) was detected above NYSDEC AWQ S/GV (2 µg/L) in 2022 demonstrating an

increase from 2019 results (4.2 µg/L). Note that adjacent monitoring well 782VMW-121D was inadvertently sampled in place of 782VMW-121 in 2021.

- Monitoring well AP2MW-3: TCE; cis-1,2-DCE; and VC were non-detect in 2022 consistent with 2021 reporting. Benzene (223 µg/L) was detected above NYSDEC AWQ S/GV (1 µg/L) in 2022 at a concentration consistent with 2021 results (252 µg/L); methyl tert-butyl ether (MTBE) was detected (8.3 µg/L) below NYSDEC AWQ S/GV (10 µg/L) representing a decrease from 2021 reporting (12 µg/L); methylene chloride (23 J) was detected above NYSDEC AWQ S/GV (5 µg/L) representing an increase from non-detect in 2021.

  This monitoring well is located south of the distal end of the VC plume and is cross-gradient south from 782VMW-121. The analytical results from this well indicate potential influence/overlap from petroleum spill site SS067.
- Monitoring well 782VMW-101: TCE and cis-1,2-DCE were non-detect in 2022 consistent with 2021 reporting; VC (1.1 µg/L) was detected below NYSDEC AWQ S/GV (2 µg/L) in 2022 demonstrating a decrease from 2021 results (2.6 µg/L).
- Surface water 782SW-115 (downgradient from 782VMW-101 within SMC): TCE; cis-1,2-DCE; and VC were non-detect in 2022 consistent with 2021 reporting; chloroform, historically detected at concentrations below NYSDEC AWQ S/GV (7 µg/L), was non-detect in 2022 demonstrating a decrease from 2021 results (0.85 J µg/L).

2.5 Analysis and Discussion

During the 2022 PM event, TCE was detected above screening criteria in upgradient/source area monitoring well 782VMW-105B only; degradation product cis-1,2-DCE was detected in upgradient/source area well 782VMW-105B and nearest downgradient well 782VMW-81; and degradation product VC was detected above NYSDEC AWQ S/GV in downgradient well 782VMW-121 only (**Figure 2-2**). The presence of TCE only at the head of the contaminant plume and the staggered occurrence of degradation products cis-1,2-DCE and then VC in downgradient monitoring wells suggests that reductive dechlorination is still occurring.

Consistent with historical results, benzene was reported above screening criteria in downgradient monitoring well AP2MW-3. Both MTBE and methylene chloride were also detected in this well. The estimated concentration of methylene chloride (23 J µg/L) reported above screening criteria is inconsistent with non-detect results dating back to 2008. The location of this well is near petroleum spill site SS067 indicating potential overlap of the groundwater contaminant plumes. CVOCs TCE; cis-1,2-DCE; and VC have been non-detect at this location since 2008.

Geochemical parameters used to monitor conditions for anaerobic bioremediation include DO, ORP, and pH. These parameters can be conducive to the bioremediation process or prohibitive (prevent biologic activity). Conducive values are ORP less than -100 millivolts (mV), DO less than 0.5 milligrams per liter (mg/L), and pH between 5 and 9 standard units (SU) (Parsons, August 2004). Prohibitive values are ORP greater than 0 mV, DO greater than 1.0 mg/L, and pH less than 5 SU.

ORP field measurements ranged from -65 mV at 782VMW-121 to 119 mV at 782VMW-81. Only two of the sampled wells had a negative ORP: 782VMW-105B and 782VMW-121. However, these two monitoring wells were not considered to be conducive to anaerobic bioremediation based on their ORP values being greater than -100 mV. The remaining sampled wells in August 2022 had ORP values considered to be 'prohibitive' to anaerobic bioremediation.

Except for elevated DO at 782VMW-81 (4.6 mg/L), DO ranged from 0.25 mg/L at 782VMW-101 to 0.59 mg/L at 782VMW-121, indicating that conditions supportive of anaerobic bioremediation of cis-1,2-DCE and VC are generally present throughout the aquifer The pH field measurements in the near neutral range also indicate that conditions are also conducive to anaerobic bioremediation.

Historically, chloroform has been detected in surface water sample 782SW-115 and has been attributed to storm water runoff and not related to the SD052-01 contaminant plume. Stormwater from the southern and eastern sections of the former Griffiss AFB is received by SMC, which is considered an industrial watershed. Chloroform, when detected in surface water, has been below the NYSDEC AWQ S/GV.

2.5.1 Trend Charts

Trend charts for TCE; cis-1,2-DCE; and VC in monitoring wells 782VMW-105B, 782VMW-81, 782VMW-121, and 782VMW-101 are included as **Figure 2-4** through **Figure 2-7**, respectively. Well locations are shown on **Figure 2-1**.

The trend chart for source area 782VMW-105B demonstrates that, while on a general decreasing trend since 2011, TCE and cis-1,2-DCE concentrations increased from non-detect in 2021 to 9.7 µg/L and 9.2 µg/L in 2022, respectively. VC concentrations have remained non-detect (**Figure 2-4**).

Approximately 250 feet downgradient of the source area at monitoring well 782VMW-81, TCE has remained non-detect or below screening criteria since 2014. A decreasing trend in cis-1,2-DCE concentrations has continued since a spike of 53 J µg/L in October 2018 (following the June 2017 injection event), decreasing to 28.3 µg/L in 2021, and to 5.7 µg/L in 2022. VC was non-detect at this location for the first time since monitoring began in 2006 (**Figure 2-5**).

At monitoring well 782VMW-121, approximately 3,000 feet downgradient of the source area and near the toe of the plume, TCE and cis-1,2-DCE have remained non-detect. Following a decreasing trend in VC concentrations since 2014, an increase to 20.5 J µg/L was observed in 2022, the highest reported result since September 2009 (**Figure 2-6**).

At the most downgradient monitoring well, 782VMW-101, TCE and cis-1,2-DCE remained non-detect. VC has historically been detected with concentrations ranging from 0.47 µg/L to 5.77 µg/L. The concentration in 2022 decreased to 1.1 µg/L from 2.6 µg/L reported in 2021 (**Figure 2-7**).

2.5.2 Data Validation Summary

Minor QC issues identified during the data validation of the laboratory results included: headspace in sample 782VMW-121-0822; field duplicate precision (as relative percent difference [RPD]) outlier for MTBE; and MS/MSD RPD outlier for bromomethane. Results reported for sample 782VMW-121-0822 have been qualified as estimated (flagged 'J/UJ') due to the headspace issue. Reported results for MTBE for the field duplicate pair (782VMW-121-0822 and 782VMW-121-0822-A) have been qualified as estimated (flagged 'J/UJ') due to the RPD outlier. No results were qualified due to the MS/MSD RPD outlier. All data were determined to be usable as qualified.

2.6 Conclusions

The selected remedy at the SD052-01 Apron 2 Chlorinated Plume site is MNA, which results in slow changes in contaminant concentrations typically observed over an extended period. TCE remains present at a concentration above NYSDEC AWQ S/GV in source area monitoring well 782MW-105B and non-detect in the other downgradient wells. TCE degradation product, cis-1,2-DCE, is present above NYSDEC AWQ S/GV in the source area well 782VMW-105B and next immediate downgradient well 782VMW-81; the remaining downgradient wells are non-detect. At the toe of the contaminant plume, VC is present in downgradient well 782VMW-121 above NYSDEC AWQ S/GV. Monitoring well 782VMW-101, approximately 200 feet further downgradient did contain VC below NYSDEC AWQ S/GV.

With the exception of TCE and cis-1,2-DCE at source area well 782VMW-105B, which both increased in 2022, concentrations of TCE and cis-1,2-DCE have generally decreased throughout the portion of the plume where historically observed, while the VC concentrations in those areas have generally increased or remained stable. This indicates that TCE, where present, continues to degrade to cis-1,2-DCE, which continues to degrade to VC. Degradation of VC is likely occurring anaerobically throughout the contaminant plume.

In 2021, the MNA remedy was supported by the lack of detections of TCE. Although an increase in TCE and cis-1,2-DCE to concentrations above screening criteria was observed in monitoring well 782VMW-105B, the increase of VC in downgradient well 782VMW-121 in 2022 continues to support MNA.

Based on the continued lack of detections of CVOCs, surface water of SMC is not impacted. The lack of detections confirms the site is compliant with the specific RAO which states the VC concentration in SMC samples must remain below 2 µg/L.

2.6.1 Impacts of AP2HW-1 Shut Down

Horizontal sparge line, AP2HW-1, fully ceased operation on July 31, 2019. The main purpose of the biosparge well was to prevent petroleum compounds associated with former spill site SS064, which was closed in 2015 (NYSDEC, September 2015), from reaching SMC. The well location was cross-gradient to the distal end of the VC plume at site SD052-01 (**Figure 2-2**). Although the ROD for site SD052-01 specifies that air sparging may be used as a possible contingency measure in

the event that VC concentrations in SMC exhibit an increasing trend (AFRPA, December 2008), the operation was not necessary for VC migration control. Recommendations for shut down of AP2HW-1 in the 2018 OBGW report included continued surface water monitoring for any increase in VC concentrations in SMC. PM sampling in 2021 and 2022 indicates that shut down of AP2HW-1 has not negatively impacted SMC, as VC has not been observed in samples collected from SMC.

2.7 Recommendations

Following evaluation of the 2021 and 2022 data, the sampling plan at site SD052-01 should proceed on a biennial basis to next occur in Fall 2024. Sampling should be conducted at the following locations and as described in **Table 2-3**:

- Upgradient/source area monitoring well 782VMW-105B
- Source area monitoring well 782VMW-81
- Downgradient/toe of plume area monitoring well 782VMW-121
- Cross-gradient monitoring well AP2MW-3
- Downgradient area monitoring well 782VMW-101
- SMC surface water sampling location 782SW-115

A site assessment report will be prepared to address remediation progress at the site and will include a remediation timeline, site status, and an evaluation of the current remediation methods.

3 SD052-02 BUILDING 775 (BUILDINGS 774 AND 776)

3.1 Site Background

Site SD052-02 is considered the Building 775 TCE plume and is located downgradient of former maintenance facilities in Buildings 774 and 776 and the former fuel pump house Building 775 (**Figure 3-1**). In 1994, as part of an RI and baseline risk assessment (LAW, December 1996), a soil-gas and groundwater survey was completed along with collection of surface and subsurface soil samples. The investigation included an area of approximately 15 acres surrounding Building 774 and former Building 775. Based on results of the RI, the source of the TCE contamination was determined to be the TCE vat storage area used when Building 774 was an armaments and electronics shop. The vat storage area was located inside of Building 774. An exterior waste solvent drum staging area was located on the southeast side of the building, adjacent to the vat storage area. The primary COC exceeding NYSDEC AWQ S/GV at site SD052-02 is TCE with minor detections of COCs 1,1,1-trichloroethane (TCA); 1,1-dichloroethane (DCA); 1,2-DCA; and chloroform. Most of the SD052-02 plume appears to have migrated south toward Landfill 6 (site SD052-04).

The contaminated aquifer is comprised of silty sands with an average thickness extending from 60 feet bgs to 120 feet bgs where shale bedrock is encountered. Due to a relatively flat gradient, average groundwater velocities at this site are slow and have been estimated at approximately 10 feet per year. Contamination is not found in the bedrock. The general absence of cis-1,2-DCE in the SD052-02 Building 775 plume confirms that reductive dechlorination is not occurring (Ecology and Environment Engineering, P.C. [EEEPC], February 2008).

3.2 Remedial Action Summary

The Final RAWP (Parsons, July 2008) provides details on the selected remedy which is groundwater extraction with discharge to an off-site treatment facility. The groundwater extraction system was designed to contain the contaminant plume (defined as TCE concentrations greater than 50 µg/L) and extract the contaminants from the aquifer. Initially, one extraction well (775EW-1) was installed but deemed inappropriate for groundwater extraction. It was replaced by extraction well 775EW-1R along with an additional extraction well (775EW-3) in Fall 2008 prior to system startup in January 2009. The original extraction well 775EW-1 was converted to a monitoring well prior to initial sampling in April 2009. Extraction wells 775EW-1R and 775EW-3 were connected to a force main and the extracted contaminated groundwater was discharged to the existing sanitary sewer system for treatment at the City of Rome Water Pollution Control Facility (FPM, July 2009).

Operation of the groundwater extraction and discharge system was initiated on January 5, 2009. The system was fine tuned in January through March 2009 and continued to operate until it was shut down in August 2016. As part of a pilot study, 12 injection wells were installed and subsequently used for permanganate injections in June 2017. The implementation and results of the pilot study were detailed in the *Final Technical Memorandum Site SD052-02* [In-Situ Chemical Oxidation] *ISCO Pilot Study, Former Griffiss Air Force Base, Rome, New York* (Bhate, July 2019).

3.3 PM Sampling Plan

The 2022 PM sampling was conducted to monitor the progress of the groundwater extraction and permanganate injection remedial efforts and included seven monitoring wells (775VMW-4, 775VMW-5, 775MW-6, 775VMW-8, 775VMW-9, 775VMW-10, and 775-MW20) as shown on **Figure 3-1**. Samples were analyzed for VOCs. Monitoring well 775-VMW20R was not sampled due to access issues.

3.4 PM Results

The 2022 PM analytical data for site COCs are summarized below and in **Table 3-1**. Water quality parameters (ORP, DO, and pH) are also presented in **Table 3-1**. Monitoring wells are presented from the upgradient/head of the contaminant plume from the source area near Buildings 774 and 776 to the downgradient area near Landfill 6 as shown on **Figure 3-1**. The approximate CVOC plume based on August 2022 analytical results is included as **Figure 3-2**.

Depth to water measurements and calculated groundwater elevations are provided in **Table 3-2**. The potentiometric surface map is included as **Figure 3-3**.

- Monitoring well 775VMW-4: TCE (6.1 µg/L) was detected above NYSDEC AWQ S/GV (5 µg/L) in 2022 representing an increase from 2020 results (4.6 J µg/L).
- Monitoring well 775VMW-5: TCE (31.2 µg/L) was detected above NYSDEC AWQ S/GV in 2022 representing a decrease from 2020 results (37 J µg/L normal/39 J µg/L field duplicate).
- Monitoring well 775MW-6: TCE (26 µg/L) was detected above NYSDEC AWQ S/GV in 2022 indicating no change from 2020 results (26 J µg/L); chloroform (0.36 J µg/L) was detected below NYSDEC AWQ S/GV (7 µg/L) consistent with 2020 results (0.65 J µg/L).
- Monitoring well 775VMW-8: TCE (25.1 µg/L) was detected above NYSDEC AWQ S/GV representing an increase from 2020 results (19 J µg/L); 1,1,1-TCA (0.42 J µg/L) was detected below NYSDEC AWQ S/GV (5 µg/L) consistent with 2020 results (0.40 J µg/L).
- Monitoring well 775VMW-9: TCE (20.5 µg/L normal/19.8 µg/L field duplicate) was detected above NYSDEC AWQ S/GV in 2022 indicating no change from 2020 results (20 J µg/L); chloroform (0.55 J µg/L normal/0.57 J µg/L field duplicate) was detected below NYSDEC AWQ S/GV consistent with 2020 results (0.65 J µg/L).
- Monitoring well 775VMW-10: TCE (38.1 µg/L) was detected above NYSDEC AWQ S/GV in 2022 indicating a decrease from 2020 results (42 J µg/L); chloroform (0.41 J µg/L) and 1,1,1-TCA (0.41 J µg/L) were detected below their respective NYSDEC AWQ S/GV consistent with 2020 results (0.77 J µg/L and 0.45 J µg/L, respectively).
- Monitoring well 775-MW20: TCE (60.7 µg/L) was detected above NYSDEC AWQ S/GV in 2022 representing a decrease from 2020 results (71 J µg/L); 1,1,1-TCA (0.53 J µg/L) was detected below NYSDEC AWQ S/GV consistent with 2020 results (0.81 J µg/L); 1,1-DCA (2.5 µg/L) was detected below NYSDEC AWQ S/GV (5 µg/L) consistent with 2020 results (2.5 µg/L); 1,2-DCA (0.33 J µg/L) was detected below NYSDEC AWQ S/GV (0.6 µg/L), whereas

the 2020 result was reported as non-detect at 0.4 U µg/L; cis-1,2-DCE (0.58 J µg/L) was detected below NYSDEC AWQ S/GV (5 µg/L) consistent with 2020 results (0.54 J µg/L).

- 775-VMW20R was not sampled in 2022 due to complications with the protective casing lock preventing well access. All site COCs were reported as non-detect from this location in 2020.

3.5 Analysis and Discussion

TCE in groundwater has historically exceeded NYSDEC AWQ S/GV at Site SD052-02. During the 2022 PM event, TCE was detected above screening criteria in all seven monitoring wells sampled. The concentration of TCE ranged from 6.1 µg/L at upgradient monitoring well 775VMW-4 to 60.7 µg/L at downgradient monitoring well 775-MW20. Five other CVOCs (1,1,1-TCA; 1,1-DCA; 1,2-DCA; chloroform; and cis-1,2-DCE) were reported at concentrations below their respective NYSDEC AWQ S/GV.

ORP measurements ranged from -60 mV at 775-MW20 to 102 at 775VMW-5 but were mostly positive. DO concentrations at the site were generally aerobic except at the upgradient (775VMW-4 at 0.53 mg/L) and downgradient (775VMW-9 at 0.69 mg/L and 775-MW20 at 0.90 mg/L) extents of the plume, with values ranging from 3.89 mg/L (775VMW-8) to 7.33 mg/L (775VMW-5) in the center of the plume. The pH values were within the -neutral range (5 to 9 SU) and ranged from 6.62 SU (775MW-6) to 7.06 SU (775VMW-5).

3.5.1 Trend Charts

Trend charts for TCE in upgradient monitoring wells (775VMW-5, 775MW-6, and 775VMW-8) and downgradient monitoring wells (775VMW-9, 775VMW-10, and 775-MW20) are included as **Figure 3-4** and **Figure 3-5**, respectively. Well locations are shown on **Figure 3-1**.

The monitoring wells in the upgradient portion of the plume (775VMW-5, 775MW-6, and 775VMW-8) indicate an overall decreasing trend since 2006; trends following the June 2017 ISCO injections exhibit stable conditions. Although TCE concentration showed a slight increase from 2020 to 2022 in 775VMW-8, 775VMW-5 reported lower TCE concentrations than previous years, and 775MW-6 reported a similar TCE concentration as previous years.

In the downgradient portion of the plume, the concentration of TCE in 775-MW20 (60.7 µg/L) decreased in 2022 relative to 2020, which is significantly higher than the concentrations reported in the upgradient wells. The reported value was within the historical range of detections at 775-MW20. The trend for monitoring wells 775VMW-9 and 775VMW-10 demonstrate overall stable or decreasing trends.

3.5.2 Data Validation Summary

The only QC issue identified during the data validation of the laboratory results was MS percent recovery outliers for parent sample 775MW-6-0822. Reported results for target analytes 1,3-dichloropropane, 4-chlorotoluene, bromobenzene, bromomethane, dibromochloro-methane, and n-butylbenzene for sample 775MW-6-0822 were qualified as estimated (flagged 'J'/UJ') due to the percent recovery outliers. All data were determined to be usable as qualified.

3.6 Conclusions

The selected remedy at Site SD052-02 is groundwater extraction within the 50 µg/L total VOC plume area, as it existed in 2004, and discharge to an off-site treatment facility followed by LTM. An August 2016 routine inspection found the system to be offline in alarm state. A September 2016 inspection identified evidence of corrosion in a transducer connection. Based on total VOC concentrations remaining below 50 µg/L and evaluation of other remedial alternatives at that time, the system was not restarted (Bhate, December 2020).

Concentrations of TCE within the upgradient (**Figure 3-4**) and downgradient (**Figure 3-5**) portions of the contaminant plume have remained stable and below 50 µg/L since operation of the groundwater extraction system ceased in 2016 and following the 2017 ISCO injections. TCE, the primary VOC in groundwater, remains present at concentrations above the NYSDEC AWQ S/GV in all monitoring wells sampled in 2022, but below 50 µg/L. The exception to this is at downgradient well 775-MW20 where the TCE concentration has increased following completion of remedial activities, but significant concentration fluctuations have been observed at this location over time.

Although separated from Three Mile Creek by downgradient Site SD052-04 Landfill TCE Site, no VOCs were identified in surface water samples (see **Section 4**). This indicates that contaminant migration from Site SD052-02, in compliance with the RAO, is not adversely impacting surface water in Three Mile Creek.

3.7 Recommendations

Following evaluation of the 2022 data, the sampling plan at site SD052-02 should proceed on a biennial basis to next occur in Fall 2024. Sampling should be conducted at the following locations and as described in **Table 3-3**.

- Upgradient monitoring wells 775VMW-4 and 775VMW-5
- Mid-plume monitoring wells 775MW-6 and 775VMW-8
- Downgradient monitoring wells 775VMW-9, 775VMW-10, and 775-MW20
- Downgradient sentry monitoring well 775-VMW20R with repair/replacement of lock

A site assessment report will be prepared to address remediation progress at the site and will include a remediation timeline, site status, and an evaluation of the current remediation methods.

4 SD052-04 LANDFILL 6 TCE SITE

4.1 Site Background

Site SD052-04 is the Landfill 6 TCE Site located downgradient and to the southwest of site LF009 (Landfill 6) (**Figure 4-1**). The most contaminated portion of the plume is located southwest of the landfill beneath the floodplain of Three Mile Creek. Site COCs exceeding the NYSDEC AWQ S/GV are TCE; cis-1,2-DCE; and VC.

The contaminated aquifer is comprised of silty sands with an average saturated thickness of 61 feet. Contamination is not present in the underlying bedrock. Due to a flat gradient, groundwater velocities at this site have been estimated at less than 4 feet per year. In general, the direction of groundwater flow at the site is southwest (Parsons, December 2015).

A groundwater and surface water sampling event was performed from February through April 2007 in accordance with the Final Work Plan for Predesign Investigation (EEEPC, July 2006). The results showed a relatively low concentration TCE plume with a smaller central hotspot with much higher TCE concentrations.

4.2 Remedial Action Summary

The selected remedy for Site SD052-04 is enhanced bioremediation. As listed in the Final RAWP (Parsons, July 2008), this process is intended to increase biodegradation of the groundwater contaminants by injecting EVO into the aquifer. The EVO injections were performed at injection wells LF6IW-01 through LF6IW-06 (**Figure 4-1**) in July 2008, August 2010, and again in October 2013. These injection wells are in a cluster slightly upgradient of the monitoring wells in the hot spot (LF6MW-16, LF6MW-17, and LF6MW-20). In July 2018, four additional injection wells (SD052-04-IW01, SD052-04-IW02, SD052-04-IW03, and SD052-04-IW04) were installed within and upgradient of the hotspot and were subsequently used to inject additional carbon substrate.

4.3 PM Sampling Plan

The 2022 PM sampling was conducted to monitor the progress of enhanced bioremediation at the site and included 13 monitoring wells (LF6MW-12, LF6MW-16, LF6MW-17, LF6MW-20, LF6MW-39, LF6VMW-13R, LF6MW-13RD, LF6TW-33, LF6TW-34, LF6TW-35, LF6TW-36, LF6TW-38, and LF6VMW-26) and one surface water location (LF6-SW1PM) as shown on **Figure 4-1**. Samples were analyzed for VOCs, dissolved gases, DOC and TOC, and sulfate.

4.4 PM Results

The 2022 PM analytical data for site COCs and other commonly detected VOCs compared to prior sampling results are summarized below and in **Table 4-1**. Water quality parameters (ORP, DO, and pH) are also presented in **Table 4-1**. Monitoring well results are presented from the upgradient/head of the contaminant plume to the downgradient/toe of the plume near Three Mile Creek; well locations are shown on **Figure 4-1**. The approximate CVOC plumes are included on **Figure 4-2**.

Depth to water measurements and calculated groundwater elevations are provided in **Table 4-2**. The potentiometric surface map is included as **Figure 4-3**.

- Monitoring well LF6TW-34: TCE (10.7 µg/L) was detected above NYSDEC AWQ S/GV (5 µg/L) in 2022 representing a decrease from 2020 results (17 D µg/L); cis-1,2-DCE (83.1 µg/L) was detected above NYSDEC AWQ S/GV (5 µg/L) representing a decrease from 2020 results (140 D µg/L); trans-1,2-DCE (7.5 µg/L) was detected above NYSDEC AWQ S/GV (5 µg/L) representing an increase from 2020 results (4.7 D µg/L); and VC was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well LF6TW-33: TCE (92.6 J µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (130 µg/L); cis-1,2-DCE (52.1 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (57 µg/L); and VC was reported as non-detect at 0.5 µg/L compared to 0.46 J µg/L in 2020.
- Monitoring well LF6TW-35: TCE (17.9 µg/L) was detected above NYSDEC AWQ S/GV representing an increase from 2020 results (14 µg/L); cis-1,2-DCE (3.5 µg/L) was detected below NYSDEC AWQ S/GV consistent with 2020 results (2.7 µg/L); and VC was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well LF6MW-12: TCE was reported as non-detect at 2.5 µg/L representing a significant decrease from 23 D µg/L reported in 2020; cis-1,2-DCE (227 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (320 D µg/L); trans-1,2-DCE (7.9 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (19 D µg/L); and VC was non-detect in 2022 consistent with 2020 reporting. Methylene chloride (29.6 µg/L) was detected above NYSDEC AWQ S/GV (5 µg/L), an increase from the non-detect result reported in 2020.
- Monitoring well LF6MW-16: TCE (8 J µg/L normal/25.5 J µg/L field duplicate) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (120 D µg/L normal/100 D field duplicate); cis-1,2-DCE (205 J µg/L/204 µg/L) was detected above NYSDEC AWQ S/GV representing a slight decrease from 2020 results (230 D µg/L/260 D µg/L); trans-1,2-DCE (5 J µg/L/6.7 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (14 D µg/L/15 D µg/L); and VC (5.9 J µg/L/6.4 µg/L) was detected above NYSDEC AWQ S/GV representing an increase from 2020 results (2.5 J D µg/L/2.9 J D µg/L).
- Monitoring well LF6MW-17: TCE (4.2 µg/L) was detected below NYSDEC AWQ S/GV representing a decrease from 2020 results (37 D µg/L normal/33 D µg/L field duplicate); cis-1,2-DCE (30.8 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (250 D µg/L/240 D µg/L); trans-1,2-DCE (5 µg/L) was detected at NYSDEC AWQ S/GV representing a decrease from 2020 results (54 D µg/L/52 D µg/L); VC (0.78 J µg/L) was detected below NYSDEC AWQ S/GV representing a decrease from 2020 results (4.9 D µg/L/5.1 D µg/L).
- Monitoring well LF6MW-20: TCE (0.65 J µg/L) was detected below NYSDEC AWQ S/GV representing a decrease from 2020 results (59 D µg/L); cis-1,2-DCE (82.9 µg/L) was detected

above NYSDEC AWQ S/GV representing a decrease from 2020 results (330 D µg/L); trans-1,2-DCE (3.3 µg/L) was detected below NYSDEC AWQ S/GV representing a decrease from 2020 results (15 D µg/L); and VC (2.4 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (13 D µg/L).

- Monitoring well LF6TW-36: TCE (111 J µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (180 µg/L); cis-1,2-DCE (23.1 J µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (31 µg/L); trans-1,2-DCE (1.1 J µg/L) was reported below NYSDEC AWQ S/GV consistent with 2020 results (1.5 µg/L); and VC was non-detect in 2022 consistent with 2020 reporting. Methylene chloride (5.5 J µg/L) was detected above NYSDEC AWQ S/GV representing an increase from non-detect in 2020.
- Monitoring well LF6TW-38: TCE (71.9 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (83 µg/L); cis-1,2-DCE (19.3 µg/L) was detected above NYSDEC AWQ S/GV consistent with 2020 results (20 µg/L); and VC was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well LF6VMW-26: TCE was non-detect in 2022 consistent with 2020 reporting; cis-1,2-DCE (6.9 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (140 D µg/L); and VC was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well LF6MW-39: TCE was non-detect in 2022 consistent with 2020 reporting; cis-1,2-DCE (78.8 µg/L) was detected above NYSDEC AWQ S/GV representing an increase from 2020 results (49 µg/L); and VC was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well LF6VMW-13R: with the exception of VC (0.57 J µg/L) in 2022, all other site COCs were non-detect in 2022 consistent with 2018 results (most recent at this location).
- Monitoring well LF6MW-13RD: TCE and cis-1,2-DCE were non-detect in 2022 consistent with 2020 reporting; and VC (2.6 J µg/L) was detected above NYSDEC AWQ S/GV consistent with 2020 results (2.4 µg/L).
- Surface water LF6-SW1PM: TCE; cis-1,2-DCE; and VC were non-detect in 2022 generally consistent with 2020 reporting (cis-1,2-DCE reported at 0.21 J µg/L in 2020).

4.5 Analysis and Discussion

Decreasing concentrations of TCE and cis-1,2-DCE were exhibited in the hotspot monitoring wells LF6MW-16, LF6MW-17, and LF6MW-20. Monitoring well LF6MW-16 continues to show an increasing VC trend while VC concentrations in LF6MW-17 and LF6MW-20 decreased from 2020.

Methane continued to be present at significant concentrations within the TCE plume hotspot; however, these concentrations are lower than those reported in 2020 suggesting the 2018 addition of a carbon source has been successful at accelerating natural degradation of the CVOCs. TCE has significantly decreased in the hot spot where concentrations now fall below the screening criteria for LF6MW-17 and LF6MW-20. The concentration of TCE in upgradient well LF6TW-34 decreased to 10.7 µg/L from 17 D µg/L in 2020; cis-1,2-DCE decreased to 83.1 µg/L from 140 D µg/L; and VC was not-detected in 2022 or 2020. Monitoring well LF6TW-38 continues

to represent the most downgradient location with elevated TCE above NYSDEC AWQ S/GV. Elevated concentrations of cis-1,2-DCE in the most downgradient monitoring well sampled (LF6MW-39 at 78.8 µg/L) does not provide delineation of groundwater; however, surface water sample results from location LF6-SW1PM indicates contamination is not impacting Three Mile Creek.

Sulfate levels across the site in 2022 (provided in **Appendix A**) were generally low, averaging around 24,000 µg/L and ranging from 14,600 D µg/L at LF6MW-16 to 35,000 µg/L at LF6TW-35. This suggests that sulfate does not compete as an electron acceptor in reductive dechlorination.

ORP levels in 2022 were generally negative across the site, except for wells LF6TW-35, LF6TW-36, LF6TW-38, and LF6VMW-26, with the negative values ranging from -121 mV at LF6MW-16 to -1 mV at LF6MW-17. DO levels across much of the plume were below 0.5 mg/L except for LF6MW-16 (0.94 mg/L) and LF6VMW-26 (5.95 mg/L). The pH levels varied between 6.21 and 7.56 SU, which is considered optimal for reductive dechlorination (the highest microbial dechlorination rate is normally observed in the near-neutral pH range of 6.5 to 7.5 SU and maintaining pH between 6 to 8 SU is typically recommended).

Based upon dissolved gas analysis, dechlorination is occurring via methanogenesis as methane is detected without ethene. Degradation of TCE and cis-1,2-DCE is still occurring in LF6MW-16 from the July 2018 injection of sodium lactate and EVO as evidenced by TCE and cis-1,2-DCE concentrations continuing to fall and VC concentrations still drastically increasing. The July 2018 injection provided an immediate increase in electron donors (from the sodium lactate) and has also provided electron donors as the EVO ferments.

4.5.1 Trend Charts

Trend charts for TCE; cis-1,2-DCE; and VC in monitoring wells LF6MW-16, LF6MW-17, and LF6MW-20 are provided as **Figure 4-4** through **Figure 4-6**, respectively. Well locations are shown on **Figure 4-1**.

The trend charts show an overall decreasing trend in TCE results between 2006 and 2022. As this parent compound breaks down, concentrations of cis-1,2-DCE and VC fluctuate and eventually decrease. Concentrations of VC in LF6MW-16 have increased since 2015. In LF6MW-17 and LF6MW-20, VC concentrations increased from 2018 to 2020, and decreased in 2022.

4.5.2 Data Validation Summary

Minor QC issues identified during the data validation of the laboratory results included: headspace for samples LF6MW-16-0822, WL-LF6TW-34-0822, and LF6MW-16-0822; field duplicate RPD outliers for methane and TCE; MS percent recovery outlier for bromomethane; MS/MSD RPD outlier for bromomethane; holding time violation for VOCs for sample WL-LF6TW-33-0822; and MS percent recovery outlier for sulfate.

Due to these minor issues, the following results have been reported with the associated qualifiers. Reported results for volatiles for samples LF6MW-16-0822, LF6VMW-13R-0822, LF6VMW-13RD-0822, and LF6TW-36-0822 have been qualified as estimated (flagged 'J/UJ') due

to headspace. Reported results for TCE for field duplicate pair (LF6MW-16-0822 and LF6MW-16-0822-A) have been qualified as estimated (flagged 'J') due to RPD outlier.

Reported result for bromomethane for parent sample LF6TW-33-0822 has been qualified as estimated (flagged 'UJ') due to MS percent recovery outlier. Reported result for TCE for sample LF6TW-33-0822 has been qualified as estimated (flagged 'J') due to holding time violation.

Reported results for methane for field duplicate pair (LF6MW-16-0822 and LF6MW-16-0822-A) have been qualified as estimated (flagged 'J') due to field duplicate RPD outlier. The reported sulfate result for parent sample LF6TW-33-0822 has been qualified as estimated due to MS/MSD recovery outlier. All data were determined to be usable as qualified.

4.6 Conclusions

Historically, a highly anaerobic groundwater zone of methanogenic conditions existed at SD052-04. Injections of sodium lactate and EVO in July 2018 augmented the supply of electron donors and helped to maintain the methanogenic conditions. The concentrations of TCE; cis-1,2-DCE; and VC have decreased in hotspot wells LF6MW-17 and LF6MW-20, while LF6MW-16 continues to demonstrate increasing VC concentrations with TCE and cis-1,2-DCE concentrations decreasing. No VOC concentrations were detected in exceedance of NYSDEC AWQ S/GV in surface water samples. Downgradient monitoring well LF6MW-39 continues to show exceedances of cis-1,2-DCE. Downgradient monitoring wells LF6MW-13RD and LF6MW-39 continue to exhibit the exceedances of cis-1,2-DCE and VC first seen in 2020.

4.7 Recommendations

Following evaluation of the 2022 data, the sampling plan at SD052-04 should proceed on a biennial basis to next occur in Fall 2024. Sampling should be conducted at the following 13 monitoring well locations and one surface water location consistent with the 2022 event and as described in **Table 4-3**:

- Upgradient monitoring wells LF6TW-34, LF6TW-33, and LF6TW-35
- Hotspot monitoring wells LF6MW-12, LF6MW-16, LF6MW-17, and LF6MW-20
- Downgradient monitoring wells LF6TW-36, LF6TW-38, LF6VMW-26, LF6MW-39, LF6VMW-13R, and LF6MW-13RD
- Three Mile Creek surface water sampling location LF6-SW1PM

A site assessment report will be prepared to address remediation progress at the site and will include a remediation timeline, site status, and an evaluation of the current remediation methods.

5 SD052-05 BUILDING 817/WSA

5.1 Site Background

Site SD052-05 is the Building 817/WSA located on the north side of the main runway between Building 817 and the culverted section of SMC, south of the former WSA (**Figure 5-1**). Building 817 was formerly used for electronic parts maintenance. The site COCs exceeding NYSDEC AWQ S/GV are tetrachloroethane (PCE); TCE; cis-1,2-DCE; and VC. Site groundwater flows in a south-southwesterly direction toward the culverted section of SMC. The contaminated aquifer is composed of relatively uniform fine sands that begin 5 feet bgs and extend to shale bedrock at approximately 20 to 25 feet bgs. Contamination has not been found in the bedrock. Groundwater velocities at this site have been estimated as high as 110 feet per year (FPM, July 2014).

5.2 Remedial Action Summary

The selected remedy for Site SD052-05 is enhanced bioremediation. As listed in the Final RAWP (Parsons, July 2008), this process is intended to increase biodegradation of the groundwater contaminants by injecting EVO into the subsurface. The EVO increases the biological breakdown of the chemicals, thereby reducing the concentration of contaminants.

In July 2008 and again in August 2010, EVO was injected at Site SD052-05 in injection wells B817IW-1 through B817IW-8. These injection wells are in a row approximately 10 feet downgradient of the northwestern corner of Building 817

In June 2017, injections were implemented south of Building 817 through the center of the plume and included a mixture EVO, an inoculum of DHC culture, and buffer. This mix was injected into the groundwater via seven DPT injection locations and two previously installed injection wells (WSA-IW03 and WSA-IW04). A summary of the ERD injections, by location, at site SD052-05 can be found in the 2017 PM Report (Bhate, June 2018). The SD052-05 design presented within the Final Remedial Optimization Work Plan (Bhate, March 2017) called for eight DPT injection locations. Due to field issues with injectant daylighting at the ground surface, four of the originally proposed injection points were not advanced (817IP-01, 817IP-03, 817IP-05, and 817IP-06), but rather supplemented with three offset DPT locations (817IP-09, 817IP-10, and 817IP-11) along with two previously installed injection wells (WSA-IW03 and WSA-IW04), located on the north side of Perimeter Road.

The DPT injection points 817IP-02, 817IP-04, and 817IP-07 through 817IP-11 were advanced near monitoring wells WSAMW-16, WSAVMW-17, WSAMW-18, and WSAMW-19. Additionally, injection wells 817IW-03 and 817IW-04 are near monitoring well WSAMW-16. The seven DPT injection points and two previously installed injection well locations where ERD treatment was performed in June 2017 are shown on **Figure 5-1**. Also shown on **Figure 5-1** are the four DPT injection points that were not advanced due to injectant daylighting issues. The temporary injection locations were installed by advancing 2.125-inch outer diameter DPT probe rods equipped with expendable points. Once the probe rods reached the target injection depth, the tool string was retracted, deploying the expendable point, thus allowing injectant to be pumped

through the probe rods and applied to the target depth intervals in the subsurface. Application of injectant into previously installed injection wells was accomplished by adding a threaded fitting to each wellhead, thus allowing injectant to be pumped under pressure down-hole and out into the formation through the well's screened interval. Batches of injectant were mixed in 250-gallon tanks and conveyed down-hole via a Moyno® pump. A summary of the ERD injections at Site SD052-05 can be found in the 2017 PM Report (Bhate, June 2018).

5.3 PM Sampling Plan

The 2022 PM sampling was conducted to monitor the progress of enhanced bioremediation at the site and included nine monitoring wells (817MW-2, 817MW-3, WSAMW-18, WSAMW-16, WSAMW-19, WSAVMW-17, WSAMW-23, WSAMW-21, and WSAMW-9) as shown on **Figure 5-1**. Samples were analyzed for VOCs, dissolved gases, DOC, TOC, and sulfate.

Consistent with prior events, surface water was not sampled in 2022 based on the historical lack of NYSDEC AWQ S/GV exceedances in downgradient monitoring well WSAMW-9. Two manholes located within the plume (MH-1 and MH-2) were visually inspected for signs of groundwater infiltrating the vaults and entering the storm water system; no indication of infiltration was observed.

5.4 PM Results

The 2022 PM analytical data for site COCs (PCE; TCE; cis-1,2-DCE; and VC) and methane are summarized below and in **Table 5-1**. Water quality parameters (ORP, DO, and pH) are also presented in **Table 5-1**. Monitoring wells are presented from upgradient/head of the contaminant plume to downgradient/toe of the plume near the culverted section of SMC; well locations are shown on **Figure 5-1**. The approximate CVOC plumes are included as **Figure 5-2**.

Depth to water measurements and calculated groundwater elevations are provided in **Table 5-2**. The potentiometric surface map is included as **Figure 5-3**.

- Monitoring well 817MW-2: PCE (0.34 J µg/L) was detected below NYSDEC AWQ S/GV (5 µg/L) as compared to non-detect (at 0.4 µg/L) in 2020; TCE (1.7 µg/L) was detected below NYSDEC AWQ S/GV (5 µg/L) representing an increase from non-detect results in 2020; cis-1,2-DCE (5 µg/L) was detected at the NYSDEC AWQ S/GV (5 µg/L) representing an increase from 2020 results (3.1 µg/L); and VC was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well 817MW-3: PCE was non-detect in 2022 consistent with 2020 reporting; TCE (2.4 µg/L) was detected below NYSDEC AWQ S/GV representing an increase from 2020 results (1.7 µg/L); cis-1,2-DCE (5.8 µg/L) was detected above the NYSDEC AWQ S/GV representing a decrease from 2020 results (8.9 µg/L); and VC was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well WSAMW-18: PCE (12.5 µg/L) was detected above NYSDEC AWQ S/GV consistent with 2020 results (13 µg/L); TCE (20.3 µg/L) was detected above NYSDEC AWQ S/GV representing an increase from 2020 results (10 µg/L); cis-1,2-DCE (3.1 µg/L) was

detected below NYSDEC AWQ S/GV representing a decrease from 2020 results (23 µg/L); and VC was reported as non-detect at 0.5 µg/L representing no significant change from 2020 results (0.31 J µg/L).

- Monitoring well WSAMW-16: PCE (7.7 J µg/L normal/8.4 J µg/L field duplicate) was detected above NYSDEC AWQ S/GV consistent with 2020 results (7.9 µg/L/7.1 µg/L); TCE (23.9 J µg/L/23.9 J µg/L) was detected above NYSDEC AWQ S/GV representing an increase from 2020 results (10 µg/L/9.8 µg/L); cis-1,2-DCE (47.7 J µg/L/50.9 J µg/L) was detected above NYSDEC AWQ S/GV representing an increase from 2020 results (27 µg/L/27 µg/L); and VC was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well WSAMW-19: PCE was non-detect in 2022 representing a decrease from 2020 results (8.3 µg/L); TCE (5.3 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (30 µg/L); cis-1,2-DCE (49.1 µg/L) was detected above NYSDEC AWQ S/GV representing an increase from 2020 results (43 µg/L); and VC was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well WSAVMW-17: PCE was reported as non-detect at 0.5 µg/L representing no significant change from 2020 results (0.26 J µg/L); TCE was reported as non-detect at 0.5 µg/L representing no significant change from 2020 results (0.39 J µg/L); cis-1,2-DCE (35.3 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (42 µg/L); and VC (14.7 µg/L) was detected above NYSDEC AWQ S/GV representing a significant increase from non-detect results in 2020.
- Monitoring well WSAMW-23 (cross-gradient from WSAVMW-17): All site COCs were non-detect in 2022 consistent with 2020 reporting.
- Monitoring well WSAMW-21: PCE was non-detect in 2022 consistent with 2020 reporting; TCE was non-detect representing a decrease from 2020 reporting (1.4 µg/L); cis-1,2-DCE (1.3 µg/L) was detected below the NYSDEC AWQ S/GV representing a decrease from 2020 results (3.2 µg/L); and VC was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well WSAMW-9: All site COCs were non-detect in 2022 consistent with 2020 reporting.

5.5 Analysis and Discussion

Upgradient monitoring wells 817MW-2 and 817MW-3 continue to exhibit PCE and TCE at concentrations below their NYSDEC AWQ S/GV suggesting minimal source material remains. Concentrations of cis-1,2-DCE are present in these wells at or slightly above NYSDEC AWQ S/GV; VC remains non-detect.

Progressing downgradient, monitoring wells WSAMW-18 and WSAMW-16 showed the highest concentrations of PCE and TCE in 2022 above their NYSDEC AWQ S/GV with WSAMW-16 having the highest cis-1,2-DCE concentration detected. Degradation product VC remained non-detect at these locations. Monitoring well WSAMW-19, approximately 100 feet downgradient of WSAMW-16, demonstrated TCE above NYSDEC AWQ S/GV. Similar concentrations of cis-1,2-DCE were observed in WSAMW-16 and WSAMW-19.

PCE and TCE concentrations in monitoring well WSAVMW-17, approximately 215 feet downgradient of WSAMW-16, were similar in 2022 (non-detect) compared to 2020 results (estimated concentrations), cis-1,2-DCE concentration decreased from 2020 to 2022. VC, historically non-detect or at a concentration below NYSDEC AWQ S/GV since 2006 at WSAMW-17, showed a significant increase from 2020 reporting. Monitoring well WSAMW-23, cross-gradient from WSAVMW-17, was non-detect for all site COCs.

Site COCs in downgradient monitoring wells WSAMW-21 and WSAMW-9 were non-detect, or were reported below NYSDEC AWQ S/GV with decreasing concentrations compared to 2020 results, confirming that contamination is not impacting SMC.

Methane was detected at all monitoring wells with the highest concentration reported at WSAMW-16 (12,000 µg/L normal/10,100 µg/L field duplicate). Methane levels decreased from 2020 in all wells.

At the monitoring wells in and around the plume, ORP levels were generally negative and DO levels were generally near-anaerobic to anaerobic suggesting that reducing conditions are present and therefore methane production is occurring.

DOC levels were low ranging from 450 J µg/L in WSAMW-21 to 1,500 µg/L in WSAMW-9. Sulfate levels ranged from 660 J µg/L in WSAVMW-17 to 6,700 µg/L in WSAMW-9 while being non-detected in 817MW-2, WSAMW-16, and WSAMW-21. Results are provided in **Appendix A**.

5.5.1 Trend Charts

Trend charts for PCE; TCE; cis-1,2-DCE; and VC in monitoring wells WSAMW-16, WSAVMW-17, WSAMW-18, WSAMW-19, and WSAMW-21 are provided as **Figure 5-4** through **Figure 5-8**, respectively. Well locations are shown on **Figure 5-1**.

Following the June 2017 injections, a large decrease in the concentrations of both PCE and TCE, paired with a large increase in their daughter product, cis-1,2-DCE, indicates that degradation of the VOCs throughout the plume is occurring. The VOC degradation is best illustrated in the trend charts for WSAVMW-17 (**Figure 5-5**) and WSAMW-21 (**Figure 5-8**) which shows the PCE and TCE concentrations falling well below the NYSDEC AWQ S/GV and the concentration of degradation product cis-1,2-DCE rapidly increasing and then drastically declining as a result of TCE and PCE mass being sufficiently reduced.

Monitoring well WSAMW-19 (**Figure 5-7**) displays a degradation trend for TCE and PCE and an increasing concentration trend for cis-1,2-DCE. Future sampling results for WSAMW-19 will most likely show the completed degradation of TCE and PCE with the daughter product cis-1,2-DCE declining. However, these trends were not seen in monitoring well WSAMW-16 where all three VOCs are displaying an increasing trend (**Figure 5-4**). Monitoring well WSAMW-18 (**Figure 5-6**) differed as well with an increasing TCE concentration and decreasing PCE and cis-1,2-DCE concentrations.

5.5.2 Data Validation Summary

Minor QC issues identified during the data validation of the laboratory results included headspace in volatile vials for samples WSA-MW16-0822, WSA-MW16-0822-A (duplicate sample of WSA-MW16-0822), WSA-MW9-0822, and WSA-TB01-0822-C (trip blank); laboratory blank contamination (2-butanone); laboratory control sample (LCS) recovery outliers; and MS/MSD recovery outliers.

No reported results have been qualified due to the blank contamination, LCS recovery or MS/MSD recovery outliers. Reported results for samples WSA-MW16-0822, WSA-MW16-0822-A, WSA-MW9-0822, and WSA-TB01-0822-C have been qualified as estimated (flagged 'J/UJ') due to headspace. All the data were determined to be usable as qualified.

5.6 Conclusions

Overall reductions in PCE and TCE concentrations with an increase in degradation product cis-1,2-DCE have been observed at WSAMW-18, WSAMW-16, WSAMW-19, WSAVMW-17, and WSAMW-21 since the EVO injections conducted in 2008, 2010, 2013, and 2017. Downgradient monitoring well WSAVMW-17 is the only location with VC observed with an absence of PCE and TCE. The lack of VC detection in the upgradient wells and presence of VC in downgradient well WSAVMW-17, paired with the presence of elevated methane levels, indicates that CVOC degradation of PCE and TCE is progressing via methanogenesis.

However, since the 2018 and 2020 monitoring events, PCE and TCE concentrations in WSAMW-18 and WSAMW-16, the most upgradient wells to be targeted by the 2017 EVO injections, are showing increasing PCE and TCE contaminant trends indicating that the bioremediation injectates are being depleted and/or migrating downgradient as expected. This is supported by the order of magnitude decrease of cis-1,2-DCE and three-order of magnitude decrease in methane concentration (10,000 µg/L to 9 µg/L) from the 2020 to 2022 monitoring events observed in WSAMW-18.

The continued absence of all site COCs since 2006 in the most downgradient well WSAMW-9 (**Appendix A-5**), indicates that SMC is not being impacted by contaminant migration from Site SD052-05, in compliance with the RAO.

5.7 Recommendations

Following evaluation of the 2022 data, the sampling plan should proceed on a biennial basis to next occur in Fall 2024. Sampling should be conducted at the following nine monitoring well locations consistent with the 2022 event and as described in **Table 5-3:**

- Source area/head of plume monitoring wells 817MW-2, 817MW-3, WSAMW-18, and WSAMW-16
- Mid-plume monitoring wells WSAMW-19 and WSAVMW-17
- Downgradient monitoring wells WSAMW-23, WSAMW-21, and WSAMW-9

- Surface water sampling at SMC is not recommended based on absence of site COC detected at WSAMW-9 since 2006 (**Appendix A-5**)

A site assessment report will be prepared to address remediation progress at the site and will include a remediation timeline, site status, and an evaluation of the current remediation methods.

6 SS062 AOC 9 WSA LANDFILL

6.1 Site Background

Site SS062, also known as AOC 9, is a grass-covered area in the southwest portion of the former WSA with a site boundary approximately 1,500 feet long and 650 feet wide (see **Figure 6-1**). The site is located northwest of the runway and extends into the WSA to the northeast. Perimeter Road runs through the center of the site and an open section of SMC passes through the southwestern edge of the site.

Site SS062 is currently inactive, and access is somewhat restricted by Perimeter Road Gates 4 and 11. The southern portion of this area is expected to remain vacant in the future, as it is situated within the restricted flightline area and acts as a buffer zone between the runway and development in adjacent areas. The northern portion of the site extends into the former WSA and is zoned as a non-residential, industrial area.

Two munitions storage bunkers were erected between Perimeter Road and SMC in the early 1950s. One of the bunkers (also referred to as igloos) was removed in the late 1970s or early 1980s (before 1981), and the other bunker was removed in 1992. Although the bunkers were initially used for munitions storage, they were later used to store hazardous materials (Tetra Tech, September 1994). The locations of these bunkers are presented on **Figure 6-1**.

The saturated zone north of Perimeter Road is composed of silty, fine- to medium-grained sands with little coarse sand and discontinuous gravel seams (EEEPC, February 2007). Groundwater is encountered at approximately 3 feet bgs and extends to approximately 28 feet bgs. South of Perimeter Road, the water table is shallower and encountered at approximately 1 foot bgs and extends to approximately 18 feet bgs. The groundwater gradient is generally to the southwest flowing from Building 917 toward Building 913 and eventually continuing in a southwesterly direction toward SMC. The seepage velocity has been calculated at approximately 87.5 feet per year (EEEPC, April 2016). The saturated soils lie on top of the dense consolidated till layer which gives refusal to DPT drilling. The till is a minimum of 5 feet thick and overlies the Utica Shale (EEEPC, February 2007). COCs have not been found in the till/Utica Shale (bedrock) at the site (EEEPC, August 2002). The plume is approximately 75 feet wide and 1,100 feet long extending from approximately 200 feet northeast of Building 913 (upgradient edge) to SMC (downgradient edge). The primary site COCs detected above NYSDEC AWQ S/GV are benzene; chlorobenzene (CB); 1,2-dichlorobenzene (DCB); 1,4-DCB; and TCE.

The results of the AOC 9 pre-design investigation (EEEPC, November 2007) indicated that a potential source location of CB was present upgradient of Building 913 and downgradient of Building 917. This source location was based on the maximum CB groundwater concentration found in a sample collected from temporary well AOC9TW-39 at 14,400 µg/L in November 2006. AOC9TW-39 was located approximately 20 feet northwest of AOC9MW-19 (Bhate, June 2019).

The Final ROD (EEEPC, July 2010) for site SS062, dated July 2010, was issued by the Air Force in August 2010 and signed by the USEPA in September 2010. The selected remedy for AOC 9 included removal of the source area through excavation of contaminated soil, polishing with

oxidant in the excavation, treatment of contaminated groundwater using chemical oxidation and enhanced aerobic bioremediation, land use controls, and natural processes (attenuation).

6.2 Remedial Action Summary

In 2010, Parsons performed an excavation (shown on **Figure 6-1**) at the AOC 9 Site as detailed in the approved RAWP (Parsons, July 2010). In addition, as a polishing step, a sodium persulfate oxidant (Klozur®) with an iron chelate activator (Dissolvine®) was applied to the bottom of the excavation to oxidize low-level residual contamination.

To enhance aerobic bioremediation of the contaminated groundwater plume, PermeOx® Plus was injected into the aquifer in November 2013. Injections were performed in general accordance with the RAWP Addendum (Parsons, September 2013) and are documented in the April 2014 LTM Data Summary Report (EEEPC, January 2015). The injections were performed in the southwestern portion of the remedial excavation area immediately downgradient of the former source area between AOC9MW-14 and AOC9MW-19.

In June 2017, ISCO injections using Oxygen BioChem® (OBC®) were implemented along a portion of the CB contaminant plume to the southwest of Buildings 912 and 913. Implementation of the ISCO treatment at site SS062 included injections of OBC® batched with water into the groundwater via seven DPT injection locations. The details from the June 2017 injections can be found in the 2017 PM Report (Bhate, June 2018).

In July 2018, 15 DPT injection points (SS062IP-12 through SS062IP-26) were advanced within the CB/benzene plume and OBC® was delivered to the subsurface through these DPT points. Details of the July 2018 injections can be found in the 2018 PM Report (Bhate, October 2019).

A supplemental investigation was conducted in Fall 2022, focusing on the upgradient portion of the contaminant plume, to further delineate the source area and to collect data necessary to update the current conceptual site model (CSM). These activities included DPT soil borings, temporary monitoring well installation and abandonment, monitoring well installation, and groundwater sampling. These activities will be discussed and assessed in a separate data assessment/CSM update.

6.3 PM Sampling Plan

The 2022 PM sampling was conducted to monitor the progress of the contaminant removal, excavation oxidation, chemical oxidation, enhanced bioremediation, and MNA methods of remediation at the site and included six monitoring wells (AOC9MW-07, AOC9MW-14, AOC9MW-15, AOC9MW-17, AOC9MW-18, and AOC9MW-19) and two surface water locations (AOC9-SW02 and AOC9SW-03) as shown on **Figure 6-1**. Samples were analyzed for VOCs.

6.4 PM Results

The 2022 PM analytical data for site COCs (benzene; CB; 1,2-DCB; 1,4-DCB; and TCE) compared to prior sampling results are summarized below and in **Table 6-1**. Water quality parameters (ORP, DO, and pH) are presented in **Table 6-1**. Results are presented from the upgradient/head of the

contaminant plume to the downgradient/toe of the contaminant plume near SMC; locations are shown on **Figure 6-1**. The approximate VOC plumes are included on **Figure 6-2**.

Depth to water measurements and calculated groundwater elevations are provided in **Table 6-2**. The potentiometric surface map is included as **Figure 6-3**.

- Monitoring well AOC9MW-18: All site COCs were non-detect in 2022 consistent with 2020 reporting.
- Monitoring well AOC9MW-19: Benzene was non-detect (10 U µg/L normal/10 U µg/L field duplicate) compared to 2020 results (1.3 J D µg/L); CB (1,030 µg/L/1,050 µg/L) was detected above NYSDEC AWQ S/GV (5 µg/L) representing an increase from 2020 results (390 D µg/L); 1,2-DCB was non-detect (10 U µg/L/10 U µg/L) compared to 2020 results (2.7 J D µg/L); 1,4-DCB (16.5 J µg/L/16.1 J µg/L) was detected above NYSDEC AWQ S/GV (3 µg/L) representing an increase from 2020 results (8.9 D µg/L); and TCE was non-detect (10 U µg/L/10 U µg/L) consistent with 2020 results (1.6 U µg/L). It should be noted that the limits of detection for this sample were higher than normal due to a 20x dilution due to CB concentrations. This resulted in non-detect results for benzene, 1,2-DCB, and TCE being reported at concentrations above NYSDEC AWQ S/GV.
- Monitoring well AOC9MW-14: Benzene was non-detect representing a decrease from 2020 results (6.5 D µg/L/6 D µg/L); CB (24 µg/L) was reported above NYSDEC AWQ S/GV representing a decrease from 2020 results (450 D µg/L/430 D µg/L); 1,2-DCB (1.6 µg/L) was detected below NYSDEC AWQ S/GV (3 µg/L) representing a decrease from 2020 results (9.1 D µg/L/8.6 D µg/L); 1,4-DCB (2.7 µg/L) was detected below NYSDEC AWQ S/GV representing a decrease from 2020 results (11 D µg/L/11 D µg/L); and TCE was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well AOC9MW-15: Benzene was non-detect representing a decrease from 2020 results (6.2 µg/L); CB (31.5 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (56 µg/L); 1,2-DCB (3.4 µg/L) was detected below NYSDEC AWQ S/GV representing a decrease from 2020 results (5.5 µg/L); 1,4-DCB was non-detect representing a decrease from 2020 results (8 µg/L); and TCE was non-detect in 2022 consistent with 2020 reporting.
- Monitoring well AOC9MW-17: Benzene (0.57 J µg/L) was detected below NYSDEC AWQ S/GV (1 µg/L) consistent with 2020 reporting (0.73 J µg/L); CB (52.8 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (70 µg/L); 1,2-DCB (19.6 µg/L) was reported above NYSDEC AWQ S/GV representing a decrease from 2020 results (27 µg/L); 1,4-DCB was non-detect representing a decrease from 2020 results (5 µg/L); and TCE (10 µg/L) was detected above NYSDEC AWQ S/GV (5 µg/L) representing a decrease from 2020 results (14 µg/L).
- Monitoring well AOC9MW-07: Benzene (0.63 J µg/L) was detected below NYSDEC AWQ S/GV consistent with 2020 results (0.35 J µg/L); CB (31.5 µg/L) was detected above NYSDEC AWQ S/GV representing a decrease from 2020 results (51 µg/L); 1,2-DCB (10.3 µg/L) was detected above NYSDEC AWQ S/GV consistent with 2020 results (9.6 µg/L); 1,4-DCB

(6.8 µg/L) was detected above NYSDEC AWQ S/GV consistent with 2020 results (7.2 µg/L); and TCE (3 µg/L) was detected below NYSDEC AWQ S/GV also consistent with 2020 results (2.2 µg/L).

- Surface water AOC9-SW02 (within SMC slightly upstream from AOC9-MW07): All COCs were non-detect in 2022 consistent with 2020 reporting.
- Surface water AOC9-SW03 (within SMC downstream from AOC9-MW07): CB (0.81 J µg/L) was detected below NYSDEC AWQ S/GV and represents an increase from non-detect result in 2020; all other COCs were non-detect in 2022 consistent with 2020 reporting.

6.5 Analysis and Discussion

The most frequently detected VOC at site SS062 continues to be CB. The target concentration for CB is 5 µg/L as presented in the UFP-QAPP (Bhate, April 2022). The highest detection of CB in 2022 was found in monitoring well AOC9MW-19 at 1,050 µg/L (duplicate sample), well above the concentration found in 2020 of 390 D µg/L. All other monitoring wells detected CB exceedances, except for AOC9MW-18 where there was no detection. However, CB concentrations for these wells have all decreased from the previous sampling event in 2020.

Benzene was only detected in monitoring wells AOC9MW-17 and AOC9MW-07 with detections below the NYSDEC AWQ S/GV. Benzene concentrations at AOC9MW-15 and AOC9MW-14 exceeded criterium in 2020 but were non-detect in 2022. TCE was detected in AOC9MW-17 and AOC9MW-07; however, only the concentration in AOC9MW-17 was above the NYSDEC AWQ S/GV at 10 µg/L.

Monitoring well AOC9MW-07 revealed COC exceedance of CB as well as exceedances of 1,2-DCB and 1,4-DCB. The CB concentration exceeded the NYSDEC AWQ S/GV of 5 µg/L with a detection of 31.5 µg/L, a decrease from 51 µg/L reported in 2020. This is similar to that of nearby monitoring well AOC9MW-17 where there was a decrease of CB to 52.8 µg/L from 70 µg/L.

Results from surface water sample locations AOC9-SW02 and AOC9-SW03 continue to indicate that groundwater contaminants are not adversely impacting SMC.

The groundwater within the site SS062 plume is neutral with pH ranging from 6.10 to 6.90, the ORP ranged between -97 mV to 64 mV, and the DO ranged from 0.37 mg/L to 0.65 mg/L.

6.5.1 Trend Charts

Trend charts for benzene; CB; 1,2-DCB; and 1,4-DCB in monitoring wells AOC9MW-14, AOCMW-15, AOC9MW-17, and AOC9MW-19 are provided as **Figure 6-4** through **Figure 6-7**, respectively. Well locations are shown on **Figure 6-1**.

Source area excavation followed by PermeOx® injection reduced VOCs in AOC9MW-19 at the head of the contaminant plume in 2018 to concentrations below NYSDEC AWQ S/GV. However, CB and 1,4-DCB concentrations have significantly increased since then to concentrations not previously observed (**Figure 6-7**). Following an increase in benzene and 1,2-DCB concentrations between 2016 and 2018, concentrations have since decreased to undetectable concentration

levels at this location. Trends for wells AOC9MW-14, AOC9MW-15, and AOC9MW-17 all showed a reduction in VOC concentrations in the 2022 PM sampling.

6.5.2 Data Validation Summary

The only QC issue identified during the data validation of the laboratory results was holding time violation for volatiles for sample AOC9-SW2PM-0822. The reported result for CB for sample AOC9-SW2PM-0822 was qualified as estimated (flagged 'UJ') due to the holding time violation. All the data were determined to be usable as qualified in the data validation report.

6.6 Conclusions

As stated in the ROD, the selected remedy at Site SS062 includes removal of the source area through excavation of contaminated soil, treatment of contaminated groundwater using chemical oxidation, and land use controls. The excavation of the source area is the primary treatment for groundwater at this site (EEEPC, July 2010). In conjunction with prior source area soil removal and remedial injections for treatment of groundwater, the results from the 2022 PM support achievement of the groundwater RAOs identified in **Table 1-1**.

Although site COCs are detected in groundwater at the most downgradient monitoring well AOC9MW-07, adjacent to SMC at concentrations above NYSDEC AWQ S/GV, VOCs continue to be non-detect at the two sampled SMC surface water locations. This indicates that contaminant migration from Site SS062, in compliance with the RAO, is not adversely impacting surface water in SMC.

The spike of CB and 1,4-DCB concentrations observed at AOC9MW-19 indicates that unexcavated contaminated soils are still present in the source area. Nonetheless, degradation of the site COCs is ongoing within the downgradient portion of the plume.

6.7 Recommendations

Following evaluation of the 2022 data, the sampling plan should proceed on a biennial basis to next occur in Fall 2024. Sampling should be conducted at the six monitoring well locations and two surface water locations consistent with the 2022 and as described in **Table 6-3**.

- Upgradient monitoring well AOC9MW-18
- Source area monitoring well AOC9MW-19
- Mid-plume monitoring wells AOC9MW-14 and AOC9MW-15
- Downgradient/plume monitoring wells AOC9MW-17 and AOC9MW-07
- Surface water locations AOC9-SW02 and AOC9-SW03

A separate data assessment/CSM update will be prepared to evaluate the Fall 2022 investigation results and address remediation progress at the site. In addition to the CSM update, the assessment will include a remediation timeline, site status, and an evaluation of the current remediation methods.

ORP (mV)	---	119	25	-48	-65		3	194
DO (mg/L)	---	4.6	0.25	0.38	0.59		0.36	5.8
pH (SU)	---	6.34	6.28	6.43	6.2		6.5	5.22

NC = no criteria
ORP (mV) = oxidation reduction potential (millivolts
DO (mg/L) = dissolved oxygen (millligrams per liter)
pH (SU) = potential of hydrogen (standard units
J = estimated value
U = not detected; reported to limit of detectio
UJ = The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criter
µg/L = micrograms per liter
Bold analytical results indicate detectior
Red analytical results exceed NYSDEC AWQ S/GV
NYSDEC AWQ S/GV = New York State Department of Environmental Conservation, Division of Water Technical and Operational Guidance Series (1.1.1), Table 1 New York State Ambient Water Quality Standards and Guidance Values (June 1998); Addendum to June 1998 Division of Water Technical and Operational Guidance Series (TOGS) No. 1.1.1 (April 2000

Notes:
D - Dilution
B - The result for the analyte was detected in a blank sample.
F - Analyte was positively identified above the Method Detection Limit (MDL), but the concentration is below the Reporting Limit (RL).
J - Analyte was positively identified above the MDL, but the concentration is below the RL.
This replaces the F flag.
M - Matrix effect is present.
U - The analyte was analyzed for, but not detected. The value is at or below the MDL.
UJ - estimated non detect flag due to a QC discrepancy
VOCs - Volatile Organic Compounds
NS - Not Sampled
DOC - Dissolved Organic Carbon
TOC - Total Organic Carbon
ORP - Oxidation Reduction Potential
µg/L - Micrograms per liter, mg/L - milligrams per liter, mV - milliVolts
NYS - New York State
- Exceedance of the NYS Groundwater Standards or Guidance Values.
♦ - Denotes higher nominal value of duplicate sample result.
* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this COC.
- - No NYS Groundwater Standard available.

Notes:
Qualifiers:
B - The result for the analyte was detected in a blank sample.
F - Analyte was positively identified above the Method Detection Limit (MDL), but the concentration is below the Reporting Limit (RL).
J - Analyte was positively identified above the MDL, but the concentration is below the RL. Replaces the "F" flag.
U - The analyte was analyzed for, but not detected. The numerical value is at or below the MDL.
VOCs - Volatile Organic Compounds
µg/L - Micrograms per liter
NYS - New York State
- Exceedance of the NYS Groundwater Standards or Guidance Values.
* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this COC.
- - No NYS Groundwater Standard available.

pH	--	7.20	7.36	6.83	7.35	7.52	7.30

Notes:
Qualifiers:
B - The analyte was detected in a blank sample.
F - Analyte was positively identified above the Method Detection Limit (MDL), but the concentration is below the Reporting Limit (RL).

J - Analyte was positively identified above the MDL, but the concentration is below the RL. This replaces the F flag.

UB - considered artifacts of blank contamination and qualified non-detected.
U - The analyte was analyzed for, but not detected - numerical value is at or below the MDL.
UJ - Estimated non detect flag due to a QC discrepancy
ORP - Oxidation Reduction Potential
µg/L - Micrograms per liter
mg/L - Milligrams per liter
mV - millivolt
NYS - New York State
Shaded cells are exceedance of the NYS Groundwater Standards or Guidance Values.
♦ - Denotes higher nominal value of duplicate sample result.

* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this COC.
- - No NYS Groundwater Standard available.

Dissolved Oxygen (mg/L)	--	4.49	4.92	1.50	8.56	2.80	2.39	3.70
pH	--	7.47	7.60	8.21	7.64	7.76	7.81	7.41

Notes:
Qualifiers:
B - The analyte was detected in a blank sample.
F - Analyte was positively identified above the Method Detection Limit (MDL), but the concentration is below the Reporting Limit (RL).

J - Analyte was positively identified above the MDL, but the concentration is below the RL. This replaces the F flag.

UB - considered artifacts of blank contamination and qualified non-detected.
U - The analyte was analyzed for, but not detected - numerical value is at or below the MDL.
UJ - Estimated non detect flag due to a QC discrepancy
ORP - Oxidation Reduction Potential
µg/L - Micrograms per liter
mg/L - Milligrams per liter
mV - millivolt
NYS - New York State
Shaded cells are exceedance of the NYS Groundwater Standards or Guidance Values.
♦ - Denotes higher nominal value of duplicate sample result.

* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this COC.
- - No NYS Groundwater Standard available.

Notes:
Qualifiers:
B - The analyte was detected in a blank sample.
F - Analyte was positively identified above the Method Detection Limit (MDL), but the concentration is below the Reporting Limit (RL).

J - Analyte was positively identified above the MDL, but the concentration is below the RL. This replaces the F flag.

UB - considered artifacts of blank contamination and qualified non-detected.
U - The analyte was analyzed for, but not detected - numerical value is at or below the MDL.
UJ - Estimated non detect flag due to a QC discrepancy
ORP - Oxidation Reduction Potential
µg/L - Micrograms per liter
mg/L - Milligrams per liter
mV - millivolt
NYS - New York State
Shaded cells are exceedance of the NYS Groundwater Standards or Guidance Values.
♦ - Denotes higher nominal value of duplicate sample result.

* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this COC.
- - No NYS Groundwater Standard available.

pH	--	7.74	7.51	7.56	8.08		8.01

Notes:
Qualifiers:
B - The analyte was detected in a blank sample.
F - Analyte was positively identified above the Method Detection Limit (MDL), but the concentration is below the Reporting Limit (RL).

J - Analyte was positively identified above the MDL, but the concentration is below the RL. This replaces the F flag.

UB - considered artifacts of blank contamination and qualified non-detected.
U - The analyte was analyzed for, but not detected - numerical value is at or below the MDL.
UJ - Estimated non detect flag due to a QC discrepancy
ORP - Oxidation Reduction Potential
µg/L - Micrograms per liter
mg/L - Milligrams per liter
mV - millivolt
NYS - New York State
Shaded cells are exceedance of the NYS Groundwater Standards or Guidance Values.
♦ - Denotes higher nominal value of duplicate sample result.

* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this COC.
- - No NYS Groundwater Standard available.

pH	--	7.59	7.58	7.39	7.35	7.22	7.58

Notes:
Qualifiers:
B - The analyte was detected in a blank sample.
F - Analyte was positively identified above the Method Detection Limit (MDL), but the concentration is below the Reporting Limit (RL).

J - Analyte was positively identified above the MDL, but the concentration is below the RL. This replaces the F flag.

UB - considered artifacts of blank contamination and qualified non-detected.
U - The analyte was analyzed for, but not detected - numerical value is at or below the MDL.
UJ - Estimated non detect flag due to a QC discrepancy
ORP - Oxidation Reduction Potential
µg/L - Micrograms per liter
mg/L - Milligrams per liter
mV - millivolt
NYS - New York State
Shaded cells are exceedance of the NYS Groundwater Standards or Guidance Values.
♦ - Denotes higher nominal value of duplicate sample result.

* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this COC.
- - No NYS Groundwater Standard available.

Notes:
NC = no criteria
ORP (mV) = oxidation reduction potential (millivolts)
DO (mg/L) = dissolved oxygen (millligrams per liter)
pH (SU) = potential of hydrogen (standard units)
J = estimated value
U = not detected; reported to limit of detection
UJ = The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria
µg/L = micrograms per liter
Bold analytical results indicate detection
Red analytical results exceed NYSDEC AWQ S/GV
NYSDEC AWQ S/GV = New York State Department of Environmental Conservation, Division of Water Technical and Operational Guidance Series (1.1.1), Table 1 New York State Ambient Water Quality Standards and Guidance Values (June 1998); Addendum to June 1998 Division of Water Technical and Operational Guidance Series (TOGS) No. 1.1.1 (April 2000)

Notes:

Qualifiers:

B - The result for the analyte was detected in a blank sample.

D - dilution

F - Analyte was positively identified above the Method Detection Limit (MDL), but the concentration is below the Reporting Limit (RL).

J - Analyte was positively identified above the MDL, but the concentration is below the RL. This replaces the F flag.

UB - considered artifacts of blank contamination and qualified non-detected

U - The analyte was analyzed for, but not detected. The numerical value is at or below the MDL.

UJ - estimated non detect flag due to a QC discrepancy

VOCs - Volatile Organic Compounds

DOC - Dissolved Organic Carbon

ORP - Oxidation Reduciton Potential

NA - Not Analyzed or Not Applicable

µg/L - Micrograms per liter, mg/L - milligrams per liter, mV - millivolts

Exceedance of the New York State (NYS) Groundwater Standards or Guidance Values.

♦ - Denotes higher nominal value of duplicate sample result.

* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this COC.

- - No NYS Groundwater Standard available.

'r - The DO measurements are considered rejected. The sampling methodology at LF6 direct-push wells involves manual checkvalve purging which results in inaccurate DO readings.

This page intentionally left blank.

Notes:
NC = no criteria
ORP (mV) = oxidation reduction potential (millivolts)
DO (mg/L) = dissolved oxygen (millligrams per liter)
pH (SU) = potential of hydrogen (standard units)
J = estimated value
U = not detected; reported to limit of detection
UJ = The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria
µg/L = micrograms per liter
Bold analytical results indicate detection
Red analytical results exceed NYSDEC AWQ S/GV
NYSDEC AWQ S/GV = New York State Department of Environmental Conservation, Division of Water Technical and Operational Guidance Series (1.1.1), Table 1 New York State Ambient Water Quality Standards and Guidance Values (June 1998); Addendum to June 1998 Division of Water Technical and Operational Guidance Series (TOGS) No. 1.1.1 (April 2000)

pH	--	7.61	

Notes:
Qualifiers:
B - The result for the analyte was detected in a blank sample.
D - dilution
F - Analyte was positively identified above the Method Detection Limit (MDL), but the concentration is below the Reporting Limit (RL).

J - Analyte was positively identified above the MDL, but the concentration is below the RL. Replaces "F" flag.
UB - considered artifacts of blank contamination and qualified non-detected
U - The analyte was analyzed for, but not detected. The numerical value is at or below the MDL.
UJ - estimated non detect flag due to a QC discrepancy
NA - Not Analyzed or Not Applicable
DOC - Dissolved Organic Carbon
ORP - Oxidation reduction potential
µg/L - Micrograms per liter
mg/L - Milligrams per liter
mV - MilliVolts
NYS - New York State
- Exceedance of the NYS Groundwater Standards or Guidance Values.
♦ - Denotes higher nominal value of duplicate sample result.
* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this COC.
- - No NYS Groundwater Standard available.

Notes:

1 - Data presented under Reference 4 for MW19 is the most recent sampling data for TW39, which was in the same location as MW19. These results are presented for comparison.

Qualifiers:

J = Estimated concentration, D = Dilution, U = Analyte not detected, UB = Considered artifact of blank contamination & qualified non-detected, UJ = Estimated non-detect flag due to a quality control discrepancy

µg/L = Micrograms per liter
NA = Not applicable
- = Well not sampled

Shaded values denote hits exceeding the New York State Department of Environmental Conservation (NYSDEC) standard.

♦ - Denotes higher nominal value of duplicate sample result.

* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this chemical of concern.

1 - Data presented under Reference 4 for MW19 is the most recent sampling data for TW39, which was in the same location as MW19. These results are presented for comparison.

Qualifiers:

J = Estimated concentration, D = Dilution, U = Analyte not detected, UB = Considered artifact of blank contamination & qualified non-detected, UJ = Estimated non-detect flag due to a quality control discrepancy

µg/L = Micrograms per liter
NA = Not applicable
- = Well not sampled

Shaded values denote hits exceeding the New York State Department of Environmental Conservation (NYSDEC) standard.

♦ - Denotes higher nominal value of duplicate sample result.

* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this chemical of concern.

Notes:

1 - Data presented under Reference 4 for MW19 is the most recent sampling data for TW39, which was in the same location as MW19. These results are presented for comparison.

Qualifiers:
J = Estimated concentration, D = Dilution, U = Analyte not detected, UB = Considered artifact of blank contamination & qualified non-detected, UJ = Estimated non-detect flag due to a quality control discrepancy

µg/L = Micrograms per liter
NA = Not applicable
- = Well not sampled
Shaded values denote hits exceeding the New York State Department of Environmental Conservation (NYSDEC) standard.
♦ - Denotes higher nominal value of duplicate sample result.
* - The principal organic contaminant standard for groundwater of 5 µg/L applies to this chemical of concern.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S4VEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the DetailedDescription and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bhate Environmental Associates, Inc.; analyses were performed by SGS North America, Inc., Orlando, FL and were reported under sample delivery group (SDG) FA98455. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 68 results (12.50%) out of the 544 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
SW8260D	The laboratory noted MS/MSD RPD out of control.

October 30, 2022

Reviewed by Kathryn Cantone, Data Review Chemist, Synectics, Sacramento, CA

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

November 09, 2022

Reviewed by Evin McKinney, Senior Scientist, Synectics, Sacramento, CA

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method SW8260D, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
782VMW-121-0822-A (N)	Methyl tert-butyl ether (MTBE)	200.0	< 30	< 30	rpd	J/None	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate RPD for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
782VMW-121-0822 FA98455-5	N	Methyl tert-butyl ether (MTBE)	1.00	0.490 F	0.490 J	-	ug/l	D3/TR/P

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
782VMW-81-0822 (SD)	Bromomethane	37.41	< 19	< 19	rpd	J/None	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
D	MS RPD
D3	Field Duplicate RPD
P	Sample preservation/collection requirement not met.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were all samples documented correctly on the chain-of-custody (COC)?	•			
Did samples listed on the COCs match the sample labels?	•			
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?		•		The laboratory noted headspace in FA98455-5 larger than 6mm. Sample was qualified J-/UJ with a P reason code.
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		LOQs were raised above project specifications in association with undiluted and diluted analyses that reported non-detects and positive target analyte hits.
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?	•			
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	LCS only
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?		•		See QC outliers
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?		•		See QC outliers
Were reported sample concentrations within calibration range?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was instrument tuning completed every 12 hours during sample analysis?	•			

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)

Review Questions	Yes	No	NA	Comment
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			
Were CCVs run at the required frequency and within project acceptance criteria?	•			
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Were certificates of standard traceability and documentation of standard solution preparation provided?		•		
Were recalculation of QC Elements and Sample Results performed?	•			
Were Relative Retention Times (RRTs) within ± 0.06 RRT units and updated with the latest daily CCV?	•			
Were chromatograms checked for peak integration? (10% of automated integration and 100% of manual integrations)	•			
Were chromatograms checked for correct baseline/peak integration and possible interferences?	•			
Were qualitative ion mass present?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data recommended for exclusion in the data validation process?		•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the DetailedDescription and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bhate Environmental Associates, Inc.; analyses were performed by SGS North America, Inc., Orlando, FL and were reported under sample delivery group (SDG) FA98452. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Equipment Blank
- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 6 results (0.88%) out of the 680 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
SW8260D	The laboratory noted MS and CCV out of control.

October 27, 2022

Reviewed by Kathryn Cantone, Data Review Chemist, Synectics, Sacramento, CA

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

November 09, 2022

Reviewed by Evin McKinney, Senior Scientist, Synectics, Sacramento, CA

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method SW8260D, Equipment Blank

The purpose of equipment blanks is to determine the existence and magnitude of cross-contamination problems resulting from the process during sampling. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in equipment blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
775-EB01-0822-D (EB)	Toluene	3.500	< 0.3	< 1	ug/l	U/None*	V	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
775MW-6-0822 (MS)	1,3-Dichloropropane	75.00	80 - 118	80 - 118	percent	J/UJ	M	
775MW-6-0822 (SD)	1,3-Dichloropropane	78.00	80 - 118	80 - 118	percent	J/UJ	M	
775MW-6-0822 (MS)	4-Chlorotoluene	82.00	83 - 130	83 - 130	percent	J/UJ	M	
775MW-6-0822 (MS)	Bromobenzene	78.00	80 - 121	80 - 121	percent	J/UJ	M	
775MW-6-0822 (MS)	Bromomethane	58.00	59 - 143	59 - 143	percent	J/UJ	M	
775MW-6-0822 (MS)	Dibromochloromethane	77.00	78 - 122	78 - 122	percent	J/UJ	M	
775MW-6-0822 (MS)	n-Butylbenzene	75.00	79 - 126	79 - 126	percent	J/UJ	M	
775MW-6-0822 (SD)	n-Butylbenzene	77.00	79 - 126	79 - 126	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
775MW-6-0822 FA98452-2	N	1,3-Dichloropropane	1.00	0.500	0.500 UJ		ug/l	M
775MW-6-0822 FA98452-2	N	4-Chlorotoluene	1.00	0.500	0.500 UJ		ug/l	M
775MW-6-0822 FA98452-2	N	Bromobenzene	1.00	0.500	0.500 UJ		ug/l	M
775MW-6-0822 FA98452-2	N	Bromomethane	5.00	4.00	4.00 UJ		ug/l	M
775MW-6-0822 FA98452-2	N	Dibromochloromethane	1.00	0.500	0.500 UJ		ug/l	M
775MW-6-0822 FA98452-2	N	n-Butylbenzene	1.00	0.500	0.500 UJ		ug/l	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Table of All Qualified Results

Test Method: SW8260D		**Extraction Method: SW5030B**						
FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
775MW-6-0822 FA98452-2	N	1,3-Dichloropropane	1.00	0.500	0.500 UJ		ug/l	M
775MW-6-0822 FA98452-2	N	4-Chlorotoluene	1.00	0.500	0.500 UJ		ug/l	M
775MW-6-0822 FA98452-2	N	Bromobenzene	1.00	0.500	0.500 UJ		ug/l	M
775MW-6-0822 FA98452-2	N	Bromomethane	5.00	4.00	4.00 UJ		ug/l	M
775MW-6-0822 FA98452-2	N	Dibromochloromethane	1.00	0.500	0.500 UJ		ug/l	M
775MW-6-0822 FA98452-2	N	n-Butylbenzene	1.00	0.500	0.500 UJ		ug/l	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
M	MS Recovery
TR	Trace Level Detect
V	Equipment Blank

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)

Review Questions	Yes	No	NA	Comment
Were all samples documented correctly on the chain-of-custody (COC)?	•			
Did samples listed on the COCs match the sample labels?	•			
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		LOQs were raised above project specifications in association with undiluted analyses that reported non-detects and positive target analyte hits.
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?	•			
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?		•		See QC outliers
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	LCS only
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?		•		See QC outliers
Was the MS/MSD RPD within project acceptance limits?	•			
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was instrument tuning completed every 12 hours during sample analysis?	•			
Was the Calibration within project acceptance criteria?	•			

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)

Review Questions	Yes	No	NA	Comment
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			
Were CCVs run at the required frequency and within project acceptance criteria?		•		It was noted CCV out of control high, samples ND. No further action taken.
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?		•		CCV samples were outside control limits and samples were not re-analyzed.
Were any data recommended for exclusion in the data validation process?		•

Comments:

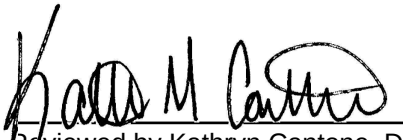
This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S4VEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final Basewide Uniform Federal Policy Quality Assurance Project Plan, Long Term Monitoring, Former Griffiss Air Force Base, Rome, New York, April 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bhate Environmental Associates, Inc.; analyses were performed by SGS North America, Inc., Orlando, FL and were reported under sample delivery group (SDG) FA98468. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.



- Lab Blank
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 206 results (28.07%) out of the 734 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Analytical Method	Data Reviewer Comment
RSK175	The laboratory noted that MS recoveries were outside control limits; however, non-SDG sample was used.
SW8260D	It was noted CCV/ECV/LCS/MS/MSD out of control.
SW9056A	It was noted the MS/MSD out of control.
SW9060A	No additional comments; see Checklist for detail.

December 10, 2022

Reviewed by Kathryn Cantone, Data Review Chemist, Synectics, Sacramento, CA

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Reviewed by Evin McKinney, Senior Scientist, Synectics, Sacramento, CA

December 15, 2022

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method SW8260D, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
V2P3568-MB (LB)	2-Butanone (MEK)	2.400	< 2	< 5	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
V2P3568-BS (BS)	Methyl tert-butyl ether (MTBE)	122.0	72 - 117	72 - 117	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW9056A, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
LF6MW-12-0822 (MS)	Sulfate	82.00	90 - 110	90 - 110	percent	J/UJ	M	
LF6MW-12-0822 (SD)	Sulfate	81.00	90 - 110	90 - 110	percent	J/UJ	M	
WL-LF6TW-38-0822 (MS)	Sulfate	80.00	90 - 110	90 - 110	percent	J/UJ	M	
WL-LF6TW-38-0822 (SD)	Sulfate	81.00	90 - 110	90 - 110	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

LF6MW-12-0822 FA98468-1	N	Sulfate	10.0	19.0	19.0 J	-	mg/l	M
WL-LF6TW-38-0822 FA98468-8	N	Sulfate	10.0	29.3	29.3 J	-	mg/l	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Table of All Qualified Results

Test Method: SW8260D		Extraction Method: SW5030B

WL-LF6TW-38-0822 FA98468-8	N	Sulfate	10.0	29.3	29.3 J	-	mg/l	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
C	LCS Recovery
L	Lab Blank
M	MS Recovery
P	Sample preservation/collection requirement not met.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: RSK175 (Dissolved Gas Analysis in Water Samples Using a GC Headspace Equilibrium Technique)				
Review Questions	Yes	No	NA	Comment
Were all samples documented correctly on the chain-of-custody (COC)?	•			
Did samples listed on the COCs match the sample labels?	•			
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?		•		Not SDG specific.
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?			•	
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	
Were reported sample concentrations within calibration range?	•			
Were Instrument Performace Checks (Degradation Checks) performed and within acceptace criteria?			•	
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			

Review Questions

Method: RSK175 (Dissolved Gas Analysis in Water Samples Using a GC Headspace Equilibrium Technique)				
Review Questions	Yes	No	NA	Comment
Were CCVs run at the required frequency and within project acceptance criteria?	•			
Were internal standard retention times and area criteria within method requirements?			•	
Were internal standards spiked for every sample, standard, and QC sample?			•	
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Was a Cleanup Procedure required (Cleanup Recovery Checks) verified and within acceptance limits?			•	
Was a Second Column/Detector used and the column difference within acceptance limits?			•	
Were certificates of standard traceability and documentation of standard solution preparation provided?		•		Lot numbers and expiration dates provided for standards/reagents, but no certificates for traceability provided. No further action.
Were recalculation of QC Elements and Sample Results performed?	•			
For internal standard calibration, were Relative Retention Times (RRTs) within ± 0.06 RRT units and updated with the latest daily CCV?			•	
Were chromatograms checked for peak integration when manually integrated?	•			
Were chromatograms checked for correct baseline/peak integration and possible interferences?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data recommended for exclusion in the data validation process?		•		

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were all samples documented correctly on the chain-of-custody (COC)?	•			
Did samples listed on the COCs match the sample labels?	•			
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?		•		The laboratory noted headspace in samples FA98468-4, 5 and 7 larger than 6mm. Samples were qualified J-/UJ.
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		Various compounds are reported with detections and non-detects at levels (LOQs) greater than the project PQGs. Additionally, it was noted that LOQs were greater than project PALs.
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?	•			
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		See QC outliers
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		See QC outliers
Was the LCS/LCSD RPD within project acceptance limits?			•	LCS only
Was a MS/MSD pair prepared with each batch?		•		Not SDG specific.
Were MS/MSD recoveries within project acceptance limits?			•	
Was the MS/MSD RPD within project acceptance limits?			•	
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?			•	
Were reported sample concentrations within calibration range?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was instrument tuning completed every 12 hours during sample analysis?		•		ECCV outside of 12 hr window for analytical run V2P3560. No action required.

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			
Were CCVs run at the required frequency and within project acceptance criteria?		•		It was noted various compounds out high for CCV/ECCV; however all associated samples ND. No further action.
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Were certificates of standard traceability and documentation of standard solution preparation provided?		•		Lot numbers and expiration dates provided for standards/reagents, but no certificates for traceability provided. No further action.
Were recalculation of QC Elements and Sample Results performed?	•			
Were Relative Retention Times (RRTs) within ± 0.06 RRT units and updated with the latest daily CCV?	•			
Were chromatograms checked for peak integration? (10% of automated integration and 100% of manual integrations)	•			
Were chromatograms checked for correct baseline/peak integration and possible interferences?	•			
Were qualitative ion mass present?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?		•		CCV and LCS samples were outside control limits and samples were not re-analyzed.
Were any data recommended for exclusion in the data validation process?		•

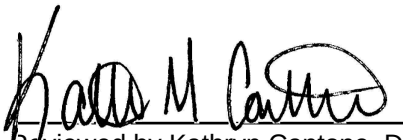
This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final Basewide Uniform Federal Policy Quality Assurance Project Plan, Long Term Monitoring, Former Griffiss Air Force Base, Rome, New York, April 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bhate Environmental Associates, Inc.; analyses were performed by SGS North America, Inc., Orlando, FL and were reported under sample delivery group (SDG) FA98517. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.



A total of 74 results (14.45%) out of the 512 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

Requested analysis on COC is "SW9056A (A)", but non-preserved bottles we received are only labeled for "SO4" analysis.

For sample -1, ID: "LF6MW-16-0822", all six vials received with headspace.
For sample -5, ID: "WL-LF6TW-34-0822", one vial received with headspace.
For sample -7, ID: "LF6MW-16-0822-A", all six vials received with headspace.

Analytical Method	Data Reviewer Comment
RSK175	No additional comments; see Checklist for detail.
SW8260D	The laboratory noted MS out of control and sample containers with head space >6mm.
SW9056A	It was noted MS/MSD out of control.
SW9060A	It was noted sample preservation was not met.

Reviewed by Kathryn Cantone, Data Review Chemist, Synectics, Sacramento, CA — December 05, 2022

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Reviewed by Evin McKinney, Senior Scientist, Synectics, Sacramento, CA — December 14, 2022

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method RSK175, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
LF6MW-16-0822-A (N)	Methane	194.0	< 30	< 30	rpd	J/None	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate RPD for RSK175

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
LF6MW-16-0822 FA98517-1	N	Methane	0.000500	0.143	0.143 J		mg/l	D3
LF6MW-16-0822-A FA98517-7	FD	Methane	0.0100	9.43	9.43 J		mg/l	D3

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, Field Duplicate RPD

Field duplicate analyses are performed in order to assess sample collection/laboratory precision for each sample matrix. Summary forms were evaluated and compared to electronic data deliverables. Field duplicate results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
LF6MW-16-0822-A (N)	Trichloroethene (TCE)	104.5	< 30	< 30	rpd	J/None	D3	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Field Duplicate RPD for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
LF6MW-16-0822 FA98517-1	N	Trichloroethene (TCE)	5.00	8.00	8.00 J		ug/l	D3/P
LF6MW-16-0822-A FA98517-7	FD	Trichloroethene (TCE)	5.00	25.5	25.5 J		ug/l	D3

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WL-LF6TW-33-0822 (MS)	Bromomethane	45.00	59 - 143	59 - 143	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
WL-LF6TW-33-0822 FA98517-4	N	Bromomethane	5.00	4.00 U	4.00 UJ		ug/l	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW8260D, MS RPD

The objective of matrix spikes/matrix spike duplicates (MS/MSD) RPD analysis is to demonstrate acceptable method precision by the laboratory at the time of analysis. MS/MSD analyses are also performed to generate data that determines the long-term precision of the analytical method on various matrices. Non-homogenous samples can impact the apparent method precision. Summary forms were evaluated and compared to electronic data deliverables. Matrix spikes/matrix spike duplicates results that were outside of the acceptance criteria are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WL-LF6TW-33-0822 (SD)	Bromomethane	29.66	< 19	< 19	rpd	J/None	D	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WL-LF6TW-33-0822 (N)		16.35	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Test Hold Time for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
WL-LF6TW-33-0822 FA98517-4	N	Trichloroethene (TCE)	2.00	92.6	92.6 J	-	ug/l	H1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Quality Control Outliers for test method SW9056A, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WL-LF6TW-33-0822 (MS)	Sulfate	83.00	90 - 110	90 - 110	percent	J/UJ	M	
WL-LF6TW-33-0822 (SD)	Sulfate	82.00	90 - 110	90 - 110	percent	J/UJ	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the MS Recovery for SW9056A

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
WL-LF6TW-33-0822 FA98517-4	N	Sulfate	10.0	20.3	20.3 J	-	mg/l	M

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

LF6MW-16-0822 FA98517-1	N	Xylenes, Total	15.0	7.50 U	7.50 U	7.50 UJ	P

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
D	MS RPD
D3	Field Duplicate RPD
H1	Test Hold Time
M	MS Recovery
P	Sample preservation/collection requirement not met.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.

NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias	
-	The result may be biased low
+	The result may be biased high
Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result	

Review Questions

Method: RSK175 (Dissolved Gas Analysis in Water Samples Using a GC Headspace Equilibrium Technique)				
Review Questions	Yes	No	NA	Comment
Were all samples documented correctly on the chain-of-custody (COC)?	•			
Did samples listed on the COCs match the sample labels?	•			
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?			•	
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?		•		See QC outliers
Were reported sample concentrations within calibration range?	•			
Were Instrument Performace Checks (Degradation Checks) performed and within acceptace criteria?	•			
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			

Review Questions

Method: RSK175 (Dissolved Gas Analysis in Water Samples Using a GC Headspace Equilibrium Technique)				
Review Questions	Yes	No	NA	Comment
Were CCVs run at the required frequency and within project acceptance criteria?	•			
Were internal standard retention times and area criteria within method requirements?			•	
Were internal standards spiked for every sample, standard, and QC sample?			•	
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Was a Cleanup Procedure required (Cleanup Recovery Checks) verified and within acceptance limits?			•	
Was a Second Column/Detector used and the column difference within acceptance limits?			•	
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data recommended for exclusion in the data validation process?		•		

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were all samples documented correctly on the chain-of-custody (COC)?	•			
Did samples listed on the COCs match the sample labels?	•			
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?		•		The laboratory noted headspace in sample FA98517-1 larger than 6mm. Sample was qualified J-/UJ with P reason code.
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		Various compounds are reported with detections and non-detects at levels (LOQs) greater than the project PQGs. Additionally, it was noted that LOQs were greater than project PALs.
Were holding times met?		•		See QC outliers
Were trip blanks analyzed at the proper frequency and in control?	•			
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			LCS only
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	
Was a MS/MSD pair prepared with each batch?	•			One of the two batches had a MS/MSD not from SDG.
Were MS/MSD recoveries within project acceptance limits?		•		See QC outliers
Was the MS/MSD RPD within project acceptance limits?		•		See QC outliers
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?		•		See QC outliers
Were reported sample concentrations within calibration range?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was instrument tuning completed every 12 hours during sample analysis?	•

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Final Basewide Uniform Federal Policy Quality Assurance Project Plan, Long Term Monitoring, Former Griffiss Air Force Base, Rome, New York, April 2022 and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

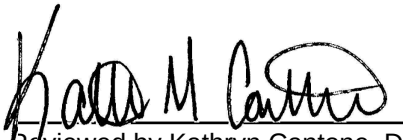
Sample collection was managed and directed by Bhate Environmental Associates, Inc.; analyses were performed by SGS North America, Inc., Orlando, FL and were reported under sample delivery group (SDG) FA98431. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Field Duplicate RPD
- Lab Blank
- Lab Replicate RPD
- LCS Recovery
- LCS RPD
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 272 results (33.66%) out of the 808 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.



Narrative Comments

Corrections on the COC were not initialed or dated.

Requested analysis on COC is "SW9056A", but bottle labels only request "SO4" analysis.

For sample -1, id: "B817-MW-002-0822", one vial received with headspace.
For sample -3, id: "WSA-MW16-0822", one vial received with headspace.
For sample -6, id: "WSA-MW21-0822", two vials received broken. Two vials received with headspace.
For sample -11, id: "WSA-MW16-0822-a", three vials received with headspace.

Analytical Method	Data Reviewer Comment
RSK175	No additional comments; see Checklist for detail.
SW8260D	It was noted method blank, LCS, MS/MSD, and CCV/ECCV were out of control.
SW9056A	No additional comments; see Checklist for detail.
SW9060A	It was noted dissolved samples were filtered in laboratory prior to analysis.

December 11, 2022

Reviewed by Kathryn Cantone, Data Review Chemist, Synectics, Sacramento, CA

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Reviewed by Evin McKinney, Senior Scientist, Synectics, Sacramento, CA

December 14, 2022

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method SW8260D, Lab Blank

The purpose of laboratory blanks is to determine the existence and magnitude of cross-contamination problems resulting from laboratory activities. Reported results were evaluated to determine compliance with the required acceptance criteria. Summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and contaminants found in laboratory blanks are listed below along with any associated qualified results.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
V2P3567-MB (LB)	2-Butanone (MEK)	2.400	< 2	< 5	ug/l	U/None*	L	
V2P3568-MB (LB)	2-Butanone (MEK)	2.400	< 2	< 5	ug/l	U/None*	L	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

*Blank flags displayed in the above table identify qualification of the sample result when it is less than or equal to the LOQ/RL. Sample results above the LOQ will be qualified based on the validation type such as J+ at the sample result.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, LCS Recovery

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) serves as a monitor of the overall performance of each step during the analysis, including the sample preparation. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
V2P3567-BS (BS)	Methyl tert-butyl ether (MTBE)	123.0	72 - 117	72 - 117	percent	J/None	C	
V2P3568-BS (BS)	Methyl tert-butyl ether (MTBE)	122.0	72 - 117	72 - 117	percent	J/None	C	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Quality Control Outliers for test method SW8260D, MS Recovery

Data for matrix spikes/matrix spike duplicates (MS/MSD) are generated to determine long-term precision and accuracy of the analytical method on various matrices and to demonstrate acceptable compound recovery by the laboratory at the time of sample analysis. These data alone cannot be used to evaluate the precision and accuracy of individual samples. However, when exercising professional judgment, MS/MSD data can be used in conjunction with other available QC information. Reported results were evaluated to determine compliance with the required acceptance criteria, and summary forms were evaluated and compared to electronic data deliverables. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
WSA-MW21-0822 (MS)	1,1-Dichloroethane	123.0	81 - 122	81 - 122	percent	J/None	M	
WSA-MW21-0822 (SD)	1,1-Dichloroethane	124.0	81 - 122	81 - 122	percent	J/None	M	
WSA-MW21-0822 (MS)	Methyl tert-butyl ether (MTBE)	124.0	72 - 117	72 - 117	percent	J/None	M	
WSA-MW21-0822 (SD)	Methyl tert-butyl ether (MTBE)	127.0	72 - 117	72 - 117	percent	J/None	M	

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

No results associated with this QC element required qualification.

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
C	LCS Recovery
L	Lab Blank
M	MS Recovery
P	Sample preservation/collection requirement not met.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: RSK175 (Dissolved Gas Analysis in Water Samples Using a GC Headspace Equilibrium Technique)				
Review Questions	Yes	No	NA	Comment
Were all samples documented correctly on the chain-of-custody (COC)?	•			
Did samples listed on the COCs match the sample labels?	•			
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)	•			
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?			•	
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?	•			
Was a MS/MSD pair prepared with each batch?	•			one out of the two batches contained a non-sdg MS/MSD
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?			•	
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Were Instrument Performace Checks (Degradation Checks) performed and within acceptace criteria?			•	
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			

Review Questions

Method: RSK175 (Dissolved Gas Analysis in Water Samples Using a GC Headspace Equilibrium Technique)				
Review Questions	Yes	No	NA	Comment
Were CCVs run at the required frequency and within project acceptance criteria?	•			
Were internal standard retention times and area criteria within method requirements?			•	
Were internal standards spiked for every sample, standard, and QC sample?			•	
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Was a Cleanup Procedure required (Cleanup Recovery Checks) verified and within acceptance limits?			•	
Was a Second Column/Detector used and the column difference within acceptance limits?			•	
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?			•	
Were any data recommended for exclusion in the data validation process?		•		

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)				
Review Questions	Yes	No	NA	Comment
Were all samples documented correctly on the chain-of-custody (COC)?	•			
Did samples listed on the COCs match the sample labels?	•			
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?		•		The laboratory noted headspace in samples FA98431-3, 8, 10 and 11 larger than 6mm. Samples were qualified J-/UJ.
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		Various compounds are reported with detections and non-detects at levels (LOQs) greater than the project PQGs. Additionally, it was noted that LOQs were greater than project PALs.
Were holding times met?	•			
Were trip blanks analyzed at the proper frequency and in control?	•			
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?		•		See QC outliers
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?		•		See QC outliers
Was the LCS/LCSD RPD within project acceptance limits?			•	LCS only
Was a MS/MSD pair prepared with each batch?	•			3 out of the 4 analytical batches had non-sdg ms/msds.
Were MS/MSD recoveries within project acceptance limits?		•		See QC outliers
Was the MS/MSD RPD within project acceptance limits?	•			
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was instrument tuning completed every 12 hours during sample analysis?		•		ECCV outside of 12 hr window for analytical run V2P3560. No action required.

Review Questions

AOC9-TB01-0822-C	FA98456-8	Water	Trip Blank/TB	X

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page at S2BVEM data validation level. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the DetailedDescription and the additional guidance documents incorporated by reference to the extent possible. Where definitive guidance is not provided, results have been evaluated in a conservative manner using professional judgment.

Sample collection was managed and directed by Bhate Environmental Associates, Inc.; analyses were performed by SGS North America, Inc., Orlando, FL and were reported under sample delivery group (SDG) FA98456. Data have been evaluated electronically based on electronic data deliverables (EDDs) provided by the laboratory, and hard copy data summary forms have also been reviewed during this effort and compared to the automated review output by the reviewers whose signatures appear on the following page. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative and throughout this report.

All quality control (QC) elements associated with this SDG have been reviewed by a project chemist in accordance with the requirements defined for the project. This review is documented in the attached Data Review Checklists. The QC elements listed below were supported by the electronic deliverable and were evaluated using ADR processes.

- Field Duplicate RPD
- Lab Blank
- LCS Recovery
- MS Recovery
- MS RPD
- Prep Hold Time
- Surrogate
- Test Hold Time
- Trip Blank

Results of the ADR process were subsequently reviewed and updated as applicable by the data review chemists identified on the signature page. Quality control elements that were not included in the electronic deliverable were reviewed manually and findings are documented within this report. Summaries of findings and associated qualified results are documented throughout this report.

A total of 1 results (0.15%) out of the 680 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected or deemed a serious deficiency (X qualifier). Trace values, defined as results that are qualified as estimated because they fall between the detection limit and the reporting limit/limit of quantitation, are not counted as qualified results in the above count. The qualified results are detailed throughout this report and discussed in the narrative below, where appropriate.

Narrative Comments

The laboratory sample receipt summary indicated that VOCs have headspace; however, no other mention of this anomaly was noted. No action was taken on this basis.

Analytical Method	Data Reviewer Comment
SW8260D	Laboratory noted CCV out of control.

Reviewed by Kathryn Cantone, Data Review Chemist, Synectics, Sacramento, CA — October 30, 2022

As the First Reviewer, I certify that I have performed a data review process in accordance with the requirements of the project guidance document, and have compared the electronic data to the laboratory's hard copy report and have verified the consistency of the reported sample results and method quality control data between the two deliverables.

Reviewed by Evin McKinney, Senior Scientist, Synectics, Sacramento, CA — November 09, 2022

As the Second Reviewer, I certify that I have performed a quality assurance review of the report generated by the First Reviewer.

Quality Control Outliers for test method SW8260D, Test Hold Time

Hold times are ascertained based on project requirements. Holding times were determined by comparing the chain of custody records with the dates of analysis found in the electronic data deliverable and laboratory summary forms. Findings of this review, and any associated qualified results, are listed below.

Sample ID/ Lab Sample ID	Analyte	Result	Warning Limits	Control Limits	Units	Qualifier	Reason Code	Comment
AOC9-SW2PM-0822 (N)		21.02	< 14	< 28	days	J/UJ	H1	Test Exceeds UWL

Where two qualifiers are listed, such as 'J/UJ', the first applies to positive results, and the second to non-detect results.
Upper and Lower Warning and Control Limits are abbreviated UWL, LWL, UCL, and LCL in the Comment field.

Qualified Results associated with the Test Hold Time for SW8260D

FieldSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
AOC9-SW2PM-0822 FA98456-6	N	Chlorobenzene	1.00	0.500	0.500 UJ		ug/l	H1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.

Table of All Qualified Results

Test Method: SW8260D		**Extraction Method: SW5030B**						
FieldSample ID / LabSample ID	Type	Analyte	LOQ	Lab Result	Qualified Result	Bias	Units	Reason
AOC9-SW2PM-0822 FA98456-6	N	Chlorobenzene	1.00	0.500	0.500 UJ		ug/l	H1

Analytes not found in project samples are reported as not detected at the limit of detection (LOD) unless blank contamination occurs and then the sample may be reported as not detected at the (LOQ) based on the sample concentration.
In instances where no LOD is provided, results are reported down to the LOQ.
Trace values are not included in the qualified results table unless additional reason codes are associated.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated Value
N	The analysis indicates the presence of an analyte for which there was presumptive evidence to make a tentative identification.
NJ	The analyte has been tentatively identified or presumptively as present and the associated numerical value was the estimated concentration in the sample.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
X	Result may require rejection; PDT attention required

Bias

-	The result may be biased low
+	The result may be biased high

Note - The bias field is a separate field; however, it is an integral part of the final flag (qualifier) on the sample result

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)

Review Questions	Yes	No	NA	Comment
Were all samples documented correctly on the chain-of-custody (COC)?	•			
Did samples listed on the COCs match the sample labels?	•			
Were samples relinquished properly on the COC?	•			
Were all samples properly preserved?	•			
Were sampling dates/times, date and time of laboratory receipt of samples, and sample conditions upon receipt at the laboratory (including preservation, pH, and temperature) documented?	•			
Were sample results reported with percent moisture correction if required?			•	
Were analytical methods performed and analysis dates present?	•			
Were all requested target analytes reported?	•			
Were QAPP specified Project Quantitation Limit Goals achieved? (The laboratory LOQ is compared to the QAPP Project Quantitation Goal)		•		LOQs were raised above project specifications in association with undiluted and diluted analyses that reported non-detects and positive target analyte hits.
Were holding times met?		•		See QC outliers
Were trip blanks analyzed at the proper frequency and in control?	•			
Were field blanks analyzed at the proper frequency and in control?			•	
Were equipment blanks analyzed at the proper frequency and in control?			•	
Was a method blank prepared and analyzed with each batch?	•			
Were target analytes in the method blank less than DL?	•			
Was an LCS/LCSD pair prepared and analyzed with each batch?	•			
Were LCS/LCSD recoveries within project acceptance limits?	•			
Was the LCS/LCSD RPD within project acceptance limits?			•	LCS only
Was a MS/MSD pair prepared with each batch?	•			The laboratory noted Non-SDG MS/MSD in several analytical batches out of control. No action taken on this basis.
Were MS/MSD recoveries within project acceptance limits?	•			
Was the MS/MSD RPD within project acceptance limits?	•			
If ISM ws used for sample collection, were laboratory triplicates analyzed and within project acceptance limits?			•	
Were surrogate recoveries within project acceptance limits?	•			
Were field replicates (duplicates, triplicates, etc.) analyzed at the proper frequency and in control?	•			
Were reported sample concentrations within calibration range?	•			
Was the GC/MS system properly tuned based on method criteria?	•			
Was instrument tuning completed every 12 hours during sample analysis?	•			

Review Questions

Method: SW8260D (Volatile Organic Compounds by GC/MS)

Review Questions	Yes	No	NA	Comment
Was the Calibration within project acceptance criteria?	•			
Was a ICV performed after each ICAL prior to sample analysis and within project acceptance criteria?	•			
Were CCVs run at the required frequency and within project acceptance criteria?		•		Laboratory noted CCV associated with FA98456-4 was out of control high for Chloroethane. Sample ND, no action taken on this basis.
Were internal standard retention times and area criteria within project acceptance criteria?	•			
Were internal standards spiked for every sample, standard, and QC sample?	•			
Were instrument run logs present and filled out appropriately?	•			
Were sample preparation sheets present and filled out appropriately?	•			
Have all Laboratory Case Narrative comments/findings been addressed in the data review process?	•			
Were DoD QSM corrective actions followed if deviations were noted?		•		CCV recoveries were outside control limits, and the sample were not reanalyzed.
Were any data recommended for exclusion in the data validation process?		•

Technical Report for

Bhate Environmental

Griffiss AFB; Rome, NY

GRFIS-BECOS

SGS Job Number: FA98455

Sampling Dates: 08/23/22 - 08/24/22

Report to:

Bhate Environmental
1608 13th Ave S Suite 300
Birmingham, AL 35205
dbadio@bhate.com

ATTN: David Badio

Total number of pages in report: 255

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

Norm Farmer
Technical Director

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Bhate Environmental **Job No:** FA98455

Site: Griffiss AFB; Rome, NY **Report Date:** 9/2/2022 12:12:48 PM

On 08/26/2022, 7 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc - Orlando. at a maximum corrected temperature of 5.2 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FA98455 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** VY2669

Sample(s) FA98455-4MS, FA98455-4MSD were used as the QC samples indicated.

RPD(s) for MSD for Methyl Bromide are outside control limits for sample FA98455-4MSD. Probable cause is due to sample non-homogeneity.

FA98455-5: Sample vial(s) contained bubbles greater than 6mm.

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

SGS Sample Receipt Summary

Job Number: FA98455 **Client:** BHATE **Project:** GRIFFISS AFB

Date / Time Received: 8/26/2022 9:00:00 AM **Delivery Method:** FX **Airbill #'s:** 570073537923

Therm ID: IR 1; **Therm CF:** 0.6; **# of Coolers:** 1

Cooler Temps (Raw Measured) °C: Cooler 1: (4.6);

Cooler Temps (Corrected) °C: Cooler 1: (5.2);

Cooler Information	Y	N
1. Custody Seals Present	☑	☐
2. Custody Seals Intact	☑	☐
3. Temp criteria achieved	☑	☐
4. Cooler temp verification	IR Gun	
5. Cooler media	Ice (Bag)	

Trip Blank Information	Y	N	N/A
1. Trip Blank present / cooler	☐	☐	☑
2. Trip Blank listed on COC	☐	☐	☑

	W	S	N/A
3. Type Of TB Received	☐	☐	☑

Sample Information	Y	N	N/A
1. Sample labels present on bottles	☑	☐	
2. Samples preserved properly	☑	☐	
3. Sufficient volume/containers recvd for analysis:	☑	☐	
4. Condition of sample	Intact		
5. Sample recvd within HT	☑	☐	
6. Dates/Times/IDs on COC match Sample Label	☑	☐	
7. VOCs have headspace	☐	☐	☑
8. Bottles received for unspecified tests	☐	☑	
9. Compositing instructions clear	☐	☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐	☐	☑
11. % Solids Jar received?	☐	☐	☑
12. Residual Chlorine Present?	☐	☐	☑

Misc. Information

Number of Encores: 25-Gram _____ 5-Gram _____ Number of 5035 Field Kits: _____ Number of Lab Filtered Metals: _____

Test Strip Lot #s: pH 0-3 230315 pH 10-12 219813A Other: (Specify) _____ _____

Residual Chlorine Test Strip Lot #: _____

(a) Initial Cal is: VY2666-ICC2666 Y64315.D 08/29/22 14:44
(b) Check Std Limit = -50 to + 100% of initial cal area.
(c) Upper Limit = + 100% of check standard area; Retention time + 0.167 minutes.

Internal Standard Area Summary

Job Number: FA98455
Account: BHATALB Bhate Environmental
Project: Griffiss AFB; Rome, NY

Check Std:	VY2669-CC2666	**Injection Date:**	09/01/22
Lab File ID:	Y64378.D	**Injection Time:**	11:07
Instrument ID:	GCMSY	**Method:**	SW846 8260D

Lab Sample ID	IS 1 AREA	IS 1 RT	IS 2 AREA	IS 2 RT	IS 3 AREA	IS 3 RT

(d) Lower Limit = -50% of check standard area; Retention time -0.167 minutes.
(e) Sample vial(s) contained bubbles greater than 6mm.

Surrogate Recovery Summary

Manual Integration Approval Summary

Sample Number: VY2666-IC2666
Lab FileID: Y64311.D
Injection Time: 08/29/22 13:05
Method: SW846 8260D
Analyst approved: 08/30/22 15:26 Jo-Ann Lugo De Jesus
Supervisor approved: 08/30/22 18:34 Shanica O'Connor

Parameter	CAS	Sig#	R.T. (min.)	Reason
Hexane	110-54-3		6.33	Overlapping peak
Vinyl Acetate	108-05-4		7.63	Missed peak
Tert-Amyl Alcohol	75-85-4		9.38	Missed peak
Cyclohexanone	108-94-1		13.29	Poor instrument integration
1,4-Dichlorobenzene	106-46-7		13.78	Missed peak
Benzyl Chloride	100-44-7		13.94	Missed peak
1,2-Dibromo-3-chloropropane	96-12-8		14.61	Missed peak
Hexachlorobutadiene	87-68-3		15.00	Missed peak

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Bhate Environmental **Job No:** FA98452

Site: Griffiss AFB; Rome, NY **Report Date:** 9/7/2022 4:14:21 PM

On 08/26/2022, 9 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc - Orlando. at a maximum corrected temperature of 4.4 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FA98452 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** VO2808

Sample(s) FA98452-2MS, FA98452-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for 1,3-Dichloropropane, Bromobenzene, Dibromochloromethane, Methyl Bromide, n-Butylbenzene, p-Chlorotoluene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for 1,3-Dichloropropane, n-Butylbenzene are outside control limits. Probable cause is due to matrix interference.

FA98452-1 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-1 for Dichlorodifluoromethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-2 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-2 for Dichlorodifluoromethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-2 for Trichloroethylene: Confirmed by re-analysis.

FA98452-3 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-3 for Dichlorodifluoromethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-4 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-4 for Dichlorodifluoromethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-4 for Trichloroethylene: Confirmed by re-analysis.

FA98452-5 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-5 for Dichlorodifluoromethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-6 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-6 for Dichlorodifluoromethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-7 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-7 for Dichlorodifluoromethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-8 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-8 for Dichlorodifluoromethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-9 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-9 for Dichlorodifluoromethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-10 for Chloroethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98452-10 for Dichlorodifluoromethane: Associated CCV outside of DOD QSM control limits high, sample is ND.

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

SGS Sample Receipt Summary

Job Number: FA98452 **Client:** BHATE ENVIRONMENT **Project:** GRIFFISS AIR FORCE BASE, BECOS

Date / Time Received: 8/26/2022 9:00:00 AM **Delivery Method:** FEDEX **Airbill #'s:** 5700 7353 8301

Therm ID: IR 1; **Therm CF:** 0.6; **# of Coolers:** 1

Cooler Temps (Raw Measured) °C: Cooler 1: (3.8);

Cooler Temps (Corrected) °C: Cooler 1: (4.4);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☑		☐	☐
2. Trip Blank listed on COC	☑		☐	☐

	W	or	S	N/A
3. Type Of TB Received	☑		☐	☐

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☐		☑	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

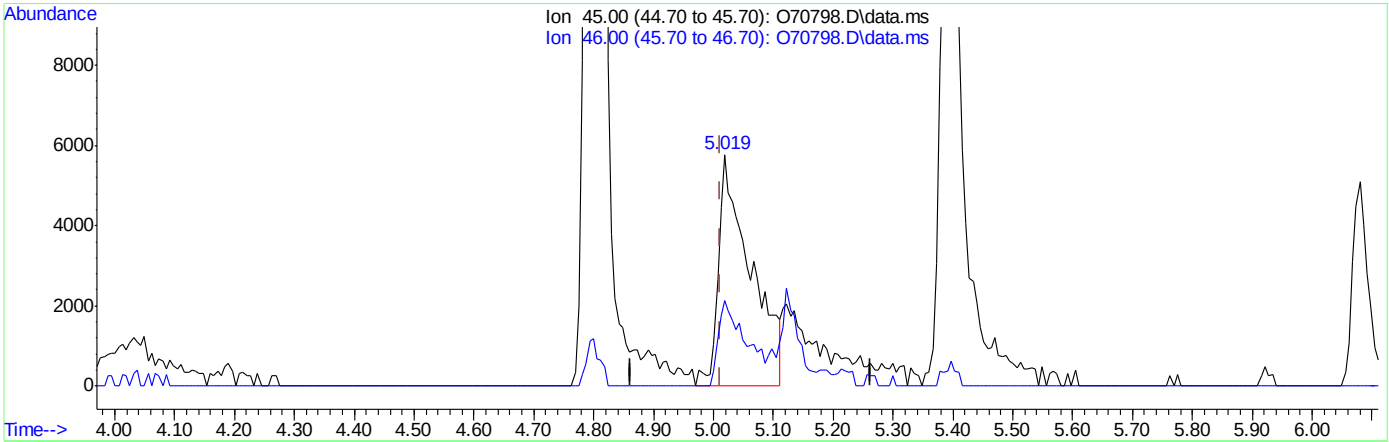
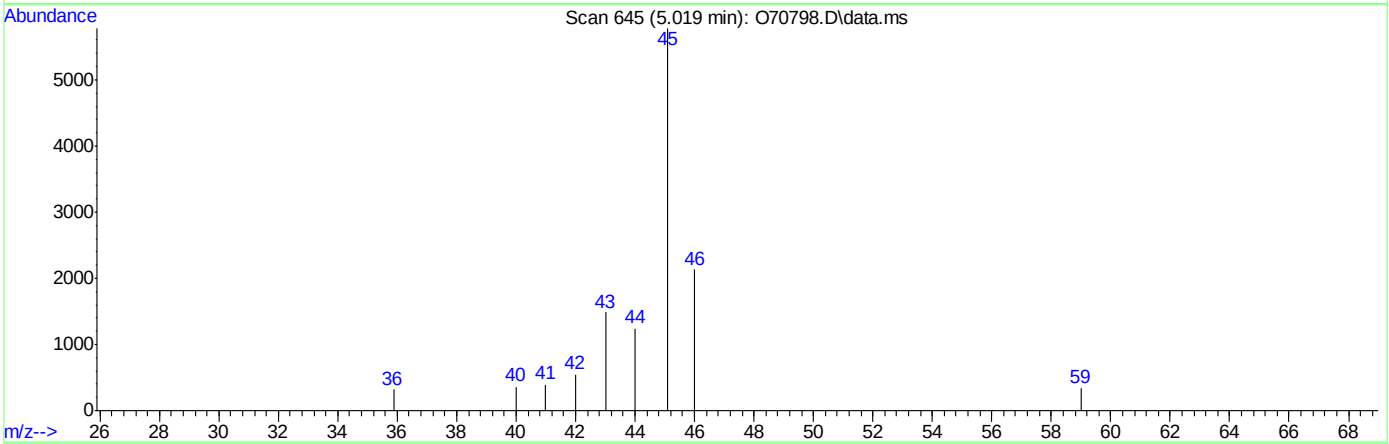
Manual Integration Approval Summary



Sample Number: VO2808-BS
Lab FileID: O70798.D
Injection Time: 09/01/22 11:54
Method: SW846 8260D
Analyst approved: 09/01/22 12:35 Jo-Ann Lugo De Jesus
Supervisor approved: 09/02/22 08:58 Karen Watson



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.02	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

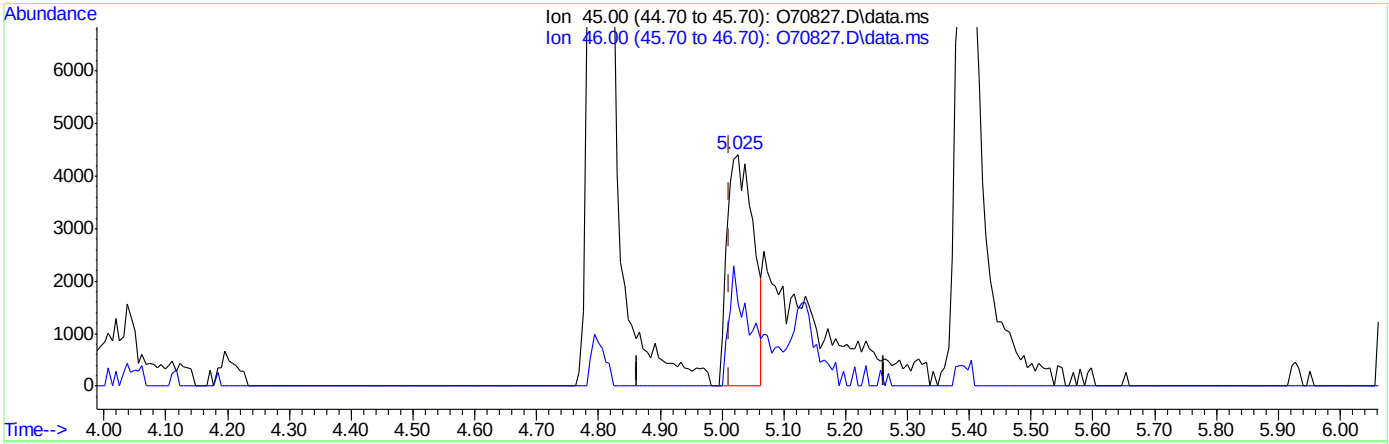
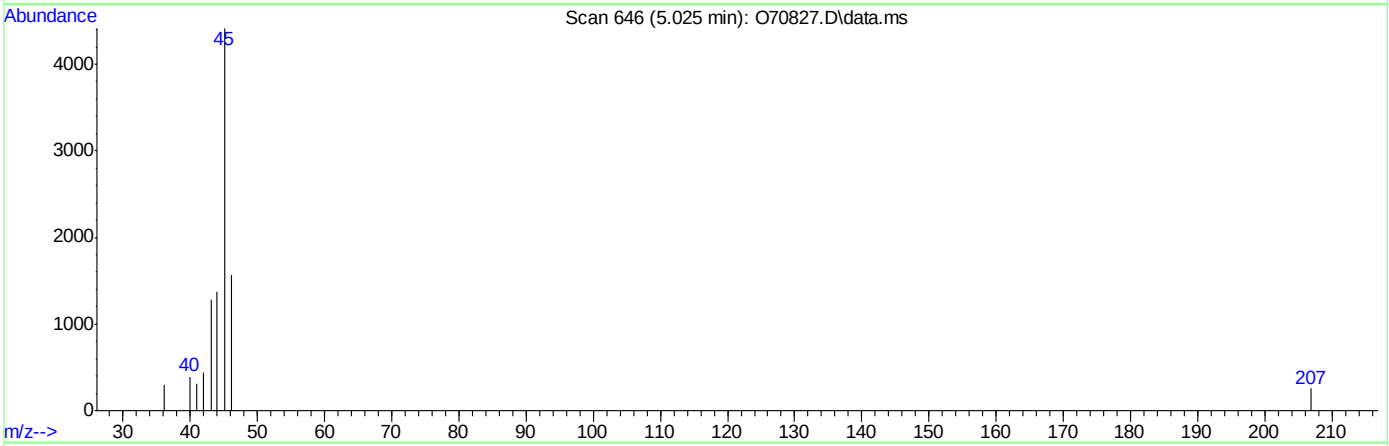
Manual Integration Approval Summary



Sample Number: VO2809-BS
Lab FileID: O70827.D
Injection Time: 09/02/22 12:47
Method: SW846 8260D
Analyst approved: 09/02/22 13:05 Jo-Ann Lugo De Jesus
Supervisor approved: 09/07/22 15:45 Karen Watson



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.03	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

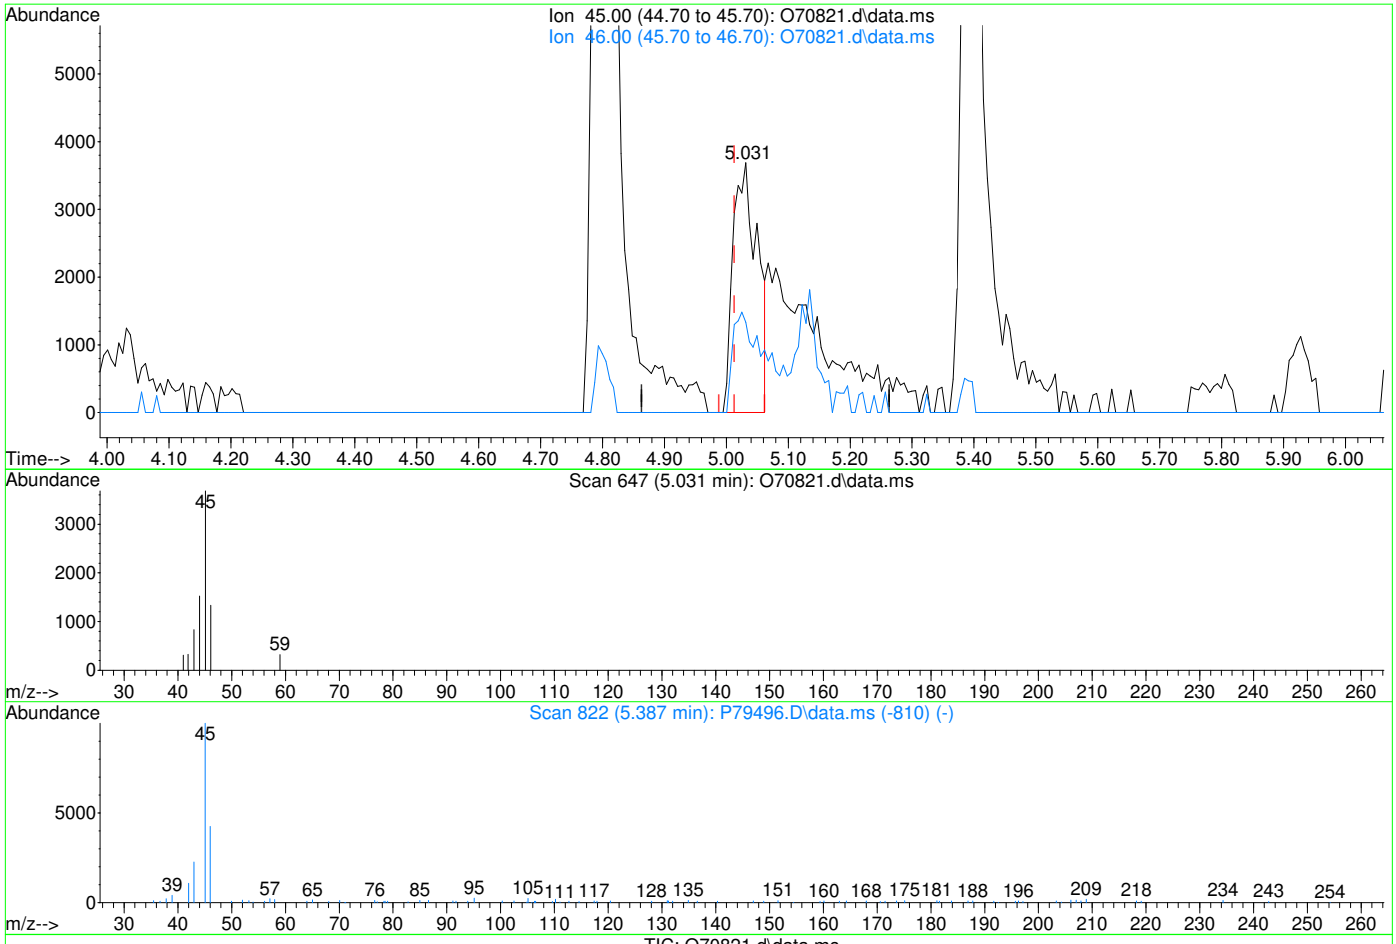
Manual Integration Approval Summary



Sample Number: FA98452-2MS
Lab FileID: O70821.D
Injection Time: 09/01/22 21:28
Method: SW846 8260D
Analyst approved: 09/02/22 08:09 Jo-Ann Lugo De Jesus
Supervisor approved: 09/07/22 15:52 Karen Watson

Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.03	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.52	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

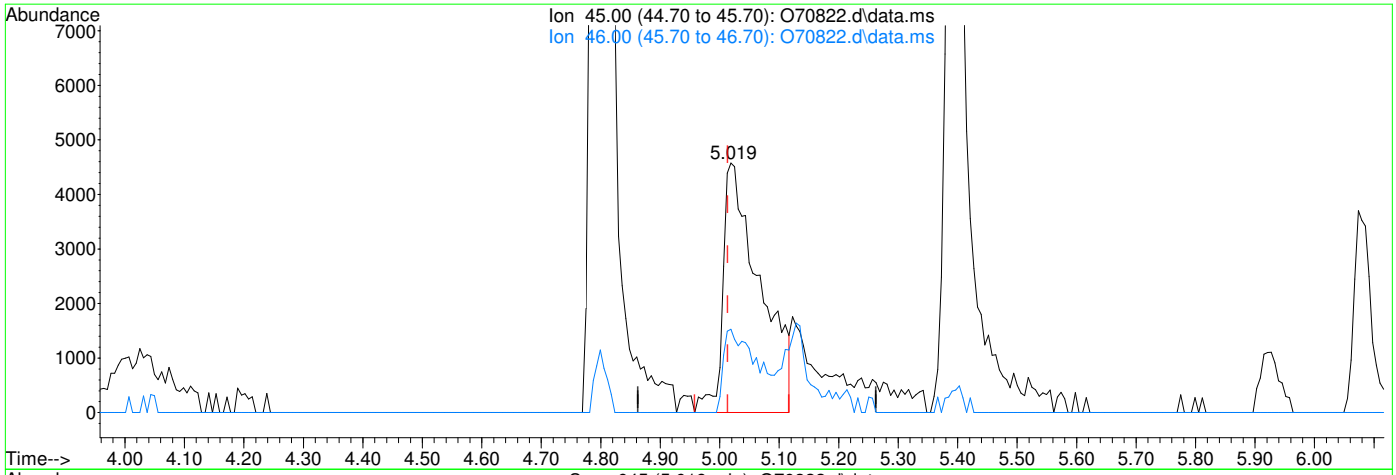
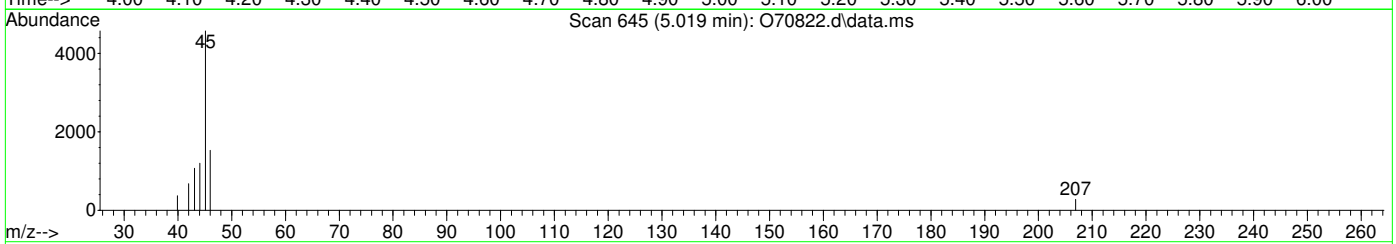
Manual Integration Approval Summary



Sample Number: FA98452-2MSD
Lab FileID: O70822.D
Injection Time: 09/01/22 21:53
Method: SW846 8260D
Analyst approved: 09/02/22 08:09 Jo-Ann Lugo De Jesus
Supervisor approved: 09/07/22 15:52 Karen Watson



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.02	Poor instrument integration
Hexane	110-54-3		6.16	Overlapping peak
Acetonitrile	75-05-8		6.52	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

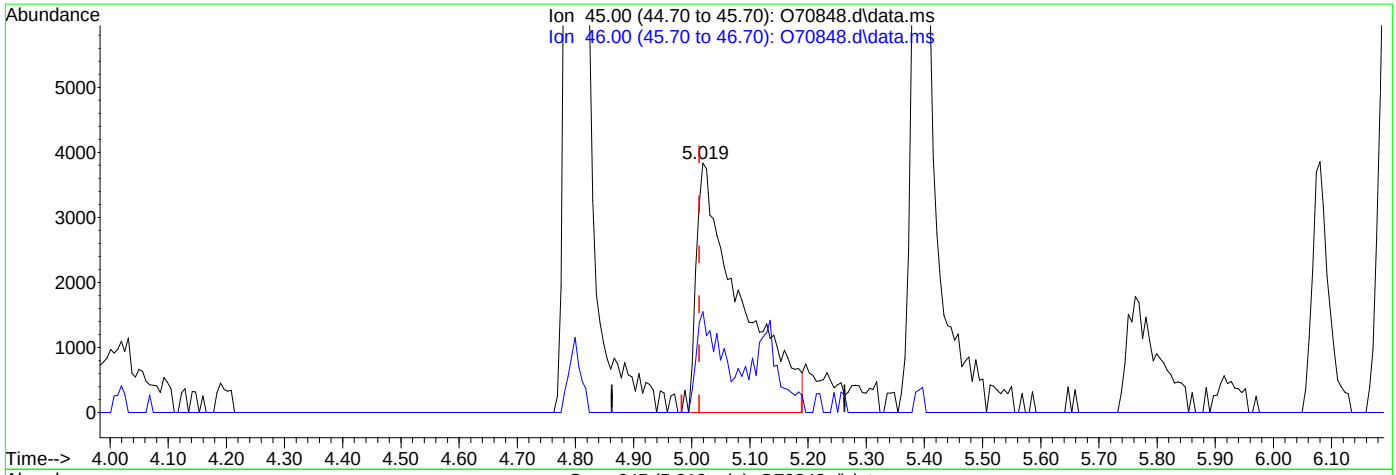
Manual Integration Approval Summary



Sample Number: FA98394-2MS
Lab FileID: O70848.D
Injection Time: 09/02/22 21:30
Method: SW846 8260D
Analyst approved: 09/05/22 02:33 Antonette Clutario
Supervisor approved: 09/07/22 15:51 Karen Watson

Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.02	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

QLast Update : Wed Aug 24 09:37:25 2022
Response via : Initial Calibration

Compound	R.T.	QIon	Response	Conc	Units	Dev(Min)
Internal Standards						
1) Fluorobenzene	8.835	96	1350303	50.00	ug/L	0.00
62) Chlorobenzene-d5	11.993	117	1137729	50.00	ug/L	0.00
85) 1,4-Dichlorobenzene-d4	14.352	152	599098	50.00	ug/L	0.00
System Monitoring Compounds						
39) Dibromofluoromethane	7.963	113	372825	48.91	ug/L	0.00
Spiked Amount 50.000	Range 83 - 118		Recovery =	97.82%		
50) 1,2-Dichloroethane-d4	8.549	65	372073	47.45	ug/L	0.00
Spiked Amount 50.000	Range 79 - 125		Recovery =	94.90%		
63) Toluene-d8	10.426	98	1377317	48.29	ug/L	0.00
Spiked Amount 50.000	Range 85 - 112		Recovery =	96.58%		
86) 4-Bromofluorobenzene	13.206	174	462691	48.23	ug/L	0.00
Spiked Amount 50.000	Range 83 - 118		Recovery =	96.46%		
Target Compounds						Qvalue
2) Dichlorodifluoromethane	2.843	85	124628	25.85	ug/L	96
3) Chloromethane	3.190	50	137822	25.62	ug/L	99
4) 1,3-butadiene	3.373	39	135627	26.89	ug/L	99
5) Vinyl Chloride	3.342	62	162056	26.85	ug/L	100
6) Bromomethane	3.891	94	55893	18.59	ug/L	98
7) Chloroethane	4.098	64	114540	28.63	ug/L	97
8) Trichlorofluoromethane	4.330	101	264056	27.57	ug/L	99
9) Ethyl Ether	4.793	59	91054	21.37	ug/L	97
10) Ethanol	5.013	45	8210m	175.83	ug/L	
11) 1,2-Dichlorotrifluoroe...	5.074	67	171563	31.16	ug/L	98
12) 1,1-Dichloroethene	5.080	61	195204	25.27	ug/L	98
13) Freon 113	5.141	101	136896	27.98	ug/L	98
14) Carbon Disulfide	5.123	76	284722	20.72	ug/L	99
15) Iodomethane	5.287	142	36120	13.54	ug/L	97
16) Acrolein	5.543	56	75124	72.14	ug/L	99
17) Allyl chloride	5.726	41	166301	26.22	ug/L	96
18) Methylene Chloride	5.866	49	190478	26.42	ug/L	98
19) Acetone	5.921	43	305003	195.87	ug/L	100
20) Methyl acetate	6.074	43	467027	116.31	ug/L	98
21) trans-1,2-Dichloroethene	6.074	61	193015	25.06	ug/L	99
22) Hexane	6.165	56	78639m	25.91	ug/L	
23) Methyl Tert Butyl Ether	6.196	73	356688	26.57	ug/L	98
24) Tert Butyl Alcohol	6.299	59	100590	204.39	ug/L	91
25) Acetonitrile	6.513	41	152000m	226.32	ug/L	
26) Di-isopropyl ether	6.653	45	382297	24.25	ug/L	100
27) Chloroprene	6.805	53	184985	117.65	ug/L	98
28) 1,1-Dichloroethane	6.830	63	252979	26.59	ug/L	99
29) Acrylonitrile	6.891	52	208969	122.45	ug/L	98
30) ETBE	7.086	59	334141	21.86	ug/L	99
31) Vinyl acetate	7.110	43	1335768	127.39	ug/L	99
32) cis-1,2-Dichloroethene	7.464	96	141720	26.06	ug/L	97
33) 2,2-Dichloropropane	7.592	77	148447	19.89	ug/L	97
34) Bromochloromethane	7.695	128	74009	24.42	ug/L	98
35) Cyclohexane	7.707	56	220668	26.51	ug/L	98
36) Chloroform	7.762	83	249819	24.79	ug/L	97
37) Ethyl acetate	7.872	43	626691	122.12	ug/L	99
38) Tetrahydrofuran	7.957	42	36496	22.69	ug/L	89
40) Carbon Tetrachloride	7.933	117	201760	26.06	ug/L	97
41) 1,1,1-Trichloroethane	8.006	97	237579	26.65	ug/L	97
42) 2-Butanone	8.092	43	303834	118.73	ug/L	99
43) 1,1-Dichloropropene	8.140	75	189182	25.73	ug/L	97
44) tert-Butyl formate	8.244	59	333957	94.22	ug/L	92

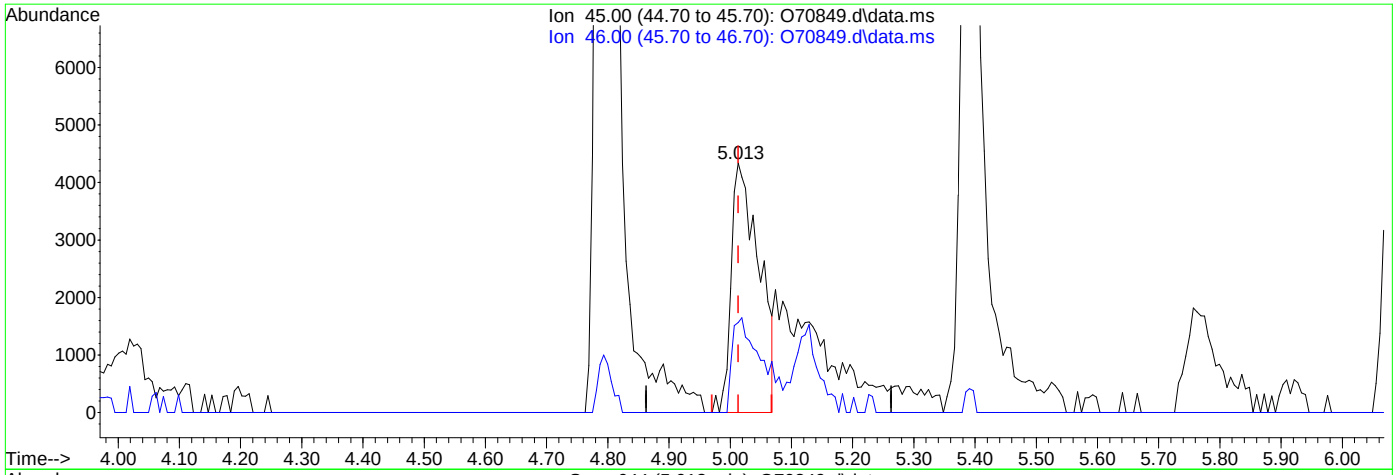
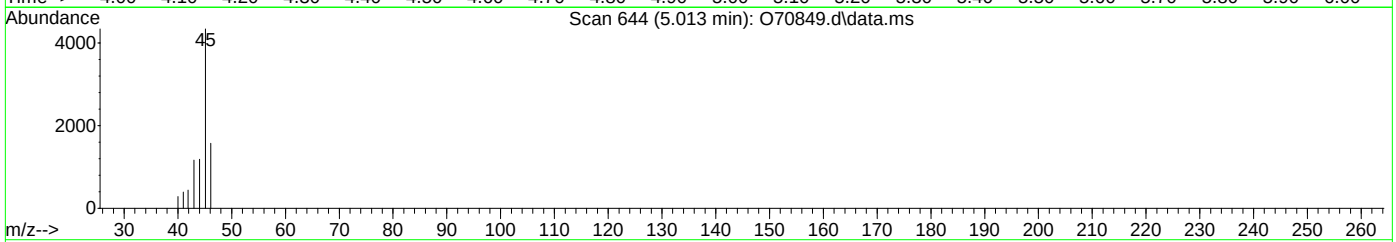
Manual Integration Approval Summary



Sample Number: FA98394-2MSD
Lab FileID: O70849.D
Injection Time: 09/02/22 21:55
Method: SW846 8260D
Analyst approved: 09/05/22 02:33 Antonette Clutario
Supervisor approved: 09/07/22 15:51 Karen Watson



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.01	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

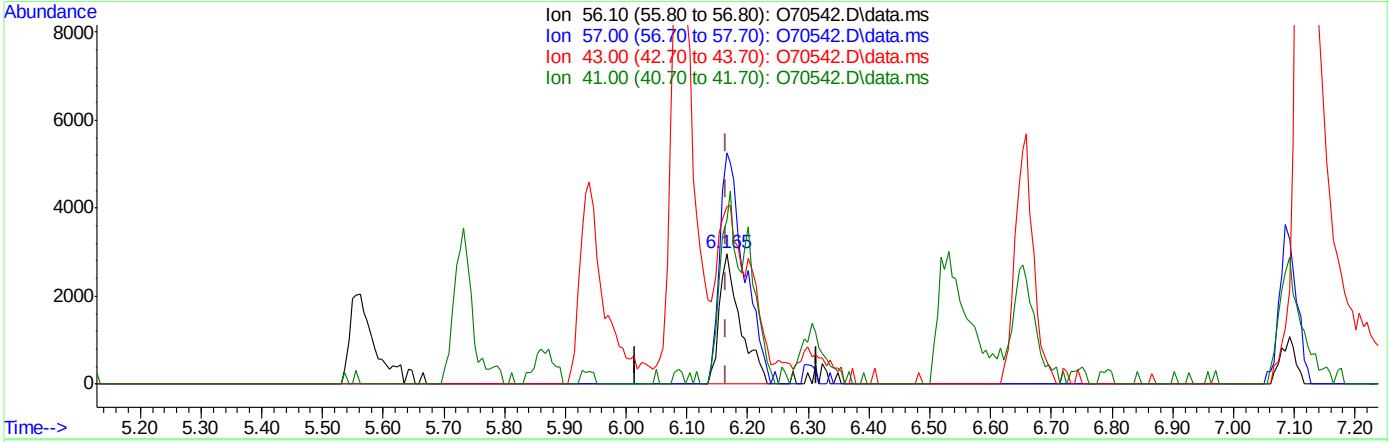
Manual Integration Approval Summary



Sample Number: VO2796-IC2796
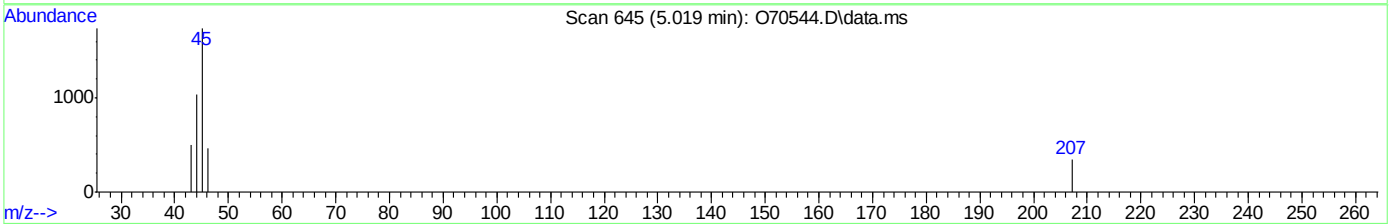
Lab FileID: O70544.D
Injection Time: 08/23/22 13:30
Method: SW846 8260D
Analyst approved: 08/24/22 09:50 Jo-Ann Lugo De Jesus
Supervisor approved: 08/24/22 12:17 Lindsay Ritner



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.02	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.52	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

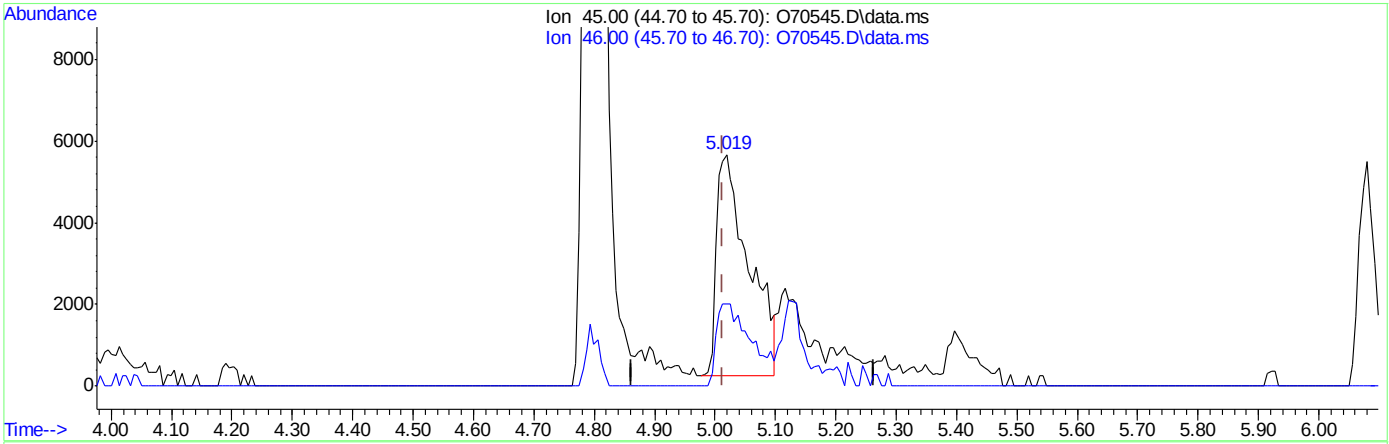
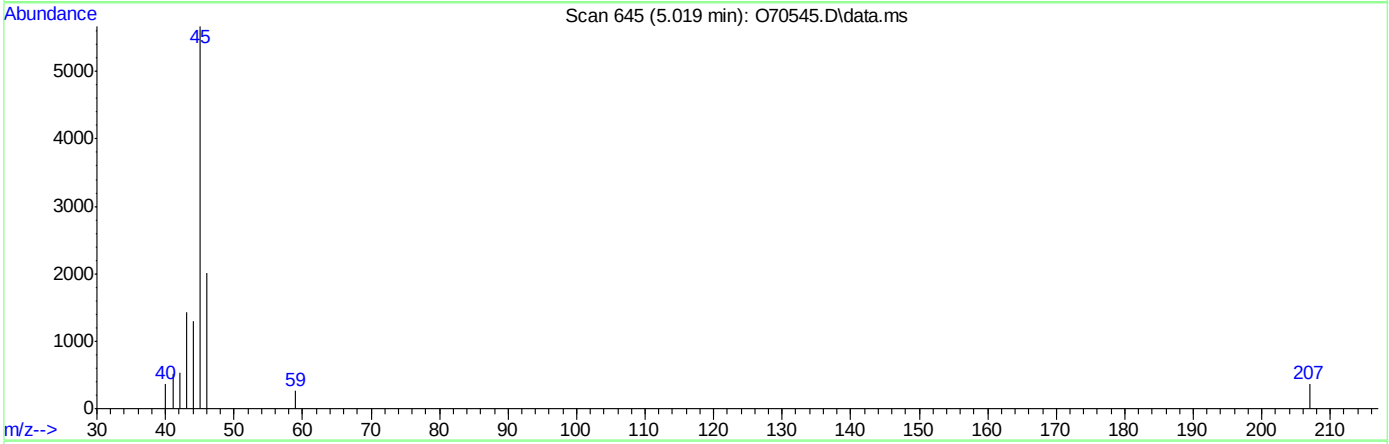
Manual Integration Approval Summary



Sample Number: VO2796-IC2796
Lab FileID: O70545.D
Injection Time: 08/23/22 13:55
Method: SW846 8260D
Analyst approved: 08/24/22 09:50 Jo-Ann Lugo De Jesus
Supervisor approved: 08/24/22 12:17 Lindsay Ritner



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.02	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration

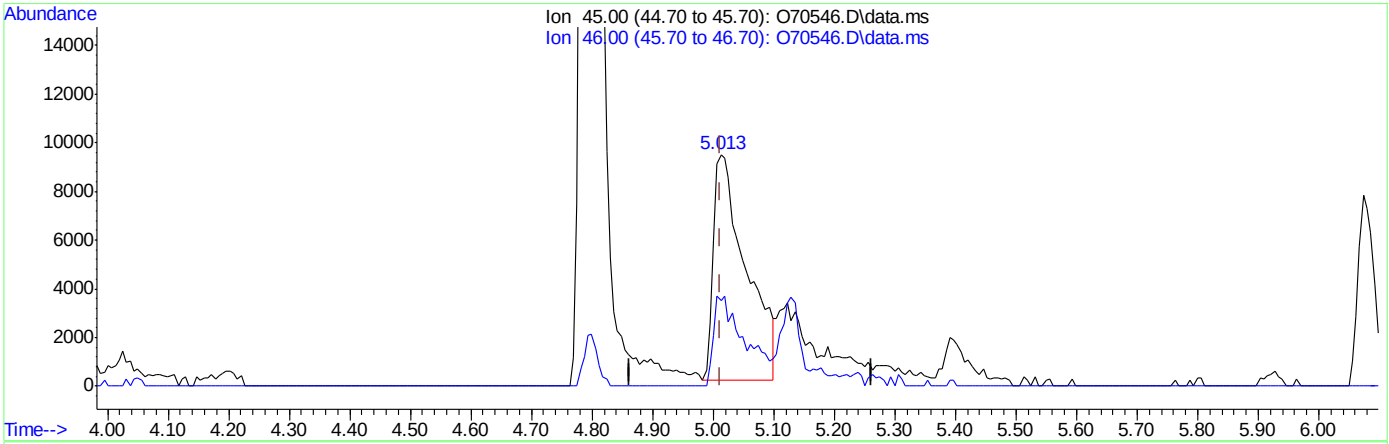
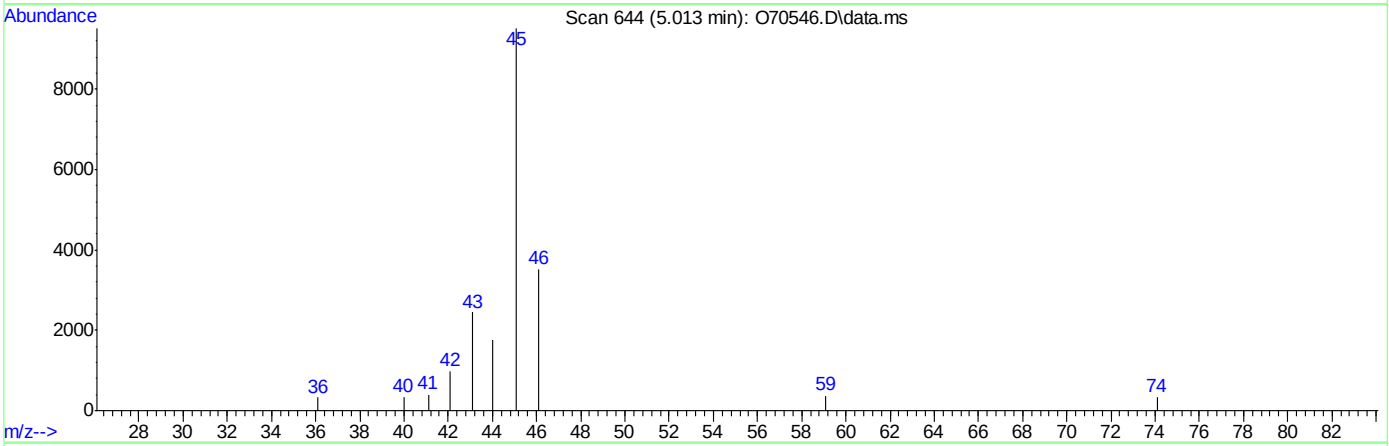
Manual Integration Approval Summary



Sample Number: VO2796-ICC2796 **Method:** SW846 8260D
Lab FileID: O70546.D **Analyst approved:** 08/24/22 09:50 Jo-Ann Lugo De Jesus
Injection Time: 08/23/22 15:09 **Supervisor approved:** 08/24/22 12:17 Lindsay Ritner



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.01	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration

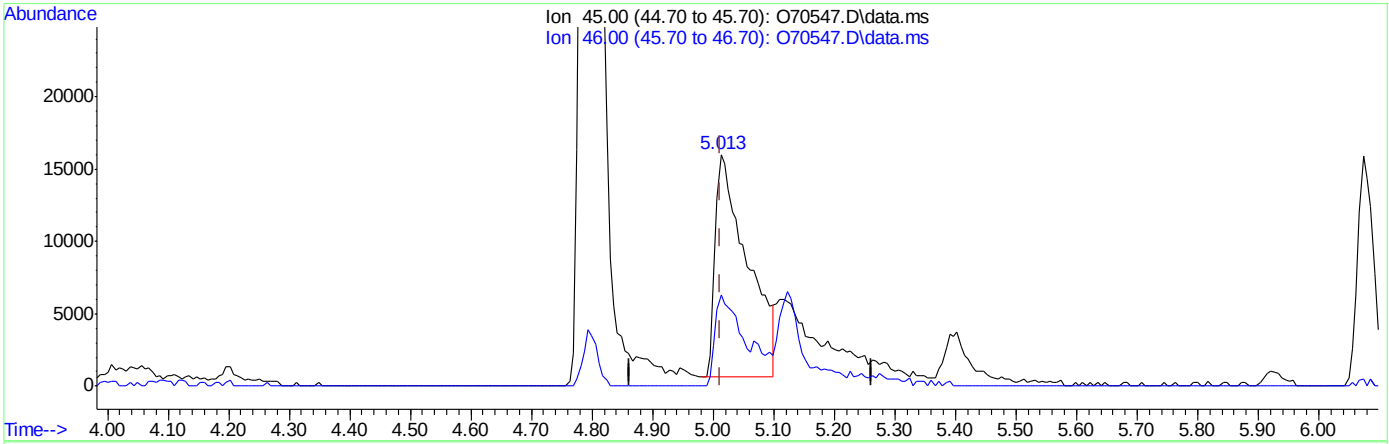
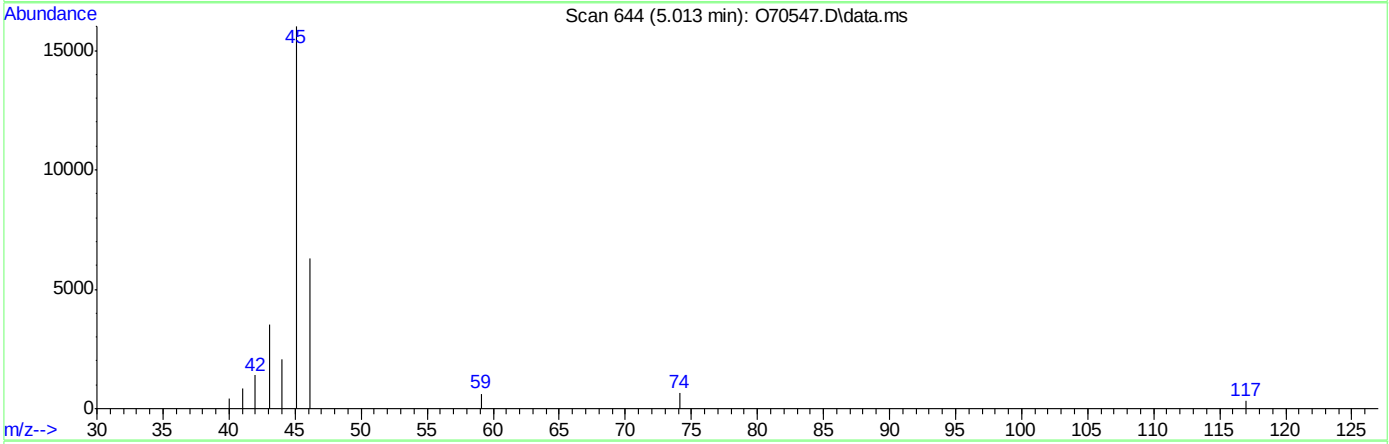
Manual Integration Approval Summary



Sample Number: VO2796-IC2796
Lab FileID: O70547.D
Injection Time: 08/23/22 15:34
Method: SW846 8260D
Analyst approved: 08/24/22 09:50 Jo-Ann Lugo De Jesus
Supervisor approved: 08/24/22 12:17 Lindsay Ritner



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.01	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration

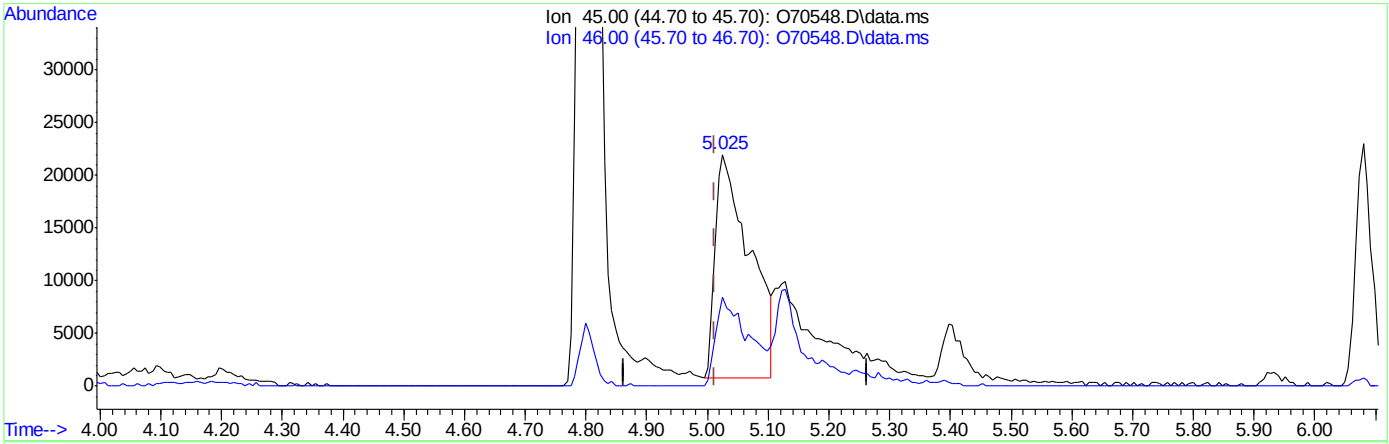
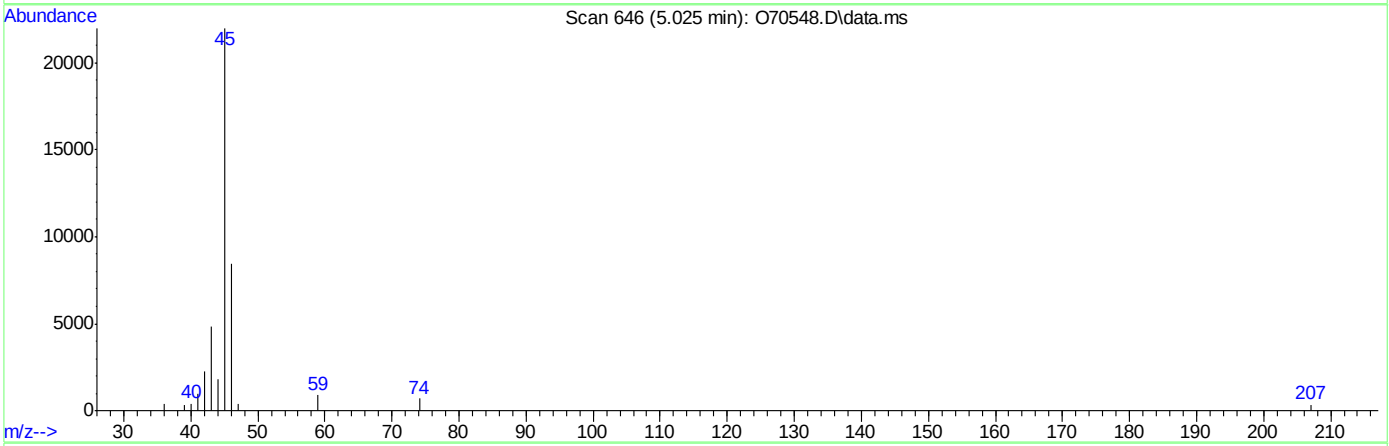
Manual Integration Approval Summary



Sample Number: VO2796-IC2796
Lab FileID: O70548.D
Injection Time: 08/23/22 15:59
Method: SW846 8260D
Analyst approved: 08/24/22 09:50 Jo-Ann Lugo De Jesus
Supervisor approved: 08/24/22 12:17 Lindsay Ritner



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.03	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.52	Poor instrument integration

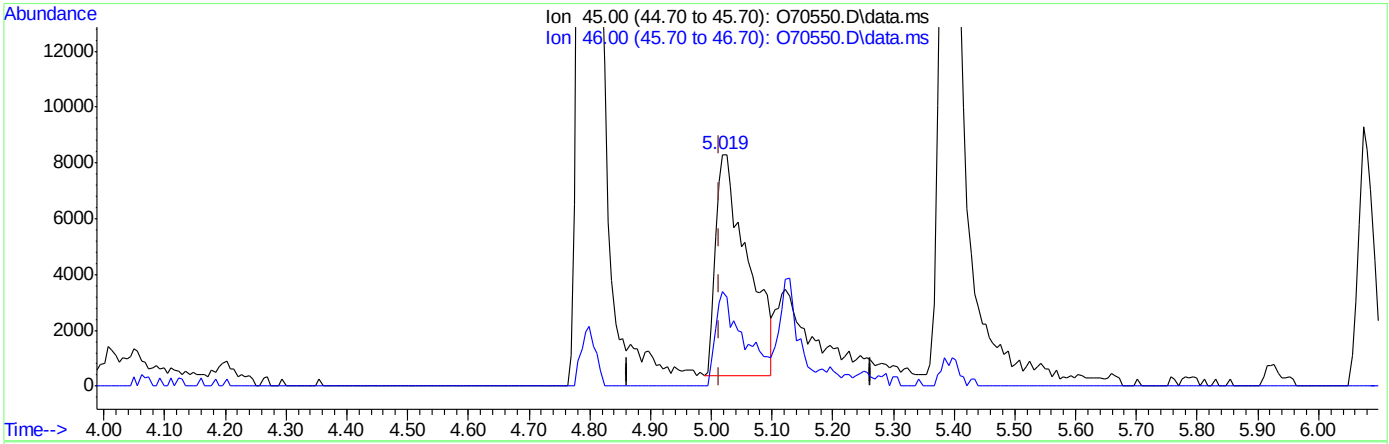
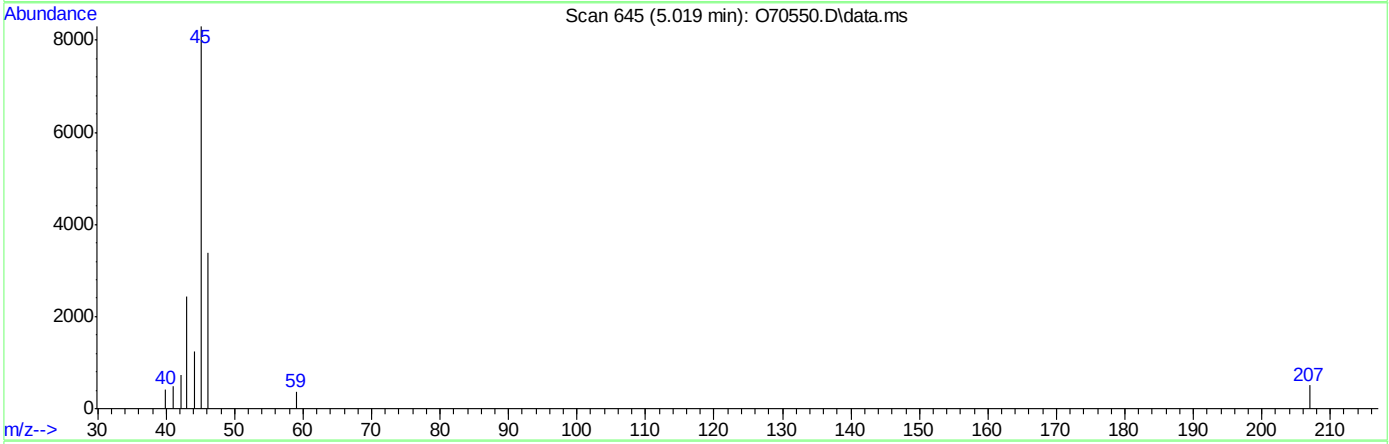
Manual Integration Approval Summary



Sample Number: VO2796-ICV2796
Lab FileID: O70550.D
Injection Time: 08/23/22 16:49
Method: SW846 8260D
Analyst approved: 08/24/22 09:50 Jo-Ann Lugo De Jesus
Supervisor approved: 08/24/22 12:17 Lindsay Ritner



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.02	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

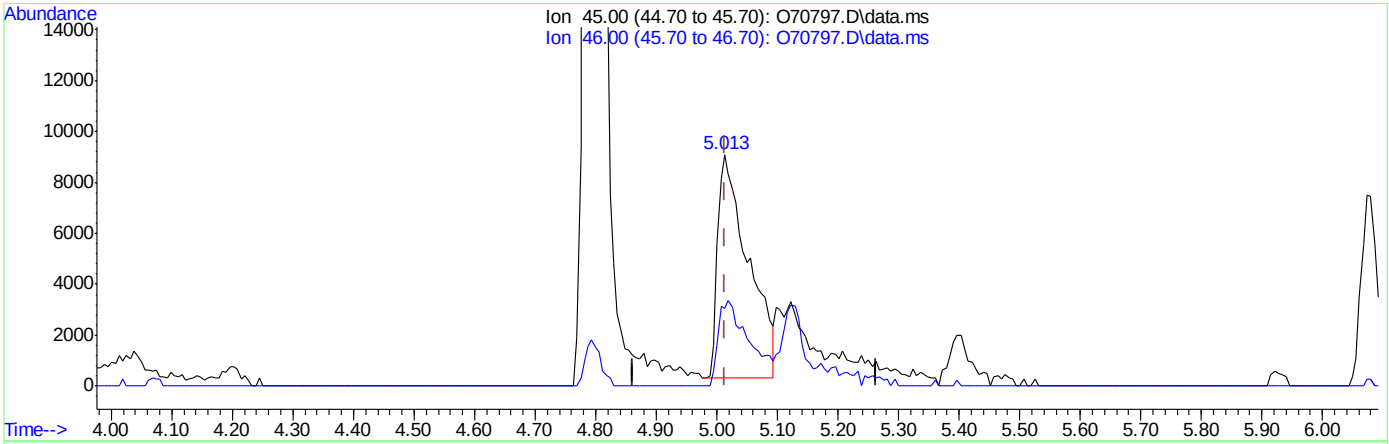
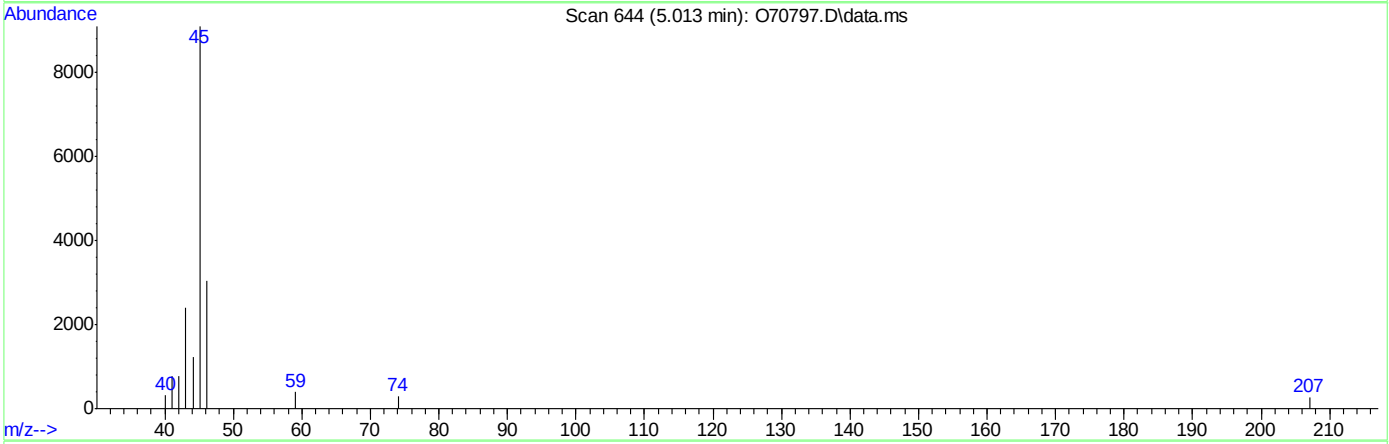
Manual Integration Approval Summary



Sample Number: VO2808-CC2796
Lab FileID: O70797.D
Injection Time: 09/01/22 11:29
Method: SW846 8260D
Analyst approved: 09/01/22 11:49 Jo-Ann Lugo De Jesus
Supervisor approved: 09/02/22 08:58 Karen Watson



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.01	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

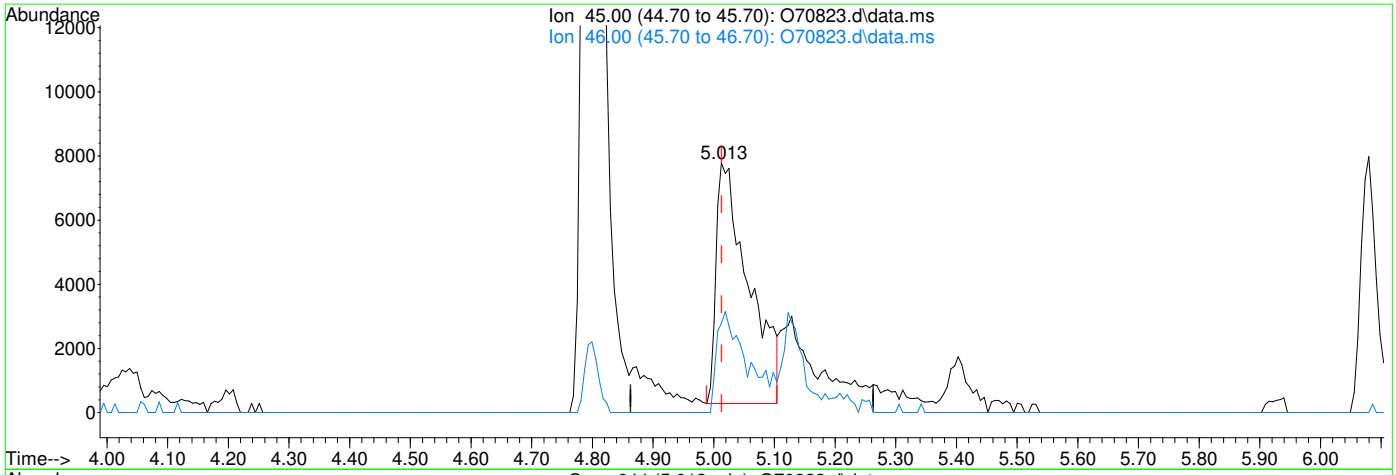
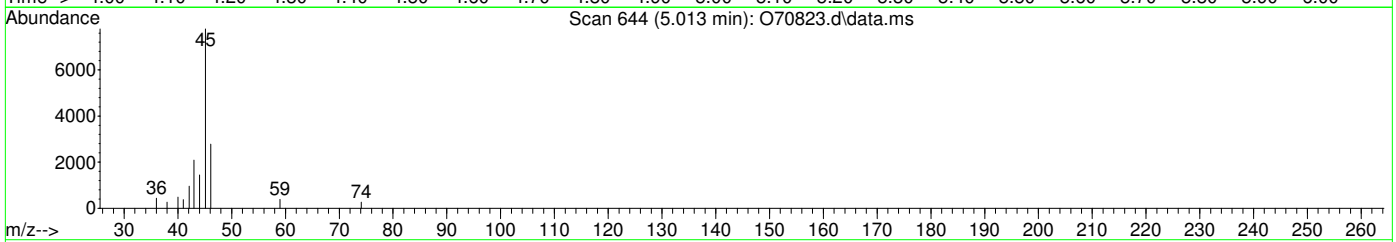
Manual Integration Approval Summary



Sample Number: VO2808-ECC2796 **Method:** SW846 8260D
Lab FileID: O70823.D **Analyst approved:** 09/02/22 08:09 Jo-Ann Lugo De Jesus
Injection Time: 09/01/22 22:18 **Supervisor approved:** 09/02/22 08:58 Karen Watson



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.01	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

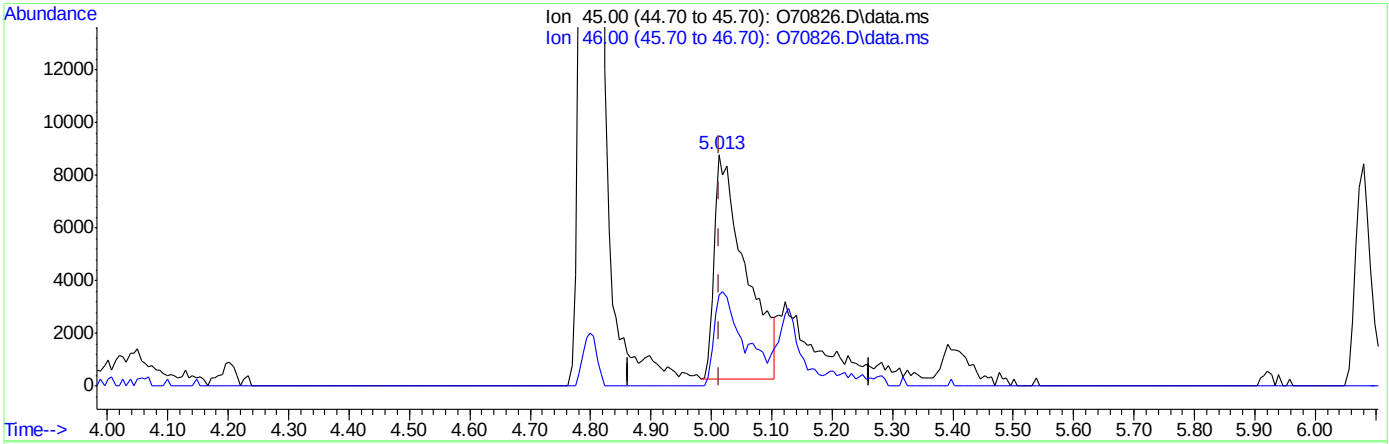
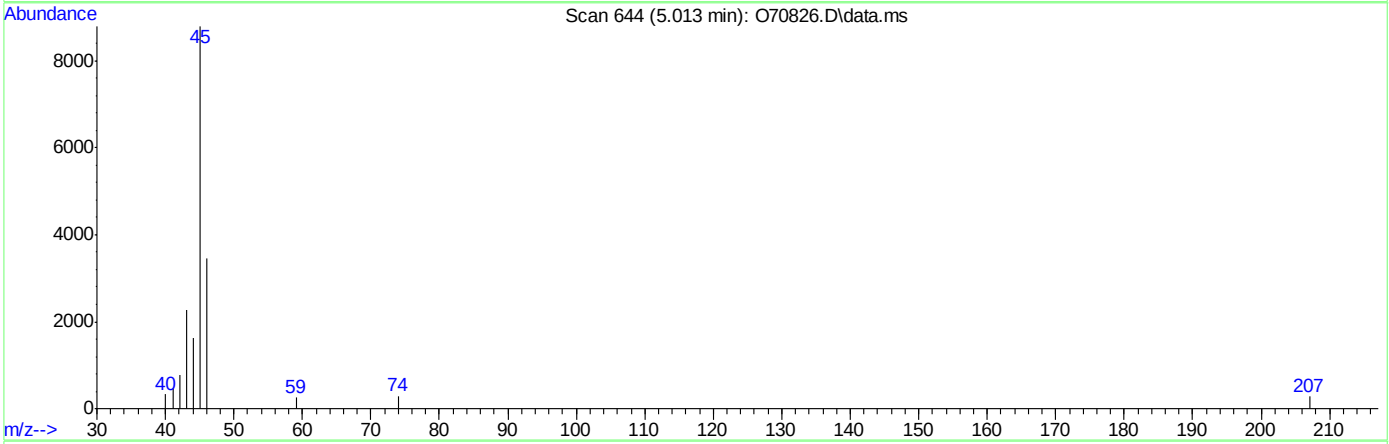
Manual Integration Approval Summary



Sample Number: VO2809-CC2796
Lab FileID: O70826.D
Injection Time: 09/02/22 12:22
Method: SW846 8260D
Analyst approved: 09/02/22 12:44 Jo-Ann Lugo De Jesus
Supervisor approved: 09/07/22 15:45 Karen Watson



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.01	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration
1-Chlorohexane	544-10-5		11.94	Poor instrument integration

Compound	R.T.	QIon	Response	Conc	Units	Dev(Min)
Internal Standards						
1) Fluorobenzene	8.835	96	1471019	50.00	ug/L	0.00
62) Chlorobenzene-d5	11.993	117	1240766	50.00	ug/L	0.00
85) 1,4-Dichlorobenzene-d4	14.353	152	653354	50.00	ug/L	0.00
System Monitoring Compounds						
39) Dibromofluoromethane	7.964	113	408940	49.25	ug/L	0.00
Spiked Amount 50.000	Range 83 - 118		Recovery = 98.50%			
50) 1,2-Dichloroethane-d4	8.549	65	415973	48.69	ug/L	0.00
Spiked Amount 50.000	Range 79 - 125		Recovery = 97.38%			
63) Toluene-d8	10.427	98	1485145	47.74	ug/L	0.00
Spiked Amount 50.000	Range 85 - 112		Recovery = 95.48%			
86) 4-Bromofluorobenzene	13.206	174	508119	48.57	ug/L	0.00
Spiked Amount 50.000	Range 83 - 118		Recovery = 97.14%			
Target Compounds						Qvalue
2) Dichlorodifluoromethane	2.849	85	292833	55.88	ug/L	98
3) Chloromethane	3.196	50	273319	46.97	ug/L	100
4) 1,3-butadiene	3.379	39	201206	36.78	ug/L	96
5) Vinyl Chloride	3.349	62	308794	47.21	ug/L	99
6) Bromomethane	3.897	94	126783	38.94	ug/L	99
7) Chloroethane	4.105	64	201072	50.70	ug/L	97
8) Trichlorofluoromethane	4.330	101	453764	43.50	ug/L	98
9) Ethyl Ether	4.800	59	187574	40.41	ug/L	96
10) Ethanol	5.013	45	38306m	733.78	ug/L	
11) 1,2-Dichlorotrifluoroe...	5.074	67	259333	43.23	ug/L	98
12) 1,1-Dichloroethene	5.086	61	365984	43.49	ug/L	99
13) Freon 113	5.141	101	254770	46.89	ug/L	98
14) Carbon Disulfide	5.129	76	661825	42.77	ug/L	99
15) Iodomethane	5.287	142	128305	36.09	ug/L	97
16) Acrolein	5.543	56	192520	169.71	ug/L	100
17) Allyl chloride	5.726	41	254247	36.44	ug/L	97
18) Methylene Chloride	5.866	49	366578	46.67	ug/L	99
19) Acetone	5.927	43	313046	184.77	ug/L	100
20) Methyl acetate	6.080	43	914012	208.95	ug/L	99
21) trans-1,2-Dichloroethene	6.074	61	351459	41.88	ug/L	97
22) Hexane	6.165	56	154526m	45.63	ug/L	
23) Methyl Tert Butyl Ether	6.196	73	588039	40.21	ug/L	98
24) Tert Butyl Alcohol	6.299	59	185928	346.79	ug/L	96
25) Acetonitrile	6.513	41	268407m	366.46	ug/L	
26) Di-isopropyl ether	6.653	45	711324	41.41	ug/L	99
27) Chloroprene	6.805	53	57240	37.49	ug/L	97
28) 1,1-Dichloroethane	6.836	63	435459	42.02	ug/L	98
29) Acrylonitrile	6.891	52	363489	195.52	ug/L	97
30) ETBE	7.086	59	693027	41.61	ug/L	98
31) Vinyl acetate	7.110	43	2214939	193.90	ug/L	100
32) cis-1,2-Dichloroethene	7.470	96	255298	42.78	ug/L	98
33) 2,2-Dichloropropane	7.592	77	282144	34.71	ug/L	97
34) Bromochloromethane	7.695	128	141224	42.57	ug/L	97

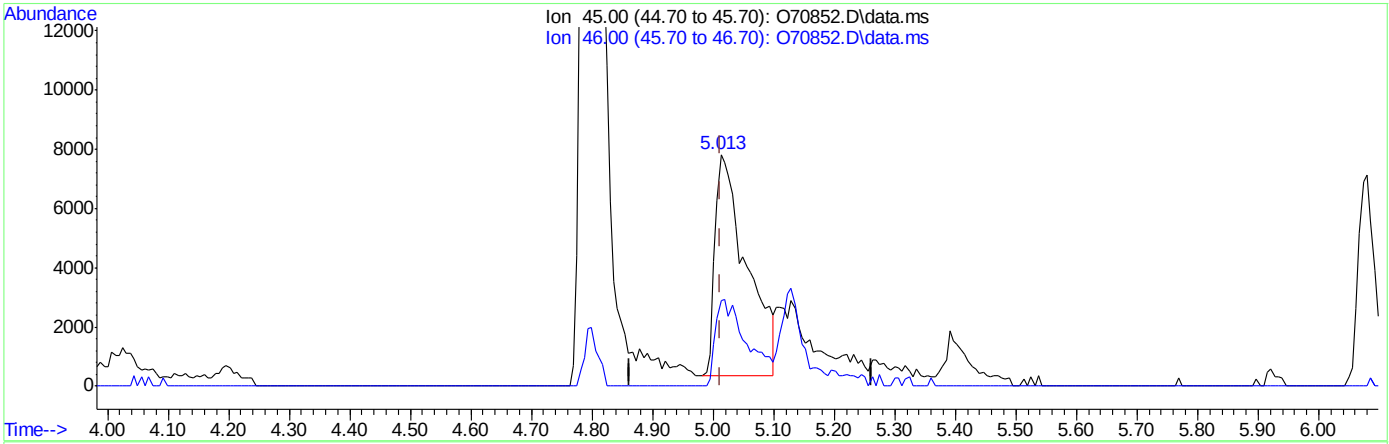
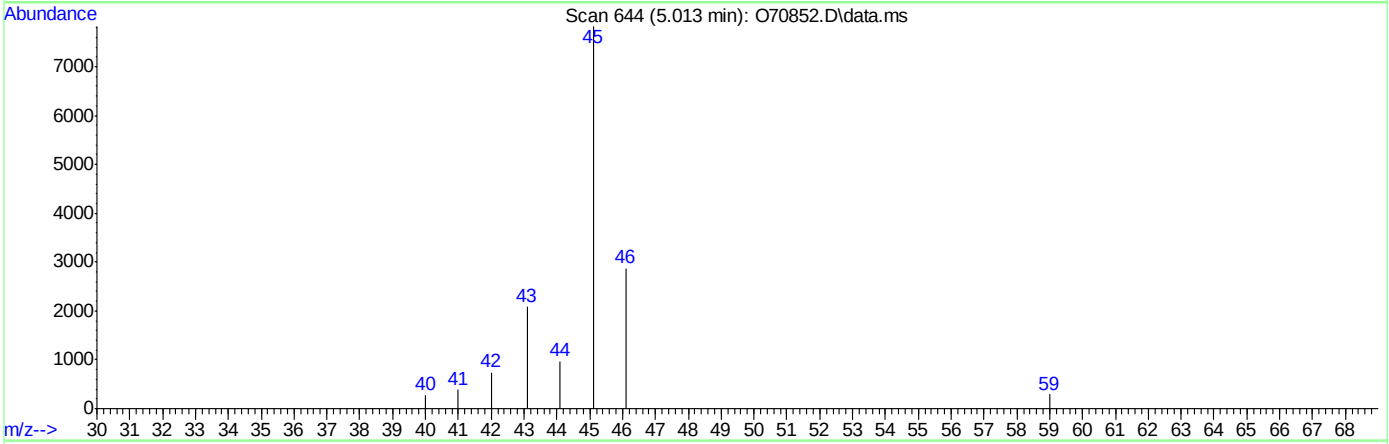
Manual Integration Approval Summary



Sample Number: VO2809-ECC2796
Lab FileID: O70852.D
Injection Time: 09/02/22 23:09
Method: SW846 8260D
Analyst approved: 09/07/22 14:58 Adelard Lefebvre
Supervisor approved: 09/07/22 15:45 Karen Watson



Parameter	CAS	Sig#	R.T. (min.)	Reason
Ethyl Alcohol	64-17-5		5.01	Poor instrument integration
Hexane	110-54-3		6.17	Overlapping peak
Acetonitrile	75-05-8		6.51	Poor instrument integration

Technical Report for

Bhate Environmental

Griffiss AFB; Rome, NY

GRFIS-BECOS

SGS Job Number: FA98468

Sampling Date: 08/26/22

Report to:

Bhate Environmental
1608 13th Ave S Suite 300
Birmingham, AL 35205
dbadio@bhate.com

ATTN: David Badio

Total number of pages in report: **1021**

Test results contained within this data package meet the requirements of the National Environmental Laboratory Accreditation Program and/or state specific certification programs as applicable.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Bhate Environmental **Job No:** FA98468

Site: Griffiss AFB; Rome, NY **Report Date:** 9/9/2022 12:38:31 PM

On 08/27/2022, 9 Sample(s), 1 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc - Orlando. at a maximum corrected temperature of 3.8 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FA98468 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** V2P3567

Sample(s) FA98474-2MS, FA98474-2MSD were used as the QC samples indicated.

Matrix: AQ **Batch ID:** V2P3568

Sample(s) FA98431-6MS, FA98431-6MSD were used as the QC samples indicated.

Blank Spike Recovery(s) for Methyl Tert Butyl Ether are outside control limits.

Matrix Spike Recovery(s) for 1,1-Dichloroethane, Methyl Tert Butyl Ether are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for 1,1-Dichloroethane, Methyl Tert Butyl Ether are outside control limits. Probable cause is due to matrix interference.

For Sample(s) FA98468-2, FA98468-3, FA98468-4, FA98468-5, FA98468-6 are associated with a blank spike that has a recovery for Methyl Tert Butyl Ether outside DOD QSM control limits.

FA98468-4: Sample vial(s) contained bubbles greater than 6mm.

FA98468-7: Sample vial(s) contained bubbles greater than 6mm.

FA98468-4 for Dichlorodifluoromethane: Associated CCV and ECC outside of DOD QSM control limits high, sample is ND.

FA98468-4 for Methyl Chloride: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98468-4 for Methyl Tert Butyl Ether: Associated BS recovery outside DOD QSM control limits high, sample is ND.

FA98468-6 for Vinyl Chloride: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98468-5 for Methyl Chloride: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98468-5 for Methyl Tert Butyl Ether: Associated BS recovery outside DOD QSM control limits high, sample is ND.

FA98468-5 for Trichlorofluoromethane: Associated CCV and ECC outside of DOD QSM control limits high, sample is ND.

FA98468-3 for Trichlorofluoromethane: Associated CCV and ECC outside of DOD QSM control limits high, sample is ND.

FA98468-6 for Methyl Tert Butyl Ether: Associated BS recovery outside DOD QSM control limits high, sample is ND.

FA98468-6 for Dichlorodifluoromethane: Associated CCV and ECC outside of DOD QSM control limits high, sample is ND.

FA98468-3 for Methyl Tert Butyl Ether: Associated BS recovery outside DOD QSM control limits high, sample is ND.

FA98468-6 for Methyl Chloride: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98468-3 for Vinyl Chloride: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98468-3 for Dichlorodifluoromethane: Associated CCV and ECC outside of DOD QSM control limits high, sample is ND.

FA98468-6 for Trichlorofluoromethane: Associated CCV and ECC outside of DOD QSM control limits high, sample is ND.

FA98468-3 for Methyl Chloride: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98468-2 for Methyl Chloride: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98468-2 for Trichlorofluoromethane: Associated CCV and ECC outside of DOD QSM control limits high, sample is ND.

FA98468-2 for Dichlorodifluoromethane: Associated CCV and ECC outside of DOD QSM control limits high, sample is ND.

FA98468-2 for Methyl Tert Butyl Ether: Associated BS recovery outside DOD QSM control limits high, sample is ND.

FA98468-5 for Dichlorodifluoromethane: Associated CCV and ECC outside of DOD QSM control limits high, sample is ND.

FA98468-2 for Vinyl Chloride: Associated CCV outside of DOD QSM control limits high, sample is ND.

Matrix: AQ **Batch ID:** V5E1550

Sample(s) FA98592-1MS, FA98592-1MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for cis-1,2-Dichloroethylene are outside control limits. Outside control limits due to high level in sample relative to spike amount.

RPD(s) for MSD for Methyl Bromide are outside control limits for sample FA98592-1MSD. Probable cause is due to sample non-homogeneity.

MS Volatiles By Method SW846 8260D

Matrix: AQ **Batch ID:** V5E1550

FA98468-4: Sample vial(s) contained bubbles greater than 6mm.

FA98468-5: Sample vial(s) contained bubbles greater than 6mm.

FA98468-7 for Methyl Bromide: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98468-8 for Methyl Bromide: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98468-9 for Methyl Bromide: Associated CCV outside of DOD QSM control limits high, sample is ND.

FA98468-9: Sample vial(s) contained bubbles greater than 6mm.

FA98468-10 for Methyl Bromide: Associated CCV outside of DOD QSM control limits high, sample is ND.

Matrix: AQ **Batch ID:** VY2672

Sample(s) FA98458-1MS, FA98458-1MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for 1,2,4-Trichlorobenzene, Bromobenzene, Bromoform, Chloroethane, Dibromochloromethane, Methyl Bromide, Methyl Tert Butyl Ether, Tetrachloroethylene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for 1,2,4-Trichlorobenzene, Bromobenzene, Chloroethane, Methyl Bromide, Methyl Tert Butyl Ether, Tetrachloroethylene are outside control limits. Probable cause is due to matrix interference.

RPD(s) for MSD for Methyl Bromide are outside control limits for sample FA98458-1MSD. Probable cause is due to sample non-homogeneity.

FA98468-1 for Chloroethane: Associated CCV outside control limits high, sample is ND.

FA98468-1 for Methyl Bromide: Associated CCV outside control limits high, sample is ND.

GC Volatiles By Method RSKSOP-147/175

Matrix: AQ **Batch ID:** G1R345

Sample(s) FA98473-11DUP, FA98473-11MS were used as the QC samples indicated.

Matrix Spike Recovery(s) for Methane are outside control limits. Outside control limits due to high level in sample relative to spike amount.

RPD(s) for Duplicate for Ethane, Ethene are outside control limits for sample FA98473-11DUP. Probable cause is due to sample non-homogeneity.

Matrix: AQ **Batch ID:** G1R346

Sample(s) FA98485-4MS, FA98485-9DUP were used as the QC samples indicated.

General Chemistry By Method EPA 300/SW846 9056A

Matrix: AQ **Batch ID:** GP38012

Sample(s) FA98468-1MSD, FA98468-1MS were used as the QC samples for Sulfate.

Matrix Spike Recovery(s) for Sulfate are outside control limits. Spike recovery indicates possible matrix interference.

Matrix: AQ **Batch ID:** GP38013

Sample(s) FA98468-8MSD, FA98468-8MS were used as the QC samples for Sulfate.

Matrix Spike Recovery(s) for Sulfate are outside control limits. Spike recovery indicates possible matrix interference.

General Chemistry By Method SM5310 B-11/SW9060A

Matrix: AQ **Batch ID:** GP37991

Sample(s) FA98473-11MS, FA98473-11MSD were used as the QC samples for Total Organic Carbon.

FA98468-6 for Total Organic Carbon: Sample was not preserved to a pH < 2.

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

Lab Use On Cooler Celsius

ORLD-SMT-0001-03-FORM-COC (4) xls Rev 031318

SGS Sample Receipt Summary

Job Number: FA98468 **Client:** BHATE **Project:** GRIFFISS AFB

Date / Time Received: 8/27/2022 9:30:00 AM **Delivery Method:** FX **Airbill #'s:** 570073538312

Therm ID: IR 1; **Therm CF:** 0.6; **# of Coolers:** 1

Cooler Temps (Raw Measured) °C: Cooler 1: (3.2);

Cooler Temps (Corrected) °C: Cooler 1: (3.8);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☑		☐	☐
2. Trip Blank listed on COC	☑		☐	☐

	W	or	S	N/A
3. Type Of TB Received	☑		☐	☐

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☐		☑	☐
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

Misc. Information

Number of Encores: 25-Gram _____ 5-Gram _____ Number of 5035 Field Kits: _____ Number of Lab Filtered Metals: _____

Test Strip Lot #s: pH 0-3 230315 pH 10-12 219813A Other: (Specify) _____ _____

Residual Chlorine Test Strip Lot #: _____
