

Primoshield 633027 AMEC Site Visit, Photos with Notes

Photo

Description

The day began as Day 2 of travel status to provide oversight at North Lawrence and Primoshield. I stayed overnight at DEC's Golden Beach Public Campground on Raquette Lake. This picture was taken from Route 28 traveling west (or south) after leaving in the morning. In this image the campground beach is across the lake.

I met Karl and Jeri from AMEC (formerly MACTEC) at noon. We opened the plant and inspected the panel. The system was down. We re-started it twice and each time it went off on overload after 1/2 hour.

Next page: opened panel, background; and bag filters and piping, foreground.

The lot has been nicely mowed

Jeri replaces a pry bar. Karl brought a large pry bar, seen here, which was needed to remove the manhole cover.

I purchased a lock box and combination padlock for Primoshield. The combination is "3027" because the site code is 633027.

Our new lock is daisy-chained with our 0344 Master padlock.
