Table of Contents

1. Introduction

The New York State Department of Environmental Conservation (NYSDEC) has issued a Work Assignment (# D004443-4) to Malcolm Pirnie, Inc. (Malcolm Pirnie) for Operation, Maintenance, and Monitoring at the Vestal Water Supply Site in New York State (Site # 7-04-009A). Malcolm Pirnie has prepared this Quarterly Report in accordance with the NYSDEC-approved Work Plan to summarize site activities.

2. Site Description

The Vestal Water Supply (Site 1-1) Site is located on Pumphouse Road, Vestal, Broome County, New York (Figure 2-1), along the southern bank of the Susquehanna River. Well 1-1 is located just south of the Susquehanna River and northwest of an industrial park located along Stage Road. Until 1980, Well 1-1 was the main source of water for Water District 1, which provides drinking water for several areas of the Town of Vestal. Currently, there are two other production wells, Wells 1-2A and 1-3 that function as the main source of water for Water District 1. Well 1-1A was installed in 1993 to replace Well 1-1 and is currently being used to pump and treat groundwater, which is then discharged to the Susquehanna River.

3. Operation and Maintenance

Malcolm Pirnie has maintained continuous operation of the groundwater treatment plant at the Vestal Water Supply Site. This includes the operation, maintenance, and influent/effluent sampling in accordance with the operations and maintenance (O&M) manual (Final Operation and Maintenance Manual, Long-Term Response, Operable Unit 1, Vestal Well 1-1 Site, Vestal, New York) (Tetra Tech EC, Inc., 2006) (Final O&M Manual). However, as indicated in the Work Assignment, no work was performed on the Vestal Water Supply (Site 1-1) soil vapor extraction system.

As part of managing the Vestal Water Supply Site, Malcolm Pirnie has a subcontract with Environmental Compliance, Inc. (ECI), who has unique knowledge of operating the groundwater treatment plant. ECI provides materials, labor, equipment, and supervision to maintain continuous operation of the groundwater treatment plant.

A variable frequency drive (VFD) was installed in February 2009 to provide soft-start operation for the Well 1-1A replacement well pump motor and reduced torque on the Certa-Lock® PVC drop pipe. The VFD also provides energy savings by allowing the well pump motor to be operated at a reduced speed. Compared to the full load rating of the pump motor and at an estimated energy cost of $0.083 per kilo-watt (KW) the VFD (at the current setting of 51 hertz) has the potential to provide an estimated annual energy cost savings up to $9,000.

3.1 System Operation

As indicated in the ECI Monthly Reports and O&M Logs (Appendix A), the groundwater treatment system was shut down for three days in July due to power disruptions. The system was also shut down for two days in August and five days in September at the request of the NYSDEC Division of Water (Division of Water) due to flooding on the Susquehanna River. During the September flood, the Division of Water cut the lock for the entry gate to gain access to the site. The Division of Water used the site as a staging area for flood control pumps. The entry gate lock was replaced by Malcolm Pirnie on September 29, 2011. The September flood caused the basement of the Well 1-1 pump house to flood. Water was subsequently pumped from the basement by ECI; no damage was reported.

Table 3-1 and Figure 3-1 summarize groundwater treatment system flow rates from the Monthly Reports and System O&M Logs. As shown in Table 3-1, the groundwater treatment system flow rate for Well 1-1A decreased from an average of 254 gallons per

minute (GPM) in July 2011 to an average of 234 GPM in September 2011. As shown on Table 3-1, approximately 29,179,000 gallons of water were treated during the third quarter 2011 operating period.

Due to continued reductions in yield, Well 1-1A will be developed quarterly as presented in the NYSDEC-approved budget addendum and Schedule 211 forms (June 2011). Quarterly well maintenance will proceed in the first quarter 2011.

The chain-link fencing in the entry gate to the treatment facility is damaged and needs to be repaired. The damage was noted during the Second Quarter, 2011. The cause of the damage is unknown, but appears to be the result of contact with heavy-equipment (possibly a front-end-loader). The repairs are scheduled to be performed by ECI during the fourth quarter, 2011.

3.2 Influent – Effluent Sampling

Third quarter 2011 influent and effluent groundwater samples were collected from the Well 1-1A treatment system in accordance with the Work Plan. Influent and effluent groundwater samples were sent to TestAmerica Laboratories following chain-of-custody protocols for analysis of volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260B. The laboratory analytical reporting forms are provided in Appendix B. The laboratory analytical data for the treatment plan samples are summarized in Tables 3-2 (influent VOCs) and Table 3-3 (effluent VOCs); Figure 3-2 presents the Well 1-1A treatment plant total influent VOC concentrations over time.

As shown in Table 3-2, maximum influent sample concentrations of 1,1,1-trichloroethane (200 µg/L), 1,1-dichloroethane (24 µg/L) , 1,1-dichloroethene (17 µg/L), cis-1,2-dichloroethene (37 µg/L), trichloroethene (39 µg/L), and vinyl chloride (7.8 µg/L) occurred in August 2011. These results are consistent with previous sampling results. In each of the samples collected during the third quarter 2011, the concentrations of 1,1,1 trichloroethane, 1,1 dichloroethene, 1,1, dichloroethene, cis-1,2 dichloroethene, trichloroethene, and vinyl chloride exceeded the corresponding NYSDEC Class GA Standards. Figure 3-2 shows that the total VOC concentrations detected in the July, August, and September Well 1-1A influent samples (316 µg/L, 365 µg/L, and 230 µg/L, respectively) were within the range of previous sampling events.

Table 3-3 shows that VOCs were not detected in any of the third quarter 2011 effluent samples collected from the treatment system.

Based on influent sample concentrations and total flow volumes from the Well 1-1A treatment system, approximately 74 pounds of VOCs were removed by the treatment system during the third quarter 2011 operating period. This quantity is less than the second quarter 2011 removal mass of 118 pounds, primarily due to the reduction of flow through the treatment system caused by power disruptions and flooding during the third quarter 2011 operating period.

4. Groundwater Monitoring

Groundwater monitoring wells were sampled in accordance with the Work Plan during the second quarter, 2011. The results of the sampling event were submitted to the NYSDEC with the second quarter 2011 Vestal Water Supply Site Quarterly Report and Annual Groundwater Monitoring Summary. An iso-concentration map showing the total VOCs concentrations in June 2011 samples collected from the wells in the shallow groundwater monitoring well network is provided in Appendix C. The next annual groundwater monitoring event is scheduled for the third quarter of 2012.

5. Recommendations

Recommendations for revised instrumentation and controls have been presented to the NYSDEC in the PRR (Malcolm Pirnie, 2010).

The effluent discharge line from the clear well to the NYSDEC Flood Management Area has a significant accumulation of precipitate and should be replaced. A scope of work and bid proposal package was prepared and submitted to the NYSDEC in October 2011 for review.

Based on well inspections performed during the second quarter, 2011 (Vestal Water Supply Site Quarterly Report and Annual Groundwater Monitoring Summary, 2011), the protective casings for groundwater monitoring wells 4009-1 and 4009-6 are damaged and should be replaced.

Due to continued reductions in flow from Well 1-1A, AquaGard well maintenance should be performed quarterly.

6. Summary

The Vestal Well 1-1A groundwater treatment system was shut down for three days in July, two days in August and five days in September due to power disruptions and flooding. The system operated with minimal interruption during the remainder of the third quarter, 2011 operation and maintenance period. The average flow rate through the treatment system during this period was 244 GPM, a decrease of approximately 83 GPM from the previous quarter. Total flow through the treatment system from July to September 2011 was approximately 29.2-million gallons. Based on monthly influent and effluent sampling, the treatment system successfully removes VOCs from groundwater extracted from the capture zone. Approximately 74 pounds of VOCs were removed by the treatment system during the third quarter, 2011 operational period.

Due to continued reductions in well yield, Well 1-1A will be redeveloped quarterly, beginning with the fourth quarter, 2011

The next groundwater sampling event is scheduled to be completed during the third quarter, 2012.

Vestal Well 1-1 Monthly Report
July 2011

SECTION I – SUMMARY OF ACTIVITIES

System went down three times during month due to power disruptions caused by thunderstorms. System was restarted by following day in each instance. Otherwise system operated continuously without any issues. Actual flow meter recordings ranged between 257 GPM at beginning of month and 250 GPM at end of the month.

SECTION II – MONTHLY OPERATIONS & MAINTENANCE

- Checked and adjusted belts
- Lubricated equipment, as needed
- Routine inspection of site
- Cleaned up grounds
- Mowed and trimmed lawn

SECTION III – REPAIR WORK COMPLETED

- None

SECTION IV – REPAIR WORK NEEDED

- None

SECTION V – RECOMMENDATIONS

- None

Vestal Well 1-1 Monthly Report
August 2011

SECTION I – SUMMARY OF ACTIVITIES

System operated continuously entire month except for two (2) days down due to flooding. Actual flow meter recordings ranged between 238 GPM and 251 GPM.

SECTION II – MONTHLY OPERATIONS & MAINTENANCE

- Checked and adjusted belts
- Lubricated equipment, as needed
- Routine inspection of site
- Cleaned up grounds
- Mowed and trimmed lawn

SECTION III – REPAIR WORK COMPLETED

- None

SECTION IV – REPAIR WORK NEEDED

- None

SECTION V – RECOMMENDATIONS

- None

Vestal Well 1-1 Monthly Report
September 2011

SECTION I – SUMMARY OF ACTIVITIES

System was down for five (5) days due to flooding caused by heavy rains. Basement was flooded with approximately 40 inches of water which was pumped out by Richard Green. NYSDEC cut off lock from gate and installed pumps on site. Lock was replaced by Jeremy Wyckoff. Rest of time system operated without issues at a rate of 230 GPM to 242 GPM.

SECTION II – MONTHLY OPERATIONS & MAINTENANCE

- Checked and adjusted belts
- Lubricated equipment, as needed
- Routine inspection of site
- Cleaned up grounds
- Mowed and trimmed lawn
- Pumped out water in basement

SECTION III – REPAIR WORK COMPLETED

- None

SECTION IV – REPAIR WORK NEEDED

- None

SECTION V – RECOMMENDATIONS

- None

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

ANALYTICAL REPORT

Job Number: 220-16116-1

Job Description: NYSDEC Standby - Vestal Water Supply

For:
Malcolm Pirnie, Inc.
855 Route 146
Suite 210
Clifton Park, NY 12065

Attention: Mr. Jeremy Wyckoff

Approved for release.
Joan Widomski
Project Manager I
8/8/2011 3:46 PM

Designee for
Jackie Trudell
Project Manager I

ACCREDITED IN ACCORDANCE WITH nelac

Job Number: 220-16116-1

Job Description: NYSDEC Standby - Vestal Water Supply

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed within the body of this report. Release of the data contained in this sample data package and in the electronic data deliverable has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Approved for release.
Joan Widomski
Project Manager I

Table of Contents

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

FORMULAS FOR NYSDEC SAMPLE CALCULATIONS

Volatiles

(Ax)(IS)(DF)
(AIS)(RRF)(V)(% solids) = C

(AX)(IS)(VT)(1000)(DF)
(AIS)(RRF)(VA)(V)(% solids) = C (for medium level soils)

SemiVolatiles

(AX)(IS)(VE)(DF)(GPC factor is 2 if needed)
(AIS)(RRF)(volume injected)(V)(% solids) = C

Pesticides

(AX)(VE)(DF)
(RRF)(V)(% solids)(volume injected) = C

PCBs for compound/retention time

(AX)(VE)(DF)
(RRF of compound at the stated retention time)(V)(% solids)(volume injected) = C

DRO/CTETPH

(AX)(VE)(DF)
(RRF)(V)(% solids)(volume injected) = C

AX = area of the target Ion
AIS = Area of Internal standard
C = concentration as ug/L or ug/Kg
DF = dilution
IS = Internal standard concentration (ng)
RRF = average RF (from initial cal except CLP methods from continuing cal)
V = sample volume for liquids in mls or sample weight for solids in grams
VA = volume of aliquot for medium level soils
VE = volume of concentrated extract
VT = volume of methanol for volatile medium level soils

ANALYTICAL REPORT

Job Number: 220-16305-1

Job Description: NYSDEC Standby - Vestal Water Supply

For:
Malcolm Pirnie, Inc.
855 Route 146
Suite 210
Clifton Park, NY 12065

Attention: Mr. Jeremy Wyckoff

Approved for release.
Cheryl Cascella
Project Manager I
9/2/2011 2:55 PM

Designee for
Jackie Trudell
Project Manager I

Job Narrative
220-16305-1

Comments
No additional comments.

Receipt
Chain of Custody was received without analysis selected. Client was contacted and instructed lab to analyze the samples for TCL VOCs.

The following volatile sample was received with headspace in 2 of 2 sample vials: Trip Blank (220-16305-3) (220-16305-A-3 and 220-16305-B-3) Client was contacted and instructed the lab to proceed with analysis.

All other samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

FORMULAS FOR NYSDEC SAMPLE CALCULATIONS

Volatiles

(Ax)(IS)(DF)
(AIS)(RRF)(V)(% solids) = C

(AX)(IS)(VT)(1000)(DF)
(AIS)(RRF)(VA)(V)(% solids) = C (for medium level soils)

SemiVolatiles

(AX)(IS)(VE)(DF)(GPC factor is 2 if needed)
(AIS)(RRF)(volume injected)(V)(% solids) = C

Pesticides

(AX)(VE)(DF)
(RRF)(V)(% solids)(volume injected) = C

PCBs for compound/retention time

(AX)(VE)(DF)
(RRF of compound at the stated retention time)(V)(% solids)(volume injected) = C

DRO/CTETPH

(AX)(VE)(DF)
(RRF)(V)(% solids)(volume injected) = C

AX = area of the target Ion
AIS = Area of Internal standard
C = concentration as ug/L or ug/Kg
DF = dilution
IS = Internal standard concentration (ng)
RRF = average RF (from initial cal except CLP methods from continuing cal)
V = sample volume for liquids in mls or sample weight for solids in grams
VA = volume of aliquot for medium level soils
VE = volume of concentrated extract
VT = volume of methanol for volatile medium level soils

Comments
No additional comments.

Receipt
The container label for the following sample does not match the information listed on the Chain-of-Custody (COC): Well 1-1A INF (220-16654-1). The container labels list the collection time as 14:05, whereas the COC lists the collection time as 14:00. Client was contact and instructed the lab to use a collection time of 14:00.

The following samples were received at the laboratory outside the required temperature criteria: TB (220-16654-3), Well 1-1A EFF (220-16654-2), Well 1-1A INF (220-16654-1). The client was contacted regarding this issue, and the laboratory was instructed to proceed with analysis.

All other samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

FORMULAS FOR NYSDEC SAMPLE CALCULATIONS

Volatiles

(Ax)(IS)(DF)
(AIS)(RRF)(V)(% solids) = C

(AX)(IS)(VT)(1000)(DF)
(AIS)(RRF)(VA)(V)(% solids) = C (for medium level soils)

SemiVolatiles

(AX)(IS)(VE)(DF)(GPC factor is 2 if needed)
(AIS)(RRF)(volume injected)(V)(% solids) = C

Pesticides

(AX)(VE)(DF)
(RRF)(V)(% solids)(volume injected) = C

PCBs for compound/retention time

(AX)(VE)(DF)
(RRF of compound at the stated retention time)(V)(% solids)(volume injected) = C

DRO/CTETPH

(AX)(VE)(DF)
(RRF)(V)(% solids)(volume injected) = C

AX = area of the target Ion
AIS = Area of Internal standard
C = concentration as ug/L or ug/Kg
DF = dilution
IS = Internal standard concentration (ng)
RRF = average RF (from initial cal except CLP methods from continuing cal)
V = sample volume for liquids in mls or sample weight for solids in grams
VA = volume of aliquot for medium level soils
VE = volume of concentrated extract
VT = volume of methanol for volatile medium level soils
