ORGANIC QUALIFIERS

U - Indicates compound was analyzed for but not detected. The sample quantitation limit must be corrected for dilution and for percent moisture.

J - Indicates an estimated value. The flag is used either when estimating a concentration for tentatively identified compounds, or when the data indicate the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit and greater than the MDL.

N - Indicates presumptive evidence of a compound. This flag is only used for tentatively identified compounds, where the identification is based on a mass spectral library search.

P - This flag is used for a pesticide/Aroclor target analyte when there is a greater than 25% difference for detected concentrations between the two GC columns. The concentration is reported on the Form I and flagged with a "P".

C - This flag applies to pesticide results where the identification has been confirmed by GC/MS.

B - This flag is used when the analyte is found in the associated blank as well as in the sample.

E - This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.

D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. If a sample or extract is re-analyzed at a higher dilution factor, as in the "E" flag above, the "DL" suffix is appended to the sample number on the Form I for the diluted sample, and ALL concentration values reported on that Form I are flagged with the "D" flag.

A - This flag indicates that a TIC is a suspected aldol-condensation product.

X - As specified in Case Narrative.

* - This flag identifies compounds associated with a quality control parameter which exceeds laboratory limits.

NYTEP SOIL REMEDIAL ACTION COMPLETE

INTRODUCTION

This fact sheet was prepared by Beazer East, Inc. (Beazer) and Suit-Kote Corporation (Suit-Kote) to inform interested parties of the completion of site activities related to the soil remedial action at the New York Tar Emulsion Product (NYTEP) Site (Site) located in Utica, New York. Field activities were initiated during November 2004 and were completed on April 22, 2005. The soil remedial action was completed and financed by Beazer and Suit-Kote to satisfy the requirements of a Consent Order (dated July 10, 1998) entered into with the New York State Department of Environmental Conservation (NYSDEC). The Order required Beazer and Suit-Kote to implement a number of activities related to a remedial program at the Site. The soil remedial action field activities were conducted pursuant to the NYSDEC-approved Soil Remedial Design Report.

SITE LOCATION MAP

SITE BACKGROUND

The NYTEP Site is located in the central southeastern part of the Harbor Point area in the City of Utica, Oneida County, New York (see Site Map). The Site is within the approximately 70 acre Harbor Point peninsula, bounded to the west and north by the Mohawk River, to the east by the New York State Barge Canal and the Utica Harbor Terminal, and to the south by a railroad corridor. The 2.96 acre NYTEP Site borders Washington Street and is the former location of the NYTEP road tar processing facility which ceased operations in 1983. During its operations since 1923, the Site used raw coal tar from the adjacent former coal gas and water gas plant and processed these materials to produce road tars. All aboveground features were removed from the Site by Suit-Kote in 1990 and the Site was covered with gravel. The Site is currently vacant and is enclosed by a perimeter security fence.

FIELD ACTIVITIES DESCRIPTION:

The following activities were performed as part of the soil remedial action implementation:

- Approximately 52,000 tons of surface and subsurface soils containing total polycyclic aromatic hydrocarbons (PAHs) greater than 1,000 parts per million (ppm) or visual tar or non-aqueous phase liquid (NAPL) in the top six feet of the NYTEP Site were excavated and disposed off-Site as a non-hazardous waste;
- Approximately 56 tons of tar and tar-like material were excavated and disposed off-Site as a hazardous waste;
- Groundwater and surface water encountered during excavation activities was treated on-Site to meet applicable criteria and was discharged to Utica Harbor;
- Air monitoring was performed throughout the duration of the construction activities in accordance with the Site-specific Health and Safety Plan. Where necessary, field activities were modified to comply with air monitoring requirements;
- The resulting excavation was backfilled to the required grades with segregated soil that met the cleanup objectives and/or imported clean fill;
- A 2-foot thick soil cover, including 6-inch vegetative layer, was placed over the entire backfilled area and was subsequently seeded/mulched; and,
- Institutional controls to protect remedial features, restrict on-site groundwater use and prohibit the NYTEP Site from being used for purposes other than appropriate recreational, industrial, or commercial uses were established with the Oneida County Clerk of Courts.

Sevenson Environmental Services, Inc. of Niagara Falls, New York performed field construction activities at the Site. Key Environmental, Inc. of Carnegie, Pennsylvania was the owner's representative during the construction activities and was responsible for field oversight activities and certification of the soil remedy.

FUTURE INFORMATION

NYSDEC, Beazer, and Suit-Kote will continue to publish fact sheets to keep the local community information of developments pertaining to Site related activities.
