<b>Comments:</b> <u>The sump pump will be replaced Spring 2001. At that time, the carbon drums will be disconnected with the ability to reconnect them in the future if possible. Then the POTW sampling can resume. There is also a note in the files that says that once the drums are removed that we should consider disconnecting the phone because the drums failing is the biggest cause of high level alarms, but does the sump pump failure also cause high level alarms? When we consider shutting down the pump, we will need to consider possible impacts that the pumping has had on lowering gw levels, i.e., will basements get flooded when pump is off.</u>
