Ms. Rachel Savarie
New York State Department of Environmental Conservation

Subject: Former Kerr-McGee/Tronox Federal Creosote Site, located in Rome, NY—
Lot 5E, 5D, Railroad Parcel Interim Remedial Measures Pre-Excavation
Documentation Sampling and Test-Pitting Report

Dear Ms. Savarie,

Greenfield Environmental Multistate Trust LLC, not individually but solely in its representative capacity as Trustee of the Multistate Environmental Response Trust (Multistate Trust), respectfully submits the attached Lot 5E, 5D, Railroad Parcel Interim Remedial Measures Pre-Excavation Documentation Sampling and Test-Pitting Report for the Former Kerr-McGee/Tronox Federal Creosote Site, located at 5900 Success Drive, Rome, NY for your review and comments.

If you have any questions or require additional information, please feel free to call me (850-228-9421) or email (ah@g-etg.com).

Sincerely,
Greenfield Environmental Multistate Trust LLC
Trustee of the Multistate Environmental Response Trust

1. Introduction

This Pre-Excavation Documentation Sampling and Test-Pitting Report, prepared by Haley & Aldrich of New York (Haley & Aldrich), documents pre-construction Interim Remedial Measures (IRM) investigations conducted by the Greenfield Environmental Multistate Trust LLC, Trustee of the Multistate Environmental Response Trust (Multistate Trust), on portions of Lot 5E, 5D, and Railroad Parcel (Lot 5E/5D/RR) of the Former Kerr-McGee/Tronox Federal Creosote Site in the City of Rome, Oneida County, New York (the “Site”; Figure 1). Activities described herein were performed under the New York State Department of Environmental Conservation (NYSDEC) Inactive Hazardous Waste Disposal Site Remediation Program, pursuant to an Order on Consent and Administrative Settlement (NYSDEC Index No. CO 6-20180611-27), and in accordance with the NYSDEC-approved Revised Interim Remedial Measures Work Plan (IRM WP) dated August 20, 2021 (Haley & Aldrich, 2021). The work was completed in general conformance with NYSDEC Division of Environmental Remediation Technical Guidance for Site Investigation and Remediation (DER-10; NYSDEC, 2010).

The Multistate Trust assumed responsibility for the Site in connection with the global Tronox bankruptcy settlement approved by the United States Bankruptcy Court (Southern District of New York) on February 14, 2011. Pursuant to the settlement agreement, under which the Multistate Trust was established, the Multistate Trust is responsible for, among other things, implementing environmental actions at the Site consistent with its fiduciary obligations to the beneficiaries of the Multistate Trust (the Beneficiaries) and under the direction of NYSDEC, as the Lead Agency for the Site. The Beneficiaries of the Multistate Trust for the Site are the United States and the State of New York.

1.1 BACKGROUND

The Site is a portion of a 189+/- acre complex formerly owned and operated by the Federal Creosote Company from the early 1900s until 1959. Historical operations included the production and preservation treatment of wooden railroad ties with creosote. The property was later developed into an industrial park in the 1970s. The Multistate Trust took title to certain portions of the Site in 2011 and is responsible for managing and funding environmental actions at the Site pursuant to NYSDEC-approved work plans and budgets. The Site consists of multiple lots, including the “Railroad Parcel” (Figure 2). Five of the lots are associated with NYSDEC remedial programs. Lot 3A is designated as Site #633088. Lots designated as 3B, 5E, and a portion of the Railroad Parcel are subject to NYSDEC Order on Consent Site #633091. Lots 5D and 6 are designated as an offsite property to Site #633091. Lot 4 is associated with a separate NYSDEC Site #633087. To date, investigations have identified the presence of contaminants associated with former wood-treating operations across several of the Site’s lots. Interim Remedial Measure (IRM) evaluations and significant source removal actions on Lots 3A and 3B (parcels not owned by the Multistate Trust) have been previously conducted in accordance with NYSDEC-approved IRM work plans.

Lot 5E, Lot 5D and the Railroad Parcels (IRM Site) are shown on Figure 2, portions of which are the subject of this IRM. Lots 5E and 5D are owned by the Multistate Trust, while the Railroad Parcel is owned by the Genesee & Mohawk Valley Railroad. Additionally, National Grid has an electrical utility easement (National Grid Easement) on a portion of the IRM Site (Lot 5E) associated with 115 kilovolt (kV) overhead power lines. The IRM Site was previously investigated by Plumley Associates (Plumley) between 2002 and 2009 under the 2002 Voluntary Cleanup Agreement (VCA) entered into by, among others, Kerr-McGee Chemical, LLC (Kerr-McGee) and the NYSDEC. Additional investigations were

conducted by Haley & Aldrich on behalf of the Multistate Trust in 2017, 2018 and 2020. The current conceptual site model (CSM) for this IRM Site suggests that creosote from former wood-treating operations on Lots 3A, 3B and 5E migrated over the ground surface and through the subsurface, through the IRM Site and to the wetlands located on Lot 5D to the south.

The IRM Site currently consists of a gravel roadway, former railroad (tracks have been partially removed), wetlands, and wooded areas. Utility towers and overhead electrical lines traverse the southern portions of Lot 5E, while a former railroad traverses the Railroad Parcel. IRM activities documented in this report were focused in areas of Lot 5E, 5D and the Railroad Parcel.

1.2 PURPOSE

In accordance with the IRM WP, the IRM will consist of excavation and removal of soils and concrete debris from within the proposed IRM excavation area. The extent of the proposed excavation area is shown on Figures 2 and 3. The proposed excavation will be generally conducted between the ground surface and a confining clay layer between approximately 7 and 16.5 feet below ground surface (ft bgs). Depths to the confining clay layer vary throughout the IRM Site and are generally deepest in the northern portions of the IRM excavation area.

Prior to completing the review of the IRM WP, the NYSDEC approved the pre-excavation documentation sampling and test-pitting activities on September 28, 2021 (Appendix A). The overall objectives of the pre-excavation IRM activities, as described in the Revised Lot 5E/5D/RR IRM WP, included:

1. Assessing the approximate extents of apparent dried creosote piles observed along the southern boundary of the proposed IRM excavation.
2. Assessing the vertical and lateral extent of concrete structures observed south of the gravel access road and along the western side of the proposed IRM excavation as potential obstructions to sheet pile driving required during proposed remedial excavation activities.
3. Use observations from test pits and soil borings to further define the proposed IRM excavation limits.

In addition, per the September 28, 2021 NYSDEC letter, completion of the investigation portion of the work in advance of IRM WP approval was intended to help refine the scope of the proposed IRM and aid in producing a Class II cost estimate for the work.

2. Pre-Excavation Activities

2.1 PRE-EXCAVATION TEST PITS

Haley & Aldrich engaged Paragon Environmental Construction, Inc. of Brewerton, New York (Paragon) to excavate test pits in the vicinity of the proposed IRM excavation. On October 4, 2021, Paragon excavated 18 test pits within areas along the southern and western boundaries of the proposed IRM excavation (Figure 3). Test pitting was performed to assess the approximate extents of the apparent dried creosote piles observed along the southern boundary of the proposed IRM excavation, and to assess the concrete structures south of the gravel access road and along the western side of the proposed IRM excavation. Brush and trees less than 3-inches diameter at breast height (DBH) were selectively cleared to enable excavator access to test pit locations. Test pits were excavated using a Kobelco 80CS excavator to depths ranging between 3 and 8 ft bgs. Test pits were backfilled to-grade with excavated materials upon completion.

2.1.1 Dried Creosote Piles

Paragon excavated eleven (11) test pits (E1 through E11; see Figure 3). During excavation, creosote saturated soils and non-aqueous phase creosote were observed between 0 and 3 feet below the top layer or vegetation, soil, and organic matter in test pits E3, E8, E9, E10, and E11. Creosote saturation was not observed in test pits E1, E2, E4, E5, E6, and E7. Pictures of representative creosote saturation are provided in Appendix C.

2.1.2 Concrete Structure

Paragon excavated TP-1 adjacent to the concrete structure south of the gravel access road and along the western side of the proposed IRM excavation. TP-1 excavation activities indicate the concrete structure has approximate dimensions of 6 ft x 6 ft x 9 ft deep. Surficial creosote saturation was observed in TP-1.

Test pits TP-2 through TP-7 were excavated immediately south, and along a transect extending approximately 125 feet west of the concrete structure. Observations from test pits TP-2 through TP-7 identified a 0.1 to 0.3 ft thick layer of creosote saturation at the interface between overlying fill/sands and the clay layer. The presence of this thin layer of creosote saturation at the sand/clay interface appears to be present throughout the Site.

2.2 PRE-EXCAVATION SOIL BORINGS AND SIDEWALL DOCUMENTATION SAMPLING

Paragon advanced soil borings using direct-push drilling methods for collection of documentation samples from the perimeter of the proposed IRM excavation limits, approximately every 30 feet, in accordance with the IRM WP, as shown on Figure 3. Soil boring locations, as presented in the IRM WP, were located and flagged onsite by Hoffman Land Surveying & Geomatics prior to soil boring advancement.

Soil borings were advanced to the clay layer, encountered approximately 6.5 and 13.3 feet bgs, using a direct-push drill rig between October 6 and October 7, 2021. Recovered soils were screened visually for evidence of creosote saturation and logged using procedures outlined in the 2017 Supplemental Investigation of Summary Report (Haley & Aldrich, 2018a). Soil boring logs are included in Appendix B.

Creosote saturation was identified in fourteen (14) soil borings located along the perimeter of the proposed IRM excavation area (see Figure 4). In accordance with the IRM WP, step-out borings were advanced at locations where creosote saturation was identified, until saturated conditions were no longer observed with the following exceptions shown on Figure 4 where creosote saturation was observed but a step out boring were not advanced:

- Boring location HA-DOC5E-24
- Borings located at and south of the tree line beyond the south side of the former railroad tracks

Regarding boring location HA-DOC5E-24, per correspondence with the NYSDEC dated October 7, 2021, step-out borings were not advanced at boring locations where *de minimis* creosote saturation (<0.2 ft thickness) was observed at the interface between overlying sands and the confining clay layer.

The deviations to the sampling methods south of the tree line were due to the widespread observation of creosote saturation in test pits (see section 2.1.1). Given those observations, the Multistate Trust proposed (via email; October 7, 2021) modifying the documentation sampling plan presented in the IRM WP as follows:

- Advance and sample soil borings north of the tree line (Figure 4; photo 13 in Appendix C) in accordance with the procedures outlined in the IRM WP,
- Advance “visual assessment only” documentation soil borings along the perimeter of the original proposed IRM excavation area south of the tree line, and eliminate “step-out” borings/documentation soil sampling at these boring locations, and
- Collect documentation samples from borings advanced generally along the tree line and immediately south of the former railroad bed to establish a potential alternative excavation boundary at a location north of the tree line. Documentation samples would be collected from these additional borings regardless of the presence of creosote saturation.

On October 7, 2021, the NYSDEC approved the proposed documentation sampling plan modifications (Appendix A). In accordance with the IRM WP and subsequent October 7, 2021 IRM WP modifications, 22 sidewall documentation samples were collected from soil borings advanced around the perimeter of the IRM excavation boundary (Figures 3 and 4). Samples were collected from either the most visually contaminated interval of the boring or from the apparent top of the water table, if no visual contamination was observed. Samples were analyzed for target compounds list (TCL) volatile organic compounds (VOCs; Method 8260) and TCL semi-volatile organic compounds (SVOCs; Method 8270), in accordance with the sampling and analysis plan set forth in the IRM WP. Documentation sample analytical results are provided in Table I. A narrative summary of the data results is provided in Section 2.3, below.

2.3 SIDEWALL DOCUMENTATION SAMPLE DATA VALIDATION AND SUMMARY

Documentation samples were validated by Haley & Aldrich, in accordance with the IRM WP. Data reports and data usability summary reports are included in Appendix D. Table I includes a summary of sidewall documentation sample results and compares the sample results to the NYSDEC Part 375 Soil Cleanup Objectives (SCOs) restricted for commercial and industrial use (NYSDEC, 2006; NYSDEC, 2010). While the SCOS for commercial and industrial use are presented as comparison criteria for the documentation samples in Table I, these criteria are not remedial objectives for the IRM.

Documentation sample results indicate several high molecular weight PAHs were detected above either the commercial or industrial SCoS in six of the sidewall samples, which are consistent with industrial fill and other investigative documentation samples collected during prior IRMs on Lot 3A and Lot 3B. VOCs were not detected above commercial or industrial SCoS.

Notes:

1. Data shown in red exceed one or more of the following New York State

Department of Environmental Conservation Part 375 Soil Criteria

[A] - Commercial

[B] - Industrial

2. ND = Not detected above detection limit shown

J = Estimated value or reporting limit (for NDs)

J+= Estimated result biased high

3. Results in bold were detected.

4. ug/kg = micrograms per kilogram

5. Data has been validated by Haley & Aldrich of New York.

6. Sample Types:

N - Normal Environmental Sample

FD - Field Duplicate

Notes:

1. Data shown in red exceed one or more of the following New York State

Department of Environmental Conservation Part 375 Soil Criteria

[A] - Commercial

[B] - Industrial

2. ND = Not detected above detection limit shown

J = Estimated value or reporting limit (for NDs)

J+= Estimated result biased high

3. Results in bold were detected.

4. ug/kg = micrograms per kilogram

5. Data has been validated by Haley & Aldrich of New York.

6. Sample Types:

N - Normal Environmental Sample

FD - Field Duplicate

**Re: 633091, Former Federal Creosote Lots 3B, 5E, & RR Parcel,
Rome (C), Oneida County
Lot 5E/5D/RR Parcel IRM Work Plan – Pre-IRM Sampling Activities**

Dear Austin Hofmeister:

The Department is currently still reviewing the August 2021 Revised Lot 5E, 5D, Railroad Parcel Interim Remedial Measures (IRM) Work Plan, for the above-referenced site. However, we understand that the Trust has an immediate opportunity with the driller's limited schedule to complete the pre-IRM sampling, identified in the IRM work plan, during the week of October 4, 2021.

We understand that these sampling activities will consist of soil borings along each proposed excavation cell sidewall as well as exploratory test pits to investigate the previously documented creosote piles and the presence of any subsurface concrete structures. These sampling activities will help to refine the proposed IRM scope as well as aid in producing the most accurate Class II cost estimate for the proposed IRM. Therefore, the Department grants the Trust the approval to proceed with pre-IRM sampling activities identified in the August 2021 revised IRM work plan.

Please note that this approval to proceed does not grant approval of the revised Lot 5E, 5D, and Railroad (RR) Parcel IRM Work Plan. The pre-IRM sampling activities should be conducted in accordance with the revised IRM work plan's Sampling and Analysis Plan and Community Air Monitoring Program (CAMP).

Austin Hofmeister

Subject: RE: Multistate Trust: Rome- 10/6/21 Field update- Modification to Work Plan approval needed

CAUTION: External Email

Good morning Austin,

I have reviewed your modification request below. I also spoke with Glenn while I was onsite on Monday (10/4) and oversaw the test pits, particularly in the southern end where creosote contamination was identified outside the current IRM excavation delineation. I concur with your proposal below, therefore, please note this email serves as my formal approval of the proposed modifications to the pre-IRM sampling outlined in the Lot 5E, 5D, Railroad Parcel IRM Work Plan. These modifications and my approval should be documented in the future IRM CCR.

Please keep me apprised of the “step out” boring in the NE corner. If creosote is present only at the clay interface, I do not think another step out boring would be required and the one step out boring completed can serve as a documentation sample (similar to the approach of the southern side of the proposed IRM excavation area).

If you have any questions or wish to discuss, please feel free to give me a call.

Thanks,
Rachel

Subject: Multistate Trust: Rome- 10/6/21 Field update- Modification to Work Plan approval needed

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Rachel,

Below is a brief summary of the work completed yesterday at the site, as well as our proposed modifications to the documentation sampling plan. I've also attached a schematic showing what borings were completed and where we are proposing modifications.

- Twenty borings were installed yesterday 10/6/21 along the north, east, and southern portion of the proposed excavation area.
- The northern and eastern sides of the excavation were delineated with the exception of the northeast corner. Creosote saturation was observed in the original boring and a "step out" boring placed approximately 5 feet to the northeast of the original boring. This will be further evaluated today.
- Creosote saturation was observed at depth in the borings installed along the south side of the proposed excavation. "Step out borings" were installed approximately 12 to 13 feet south of those borings beyond the rail line and at the southern tree line. Creosote saturation continued to be observed at the sand/clay interface in those "step out" locations. Additional borings installed along the original proposed excavation boundaries south of the tree line also had observed creosote saturation.

Due to the findings and observations from the test pitting and observed creosote saturation in the southernmost borings, we plan to modify the sampling plan as follows:

- The southern boundary of the new proposed excavation area will not extend past the tree line. Documentation samples will be collected from the "step out" borings, and two additional documentation samples will be collected within the former excavation footprint north of the tree line to demarcate the new southern boundary as shown on the attached schematic. Documentation samples will be collected from those locations regardless of the presence of creosote saturation.
- All borings planned south of the tree line will be installed for visual documentation only. No "step-out" sampling will be conducted.
- Borings north of the tree line will be installed and sampled in accordance with the procedures in the Draft IRM Work Plan.

It is anticipated that the remaining borings and samples will be collected today, 10/7/21.

I will be giving you a call first thing this morning to discuss the changes to the Pre IRM investigation scope of work described above. Before we move forward with the proposed changes, I need to get approval from NYSDEC for the modifications to the Draft IRM Work Plan.

Thank You,
Austin

**Re: 633091, Former Federal Creosote Lots 3B, 5E, & RR Parcel,
Rome (C), Oneida County
Lot 5E/5D/RR Parcel IRM Work Plan**

Dear Austin Hofmeister:

The Department has reviewed the revised Lot 5E, 5D, Railroad Parcel Interim Remedial Measures (IRM) Work Plan, electronically received on August 23, 2021, for the above-referenced site. Based on our review, we find the revised work plan to be acceptable, however final approval will be reserved pending the Departments' review and approval of the Wetland Mitigation, Restoration, and Monitoring Plan.

Please note the following:

- Please provide the Departments with at least ten (10) days advance notice of when the wetland delineation is scheduled for the Federal Creosote site. If available, a NYSDEC Region 6 biologist will visit the site to verify the wetland delineation flagging after Haley & Aldrich has completed the delineation.
- Please provide the Departments with the Wetland Mitigation, Restoration, and Monitoring Plan as soon as it is finalized. This plan should be reviewed and approved by NYSDEC prior to submitting the Nationwide permit application to the US Army Corps of Engineers (USACE).

As a note, the Departments understand that the Trust and their consultant, Haley & Aldrich, are currently compiling the information gathered from the pre-IRM sampling activities to create a Class II cost estimate for the proposed Lot 5E, 5D, & Railroad Parcel IRM. Following the submittal of this cost estimate, we are anticipating an in-depth discussion with the Trust and NYSDEC's Central Office regarding this IRM and if sufficient funding is available to proceed with the IRM.

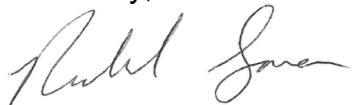

Austin Hofmeister

Documentation Sample Analytical Data

Data Usability Summary Report

Project Name: Rome GEMT

Project Description: Soil Samples

Sample Date(s): 6 & 7 October 2021

Analytical Laboratory: Alpha Analytical – Westborough, MA

Validation Performed by: Vanessa Godard

Validation Reviewed by: Katherine Miller

Validation Date: 21 October 2021

Haley & Aldrich, Inc. prepared this Data Usability Summary Report (DUSR) to summarize the review and validation of the samples described above. The analytical results for Sample Delivery Group(s) (SDG) listed below were reviewed to determine the data's usability:

1. Sample Delivery Group Number L2154507
2. Sample Delivery Group Number L2154924
3. Precision and Accuracy [for SDG(s) above]

This data validation and usability assessment was performed per the guidance and requirements established by the U.S. Environmental Protection Agency's (USEPA) *National Functional Guidelines (NFG) for Organic Data Review*.

Data reported in this sampling event were reported to the laboratory method detection limit (MDL). Results found between the MDL and RL are flagged "J" as estimated.

Sample data were qualified in accordance with laboratory's standard operating procedures (SOP). The results presented in each laboratory report were found to be compliant with the data quality objectives for the project and therefore usable; any exceptions are noted in the following pages.

For more detailed quality control (QC) information see Explanations section.

1. Sample Delivery Group Number L2154507

1.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L2154507, dated 12 October 2021. Samples were collected, preserved, and shipped following standard chain of custody (COC) protocol. Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used on the sample cooler(s).

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC5E-02-211006-1010	N	L2154507-01	10/6/2021	Soil	A, B, D
DOC5E-01-211006-1040	N	L2154507-02	10/6/2021	Soil	A, B, D
DOC5E-05-211006-1130	N	L2154507-03	10/6/2021	Soil	A, B, D
DOC5E-07-211006-1245	N	L2154507-04	10/6/2021	Soil	A, C, D
DOC5E-08-211006-1320	N	L2154507-05	10/6/2021	Soil	A, B, D
DOC5E-09-211006-1340	N	L2154507-06	10/6/2021	Soil	A, B, D
DOC5E-11-211006-1415	N	L2154507-07	10/6/2021	Soil	A, B, D
DOC5E-12-211006-1435	N	L2154507-08	10/6/2021	Soil	A, B, D

Method Holding Time			
A.	EPA 2540G	Total Solids	7 days
B.	EPA 8260C	Volatile Organic Compounds (VOCs) – DI Vial Terracore	48 hr. freeze, 14-day analysis
C.	EPA 8260C	Volatile Organic Compounds (VOCs) – Methanol Terracore	14-day analysis
D.	EPA 8270D	Semi-Volatile Organic Compounds (SVOCs)	14 day extract, 40 day analysis

1.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol.

Cooler(s) temperature on arrival to the laboratory was: 2.5 degrees Celsius.

1.3 REPORTING LIMITS AND SAMPLE DILUTIONS

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Analyte/ Method	Dilution Factor	Issue/Explanation
DOC5E-02-211006-1010	L2154507-01	SVOCs	10x	Dilution required to bring the concentration of target analytes within the calibration range.
DOC5E-01-211006-1040	L2154507-02		10x	
DOC5E-07-211006-1245	L2154507-04		5x	
		VOCs	Elevated	Methanol vial used due to elevated concentration.

1.4 REPORTING BASIS (WET/DRY)

[Refer to section E 1.1](#). Per the matrix and state requirements, data in this SDG were reported on a dry weight basis. Percent solid results were reviewed and found to be within limits.

1.5 SURROGATE RECOVERY COMPLIANCE

[Refer to section E 1.2](#). The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory specified QC limits.

1.6 LABORATORY CONTROL SAMPLES

[Refer to section E 1.3](#). Compounds associated with the laboratory control samples/laboratory control sample duplicates (LCS/LCSD) analyses exhibited recoveries and RPDs within the specified limits.

1.7 MATRIX SPIKE SAMPLES

[Refer to section E 1.4](#). No client samples were used for matrix spike/matrix spike duplicate (MS/MSD) analysis in this SDG.

1.8 BLANK SAMPLE ANALYSIS

[Refer to section E 1.5](#). Method blank samples had no detections, indicating that no contamination from laboratory activities occurred.

1.9 DUPLICATE SAMPLE ANALYSIS

[Refer to section E 1.6](#). No client samples were used for laboratory duplicate analysis in this SDG. No field duplicates were collected in this data set.

1.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable as no data was rejected. No qualifiers were applied to any data in this report.

2. Sample Delivery Group Number L2154924

2.1 SAMPLE MANAGEMENT

This DUSR summarizes the review of SDG number L2154924, dated 14 October 2021. Samples were collected, preserved, and shipped following standard chain of custody (COC) protocol. Samples were also received appropriately, identified correctly, and analyzed according to the COC. Issues noted with sample management are listed below:

- Custody seals were not used on the sample cooler(s).
- The EPA 8260C methanol vial was received empty for sample L2154924-05.
- Sample L2154924-14 was reanalyzed for VOCs after the initial run produced failing surrogate recoveries. The reanalysis achieved similar results. Both runs are reported. To avoid reporting duplicate data, **the reviewer marked the initial run non-reportable**. Both runs are technically valid and resulted in comparable results.

Analyses were performed on the following samples:

Sample ID	Sample Type	Lab ID	Sample Collection Date	Matrix	Methods
DOC5E-16-211007-0740	N	L2154924-01	10/7/2021	Soil	A, C, D
DOC5E-17-211007-0800	N	L2154924-02	10/7/2021	Soil	A, B, D
DOC5E-18-211007-0815	N	L2154924-03	10/7/2021	Soil	A, B, D
DOC5E-19-211007-0825	N	L2154924-04	10/7/2021	Soil	A, B, D
DOC5E-20-211007-0910	N	L2154924-05	10/7/2021	Soil	A, B, D
DOC5E-21-211007-0920	N	L2154924-06	10/7/2021	Soil	A, C, D
DOC5E-22-211007-0940	N	L2154924-07	10/7/2021	Soil	A, C, D
DOC5E-23-211007-1020	N	L2154924-08	10/7/2021	Soil	A, B, D
DOC5E-24-211007-1045	N	L2154924-09	10/7/2021	Soil	A, B, D
DOC5E-25-211007-1125	N	L2154924-10	10/7/2021	Soil	A, B, D
DOC5E-32-211007-1420	N	L2154924-11	10/7/2021	Soil	A, B, D
DOC5E-13-211007-1445	N	L2154924-12	10/7/2021	Soil	A, B, D
DOC5E-10-211007-1500	N	L2154924-13	10/7/2021	Soil	A, B, D
DOC5E-03-211007-1600	N	L2154924-14	10/7/2021	Soil	A, C, D
4125-211007-0001	FD	L2154924-15	10/7/2021	Soil	A, B, D
4125-211007-0002	FD	L2154924-16	10/7/2021	Soil	A, C, D

Method Holding Time			
A.	EPA 2540G	Total Solids	7 days
B.	EPA 8260C	Volatile Organic Compounds (VOCs) – DI Vial Terracore	48 hr. freeze, 14-day analysis
C.	EPA 8260C	Volatile Organic Compounds (VOCs) – Methanol Terracore	14-day analysis
D.	EPA 8270D	Semi-Volatile Organic Compounds (SVOCs)	14 day extract, 40 day analysis

2.2 HOLDING TIMES/PRESERVATION

The samples arrived at the laboratory at the proper temperature and were prepared and analyzed within the holding time and preservation criteria specified per method protocol with the following exceptions:

- The sample L2154924-05 EPA 8260C terracore volume was not collected according to 5035-L low-level specifications. Any reported concentrations that are below 200 ug/kg (all detects) may be biased low. **Qualify all VOCs for this sample "J-/UJ".**

Cooler(s) temperature on arrival to the laboratory was: 2.7, 4.3 degrees Celsius.

2.3 REPORTING LIMITS AND SAMPLE DILUTIONS

All dilutions were reviewed and found to be justified. Any non-detects with elevated reported limits are noted and explained below.

Sample ID	Lab ID	Analyte/ Method	Dilution Factor	Issue/Explanation
4125-211007-0002	L2154924-16	SVOCs	20x	Dilution required to bring the concentration of target analytes within the calibration range.
DOC5E-16-211007-0740	L2154924-01		10x	
DOC5E-03-211007-1600	L2154924-14		10x	
DOC5E-17-211007-0800	L2154924-02		5x	
DOC5E-20-211007-0910	L2154924-05		5x	
DOC5E-21-211007-0920	L2154924-06		5x	
		VOCs	4x	

2.4 REPORTING BASIS (WET/DRY)

Refer to section E 1.1. Per the matrix and state requirements, data in this SDG were reported on a dry weight basis. Percent solid results were reviewed and found to be within limits.

2.5 SURROGATE RECOVERY COMPLIANCE

Refer to section E 1.2. The percent recovery (%R) for each surrogate compound added to each project sample were determined to be within the laboratory specified QC limits, with the following exceptions:

Method	Sample ID	Lab ID	Surrogate	Dilution	%R	Qualification
EPA 8260C	DOC5E-17- 211007-0800	L2154924- 02*	1,2-Dichloroethane-d4	1x	135%	“J+” All Detects
			4-Bromofluorobenzene		156%	
			Dibromofluoromethane		137%	
	DOC5E-03- 211007-1600	L2154924-14	1,2-Dichloroethane-d4	1x	137%	“J+” 2-Butanone, Benzene, Cyclohexane
			Dibromofluoromethane		133%	
		L2154924-14 RE	1,2-Dichloroethane-d4		139%	“J+” 2-Butanone, Benzene
			Dibromofluoromethane		139%	
EPA 8270D	DOC5E-20- 211007-0910	L2154924-05	Nitrobenzene-d5	5x	13%	“J-/UJ” Target Compounds**
	4125-211007- 0002	L2154924-16	All SVOC Surrogates	20x	0%	None, dilution > 5x

* This sample was not re-analyzed due to coelution with an obvious interference.

** 2,2'-oxybis(1-Chloropropane), 4-Chloroaniline, Acetophenone, Benzaldehyde, bis(2-Chloroethoxy)methane, bis(2-Chloroethyl)ether, Hexachlorobutadiene, Hexachloroethane, Naphthalene, and N-Nitrosodi-n-propylamine.

2.6 LABORATORY CONTROL SAMPLES

Refer to section E 1.3. Compounds associated with the laboratory control samples/laboratory control sample duplicates (LCS/LCSD) analyses exhibited recoveries and RPDs within the specified limits with the following exceptions:

Sample Type	Method	Batch ID	Analyte	%R	Qualifier	Affected Samples
LCS	EPA 8260C	1558023	Chloromethane	134%	NA	None, sample ND.
LCS			Vinyl chloride	136%	NA	None, sample ND.
LCS/LCSD			2-Butanone	137%/136%	NA	None, sample ND.
LCS/LCSD	1556395	Phenol	97%/107%	J+	L2154924-08, 14	
LCSD		p-chloro-m-cresol	107%	J+	L2154924-08, 14	
LCSD	EPA 8270D	p-chloro-m-cresol	112%	J+	L2154924-05	
LCSD		4-nitrophenol	126%	NA	None, sample ND.	
LCSD		Caprolactam	136%	NA	None, sample ND.	

2.7 MATRIX SPIKE SAMPLES

Refer to section E 1.4. The sample(s) below were used for matrix spike/matrix spike duplicate (MS/MSD):

Lab Sample Number	Matrix Spike/ Matrix Spike Duplicate Sample Client ID	Method(s)
L2154924-11	DOC5E-32-211007-1420	VOCs, SVOCs
L2154924-13	DOC5E-10-211007-1500	VOCs, SVOCs

The MS/MSD recoveries and the RPD between the MS and MSD results were within the specified limits with the following exceptions:

Sample Type	Method	Parent Sample	Analyte	%R/RPD	Qualifier	Affected Samples
MS/MSD	EPA 8260C	DOC5E-32-211007-1420	Acetone	53%/50%	J/UJ	L2154924-11
MSD			2-Butanone	52%	J/UJ	L2154924-11
MSD			2-Hexanone	55%	J/UJ	L2154924-11
MSD			Bromochloromethane	67%	J/UJ	L2154924-11
MSD	EPA 8270D	DOC5E-10-211007-1500	Phenol	92%	NA	None, sample ND.

2.8 BLANK SAMPLE ANALYSIS

[Refer to section E 1.5.](#) Method blank samples had no detections, indicating that no contamination from laboratory activities occurred with the following exceptions:

Blank Type	Batch ID	Analyte Detected in Blank	Concentration (ug/kg)	Qualifier	Affected Samples
Method Blank	1557402	Chloromethane	1.7 J	NA	None, samples ND.
		Styrene	0.28 J	RL U	L2154924-02
	1557542	Chloromethane	86 J	RL U	L2154924-01, 07
		Styrene	14 J	RL U	L2154924-07
	1557727	Chloromethane	86 J	RL U	L2154924-14 RE
		1,2-Dichlorobenzene	7.5 J	RL U	L2154924-14 RE
		1,3-Dichlorobenzene	8.8 J	RL U	L2154924-14 RE
		Styrene	9.8 J	NA	None, sample >10x blank
	1557727	Chlorobenzene	7.3 J	NA	None, samples ND.
		Chloromethane	48 J	RL U	L2154924-16
		1,2-Dichlorobenzene	7.4 J	RL U	L2154924-06, 14, 16
		1,3-Dichlorobenzene	7.6 J	RL U	L2154924-06, 16
		1,4- Dichlorobenzene	8.9 J	RL U	L2154924-06, 16
		Styrene	20 J	RL U	L2154924-06, 16
				J+	L2154924-14
	1557735	Chlorobenzene	0.15 J	NA	None, samples ND.
		Chloromethane	0.95 J	NA	None, samples ND.
		1,2-Dichlorobenzene	0.15 J	RL U	L2154924-12
		1,3-Dichlorobenzene	0.15 J	RL U	L2154924-12
		1,4- Dichlorobenzene	0.18 J	RL U	L2154924-12
		Styrene	0.41 J	RL U	L2154924-05, 12, 15

2.9 DUPLICATE SAMPLE ANALYSIS

[Refer to section E 1.6.](#) The following sample(s) were used for laboratory duplicate analysis and the RPDs were all below 20 percent (or the absolute difference rule was satisfied if detects were less than 5x the RL):

Lab Sample Number	Laboratory Duplicate Sample Client ID	Method(s)
L2154924-11	DOC5E-32-211007-1420	Total Solids

The following sample(s) were used for field duplicate analysis. The RPD comparison for detections in either the parent or duplicate sample(s) is shown below. RPDs were all below 50 percent (or the absolute difference rule was satisfied if detects were less than 5x the RL).

Primary Sample ID	Duplicate Sample ID	Method(s)
DOC5E-13-211007-1445	4125-211007-0001	Total Solids, VOCs, SVOCs
DOC5E-03-211007-1600	4125-211007-0002	Total Solids, VOCs, SVOCs

Field Duplicate RPD Calculations:

Method(s): EPA 8260C, 8270D, 2540G				
Analyte ($\mu\text{g}/\text{kg}$, unless noted)	Primary Sample ID	Duplicate Sample ID	% RPD	Qualification
	DOC5E-13	4125-211007-0001		
Total Solids (%)	82.5	81.0	2	None, RPD < 50%
1,2-Dichlorobenzene	0.10 J*	ND U	NA	None, Both ND
1,3-Dichlorobenzene	0.12 J*	ND U	NA	None, Both ND

Pyrene	210000	190000	10	None, RPD < 50%
All Remaining SVOCS	ND U	ND U	NA	None, Both ND

* Qualified non-detect (ND) based on method blank contamination.

2.10 SYSTEM PERFORMANCE AND OVERALL ASSESSMENT

The results presented in this report were found to comply with the data quality objectives for the project and the guidelines specified by the analytical method. Based on the review of this report, the data are useable and acceptable as no data was rejected. A summary of qualifiers applied to this SDG are shown below.

Sample ID	Analyte	Reported Result	Validated Result	Reason for Qualifier
DOC5E-03-211007-1600	Initial VOCs Run	Detect/ND U	Non-reportable	Multiple Results Available
DOC5E-20-211007-0910	All VOCs	Detect/ND U	Detect J-/ND UJ	Inadequate Preservation
DOC5E-17-211007-0800	Acetone	14	14 J+	Surrogate Exceedance
	Benzene	5.9	5.9 J+	
	Cyclohexane	0.53	0.53 J+	
	Ethylbenzene	110	110 J+	
	Isopropylbenzene	200	200 J+	
	m,p-Xylenes	170	170 J+	
	Methylcyclohexane	7.4	7.4 J+	
	o-Xylene	37	37 J+	
DOC5E-03-211007-1600	2-Butanone	140	140 J+	Surrogate Exceedance
	2-Butanone RE	150	150 J+	
	Benzene	91	91 J+	
	Benzene RE	97	97 J+	
	Cyclohexane	35	35 J+	
DOC5E-20-211007-0910	2,2'-oxybis(1-Chloropropane)	ND U	ND UJ	Surrogate Exceedance
	4-Chloroaniline	ND U	ND UJ

3. Precision and Accuracy [for SDG(s) above]

Refer to section E 1.7. Some measurement of analytical accuracy and precision was reported for each method with the site samples.

Explanations

The following explanations include more detailed information regarding each of the sections in the DUSR above. Not all sections in the Explanations are represented:

- E 1.1 Reporting Basis (Wet/Dry)
 - Soil samples can be reported on either a wet (as received) or dry weight basis. Dry weight data indicate calculations were made to compensate for the moisture content of the soil sample.
 - Percent (%) solids should be appropriately considered when evaluating analytical results for non-aqueous samples. Sediments with high moisture content may or may not be successfully analyzed by routine analytical methods. Samples should have $\geq 30\%$ solids to be appropriately quantified.
- E 1.2 Surrogate Recovery Compliance
 - Surrogates, also known as system monitoring compounds, are compounds added to each sample prior to sample preparation to determine the efficiency of the extraction procedure by evaluating the percent recovery (%R) of the compounds.
- E 1.3 Laboratory Control Samples
 - The laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses are used to assess the precision and accuracy of the analytical method independent of matrix interferences.
- E 1.4 Matrix Spike Samples
 - Matrix spike/matrix spike duplicate (MS/MSD) data are used to assess the precision and accuracy of the analytical method and evaluate the effects of the sample matrix on the sample preparation procedures and measurement methodologies.
- E 1.5 Blank Sample Analysis
 - Method blanks are prepared by the analytical laboratory and analyzed concurrently with the project samples to assess possible laboratory contamination.
- E 1.6 Laboratory and Field Duplicate Sample Analysis
 - The laboratory duplicate sample analysis is used by the laboratory at the time of the analysis to demonstrate acceptable method precision. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.
 - The field duplicate sample analysis is used to assess the precision of the field sampling procedures and analytical method. The RPD or absolute difference was evaluated for each duplicate sample pair to monitor the reproducibility of the data.

- E 1.7 Precision and Accuracy
 - Precision measures the reproducibility of repetitive measurements. In a laboratory environment, this will be measured by determining the relative percent difference (%RPD) found between a primary and a duplicate sample. This can be an LCS/LCSD pair, a MS/MSD pair, a laboratory duplicate performed on a site sample, or a field duplicate collected and analyzed concurrently with a site sample.
 - Accuracy is a statistical measurement of the correctness of a measured value and includes components of random error (variability caused by imprecision) and systematic error. In a laboratory environment, this will be measured by determining the percent recovery (%Rec) of certain spiked compounds. This can be assessed using LCS, BS, MS, and/or surrogate recoveries.

Glossary

Not all of the following symbols, acronyms, or qualifiers occur in this document.

- Sample Types:
 - EB Equipment Blank Sample
 - FB Field Blank Sample
 - FD Field Duplicate Sample
 - N Primary Sample
 - TB Trip Blank Sample
- Units:
 - $\mu\text{g}/\text{kg}$ microgram per kilogram
 - $\mu\text{g}/\text{L}$ microgram per liter
 - $\mu\text{g}/\text{m}^3$ microgram per cubic meter
 - mg/kg milligram per kilogram
 - mg/L milligram per liter
 - ppb v/v parts per billion volume/volume
 - pCi/L picocuries per liter
- Matrices:
 - AA Ambient Air
 - GS Soil Gas
 - GW/WG Groundwater
 - QW Water Quality
 - IA Indoor Air
 - SE Sediment
 - SO Soil
 - WQ Water Quality control matrix

Qualifiers

The qualifiers below are from the USEPA National Functional Guidelines and the data in the DUSR may contain these qualifiers:

- Concentration (C) Qualifiers:
 - U The compound was analyzed for but not detected. The associated value is either the compound quantitation limit if not detected by the analytical instrument or could be the reported or blank concentration if qualified by blank contamination. This can also be displayed as less than the associated compound quantitation limit (<RL or <MDL), or “ND”.
 - B The compound was found in the sample and its associated blank. Its presence in the sample may be suspect.
- Quantitation (Q) Qualifiers:
 - E The compound was quantitated above the calibration range.
 - D The concentration is based on a diluted sample analysis.
- Validation Qualifiers:
 - J The compound was positively identified; however, the associated numerical value is an estimated concentration only.
 - J+ The result is an estimated quantity, but the result may be biased high.
 - J- The result is an estimated quantity, but the result may be biased low.
 - UJ The compound was not detected above the reported sample quantitation limit; however, the reported limit is estimated and may or may not represent the actual limit of quantitation.
 - NJ The analysis indicated the presence of a compound for which there is presumptive evidence to make a tentative identification; the associated numerical value is an estimated concentration only.
 - R The sample results were rejected as unusable; the compound may or may not be present in the sample.
 - S Result is suspect. See DUSR for details.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

L2154507-04: The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of non-target compounds in the sample.

Semivolatile Organics

L2154507-01D and -04D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L2154507-01D and -04D: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2154507-02D: The sample has elevated detection limits due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
	Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: LOT SE IRM
Project Number: 127887-020

Lab Number: L2154507
Report Date: 10/12/21

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthrenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e., co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name: LOT SE IRM
Project Number: 127887-020

Lab Number: L2154507
Report Date: 10/12/21

Data Qualifiers

- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine. SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C**, **SM4500CN-CE**, **EPA 180.1**, **SM2130B**, **SM4500CI-D**, **SM2320B**, **SM2540C**, **SM4500H-B**, **SM4500NO2-B**

EPA 332: Perchlorate; **EPA 524.2**: THMs and VOCs; **EPA 504.1**: EDB, DBCP.

Microbiology: **SM9215B**; **SM9223-P/A**, **SM9223B-Colilert-QT**, **SM9222D**.

Lab Number: L2154924
Report Date: 10/14/21

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively.

When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances, the specific failure is not narrated but noted in the associated QC Outlier Summary Report, located directly after the Case Narrative. QC information is also incorporated in the Data Usability Assessment table (Format 11) of our Data Merger tool, where it can be reviewed in conjunction with the sample result, associated regulatory criteria and any associated data usability implications.

Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

HOLD POLICY - For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Alpha Project Manager and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Project Management at 800-624-9220 with any questions.

Project Number: 127887-020

Lab Number: L2154924
Report Date: 10/14/21

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L2154924-05A: The container for Volatile Organics - High Level was received empty.

L2154924-09: The collection date and time on the chain of custody was 07-OCT-21 10:49; however, the collection date/time on the container label was 07-OCT-21 10:45. At the client's request, the collection date/time is reported as 07-OCT-21 10:45.

Volatile Organics

L2154924-01, -07, and -16: The analysis of Volatile Organics by EPA Method 5035/8260 Low Level could not be performed due to the elevated concentrations of non-target compounds in the sample.

L2154924-02: The surrogate recovery is outside the acceptance criteria for 1,2-dichloroethane-d4 (135%), 4-bromofluorobenzene (156%) and dibromofluoromethane (137%); however, the sample was not re-analyzed due to coelution with an obvious interference. A copy of the chromatogram is included as an attachment to this report.

L2154924-05: Any reported concentrations that are below 200 ug/kg may be biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

L2154924-06D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

L2154924-14: The surrogate recoveries were outside the acceptance criteria for 1,2-dichloroethane-d4 (137%) and dibromofluoromethane (133%); however, re-analysis achieved similar results: 1,2-dichloroethane-d4 (137%) and dibromofluoromethane (138%). The results of both analyses are reported; however, all associated compounds are considered to have a potential bias.

The WG1558023-3 LCS recoveries, associated with L2154924-10, are above the individual acceptance criteria for chloromethane (134%), vinyl chloride (136%) and 2-butanone (137%), but within the overall method

Project Name: LOT 5E IRM
Project Number: 127887-020

Lab Number: L2154924
Report Date: 10/14/21

Case Narrative (continued)

allowances. The results of the associated sample are reported.

The WG1558023-4 LCSD recovery, associated with L2154924-10, is above the individual acceptance criteria for 2-butanone (136%), but within the overall method allowances. The results of the associated samples are reported.

The WG1557735-8 MS recoveries, performed on L2154924-11, are outside the acceptance criteria for acetone (53%) and acrylonitrile (137%); however, the associated LCS/LCSD recoveries are within overall method allowances. No further action was required.

The WG1557735-9 MSD recoveries, performed on L2154924-11, are outside the acceptance criteria for acetone (50%), 2-butanone (52%), 2-hexanone (55%) and bromochloromethane (67%); however, the associated LCS/LCSD recoveries are within overall method allowances. No further action was required.

Semivolatile Organics

L2154924-01D, -02D, -05D, -06D, -14D, and -16D: The sample has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

L2154924-05D: The surrogate recovery is outside the individual acceptance criteria for nitrobenzene-d5 (13%), but within the overall method allowances. The results of the original analysis are reported; however, all associated compounds are considered to have a potential bias.

L2154924-07, -14D and -16D: The sample was re-analyzed on dilution in order to quantitate the results within the calibration range. The result(s) should be considered estimated, and are qualified with an E flag, for any compound(s) that exceeded the calibration range in the initial analysis. The re-analysis was performed only for the compound(s) that exceeded the calibration range.

L2154924-16D: The surrogate recoveries are below the acceptance criteria for 2-fluorophenol (0%), phenol-d6 (0%), nitrobenzene-d5 (0%), 2-fluorobiphenyl (0%), 2,4,6-tribromophenol (0%) and 4-terphenyl-d14 (0%) due to the dilution required to quantitate the sample. Re-extraction was not required; therefore, the results of the original analysis are reported.

The WG1556395-2 LCS recovery, associated with L2154924-01D, -02D, -03, -04, -06D, -07, -07D, -08, -09, -10, -11, -13, -14D, -14D2, and -15, is above the individual acceptance criteria for phenol (97%), but

Lab Number: L2154924
Report Date: 10/14/21

Case Narrative (continued)

within the overall method allowances. The results of the associated samples are reported.

The WG1556395-3 LCSD recoveries, associated with L2154924-01D, -02D, -03, -04, -06D, -07, -07D, -08, -09, -10, -11, -13, -14D, -14D2, and -15, are above the individual acceptance criteria for p-chloro-m-cresol (107%) and phenol (107%), but within the overall method allowances. The results of the associated samples are reported.

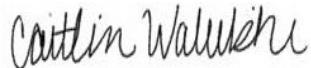

The WG1556395-7 MSD recovery, performed on L2154924-13, is outside the acceptance criteria for phenol (92%).

PAHs

The WG1556449-3 LCSD recoveries, associated with L2154924-05D, are above the individual acceptance criteria for p-chloro-m-cresol (112%), 4-nitrophenol (126%) and caprolactam (136%), but within the overall method allowances. The results of the associated samples are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
	Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Project Name: LOT 5E IRM
Project Number: 127887-020

Lab Number: L2154924
Report Date: 10/14/21

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthrenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA, this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- F** - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.
- G** - The concentration may be biased high due to matrix interferences (i.e., co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

Project Name: LOT 5E IRM
Project Number: 127887-020

Lab Number: L2154924
Report Date: 10/14/21

Data Qualifiers

- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- V** - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)
- Z** - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at its own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

The following analytes are not included in our Primary NELAP Scope of Accreditation:

Westborough Facility

EPA 624/624.1: m/p-xylene, o-xylene, Naphthalene

EPA 625/625.1: alpha-Terpineol

EPA 8260C/8260D: NPW: 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene, Azobenzene; SCM: Iodomethane (methyl iodide), 1,2,4,5-Tetramethylbenzene; 4-Ethyltoluene.

EPA 8270D/8270E: NPW: Dimethylnaphthalene,1,4-Diphenylhydrazine, alpha-Terpineol; SCM: Dimethylnaphthalene,1,4-Diphenylhydrazine. SM4500: NPW: Amenable Cyanide; SCM: Total Phosphorus, TKN, NO₂, NO₃.

Mansfield Facility

SM 2540D: TSS

EPA 8082A: NPW: PCB: 1, 5, 31, 87,101, 110, 141, 151, 153, 180, 183, 187.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

Biological Tissue Matrix: EPA 3050B

The following analytes are included in our Massachusetts DEP Scope of Accreditation

Westborough Facility:

Drinking Water

EPA 300.0: Chloride, Nitrate-N, Fluoride, Sulfate; EPA 353.2: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C**, **SM4500CN-CE**, **EPA 180.1**, **SM2130B**, **SM4500CI-D**, **SM2320B**, **SM2540C**, **SM4500H-B**, **SM4500NO2-B**

EPA 332: Perchlorate; **EPA 524.2**: THMs and VOCs; **EPA 504.1**: EDB, DBCP.

Microbiology: **SM9215B**; **SM9223-P/A**, **SM9223B-Colilert-QT**, **SM9222D**.

Non-Potable Water
