RE: National Grid Former Manufactured Gas Plant Site
10 King Street, Ogdensburg, New York
Annual Groundwater Monitoring Report

Dear Mr. Deyette:

Enclosed for your review is the Annual Groundwater Monitoring Report for the NG Ogdensburg MGP Site, for 2022.

Groundwater and Environmental Service, Inc., (GES) OM&M contractor for National Grid, conducts all long-term OM&M activities at the site. Quarterly site inspections were conducted in 2022 (January, April, July, and October). The site is generally in good shape and in compliance. There were detections of BTEX and/or PAHs in all thirteen monitoring wells sampled.

If you have any questions, then please feel free to contact me at 315.428.5652.

Very truly yours,

for SPS

Steven P. Stucker, C.P.G.
Lead Environmental Engineer
National Grid

1 Introduction

This Annual Groundwater Monitoring Report presents results from the activities conducted at the Ogdensburg former manufactured gas plant (MGP) site (the site) located in Ogdensburg, New York (the Site). A site map is presented on Figure 1. The work summarized herein has been conducted in accordance with the approved Site Management Plan (SMP) for the site, dated September 26, 2018.

A detailed discussion of the semi-annual monitoring activities and results is presented below.

2 Semi-Annual Groundwater Monitoring

2.1 Objectives

The objectives of the April and October 2022 groundwater monitoring activities were to:

- Obtain groundwater elevation data from monitoring wells in the vicinity of the site to evaluate groundwater flow direction and velocity, and compare the results with historical groundwater flow conditions.
- Obtain analytical data to assess potential changes in groundwater quality at the site and compare the results to the Class GA groundwater standards and guidance values presented in the New York State Department of Environmental Conservation (NYSDEC) document entitled, "Division of Water Technical and Operational Guidance Series (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations" (TOGS 1.1.1), reissued June 1998 and addended April 2000 and June 2004.

2.2 Groundwater Well Gauging

The April 14, 2022 and October 20, 2022 groundwater monitoring field activities were conducted by GES. Prior to collecting groundwater samples, static fluid level measurements were collected from MW-2(R), MW-5R(R), MW-8R, MW-9, MW-10R, MW-11, MW-12R, MW-14R, MW-15, MW-15RS, MW-17R, MW-19R, and MW-20R. Water levels were measured to the nearest 0.01 foot using an electronic oil-water interface probe to determine the depth from a surveyed mark on the top of the inner polyvinyl chloride (PVC) well casing to the groundwater within the well.

The fluid level measurements obtained from each monitoring well were converted to groundwater elevations using the surveyed well elevations. The calculated groundwater elevations for each monitoring well are listed in Table 1. Table 1 also includes groundwater elevation measurements obtained during previous groundwater monitoring events. A shallow groundwater potentiometric surface contour map developed based on the groundwater elevation measurements taken on April 14, 2022 and October 20, 2022, is included on Figure 2 and Figure 3, respectfully.

Groundwater generally flows to the north from the Site toward the St. Lawrence River. Groundwater elevations ranged from 249.07 feet above sea level (asl; well MW-15) to 257.51 feet asl (well MW-5R(R)). Field data from the gauging event is presented in Appendix B.

2.3 Groundwater Well Sampling and Analytical Results

Groundwater samples were collected by GES from 13 monitoring wells on April 14, 2022 and October 20, 2022 (including MW-2(R), MW-5R(R), MW-8R, MW-9, MW-10R, MW-11, MW-12R, MW-14R, MW-15, MW-15RS, MW-17R, MW-19R, and MW-20R). Low-flow sampling techniques were used to purge groundwater from each monitoring well prior to collecting groundwater samples. Field parameters (consisting of turbidity, temperature, pH, conductivity, oxidation reduction potential [ORP], and dissolved oxygen) were measured approximately every 5 to 10 minutes during well purging, and the depth to water was monitored throughout the pumping process to minimize drawdown within the well. Well purging activities continued at each well until the field parameters stabilized and the turbidity of the water in the wells was reduced to less than 50 nephelometric turbidity units (NTUs). Groundwater field data is presented in Appendix B.

Following purging, groundwater samples were collected. The groundwater samples were bottled and shipped to Pace Analytical for laboratory analysis for Benzene, Toluene, Ethylbenzene, and total Xylenes (BTEX; EPA Method 8260C), Semi-Volatile Polycyclic Aromatic Hydrocarbons (PAHs; EPA Method 8270D), as well as total cyanide (EPA Method 9012B). Quality assurance/quality control (QA/QC) samples, including a field duplicate, matrix spike, and duplicate matrix spike were also submitted for laboratory analysis. The laboratory analytical results for the groundwater samples were reported using NYSDEC Analytical Services Protocol (ASP) Category B data deliverable packages to facilitate data validation. Note that analytical results for well MW-15 were not reported for the October 2022 sampling event, as the laboratory lost the sample.

Purge water generated during the sampling activities was collected in 5-gallon buckets and transferred into 55-gallon steel drums for characterization prior to offsite treatment/disposal in accordance with applicable regulations.

Analytical results from the laboratory analysis report are summarized in Table 2 and compared to the Class GA groundwater standards and guidance values presented in TOGS 1.1.1. VOC exceedances are bolded on Table 2 and further shown on Figures 4 and 5. The Data Usability Summary Report (DUSR) is included in Appendix C.

There were BTEX and/or PAH detections in all the monitoring wells sampled during the April and October 2022 sampling event. In April 2022, BTEX, acenaphthene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-cd)pyrene, and naphthalene were detected above the regulatory criteria in one or more samples. Cyanide was detected in monitoring wells MW-2(R), MW-5R(R), MW-8R, MW-9, MW-10R, MW-11, MW-12R, and MW-15RS during the April 2022 event. In October 2022, BTEX, acenaphthene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and naphthalene were detected above the regulatory criteria in one or more samples. Cyanide was detected in monitoring wells MW-2(R), MW-5R(R), MW-8R, MW-9, MW-10R, MW-11, MW-12R, and MW-15RS in October 2022. As shown on Table 2, BTEX, PAHs and total cyanide detected in groundwater during the April and October 2022 sampling events are consistent with results from previous sampling events.

3 Quarterly Site-Wide Inspections

The quarterly site-wide inspections were conducted on January 20, April 14, July 20, and October 20, 2022. The Site Inspection Forms are presented in Appendix A. In general, the Site is in compliance.

4 Recommendations

4.1 Recommendations

At this time, National Grid recommends continuing the annual monitoring activities. The next annual groundwater sampling event would be in the spring 2023. Semi-Annual site-wide inspections are required; however, for internal security purposes, National Grid will continue to conduct quarterly site-wide inspections.

Notes:

Results are presented in units of micrograms per liter (µg/L).

E = Results exceeded calibration range

D = Compound quantitated using a secondary dilution

J = Analyte was detected at a concentration less than the laboratory reporting limit

ND (<#) = Not detected above laboratory reporting limit. # represents the laboratory reporting limit.

Bolded = values indicate exceedance of the NYSDEC AWQS

DTW *-depth to water*

DTP *-depth to product*

DTB *-depth to bottom*

MW-10R's DTW was updated to 0.00 upon review. Initial DTW was measured above the top of casing as the water level rose above it following the removal of the j-plug due to positive pressure.

DTW *-depth to water*

DTP *-depth to product*

DTB *-depth to bottom*

MW-10R's DTW was updated to 0.00 upon review. Initial DTW was measured above the top of casing as the water level rose above it following the removal of the j-plug due to positive pressure.

RE: Data Usability Summary Report for National Grid - Ogdensburg: Data Packages Pace Analytical Job No. 30481458, 30532087

Groundwater & Environmental Services, Inc. (GES) reviewed two data packages (Laboratory Project Numbers 30481458, 30532087) from Pace Analytical Services, Inc., for the analysis of groundwater samples collected on April 14, 2022 and October 20, 2022 from monitoring wells located at the at the National Grid Ogdensburg site. Collected samples included 13 aqueous samples in the spring and 12 aqueous samples in the fall event, as well as field quality samples including a trip blank and a field duplicate during each event. Sample MW-15 was not analyzed in the fall sampling event, as the sample was lost at the laboratory. The samples were processed for volatile organic compounds benzene, toluene, ethylbenzene and xylenes (BTEX), cyanide and polycyclic aromatic hydrocarbons (PAHs). The trip blanks were analyzed for volatiles with the site samples. The purpose of the trip blank is to determine if there is outside BTEX contamination caused by transporting the samples.

Analytical methodologies are those of the USEPA with additional requirements of the NYSDEC ASP.

Complete NYSDEC Category B deliverables were included in the laboratory data package and all information required for validation of the data is present. This usability report is generated from review of the summary form information, and review of associated QC raw data. The reported summary forms have been reviewed for application of validation qualifiers, using guidance from the National Grid generic QAPP, USEPA Region 2 validation SOPs, the USEPA National Functional Guidelines for Data Review, and professional judgment, as affects the usability of the data. The following items were reviewed:

- Laboratory Narrative Discussion
- Custody Documentation
- Holding Times
- Surrogate and Internal Standard Recoveries
- Matrix Spike Recoveries/Duplicate (MS/MSD) Correlations
- Field Duplicate Correlations
- Laboratory Control Sample (LCS)
- Preparation/Calibration Blanks
- Calibration/Low Level Standard Responses
- Instrumental Tunes
- Sample Quantitation and Identification

All of the items were determined to be acceptable for the DUSR level review. In summary, sample results are usable.

The laboratory case narratives and sample identification summary forms are attached to this text, and should be reviewed in conjunction with this report.

Table 1 – Data Qualifications

Sample ID	Qualifier	Analyte	Reason for qualification
MW-8R-1022	J+	Benzene	High MS/MSD recoveries
	R	Cyanide	MS/MSD recoveries <10%
	J	Anthracene Benzo(a)anthracene Benzo(a)pyrene Benzo(b)fluoranthene Benzo(k)fluoranthene Chrysene Fluoranthene Phenanthrene Pyrene	RPD exceeds maximum
	UJ	Benzo(g,h,i)perylene Indeno(1,2,3-cd)pyrene	
MW-2R-0422	J-	Cyanide Naphthalene	Low MS/MSD recoveries
	J+	2-Methylnaphthalene Acenaphthene	High MS/MSD recoveries
MW-15RS-0422 **MW-17R-0422** **MW-19R-0422**	J+	Naphthalene	Method Blank detections

J-/UJ-: estimated detect/estimated non-detect with a possible low bias
R: Data unusable due to gross QC failure
J+: estimated detect with a possible high bias
J/UJ: estimated with an indeterminate bias

BTEX and TCL Volatiles by EPA 8260C/NYSDEC ASP

Sample holding times for groundwater and instrumental tune fragmentations are within acceptance ranges for both events. Surrogate and internal standard recoveries are within required limits. Calibration standards show acceptable responses within analytical protocol and validation action limits.

LCS/LCSD recoveries and relative percent differences (RPD) are within criteria for both events.

For the spring event, an MS/MSD was analyzed using **MW-8R-0422** as the matrix. Per EPA guidance, the original concentration cannot be more than 4x the spiking concentration for recovery accuracy to be calculated. Benzene recovered outside specification; however, the original concentration was ~18x that of the spiking concentration and the calculated recovery does not accurately represent the method efficacy. No qualifiers were required. The blind field duplicate correlations of **MW-10R** were within the project specification of ≤25% for both sampling events.

Table *2a*: *VOCs* Precision Calculations

Compound	MW-10R-0422	FD-0422	RPD
Benzene	1220	1200	1.7
Ethylbenzene	101	98.7	2.3
Toluene	174	165	5.3
Xylene (Total)	127	124	2.4
m&p-Xylene	84.3	80.7	4.4
o-Xylene	43.1	43.2	0.2

µg/L-microgram per liter RPD - relative percent difference

For the fall event, an MS/MSD was analyzed using **MW-8R-1022** as the matrix. All QC elements fell within project criteria with the exception of benzene, which recovered high. The blind field duplicate correlations of **MW-10R** were within the project specification of ≤25% for both sampling events.

Table *2b*: *VOCs* Precision Calculations

Compound	MW-10R-1022	FD-1022	RPD
Benzene	1760	1650	6.4
Ethylbenzene	139	140	0.7
Toluene	222	222	0
Xylene (Total)	175	171	2.3

µg/L-microgram per liter RPD - relative percent difference

Cyanide by EPA 9012B/NYDESC ASP

Holding times were met for both sampling events. Blanks, both laboratory and field-generated, show no contamination. Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines.

The laboratory control spike recoveries and precision indicate the method is within laboratory control.

For the spring event, an MS/MSDs were analyzed using **MW-2R-0422** where the recoveries were below criteria (81%, 84%). The cyanide data for this sample is qualified as estimated with a possible low bias.

The blind field duplicate correlations of **MW-10R-0422** were within project criteria. No data was qualified.

Table *3a*: Cyanide Precision Calculations

Compound	MW-10R-0422	FD-0422	RPD
Cyanide	0.15	0.14	6.9

µg/L-microgram per liter RPD - relative percent difference

For the fall event, an MS/MSD was analyzed using **MW-8R-1022** where the recoveries were below criteria (-12%, 7%). These recoveries are below the EPA-required 10% for usable data. Cyanide in the fall event for MW-8R is rejected.

The blind field duplicate correlations of **MW-10R-1022** were within project criteria. No data was qualified.

Table *3b*: Cyanide Precision Calculations

Compound	MW-10R-1022	FD-0422	RPD
Cyanide	0.11	0.13	16.7

µg/L-microgram per liter RPD - relative percent difference

PAHs by EPA8270D/NYSDEC ASP

Holding times were met. Instrumental tune fragmentations are within acceptance ranges. Blanks reported no above RL concentrations with the exception of naphthalene (0.18 µg/L) in the method blank associated with the spring sampling event. Three associated samples had naphthalene detections <5x the blank concentration, rendering these naphthalene data points as possibly affected by the same laboratory source as the method blank. Data from these samples are qualified as estimated with a possible high bias, as noted in **Table 1**. All other samples had no detection of naphthalene, or reported concentrations > 5x the blank.

Surrogates were within specification for all samples. Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines. Samples with high concentrations were run at dilution to allow accurate quantification. Some detection limits are elevated.

The spring laboratory control spike recoveries and precision indicate the method is within laboratory control. Matrix spike and matrix spike associated with **MW-02R-0422** recoveries were within laboratory specified criteria, with the following exceptions:

- 2-Methylnapthalene and acenaphthene both reported high.
- Naphthalene reported low recoveries

Data is qualified as estimated as noted in **Table 1.**

The blind field duplicate correlations of **MW-10R-0422** were within project specification of RPD ≤ 25%, with the exception of naphthalene. Naphthalene is qualified as estimated with an indeterminate bias.

Table *4a*: PAH Precision Calculations

Compound	MW-10R-0422	FD-0422	RPD
Acenaphthene	29.2	26	11.6
Acenaphthylene	37.5	34	9.8
Anthracene	0.78	0.8	2.5
Fluorene	10.5	10.6	0.9
2-Methylnaphthalene	11.0	11.1	0.9
Naphthalene	449	647	36.1
Phenanthrene	1.7	1.8	5.7

The fall laboratory control spike recoveries and precision indicate the method is within laboratory control. Matrix spike and matrix spike recoveries associated with **MW-8R-1022** were within laboratory specified criteria, with the exception of the recovery for naphthalene, which recovered high, and acenaphthylene and phenanthrene, which recovered low. As the original naphthalene concentration >>4x the spiking concentration, the recovery does not accurately reflect the method efficacy, and no qualifications are required.

The RPDs of the following analytes exceeded criteria in the fall MS/MSD, and the associated data in **MW-8R-1022** is qualified as estimated due to the precision issue. This qualification supersedes the possible high or low bias introduced by MS/MSD recoveries.

- Anthracene
- Benzo(a)anthracene
- Benzo(a)pyrene
- Benzo(b)fluoranthene
- Benzo(g,h,i)perylene
- Benzo(k)fluoranthene
- Chrysene
- Fluoranthene
- Indeno(1,2,3-cd)pyrene
- Phenanthrene
- Pyrene

The blind field duplicate correlations of **MW-10R-1022** were within project specification of RPD ≤ 25%. No qualifications are required.

Table *4b*: PAH Precision Calculations

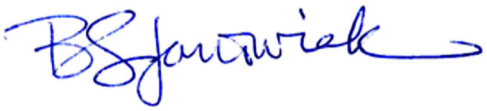
Compound	MW-10R	FD-1022	RPD
Acenaphthene	37.5	36.8	1.9
Acenaphthylene	46.6	45.0	3.5
Fluorene	16.2	16.3	0.6
2-Methylnaphthalene	6.4	6.0	6.5
Naphthalene	431	412	4.5
Phenanthrene	2.5	2.5	0.0

Data Package Completeness

Complete NYSDEC Category B deliverables were included in the laboratory data package, all information required for validation of the data is present.

Please do not hesitate to contact me if you have comments or questions regarding this report.

Sincerely,



Bonnie Janowiak, Ph.D.
Principal Environmental Chemist, NRCC Certified

PROJECT NARRATIVE

Project: National Grid - Ogdensburg Kin
Pace Project No.: 30481458

Method: **EPA 8270D by SIM**
Description: 8270D PAH SIM Reduced Volume
Client: Groundwater & Environmental Services, Inc. (Syracuse)
Date: April 26, 2022

General Information:
16 samples were analyzed for EPA 8270D by SIM by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3510C with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: 498907

B: Analyte was detected in the associated method blank.

- BLANK for HBN 498907 [OEXT/466 (Lab ID: 2414771)
  - Naphthalene

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 498907

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30481458003

MH: Matrix spike recovery and/or matrix spike duplicate recovery was above laboratory control limits. Result may be biased high.

- MS (Lab ID: 2414773)
  - 2-Methylnaphthalene
  - Acenaphthene
  - Acenaphthylene

PROJECT NARRATIVE

Project: National Grid - Ogdensburg, NY
Pace Project No.: 30532087

Method: **EPA 8270D by SIM**
Description: 8270D PAH SIM Reduced Volume
Client: Groundwater & Environmental Services, Inc. (Syracuse)
Date: December 27, 2022

General Information:
15 samples were analyzed for EPA 8270D by SIM by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3510C with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 542089

CL: The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.

- LCS (Lab ID: 2630722)
  - Benzo(g,h,i)perylene

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: 542089

L2: Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.

- LCS (Lab ID: 2630722)
  - Naphthalene

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.
