LOT 3A INTERIM REMEDIAL MEASURES
CONSTRUCTION COMPLETION REPORT

Former Kerr-McGee/Tronox Federal Creosote Site
Rome, New York
Portion of NYSDEC Site #633088

Prepared for

Greenfield Environmental Multistate Trust LLC
Trustee of the Multistate Environmental Response Trust

Prepared by:
Haley & Aldrich of New York

For Submittal to:

New York State Department of Environmental Conservation

December 10, 2019

This Lot 3A Interim Remedial Measures Construction Completion Report was prepared by Haley & Aldrich of New York (Haley & Aldrich), for Greenfield Environmental Multistate Trust LLC, Trustee of the Multistate Environmental Response Trust (the Multistate Trust).

Associate | Senior Project Manager

Engineer Certification

I, James E. Siegfried, P.E. certify that I am currently a NYS registered professional engineer, I had primary direct responsibility for the implementation of the subject construction program, and I certify that the Remedial Work Plan was implemented and that all construction activities were completed in substantial conformance with the DER-approved Remedial Work Plan.

James E. Siegfried, P.E.

1. Introduction

1.1 SITE DESCRIPTION

This Construction Completion Report (CCR), prepared by Haley & Aldrich of New York (Haley & Aldrich), documents Interim Remedial Measures (IRM) conducted by the Greenfield Environmental Multistate Trust LLC, Trustee of the Multistate Environmental Response Trust (Multistate Trust), at a portion of the Former Federal Creosote Site in Rome, NY (Site) (see Figure 1). Remediation activities described herein were performed under the New York State Department of Environmental Conservation (NYSDEC) Inactive Hazardous Waste Disposal Site Remediation Program, pursuant to an Order on Consent and Administrative Settlement (NYSDEC Index No. CO 6-20180611-27) regarding Site #633088, and in accordance with the NYSDEC-approved Revised Interim Remedial Measures Work Plan (IRMWP) dated August 10, 2018 (Haley & Aldrich, 2018b). The work was completed in general conformance with NYSDEC Division of Environmental Remediation Technical Guidance for Site Investigation and Remediation (DER-10; NYSDEC, 2010a).

The IRM was conducted on Lot 3A, a 4.51± acre parcel located at 5900 Success Drive in the City of Rome, New York (see Figure 2). The Lot 3A property is owned by the Oneida County Industrial Development Authority (OCIDA), and includes an active powder coating manufacturing facility building owned and operated by Nortek Powder Coating, LLC (Nortek), a paved parking and loading dock area south of the Nortek building, driveways, landscaped areas, and a wooded area on the west portion of the property. IRM activities were primarily located on the paved parking area south of the Nortek building (south parking lot), and soil staging activities and construction staging extended onto Lot 3B, which is located contiguous to and south of Lot 3A. Lot 3B is a 1.17± acre undeveloped parcel, also owned by the OCIDA, and the location of previous remedial activities conducted by the Multistate Trust in 2016 (Haley & Aldrich, 2017). The IRM area encompassing Lot 3A and Lot 3B is herein referred to as the "IRM Site." Access for the IRM activities described herein was coordinated between the NYSDEC, the Multistate Trust, the OCIDA, and Nortek.

1.2 SITE HISTORY

The Site is a portion of a 189+/- acre complex formerly owned and operated by the Federal Creosoting Company from the early 1900s until 1959. Historical operations included the production and preservation treatment of wooden railroad ties with creosote. The property was later developed into an industrial park in the 1970s. The Multistate Trust, which was established pursuant to the global settlement of the Tronox bankruptcy, took title to certain portions of the Site in 2011 and is responsible for managing and funding environmental actions at the Site pursuant to NYSDEC-approved work plans and budgets.

Lot 3A was the former location of, among other things, four aboveground storage tanks (ASTs) used to store liquid creosote for wood treatment operations at the Site. Other structures formerly located on Lot 3A included a boiler house and an office. Following cessation of wood treatment operations at the Site in the 1950s, the original Lot 3A building was constructed in 1979. An addition to the east side of the building was constructed by Nortek in 2016.

1.3 REMEDIAL INVESTIGATION SUMMARY

Starting in 2001, investigations and remedial actions at Lot 3A were conducted on behalf of Kerr-McGee by Plumley Engineering of Baldwinsville, New York (Plumley). The investigations and remedial actions at Lot 3A and other portions of the Site were performed under a Voluntary Cleanup Agreement (VCA) (Site No. V00612-6) entered into by, among others, Kerr-McGee Chemical, LLC (Kerr-McGee) and the NYSDEC. Plumley's investigations included soil borings, groundwater monitoring, and soil vapor monitoring beneath the Nortek building. Soil boring observations and associated sample analyses detected elevated concentrations of polycyclic aromatic hydrocarbons (PAHs) in soil below portions of the pavement in the south parking lot of Lot 3A. Plumley conducted remedial excavations to assumed depths of approximately four feet below ground surface (bgs) (based on photographs provided by the NYSDEC) throughout the northwestern portion of the paved parking area south of the Nortek building in 2006 and 2007. Following remedial excavations and approval of a Lot 3A-specific Soil Management Plan (SMP) in 2008, Lot 3A was released from the VCA in 2012.

In 2016, Haley & Aldrich conducted IRMs on Lot 3B (Lot 3B IRM) pursuant to a NYSDEC-approved work plan on behalf of the Multistate Trust (Haley & Aldrich, 2017). During Lot 3B IRM excavations near the property line between Lots 3A and 3B (see Figure 2), Haley & Aldrich observed potentially impacted groundwater migrating south from Lot 3A onto Lot 3B, suggesting the presence of contaminated soils in the south parking lot area of Lot 3A. Due to such observations, as part of the Lot 3B IRM activities, a sheet pile wall installed between Lots 3A and 3B was left in-place following completion of the Lot 3B IRM to impede impacted groundwater from migrating onto Lot 3B from Lot 3A.

A subsequent investigation of the Lot 3A parking lot area was conducted by Haley & Aldrich in 2017 as part of supplemental investigation activities (2017 Supplemental Investigation) related to multiple Site parcels (Lot 3A, Lot 4, Lot 5E, and the Railroad Parcel) (Haley & Aldrich, 2018a). Findings of the 2017 Supplemental Investigation included visual observations of creosote-saturated soil up to 2.2 feet thick generally found above the clay layer in random locations in the Lot 3A investigation area between four and 10.1 feet below the pavement surface.

Based on the findings of the 2017 Supplemental Investigation, the NYSDEC requested, via letter dated May 18, 2018, that the Multistate Trust prepare an IRM work plan for the purpose of removing visible creosote-saturated soils identified during the 2017 Supplemental Investigation activities in the Lot 3A parking lot area. The IRMWP was submitted to NYSDEC on August 10, 2018 and approved on August 20, 2018.

Borings were installed for IRM documentation sampling purposes prior to the commencement of Lot 3A IRM excavation activities in May 2019. Haley & Aldrich advanced soil borings around the perimeter of the proposed IRM excavation areas to collect sidewall documentation samples and visually document the presence or absence of creosote-saturated soils along the perimeter of each proposed IRM excavation, as prescribed in the IRMWP and further described in Section 3.1 below. Following observations of creosote-saturated soils in the northeast corner of the proposed excavation, additional soil borings were advanced to delineate the lateral extent of observed creosote-saturated soils, and to revise the proposed IRM excavation boundaries. Following completion of the additional soil borings, the proposed limits of the Lot 3A IRM excavation area(s) were expanded to the limits shown on Figures 3 and 4.

1.4 PHYSICAL SETTING

Subsurface geologic conditions on Lot 3A were determined based on subsurface investigations conducted at the IRM Site by both Plumley and Haley & Aldrich between 2002 and 2019. Those investigations confirmed that a confining clay layer is present between approximately six and 12 feet bgs, overlain by lacustrine sands and surficial fill associated with historical Site use. Based on previous investigations described above, creosote-saturated soil appears to be limited to the sand and fill layers and does not appear to extend into or below the clay layer.

The former Federal Creosote Company facility boiler house was also historically located on Lot 3A. Numerous concrete structures, likely associated with former Site building foundations, were uncovered and removed during the IRM activities. Based on correspondence with NYSDEC, three of these concrete features were left in place, as discussed in Section 3.2.4.

1.5 REMEDIAL GOALS AND CLEANUP CRITERIA

The objectives for the IRM, as presented in the IRMWP, included:

1. Removing and disposing of, to the extent practical, visible creosote-saturated soil, fill, and debris from the south parking lot area of Lot 3A;
2. Achieving Site conditions that will allow for no further remedial action requirements related to visible creosote non-aqueous phase liquid (NAPL) contamination on Lot 3A; and
3. Documenting remaining Site conditions for ongoing and future Site management.

The IRMWP defined visual impacts from creosote as evidence of creosote-saturation or free product. The activities described herein document the removal and disposal of such material.

2. Site Preparation Activities

Prior to implementation of IRM activities, Haley & Aldrich, the NYSDEC, the New York State Department of Health (NYSDOH), the Multistate Trust, National Grid, and representatives of the OCIDA and Nortek attended a pre-construction meeting/site walk on April 25, 2019 to review pre-excavation sampling and subsequent IRM construction activities. On June 17, 2019, National Grid provided the Multistate Trust authorization to conduct Lot 3A IRM construction-related activities (e.g., excavated material staging and truck travel) on portions of the Site (Lot 5E) located beneath high voltage electrical lines shown on Figure 3.

Haley & Aldrich Construction Services (HCS) engaged Paragon Environmental Construction, Inc. of Brewerton, New York (Paragon) to perform construction activities, including site preparation, soil excavation, water management, and waste transport. HCS managed the construction and provided construction oversight. IRM implementation monitoring, documentation soil sampling, and wastewater sampling were performed by Haley & Aldrich.

2.1 REGULATORY APPROVALS AND PERMITS

The NYSDEC issued initial approval of the IRMWP on August 20, 2018 (Appendix A; NYSDEC, 2018b). During implementation of the IRM, NYSDEC approval for deviations from the IRMWP was requested. Documentation of NYSDEC approvals are included in Appendix A.

The City of Rome Water Pollution Control Facility (WPCF) issued approval on May 1, 2019 to discharge groundwater recovered from remedial excavations to the City of Rome sanitary sewer under Industrial Discharge Permit HAL-1920 (Permit HAL-1920). The WPCF and NYSDEC approved modifications to the wastewater sampling schedule specified in HAL-1920 on August 1, 2019. Permit HAL-1920 is included in Appendix A.

Creosote-impacted materials excavated at the Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the materials require handling and disposal as hazardous waste, unless granted a "Contained-In" determination.

Pursuant to correspondence between NYSDEC and Haley & Aldrich, dated July 31, 2019, wastewater generated at the Site was granted a generic "Contained-In" determination, applicable only to the delivery of water to the WPCF meeting discharge conditions specified in Permit HAL-1920.

Haley & Aldrich submitted twelve "Contained-In" determination requests to NYSDEC to facilitate management of stockpiled creosote-impacted soils and construction debris generated during implementation of IRM activities. NYSDEC granted each "Contained-In" determination requested as part of such IRM activities. "Contained-In" request letters, analytical data, and determinations regarding the same are included in Appendix B.

2.2 SITE SURVEYS

Topographic surveys of the Lot 3A south parking lot and Lot 3B in 2018 established IRM Site feature elevations and surface grades prior to IRM implementation. In May and June 2019, the pre-approved

Lot 3A IRM excavation limits were marked by a surveyor on the asphalt surface of the Lot 3A south parking lot. The surveyed excavation limits guided the location of soil borings advanced along the excavation perimeters to screen for visual evidence of creosote-saturated soils and collection of sidewall documentation soil samples. Surveyed excavation limits also guided sheet pile installation locations during subsequent IRM excavation activities.

3. Interim Remedial Measures Summary

3.1 PRE-EXCAVATION SOIL BORINGS AND SIDEWALL DOCUMENTATION SAMPLING

Haley & Aldrich engaged NYEG Drilling, LLC of Brewerton, New York (NYEG) to advance soil borings using direct-push drilling methods for collection of documentation sidewall samples from the perimeter of the surveyed excavation limits prior to IRM construction activities, in accordance with the IRMWP. Soil borings were advanced by direct-push methods approximately every 30 linear feet along the perimeter of the approved limits of the large excavation area, and on each sidewall of the two smaller excavation areas, as shown on Figure 4. Soil borings were not advanced along excavation sidewalls of the larger excavation area abutting Lot 3B to the south, since this area was previously excavated and backfilled in 2016 by the Multistate Trust.

Soil borings were advanced to the confining clay layer, approximately 10 to 12 feet bgs using a direct-push drill rig between May 1 and May 2, 2019. Recovered soils were screened for visual evidence of creosote-saturated soil and logged using procedures outlined in the 2017 Supplemental Investigation of Lot 3A (Haley & Aldrich, 2018a). Creosote saturation was identified in three soil borings located in the northeast corner of the large excavation area (borings HA-DOC3A-18, HA-DOC3A-18B and HA-DOC3A-18C; see Figure 4). Following consultation with the NYSDEC and Nortek representatives, step-out borings were advanced on May 16, 2019 to delineate the lateral and vertical extent of additional creosote-saturated soils to the east of the proposed large excavation area, which were designated as cell A and cell B3. Boring logs are included in Appendix C.

During a conference call on June 3, 2019 attended by representatives of the Multistate Trust, the NYSDEC, and the NYSDOH, the NYSDEC requested excavation of cells A and B3. The excavation limits were determined based on the boring data and marked in the field.

In accordance with the IRMWP, sixteen (16) sidewall documentation samples were collected from soil borings (see Figure 4). Samples were collected from either the most visually contaminated interval of the boring or approximately from the top of the water table, if no visual contamination was observed. Samples were analyzed for target compounds list (TCL) volatile organic compounds (VOCs; Method 8260), and TCL semi-volatile organic compounds (SVOCs; Method 8270), in accordance with the sampling and analysis plan set forth in the IRMWP. A sampling and analysis summary is included in Table I. Documentation sample analytical results are provided in Table II. A narrative summary of the data results is provided in Section 3.4.

3.2 REMEDIAL EXCAVATION

Remediation construction activities were conducted by Paragon with oversight by HCS and documentation by Haley & Aldrich personnel between June 17, 2019 and September 26, 2019 in accordance with the IRMWP (Haley & Aldrich, 2018b). Field activities were documented in a photographic log (see Appendix D for select photographs).

3.2.1 Limits of Excavation

The lateral limits of remedial excavations completed during the IRM are shown on Figures 3 and 4. Vertical extents of excavation were to the top of the confining clay layer, approximately 7.5 to 10 feet

bgs, or to the top of concrete slabs left in place. Remedial excavation limits were expanded beyond those proposed in the IRMWP to include an additional approximately 688-square foot area northeast of the larger excavation area identified as excavation "cells" A, B3, and 2A in Figure 4.

3.2.2 Excavation and Materials Management

For purposes of construction sequencing and water management, the remedial excavation areas were planned to be subdivided into sixteen (16) "cells" as shown on Figure 4. Excavation of creosote-impacted materials was facilitated by interlocking sheet piles installed at the perimeter of the pre-defined excavation cells. Due to the proximity to the Nortek building and the shallow target depth excavation, cell A was completed without sheet piles. Upon completion of excavation and backfill (as described in Section 4.1) within a cell or area, sheet piles were removed and re-used to stabilize subsequent excavation cells.

Prior to the excavation of a cell, the asphalt surface was removed and stockpiled for recycling. Segregation of creosote-impacted soil from non-impacted soil and concrete within each cell was anticipated in the IRMWP but was not practically feasible because creosote impacts were not limited to discrete areas. Where practical, concrete removed during remedial excavations was broken in-place, resized, and mixed with impacted soil for disposal at a NYSDEC-permitted disposal facility.

Excavations were conducted between June 25, 2019 and September 9, 2019. Cell excavations began with cells 6 and 1 (Figure 4) to facilitate subsequent equipment access to the main excavation area, and to minimize disturbances to Nortek's operations (e.g., ingress/egress along the southern portion of the Nortek building). Following backfill of cells 6 and 1, excavation in the large excavation area commenced in cell A, generally progressed to the southwest, and finished in cell 5C (see Figure 4 for excavation layout). Excavated soil was temporarily stockpiled on Lot 3B, solidified with Quicklime, sampled and analyzed for Contained-In determination and landfill acceptance, covered with polyethylene sheeting, and subsequently loaded out for disposal, as described in Section 3.6.1. Steel rebar recovered during resizing of the concrete was segregated for recycling by Paragon, as described in Section 3.6.2.

3.2.3 Excavation Water Management

Shallow groundwater and precipitation resulted in water infiltration into the remedial excavations. As a result, dewatering was needed during active excavation. Temporary sumps were constructed of perforated, corrugated plastic pipe surrounded by washed stone. Excavation water was pumped using a 4-inch pump from the sumps into 20,000-gallon frac tanks located on Lot 3B. Upon filling a tank, the water was pumped through 50-micron, in-line bag filters into a clean tank, flocculated, and tested as described in Section 3.6.3 per disposal facility requirements. The sumps were removed from each excavation cell prior to backfilling.

3.2.4 Concrete Structures Left in Place

During remedial excavation activities, three concrete structures were encountered and left entirely or partially in place due to the infeasibility of excavation and removal. Written and/or verbal approvals to leave each concrete structure in place were obtained from NYSDEC. The locations of the concrete structures are shown on Figure 4, and their conditions are described below.

Excavation of the eastern portions of cell A on July 9, 2019 identified concrete floors and sub-walls at depths between approximately two and four feet bgs. Due to the proximity of the structure to the Nortek building, Haley & Aldrich concluded that excavation and removal of the concrete structure might compromise the structural integrity of the nearby building. NYSDEC provided subsequent verbal approval to leave the concrete structure in place, following the excavation and removal of overlying creosote-impacted soil and fill.

The excavation of cell 3A exposed a 1-foot thick concrete slab at a depth of approximately 6 feet bgs. Subsequent exploratory test pits indicated the slab extended more than 1,200 square feet across portions of excavation cells 3A, 3B, 4A, 4B, 5A, and 5B (Figure 4). Due to the difficulty of removing the concrete slab, a borehole (HA-DOC3A-SUBSLAB) was advanced through the slab and approximately one foot into the clay layer below, and a soil sample collected from beneath the slab to assess for the presence of creosote-saturation. Because visual evidence of creosote saturation was not observed in clay soils collected from the borehole, the concrete slab was left in place, and a documentation sample was collected and submitted for analysis of VOCs by EPA method 8260, SVOCs by EPA method 8270, and RCRA metals by EPA method 6010. Results are included in Appendix E and summarized in Table II.

During the excavation of soils along the boundary between cells 3B and 4B, an approximately 30-foot long and 1-foot thick concrete wall was encountered extending to depths greater than 12.5 feet bgs. The wall extended into the confining clay layer at the base of the remedial excavation identified at 8.5 ft bgs. Creosote-saturated soils were not observed within the clay surrounding the concrete wall. Following approval from NYSDEC, portions of the wall located above the clay layer were broken, excavated, and removed. Portions of the wall within the clay layer (below 8.5 feet bgs) were left in place.

3.3 POST-EXCAVATION BOTTOM DOCUMENTATION SAMPLING

Documentation samples were collected from the bottom of each excavation cell prior to backfilling as shown on Figure 4. The sample frequency was in general accordance with DER-10 guidance. Bottom documentation samples were collected from cell 6 (284 square feet) and cell 1 (400 square feet). Thirteen bottom documentation samples were collected from cells within the larger excavation area, at a frequency of one sample per approximately 808 square feet of excavation bottom area. One combined sample was collected from cells 2A and B3. A single documentation sample was collected from clay soils observed during the advancement of soil boring HA-DOC3A-SUBSLAB through the concrete slab described in Section 3.2.4, above. Documentation samples were collected from the clay layer encountered at the bottom of each excavation cell.

Bottom documentation samples were analyzed for VOCs by EPA method 8260, SVOCs by EPA method 8270, and RCRA metals by EPA method 6010. A sampling and analysis summary is included in Table I. The results are presented in Table II and narratively summarized in Section 3.4 below.

3.4 DOCUMENTATION SAMPLE DATA VALIDATION AND SUMMARY

Documentation samples were validated by Haley & Aldrich, in accordance with the IRMWP. Data reports and data usability summary reports are included in Appendix E. Table II includes a summary of sidewall and bottom documentation sample results. Table II also includes the NYSDEC Part 375 Soil Cleanup Objectives (SCOs) restricted for commercial and industrial use (NYSDEC, 2006; NYSDEC, 2010b) for comparison purposes. While the SCOs for commercial and industrial use are presented as comparison

criteria for the documentation samples in Table II, these criteria were not used as remedial objectives for this IRM.

The compounds detected above one or both SCOs included:

- Several high molecular weight PAHs were detected above the SCOs in five of the sidewall samples and two bottom samples; and
- Naphthalene and phenanthrene, likely related to creosote, were detected above the SCOs in three sidewall samples: DOC3A-02, DOC3A-10, DOC3A-111. Low to moderate impacts from creosote were observed in those three boring locations during the pre-construction documentation sampling (see Boring Logs, Appendix C).

3.5 MONITORING WELL ABANDONMENT

During construction planning associated with the IRM, a monitoring well installed by Plumley, designated MW-4 (Figure 4), was identified as likely to be impacted by planned construction activities. A revised Lot 3A IRMWP Addendum dated June 19, 2019 was submitted to NYSDEC for decommissioning of the well. The Revised Lot 3A IRMWP Addendum was approved by NYSDEC on June 27, 2019.

On July 12, 2019, NYEG decommissioned monitoring well MW-4 in accordance with NYSDEC Commissioners Policy (CP) 43 – Groundwater Monitoring Well Decommissioning Policy, issued November 3, 2009 (NYSDEC, 2009). During well decommissioning, the bottom plug (12 feet bgs) of the well was broken and grout was mixed and tremied to the bottom of the well casing. Subsequently, an excavator pulled the well casing out of the ground, depositing grout in the remaining hole.

3.6 WASTE DISPOSAL

Contained-In determination request letters were submitted to the NYSDEC for creosote-impacted soil and wastewater to be removed from the Site. Upon receipt of contained-in determinations, waste materials were disposed of in accordance with the conditions of the contained-in determinations. Table III summarizes the quantities of soil wastes removed for disposal and identifies the disposal facility and any associated conditions of the contained-in determinations.

Waste material generated as part of this IRM was disposed of at the following facilities:

- WPCF via the sanitary sewer (water); and
- Oneida Herkimer Solid Waste Authority (OHSWA) of Boonville, New York (soil).

Contained-in request letters, analytical data, and determinations regarding the same are included in Appendix B. Waste disposal documentation, including weight tickets and manifests, are included in Appendix F. A sampling and analysis summary is included in Table I.

3.6.1 Impacted Soil

Creosote-impacted soil was disposed of at OHSWA. Wet materials were mixed with Quicklime to reduce moisture content to facilitate proper transport and disposal of the material. A total of 5,747.95 tons of impacted soil were removed from the Site and disposed of at OHSWA under profile number CS071909 (see Table III).

3.6.2 Non-Creosote Contaminated Materials (Asphalt and Sub-base)

To facilitate grading and paving of the Lot 3A parking lot following IRM excavation activities, approximately 588 cubic yards of asphalt and 1,228.31 tons of non-creosote-impacted gravel and sand asphalt sub-base materials were excavated and staged on the Site for disposal or recycling. The asphalt sub-base materials from areas outside of the remedial excavations were sampled on August 29, 2019 and tested for parameters required by OSHWA for profiling purposes. Following landfill approval, the asphalt sub-base materials were disposed of at OHSWA between September 17 and 18, 2019, under profile number CS091906. Stockpiled asphalt was recycled at Hanson Aggregates in Oriskany Falls, New York, on September 11 and 12, 2019.

3.6.3 Water

Water pumped from remedial excavations was periodically discharged to the City of Rome sanitary sewer under Permit HAL-1920 issued by the WPCF. Prior to discharge, recovered water was filtered and flocculated onsite to remove solids so that Total Suspended Solids (TSS) levels were below the maximum threshold for acceptance by the WPCF. Water was staged onsite in 20,000-gallon frac tanks, pending sampling required for discharge to the City of Rome sanitary sewer. Analyses were performed per the requirements and acceptance criteria of the WPCF Permit HAL-1920, which is included in Appendix A. Analytical parameters were as follows:

- Total Toxic Organics (TTO) by EPA method 624;
- Total SVOCs by EPA method 625;
- EPA Priority Pollutant metals by EPA method 6020 (mercury by 1631);
- TSS by EPA method 2540; and
- pH.

A total of 283,003 gallons were discharged to the City of Rome sanitary sewer at the designated manhole along Success Drive (see Figure 3) between July 31, 2019 and September 4, 2019. Upon completion of excavation activities, water filtration and holding tanks were decontaminated by Paragon. Residual solids were incorporated with impacted soil material and removed for disposal.

3.6.4 Recyclable Metals

Recyclable metals (steel fragments, rebar) were segregated by Paragon throughout IRM activities and shipped to Empire Recycling of Utica, New York on September 25, 2019.

3.7 COMMUNITY AIR MONITORING PROGRAM

Community air monitoring was conducted during excavation activities per the NYSDOH Community Air Monitoring Plan (CAMP). Air monitoring was conducted for both particulates and VOC emissions. Exceedances were not noted on the air monitors during excavation activities. CAMP monitoring results are summarized in Appendix G.

3.8 VIBRATION MONITORING

During sheet pile installation and removal activities, Haley & Aldrich monitored vibrations using a sensor placed along the southern side of the Nortek building. Vibration monitoring results, reported as peak particle velocity in inches per second (in/sec) based on the frequency of vibrations, were compared to generally accepted reference material for vibration limits during sheet pile installation. Measured vibrations did not exceed vibration limits during sheet pile installation and removal activities.

4. Backfill and Site Restoration

4.1 MATERIAL IMPORT AND BACKFILL

Material imported to the Site for use in excavation backfilling and general construction/grading activities included washed #1/#2, #2/#3 stone, #3/#4 stone, and crusher run, sourced from Hanson Plant 40612 (NYSDOT Approved Source 2-9R). Chemical testing of the imported material was not required, based on import material testing requirements of DER-10 Section 5.4(e)5, specifically that less than 10 percent of the material by weight passed the #80 sieve. NYSDEC approved the use of the imported materials on the Site on June 18 and 25, 2019.

Backfilling of the IRM excavation areas with import materials was conducted upon completion of excavation within each cell and the collection of the cell-specific bottom documentation soil sample. IRM excavation backfilling was periodically conducted between June 27, 2019 and September 12, 2019.

Between September 12 and 18, 2019, imported backfill was also placed throughout the portion of the Lot 3A parking lot to be repaved as part of surface restoration activities described in Section 4.2 (see Figure 5). Compactive effort was applied to the backfill material with multiple passes of a Sakai SV505 12-ton single-drum vibratory roller to minimize uneven settling and support the continued use of the area as a paved parking lot.

Import material documentation, including sieve analyses, weight tickets, and material source permits are included in Appendix H. An import material summary is provided on Table IV.

4.2 SURFACE RESTORATION

Following excavation and earthwork activities conducted under the IRM, approximately 39,048 square feet of the Lot 3A parking lot (see Figure 5), including the IRM excavation areas, were graded and re-paved by Todd Paving, a subsidiary of Paragon.

5. Site Engineering Controls and Future Site Management

The remedial actions described in this report have achieved removal of soil/fill material from Lot 3A that contained visual evidence of creosote impacts, as described in the IRMWP (Haley & Aldrich, 2018b). Subsurface impact remains beneath the paved parking lot and the Nortek building. The pavement and building serve as barriers to exposure and should be maintained

Notes:

[1] Contained-In determination via “Generic Contained-In Determination Request for the discharge of groundwater”, dated 31 July 2019

* Contained-in approval letter revised and re-issued by NYSDEC on 11 September 2019 with corrected laboratory Sample ID

NA: Not Applicable

OHSWA: Oneida Herkimer Solid Waste Authority

Sample Analysis Suites:

Contained-In ("CI") = Total & TCLP SVOCs (1311/8270); Total & TCLP RCRA Metals (1311/6010); TCLP VOCs (1311/8260), Corrosivity (pH)

Non-Hazardous ("NH") = TCLP Herbicides (1311/8151) and Pesticides (1311/8081); PCBs (8082); Reactivity; pH (9045); Percent Solids (2540), Paint Filter, Ignitability, Flash

Wastewater ("WW") = SVOCs (625); PP Metals (6020); Mercury (1631); Total Toxic Organics (624); Total Suspended Solids (2540), pH

Documentation sidewall ("DOC3A-01") = VOCs (8260); SVOCs (8270)

Documentation bottom ("DOC3A-CELL") = VOCs (8260); SVOCs (8270), RCRA Metals (6010)

Notes:
1. Data shown in red exceed one or more of the following New York State Department of Environmental Conservation Part 375 Soil Criteria
   [A] - Commercial
   [B] - Industrial
2. ND = Not detected above detection limit shown
   J = Estimated value
3. Results in **bold** were detected.
4. ug/kg = micrograms per kilogram
   mg/kg = milligrams per kilogram
5. Data has been validated by Haley & Aldrich of New York

Notes:
1. Data shown in red exceed one or more of the following New York State Department of Environmental Conservation Part 375 Soil Criteria
   [A] - Commercial
   [B] - Industrial
2. ND = Not detected above detection limit shown
   J = Estimated value
3. Results in **bold** were detected.
4. ug/kg = micrograms per kilogram
   mg/kg = milligrams per kilogram
5. Data has been validated by Haley & Aldrich of New York

n-Propylbenzene	500000	1000000	-	-	ND (300)	-	-
o-Xylene	-	-	**80000**	**21 J**	ND (300)	ND (77)	**0.43 J**
Styrene	-	-	**6400 J**	ND (70)	ND (300)	ND (77)	ND (0.99)
tert-Butylbenzene	500000	1000000	-	-	ND (600)	-	-
Tetrachloroethene	150000	300000	ND (10000)	ND (35)	ND (150)	ND (38)	ND (0.5)
Toluene	500000	1000000	**110000**	ND (70)	ND (300)	ND (77)	ND (0.99)
trans-1,2-Dichloroethene	500000	1000000	ND (30000)	ND (100)	ND (450)	ND (120)	ND (1.5)
trans-1,3-Dichloropropene	-	-	ND (20000)	ND (70)	ND (300)	ND (77)	ND (0.99)
Trichloroethene	200000	400000	ND (10000)	ND (35)	ND (150)	ND (38)	ND (0.5)
Trichlorofluoromethane (CFC-11)	-	-	ND (80000)	ND (280)	ND (1200)	ND (310)	ND (4)
Trifluorotrichloroethane (Freon 113)	-	-	ND (80000)	ND (280)	ND (1200)	ND (310)	ND (4)
Vinyl chloride	13000	27000	ND (20000)	ND (70)	ND (300)	ND (77)	ND (0.99)
Xylene (total)	500000	1000000	-	-	ND (300)	-	-

Notes:
1. Data shown in red exceed one or more of the following New York State Department of Environmental Conservation Part 375 Soil Criteria
   [A] - Commercial
   [B] - Industrial
2. ND = Not detected above detection limit shown
   J = Estimated value
3. Results in **bold** were detected.
4. ug/kg = micrograms per kilogram
   mg/kg = milligrams per kilogram
5. Data has been validated by Haley & Aldrich of New York

Notes:
1. Data shown in red exceed one or more of the following New York State Department of Environmental Conservation Part 375 Soil Criteria
   [A] - Commercial
   [B] - Industrial
2. ND = Not detected above detection limit shown
   J = Estimated value
3. Results in **bold** were detected.
4. ug/kg = micrograms per kilogram
   mg/kg = milligrams per kilogram
5. Data has been validated by Haley & Aldrich of New York

Notes:
1. Data shown in red exceed one or more of the following New York State Department of Environmental Conservation Part 375 Soil Criteria
   [A] - Commercial
   [B] - Industrial
2. ND = Not detected above detection limit shown
   J = Estimated value
3. Results in **bold** were detected.
4. ug/kg = micrograms per kilogram
   mg/kg = milligrams per kilogram
5. Data has been validated by Haley & Aldrich of New York

Notes:
1. Data shown in red exceed one or more of the following New York State Department of Environmental Conservation Part 375 Soil Criteria
   [A] - Commercial
   [B] - Industrial
2. ND = Not detected above detection limit shown
   J = Estimated value
3. Results in **bold** were detected.
4. ug/kg = micrograms per kilogram
   mg/kg = milligrams per kilogram
5. Data has been validated by Haley & Aldrich of New York

Trifluorotrichloroethane (Freon 113)	-	-	ND (430)	ND (3.3)
Vinyl chloride	13000	27000	ND (110)	ND (0.84)
Xylene (total)	500000	1000000	**250 J**	ND (0.84)

Notes:
1. Data shown in red exceed one or more of the following New York State Department of Environmental Conservation Part 375 Soil Criteria
   [A] - Commercial
   [B] - Industrial
2. ND = Not detected above detection limit shown
   J = Estimated value
3. Results in **bold** were detected.
4. ug/kg = micrograms per kilogram
   mg/kg = milligrams per kilogram
5. Data has been validated by Haley & Aldrich of New York

RE: Site No. 633088, Former Federal Creosote Lots 3A, 3B, 5E & RR Parcel, Rome(C), Oneida County

Dear Mr. Eckert:

The Department and the New York State Department of Health (NYSDOH) have reviewed the "Lot 3A Interim Remedial Measures Work Plan," dated June 28, 2018, for the above-referenced site. Based on our review, we have the following comments:

1. Section 2.3.3 Pre-Excavation Sidewall Documentation Sampling (p. 4) – After discussing the site with Central Office staff, the remedy for the site will likely be source removal and as such, the analysis as outlined in Section 2.3.3 may be reduced. The documentation samples do not need to be analyzed for total RCRA 8 metals, and a limited number of the estimated 19 samples need to be analyzed for VOCs and SVOCs.

2. Section 2.3.4 Additional Documentation Sampling (p. 5) – Please see Comment #1 above. Since the remedy will likely be source removal only, the supplemental documentation sampling as requested by the Departments is no longer necessary. This section may be removed from the work plan.

3. Figure 5 Dewatering Cell – Please indicate the proposed location of the Dewatering Cell, as detailed in Figure 5, on Figure 3 – Project Execution Concept (Lot 3B/3A).

Please revise the work plan to address the comments above and submit for the Departments' review by August 10, 2018. An electronic version of the revised work plan is acceptable for submittal.

If you have any questions or would like to discuss these comments, please feel free to contact me at (315) 785-2522.

Sincerely,

Rachel K. Gardner

RE: Site No. 633088, Former Federal Creosote Lots 3A, 3B, 5E & RR Parcel, Rome(C), Oneida County

Dear Mr. Eckert:

The Department and the New York State Department of Health (NYSDOH) have reviewed the revised "Lot 3A Interim Remedial Measures Work Plan," dated August 10, 2018, for the above-referenced site. Based on our review, the revised work plan is approved.

We understand there will be continuous coordination with the Lot 3A property owners, OCIDA and Nortek, throughout the IRM activities. We recommend routine inspections of the Nortek Building and meetings with the owners to identify and evaluate any perceived areas of concern pertaining the installation of sheet piling and/or the performance of soil excavation.

If you have any questions, please feel free to contact me at (315) 785-2522.

Sincerely,

Rachel K. Gardner

Re: Issuance of Industrial Discharge Permit

The enclosed permit "***HAL-1920***" covers the wastewater generated from the groundwater remediation site located off of Success Drive, this site is known as the Greenfield Trust remediation area. Wastewaters from this site will be discharged directly into the City sanitary sewer the POTW at 7180 East Dominick Street.

If you wish to appeal or challenge any condition imposed in this permit, petition shall be filed for modification or reissuance of this permit within thirty (30) days of receipt of this correspondence. Failure to petition for reconsideration of this permit within the allotted time is deemed a waiver by the permittee of his/her right to challenge the terms of this permit.

By: Butch Conover
Butch Conover
Commissioner of Public Works

Issued this 1st day of May 2019

THIS PAGE INTENTIONALLY LEFT BLANK

1.1 DISCHARGE PERMIT ISSUANCE NUMBER *HAL-1920*

The City of Rome Control Authority in accordance with the terms and conditions of the City of Rome Sewer Use Ordinance Section 74-61 through 74-285 and also with any applicable provisions of Federal or State Law or Regulation,

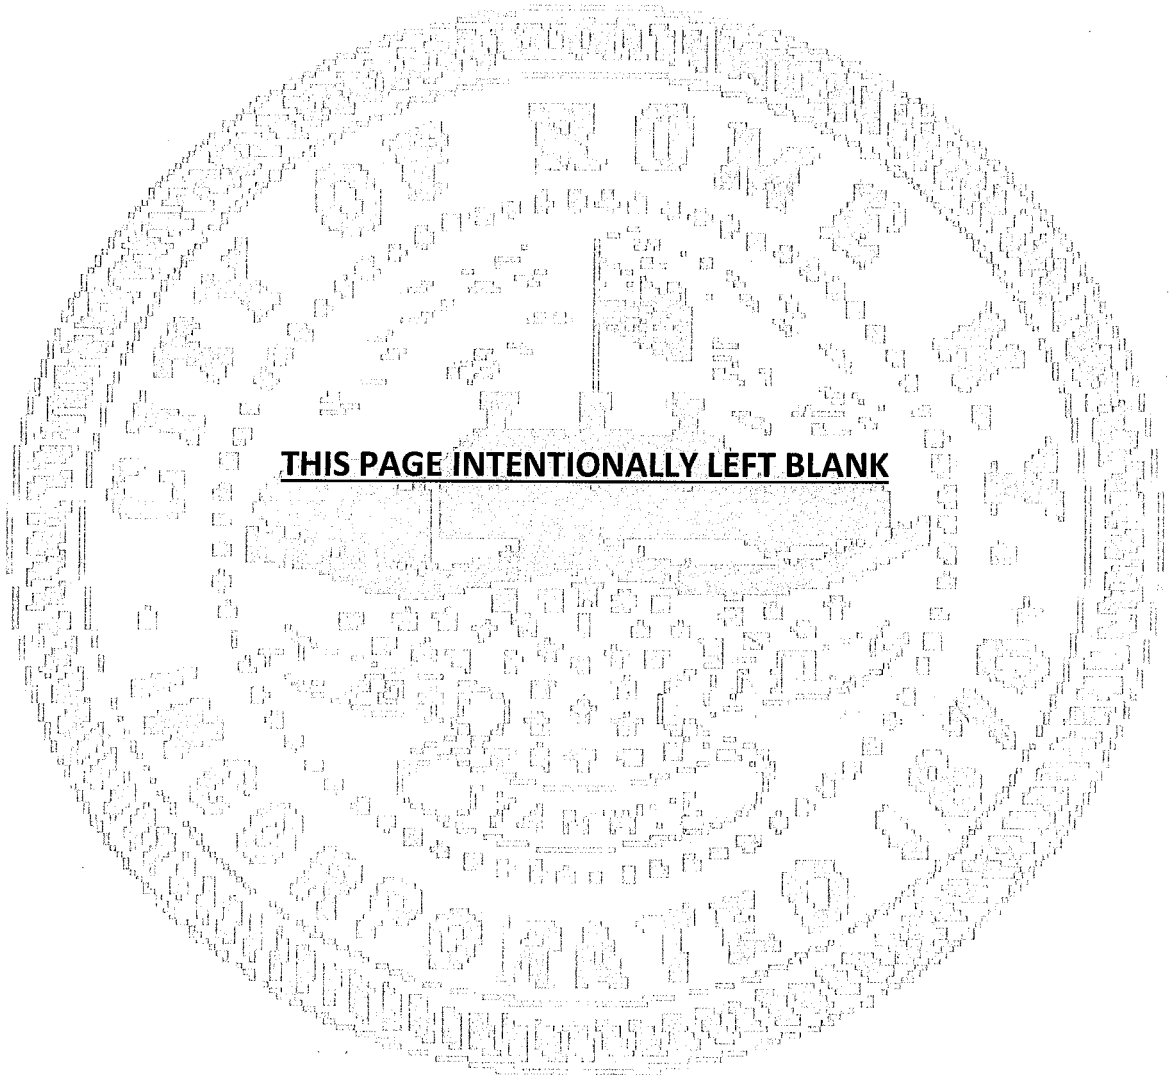
COMPANY NAME: ***Haley & Aldrich Construction Services, Inc.***

Jobsite Address: ***Success Drive , Rome New York***

Company Mailing Address: ***200 Town Centre Drive, Suite 2 Rochester, NY 14623-4264***

Is hereby authorized to discharge wastewater from the above facility. Compliance with this permit does not relieve the permittee of its obligation to comply with any or all applicable pretreatment regulations, standards, requirements under local, State, Federal laws, including any such regulations, standards, requirements, or laws that may become effective during the term of this permit.

Noncompliance with any term or condition of this permit shall constitute a violation of the City of Rome Sewer Use Ordinance.



Signature Butch Conover

Butch Conover
Commissioner of Public Works

Issued this 1st day of May 2019

EXPIRATION DATE: April 30, 2020

This permit is granted in accordance with inspection(s) conducted by this office, and in conformity with plans, specifications and other data submitted to the Commissioner in support of the application, all of are filled with and considered as part of the above application, together with the following conditions and requirements.

THIS PAGE INTENTIONALLY LEFT BLANK

2.1 PERMIT CONDITIONS

All Industrial Users are accountable for their waste, and are required to comply with Federal discharge standards and Categorical Pretreatment Standards along with any conditions and limitations specified by the City of Rome Sewer Use Ordinance. The Wastewater Discharge Permit is the mechanism used by the Control Authority to regulate and control industrial discharges. Industrial Users shall fully comply with the terms and conditions of their permits in addition to the provisions of the Rome Sewer Use Ordinance. Violations of the permit's terms or conditions are deemed a violation of Rome's Sewer Use Ordinance and Federal regulations.

3.1 DESCRIPTION OF PERMITTED PROCESS AND SAMPLING LOCATION

A brief discussion of the facility and mode of operation is given. Process subject to Federal Categorical Standards are identified. The most stringent of the Federal Regulations and Rome Sewer Use Ordinance shall apply at the end of the regulated Process. Haley & Aldrich Construction Services will be the lead engineering firm for the groundwater remediation efforts at this site. Paragon has been contracted to carry out work at the groundwater remediation site. This site has a Contained-In determination set upon it by the New York State Department of Environmental Conservation (NYSDEC). All excavation water will be sent through Frac-Tanks prior to discharge to the City's sanitary sewer. Samples will be taken according to schedule which is outlined in the appendices of this permit. Due to the nature of this site analytical data must be reviewed prior to discharge and sent to NYSDEC personnel (Henry Wilkie) for final approval. Once blanket approval is given by the State, my office will be the lead in ensuring water from this site is handled and disposed of according to the City's sewer use ordinance. Arrangements have been made by this office to allow Haley & Aldrich to dispose of the waste water in a manhole on site. The City has the right to halt any discharge at anytime for any reason. If it is deemed that this discharge is not working in the way described, the City has the right to halt all discharges to the manhole. Exact records of volumes discharged must be kept. Haley & Aldrich must ensure that silt/ debris from the bottom portion of the frac-tanks do not entire the sanitary system.

4.1 MONITORING FACILITIES

The User shall provide and operate at its own expense, monitoring facilities to allow inspection, and sampling and flow measurement of building and/or internal and external drainage systems, at its own expense, monitoring facilities to allow inspection, sampling and flow measurement of building sewer and or internal or external drainage system. The monitoring facilities should be situated on the User's premises and located such that landscaping or parked vehicles will not obstruct it. Access shall be provided at all times to the City of Rome. There shall be ample room in or near any such facility to allow accurate sampling and preparation of such samples for analysis. Each facility shall be maintained at all times in safe and proper operating condition at the expense of the User. The sampling and monitoring facilities shall be provided in accordance with the City's requirements and all applicable local construction standards and specifications. The City reserves the right to inspect the construction of such monitoring facilities. The User shall provide for sampling the User's industrial processes which are subject to Federal regulations and the City of Rome Sewer Use Ordinance at the physical end of such process.

5.1 WASTEWATER DISCHARGE LIMITATIONS AND MONITORING FACILITIES

5.1.1 SAMPLING LOCATION

At Frac-Tank

Discharge location-Manhole on Success Drive-East of Nortek.

5.1.2 TYPE AND FREQUENCY OF SAMPLING

See table 1

5.1.3 APPLICABLE STANDARD(s)

Rome Sewer Use Ordinance

5.1.4 REGULATED POLLUTANTS AND DISCHARGE LIMITS

See Table 1

6.1 SELF-MONITORING AND REPORTING REQUIREMENTS

6.1.1 Quarterly SELF MONITORING REPORT

Reports shall include all monitoring performed during the reporting period that were arrived at using methodology used in section 6.1.2 and 6.1.3. Also, information in sections 6.1.4 through 6.1.11 shall be submitted and any additional reporting requirements under section 7.1.

6.1.2 ANALYTICAL METHODOLOGY

The requirements contained in the Code of Federal Regulations (CFR) 40 CFR 136, or EPA approved alternative procedure shall be used. All mercury testing should use EPA methods 1631 or 245.7.

6.1.3 REPRESENTATIVE SAMPLING

Samples and measurements taken as required herein shall be representative of the volume and nature of the monitored discharge. All samples shall be taken at monitoring points specified in this permit and, unless otherwise specified, before effluent joins or is diluted by any other waste stream, body of water or substance.

6.1.4 ANALYTICAL REPORTING

For each report submitted, the following information shall be reported.

a) The exact place, date and time of sampling
b) The date analyses were performed
c) The person(s) who performed the analysis
d) The analytical techniques or methodology used
e) The results of all required analysis

6.1.5 CONTRACT LABORATORY CERTIFICATION

Such laboratories that have been issued a certificate of approval by the New York State Commissioner of Public Health shall conduct all laboratory tests or sample analyses required. Reference to this certification shall be included with the laboratory analyses test report.

6.1.6 REPORTING NON-COMPLIANCE EVENTS

If self-monitoring reveals a violation of any limitation specified herein, the User shall notify the Control Authority within 24 hours of becoming aware of the violation. The User shall also repeat the sampling and analysis and submit the results of the repeat analysis to the City within 30 days after becoming aware of the violation. The non-compliance and resampling results shall be included in all reports.

6.1.8 HAZARDOUS WASTE DISPOSAL

If hazardous waste is shipped out of the facility, all manifests that occurred during the reporting period shall be included in all quarterly reports.

6.1.9 CERTIFICATION REQUIREMENTS

The User shall submit with all reports the following signed certification statements:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who managed the system, or directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including possibilities of fines and imprisonment for knowing violation."

6. 1.10 SIGNATORY REQUIREMENTS

All reports required by this permit shall be signed by a principal executive Officer of the company, or his designee. The appointment of a designee to complete and sign reports, requires that the principal executive officer of the company submit to the city the following Certification Statement with the name and title of the designee prior to the submittal of the reports:

"I (Name and Title) designate (Name and Title) to sign reports and I certify Under penalty of law that this document and all attachments were prepared Under my direction or supervision in accordance with a system designed to Assure that qualified personnel properly gathered and evaluated the Information submitted. Based on my inquiry of the person or persons who managed the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibilities of fines and imprisonment for knowing violation."

Signature: _____ Date:_____

6.1.12 90 DAY SELF MONITORING REPORT SUBMITTAL

The user shall submit all required reports within thirty (30) days after reporting Period:

Send Report to:	Report Period	Date Due
City of Rome WPCF	January – March	April 30th
7180 East Dominick St	April-June	July 30th
Rome, New York 13440	July- September	October 30th
Attn: IPP Coordinator	October-December	January 30th

7.1 ADDITIONAL REPORTING REQUIREMENTS

7.1.1 CHANGE IN PROCESS AND/OR NATURE OF POLLUTANTS

The User shall notify the City in advance of proposed changes in the process and the introduction of any new constituents that would change the volume or characteristic of the discharge.

7.1.2 PRETREATMENT COMPLIANCE SCHEDULE REPORT

If additional pretreatment or operation and maintenance is required to meet pretreatment standards, the User shall provide the City with a detailed schedule indicating how and in the shortest amount of time,

7.1.3 PRODUCTION RATE DATA

The User shall, if applicable for the permit requirements, record and maintain a daily record of the production passing through the facility. The data shall be maintained on file, available to City personnel for determining production-based limits.

8.1 RIGHT OF ENTRY AND INSPECTION

The User shall allow the City, New York State DEC, United States EPA or its representative exhibiting credentials and identification, to enter upon the premises of the User, at all reasonable hours, for the purpose of inspection and sampling, or record inspection. Reasonable hours in the context of inspection and sampling include any time the User is operating any process, which may result in a process wastewater discharge to the City's sanitary sewer. The City or other authorized representatives shall be allowed to:

a) Have access to and copy, at reasonable times, any record that must be kept under the conditions of this permit.
b) Inspect at reasonable times any facilities, equipment, (including monitoring and control equipment), practices, or operations regulated or required under this permit.
c) Sample or monitor, for the purpose of assuring permit compliance, any substances or parameters at any location and;
d) Inspect any production, manufacturing, fabricating, or storage area (including waste storage area) where pollutants, regulated under the permit, could originate, be stored, or be discharges to the sewer system.

9.1 DILUTION

No User shall increase the use of potable or process water or, in any way attempt to dilute a discharge as a part or complete substitute for adequate treatment to achieve compliance with limitations contained in permit.

10.1 RECORDS RETENTION

(a) The User shall retain and preserve for no less than three (3) years any records, books, correspondence and any and all summaries thereof, relating to monitoring. Sampling and chemical analysis made by or in behalf of the User in connection with its discharge. This period may be extended by request of the City at any time.

(b) If records that pertain to matters that are subject of special orders or any other enforcement or litigation activities brought by the City shall be retained and preserved by the User until enforcement activities have concluded all periods of limitation with respect to any and all appeals.

11.1 CONFIDENTIAL INFORMATION

Except for data determined to be confidential under Division 6 Section 74-249 of the City of Rome Sewer Use Ordinance, all reports required by this permit shall be available for public inspection.

12.1 REVOCATION OF PERMIT

The permit issued to the User by the City of Rome may be revoked when, after inspection, monitoring or analysis it is determined that the discharge of wastewater to the sanitary sewer is in violation of Federal, State, or local laws, ordinances, or regulations. Additionally, falsification or intentional misrepresentation of data or statements pertaining to permit application or other required reporting shall be cause for permit revocation.

13.1 LIMITATION ON PERMIT TRANSFER

Wastewater discharge permits are issued to a specific User for a specific operation and are not assignable to another User or transferable to any other location without prior written approval of the City. Sale of a User's premises shall obligate the purchaser to seek prior written approval of the City for continued discharge to the sanitary sewer.

14.1 FALSIFYING INFORMATION OR TAMPERING WITH MONITORING EQUIPMENT

Knowingly making any false statement or any report or other document required by this permit or knowingly rendering any monitoring device or method inaccurate, may result in punishment under criminal laws of the Federal, State or City, as well as being subjected to civil penalties and relief.

15.1 PERMIT MODIFICATION

a) The terms and conditions of this permit may be subjected to modification by the City at any time.

b) This permit may also be modified to incorporate special conditions resulting from the issuance of a special order.

c) The terms and conditions may be modified as a result of USEPA promulgating a new Federal pretreatment standard

d) Any permit modification, which results in a new condition(s) in the permit, shall include a reasonable time for compliance if necessary.

15.2 Special Arrangements

Haley & Aldrich will be held responsible for all damages that may occur to any City infrastructure due to the disposal of the above mentioned waste. Damages may include, but are not limited to the following, manhole lid retrieval, damage to the riser, cap or inner walls of the manhole itself. Any blockages in the city sanitary due to this discharge will be taken care of by Haley & Aldrich. Haley & Aldrich must have an employee present at the manhole while the lid of the manhole is off. Haley & Aldrich will be held responsible if any accidents occur at the above mentioned manhole. City personnel must be present at the initial discharge and may be present at any time.

16.1 SEVERABILITY

The provisions of this permit are severable, and if any provision of this, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit shall not be affected thereby.

17.1 PROPERTY RIGHTS

The issuance of this permit does not convey any property rights in either real or personal property, or any exclusive privileges, nor does it authorize any invasion of personal rights, nor any infringement of Federal, State, or local regulations.

18.1 REQUIREMENTS AND DUTIES

18.1.1 RESOURCE CONSERVATION AND RECOVERY ACT (RCRA) REQUIREMENTS

The disposal of sludge(s) and spent chemicals shall be done in accordance with Section 405 of the Clean Water Act and subtitles C and D of the RCRA.

18.1.2 PERMIT REISSUANCE

The User shall apply for permit reissuance a minimum of ninety (90) days prior to the expiration of the User's existing permit. The terms and conditions of the permit may be subject to modification, by the Commissioner, during the term of the permit, as limitations or requirements, as identified in existing permit conditions, or other just cause exists. The User shall be informed of any proposed changes in his permit, at least thirty (30 days prior to effective date of change. Any change or new conditions in the reissued permit shall include a reasonable time schedule for compliance.

18.1.3 DUTY TO COMPLY

The User must comply with all conditions of this permit. Failure to comply with the requirements of this permit may be grounds for administrative action, or enforcement proceeding including civil or criminal penalties, injunctive relief, and summery abatements.

18.1.4 PROPER OPERATION AND MAINTENANCE

The User shall at all times properly operate and maintain all facilities and systems of treatment and control and related appurtenances which are installed or used by User to achieve compliance with the conditions of this permit. Proper operation and maintenance includes but is not limited to: effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with conditions of the permit.

18.1.5 DUTY TO PROVIDE INFORMATION

The User shall furnish to the City of Rome, within 24-hours any information which the City may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The User shall also, upon request, furnish to the City of Rome within 24 hours copies of any records required to be maintained by this permit.

18.1.6 DUTY TO MITIGATE

The User shall take all reasonable steps to minimize or correct any adverse impact to the POTW or environment resulting from non-compliance with this permit, including such accelerated or additional monitoring as necessary to determine the nature and impact of the non-complying discharge.

18.1.7 FLOW MEASUREMENTS

Flow measurement is required by this permit. All wastewater leaving the frac-tank must be metered. The appropriate flow measurement devices and methods consistent with scientific practices shall be selected and used to ensure the accuracy and reliability of measurements of the volume of monitored discharge. The devices shall be installed, calibrated, and maintained to ensure the accuracy of the measurements is consistent with the accepted capability of the type of device. Devices selected shall be capable of measuring flows with a maximum deviation of less than 10 percent from the true discharge rates throughout the range of the expected discharge volumes. Documentation of regular calibration shall be available to City officials at anytime.

19.1 ANNUAL PUBLICATION

The City in the official daily newspaper within its service area shall at least annually publish a list of industrial users, which, at any time during the previous twelve months, were in significant noncompliance with applicable pretreatment requirements. Accordingly, the User is apprised that noncompliance with this permit may lead to enforcement action and result in publication of its name in an appropriate newspaper in accordance with this section.

20.1 PENALTIES

(a) The City of Rome Sewer Use Ordinance, Article III, Division 2, Section 74-98 provides that any person found in violation of a permit condition or article of this Sewer Use Ordinance may be fined a minimum of$1000.00 for each violation, provided that the violation is not the cause of a malfunction or efficiency reduction in any process of the POTW treatment plant resulting in a violation of the City's National Pollutant Discharge Elimination System (NPDES) or State Pollutant Discharge Elimination System (SPDES) discharge permit.

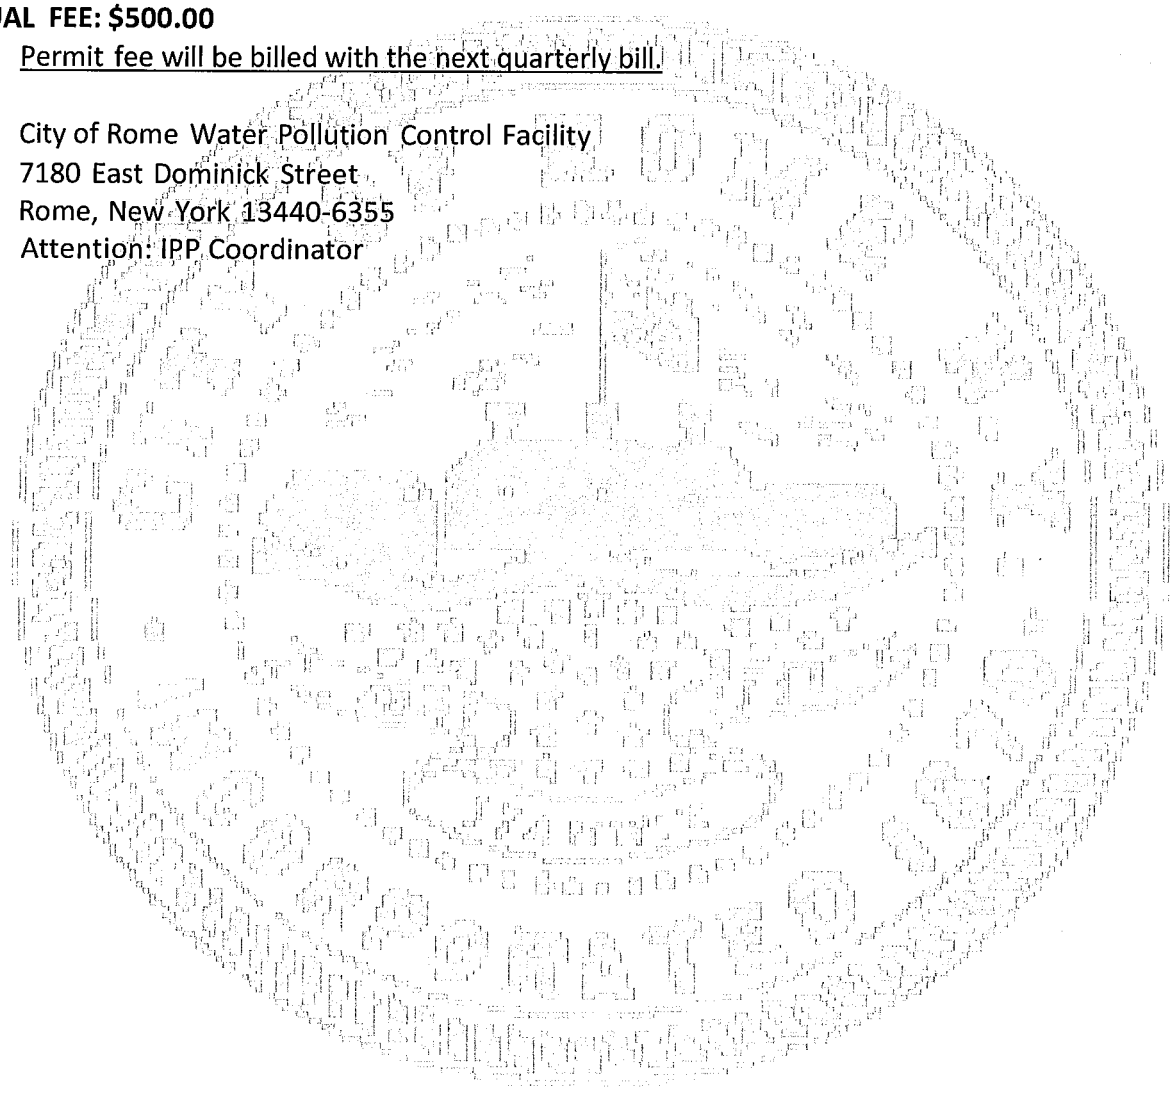
(b) Any person committing a violation of this article resulting in a malfunction or process upset in the POTW treatment plant which, in turn, causes a violation in the City's NPDES or SPDES permit shall be liable for the fine charged by the U.S. Environmental Protection Agency and any other applicable enforcement agency plus any expense, loss or damage incurred by the City because of such violation.

(c) Any person who knowingly makes false statement, representation or certification in any application, record, report, plan, or other document filed or required to be maintained pursuant to this article or a wastewater discharge permit or who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required under this article may be punished by a fine of a minimum of $1000.00 or by imprisonment for not more than six months or by both. Each act shall constitute a separate violation.

21.1 RECOVERY OF COSTS

In addition to civil and criminal liability, the User violating any provisions of this permit or causing damage to or otherwise inhibiting the City of Rome POTW and/or sanitary tributaries shall be liable to the City of Rome for any expense, loss or damage caused by such violation or discharge. The City shall bill the User for any cleaning, repair, or replacement work caused by the violation or discharge. Refusal to pay the assessed costs shall constitute a separate violation of the City of Rome Sewer Use Ordinance.

22.1 INDUSTRIAL USER FEE



The permit and regulation fee includes sampling, physical and analytical monitoring, and administrative costs. The Commissioner shall have the authority to determine an annual fee based on a composite of charges.

The charges for this site will be $0.03/ gallon

ANNUAL FEE: $500.00

Permit fee will be billed with the next quarterly bill.

Subject: RE: Multistate Trust: Rome- Confirmation soil boring needed below concrete slab

CAUTION: External Email

Yes Austin, your summary adequately summarizes our phone conversation yesterday. A boring in the vicinity of HA-3A-23 will allow us to document if any creosote saturation is located under the concrete slab. Based on the slab's depth and thickness, the clay layer at the site, and the surrounding investigation soil borings, we do not anticipate to find significant creosote product underneath the slab. If ***significant*** creosote product is found, we may need to have another discussion regarding the slab. However at this time, we are on board with the current plan to leave the concrete structure in plan, excavating above and around the structure, followed by backfilling with stone.

If you have any questions, just let me know.

Thanks,
Rachel

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Quick email to summarize our call earlier this morning. NYSDEC would like a confirmation soil boring collected under the concrete slab, located in the vicinity of boring HA -3A-23. The boring will be used to document if any creosote saturated soil is present under the slab. The current plan is to leave the concrete structure in place, excavate above and around the structure, backfill the cells with stone leaving the concrete structure in the ground, after excavation activities have been completed. Let me know if I missed anything.

Thank you,
Austin

Sounds like Rachel is out of town this week. I wanted to keep NYSDEC up to date. HCS will be backfilling Cells 3B and 3C today. Cell 3B has a portion of the concrete wall remaining in place (as described in the email below.) Let me know if you have any questions.

Thank you,
Austin

Subject: Multistate Trust: Rome-summary large concrete wall left in place-cell 3B

Rachel,

I received a call from Glenn later this afternoon. HCS found another large concrete wall (1 ft thick) in cells 3B and 3C. HCS was able to remove all of the wall in cell 3C (since that portion of the wall did not extend very deep.) HCS was not able to remove all of the wall in cell 3B, because the wall extends deeper than 12 ft bgs (clay at 8.5 ft bgs.) They did remove all of the wall that was exposed above the clay in cell 3B. There was no indication of creosote saturated soil around the concrete wall. The clay encountered at approximately 8.5 ft bgs was clean. Attached is a sketch of the 30ft linear concrete wall which is being left in place below the clay layer. Give me a call if you have any questions.

Thank you,
Austin

Haley & Aldrich, Inc

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Sample ID: L1929111-01) submitted with your July 10, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile (Sample ID: L1929111-01), approximately 300 cubic yard of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, does not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190710-0001

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 300 cubic yard pile (representative of 500 tons) of soil and/or concrete was generated for disposal and designated as SP-01. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP01-190702-1530

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Lab Number: L1929111
Report Date: 07/09/19

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L1929111-01 (SP01-190702-1530): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1929111-01 (SP01-190702-1530): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The result should be considered estimated, and are qualified with an E flag, for any compound that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound that exceeded the calibration range.

L1929111-01 (SP01-190702-1530): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

TCLP Semivolatiles

The WG1256729-2/-3 LCS/LCSD RPD, associated with L1929111-01 (SP01-190702-1530), is above the acceptance criteria for pyridine (65%).

Total Metals

L1929111-01 (SP01-190702-1530): The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1929111
Project Number:	127887-007	**Report Date:**	07/09/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Sample ID: L1930539-01) submitted with your July 17, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile (Sample ID: L1930539-01), approximately 250 cubic yard of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, does not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie
Assistant Environmental Engineer

Rome, New York
Contained-In Determination Request
Request #190717-0001

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 250 cubic yard pile (representative of approximately 420 tons) of soil and/or concrete was generated for disposal and designated as SP-02. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP02-190711-1015 (Laboratory Sample ID: L1930539-01)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L1930539-01 (SP02-190711-1015): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1930539-01 (SP02-190711-1015): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The results should be considered estimated, and are qualified with an E flag, for any compound that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound that exceeded the calibration range.

L1930539-01 (SP02-190711-1015): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

The WG1259560-2 LCS recovery, associated with L1930539-01 (SP02-190711-1015), is below the individual acceptance criteria for hexachlorocyclopentadiene (35%), but within the overall method allowances. The result of the associated sample is reported.

TCLP Semivolatiles

The WG1259600-2/-3 LCS/LCSD recoveries, associated with L1930539-01 (SP02-190711-1015), are above the individual acceptance criteria for pyridine (71%/67%), but within the overall method allowances. The result of the associated sample is reported.

Solids, Total

L1930539-01 (SP02-190711-1015): A Laboratory Duplicate was prepared with the sample batch; however, analysis of the native sample was cancelled; therefore, the QC result could not be reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1930539
Project Number:	127887-007	**Report Date:**	07/17/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Sample ID: L1931910-01) submitted with your July 24, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile (Sample ID: L1931910-01), approximately 300 cubic yard of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, does not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie
Assistant Environmental Engineer

Division of Environmental Remediation
Remedial Bureau A, 12th Floor
625 Broadway
Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190724-0001

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 300 cubic yard pile (representative of approximately 500 tons) of soil and/or concrete was generated for disposal and designated as SP-03. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP03-190718-0930 (Laboratory Sample ID: L1931910-01)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

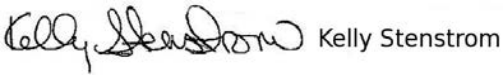
Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics



L1931910-01 (SP03-190718-0930): The sample has elevated detection limits due to the dilution required by the sample matrix.

L1931910-01 (SP03-190718-0930): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

TCLP Semivolatiles

The WG1262673-2/-3 LCS/LCSD RPDs, associated with L1931910-01 (SP03-190718-0930), are above the acceptance criteria for hexachlorobenzene (50%), 2,4-dinitrotoluene (49%), hexachlorobutadiene (41%), hexachloroethane (33%), nitrobenzene (40%), 2,4,6-trichlorophenol (47%), pentachlorophenol (52%), 2-methylphenol (38%), 3-methylphenol/4-methylphenol (38%), 2,4,5-trichlorophenol (43%), and pyridine (45%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1931910
Project Number:	127887-007	**Report Date:**	07/23/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Sample ID: L1932846-01) submitted with your July 30, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile (Sample ID: L1932846-01), approximately 275 cubic yard of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, does not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie
Assistant Environmental Engineer

Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190730-0001

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 275 cubic yard pile (representative of approximately 460 tons) of soil and/or concrete was generated for disposal and designated as SP-04. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP04-190724-1115 (Laboratory Sample ID: L1932846-01)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L1932846-01 (SP04-190724-1115): The Client ID was specified by the client.

Semivolatile Organics

L1932846-01 (SP04-190724-1115): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1932846-01 (SP04-190724-1115): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

TCLP Semivolatiles

The WG1265349-2 LCS recovery, associated with L1932846-01 (SP04-190724-1115), is above the individual acceptance criteria for pentachlorophenol (114%), but within the overall method allowances. The results of the associated sample are reported; however, all positive detects are considered to have a potentially high for this compound.

The WG1265349-3 LCSD recovery, associated with L1932846-01 (SP04-190724-1115), is above the acceptance criteria for pentachlorophenol (112%); however, the associated sample is non-detect to the RL for this target analyte. The results of the original analysis are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1932846
Project Number:	127887-007	**Report Date:**	07/29/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Lab Sample ID: L1934867-01 and L1934867-02) submitted with your August 9, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile SP05 (Lab Sample ID: L1934867-02), approximately 240 cubic yards, and SP06 (Lab Sample ID: L1934867-01) approximately 280 cubic yards, of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, do not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie
Assistant Environmental Engineer

File No. 127887-007

New York State Department of Environmental Conservation
Division of Environmental Remediation
Remedial Bureau A, 12th Floor
625 Broadway
Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190809-0001

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

Two piles of soil and/or concrete were generated for disposal and designated as SP-05 and SP-06, respectively. SP-05 is an approximately 240 cubic yard pile (representative of approximately 400 tons), and SP-06 is an approximately 280 cubic yard pile (representative of approximately 470 tons). One (1) composite sample, representative of the material to be disposed, was collected from each stockpile and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the samples is attached for your review. The samples are identified as:

- SP05-190805-1245 (Laboratory Sample ID: L1934867-02)
- SP06-190805-1130 (Laboratory Sample ID: L1934867-01)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Number:	127887-007	**Report Date:**	08/08/19

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

Semivolatile Organics

L1934867-01 (SP06-190805-1130): The sample has elevated detection limits due to the dilution required by the sample matrix.

L1934867-02 (SP05-190805-1245): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1934867-01 (SP06-190805-1130) and -02 (SP05-190805-1245): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

L1934867-02 (SP06-190805-1130): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound that exceeded the calibration range.

The WG1269010-2/-3 LCS/LCSD recoveries, associated with L1934867-01 (SP06-190805-1130) and -02 (SP05-190805-1245), are above the acceptance criteria for 2-nitroaniline (LCSD at 142%), p-chloro-m-cresol (112%/122%), chlorophenol (LCSD at 108%), 4-nitrophenol (135%/142%), 4,6-dinitro-o-cresol (135%/142%), pentachlorophenol (114%/122%) and phenol (98%/107%); however, the associated samples are non-detect to the RLs for these target analytes. The results of the original analysis are reported.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1934867
Project Number:	127887-007	**Report Date:**	08/08/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Sample ID: L1935571-01) submitted with your August 14, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile SP07 (Sample ID: L1935571-01), approximately 270 cubic yard of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, does not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie
Assistant Environmental Engineer

Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190814-0001

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 270 cubic yard pile (representative of approximately 450 tons) of soil and/or concrete was generated for disposal and designated as SP-07. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP07-190808-0915 (Laboratory Sample ID: L1935571-01)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L1935571-01 (SP07-190808-0915): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1935571-01 (SP07-190808-0915): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

The WG1271174-2/-3 LCS/LCSD recoveries, associated with L1935571-01 (SP07-190808-0915), are above the individual acceptance criteria for p-chloro-m-cresol (109%/107%) and phenol (97%/102%), but within the overall method allowances. The results of the associated samples are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1935571
Project Number:	127887-007	**Report Date:**	08/13/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Sample ID: L1937005-01) submitted with your August 21, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile SP08 (Sample ID: L1937005-01), approximately 220 cubic yard of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, does not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie
Assistant Environmental Engineer

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190821-0001

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 220 cubic yard pile (representative of approximately 370 tons) of soil and/or concrete was generated for disposal and designated as SP-08. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP08-190815-1530 (Laboratory Sample ID: L1937005-01)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

Semivolatile Organics

L1937005-01 (SP08-190815-1530): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1937005-01 (SP08-190815-1530): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The results should be considered estimated, and are qualified with an E flag, for any compounds that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compounds that exceeded the calibration range.

L1937005-01 (SP08-190815-1530): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1937005
Project Number:	127887-007	**Report Date:**	08/20/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when using acetone as a solvent.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Sample ID: L1937704-02) submitted with your August 23, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile SP09 (Sample ID: L1937704-02), approximately 285 cubic yard of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, does not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Stephen G. Malsan P.E. for
Henry Wilkie
Assistant Environmental Engineer

Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190823-0001

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 285 cubic yard pile (representative of approximately 475 tons) of soil and/or concrete was generated for disposal and designated as SP-09. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP09-190820-1015 (Laboratory Sample ID: L1937704-02)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L1937704-02 (SP09-190820-1015): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1937704-02 (SP09-190820-1015): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L1937704-02 (SP09-190820-1015): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

TCLP Semivolatiles

The WG1275396-2/-3 LCS/LCSD RPD, associated with L1937704-02 (SP09-190820-1015), is above the acceptance criteria for pyridine (35%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1937704
Project Number:	127887-007	**Report Date:**	08/23/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when using acetone as a solvent.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Sample ID: L1938502-01) submitted with your August 29, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile SP-10 (Sample ID: L1938502-01), approximately 250 cubic yard of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, does not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Sample ID: L1938802-01) submitted with your August 29, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile SP10 (Sample ID: L1938802-01), approximately 250 cubic yard of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, does not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Attention: Mr. Stephen Malsan
Environmental Engineer 2

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190829-0001

Dear Mr. Malsan:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 250 cubic yard pile (representative of approximately 417 tons) of soil and/or concrete was generated for disposal and designated as SP-10. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP10-190823-1100 (Laboratory Sample ID: L1938502-01)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L1938502-01 (SP10-190823-1100): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1938502-01 (SP10-190823-1100): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

TCLP Semivolatiles

The WG1276872-2 LCS recovery, associated with L1938502-01 (SP10-190823-1100), is below the acceptance criteria for pyridine (7%); however, it has been identified as a "difficult" analyte. The results of the associated sample are reported.

The WG1276872-2/-3 LCS/LCSD RPD, associated with L1938502-01 (SP10-190823-1100), is above the acceptance criteria for pyridine (72%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1938502
Project Number:	127887-007	**Report Date:**	08/28/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Lab Sample ID: L1938984-01 and L1939218-01) submitted with your September 4, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile SP-11 (Lab Sample ID: L1938984-01), approximately 270 cubic yards, and SP-12 (Lab Sample ID: L1939218-01) approximately 270 cubic yards, of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, do not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie
Assistant Environmental Engineer

File No. 127887-007

New York State Department of Environmental Conservation
Division of Environmental Remediation
Remedial Bureau A, 12th Floor
625 Broadway
Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190904-0001

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 270 cubic yard pile (representative of approximately 450 tons) of soil and/or concrete was generated for disposal and designated as SP-11. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP11-190827-1330 (Laboratory Sample ID: L1938984-01)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Report Date: 08/30/19

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

TCLP Volatiles

WG1278326-3/-4: One or more compounds failed to meet the recovery and/or RPD limits. Please refer to the QC section of the report for specific details.

Semivolatile Organics

L1938984-01: The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The result should be considered estimated, and are qualified with an E flag, for any compound that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

The WG1278056-3 LCSD recoveries, associated with L1938984-01, are above the individual acceptance criteria for n-nitrosodimethylamine (108%), p-chloro-m-cresol (122%), 2-chlorophenol (108%), 4-nitrophenol (143%), phenol (105%), pyridine (96%) and caprolactam (141%), but within the overall method allowances. The results of the associated samples are reported.

TCLP Semivolatiles

The WG1278654-2/-3 LCS/LCSD RPD, associated with L1938984-01, is above the acceptance criteria for pyridine (67%).

Total Metals

L1938984-01: The sample has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1938984
Project Number:	127887-007	**Report Date:**	08/30/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Lab Sample ID: L1938984-01 and L1939218-01) submitted with your September 4, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile SP-11 (Lab Sample ID: L1938984-01), approximately 270 cubic yards, and SP-12 (Lab Sample ID: L1939218-01) approximately 270 cubic yards, of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, do not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie

625 Broadway
Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190904-0002

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 270 cubic yard pile (representative of approximately 450 tons) of soil and/or concrete was generated for disposal and designated as SP-12. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP12-190828-0930 (Laboratory Sample ID: L1939218-01)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

TCLP Volatiles

The WG1279626-3/-4 LCS/LCSD recoveries, associated with L1939218-01 (SP12-190828-0930), are above the individual acceptance criteria for 2-butanone (160%/160%) but within the overall method allowances. The results of the associated samples are reported.

Semivolatile Organics

L1939218-01 (SP12-190828-0930): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The results should be considered estimated, and are qualified with an E flag, for any compound that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compounds that exceeded the calibration range.

The WG1278056-3 LCSD recoveries, associated with L1939218-01 (SP12-190828-0930), are above the individual acceptance criteria for p-chloro-m-cresol (122%), 2-chlorophenol (108%), 4-nitrophenol (143%), phenol (105%), and caprolactam (141%), but within the overall method allowances. The results of the associated samples are reported.

TCLP Semivolatiles

The WG1279147-3 LCSD recovery, associated with L1939218-01 (SP12-190828-0930), is below the acceptance criteria for pyridine (8%); however, it has been identified as a "difficult" analyte. The results of the associated sample is reported.

The WG1279147-2/-3 LCS/LCSD RPD, associated with L1939218-01 (SP12-190828-0930), is above the acceptance criteria for pyridine (141%).

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1939218
Project Number:	127887-007	**Report Date:**	09/03/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request

Dear Ms. Mondello:

We have completed our review of the soil sampling data (Sample ID: L1940276-01) submitted with your September 10, 2019 request for a “contained-in” determination for the referenced project.

Concentrations detected for individual SVOCs and metals were all significantly less than their current NYSDEC "contained in" soil action levels and Land Disposal Restriction concentrations. Most of the individual SVOCs were not detected above the detection limit. No hazardous constituents exhibited a hazardous waste characteristic by exceeding their TCLP regulatory level.

Concentrations for Acenaphthene, Anthrancene, Fluorene, 2-Methylnaphthalene, Naphthalene, Phenanthrene and Pyrene were below the soil "contained in" action level and the Land Disposal Restriction concentration. Therefore, the stockpile SP-13 (Sample ID: L1940276-01), approximately 155 cubic yard of impacted waste material (soil and/or concrete) generated during excavation at the referenced project, does not have to be managed as hazardous waste when transported to Oneida Herkimer Solid Waste Authority in Boonville, NY, for disposal as non-hazardous waste.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie
Assistant Environmental Engineer

Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Request #190910-0001

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), requests a "Contained-In" determination for the material referenced below pursuant to the Interim Remedial Measures (IRM) Work Plan dated 10 August 2018, and our 29 April 2019 conference call documented in meeting minutes dated 15 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

An approximately 155 cubic yard pile (representative of approximately 260 tons) of soil and/or concrete was generated for disposal and designated as SP-13. One (1) composite sample, representative of the material to be disposed, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your review. The sample is identified as:

- SP13A-190904-1330 (Laboratory Sample ID: L1940276-01)

Upon receipt of a Contained-In determination, the waste will be profiled for disposal at the Oneida Herkimer Solid Waste Authority in Boonville, NY.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

L1940276-01 (SP13A-190904-1330): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Project Number:	127887-007	**Report Date:**	09/09/19

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1940276
Project Number:	127887-007	**Report Date:**	09/09/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

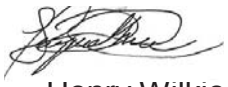
Re: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Contained-In Determination Request
Discharge of groundwater to City of Rome WPCF

Dear Ms. Mondello:

The Department has reviewed your Generic "Contained-In" Determination Request for the discharge of groundwater generated during Interim Remedial Measures (IRM) to the City of Rome sanitary sewer at the Referenced project. The information indicates that collected groundwater will be discharged directly to a sewer manhole, pursuant to the IRM Work Plan dated 10 August 2018, and in accordance with Industrial Discharge Permit HAL-1920 ("Permit HAL-1920") issued by the City of Rome Water Pollution Control Facility (WPCF), dated 1 May 2019.



Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities has been determined by the NYSDEC to be considered F034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination.

Based on the provided information and all analytical water data submitted between August 29, 2016 to November 15, 2016, the collected groundwater does not have to be managed as hazardous waste when is discharged to the City of Rome sanitary sewer, NY, for disposal.

Please be advised that this contained-in determination will only apply if the collected groundwater meets all Rome WPCF discharge conditions. Also, please submit the next four (4) analytical data results to confirm that the discharged groundwater is meeting Rome WPCF permit conditions.

Should you have any questions regarding the content of this letter, please do not hesitate to contact me at (518) 402-9611 or email me at henry.wilkie@dec.ny.gov.

Sincerely,

Henry Wilkie

File No. 127887-007

New York State Department of Environmental Conservation
Division of Environmental Remediation
Remedial Bureau A, 12th Floor
625 Broadway
Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Discharge of groundwater to City of Rome WPCF

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), is notifying the New York State Department of Environmental Conservation (NYSDEC) of the discharge of groundwater generated during Interim Remedial Measures (IRM) to the City of Rome sanitary sewer. Collected groundwater will be discharged directly to a sewer manhole, pursuant to the IRM Work Plan dated 10 August 2018, and in accordance with Industrial Discharge Permit HAL-1920 ("Permit HAL-1920") issued by the City of Rome Water Pollution Control Facility (WPCF), dated 1 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination. Pursuant to correspondence between NYSDEC and the Multistate Trust, dated 17 November 2016, water generated at the Site has been granted a generic "Contained-In" determination, applicable only if collected water is delivered to the Rome WPCF and meets Rome WPCF discharge conditions.

In accordance with Rome WPCF Permit HAL-1920, a water sample representative of the water to be discharged to the sanitary sewer, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your files. The sample is identified as:

- WW-01-190718-1530 (Laboratory Sample ID L1931908-01)

The analytical data meet the Rome WPCF discharge conditions outlined in Permit HAL-1920, and pursuant to the Permit and previously issued Generic "Contained-In" determination, will be discharged to the City of Rome sanitary sewer. Groundwater generated during subsequent IRM activities will be discharged as required to the sanitary sewer under the Generic Contained-In determination, and will be sampled and analyzed in accordance with the sampling requirements defined in the WPCF Permit HAL-1920 or otherwise modified by the Rome WPCF.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name:	LOT 3A IRM	**Lab Number:**	L1931908
Project Number:	127887-007	**Report Date:**	07/27/19

Case Narrative (continued)

Report Submission

July 27, 2019: This final report includes the results of all requested analyses.

July 26, 2019: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics by Method 624

L1931908-01 (WW-01-190718-1530): The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

The WG1263340-3 LCS recoveries, associated with L1931908-01 (WW-01-190718-1530), are above the acceptance criteria for carbon tetrachloride (135%) and 1,1,1-trichloroethane (140%); however, the associated sample is non-detect to the RL for this target analyte. The results of the original analysis are reported.

Semivolatile Organics by Method 625

L1931908-01: The sample has elevated detection limits due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1931908
Project Number:	127887-007	**Report Date:**	07/27/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**

File No. 127887-007

New York State Department of Environmental Conservation
Division of Environmental Remediation
Remedial Bureau A, 12th Floor
625 Broadway
Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Discharge of groundwater to City of Rome WPCF

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), is notifying the New York State Department of Environmental Conservation (NYSDEC) of the discharge of groundwater generated during Interim Remedial Measures (IRM) to the City of Rome sanitary sewer. Collected groundwater will be discharged directly to a sewer manhole, pursuant to the IRM Work Plan dated 10 August 2018, and in accordance with Industrial Discharge Permit HAL-1920 ("Permit HAL-1920") issued by the City of Rome Water Pollution Control Facility (WPCF), dated 1 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination. Pursuant to correspondence between NYSDEC and the Multistate Trust, dated 17 November 2016, water generated at the Site has been granted a generic "Contained-In" determination, applicable only if collected water is delivered to the Rome WPCF and meets Rome WPCF discharge conditions.

In accordance with Rome WPCF Permit HAL-1920, a water sample representative of the water to be discharged to the sanitary sewer, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your files. The sample is identified as:

- WW-02-190724-1500 (Laboratory Sample ID L1932850-01)

The analytical data meet the Rome WPCF discharge conditions outlined in Permit HAL-1920, and pursuant to the Permit and previously issued Generic "Contained-In" determination, will be discharged to the City of Rome sanitary sewer. Groundwater generated during subsequent IRM activities will be discharged as required to the sanitary sewer under the Generic Contained-In determination, and will be sampled and analyzed in accordance with the sampling requirements defined in the WPCF Permit HAL-1920 or otherwise modified by the Rome WPCF.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics by Method 624

The WG1265306-3 LCS recoveries, associated with L1932850-01 (WW-02-190724-1500), are above the acceptance criteria for carbon tetrachloride (140%) and 1,1,1-trichloroethane (140%); however, the associated samples are non-detect to the RL for these target analytes. The results of the original analysis are reported.

Semivolatile Organics by Method 625

L1932850-01 (WW-02-190724-1500): The sample has elevated detection limits due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1932850
Project Number:	127887-007	**Report Date:**	07/30/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

13 August 2019
File No. 127887-007

New York State Department of Environmental Conservation
Division of Environmental Remediation
Remedial Bureau A, 12th Floor
625 Broadway
Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Discharge of groundwater to City of Rome WPCF

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), is notifying the New York State Department of Environmental Conservation (NYSDEC) of the discharge of groundwater generated during Interim Remedial Measures (IRM) to the City of Rome sanitary sewer. Collected groundwater will be discharged directly to a sewer manhole, pursuant to the IRM Work Plan dated 10 August 2018, and in accordance with Industrial Discharge Permit HAL-1920 ("Permit HAL-1920") issued by the City of Rome Water Pollution Control Facility (WPCF), dated 1 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination. Pursuant to correspondence between NYSDEC and the Multistate Trust, dated 31 July 2019, water generated at the Site has been granted a generic "Contained-In" determination, applicable only if collected water is delivered to the Rome WPCF and meets Rome WPCF discharge conditions.

In accordance with Rome WPCF Permit HAL-1920, a water sample representative of the water to be discharged to the sanitary sewer, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your files. The sample is identified as:

- WW-03-190801-1330 (Laboratory Sample ID L1934330-01)

The analytical data meet the Rome WPCF discharge conditions outlined in Permit HAL-1920, and pursuant to the Permit and previously issued Generic "Contained-In" determination, will be discharged to the City of Rome sanitary sewer. Groundwater generated during subsequent IRM activities will be discharged as required to the sanitary sewer under the Generic Contained-In determination, and will be sampled and analyzed in accordance with the sampling requirements defined in the WPCF Permit HAL-1920 or otherwise modified by the Rome WPCF.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1934330
Project Number:	127887-007	**Report Date:**	08/13/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

File No. 127887-007

New York State Department of Environmental Conservation
Division of Environmental Remediation
Remedial Bureau A, 12th Floor
625 Broadway
Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Discharge of groundwater to City of Rome WPCF

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), is notifying the New York State Department of Environmental Conservation (NYSDEC) of the discharge of groundwater generated during Interim Remedial Measures (IRM) to the City of Rome sanitary sewer. Collected groundwater will be discharged directly to a sewer manhole, pursuant to the IRM Work Plan dated 10 August 2018, and in accordance with Industrial Discharge Permit HAL-1920 ("Permit HAL-1920") issued by the City of Rome Water Pollution Control Facility (WPCF), dated 1 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination. Pursuant to correspondence between NYSDEC and the Multistate Trust, dated 31 July 2019, water generated at the Site has been granted a generic "Contained-In" determination, applicable only if collected water is delivered to the Rome WPCF and meets Rome WPCF discharge conditions.

In accordance with Rome WPCF Permit HAL-1920, a water sample representative of the water to be discharged to the sanitary sewer, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your files. The sample is identified as:

- WW-4-1908012-0800 (Laboratory Sample ID L1936131-01)

The analytical data meet the Rome WPCF discharge conditions outlined in Permit HAL-1920, and pursuant to the Permit and previously issued Generic "Contained-In" determination, will be discharged to the City of Rome sanitary sewer. Groundwater generated during subsequent IRM activities will be discharged as required to the sanitary sewer under the Generic Contained-In determination, and will be sampled and analyzed in accordance with the sampling requirements defined in the WPCF Permit HAL-1920 or otherwise modified by the Rome WPCF.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1936131
Project Number:	127887-007	**Report Date:**	08/16/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

30 August 2019
File No. 127887-007

New York State Department of Environmental Conservation
Division of Environmental Remediation
Remedial Bureau A, 12th Floor
625 Broadway
Albany, New York

Attention: Mr. Henry Wilkie
Environmental Engineer I

Subject: Former Federal Creosote Site (Site #633088)
Lot 3A Interim Remedial Measures
Rome, New York
Discharge of groundwater to City of Rome WPCF

Dear Mr. Wilkie:

By this letter, Haley & Aldrich of New York ("Haley & Aldrich") on behalf of the Multistate Trust, Trustee of the Multistate Environmental Response Trust ("Multistate Trust"), is notifying the New York State Department of Environmental Conservation (NYSDEC) of the discharge of groundwater generated during Interim Remedial Measures (IRM) to the City of Rome sanitary sewer. Collected groundwater will be discharged directly to a sewer manhole, pursuant to the IRM Work Plan dated 10 August 2018, and in accordance with Industrial Discharge Permit HAL-1920 ("Permit HAL-1920") issued by the City of Rome Water Pollution Control Facility (WPCF), dated 1 May 2019.

Creosote-impacted waste materials generated at the Former Federal Creosote Site as part of remediation activities have been determined by the NYSDEC to be considered F-034 listed hazardous waste per the NYSDEC's letter to the Multistate Trust dated August 11, 2015. As such, the waste requires handling and disposal as hazardous waste, unless granted a Contained-In determination. Pursuant to correspondence between NYSDEC and the Multistate Trust, dated 31 July 2019, water generated at the Site has been granted a generic "Contained-In" determination, applicable only if collected water is delivered to the Rome WPCF and meets Rome WPCF discharge conditions.

In accordance with Rome WPCF Permit HAL-1920, a water sample representative of the water to be discharged to the sanitary sewer, was collected and analyzed as per the sampling and analysis procedures, detailed in the IRM Work Plan. The laboratory analytical report for the sample is attached for your files. The sample is identified as:

- WW-05-190819-0935 (Laboratory Sample ID L1937384-01)

The analytical data meet the Rome WPCF discharge conditions outlined in Permit HAL-1920, and pursuant to the Permit and previously issued Generic "Contained-In" determination, will be discharged to the City of Rome sanitary sewer. Groundwater generated during subsequent IRM activities will be discharged as required to the sanitary sewer under the Generic Contained-In determination, and will be sampled and analyzed in accordance with the sampling requirements defined in the WPCF Permit HAL-1920 or otherwise modified by the Rome WPCF.

If you have any questions or concerns, please contact me at (585) 321-4220.

Sincerely yours,
HALEY & ALDRICH OF NEW YORK

Andrew L. Nichols
Technical Specialist

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

August 30, 2019: The Volatile Organics analyte list has been amended on L1937384-01 (WW-05-190819-0935).

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics by Method 625

L1937384-01 (WW-05-190819-0935): The sample has elevated detection limits due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1937384
Project Number:	127887-007	**Report Date:**	08/30/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics by Method 625

L1938656-01 (WW-06-190826-0745): The sample has elevated detection limits due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1938656
Project Number:	127887-007	**Report Date:**	09/04/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.
SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B, SM4500NO2-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.

Data Usability Summary Report

Project Name: Rome GEMT (NY) – Lot 3A IRM

Analytical Laboratory: Alpha Analytical – Westborough, MA

Validation Performed by: Vanessa Godard

Validation Reviewed by: Katherine Miller

Validation Date: July 2019

Haley & Aldrich, Inc., prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the Rome GEMT soil samples collected on 01, 02 and 16 May 2019. The analytical results for Sample Delivery Group(s) (SDG) listed below were reviewed to determine the data's usability. This data validation and usability assessment was performed per the guidance and requirements established by the U.S. Environmental Protection Agency's (EPA) "National Functional Guidelines for Organic Data Review". The following quality assurance/quality control criteria from the analysis of the project samples were reviewed as applicable:

1. Sample Delivery Group Number L1918111
2. Sample Delivery Group Number L1918379
3. Sample Delivery Group Number L1920729

- Holding Times/Preservation
- Reporting Limits and Sample Dilution
- Reporting Basis (Wet/Dry)
- Blank Sample Analysis
- Surrogate Recovery Compliance
- Laboratory Control Samples
- Matrix Spike Samples
- Laboratory and Field Duplicate Sample Analysis
- System Performance and Overall Assessment

Analytical precision and accuracy were evaluated based on the laboratory control, matrix spike, or laboratory duplicate analyses performed concurrently with the project samples or based on field duplicates collected at the site.

Data reported in this sampling event were reported to the laboratory method detection limit (MDL). Results found between the MDL and RL are flagged "J" estimated.

Sample data were qualified in accordance with laboratory's standard operating procedures (SOPs). The results presented in each laboratory report were found to be compliant with the data quality objectives for the project and usable; any exceptions are noted in the following pages.

1. Sample Delivery Group Number L1918111

1.1 SUMMARY

This DUSR summarizes the review of SDG number L1918111. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized.

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-01-190501-1035	N	L1918111-01	5/1/2019	Soil	A, B, D
DOC3A-02-190501-1210	N	L1918111-02	5/1/2019	Soil	A, B, D
DOC3A-03-190501-1315	N	L1918111-03	5/1/2019	Soil	A, B, C, D
DOC3A-04-190501-1345	N	L1918111-04	5/1/2019	Soil	A, C, D
DOC3A-05-190501-1550	N	L1918111-05	5/1/2019	Soil	A, B, D
DOC3A-06-190501-1630	N	L1918111-06	5/1/2019	Soil	A, B, D
1234-190501-0001	TB	L1918111-07	5/1/2019	Blank	B

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. Volatile Organic Compounds (VOCs) by EPA 8260C (TerraCore – DI vial) ---------- Freeze in 48 hrs.; 14 days
C. Volatile Organic Compounds (VOCs) by EPA 8260C (TerraCore – Methanol vial) ---------- 14 days
D. Semi-Volatile Organic Compounds (SVOCs) by EPA 8260C ---------- 14 days extraction; 40 days analysis

1.2 CASE NARRATIVE

The Alpha laboratory report case narrative lists various additional points of interest:

- The lab noted differences between the results of the low-level and high-level analyses for sample L1918111-03 VOC analysis by EPA 8260C. The lab attributed these differences to vial discrepancies. Further re-analysis could not be performed due to the existing vials being compromised from analysis. Both runs were reported, and no glaring discrepancies were noted by the reviewer. The low-level run shows concentrations for certain VOCs that would not have been seen at the high level due to elevated reporting limits.

1.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 4.1 Degrees C.

1.4 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Analyte/ Method	Dilution Factor	Issue/Explanation
DOC3A-02-190501-1210	L1918111-02	VOCs by EPA 8260C	500x	Dilution required due to high target analyte concentrations.
		SVOCs by EPA 8270D	125x	
DOC3A-03-190501-1315	L1918111-03	Naphthalene by EPA 8260C	Methanol Vial*	
DOC3A-04-190501-1345	L1918111-04	VOCs by EPA 8260C	Methanol Vial	
DOC3A-06-190501-1630	L1918111-06	VOCs by EPA 8260C	20x	
DOC3A-05-190501-1550	L1918111-05	SVOCs by EPA 8270D	4x	

* Naphthalene exceeded the calibration range for the low-level DI water vial. The lab analyzed the high-level methanol vial to get the Naphthalene concentration within calibration range. Only Naphthalene is reported from the high-level methanol analysis, with elevated reporting limits.

1.5 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to within limits.

1.6 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1233889-5	Methyl tert butyl ether	0.20 J ug/kg	NA	None, associated samples ND.
Method Blank	WG1233891-5	Methyl tert butyl ether	10 J ug/kg	NA	None, associated samples ND.
Method Blank	WG1233999-5	Methyl tert butyl ether	14 J ug/kg	NA	None, associated samples ND.
Method Blank	WG1234434-5	Bromomethane	30 J ug/kg	NA	None, associated samples ND.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Trip blanks are prepared when volatile analysis is requested to identify contamination that may have been introduced during transport. Blank samples for field quality control had no detections, indicating that no contamination from field activities occurred.

1.7 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits with the following exceptions:

Method	Sample ID	Lab ID	Surrogate	Recovery	Qualification
EPA 8270D	DOC3A-02-190501-1210	L1918111-02	2-Fluorobiphenol	0%	None, the sample was diluted 125x. This dilution effectively dilutes the added surrogate spikes out and makes the recovery irrelevant.
			Phenol-d6	0%	
			Nitrobenzene-d5	0%	
			2-Fluorobiphenyl	0%	
			2,4,6-tribromophenol	0%	
			4-terphenyl-d14	0%	

1.8 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCSD	EPA 8260C	WG1233999	Trichlorofluoromethane	146%	NA	None, sample ND.
LCS/LCSD		WG1234434	Carbon tetrachloride	134%/137%	NA	None, sample ND.
LCS/LCSD			Trichlorofluoromethane	140%/154%	NA	None, sample ND.
LCSD			1,1,1-Trichloroethane	133%	NA	None, sample ND.
LCS/LCSD	EPA 8270D	WG1233745	3,3'-Dichlorobenzidine	34%/35%	**J/UJ**	**All Samples**
LCS			Biphenyl	50%	**J/UJ**	**All Samples**
LCS/LCSD			Carbazole	50%/53%	**J/UJ**	**All Samples**

1.9 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

1.10 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20% (or the absolute difference rule was satisfied if detects were less than 5x the RL):

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)
L1918111-02	DOC3A-02-190501-1210	Total Solids by EPA 2540G

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

1.11 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable except for rejected data noted below. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
All Samples	3,3'-Dichlorobenzidine	Detect/ND U	Detect J/ND UJ	Lab Control Sample Exceedance
	Biphenyl	Detect/ND U	Detect J/ND UJ	
	Carbazole	Detect/ND U	Detect J/ND UJ	
DOC3A-03-190501-1315	VOCs by Methanol	ND U	Reject	Alternate Data Available from DI Vial
	Naphthalene by DI Water	Detect	Reject	Calibration Range Exceeded

2. Sample Delivery Group Number L1918379

2.1 SUMMARY

This DUSR summarizes the review of SDG number L1918379. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized.
- The sample ID was updated on 6/13/2019 for sample L1918379-04 by client request.

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
1234-190502-0001	TB	L1918379-01	5/2/2019	Blank	B
1234-190502-0002	FD	L1918379-02	5/2/2019	Soil	A, C, D
DOC3A-07-190502-0830	N	L1918379-03	5/2/2019	Soil	A, C, D
DOC3A-08-190502-0930	N	L1918379-04	5/2/2019	Soil	A, C, D
DOC3A-09-190502-1030	N	L1918379-05	5/2/2019	Soil	A, B, D
DOC3A-10-190502-1130	N	L1918379-06	5/2/2019	Soil	A, C, D
DOC3A-11-190502-1210	N	L1918379-07	5/2/2019	Soil	A, C, D
DOC3A-12-190502-1330	N	L1918379-08	5/2/2019	Soil	A, C, D
DOC3A-13-190502-1410	N	L1918379-09	5/2/2019	Soil	A, B, D
DOC3A-14-190502-1500	N	L1918379-10	5/2/2019	Soil	A, C, D
DOC3A-21-190502-1530	N	L1918379-11	5/2/2019	Soil	A, C, D

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. Volatile Organic Compounds (VOCs) by EPA 8260C (TerraCore – DI vial) ---------- Freeze in 48 hrs.; 14 days
C. Volatile Organic Compounds (VOCs) by EPA 8260C (TerraCore – Methanol vial) ---------- 14 days
D. Semi-Volatile Organic Compounds (SVOCs) by EPA 8260C ---------- 14 days extraction; 40 days analysis

2.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 3.2 Degrees C.

2.3 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Analyte/ Method	Dilution Factor	Issue/Explanation
1234-190502-0002	L1918379-02*	VOCs by EPA 8260C	200x	Dilution required due to high target analyte concentrations.
DOC3A-10-190502-1130	L1918379-06*		200x	
DOC3A-08-190502-0930	L1918379-04		10x	
DOC3A-21-190502-1530	L1918379-11		5x	
Various	2, 3, 4, 6, 7, 8, 10, 11		Methanol**	
DOC3A-10-190502-1130	L1918379-06	SVOCs by EPA 8270D	50x	
DOC3A-08-190502-0930	L1918379-04		5x	
DOC3A-21-190502-1530	L1918379-11		2x	Dilution required by sample matrix.

* These samples were reanalyzed at a higher dilution for naphthalene only in order to report it within the calibration range.
** High-level methanol vial analyzed, resulting in elevated reporting limits.

2.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a/dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to within limits.

2.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1234617	Bromomethane	76 J ug/kg	**RL U**	**L1918379-08**

Field blanks are prepared to identify contamination that may have been introduced during field activity. Trip blanks are prepared when volatile analysis is requested to identify contamination that may have been introduced during transport. Blank samples for field quality control had no detections, indicating that no contamination from field activities occurred.

2.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits with the following exceptions:

Method	Sample ID	Lab ID	Surrogate	Recovery	Qualification
EPA 8270D	DOC3A-10-190502-1130	L1918379-06	2-Fluorobiphenol	0%	None, the sample was diluted 50x. This dilution effectively dilutes the added surrogate spikes out and makes the recovery irrelevant.
			Phenol-d6	0%	
			Nitrobenzene-d5	0%	
			2-Fluorobiphenyl	0%	
			2,4,6-tribromophenol	0%	
			4-terphenyl-d14	0%	

2.7 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. The sample(s) below were used for MS/MSD:

Lab Sample Number	Matrix Spike/ Matrix Spike Duplicate Sample Client ID	Method(s)
L1918379-05	DOC3A-09-190502-1030	VOCs by EPA 8260C; SVOCs by EPA 8270D

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits with the following exceptions:

Sample Type	Method	Parent Sample Number	Analyte	%R/RPD	Qualifier	Affected Samples
MSD	EPA 8260C	DOC3A-09	1,1,2,2-Tetrachloroethane	65%	**UJ**	**DOC3A-09**
MS			Bromomethane	55%	**UJ**	**DOC3A-09**
MSD			Dichlorodifluoromethane	RPD = 40%	NA	None, sample ND
MSD			2-Hexanone	63%	**UJ**	**DOC3A-09**
MSD			1,2-Dibromo-3-chloropropane	64%	**UJ**	**DOC3A-09**
MSD			Naphthalene	141%	**J**	**DOC3A-09**
MS			1,2,3-Trichlorobenzene	67%	**UJ**	**DOC3A-09**
MS			1,2,4-Trichlorobenzene	66%	**UJ**	**DOC3A-09**

2.8 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20% (or the absolute difference rule was satisfied if detects were less than 5x the RL):

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)
L1918379-05	DOC3A-09-190502-1030	Total Solids by EPA 2540G

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The RPD comparison for any field duplicates in this SDG is shown below. RPDs were all below 50% for soil (or the absolute difference rule was satisfied if detects were less than 5x the RL). Any exceptions are noted below and qualified.

Field Duplicate RPD Calculations:

Method	Analyte (µg/kg, unless noted)	Primary Sample ID	Duplicate Sample ID	% RPD	Qualification
		DOC3A-08-190502-0930	1234-190502-0002		
2540G	Total Solids (%)	**80.0**	**79.3**	0.9	None, RPD < 50%
VOCs 8260C	Ethylbenzene	**290 J**	**56,000**	NA	**J-Flag, Abs. Diff. > RL**
	Isopropylbenzene	690 U	**6,800 J**	NA	None, Abs. Diff. < RL
	m,p-Xylenes	**800 J**	**120,000**	NA	**J-Flag, Abs. Diff. > RL**
	Naphthalene	**130,000**	**24,000,000**	**197.8**	**J-Flag, RPD > 50%**
	o-Xylene	690 U	**42,000**	NA	**J-Flag, Abs. Diff. > RL**
	Toluene	690 U	**35,000**	NA	**J-Flag, Abs. Diff. > RL**
SVOCs 8270D	2-Methylnaphthalene	**8,500**	**2,700**	**103.6**	**J-Flag, RPD > 50%**
	Acenaphthene	**7,100**	**2,500**	**95.8**	**J-Flag, RPD > 50%**
	Acenaphthylene	**690 J**	**230**	NA	None, Abs. Diff. < RL
	Anthracene	**2,500**	**870**	NA	**J-Flag, Abs. Diff. > RL**
	Benzo(a)anthracene	**2,900**	**1,100**	NA	**J-Flag, Abs. Diff. > RL**
	Benzo(a)pyrene	**1,100**	**110 J**	NA	**J-Flag, Abs. Diff. > RL**
	Benzo(b)fluoranthene	**1,600**	**560**	NA	**J-Flag, Abs. Diff. > RL**
	Benzo(g,h,i)perylene	**290 J**	**110 J**	NA	None, Abs. Diff. < RL
	Benzo(k)fluoranthene	**630**	**210**	NA	None, Abs. Diff. < RL
	Biphenyl	**1,900 J**	**600**	NA	None, Abs. Diff. < RL
	Carbazole	**1,800**	**1,000**	NA	None, Abs. Diff. < RL
	Chrysene	**2,000**	**760**	NA	**J-Flag, Abs. Diff. > RL**
	Dibenz(a,h)anthracene	610 U	**33 J**	NA	None, Abs. Diff. < RL
	Dibenzofuran	**6,400**	**2,400**	**90.9**	**J-Flag, RPD > 50%**
	Fluoranthene	**9,700**	**3,900**	**85.3**	**J-Flag, RPD > 50%**
	Fluorene	**7,700**	**3,000**	**87.9**	**J-Flag, RPD > 50%**
	Indeno(1,2,3-cd)pyrene	**410 J**	**130 J**	NA	None, Abs. Diff. < RL
	Naphthalene	**22,000**	**7,700**	**96.3**	**J-Flag, RPD > 50%**
	Phenanthrene	**16,000**	**6,600**	**83.2**	**J-Flag, RPD > 50%**
	Pyrene	**6,500**	**2,600**	**85.7**	**J-Flag, RPD > 50%**

Field notes and lab tracking were reviewed to double check these samples were the correct parent/duplicate pair.

2.9 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCS/LCSD	EPA 8260C	WG1234494	Chloromethane	133%/132%	NA	None, samples ND.
LCS	EPA 8270D	WG1234146	p-Chloro-m-cresol	104%	NA	None, samples ND.

2.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-12	Bromomethane	94 J	150 U	Method Blank Contamination
DOC3A-09	1,1,2,2-Tetrachloroethane	ND U	ND UJ	Matrix Spike Exceedance
	Bromomethane	ND U	ND UJ	
	2-Hexanone	ND U	ND UJ	
	1,2-Dibromo-3-chloropropane	ND U	ND UJ	
	Naphthalene	240	240 J	
	1,2,3-Trichlorobenzene	ND U	ND UJ	
	1,2,4-Trichlorobenzene	ND U	ND UJ	
DOC3A-08 & 1234-190502-0002	5 VOCs (See Section 2.8)	Detect/ ND U	Detect J/ ND UJ	Field Duplicate RPD
	13 SVOCs (See Section 2.8)	Detect	Detect J	

3. Sample Delivery Group Number L1920729

3.1 SUMMARY

This DUSR summarizes the review of SDG number L1920729. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized.

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-111-190516-1730	N	L1920729-01	5/16/2019	Soil	A, B, C

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. Volatile Organic Compounds (VOCs) by EPA 8260C (TerraCore – Methanol vial) ---------- 14 days
C. Semi-Volatile Organic Compounds (SVOCs) by EPA 8260C ---------- 14 days extraction; 40 days analysis

3.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 3.4 Degrees C.

3.3 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Analyte/ Method	Dilution Factor	Issue/Explanation
DOC3A-111-190516-1730	L1920729-01	SVOCs by EPA 8270D	25x	Dilution required due to high target analyte concentrations.
		VOCs by EPA 8260C	5x	
			Methanol*	

** High-level methanol vial analyzed, resulting in elevated reporting limits.

3.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to within limits.

3.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1240335	Methyl tert butyl ether	12 J ug/kg	NA	None, sample ND.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Trip blanks are prepared when volatile analysis is requested to identify contamination that may have been introduced during transport. Blank samples for field quality control were not collected in this SDG.

3.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits with the following exceptions:

Method	Sample ID	Lab ID	Surrogate	Recovery	Qualification
EPA 8270D	DOC3A-111-190516-1730	L1920729-01	2-Fluorobiphenol	0%	None, the sample was diluted 25x. This dilution effectively dilutes the added surrogate spikes out and makes the recovery irrelevant.
			Phenol-d6	0%	
			Nitrobenzene-d5	0%	
			2-Fluorobiphenyl	0%	
			2,4,6-tribromophenol	0%	
			4-terphenyl-d14	0%	

3.7 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCS/LCSD	EPA 8260C	WG1240335	Vinyl chloride	133%/133%	NA	None, sample ND.
LCSD			Chloroethane	152%	NA	None, sample ND.
LCS/LCSD	EPA 8270D	WG1239455	Hexachlorocyclopentadiene	7%/7%	**R**	**L1920729-01**

3.8 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

3.9 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20% (or the absolute difference rule was satisfied if detects were less than 5x the RL):

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)
L1920729-01	DOC3A-111-190516-1730	Total Solids by EPA 2540G

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

3.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable except for rejected data noted below. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-111	Hexachlorocyclopentadiene	ND U	Reject	Extremely Low LCS Recovery

Glossary

- Sample Types:
  - N Primary Sample
  - FD Field Duplicate Sample
  - FB Field Blank Sample
  - EB Equipment Blank Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg or ug/kg microgram per kilogram
  - mg/kg milligram per kilogram
  - % percent
- Table Footnotes
  - NA Not applicable
  - ND Non-detect

Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D The concentration is based on a diluted sample analysis.
- Validation Qualifiers:
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - J+ The result is an estimated quantity, but the result may be biased high.
  - J- The result is an estimated quantity, but the result may be biased low.
  - UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is therefore an estimated concentration only.
  - R The sample results were rejected as unusable; the compound may or may not be present in the sample.

Data Usability Summary Report

Project Name: Rome GEMT

Analytical Laboratory: Alpha Analytical – Westborough, MA

Validation Performed by: Vanessa Godard

Validation Reviewed by: Katherine Miller

Validation Date: October 2019

Haley & Aldrich, Inc., prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the Rome GEMT soil samples collected from 27 June to 30 August 2019. The analytical results for Sample Delivery Group(s) (SDG) listed below were reviewed to determine the data's usability. This data validation and usability assessment was performed per the guidance and requirements established by the U.S. Environmental Protection Agency's (EPA) "National Functional Guidelines for Inorganic Data Review" and "National Functional Guidelines for Organic Data Review".

1. Sample Delivery Group Number L1928243
2. Sample Delivery Group Number L1929112
3. Sample Delivery Group Number L1929540
4. Sample Delivery Group Number L1929831
5. Sample Delivery Group Number L1931015
6. Sample Delivery Group Number L1932289
7. Sample Delivery Group Number L1934621
8. Sample Delivery Group Number L1935121
9. Sample Delivery Group Number L1935122
10. Sample Delivery Group Number L1937007
11. Sample Delivery Group Number L1937385
12. Sample Delivery Group Number L1937386
13. Sample Delivery Group Number L1938501
14. Sample Delivery Group Number L1938949
15. Sample Delivery Group Number L1938951
16. Sample Delivery Group Number L1939870

General Quality Control

The following quality assurance/quality control criteria from the analysis of the project samples were reviewed as applicable:

- Holding Times/Preservation
- Reporting Limits and Sample Dilution
- Reporting Basis (Wet/Dry)
- Blank Sample Analysis
- Surrogate Recovery Compliance
- Laboratory Control Samples
- Matrix Spike Samples
- Laboratory and Field Duplicate Sample Analysis
- System Performance and Overall Assessment

Analytical precision and accuracy were evaluated based on the laboratory control, matrix spike, or laboratory duplicate analyses performed concurrently with the project samples or based on field duplicates collected at the site.

Data reported in this sampling event were reported to the laboratory method detection limit (MDL). Results found between the MDL and RL are flagged “J” estimated.

Sample data were qualified in accordance with laboratory’s standard operating procedures (SOPs). The results presented in each laboratory report were found to be compliant with the data quality objectives for the project and usable; any exceptions are noted in the following pages.

1. Sample Delivery Group Number L1928243

1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1928243. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL6-09-190627-1330	N	L1928243-01	6/27/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore DI vial) ---------- Freeze within 48 hours, analyze in 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

1.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 2.7 Degrees C.

1.3 REPORTING LIMITS AND SAMPLE DILUTION

No dilutions were performed on data in this report.

1.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

1.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1255875	Selenium	0.148 J mg/kg	NA	None, sample ND.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

1.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

1.7 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20% (or the absolute difference rule was satisfied if detects were less than 5x the RL):

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)
L1928243-01	DOC3A-CELL6-09-190627-1330	Total Solids by EPA 2540G

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

1.8 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits.

1.9 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. For inorganic methods, when a matrix spike recovery falls outside of the control limits and the sample result is less than four times the spike added, a post digestion spike (PDS) is performed. The sample(s) below were used for MS/MSD:

Lab Sample Number	Matrix Spike/ Matrix Spike Duplicate Sample Client ID	Method(s)
L1928243-01	DOC3A-CELL6-09-190627-1330	VOCs by EPA 8260C; SVOCs by EPA 8270D; Metals by EPA 6010D, Mercury by EPA 7471B

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits with the following exceptions:

Type	Method	Parent	Analyte	%R/RPD	Qualifier	Affected Samples
MSD	EPA 8260C	DOC3A-CELL6-09-190627-1330	Methylene Chloride	69%	**J/UJ**	**DOC3A-CELL6-09**
MSD			Dibromochloromethane	67%	**J/UJ**	**DOC3A-CELL6-09**
MSD			Chlorobenzene	58%	**J/UJ**	**DOC3A-CELL6-09**

1.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-CELL6-09-190627-1330	Various VOCs (See Section 1.9)	ND U	ND UJ	Matrix Spike Exceedance
	2,4-Dinitrophenol	980 U	980 UJ	
	Barium	66.0	66.0 J-	
	Cadmium	0.810	0.810 J-	
	Chromium	10.7	10.7 J-	
	Lead	5.47	5.47 J-	
	Selenium	0.975 U	0.975 UJ	

2. Sample Delivery Group Number L1929112

2.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1929112. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL1-09-190702-1330	N	L1929112-01	7/2/2019	Soil	A, B, C, D, E
1234-190702-0001	FD	L1929112-02	7/2/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

2.2 CASE NARRATIVE

The Alpha laboratory report case narrative lists the following additional data usability items:

- The lab flagged certain results “E”, indicating the concentration was above the calibration range and should be considered estimated. As the lab reanalyzed the affected samples for the compounds that exceeded the calibration range, the results flagged “E” are rejected as unusable and marked non-reportable in favor of the reanalysis data found within the calibration range.

2.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 4.3 Degrees C.

2.4 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Analyte/ Method	Dilution Factor	Issue/Explanation
DOC3A-CELL1-09-190702-1330	L1929112-01	VOCs by EPA 8260C	10x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.
1234-190702-0001	L1929112-02			

2.5 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

2.6 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

2.7 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

2.8 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits.

2.9 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

2.10 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The RPD comparison for any field duplicates in this SDG is shown below. RPDs were all below 50% for soil (or the absolute difference rule was satisfied if detects were less than 5x the RL). Any exceptions are noted below and qualified.

Field Duplicate RPD Calculations:

Method(s): EPA 8260C, 8270D, 6010D, 7471B, 2540G				
Analyte (µg/kg, unless noted)	**Primary Sample ID**	**Duplicate Sample ID**	**% RPD**	**Qualification**
	DOC3A-CELL1-09-190702-1330	**1234-190702-0001**

2.11 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-CELL1-09-190702-1330 & 1234-190702-0001	2-Methylnaphthalene	Detect/ ND U	Detect J/ ND UJ	Field Duplicate RPD
	Acenaphthene			
	Acenaphthylene			
	Anthracene			
	Benzo(a)anthracene			
	Benzo(a)pyrene			
	Benzo(b)fluoranthene			
	Biphenyl			
	Chrysene			
	Dibenzofuran			
	Fluoranthene			
	Fluorene			
	Naphthalene			
	Phenanthrene			
	Pyrene			

This table does not include a summary of data rejected due to exceeding the calibration curve because alternate data obtained through additional dilution was available that replaces this invalid data.

3. Sample Delivery Group Number L1929540

3.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1929540. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELLA-09-190708-1205	N	L1929540-01	7/8/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

3.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 4.2 Degrees C.

3.3 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Analyte/ Method	Dilution Factor	Issue/Explanation
DOC3A-CELLA-09-190708-1205	L1929540-01	VOCs by EPA 8260C	2x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.

3.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

3.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1259092	Methyl tert butyl ether	10 J ug/kg	NA	None, sample ND.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

3.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

3.7 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

- A LCSD was not reported for Metals. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCS/LCSD	EPA 8260B	WG1259092	Trichlorofluoromethane	58%/59%	**UJ**	**All Samples**
LCS/LCSD			Bromomethane	55%/55%	**UJ**	**All Samples**
LCS	EPA 8270D	WG1258288	Biphenyl	107%	NA	None, sample ND
LCS			p-Chloro-m-cresol	112%	NA	None, sample ND
LCS			2-Chlorophenol	103%	NA	None, sample ND
LCS			4-Nitrophenol	116%	NA	None, sample ND
LCS			Phenol	103%	NA	None, sample ND

3.8 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

3.9 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

3.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-CELLA-09-190708-1205	Bromomethane	220 U	220 UJ	Low Lab Control Sample Recovery
	Trichlorofluoromethane	430 U	430 UJ	

4. Sample Delivery Group Number L1929831

4.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1929831. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL 2A/B3-10-190709-1515	N	L1929831-01	7/9/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

4.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 2.0 Degrees C.

4.3 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Method	Dilution Factor	Issue/Explanation
DOC3A-CELL 2A/B3-10-190709-1515	L1929831-01	VOCs by EPA 8260C	2.5x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.

4.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

4.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1259321	Arsenic	0.088 J mg/kg	NA	None, sample >10x blank.
		Chromium	0.084 J mg/kg	NA	None, sample >10x blank.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

4.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

4.7 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20% (or the absolute difference rule was satisfied if detects were less than 5x the RL):

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)	Analyte RPD Out	Assessment
L1929831-01	DOC3A-CELL 2A/B3-10-190709-1515	Metals by EPA 6010D	**Arsenic at 31%**	**J Flag All Samples**

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

4.8 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

- A LCSD was not reported for Mercury by EPA 7471B and Total Solids by EPA 2540G. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCS/LCSD	EPA 8260B	WG1259125	Trichlorofluoromethane	58%/58%	**UJ**	**All Samples**
LCS/LCSD			Bromomethane	54%/54%	**UJ**	**All Samples**

4.9 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. The sample(s) below were used for MS/MSD:

Lab Sample Number	Matrix Spike/ Matrix Spike Duplicate Sample Client ID	Method(s)
L1929831-01	DOC3A-CELL 2A/B3-10-190709-1515	Metals by EPA 6010D (MS only)

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits with the following exceptions:

Sample Type	Method	Parent Sample Number	Analyte	%R/RPD	Qualifier	Affected Samples
MS	EPA 6010D	DOC3A-CELL 2A/B3-10-190709-1515	Arsenic	141%	**J (PDS within)**	**All Samples**
MS			Cadmium	62%	**J-/UJ**	**All Samples**
PDS				59%		
MS			Chromium	74%	**J-/UJ**	**All Samples**
PDS				64%		
MS			Lead	67%	**J-/UJ**	**All Samples**
PDS				64%		

4.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-CELL 2A/B3-10-190709-1515	Bromomethane	290 U	290 UJ	Low Lab Control Sample Recovery
	Trichlorofluoromethane	590 U	590 UJ	
	Cadmium	0.463 U	0.463 UJ	Low Matrix Spike Recovery
	Chromium	13.4	13.4 J-	
	Lead	6.33	6.33 J-	
	Arsenic	4.38	4.38 J	High Matrix Spike Recovery & Lab Duplicate RPD

5. Sample Delivery Group Number L1931015

5.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1931015. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL2B-09-190715-1400	N	L1931015-01	7/15/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

5.2 CASE NARRATIVE

The Alpha laboratory report case narrative lists the following additional data usability items:

- The lab flagged certain results “E”, indicating the concentration was above the calibration range and should be considered estimated. As the lab reanalyzed the affected samples for the compounds that exceeded the calibration range, the results flagged “E” are rejected as unusable and marked non-reportable in favor of the reanalysis data found within the calibration range.

5.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 2.1 Degrees C.

5.4 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Method	Dilution Factor	Issue/Explanation
DOC3A-CELL2B-09-190715-1400	L1931015-01	VOCs by EPA 8260C	5x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.

5.5 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

5.6 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1261381	Chromium	0.068 J mg/kg	NA	None, sample >10x blank.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

5.7 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

5.8 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

- A LCSD was not reported for Metals or Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCS/LCSD	EPA 8270D	WG1262062	p-Chloro-m-cresol	110%/104%	NA	None, sample ND.
LCS			4-Nitrophenol	117%	NA	None, sample ND.
LCS/LCSD			Phenol	117%/109%	NA	None, sample ND.

5.9 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

5.10 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

5.11 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. No qualifiers were applied to any data in this report.

This does not include a summary of data rejected due to exceeding the calibration curve because alternate data obtained through additional dilution was available that replaces this invalid data.

6. Sample Delivery Group Number L1932289

6.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1932289. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL2C-10-190722-1315	N	L1932289-01	7/22/2019	Soil	A, B, C, D, E, F

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore DI vial) ---------- Freeze within 48 hours, analyze in 14 days
E. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
F. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

6.2 CASE NARRATIVE

The Alpha laboratory report case narrative lists the following additional data usability items:

- The lab flagged certain results “E”, indicating the concentration was above the calibration range and should be considered estimated. As the lab reanalyzed the affected samples for the compounds that exceeded the calibration range, the results flagged “E” are rejected as unusable and marked non-reportable in favor of the reanalysis data found within the calibration range.
- The results of both the low-level DI water vial and high-level Methanol vial were reported for VOCs. Differences were noted by the laboratory between the results of the analyses. These were attributed to vial discrepancies.

6.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 2.9 Degrees C.

6.4 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Method	Dilution Factor	Issue/Explanation
DOC3A-CELL2C-10-190722-1315	L1932289-01	VOCs by EPA 8260C	1x & 10x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required. Only Naphthalene is reported from the high-level vial at dilution.

6.5 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

6.6 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1263797	Methyl tert butyl ether	0.24 J ug/kg (Low-Level)	NA	None, sample ND.
Method Blank	WG1264980	Methyl tert butyl ether	10 J ug/kg (High-Level)	NA	None, sample ND.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

6.7 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

6.8 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

6.9 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

- A LCSD was not reported for Metals & Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCS/LCSD	EPA 8260B	WG1263797	Carbon tetrachloride	132%/138%	NA	None, sample ND.

6.10 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

6.11 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. No qualifiers were applied to any data in this report.

This does not include a summary of data rejected due to exceeding the calibration curve because alternate data obtained through additional dilution was available that replaces this invalid data.

7. Sample Delivery Group Number L1934621

7.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1934621. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).
- The date/time did not match between the COC and the label. Per the client, the label info was used.

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL3A-8-190802-1145	N	L1934621-01	8/2/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

7.2 CASE NARRATIVE

The Alpha laboratory report case narrative lists the following additional data usability items:

- The lab flagged certain results “E”, indicating the concentration was above the calibration range and should be considered estimated. As the lab reanalyzed the affected samples for the compounds that exceeded the calibration range, the results flagged “E” are rejected as unusable and marked non-reportable in favor of the reanalysis data found within the calibration range.

7.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 4.2 Degrees C.

7.4 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Method	Dilution Factor	Issue/Explanation
DOC3A-CELL3A-8-190802-1145	L1934621-01	VOCs by EPA 8260C	4x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.

7.5 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

7.6 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1270160	Methylene Chloride	130 J ug/kg	NA	None, sample ND.
		Methyl tert butyl ether	10 J ug/kg	NA	None, sample ND.
Method Blank	WG1269481	Chromium	0.060 J mg/kg	NA	None, sample >10x blank.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

7.7 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

7.8 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

- A LCSD was not reported for Metals and Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCSD	EPA 8270D	WG1269932	4-Chloroanaline	37%	**UJ**	**DOC3A-CELL3A-8**
LCSD			Carbazole	53%	**J**	**DOC3A-CELL3A-8**

7.9 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

7.10 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

7.11 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-CELL3A-8-190802-1145	4-Chloroanaline	190 U	190 UJ	Low Lab Control Sample Recovery
	Carbazole	1500	1500 J	

This table does not include a summary of data rejected due to exceeding the calibration curve because alternate data obtained through additional dilution was available that replaces this invalid data.

8. Sample Delivery Group Number L1935121

8.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1935121. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL5A-8-190806-1300	N	L1935121-01	8/6/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

8.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 2.7 Degrees C.

8.3 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Method	Dilution Factor	Issue/Explanation
DOC3A-CELL5A-8-190806-1300	L1935121-01	VOCs by EPA 8260C	5x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.
		SVOCs by EPA 8270D		Dilution required due to high target analyte concentrations.

8.4 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

8.5 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

8.6 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1271380	Methylene chloride	140 J ug/kg	NA	None, sample ND.
Method Blank	WG1270290	Arsenic	0.148 J mg/kg	NA	None, sample >10x blank.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

8.7 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

- A LCSD was not reported for Metals or Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCSD	EPA 8270D	WG1271080	3,3'-dichlorobenzidine	39%	**UJ**	**DOC3A-CELL5A-8**
LCS			p-chloro-m-cresol	108%	NA	None, sample ND.
LCS			4-nitrophenol	120%	NA	None, sample ND.
LCSD			Various SVOCs	RPD High	NA	None, sample ND.
LCSD			Acenaphthene		**J**	**DOC3A-CELL5A-8**
LCSD			Carbazole		**J**	**DOC3A-CELL5A-8**
LCSD			Fluoranthene		**J**	**DOC3A-CELL5A-8**
LCSD			Fluorene		**J**	**DOC3A-CELL5A-8**
LCSD			Phenanthrene		**J**	**DOC3A-CELL5A-8**
LCSD			Pyrene		**J**	**DOC3A-CELL5A-8**

8.8 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

8.9 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

8.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-CELL5A-8-190806-1300	3,3'-Dichlorobenzidine	980 U	980 UJ	Lab Control Sample Exceedance
	Acenaphthene	120 J	120 J	
	Carbazole	190 J	190 J	
	Fluoranthene	120 J	120 J	
	Fluorene	100 J	100 J	
	Phenanthrene	240 J	240 J	
	Pyrene	99 J	99 J	

9. Sample Delivery Group Number L1935122

9.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1935122. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL4A-8-190806-0845	N	L1935122-01	8/6/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

9.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 2.7 Degrees C.

9.3 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Method	Dilution Factor	Issue/Explanation
DOC3A-CELL4A-8-190806-0845	L1935122-01	VOCs by EPA 8260C	2.5x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.

9.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

9.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1271380	Methylene chloride	140 J ug/kg	NA	None, sample ND.
Method Blank	WG1270290	Arsenic	0.148 J mg/kg	NA	None, sample >10x blank.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

9.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

9.7 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

- A LCSD was not reported for Metals and Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCSD	EPA 8270D	WG1271080	3,3'-dichlorobenzidine	39%	**UJ**	**DOC3A-CELL4A-8**
LCS			p-chloro-m-cresol	108%	NA	None, sample ND.
LCS			4-nitrophenol	120%	NA	None, sample ND.
LCSD			Various SVOCs	RPD High	NA	None, sample ND.
LCSD			Acenaphthene		**J**	**DOC3A-CELL4A-8**
LCSD			Anthracene		**J**	**DOC3A-CELL4A-8**
LCSD			Biphenyl		**J**	**DOC3A-CELL4A-8**
LCSD			Carbazole		**J**	**DOC3A-CELL4A-8**
LCSD			Fluorene		**J**	**DOC3A-CELL4A-8**
LCSD			Phenanthrene		**J**	**DOC3A-CELL4A-8**

9.8 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

9.9 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

9.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-CELL4A-8-190806-0845	3,3'-Dichlorobenzidine	190 U	190 UJ	Lab Control Sample Exceedance
	Acenaphthene	570	570 J	
	Anthracene	300	300 J	
	Biphenyl	240 J	240 J	
	Carbazole	78 J	78 J	
	Fluorene	130 J	130 J	
	Phenanthrene	310	310 J	

10. Sample Delivery Group Number L1937007

10.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1937007. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL3B-08-190815-1430	N	L1937007-01	8/15/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

10.2 CASE NARRATIVE

The Alpha laboratory report case narrative lists the following additional data usability items:

- The lab flagged certain results “E”, indicating the concentration was above the calibration range and should be considered estimated. As the lab reanalyzed the affected samples for the compounds that exceeded the calibration range, the results flagged “E” are rejected as unusable and marked non-reportable in favor of the reanalysis data found within the calibration range.

10.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 5.5 Degrees C.

10.4 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Analyte/ Method	Dilution Factor	Issue/Explanation
DOC3A-CELL3B-08-190815-1430	L1937007-01	VOCs by EPA 8260C	20x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.

10.5 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

10.6 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1274554	Dimethyl phthalate	37 J ug/kg	NA	None, sample ND.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

10.7 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits with the following exceptions:

Method	Sample ID	Lab ID	Surrogate	Recovery	Qualification
EPA 8270D	DOC3A-CELL3B-08-190815-1430	L1937007-01	2-Fluorophenol	17%	None, other surrogates cover.
			Nitrobenzene-d5	20%	None, within NFG limits.

10.8 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits.

- A LCSD was not reported for Metals and Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

10.9 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

10.10 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

10.11 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. No qualifiers were applied to any data in this report.

This does not include a summary of data rejected due to exceeding the calibration curve because alternate data obtained through additional dilution was available that replaces this invalid data.

11. Sample Delivery Group Number L1937385

11.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1937385. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL3C-7.5-190819-0830	N	L1937385-01	8/19/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

11.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 2.5 Degrees C.

11.3 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Method	Dilution Factor	Issue/Explanation
DOC3A-CELL3C-7.5-190819-0830	L1937385-01	VOCs by EPA 8260C	5x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.

11.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

11.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1275228	Silver	0.124 J mg/kg	NA	None, sample ND.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

11.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

11.7 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits.

- A LCSD was not reported for Metals and Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

11.8 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

11.9 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

11.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. No qualifiers were applied to any data in this report.

12. Sample Delivery Group Number L1937386

12.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1937386. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL4B-SUBSLAB-06-	N	L1937386-01	8/17/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore DI vial) ---------- Freeze within 48 hours, analyze in 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

12.2 CASE NARRATIVE

The Alpha laboratory report case narrative lists the following additional data usability items:

- The lab flagged certain results “E”, indicating the concentration was above the calibration range and should be considered estimated. As the lab reanalyzed the affected samples for the compounds that exceeded the calibration range, the results flagged “E” are rejected as unusable and marked non-reportable in favor of the reanalysis data found within the calibration range.

12.3 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 2.9 Degrees C.

12.4 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Only detected analytes were reported from a dilution.

12.5 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

12.6 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1275228	Silver	0.124 J mg/kg	NA	None, sample ND.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

12.7 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

12.8 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits.

- A LCSD was not reported for Metals and Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

12.9 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

12.10 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

12.11 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. No qualifiers were applied to any data in this report.

This does not include a summary of data rejected due to exceeding the calibration curve because alternate data obtained through additional dilution was available that replaces this invalid data.

13. Sample Delivery Group Number L1938501

13.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1938501. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL4B-7.5-190823-0815	N	L1938501-01	8/23/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

13.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 5.5 Degrees C.

13.3 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Method	Dilution Factor	Issue/Explanation
DOC3A-CELL4B-7.5-190823-0815	L1938501-01	VOCs by EPA 8260C	2x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.
		SVOCs by EPA 8270D	Elevated	Detection limits are elevated due to the limited sample volume utilized during extraction.

13.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

13.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1277482	Chromium	0.068 J mg/kg	NA	None, sample >10x blank.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

13.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

13.7 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

- A LCSD was not reported for Metals or Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCS/LCSD	EPA 8260B	WG1278273	Dichlorodifluoromethane	180%/169%	NA	None, sample ND.

13.8 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

13.9 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

13.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. No qualifiers were applied to any data in this report.

14. Sample Delivery Group Number L1938949

14.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1938949. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL4C-8-190827-1400	N	L1938949-01	8/27/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore DI vial) ---------- Freeze within 48 hours, analyze in 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

14.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 4.3 Degrees C.

14.3 REPORTING LIMITS AND SAMPLE DILUTION

No dilutions were performed on data in this report.

14.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

14.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1278458	Arsenic	0.092 J mg/kg	NA	None, sample >10x blank.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

14.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

14.7 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits with the following exceptions:

- A LCSD was not reported for Metals and Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCS/LCSD	EPA 8260C	WG1279064	Dichlorodifluoromethane	182%/178%	NA	None, sample ND.
LCS/LCSD			2-Butanone	66%/50%	**UJ**	**DOC3A-CELL4C-8**
LCSD			2-Hexanone	68%	**UJ**	**DOC3A-CELL4C-8**

14.8 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

14.9 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

14.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-CELL4C-8-190827-1400	2-Butanone	9.4 U	9.4 UJ	Lab Control Sample Exceedance
	2-Hexanone	9.4 U	9.4 UJ	

15. Sample Delivery Group Number L1938951

15.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1938951. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL5B-8.5-190827-1030	N	L1938951-01	8/27/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

15.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 2.4 Degrees C.

15.3 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Method	Dilution Factor	Issue/Explanation
DOC3A-CELL5B-8.5-190827-1030	L1938951-01	VOCs by EPA 8260C	2.5x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.

15.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

15.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1279020	Bromomethane	30 J ug/kg	NA	None, sample ND.
Method Blank	WG1278458	Arsenic	0.092 J mg/kg	NA	None, sample >10x blank.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

15.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

15.7 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits.

- A LCSD was not reported for Metals and Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

15.8 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. No client samples were used for MS/MSD analysis in this SDG.

15.9 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. No client samples were used for laboratory duplicate analysis in this SDG.

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

15.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. No qualifiers were applied to any data in this report.

16. Sample Delivery Group Number L1939870

16.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L1939870. Samples were collected, preserved, and shipped following standard chain of custody protocol. Samples were also received appropriately, identified correctly, and analyzed according to the monitoring schedule. Chains of custody were appropriately signed and dated by the field and/or laboratory personnel with the following exceptions:

- Custody seals were not utilized on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC3A-CELL5C-8-190830-1000	N	L1939870-01	8/30/2019	Soil	A, B, C, D, E

Holding Times:

A. Total Solids by EPA 2540G ---------- 7 days
B. ICP Metals (As, Ba, Cd, Cr, Pb, Se, Ag) by EPA 6010D ---------- 180 days
C. Mercury by EPA 7471B ---------- 28 days
D. Volatile Organic Compounds (VOCs) by EPA 8260C (Terracore Methanol vial) ---------- 14 days
E. Semi-Volatile Organic Compounds (SVOCs) by EPA 8270D ---------- 14 days extraction, 40 days analysis

16.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler temperature on arrival to the laboratory was: 5.8 Degrees C.

16.3 REPORTING LIMITS AND SAMPLE DILUTION

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Method	Dilution Factor	Issue/Explanation
DOC3A-CELL5C-8-190830-1000	L1939870-01	VOCs by EPA 8260C	2.5x	Dilution required due to high target analyte concentrations. The high-level methanol vial was used since a dilution was required.

16.4 REPORTING BASIS (WET/DRY)

Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations have been made to compensate for the moisture content of the soil sample. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis.

Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have ≥ 30% solids to be appropriately quantified. Percent solid results have been reviewed and found to be within limits.

16.5 BLANK SAMPLE ANALYSIS

Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination. Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration	Qualifier	Affected Samples
Method Blank	WG1281094	Chloroform	8.7 J ug/kg	NA	None, sample ND.
Method Blank	WG1280274	Arsenic	0.088 J mg/kg	NA	None, sample >10x blank.

Field blanks are prepared to identify contamination that may have been introduced during field activity. Blank samples for field quality control were not collected in this SDG.

16.6 SURROGATE RECOVERY COMPLIANCE

Surrogates, also known as deuterated monitoring compounds, are compounds added to each sample prior to sample preparation to evaluate the percent recovery (%R) to ensure that the organic analytical method is efficient. The %R were within the specified limits.

16.7 LABORATORY CONTROL SAMPLES

The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. Compounds associated with the LCS/LCSD analyses exhibited recoveries and relative percent difference (RPDs) within the specified limits.

- A LCSD was not reported for Total Solids. As a site-specific matrix spike duplicate, field duplicate, or laboratory duplicate were also not analyzed, this data set was not supported by any site-specific precision quality control.

16.8 MATRIX SPIKE SAMPLES

Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effect of the sample matrix on the sample preparation procedures and measurement methodologies. The sample(s) below were used for MS/MSD:

Lab Sample Number	Matrix Spike/ Matrix Spike Duplicate Sample Client ID	Method(s)
L1939870-01	DOC3A-CELL5C-8-190830-1000	Metals by EPA 6010D (MS only)

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits with the following exceptions:

Sample Type	Method	Parent Sample Number	Analyte	%R/RPD	Qualifier	Affected Samples
MS	EPA 6010D	DOC3A-CELL5C-8-190830-1000	Lead	71%	J-	**DOC3A-CELL5C-8-190830-1000**
PDS				63%		

16.9 LABORATORY AND FIELD DUPLICATE SAMPLES

The laboratory duplicate sample analysis is used by the laboratory at the time of analysis to demonstrate acceptable method precision. The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20% (or the absolute difference rule was satisfied if detects were less than 5x the RL):

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)	Parameter/RPD	Assessment
L1939870-01	DOC3A-CELL5C-8-190830-1000	Metals by EPA 6010D	**Arsenic/28%**	**J Flag Sample**

The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. No field duplicates were collected in this data set.

16.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by analytical method. Based on the review of this report, the data are 100% useable. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC3A-CELL5C-8-190830-1000	Lead	5.96	5.96 J-	Matrix Spike Exceedance
	Arsenic	4.50	4.50 J	Laboratory Duplicate RPD

Glossary

- Sample Types:
  - N Primary Sample
  - FD Field Duplicate Sample
  - FB Field Blank Sample
  - EB Equipment Blank Sample
  - TB Trip Blank Sample
- Units:
  - µg/kg or ug/kg microgram per kilogram
  - mg/kg milligram per kilogram
- Table Footnotes
  - NA Not applicable
  - ND Non-detect

Results are qualified with the following codes in accordance with EPA National Functional Guidelines:

- Concentration (C) Qualifiers:
  - U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
  - B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
  - E The compound was quantitated above the calibration range.
  - D The concentration is based on a diluted sample analysis.
- Validation Qualifiers:
  - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
  - J+ The result is an estimated quantity, but the result may be biased high.
  - J- The result is an estimated quantity, but the result may be biased low.
  - UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is approximate and may or may not represent the actual limit of quantitation.
  - NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is therefore an estimated concentration only.
  - R The sample results were rejected as unusable; the compound may or may not be present in the sample.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L1918111-02 (DOC3A-02-190501-1210) and -06 (DOC3A-06-190501-1630): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1918111-02 (DOC3A-02-190501-1210): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The result should be considered estimated, and are qualified with an E flag, for any compound that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound that exceeded the calibration range.

L1918111-03 (DOC3A-03-190501-1315) was analyzed as a High Level Methanol in order to quantitate the sample within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial Low Level analysis. The results of both analyses are reported.

L1918111-03 (DOC3A-03-190501-1315): Differences were noted between the results of the analyses which have been attributed to vial discrepancies. Further re-analysis could not be performed due to the existing vials being compromised.

L1918111-04 (DOC3A-04-190501-1345): The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of target compounds in the sample.

Semivolatile Organics

L1918111-02 (DOC3A-02-190501-1210) and -05 (DOC3A-05-190501-1550): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1918111-02 (DOC3A-02-190501-1210): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not

Project Number:	127887-007	**Report Date:**	05/08/19

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A 1 RM	**Lab Number:**	L1918111
Project Number:	127887-007	**Report Date:**	05/08/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

June 13, 2019: The Client ID was changed on L1918379-04 (DOC3A-08-190502-0930).

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L1918379-02 and -06 (1234-190502-0002 and DOC3A-10-190502-1130): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L1918379-02, -04, -06, and -11 (1234-190502-0002, DOC3A-08-190502-0930, DOC3A-10-190502-1130, and DOC3A-21-190502-1530): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1918379-03, -07, -08, and -10 (DOC3A-07-190502-0830, DOC3A-11-190502-1210, DOC3A-12-190502-1330, and DOC3A-14-190502-1500): The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of target compounds in the sample.

The WG1234494-3/-4 LCS/LCSD recoveries, associated with L1918379-05 and -09 (DOC3A-09-190502-1030 and DOC3A-09-190502-1030), are above the individual acceptance criteria for chloromethane (133%/132%), but within the overall method allowances. The results of the associated samples are reported; however, all positive detects are considered to have a potentially high bias for these compounds.

The WG1234494-6/-7 MS/MSD recoveries, performed on L1918379-05 (DOC3A-09-190502-1030), are outside the acceptance criteria for 1,1,2,2-tetrachloroethane (MSD at 65%), bromomethane (MS at 55%), 1,2,3-trichloropropane (67%/63%), 2-hexanone (MSD at 63%), 1,2-dibromo-3-chloropropane (MSD at 64%), naphthalene (MSD at 141%), 1,2,3-trichlorobenzene (MS at 67%) and 1,2,4-trichlorobenzene (MS at 66%); however, the associated LCS/LCSD recoveries are within overall method allowances. No further action was

Project Name: LOT 3A IRM **Lab Number:** L1918379
Project Number: 127887-007 **Report Date:** 06/13/19

Case Narrative (continued)

required.

The WG1234494-6/-7 MS/MSD RPD, performed on L1918379-05 (DOC3A-09-190502-1030), is outside the acceptance criteria for dichlorodifluoromethane (40%).

WG1234494-7: The result with an E flag is due to targe hit in native sample , The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis.

Semivolatile Organics

L1918379-04 and -06 (DOC3A-08-190502-0930 and DOC3A-10-190502-1130): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1918379-06 (DOC3A-10-190502-1130): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

L1918379-11 (DOC3A-21-190502-1530): The sample has elevated detection limits due to the dilution required by the sample matrix.

The WG1234146-2 LCS recovery, associated with L1918379-02 through -11 (1234-190502-0002, DOC3A-07-190502-0830, DOC3A-08-190502-0930, DOC3A-07-190502-0930, DOC3A-10-190502-1130, DOC3A-11-190502-1210, DOC3A-12-190502-1330, DOC3A-13-190502-1410, DOC3A-14-190502-1500 and DOC3A-21-190502-1530), is above the individual acceptance criteria for p-chloro-m-cresol (104%), but within the overall method allowances. The results of the associated samples are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1918379
Project Number:	127887-007	**Report Date:**	06/13/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300: Chloride, Sulfate, Nitrate.**
EPA 624.1: Volatile Halocarbons & Aromatics,

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The analyses performed were specified by the client.

Volatile Organics

L1920729-01 (DOC3A-111-190516-1730): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

The WG1240335-3/-4 LCS/LCSD recoveries, associated with L1920729-01 (DOC3A-111-190516-1730), are above the individual acceptance criteria for vinyl chloride (133%/133%) and chloroethane (LCSD at 152%), but within the overall method allowances. The results of the associated sample are reported.

Semivolatile Organics

L1920729-01 (DOC3A-111-190516-1730): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L1920729-01 (DOC3A-111-190516-1730): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L1920729-01 (DOC3A-111-190516-1730): The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

The WG1239455-2/-3 LCS/LCSD recoveries, associated with L1920729-01 (DOC3A-111-190516-1730), are below the acceptance criteria for hexachlorocyclopentadiene (7%/7%); however, it has been identified as a

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1920729
Project Number:	127887-007	**Report Date:**	05/24/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

The WG1255764-6/-7 MS/MSD recoveries, performed on L1928243-01 (DOC3A-CELL6-09-190627-1330), are outside the acceptance criteria for methylene chloride (MSD 69%), dibromochloromethane (MSD 67%), chlorobenzene (MSD 58%), 1,2-dichloroethane (MSD 68%), trans-1,3-dichloropropene (65%/54%), cis-1,3-dichloropropene (MSD 62%), 1,1,2,2-tetrachloroethane (MSD 69%), ethylbenzene (MSD 64%), 1,2-dichlorobenzene (64%/46%), 1,3-dichlorobenzene (64%/43%), 1,4-dichlorobenzene (59%/40%), p/m-xylene (MSD 64%), o-xylene (MSD 66%), styrene (MSD 54%), 2-butanone (64%/66%), 2-hexanone (59%/57%), 1,2-dibromoethane (65%/56%), n-butylbenzene (MSD 41%), sec-butylbenzene (MSD 59%), 1,2-dibromo-3-chloropropane (63%/57%), p-isopropyltoluene (MSD 55%), naphthalene (47%/38%), n-propylbenzene (MSD 59%), 1,2,3-trichlorobenzene (38%/27%), 1,2,4-trichlorobenzene (37%/25%), 1,3,5-trimethylbenzene (MSD 63%), and 1,2,4-trimethylbenzene (MSD 57%); however, the associated LCS/LCSD recoveries are within overall method allowances. No further action was required.

The WG1255764-6/-7 MS/MSD RPDs, performed on L1928243-01 (DOC3A-CELL6-09-190627-1330), are outside the acceptance criteria for 1,2-dichlorobenzene (35%), 1,3-dichlorobenzene (42%), 1,4-dichlorobenzene (40%), p/m-xylene (31%), styrene (33%), n-butylbenzene (62%), sec-butylbenzene (49%), tert-butylbenzene (39%), isopropylbenzene (36%), p-isopropyltoluene (50%), n-propylbenzene (45%), 1,2,3-trichlorobenzene (36%), 1,2,4-trichlorobenzene (41%), 1,3,5-trimethylbenzene (41%), and 1,2,4-trimethylbenzene (42%).

Semivolatile Organics

The WG1256107-6/-7 MS/MSD recoveries, performed on L1928243-01 (DOC3A-CELL6-09-190627-1330), are below the acceptance criteria for 2,4-dinitrophenol (0%/0%) due to the concentration of this compound falling below the reported detection limit.

Project Name: LOT 3A IRM
Project Number: 127887-007

Lab Number: L1928243
Report Date: 07/08/19

Case Narrative (continued)

Total Metals

The WG1255875-3 MS recovery, performed on L1928243-01 (DOC3A-CELL6-09-190627-1330), is outside the acceptance criteria for barium (72%). A post digestion spike was performed and yielded an unacceptable recovery of 76%. The serial dilution recovery was not acceptable; therefore, this element fails the matrix test and the result reported in the native sample should be considered estimated.

The WG1255875-3/-4 MS/MSD recoveries, performed on L1928243-01 (DOC3A-CELL6-09-190627-1330), are outside the acceptance criteria for cadmium (64%/67%), chromium (64%/68%), and lead (58%/59%). A post digestion spike was performed and yielded unacceptable recoveries for cadmium (69%), chromium (64%), and lead (63%). The serial dilution recoveries were not applicable; therefore, these elements fail the matrix test and the results reported in the native sample should be considered estimated.

The WG1255875-3/-4 MS/MSD recoveries, performed on L1928243-01 (DOC3A-CELL6-09-190627-1330), are outside the acceptance criteria for selenium (72%/72%). A post digestion spike was performed and was within acceptance criteria.

The WG1256086-4 MSD recovery, performed on L1928243-01 (DOC3A-CELL6-09-190627-1330), is outside the acceptance criteria for mercury (126%). A post digestion spike was performed and was within acceptance criteria. The MS/MSD RPD for mercury (21%) is above the acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1928243
Project Number:	127887-007	**Report Date:**	07/08/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate; **EPA 524.2:** THMs and VOCs; **EPA 504.1:** EDB, DBCP.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT,SM9222D**.

Non-Potable Water
SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2320B, SM4500CL-E, SM4500F-BC, SM4500NH3-BH: Ammonia-N and Kjeldahl-N, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **EPA 351.1, SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500P-E, SM4500P-B, E, SM4500SO4-E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, EPA 420.1, SM4500-CN-CE, SM2540D, EPA 300: Chloride, Sulfate, Nitrate.**

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L1929112-01 and -02 (DOC3A-CELL1-09-190702-1330 and 1234-190702-0001): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

Semivolatile Organics

L1929112-01 and -02 (DOC3A-CELL1-09-190702-1330 and 1234-190702-0001): The sample was re-analyzed on dilution in order to quantify the results within the calibration range. The results should be considered estimated, and are qualified with an E flag, for any compound that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compounds that exceeded the calibration range.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Footnotes

Report Format: DU Report with 'J' Qualifiers

Project Name:	LOT 3A IRM	**Lab Number:**	L1929112
Project Number:	127887-007	**Report Date:**	07/11/19

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility
EPA 624/624.1: m/p-xylene, o-xylene
EPA 8260C: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), Methyl methacrylate, 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.
EPA 8270D: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine.

EPA 6860: SCM: Perchlorate

SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO2, NO3.

Mansfield Facility
SM 2540D: TSS
EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.
Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water
EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Name: LOT 3A IRM
Project Number: 127887-007

Lab Number: L1929540
Report Date: 07/15/19

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L1929540-01 (DOC3A-CELLA-09-190708-1205): The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

The WG1259092-10/-11 LCS/LCSD recoveries, associated with L1929540-01 (DOC3A-CELLA-09-190708-1205), are below the individual acceptance criteria for trichlorofluoromethane (58%/59%) and bromomethane (55%/55%), but within the overall method allowances. The results of the associated sample are reported; however, all results are considered to have a potentially low bias for these compounds.

Semivolatile Organics

The WG1258288-2 LCS recoveries, associated with L1929540-01 (DOC3A-CELLA-09-190708-1205), are above the individual acceptance criteria for biphenyl (107%), p-chloro-m-cresol (112%), 2-chlorophenol (103%), 4-nitrophenol (116%) and phenol (103%), but within the overall method allowances. The results of the associated sample are reported; however, all positive detects are considered to have a potentially high bias for these compounds.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Michelle M. Morris

1,2-Dichloroethane-d4	108		70-130
Toluene-d8	103		70-130
4-Bromofluorobenzene	113		70-130
Dibromofluoromethane	95		70-130

Project Name: LOT 3A IRM
Project Number: 127887-007

Lab Number: L1929540
Report Date: 07/15/19

Method Blank Analysis
Batch Quality Control

Analytical Method: 1,8260C
Analytical Date: 07/11/19 17:44
Analyst: AD

Parameter	Result	Qualifier	Units	RL	MDL
Volatile Organics by GC/MS - Westborough Lab for sample(s): 01 Batch: WG1259092-12					
Methylene chloride	ND		ug/kg	250	110
1,1-Dichloroethane	ND		ug/kg	50	7.2
Chloroform	ND		ug/kg	75	7.0
Carbon tetrachloride	ND		ug/kg	50	12.
1,2-Dichloropropane	ND		ug/kg	50	6.2
Dibromochloromethane	ND		ug/kg	50	7.0
1,1,2-Trichloroethane	ND		ug/kg	50	13.
Tetrachloroethene	ND		ug/kg	25	9.8
Chlorobenzene	ND		ug/kg	25	6.4
Trichlorofluoromethane	ND		ug/kg	200	35.
1,2-Dichloroethane	ND		ug/kg	50	13.
1,1,1-Trichloroethane	ND		ug/kg	25	8.4
Bromodichloromethane	ND		ug/kg	25	5.4
trans-1,3-Dichloropropene	ND		ug/kg	50	14.
cis-1,3-Dichloropropene	ND		ug/kg	25	7.9
1,3-Dichloropropene, Total	ND		ug/kg	25	7.9
Bromoform	ND		ug/kg	200	12.
1,1,2,2-Tetrachloroethane	ND		ug/kg	25	8.3
Benzene	ND		ug/kg	25	8.3
Toluene	ND		ug/kg	50	27.
Ethylbenzene	ND		ug/kg	50	7.0
Chloromethane	ND		ug/kg	200	47.
Bromomethane	ND		ug/kg	100	29.
Vinyl chloride	ND		ug/kg	50	17.
Chloroethane	ND		ug/kg	100	23.
1,1-Dichloroethene	ND		ug/kg	50	12.
trans-1,2-Dichloroethene	ND		ug/kg	75	6.8
Trichloroethene	ND		ug/kg	25	6.8
1,2-Dichlorobenzene	ND		ug/kg	100	7.2
