ATSDR and its Public Health Assessment

ATSDR is the Agency for Toxic Substances and Disease Registry, a federal public health agency. ATSDR is part of the Public Health Service in the U.S. Department of Health and Human Services. ATSDR is not a regulatory agency. Created by Superfund legislation in 1980, ATSDR's mission is to prevent or mitigate adverse human health effects and diminished quality of life resulting from exposure to hazardous substances in the environment.

The Superfund legislation directs ATSDR to undertake actions related to public health. One of these actions is to prepare public health assessments for all sites on or proposed for the Environmental Protection Agency's National Priorities List, including sites owned or operated by the federal government.

During ATSDR assessment process the author reviews available information on

- the levels (or concentrations) of the contaminants,
- how people are or might be exposed to the contaminants, and
- how exposure to the contaminants might affect people's health

to decide whether working or living nearby might affect peoples' health, and whether there are physical dangers to people, such as abandoned mine shafts, unsafe buildings, or other hazards.

Four types of information are used in an ATSDR assessment.

1) environmental data; information on the contaminants and how people could come in contact with them

2) demographic data; information on the ethnicity, socioeconomic status, age, and gender of people living around the site,

3) community health concerns; reports from the public about how the site affects their health or quality of life

4) health data; information on community-wide rates of illness, disease, and death compared with national and state rates

The sources of this information include the Environmental Protection Agency (EPA) and other federal agencies, state, and local environmental and health agencies, other institutions, organizations, or individuals, and people living around and working at the site and their representatives.

ATSDR health assessors visit the site to see what it is like, how it is used, whether people can walk onto the site, and who lives around the site. Throughout the assessment process, ATSDR health assessors meet with people working at and living around the site to discuss with them their health concerns or symptoms.

A team of ATSDR staff recommend actions based on the information available that will protect the health of the people living around the site. When actions are recommended, ATSDR works with other federal and state agencies to carry out those actions.

A public health action plan is part of the assessment. This plan describes the actions ATSDR and others will take at and around the site to prevent or stop exposure to site contaminants that could harm peoples' health. ATSDR may recommend public health actions that include these:

- restricting access to the site,
- monitoring,
- surveillance, registries, or health studies,
- environmental health education, and
- applied substance-specific research.

ATSDR shares its initial release of the assessment with EPA, other federal departments and agencies, and the state health department to ensure that it is clear, complete, and accurate. After addressing the comments on that release, ATSDR releases the assessment to the general public. ATSDR notifies the public through the media that the assessment is available at nearby libraries, the city hall, or another convenient place. Based on comments from the public, ATSDR may revise the assessment. ATSDR then releases the final assessment. That release includes in an appendix ATSDR's written response to the public's comments.

If conditions change at the site, or if new information or data become available after the assessment is completed, ATSDR will review the new information and determine what, if any, other public health action is needed.

For more information about ATSDR's assessment process and related programs please write to:

SUMMARY OF BACKGROUND AND HISTORY

The Conklin Dumps site is in the Town of Conklin, Broome County, New York. The site consists of two inactive municipal landfills referred to as the upper and lower landfills (refer to Figure 1, Attachment A). The 37-acre site is 10 miles southeast of Binghamton, about 1 mile north of the Kirkwood Interchange of Route 81. The two landfill properties are divided by County Route 322, also known as Broome Parkway, which runs in a north-south direction. The site was listed on the National Priorities List (NPL) in March of 1989.

The lower landfill (28.5 acres) was operated by the Town of Conklin for the disposal of municipal refuse between 1964 and 1969 and received about 34,000 cubic yards of fill. The lower landfill is one-half mile east of the 100 year flood plain of the Susquehanna River and borders a New York State Department of Environmental Conservation (NYS DEC) designated wetland area, which surrounds a large portion of the lower landfill. A Delaware & Hudson railroad track borders the eastern perimeter of the lower landfill disposal area. Access to the lower landfill is by a dirt road on the east side of County Route 322.

The upper landfill was operated by the Town of Conklin for the disposal of municipal wastes from 1969 to 1975. Most of the wastes were disposed in unlined cells and reportedly, some industrial and chemical wastes may have also been disposed at the upper landfill. The upper landfill (8.5 acres) contains about 72,000 cubic yards of fill and is situated on a hillside on the west side of County Route 322, almost directly across the entrance to the lower landfill.

The population within one mile of the site is about 700. The closest residents live along Route 7, about one-quarter mile from the lower landfill boundary. The area immediately surrounding the upper and lower landfills is proposed to be developed as an industrial park. The potential for residential development of this area does not exist. The predominant land use in the Town of Conklin is agricultural, with other land either vacant or forested. The Town of Conklin public water supply well number (No.) 3 is 2,000 feet northeast of the site. Carlin Creek, north of the site, drains the area to several wetlands and may also contribute to local recharge of groundwater.

Since 1983, field investigations have been conducted both on- and off-site and have included sampling of leachate seeps, groundwater and drinking water supplies. In October 1983, the Broome County Health Department (BCHD) requested sampling of six private water supplies near the site.

Between 1983 and 1985 a two-phase hydrogeologic investigation was conducted for the Broome County Industrial Development Agency who were considering putting a corporate industrial park in the area. This investigation included sampling of 17 private drinking water supplies near the site (refer to Figure 2, Attachment A). All of the private wells were sampled in November 1983 for analyses of inorganic parameters, including metals. Twelve wells were sampled by the

001747

consultant for the Broome County Industrial Development Agency in November 1983 for volatile organic compounds (VOCs) and 5 wells were sampled by the BCHD one year later (November 1984), for VOCs. Chloroform was detected in two private wells at 2.0 micrograms per liter (mcg/L); toluene and trichloroethene were detected in another well at 10 mcg/L and 9 mcg/L, respectively; trans-1,3-dichloropropene and trichloroethene were detected in a fourth well at 2 mcg/L and 4 mcg/L, respectively. Results of the metals analyses showed arsenic at levels ranging from 10 mcg/L to 110 mcg/L in 5 private wells; copper was detected in 7 wells at levels ranging from 10 mcg/L to 330 mcg/L; iron was detected in 9 wells at 10 mcg/L to 8,400 mcg/L; manganese was detected in 15 wells at levels ranging from 10 mcg/L to 1,900 mcg/L; zinc was detected in 14 wells at levels ranging from 10 mcg/L to 260 mcg/L. Groundwater from on-site monitoring wells at both the upper and lower landfill sites (refer to Figure 2, Attachment 1) contained elevated levels of several volatile organic compounds (VOCs). Leachate from seeps at both the upper and lower landfill contained VOCs.

In October 1984, the New York State Department of Health (NYS DOH) inspected the site and collected water samples from nearby private wells. One residential well contained trichloroethene at levels ranging from 2 micrograms per liter (mcg/L) to 5 mcg/L. Methylene chloride was also detected at 35 mcg/L; however, this finding was not confirmed in subsequent sampling. Based on these results and the 1984 sampling results, NYS DOH recommended that public water be extended to the residents downgradient of the site to eliminate exposure to contaminants in drinking water. Public water was extended to this area in 1985 as part of anticipated industrial and commercial development in the area. NYS DOH advised those residents near the site to be connected to public water to eliminate exposures to contaminants in drinking water.

In 1986, the BCHD released a report on cancer incidence in areas of the county where organic chemical contamination of a water supply had occurred or where there was a public perception that contamination had occurred. Cancer cases diagnosed during 1976-1980, as reported to the New York State Cancer Registry, were included in the study. One 1980 census tract in Conklin (127.01) was in the study because it corresponded to the area served by the Conklin public water supply Well #1. No statistically significant results or unexpected cancer rates were found ("Cancer Occurrence by Common Drinking Water Source - Broome County, NY: 1976-1980").

A work plan for a remedial investigation (RI) and feasibility study (FS) was submitted to the NYS DEC and field investigations were completed in June 1986. A consent order was signed in June 1987 and the initial RI report was submitted to the United States Environmental Protection Agency (US EPA) in 1988. The report was reviewed by the US EPA, NYS DOH and NYS DEC.

A preliminary health assessment was completed for the site in June 1989 by the NYS DOH through a cooperative agreement with the Agency for Toxic Substances and Disease Registry (ATSDR). The potential human exposure routes that were identified in the health assessment

001748

included direct contact, inhalation and inadvertent ingestion of contaminants in leachate seeps, surface water and sediments. Exposure to site contaminants in groundwater via inhalation, ingestion and dermal contact were also identified as potential human exposure pathways, as groundwater from the aquifer beneath the site is used for both public and private drinking water supplies. The potential for soil vapors to migrate off-site was not evaluated as part of the preliminary health assessment as soil gas data were not available when the health assessment was prepared. Conclusions in the health assessment were that additional data were needed to develop a final health assessment for the site and that provision of a public water supply to residences with private water supplies near the site would eliminate the potential for exposure to contaminated groundwater. No specific conclusions were made in the preliminary health assessment about the degree of public health hazard posed by the site; however, based on the insufficient data available at the time when the health assessment was prepared, ATSDR considers this site to be an indeterminate public health hazard. Recommendations were to monitor groundwater contaminant migration and develop remedial alternatives for leachate and groundwater. No community health concerns were identified in the health assessment for the site.

A soil gas investigation was conducted at both the upper and lower landfills in the spring of 1990 to evaluate methane migration. Soil gas samples were collected along the site perimeters of both landfills at six inches below ground surface; methane was not detected at the site. A supplemental RI/FS was completed in the fall of 1990 and findings indicated that the majority of site-related contamination was directly downgradient of the upper landfill. Leachate samples from the upper landfill contained iron, manganese, cadmium, copper, trichloroethene, tetrachloroethene, 1,1-dichloroethane, 1,2-dichloroethane, ethylbenzene, benzene and ketones. Leachate from the lower landfill contained iron, manganese and benzene. Groundwater samples taken near the upper landfill had elevated concentrations of iron, manganese, sulfate, toluene, vinyl chloride, 1,1-dichloroethane, 1,2-dichloroethane, benzene, methylene chloride, 1,2-dichloropropane, methyl isobutyl ketone, and chloroethane. Some compounds in the groundwater and leachate exceeded New York State drinking water or groundwater standards. Chloroethane, 1,2-dichloropropane, and xylene have been detected at concentrations above these standards at the upper landfill. Xylene was detected at 7 mcg/L, just above the standard of 5 mcg/L. The concentration of 1,2-dichloropropane was 9 mcg/L in 1990 and has been decreasing over the past three years and was just recently detected slightly above the standard of 5 mcg/L. Chloroethane was detected at a concentration of 68 mcg/L in 1990. Sediment and surface water from Carlin Creek and the adjacent wetlands did not contain elevated levels of site contaminants.

In 1990, NYS DOH learned that some residences near the site were not connected to public water. The BCHD sampled 4 residential wells near the site and the private well serving the Conklin Town Hall in March 1991. The residential water supply samples were analyzed for VOCs, lead and arsenic and the water supply sample for the Town Hall was analyzed for VOCs. No VOCs were detected in any of the samples collected. Arsenic was detected at 16 mcg/L and 25 mcg/L in two residential water supplies. These concentrations are below the NYS DOH

001749

maximum contaminant level of 50 mcg/L for arsenic in drinking water. The BCHD recommended to each homeowner whose drinking water was sampled, that they connect their homes to the existing public water supply serving the area.

A public meeting was held by US EPA on February 25, 1991 to present findings of the RI and the proposed plan for site remediation. Community concerns at this meeting were about the remedial alternatives, their costs and implementability of the proposed alternative. No specific or community health concerns were identified. A record of decision (ROD) was signed on March 29, 1991. The major components of the selected remedy included:

- Containment through installation of caps over both landfills, with leachate collection and treatment and discharge to the Binghamton - Johnson City Joint Sewage Treatment Plant. If the treatment plant is not available, leachate will be treated on site using air stripping and discharged to Carlin Creek.

- Fencing, deed restrictions, groundwater monitoring and five year reviews.

In June 1992, the US EPA modified the final remedy selected in the March 1991 ROD. The proposed modification was to consolidate waste materials and soil at the lower landfill with the upper landfill. The proposed modification was supported by NYS DEC, NYS DOH and US EPA and included the following provisions:

- Excavation of materials from the lower landfill, with transport and consolidation on the upper landfill;

- Installation of a cap over the consolidated material.

- Leachate collection with on-site treatment via air stripping and discharge of the treated effluent to Carlin Creek; and

- Groundwater monitoring, fencing, deed restrictions and five year reviews.

A public meeting was held on July 14, 1992 at the Conklin Town Hall by US EPA and representatives of NYS DOH and NYS DEC were present. The purpose of this meeting was to present the proposed modification to the remedy. The primary community concerns related to operation and maintenance costs of the modified remedy. No specific or community health concerns were raised at this meeting.

In January 1993, Phase I remediation activities were initiated at the site. The Phase I activities included excavation, transport and placement of wastes from the lower landfill to the upper landfill. Air sampling occurred during Phase I remediation and included particulate monitoring and sampling of volatile emissions along the site perimeter. Air monitoring did not detect site-

001750

related contaminants during excavation of the lower landfill and the lack of emissions was attributed to the extremely cold temperatures and the advanced decomposed state of the buried wastes. As a result, air sampling was suspended along the site perimeter. However, real-time monitoring of particulates and volatile emissions in the work zone continued with a contingency to reinitiate air sampling along the site boundary if changes were observed in the waste composition and detectable levels of VOCs or particulates were recorded in the work zone. No additional air monitoring was required along the site perimeter of the lower landfill during Phase I remediation.

Excavation of the lower landfill and consolidation with the upper landfill was completed in July 1993. The Town of Conklin will complete remediation activities at the lower landfill which will include regrading of the lower landfill area using clean fill, as needed. These activities are expected to be completed by September 1993. Phase II remediation activities at the upper landfill are expected to be initiated by September 1993. Phase II activities will include installation of a leachate collection system and landfill cap on the upper landfill and these activities are expected to be completed by November 1993.

Past public health concerns included potential human exposure to contaminated leachate seeps, surface water and sediments, via direct contact, inhalation and incidental ingestion and the possibility of contaminants migrating to basements of nearby homes in soil gas and groundwater. Inhalation of volatile contaminants and contaminated air particulates during site remediation activities was a public health concern; however, monitoring of air quality during excavation of the lower landfill did not detect site-related contaminants. Exposure to contaminants in groundwater was also a human exposure pathway of concern because public and private water supplies obtain water from the same aquifer which has shown evidence of contamination near the upper landfill site. Because of this concern the NYS DOH recommended extension of the Conklin public water supply to homes along Route 7 and nearby subdivisions. There are no known past or present community health concerns for this site.

PUBLIC HEALTH IMPLICATIONS

For an undetermined period of time, some residents living near the Conklin Dumps site have been exposed to toluene, trichloroethene, trans-1,3-dichloropropene, arsenic, and manganese in their private well drinking water. Trichloroethene and trans-1,3-dichloropropene cause cancer in laboratory animals exposed to high levels over their lifetimes (ATSDR, 1991b, 1992). Whether or not these compounds cause cancer in humans is not known. Studies of people exposed to high levels of arsenic in drinking water in foreign countries suggest an association between arsenic ingestion and skin cancer. To date, however, studies in the United States of exposure to arsenic in drinking water have not shown an increased risk of cancer (ATSDR, 1991a). Toluene, trichloroethene and trans-1,3-dichloropropene produce noncarcinogenic toxic effects (primarily damage to the nervous system, liver, and kidneys) at exposures several orders of magnitude greater than those estimated for past and present exposures to the highest levels

0017[illegible]1

of these contaminants in private water supply wells. Chronic (long-term) exposure to arsenic is associated with effects on the skin (growths on hands and feet and darkening of the skin), with nerve, liver, and blood vessel damage, and with behavioral problems including learning and hearing deficiencies (ATSDR, 1991a). Arsenic and manganese produce these effects at exposures less than one order of magnitude greater than those estimated for past and present exposures to the highest levels of these metal contaminants found in private water supply wells. Chemicals that cause cancer or other adverse effects in humans and/or animals after high levels of exposure may also pose a risk to humans who are exposed to lower levels over long periods of time.

Operation of the lower Conklin Dumps landfill began in 1964. Residents with private water supply wells may have been exposed to toluene, trichloroethene, trans-1,3-dichloropropene, arsenic, and manganese in their drinking water for an unknown period of time since then. Although many affected and potentially affected residences were connected to the Town of Conklin public water supply in 1985, some residents may still be using contaminated private water supply wells. Although exposure to toluene, trichloroethene, trans-1,3-dichloropropene, arsenic, and manganese could be up to about 29 years, the levels of contamination prior to 1983 are not known. Based on the results of animal studies and limited sampling of the private water supply wells, it is estimated that the increased risk of developing cancer could be high from past and continuing exposure to arsenic in drinking water, and low from past and continuing exposure to trichloroethene and trans-1,3-dichloropropene. Although the risks of noncarcinogenic effects from past and continuing exposures to toluene, trichloroethene, trans-1,3-dichloropropene, arsenic, and manganese are not completely understood, the existing data suggest that they could be high for arsenic and manganese, and minimal for toluene, trichloroethene, and trans-1,3-dichloropropene in private water supply wells.

CURRENT CONDITIONS OF SITE

On July 14, 1992, Claudine Jones Rafferty of the NYS DOH met with representatives of the US EPA, the NYS DEC, the Town of Conklin and their consultant at the lower landfill site. The lower landfill is accessed by a dirt road, south of County Road 322. Vehicular access is prevented by a locked gate. The area surrounding the lower landfill is densely vegetated, which limits unauthorized entry to the site. The dirt road passes two large water bodies on the southern portion of the site and extends to the embankment of the Delaware and Hudson Railroad tracks, which run along the eastern perimeter of the lower landfill site. A large horseshoe-shaped berm extends along the southern, eastern and northern site boundaries and is about the limit of waste disposal. The berm is approximately fifteen feet high. The upper landfill is situated north of County Road 322, near the top of a hillside, across from the access road to the lower landfill. Due to the extremely dense vegetation, the upper landfill property was not walked. A site visit was not conducted for preparation of the 1989 health assessment and a comparison of how site conditions have changed cannot be made.

001752

The conclusions of the 1989 health assessment were complete based upon information available at that time. Remediation of the lower landfill is essentially complete; the lower landfill wastes have been excavated and consolidated with the upper landfill. Remediation of the upper landfill is underway and expected to be completed in the summer of 1994. Once these remediation activities are completed, many of the past potential human exposure pathways to site contaminants will be eliminated.

CURRENT ISSUES

The only past public health concern which needs additional follow-up is to review any new monitoring data related to the quality of drinking water in nearby and downgradient private drinking water supplies. If the industrial park is developed and water supply wells are installed, then potable water use should be evaluated to ensure that groundwater extraction does not pick up residual contamination from the site. The BCHD occasionally receives queries from nearby residents and individuals wishing to purchase or build housing near the site about possible off-site impacts from the Conklin Dumps site, including surface water runoff and groundwater contamination. Currently, it is not known how many residents with contaminated water supplies, if any, are still using their private wells for potable water. Presently, there are no known community health concerns associated with this site.

CONCLUSIONS

The site posed a public health hazard in the past because some residents near the site were exposed to toluene, trichloroethene, trans-1,3-dichloropropene, arsenic, and manganese in drinking water at concentrations that may cause adverse health effects. Human exposure to these contaminants occurred via ingestion, inhalation, and dermal contact for a period of up to 29 years. The extension of the public water supply to affected and potentially affected residences in 1985 eliminated exposures for those residents who connected to the public water supply. Currently, the site poses an indeterminate public health hazard. Some residents who did not connect their homes to the public water supply, may still be exposed to contaminated water from continued use of their private wells. Currently, it is not known how many residents with contaminated water supplies, if any, are still using their private wells.

The conclusions from the 1989 health assessment were valid based on the information available at the time when the health assessment was prepared.

- As recommended in the 1989 health assessment, the remedy for the site includes installation of a leachate collection trench with on-site treatment via air stripping prior to discharge to Carlin Creek.

- As recommended in the 1989 health assessment, the physical boundaries of the original landfills were clearly delineated to develop remediation goals for the site.

001753

- Additional data have been collected since the 1989 health assessment to characterize contamination and to develop the final remedy for the site.

- The final remedy for the site does not provide for collection and treatment of groundwater; however, it does provide for routine monitoring of groundwater quality at the site.

- The potential for commercial development of the immediate area still exists.

- Past investigations of methane in soil gas did not detect methane at elevated levels or migrating off-site.

- Past sampling of nearby residential wells has shown elevated levels of VOCs and metals in private drinking water supplies along Route 7. Past exposures to these contaminants have been evaluated as part of this site review and update and public water is available to residential areas along Route 7.

- Past sampling of surface water and sediment in Carlin Creek did not detect site contaminants.

- Routine monitoring of the Town of Conklin No. 3 public water supply well, 2,000 feet northeast of the site, has not detected contaminants from the site.

- There are some homes near the site which are not connected to public water.

- Sampling and air monitoring activities during Phase I remediation activities did not detect site contaminants.

- Leachate collection at the upper landfill will reduce the potential for further contamination of groundwater underlying the site.

- Elevated levels of VOCs have been detected in groundwater near the upper and lower landfill sites in the past.

- The potential for exposure to contaminants in leachate will be eliminated once the final remedy has been completed.

- Other than the proposed five year reviews and monitoring activities presented in the final ROD for the site, additional evaluation of the site is not needed at this time.

001754

RECOMMENDATIONS

A public health assessment is not needed for the Conklin Dumps site. Past public health concerns have been addressed by the extension of the public water supply to residential areas along Route 7. However, homes near the site, where it is determined are not connected to public water supplies, should be sampled to determine current drinking water quality. Potential public health concerns will be addressed by the proposed remedy for the site which has been implemented and is expected to be completed in the summer of 1994.

The five year reviews should continue as planned and monitoring of groundwater quality at the downgradient site perimeter should occur in conjunction with long-term operation and maintenance of the final remedy. The groundwater monitoring data should be reviewed to determine the need for sampling downgradient residential wells near the site or any other appropriate follow-up public health actions.

If the industrial park is developed, water use should be evaluated, to ensure that pumping wells do not draw residual contamination from the site. In addition, construction activities should not adversely affect drainage at the site or the remedial measures.

The data and information developed in the Site Review and Update for the Conklin Dumps site in Conklin, Broome County, New York, has been reviewed by ATSDR's Health Activities Recommendations Panel (HARP) to determine appropriate follow-up actions. Because of past exposure to contaminated drinking water the panel recommended this site for follow-up health activities. Specifically, those persons exposed in the past should be considered for inclusion in the NYS DOH's registry being developed for VOC exposures from drinking contaminated water. The HARP also determined that community health education is needed. Specifically, the panel determined that residents and/or their physicians should be provided information regarding their past exposures. In addition, the panel determined that the NYS DOH should consider including this site in their update of cancer incidence in Broome County. No other follow-up activities were recommended by HARP at this time.

001755

PUBLIC HEALTH ACTIONS

The Public Health Action Plan (PHAP) for the Conklin Dumps site contains a description of actions to be taken by ATSDR and/or the NYS DOH at and near the site, following completion of this Site Review and Update. For those actions already taken at the site, please refer to the Summary of Background and History section of this Site Review and Update. The purpose of the PHAP is to ensure that this Site Review and Update not only identifies public health hazards, but provides a plan of action designed to mitigate and prevent adverse human health effects resulting from past, present and/or future exposures to hazardous substances at or near the site. Included, is a commitment on the part of ATSDR and/or the NYS DOH to follow-up on this plan to ensure that it is implemented.

The public health actions planned for the Conklin Dumps site are as follows:

1. ATSDR and NYS DOH will coordinate with the appropriate environmental agencies to develop plans to implement the recommendations contained in this Site Review and Update.

2. ATSDR will provide an annual follow-up to this PHAP, outlining the actions completed and those in progress. This report will be placed in repositories that contain copies of this Site Review and Update, and will be provided to persons who request it.

3. NYS DOH is developing a registry of persons exposed to VOCs in drinking water. Residents who were exposed in the past to VOCs in drinking water, will be considered for inclusion to this registry.

4. NYS DOH will request that the 1986 study of cancer incidence conducted by the Broome County Health Department be updated through 1990 to determine whether the cancer incidence patterns seen for 1976-1980 are also found for 1981-1990.

5. NYS DOH will provide health education materials to those persons enrolled in the VOC registry. In addition, information will be provided to the registrant's physicians as indicated.

6. Through the NYS DOH, homes near the site, where it is determined are not connected to public water supplies, will be sampled to determine current drinking water quality. NYS DOH will provide homeowners, whose water supplies are sampled, with copies of the analytical results of their water sample as well as an explanation of the results.

ATSDR will re-evaluate and expand the Public Health Action Plan when needed. New environmental, toxicological, or health outcome data, or the results of implementing the above proposed actions may determine the need for additional actions at this site.

001756

CERTIFICATION

The Site Review and Update for the Conklin Dumps site was prepared by the New York State Department of Health under a cooperative agreement with the Agency for Toxic Substances and Disease Registry (ATSDR). It is in accordance with approved methodology and procedures existing at the time the site review and update was initiated.

Gregory V. Ulirsh
Technical Project Officer, SPS, RPB, DHAC

The Division of Health Assessment and Consultation (DHAC), ATSDR, has reviewed this Site Review and Update and concurs with its findings.

Division Director, DHAC, ATSDR

June 4, 1987

STATE OF NEW YORK: DEPARTMENT OF ENVIRONMENTAL CONSERVATION

In the Matter of the Development and Implementation of a Remedial Investigation, Feasibility Study and Implementation of a Remedial Program for an Inactive Hazardous Waste Disposal Site, Under Article 27, Title 13, of the Environmental Conservation Law of the State of New York (the "ECL") by

TOWN OF CONKLIN,

Respondent.

ORDER ON CONSENT

Index #T050587

WHEREAS,

1. The New York State Department of Environmental Conservation (the "Department") is responsible for enforcement of Article 27, Title 13, of the Environmental Conservation Law of the State of New York ("ECL"), entitled "Inactive Hazardous Waste Disposal Sites".

2. Respondent, Town of Conklin, owns two inactive landfills (the "Sites") in an area of Broome County west of Route 7, north of Conklin Forks Road, south of Carlin Road at which the Broome Industrial Park is being developed by Broome County (the "County"). A map of the Sites is attached hereto and is hereby incorporated into this Order as Exhibit "A".

3. The easternmost or lower Site was operated from 1968 to 1971 and the westernmost or upper Site was operated from 1972 to 1977.

4. The Department alleges as follows:

(a) During the period of operation, certain industrial and chemical wastes, in addition to municipal wastes, are believed to have been disposed of in each of the Sites;

(b) The Sites are "inactive hazardous waste disposal sites", as that term is defined in ECL Section 27-1301(2); and

(c) Hazardous wastes, hazardous waste constituents and toxic degradation products thereof at and in the vicinity of the Sites constitute a significant threat to the environment.

5. The Sites have been included by the Department in the Registry of Inactive Hazardous Waste Disposal Sites in New York State and given a Type 2 classification. Such classification indicates: "significant threat to the public health or environment - action required".

6. Pursuant to ECL Section 27-1313(3)(a), whenever the Commissioner of Environmental Conservation (the "Commissioner") "finds that hazardous wastes at an inactive hazardous waste disposal site constitute a significant threat to the environment, he may order the owner of such site and/or any person responsible for the disposal of hazardous wastes at such site (i) to develop an inactive hazardous waste disposal site remedial program, subject to the approval of the department, at such site, and (ii) to implement such program within reasonable time limits specified in the order."

7. After a series of negotiating sessions, the Respondent and the Department agreed on a work plan to perform a Remedial Investigation/Feasibility Study ("RI/FS") at the Sites.

8. The State reviewed the RI/FS Work Plan in detail and concluded as follows:

(a) The RI/FS Work Plan was a technically sound and legally appropriate response to the Department's concerns with the conditions presented at the Sites;

(b) Performance of the tasks described in the RI/FS Work Plan were necessary and consistent with the National Contingency Plan ("NCP").

9. The State represents that prior to approving the Work Plan, it had forwarded to EPA's Region II a copy of the Work Plan in accordance with the Department's agreement with the EPA on enforcement of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 ("CERCLA").

10. The engineering firm of O'Brien & Gere Engineers, Inc. ("OB&G") was retained by Respondent to perform the RI/FS and OB&G commenced the work after notifying the Department in December of 1985.

11. On October 17, 1986, Congress passed the Superfund Amendments and Reauthorization Act of 1986 ("SARA") which modified the requirements of an RI/FS under CERCLA.

12. The Department and Respondent agree that the goal of this Order shall be that the Respondent complete an RI/FS that

is consistent with the NCP and SARA and implement the selected remedial program within time limits acceptable to the Department.

13. (a) Respondent, having waived its right to a hearing as provided by law, has consented to the issuance of this Order without any adjudication of fact or law. Respondent's consent to this Order and its subsequent compliance with its terms does not constitute, and shall not be construed as, an admission of liability of any kind or an admission by the Respondent of any fact or conclusion of law or of the applicability or inapplicability of any law.

(b) The Respondent has agreed to this Order to avoid the risk of an adverse determination in an enforcement proceeding under Article 27, Title 13 of the ECL or CERCLA, address the Department's concern that the Sites constitute a significant threat to the environment and qualify for financial assistance under the 1986 Environmental Quality Bond Act and its implementing regulations.

NOW, having considered this matter and being duly advised, IT IS ORDERED THAT:

I. All investigations, proposals, reports, plans, remedial programs, and supplements and revisions ("submittals") thereto required by this Order shall address both on-site and off-site contamination caused by the disposal of hazardous and

001451

industrial wastes at the Sites. The Department shall approve said submittals if they are prepared, designed and executed consistent with the requirements of the NCP and SARA.

II. As used herein, "hazardous wastes" shall mean hazardous wastes, any hazardous constituents thereof, and any toxic degradation products of such wastes and of such constituents.

III. Within forty-five (45) days after the effective date of this Order, Respondent shall submit to the Department a report, which (a) includes all data generated and all other information obtained during the investigation performed to date under the work plan previously approved by the Department and (b) sets forth a proposed written scope of work to complete an RI/FS consistent with the requirements of the NCP and SARA ["Preliminary Report"].

IV. A. Within thirty (30) days after its receipt of the Preliminary Report, the Department shall determine if it is consistent with the requirements of this Order and provide written notification to Respondent of its determination.

B. If the Department disapproves the Preliminary Report, the written notification shall specify the basis of the Department's objections. Within thirty (30) days after its receipt of the notice of disapproval, or at such other time as is agreed to in writing by the parties, Respondent shall revise the Preliminary Report addressing each of the Department's objections

and shall submit to the Department a second Preliminary Report which has been revised in accordance with the requirements of this Order.

Within fifteen (15) days of receipt of the revised Preliminary Report, the Department shall determine if it is consistent with the requirements of this Order.

C. If the Department approves either the Preliminary Report or the revised Preliminary Report, the approved Preliminary Report shall become incorporated in and made a part of this Order and shall be attached hereto as Exhibit "B" (hereinafter "Final Preliminary Report").

D. If the Department disapproves the revised Preliminary Report, Respondent shall be in violation of this Order if it has not submitted a Preliminary Report in accordance with the requirements of this Order.

V. A. In the event the work plan in the Final Preliminary Report requires the performance of additional field work to complete an RI/FS in accordance with the NCP and SARA, the Respondent shall commence said field work within thirty (30) days of receipt of the Department's approval or at such other time as is agreed to in writing by the parties.

B. Within sixty (60) days of the completion of the field work described in the work plan, or at such other time as is agreed to in writing by the parties, Respondent shall submit to the Department a Remedial Investigation Report (the "RI Report").

001453

VI. A. Within sixty (60) days after its receipt of the RI Report, the Department shall determine if the field work was conducted and the RI Report prepared in accordance with the requirements of this Order. The Department shall provide written notification to the Respondent of its determination.

B. If the Department disapproves the RI Report, the written notification shall specify the basis of the Department's objections. Within thirty (30) days after its receipt of the notice of disapproval, or such greater time as is agreed to in writing by the parties, Respondent shall revise the RI Report and/or reperform or supplement the field work in the work plan, addressing each of the Department's objections, and shall submit to the Department a second RI Report which has been revised in accordance with the requirements of this Order.

Within fifteen (15) days after its receipt of the Revised RI Report, the Department shall determine if the Revised Report was prepared in accordance with the requirements of this Order.

C. If the Department approves either the RI Report or the Revised RI Report, the approved Report shall become incorporated in and made a part of this Order and shall be attached hereto as Exhibit "C" (hereinafter the "Final RI Report").

D. If the Department disapproves the Revised RI Report, the Respondent shall be in violation of this Order if it

has not submitted a RI Report and/or conducted the field work of the Remedial Investigation in accordance with the requirements of this Order.

VII. The Department reserves the right to take any reasonable action to require modification or expansion of the Remedial Investigation as set forth in the work plan to address specific on-site and off-site areas, if the Department determines that further investigation is necessary as a result of reviewing data generated during the investigation or as a result of reviewing newly generated data.

VIII. Within ninety (90) days after receipt of the Department's approval of the Final Preliminary Report or the Final RI Report (whichever is applicable), or at such other time as is agreed to in writing by the parties, Respondent shall submit to the Department a Feasibility Study (the "Feasibility Study") prepared in accordance with the terms and conditions of the work plan contained in the Final Preliminary Report.

IX. A. Within sixty (60) days after its receipt of the Feasibility Study, the Department shall determine if the Feasibility Study was prepared in accordance with the requirements of this Order. The Department shall provide written notification to the Respondent of its determination.

B. If the Department disapproves the Feasibility Study, the written notification shall specify the basis of the

Department's objections. Within thirty (30) days after its receipt of the notice of disapproval, or such greater time as is agreed to in writing by the parties, Respondent shall revise the Feasibility Study, addressing each of the Department's objections, and shall submit to the Department a second Feasibility Study which has been revised in accordance with the requirements of this Order.

Within fifteen (15) days after its receipt of the Revised Feasibility Study, the Department shall determine if the Revised Feasibility Study was prepared in accordance with the requirements of this Order.

C. If the Department approves either the Feasibility Study or the Revised Feasibility Study, the approved Feasibility Study shall be made available for public review and comment as described in Paragraph X of this Order.

D. If the Department disapproves the Revised Feasibility Study, the Respondent shall be in violation of this Order if it has not submitted a Feasibility Study in accordance with the requirements of this Order.

X. After the Department approves the Feasibility Study, the Department will announce the availability of the Feasibility Study to the public for review and comment. The Department will accept comments from the public for a period of thirty (30) days after such announcement. The Department will also announce that a public informational meeting will be held

during the thirty-day comment period at which members of the public may present their comments. At the end of the comment period, the Department will review all such comments and either:

(a) determine that the Feasibility Study should be made effective in its present form, in which case Respondent will be so notified in writing; or

(b) determine that modification of the Feasibility Study is necessary, in which case Respondent will be informed as to the nature of any such required modifications and be required to revise the Feasibility Study accordingly and resubmit it to the Department for its approval.

The Feasibility Study which has been approved by the Department after public comment shall be incorporated and made a part of this Order and shall be attached hereto as Exhibit "D" (hereinafter the "Final Feasibility Study").

XI. Within ninety (90) days after receipt of the Department's approval of the Feasibility Study as provided for above, or such greater time as is agreed to in writing by the parties, Respondent shall submit to the Department a remedial design engineering report (the "Remedial Design").

XII. The Remedial Design shall include, but not be limited to, the following:

(a) A description of the means of effectuating the alternative technologies selected by the Final Feasibility Study, which collectively constitute the Remedial Program

("Remedial Program"). This shall include, but not be limited to, the quality control and quality assurance procedures and protocols and health and safety procedures which will be applied to construction activities;

(b) "Contract-ready" documents for the construction of the elements of the Remedial Program, including plans and specifications prepared and certified by a licensed professional engineer registered in the State of New York, which shall satisfy all applicable state and federal laws, rules and regulations;

(c) A time schedule for construction of the elements of the Remedial Program;

(d) The parameters, conditions, procedures and protocols to determine the effectiveness of the Remedial Program, including a schedule for periodic sampling of existing and planned groundwater monitoring wells on-site and off-site;

(e) A description of the maintenance and monitoring activities, procedures and protocols to be undertaken during the period commencing upon completion of the construction of the elements of the Remedial Program, including a provision for submission to the Department of periodic monitoring reports;

(f) A contingency response remedial program to be implemented in the event that any element of the Remedial Program fails to operate in accordance with the Remedial Design prior to the date thirty years after satisfactory completion of construction pursuant thereto; and

(g) An evaluation of the need to take measures to provide for the health and safety of human beings residing at and in the vicinity of the Sites during a thirty-year (30) period following completion of the implementation of the Remedial Program and a plan for the implementation of such measures.

XIII. A. Within ninety (90) days after its receipt of the Remedial Design, the Department shall determine if the Remedial Design was prepared in accordance with the requirements of this Order and shall provide written notification to the Respondent of its determination.

B. If the Department disapproves the Remedial Design, the written notification shall specify the basis of the Department's objections. Within thirty (30) days after its receipt of the notice of disapproval, or such time as is agreed to in writing by the parties, Respondent shall revise the Remedial Design addressing each of the Department's objections and shall submit to the Department a second Remedial Design which has been revised in accordance with the requirements of this Order.

Within fifteen (15) days after its receipt of the Revised Remedial design, the Department shall determine if the Revised Remedial Design was prepared in accordance with the requirements of this Order.

C. If the Department approves either the Remedial Design or the Revised Remedial Design, the approved Remedial Design shall become incorporated in and made a part of this Order and shall be attached hereto as Exhibit "E" (hereinafter the "Final Remedial Design").

D. If the Department disapproves the Revised Remedial Design, the Respondent shall be in violation of this Order if it has not submitted a Remedial Design in accordance with the requirements of this Order.

XIV. Within such period as may be allowed by the Final Remedial Design, Respondent shall complete construction pursuant to the Final Remedial Design, and within forty-five (45) days thereafter, Respondent shall submit to the Department as-built drawings and a certification that construction was completed in accordance with the Final Remedial Design. Such certification shall be by a licensed professional engineer registered in the State of New York.

XV. Within forty-five (45) days after receipt of the as-built drawings and certification, the Department shall advise Respondent in writing as to whether the construction has been completed in accordance with the Final Remedial Design.

In the event that the construction has not been completed in accordance with the requirements of the Final Remedial Design, the Department may take any action and pursue any remedy to which it may be entitled by law.

If the Department acknowledges that the construction has been completed in accordance with the Final Remedial Design, then, unless a Supplementary Remedial Program is required pursuant to Paragraph XXVII hereof, and except for the requirements of Paragraph XVII hereof, such acknowledgement shall constitute a full and complete satisfaction and release of each and every claim, demand, remedy or action whatsoever against Respondent, its past, current and future board members, servants, agents, employees, successors and assigns, which the Department has or may have pursuant to applicable federal or state law for remedial work, relative to or arising from the disposal of hazardous and industrial wastes at the Sites.

Nothing herein shall be construed as barring, diminishing, adjudicating or in any way affecting any legal or equitable rights or claims, actions, suits, causes of action or demands whatsoever that the Department may have against anyone other than Respondent, its past, current and future board members, servants, agents, employees, successors and assigns.

XVI. The right of the Department to enforce the terms of this Order shall not be affected by any release contained herein.

XVII. Respondent shall maintain and provide for physical security at the Sites and conduct a monitoring program there at in accordance with the Final Remedial Design ("Post-Closure Period"). Respondent shall have the right, upon written notification to the

Department, to discontinue these post-closure measures upon a showing that they are no longer "necessary" as determined in accordance with the terms of the Final Remedial Design. During such Post-Closure Period, Respondent shall provide the Department with periodic monitoring reports set forth in the Final Remedial Design.

XVIII. The Department shall ensure that the EPA's Region II is fully advised of each phase of remediation of the Sites to be performed under this Order. The Department shall forward to EPA copies of all necessary data, documents, proposals, reports, studies, and correspondence that pertain to remediation of the Sites and action taken towards remediation in accordance with the provisions of the Department's Agreement with the EPA on enforcement of CERCLA.

XIX. The Department shall have the right to obtain for the purpose of comparative analysis "split samples" or "duplicate samples" of all substances and materials sampled by Respondent pursuant to this Order.

XX. The Department and Respondent shall each have access to and share all raw data, field notes, logs and chemical analyses generated during the investigation as soon as they become available, except that the Department shall not be required to provide the analytical results of any split sampling until such time as those results are made available by Respondent.

XXI. Respondent and Department shall mutually agree to appropriate work dates for the field activities described in the Order. In no case will said field activities be scheduled less than five working days in advance of notice to the Department.

XXII. Respondent shall permit, upon reasonable notice, any duly designated officer, employee, consultant, contractor or agent of the Department to enter upon the Sites or areas in the vicinity of the Sites which may be under the control of Respondent, and any areas necessary to gain access thereto, for inspection purposes and for the purpose of making or causing to be made such sampling and tests as the Department deems necessary, and for ascertaining Respondent's compliance with the provisions of this Order.

Notwithstanding the foregoing, the Department reserves whatever other rights of access it may have under the Environmental Conservation Law.

XXIII. Respondent shall promptly seek whatever permits, easements, rights-of-way, or access agreements ("authorizations") which are necessary to perform the work required as part of this Order. If the Respondent's good faith efforts are unsuccessful in obtaining any required authorizations, the Department, upon notification, shall exercise its authority under the Environmental Conservation Law in an effort to assist the Respondent to obtain the necessary authorizations. The Department acknowledges that pursuant to 6 NYCRR Part 375.8, permits may not be required for work performed pursuant to this Order.

XXIV. The terms and conditions of this Order shall be delayed or modified if Respondent cannot comply because of an act of God, war, strike, riot, adverse weather or other condition as to which negligence or willful misconduct on the part of the Respondent was not a proximate cause; provided however, that Respondent shall immediately notify the Department in writing when it obtains knowledge of any such condition and request an appropriate extension or modification of the provisions hereof.

XXV. (a) The failure of Respondent to comply with any provision of this Order shall constitute a default and a failure to perform an obligation under this Order and under the ECL.

(b) Except as otherwise specifically provided in this Order, if the Department determines the Respondent has defaulted in the performance of any term or condition of this Order, it shall give Respondent written notice specifying in what manner the Respondent has defaulted. If the default is not cured by Respondent within fifteen (15) days after receipt of the written notice of default, the Department may exercise its rights, including summary abatement powers, under applicable law to remedy the default and violation of this Order. If the default cannot be cured within the fifteen (15) day period, the period shall be extended for a reasonable additional time, provided that the Respondent commences to cure the default within the fifteen (15) day period and proceeds diligently thereafter to effect cure of the default.

XXVI. Respondent shall retain a third-party professional consultant, contractor and/or laboratory to perform the technical, engineering and analytical obligations required by this Order.

XXVII. In the event that either the Department or Respondent finds at any time prior to or during the post-closure period that any element of the Remedial Program has failed to meet the provisions of the Final Remedial Design, one shall immediately notify the other by telephone and in writing of such failure. Immediately upon such discovery or immediately upon its receipt of written notification from the Department of such failure, Respondent shall investigate to determine its causes, develop a Supplementary Remedial Program (the "SRP") to correct the failure, and submit the SRP to the Department within 60 days of discovery or receipt of such written notification. The SRP shall include a written scope of work and time schedule for implementation.

XXVIII. A. Within thirty (30) days of receipt of the SRP, the Department shall determine if the SRP was prepared in accordance with the requirements of this Order. The Department shall provide written notification to Respondent of its determination.

B. If the Department disapproves the SRP, the written notice shall specify the basis of the Department's objections. Within thirty (30) days after receipt of notice of disapproval, or such time as is agreed to in writing by the parties,

Respondent shall revise the SRP addressing each of the Department's objections and shall submit to the Department a second SRP which has been revised in accordance with the requirements of this Order.

Within fifteen (15) days of receipt of the Revised SRP, the Department shall determine if the Revised SRP was prepared in accordance with the requirements of this Order.

C. If the Department approves either the SRP or the Revised SRP, the approved SRP shall become incorporated in and made a part of this Order and shall be attached hereto as Exhibit "F" (hereinafter the "Final SRP").

D. If the Department disapproves the Revised SRP, the Respondent shall be in violation of this Order if it has not submitted a SRP in accordance with the requirements of this Order.

XXIX. Within such period as may be allowed by the Final SRP, the Respondent shall complete construction pursuant to the Final SRP, and within forty-five (45) days thereafter, Respondent shall submit to the Department as-built drawings and a certification that construction was completed in accordance with the Final SRP. Such certification shall be by a licensed professional engineer registered in the State of New York.

XXX. Within forty-five (45) days of receipt of the as-built drawings, the Department will advise Respondent in writing as to whether the construction has been completed and in accordance with the provisions of the Final SRP. In the event

that the construction has not been completed in accordance with the Final SRP, the Department may take any action or pursue any remedy to which it is entitled by law.

If the Department acknowledges that the construction has been completed in accordance with the Final SRP, such acknowledgment shall constitute a full and complete satisfaction and release of each and every claim, demand, remedy or action whatsoever against Respondent, its past, current and future board members, servants, agents, employees, successors and assigns which the Department has or may have pursuant to applicable federal or state law for remedial work, relative to or arising from the disposal of hazardous and industrial wastes at the Sites, except for the requirements of Paragraph XXXI hereof.

Nothing herein shall be construed as barring, diminishing, adjudicating or in any way affecting any legal or equitable rights or claims, actions, suits, causes of action or demands whatsoever that the Department may have against anyone other than Respondent, its past, current and future board members, servants, agents, employees, successors and assigns.

XXXI. Respondent shall maintain and provide for physical security and conduct a monitoring program at the areas at which the Supplementary Remedial Program is implemented in accordance with the Final SRP ("Extended Post-Closure Period"). Respondent shall have the right, upon written notification to the Department, to discontinue the extended post-closure measures upon a

showing that they are no longer "necessary" as determined in accordance with the terms of the Final SRP. During the Extended Post-Closure period, Respondent shall provide the Department with periodic monitoring reports as set forth in the Final Remedial Plan and the Final SRP.

XXXII. Nothing contained in this Order shall be construed as barring, diminishing, adjudicating or in any way affecting (1) any legal or equitable rights or claims, actions, suits, causes of action or demands whatsoever that the Department may have against anyone other than Respondent, its past, current and future board members, servants, agents, employees, successors and assigns; (2) the Department's right to bring an action for summary abatement against Respondent, its past, current and future board members, servants, agents, employees, successors and assigns with respect to areas or resources that may have been affected or contaminated as a result of the release or migration of hazardous or industrial wastes from the Sites or from areas in the vicinity of the Sites.

XXXIII. Respondent shall indemnify and hold the Department, the State of New York, and their representatives and employees harmless for all claims, suits, actions, damages and costs of every name and description arising out of or resulting from the fulfillment or attempted fulfillment of the provisions of this Order to the extent the Respondent's negligent acts or omissions were the proximate cause of the losses.

XXXIV. The effective date of this Order shall be the date this Order is signed by the Commissioner.

XXXV. If for any reason Respondent desires that any provision of this Order be changed, Respondent shall make timely written application to the Commissioner, setting forth reasonable grounds for the relief sought. The Commissioner shall not unreasonably deny such requests.

XXXVI. Within 30 days after the effective date of this Order, Respondent shall file a Declaration of Covenants and Restrictions with the Broome County Clerk's Office for the purpose of providing notice of this Order to all potential future purchasers of any portion of the site. Said Declaration must indicate that any successor in title to any portion of the Sites shall be responsible for implementing the provisions of this Order.

XXXVII. A. All communication required hereby to be made between the Department and Respondent shall be made in writing and transmitted by United States Postal Service, or hand delivered to the address listed below.

B. Unless otherwise agreed in writing, all correspondence with respect to the subject matter of this Order between the signatories hereto shall originate from and be sent to the following:

(i) Respondent:

Mark S. Gorgos, Esq.
Coughlin & Gerhart
One Marine Midland Plaza
P.O. Box 2039
Binghamton, New York 13902

(ii) Department (two copies to each of the following):

Division of Solid and Hazardous Waste
Room 212
50 Wolf Road
Albany, New York 12233

Division of Environmental Enforcement
Room 415
50 Wolf Road
Albany, New York 12233

Regional Director
Region 7
7481 Henry Clay Boulevard
Liverpool, New York 13088

C. No oral advice or guidance by the Department's officers or employees or representatives upon any plan, report, proposal, study or other document, or modifications or additions thereto, submitted by Respondent to the Department, shall relieve Respondent of any obligation it may have to obtain the Department's formal written approval of the same.

XXXVIII. The provisions of this Order shall be deemed to bind the parties and their respective successors and assigns.

XXXIX. The provisions hereof shall constitute the complete and entire Order between Respondent and the Department concerning the Sites. No terms, conditions, understandings or agreements

purporting to modify or vary the terms hereof shall be binding unless made in writing and subscribed by the party to be bound.

DATED: Albany, New York
January 12, 1987

HENRY G. WILLIAMS
Commissioner
New York State Department of
Environmental Conservation

CONSENT BY RESPONDENT

Respondent, without any admission of law or fact, hereby consents to the issuing and entering of this Order, waives its right to a hearing herein as provided by law, and agrees to be bound by the provisions, terms and conditions contained in this Order.

0000054	1		NYSDEC	Report	10/1/87	O'Brien & Gere, Town of Conklin/ NYSDEC	Preliminary Report - Town of Conklin Landfills	Section 1.01 Site Background (Bates 000055).
0000056	1		NYSDEC	Report	10/1/87	O'Brien & Gere, Town of Conklin/ NYSDEC	Preliminary Report - Town of Conklin Landfills	Section 3.01 General information on investigation of the landfills. Between 1964 and 1969 Lower Landfill was used for disposal of municipal solid waste. Between 1969-1975 Upper Landfill used for disposal of municipal solid waste. Investigation was based on groundwater, surface water, and sediment to determine environmental impacts. Section 3.02 discusses the Nature of Waste Materials. Wastes deposited at both Landfills are municipal solid waste as there is no record of disposal of any industrial waste. Leachate samples revealed concentrations of iron, manganese, mercury, copper and benzene at the Lower Landfill. Upper Landfill samples revealed concentrations of iron, manganese, cadmium, chloride, trichloroethene, tetrachloroethene, 1,1-dichloroethane, 1,2-dichloroethane, ethyl benzene and benzene. Bates #s 000056-000057.

0000092	1	Chesapeake Co., Suburban Sanitary, Vindale Mobile Home Builders, Conklin Sanitary, Malchak, Eureka Tent, Conklin Book Center, and Dunn/Donnelly Book/ Harper Row Book			3/21/90	Investigator S. Canfield, NYSDEC		Canfield and Layman interviewed K. Webb former property owner and landfill employee for Conklin Landfill and now a member of JDA Town of Conklin. Mr. Webb worked both upper and lower landfills as a bulldozer operator. Landfill was a ditch type filling to capacity every day. Mentioned list of industries in Possible PRP Column as users of landfill. On one occasion while packing the trash, a drum exploded lifting bulldozer. Malchak Carting used landfill 3 years till barred; used to bring in roll-off containers and garbage trucks. However, Mr. Webb believes that bulk of drums and pails came from Savin and Vindale. Bates #s 000092-000093.

0000087	1	Savin Corporation - 9 West Broad Street, P.O. Box 10270, Stamford, CT. 06904 PH:(203)967-5000; NESCO, and Magnetic Labs Inc. (NESCO)	NYSDEC	Narrative Report	3/27/90	Investigator D. Layman, NYSDEC	Conklin Landfills - Interviews	Telecon with J. Ransford, Savin Corporation, stated that Savin purchased 3 facilities from NESCO, Magnetic Labs manufactured cookware, with heavy metals plating in operation. NESCO used trichlorethene and MEK and solvents were recycled in a distillation process in PA.
0001661	1	Savin, Jewell tea Co., and Malchak.	NYSDEC	Report	3/26/90	Encon Police	Encon Police report Form	Describes drums being brought to landfill from Savin. But could have been Jewell Tea. Also states that hauler Malchak puled some "fast ones" on the town.
0000088	1	SAVIN, NESCO/Magnetic Labs, Jewell Tea Co., Malchak Salvage Co.	NYSDEC	Narrative Report	3/26/90	Investigator D. Layman, NYSDEC	Conklin Landfills-Interviews	In telecon, a Mr. Ken Webb (PH: 775-1503) recalled some drums being hauled to the landfill, however, could remember whether full or empty or where they came from (maybe Jewell Tea Co.). He also gives info as to Malchak tactics. Malchak denies ever been on the site.
0000077	1	Town of Conklin	NYSDEC	Permit Application	3/29/78	Town of Conklin/NYSDEC	Application for Use of A Construction and Demolition Debris Disposal Site	Town of Conklin application to dispose of razed buildings and other structure, dirt, stones, concrete, bricks, plaster, lumber, shingles, plumbing, heating, electric parts; periodic bulky items.

One Marine Midland Plaza
PO Box 2039
Binghamton, New York 13902-2039

Dear Mr. Gorgos:

RE: Town of Conklin Landfills - Site #704013

The Bureau of Environmental Conservation Investigation (BECI) has recently completed an investigation of past disposal activities at the Conklin site. The information obtained during the investigation, together with the sample results obtained at the site in the preliminary and remedial investigations and other information in the Department's files support the probability that hazardous waste was disposed of at the Conklin Landfills. The following is a summary of the evidence supporting the conclusion that hazardous waste was disposed of at the site:

The Right to Know (RTK) form received from GAF Corporation - Special Products Plant in Binghamton listed trichlorethylene and trichlorethane as being used for degreasing purposes. These substances qualify as hazardous wastes. The RTK form indicates that Malchak Garbage Service was its waste transporter and does not identify any landfills used for disposal. In separate interviews conducted by BECI, two former landfill employees stated that Malchak used the Conklin Landfill for disposal until the Town determined that Malchak was picking up waste from outside the Town boundaries, and bringing it (together with waste from within the Town) to the Conklin Dumps.

Groundwater sampling results downgradient of the landfill have detected trichlorethylene at 23 parts per billion. (The standard is 5 ppb.) In addition, vinyl chloride, dichloroethane and chloroethane were detected at 62 ppb, 80 ppb and an average of 17 ppb, respectively (with a standard of 5 ppb for each). Vinyl chloride is a breakdown product of trichlorethylene, and dichloroethane and chloroethane are breakdown products of trichlorethane.

Mr. Mark Gorgos

The conclusion that these hazardous wastes originated from area industries is further strengthened by a BECI interview with the former president of NESCO, an industry operating in the Town during the time period the Dumps were being operated. NESCO used trichlorethylene and the spent solvents were, according to the former president, recycled in a distillation process at Hallstead, Pennsylvania. However, it is reasonable to assume that some of these spent solvents were disposed of at the landfill based on BECI's investigation. NESCO's former president did not know if the company's wastes were taken to the Conklin Dumps, but he did identify Suburban Sanitation as the hauler for the company. Suburban Sanitation was identified by both former landfill operators as a hauler which used the Dumps, and the owner of Suburban Sanitation acknowledged that he used the Conklin Dumps (although he stated he did not recall ever taking any drums to the Dumps).

In light of the additional information which has been obtained by BECI, a reasonable legal and technical basis exists for the conclusion that hazardous wastes have been disposed of at the site. Therefore, the Conklin Landfills will remain on the State Registry of Inactive Hazardous Waste Disposal Sites as a Class 2 Site. The remedial program currently under way will remain eligible for EQBA Title 3 funding in accordance with the Consent Order and State Assistance Contract.

The Town of Conklin should direct O'Brien and Gere to submit a revised schedule for the agreed upon confirmatory sampling and feasibility study as soon as possible. The proposed laboratory contract and Quality Assurance/Quality Control Program for the confirmatory sampling should be reviewed by the Department's Quality Assurance Officer. Mr. Brian Davidson, of my staff, will work directly with Mr. John Tomik, of O'Brien and Gere, on this matter.

The Department is hopeful that we can now move expeditiously toward a Record of Decision on this site. If you have any questions, please contact Mr. Brian Davidson at 518-457-1641.

Sincerely,

Michael J. O'Toole Jr

1.0 INTRODUCTION

In accordance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Section 117(c) and Section 300.435(c)(2)(i) of the National Oil and Hazardous Substances Pollution Contingency Plan, if after the adoption of a final remedial action plan, such action differs in any significant respects from the final plan, an explanation of the significant differences and the reasons such changes were made must be published.

The March 1991 Record of Decision (ROD) for the Conklin Dumps site calls for, among other things, the capping of the Upper Landfill and the Lower Landfill in place and leachate collection and treatment. Since the signing of the ROD, however, the New York State Department of Environmental Conservation (NYSDEC), the lead agency for the project, the New York State Department of Health (NYSDOH), and the Environmental Protection Agency (EPA), the support agency for this project, have concluded that a more favorable remedy would be to excavate the Lower Landfill and consolidate the excavated material on top of the Upper Landfill, followed by capping of the Upper Landfill and leachate collection and treatment.

The ROD identifies and evaluates an alternative to consolidate the Lower Landfill on the Upper Landfill with the Upper Landfill being capped in accordance with 6 NYCRR Part 360 (Alternative No. 6). Alternative 6, summarized in this Explanation of Significant Differences, is described further in the remedial investigation and feasibility study (RI/FS) report prepared for this site.

Consolidation of the Lower Landfill on the Upper Landfill is strongly supported by the lead agency, the support agency, and the Town of Conklin (the owner of the landfill). Consolidation of the Lower Landfill on the Upper Landfill significantly changes but does not fundamentally alter the remedy selected in the ROD with respect to scope, performance, or cost. Consolidation employs the same remedial technologies to reduce the toxicity, mobility, and volume of contamination as the remedy selected in the ROD, *i.e.,* capping and leachate treatment.

This Explanation of Significant Differences will become part of the administrative record file for the Conklin Dumps site. The entire administrative record for the site, which also includes the RI Report, FS Report, ROD, Proposed Plan, and other reports related to the site, is available for public review at the following location:

Conklin Town Hall

The Administrative Record file is also available for public review at the EPA Region II office at the following location:

U.S. Environmental Protection Agency
26 Federal Plaza, Room 2900
New York, New York 10278
Hours: 9:00 am - 5:00 pm
Monday - Friday

2.0 PUBLIC PARTICIPATION ACTIVITIES

EPA and NYSDEC rely on public input to ensure that the concerns of the community are considered in selecting an effective remedy for each Superfund site. To this end, the draft Explanation of Significant Differences was made available to the public for a public comment period which began on June 22, 1992 and concluded on July 22, 1992. A public meeting was held during the public comment period on July 14, 1992 at the Conklin Town Hall to present the draft Explanation of Significant Differences to the public and to address any questions or concerns the public may have concerning the draft Explanation of Significant Differences and the proposed modified remedy. Comments received during the public comment period and their responses are included in the attached Responsiveness Summary.

3.0 SUMMARY OF SITE HISTORY, CONTAMINATION PROBLEMS, AND SELECTED REMEDY

The Conklin Dumps site consists of two landfilled areas totaling about 37 acres, referred to as the Upper and Lower Landfills (Figure 1). The Lower Landfill, which was operated between 1964 and 1969, contains approximately 33,000 cubic yards of wastes. It is believed that only municipal solid waste was disposed of in the Lower Landfill. The Upper Landfill contains approximately 72,000 cubic yards of waste. It is believed that some industrial wastes were co-disposed with municipal solid wastes in the Upper Landfill. The Landfills are owned and were operated by the Town of Conklin. In 1975, a closure order was issued by NYSDEC.

A two-phase hydrogeologic investigation was completed by O'Brien and Gere Engineers for the Broome County Industrial Development Agency in 1984 and 1985. Additional field work was performed in 1986, and in June 1986 the site was nominated for inclusion on the Superfund National Priorities List. In June 1987, a Consent Order was signed between the Town of Conklin and NYSDEC which required an RI/FS to be performed at the Conklin Dumps site. The Consent Order also required that the remedial measures selected in the ROD be implemented at the site.

001764

The RI, which was completed in December 1988, indicated limited ground-water contamination in the immediate vicinity of the Upper Landfill. Confirmatory sampling, performed in June 1990, confirmed the RI findings and provided additional validated data.

The FS report was completed in January 1991. EPA, in consultation with NYSDEC, issued a Proposed Plan on February 3, 1991. A public comment period began on February 4, 1991 and extended until March 6, 1991. A public meeting was held at the Conklin Town Hall on February 25, 1991. A ROD, which was signed by the EPA Regional Administrator on March 29, 1991, called for, among other things, the capping of the Upper Landfill and the Lower Landfill in place and leachate collection and treatment. Comments received at the public meeting, as well as one written comment received during the comment period and the associated responses, are documented in the Responsiveness Summary (ROD Appendix 5).

4.0 DESCRIPTION OF SIGNIFICANT DIFFERENCES AND THE BASIS FOR THOSE DIFFERENCES

During preliminary design activities associated with the selected remedy, it was determined that the construction of a leachate collection trench and cap at the Lower Landfill would present significant engineering difficulties due to the proximity of an adjacent wetland and railroad tracks. In order to eliminate the leachate seeps at the Lower Landfill, it would be necessary to install a leachate-collection system below the water table. A leachate-collection system installed below the water table, however, would collect vast amounts of uncontaminated ground water and could adversely impact the adjacent wetland by dewatering a portion of it, unless hydraulic barriers are installed (which in itself could adversely impact the wetland). In addition, installing a cap on the Lower Landfill could negatively impact the adjacent wetland in that it would encroach on the wetland. Due to these technical feasibility and environmental concerns, a modified remedy consisting of the excavation of the Lower Landfill, consolidation of the excavated Lower Landfill contents onto the Upper Landfill, capping of the Upper Landfill, and construction of a leachate collection and treatment system is proposed.

The modified remedy, presented as Alternative 6 in the ROD, was screened out due to concerns related to Resource Conservative and Recovery Act (RCRA) Land Disposal Restrictions (LDRs). Upon further analysis of the RI data during pre-design activities, however, it has been determined that LDRs do not apply to the Lower Landfill, since there is no evidence to indicate that any waste other than municipal solid waste, as defined by 40 CFR Part 261.4 (b), is contained within the Lower Landfill. The Lower Landfill is believed to contain a heterogeneous mixture of approximately 33,000 cubic yards of municipal refuse with only low concentrations of hazardous substances typically associated with municipal refuse.

001765

Table 1 provides a comparison of the results of the analysis of ground-water and leachate samples with both regulatory levels for determining toxicity characteristics using the Toxicity Characteristic Leaching Procedure (TCLP) as well as treatment standards expressed as Constituent Concentrations in Waste Extract (CCWE) from 40 CFR Part 268 Subpart D. All contaminants for which there is a corresponding TCLP or CCWE standard are one to five orders of magnitude below these standards. Though it is recognized that the TCLP provides a more aggressive leaching than natural leaching of precipitation through the solid waste, the wide disparity between the reported results with regulatory standards indicates that the waste may not be defined as a hazardous waste due to toxicity, and is, therefore, not subject to LDRs.

However, in order to be certain that RCRA Subtitle C is not relevant and appropriate, additional confirmatory sampling will be performed, with selected samples being analyzed for all toxic chemical constituents listed in 40 CFR Section 261.24.

If, during the excavation of the Lower Landfill, excavated wastes fail TCLP testing, which would preclude its placement on the Upper Landfill, this material would be sent to a RCRA-compliant treatment/disposal facility.

In order to assess the proposed modified remedy fully as it compares to the remedy selected in the ROD, an evaluation was performed of the proposed modified remedy utilizing the following criteria set forth in the October 1988, USEPA *Guidance for Conducting Remedial Investigations and Feasibility Studies under CERCLA*.

4.1 Overall Protection of Human Health and the Environment

Placing a final cover on the Lower Landfill and providing a leachate-collection system would afford the same level of protection to public health as the modified remedy, since both remedies would prevent exposure to leachate seeps. The modified remedy, however, would be more protective of the environment than the selected remedy, since elimination of the leachate seeps at the Lower Landfill under the selected remedy would necessitate the installation of a leachate-collection system below the water table. Such an arrangement, however, would result in the collection of vast amounts of uncontaminated ground water, which could dewater a portion of the adjacent wetland.

4.2 Compliance with Applicable or Relevant and Appropriate Requirements (ARARs)

ARARs that apply to the remedy selected in the ROD and the proposed modified remedy include:

- New York State Class GA Ground Water Quality Standards (6 NYCRR Part 703);

- State Permit Discharge Elimination System Requirements (6 NYCRR Parts 750-758);

- New York State Ambient Water Quality Standards (6 NYCRR Part 701);

- National Ambient Air Quality Standards for Particulate Matter (40 CFR Part 50);

- Solid Waste Management Facilities Landfill Closure Criteria (6 NYCRR Part 360-2.15);

- Freshwater Wetlands Requirements (6 NYCRR Part 663); and

- Air Emissions Standards and Guidelines (6 NYCRR Part 212 and New York State Air Guide 1).

With the exception of air emissions regulations, the modified remedy would equal or exceed the selected remedy's ability to comply with ARARs. During excavation of the solid waste, short-term air emissions of particulates and volatiles could possibly occur. However, various engineering controls, such as dust suppressants and odor control measures, would be utilized, as necessary.

The selected remedy specifies a leachate-collection system to guard against the potential for future releases of hazardous substances. Consolidation of the Lower Landfill would simplify the leachate-collection system and improve the efficiency of contaminant removal. Similarly, the removal of the waste would prevent adverse impacts to the wetlands adjacent to the Lower Landfill through a means which would have little if any impact on the wetland. The proximity of the wetlands to the Lower Landfill would provide difficulties with the installation and operation of a leachate-collection system designed to prevent leachate infiltration into the wetlands. A leachate-collection system would invariably negatively impact the wetlands by dewatering a portion of it.

The closure and maintenance of a single landfill unit would facilitate compliance with New York State Solid Waste Management regulations. Though the basic components of the closure would be the same whether one or two landfills were closed, consolidation would decrease the total footprint or landfill area.

If, during the excavation of the Lower Landfill, any excavated wastes fail TCLP testing, which would preclude its placement on the Upper Landfill, this material would be sent to a RCRA-compliant treatment/disposal facility.

4.3 Long-Term Effectiveness and Permanence

Consolidating the waste from the Lower Landfill onto the Upper Landfill would have a greater degree of long-term effectiveness and permanence than if the wastes were

001767

contained in two separate landfill units as is called for in the ROD. As discussed in the following section of this document, the hydrogeologic conditions at the Upper Landfill are better suited for effective leachate collection than at the Lower Landfill.

4.4 Reduction of Toxicity, Mobility, or Volume Through Treatment

The selected remedy and the modified remedy would both include the same methods for treatment of leachate. However, with the consolidation of all of the waste into one landfill unit, the amount of leachate generated would be reduced. The hydrogeologic conditions at the Upper Landfill are better suited for effective leachate collection than at the Lower Landfill. The Upper Landfill is underlain by a low permeability till layer which provides an effective means of containing leachate within the landfill. This is evident by the relatively low levels of contamination found in ground-water monitoring wells downgradient of the landfill. The Lower Landfill, on the other hand, is underlain by sand and gravel outwash. This sand and gravel layer, which is approximately 20 feet thick, is underlain by glacial till. Ground water occurs between 1 and 14 feet below the surface. As a result, in order to eliminate the leachate seeps at the Lower Landfill, it would be necessary to install a leachate-collection system below the water table which would result in the collection (and treatment) of vast amounts of uncontaminated ground water.

The modified remedy would not have a greater effect on the reduction of toxicity of the waste than the selected remedy, but it would reduce the mobility and volume of leachate by providing a more effective means of containing the waste and the leachate generated.

4.5 Short-Term Effectiveness

Although the municipal refuse in the Lower Landfill is 20 to 25 years old and may be fully decomposed, there could be adverse environmental impacts during excavation and transportation. Dust, odors, and volatile emissions would be monitored and controlled to protect the health and safety of workers and the community. As a result, the potential short-term impacts associated with the modified remedy would be greater than those posed by the selected remedy.

A contingency plan would be prepared during the remedial design phase to address any unexpected hazardous waste materials uncovered during the excavation of the Lower Landfill.

Engineering controls would be employed during implementation of the modified remedy to control air emissions and surface runoff.

001783

4.6 Implementability

The ROD identifies the significant factors in assessing implementability as the following:

- the ability to construct and operate;
- the reliability of technologies;
- the ease of undertaking additional remedial action;
- the ability to monitor the effectiveness of each remedy;
- the ability to obtain necessary approvals from other agencies; and
- the availability of services, capacities, equipment, materials and specialists.

The construction of a leachate collection trench and cap at the Lower Landfill, as called for in the ROD would present significant engineering difficulties due to the proximity of the adjacent wetland and the railroad tracks. Hydraulic barriers would be necessary between the collection trench and the wetland to prevent adverse impacts to the wetland.

The modified remedy would require commonly available construction services, equipment and materials. It would provide a greater degree of reliability than the ROD remedy, since only a single landfill unit would require closure and operation and maintenance. Additionally, the amount of leachate requiring treatment would be less, allowing for a smaller and more automated treatment system.

4.7 Cost

The estimated costs for the selected remedy versus the modified remedy compare as follows:

Remedy	Capital Cost	Annual Operation and Maintenance Cost	Present-Worth Cost
Selected Remedy	$3,277,132	$93,180	$4,709,542
Modified Remedy	$3,245,425	$72,764	$4,363,990

The estimated costs for the selected remedy were adapted from the January 1991 FS report and the March 1991 ROD.

This comparison shows the estimated capital cost for the selected remedy and the modified remedy to be essentially equal (approximately 1 percent variation). Although it

001769

may seem reasonable for the modified remedy to be less costly than the selected remedy since only one landfill would be capped (although it would be a slightly larger cap), the cost of excavation and consolidation of the lower Landfill would off-set any savings in capping costs. A detailed breakdown of the estimated cost is provided in Tables 2 and 3.

A greater variation exists in the comparison of annual operating and maintenance costs in which the estimated annual operation and maintenance costs for the modified remedy are approximately 22 percent less than the selected remedy. This is a result of lower requirements for operating and maintaining one landfill rather than two. This difference in operation and maintenance costs is further evident in the estimated present worth in which the annual operation and maintenance costs were taken for a period of 30 years at a 5 percent discount rate.

4.8 State Acceptance

NYSDEC, after careful consideration of the modified remedy, strongly supports consolidation of the Lower Landfill on the Upper Landfill, instead of implementing the remedy selected in the ROD. Based upon further analysis of the site during preliminary design activities, it appears that an effective landfill cap and leachate-collection system would be difficult to implement at the Lower Landfill. NYSDEC supports the modified remedy due to the environmental, public health, and technical advantages, and due to the fact that the modified remedy significantly changes but does not fundamentally alter the remedy selected in the ROD with respect to scope, performance, or cost. NYSDOH also supports on-site consolidation (see Appendix A).

4.9 Community Acceptance

No written comments pertaining to the modified remedy were received. Comments received at the public meeting and their responses are addressed in the attached Responsiveness Summary. The comments at the public meeting did not raise any substantial objections or concerns about the modified remedy. Therefore, EPA believes that the modified remedy has the support of the affected community.

5.0 AFFIRMATION OF STATUTORY DETERMINATIONS

The modified remedy, excavation of the Lower Landfill and consolidation of the excavated material on top of the Upper Landfill, followed by capping of the Upper Landfill and leachate collection and treatment, satisfies all statutory requirements. EPA, NYSDEC, and NYSDOH believe that the modified remedy is protective of human health and the environment, complies with federal and state requirements that are applicable or relevant

001770

and appropriate to this remedial action and is cost-effective. In addition, the modified remedy utilizes permanent solutions and alternative treatment technologies to the maximum extent practicable for this site.

Regional Administrator

Attached for your review and approval is a *Close-Out Report* for the Conklin Dumps Superfund site, located in the Town of Conklin, Broome County, New York.

The Conklin Dumps site originally consisted of two landfilled areas totaling about 37 acres, referred to as the Upper and Lower Landfills. The Lower Landfill, which was operated between 1964 and 1969, contained approximately 48,000 cubic yards of wastes before it was excavated and consolidated with the Upper Landfill. The Upper Landfill, which originally contained approximately 55,000 cubic yards of waste, was operated from 1969 until 1975, when a closure order was issued by the New York State Department of Environmental Conservation (NYSDEC). The property is currently owned by the Town of Conklin.

In June 1986, the site was nominated for inclusion on the National Priorities List (NPL). In June 1987, a Consent Order was signed between the Town of Conklin and NYSDEC, which covered the performance of a remedial investigation and feasibility study (RI/FS) and the remedial design/remedial action.

Following the completion of the RI/FS, a Record of Decision (ROD) was signed by the EPA Regional Administrator on March 29, 1991. The ROD called for, among other things, capping of the Upper Landfill and the Lower Landfill in-place, leachate collection, either on- or off-site treatment of the leachate, imposition of deed restrictions to prevent the installation of drinking water wells at the site and to restrict activities which could affect the integrity of the cap, and long-term monitoring.

During preliminary design activities associated with the selected remedy, it was determined that the construction of a leachate collection trench and cap at the Lower Landfill would present significant engineering difficulties due to the proximity of an adjacent wetland and railroad tracks. In order to eliminate the leachate seeps at the Lower Landfill, it would be necessary to install a leachate collection system below the water table. A leachate collection system installed below the water table, however, would collect vast amounts of uncontaminated ground water and could adversely impact the adjacent wetland by dewatering a portion of it, unless hydraulic barriers were installed (which in itself could adversely impact the wetland). In addition, installing a cap on the Lower Landfill could negatively impact the adjacent wetland in that it would encroach on the wetland. Due to these technical feasibility and environmental concerns, the selected remedy was modified by an Explanation of Significant Differences in September 1992. The modified remedy consists of the excavation of the

SYMBOL —>	CNYRS	CNYRS	NYRB	ERRD	ERRD	DRA	RA	
SURNAME ->	BERNAS	SINGERMAN	LA PADULA	MCCABE	CASPE	MUSZYNSKI	FOX	
DATE ----->	9/10/92	9/10	9/11	9/13	9/17/92		9/17/92	

Lower Landfill, consolidation of the excavated Lower Landfill contents onto the Upper Landfill, capping of the Upper Landfill, construction of a leachate collection system, and either on- or off-site treatment of the leachate.

The excavation of the Lower Landfill began in January 1993. The composition of the wastes that were encountered during the excavation was primarily soil and decomposed organic matter intermixed with scrap metal, bottles and fabric from a local tent manufacturer. Although four 55 gallon drums were encountered, they were found to be empty or contained non-hazardous debris, and were crushed and disposed of in the Upper Landfill.

The waste that was excavated from the Lower Landfill was deposited on the Upper Landfill in approximately one-foot lifts. This effort was completed in July 1993. A *Remedial Action Report*, documenting the completion of the excavation of the Lower Landfill was approved on September 29, 1993.

The compaction and regrading of the excavated waste mass, installation of a leachate recovery system, construction of a final cover system for the Upper Landfill, and the installation of an eight-foot high chain linked fence around the Upper Landfill to restrict access, was performed from October 1993 to November 1994.

In June 1995, the Binghamton-Johnson City Joint Sewer Board approved the Town of Conklin's application for discharge of the leachate from the Upper Landfill into the sanitary sewer system for treatment at the Binghamton-Johnson City Joint Sewage Treatment Plant in Vestal, New York. This approval required that the Town obtain an industrial wastewater discharge permit and temporarily store the leachate in an on-site storage tank while it is sampled and analyzed to determine if it meets the discharge requirements of the permit.

The construction of a leachate storage, pre-treatment system, and pipeline to the sewer interceptor, which began in November 1995, included the installation of a 30,000 gallon horizontal steel storage tank with a secondary containment dike, installation of a leachate pre-treatment system, consisting of a series of bag filters to remove solids, and installation of a pipe to discharge the leachate from the storage and pre-treatment system to the sanitary sewer system. The work was completed in January 1996. A *Remedial Action Report*, documenting the completion of the construction of the final cover system and leachate collection system for the Upper Landfill, leachate collection tank installation, and construction of a pipeline to the sewer interceptor was approved on July 15, 1996.

It is requested that you approve the *Close-Out Report* by signing this document. Following your approval of the *Close-Out Report*, it is anticipated that the following will be accomplished shortly thereafter:

1. Approval of a *Notice of Intent to Delete* the site from the NPL.

2. Publication of the *Notice of Intent to Delete* in the *Federal Register* and a notice in a local newspaper;

3. Preparation of a responsiveness summary, as required, addressing comments resulting from a thirty-day public comment period associated with the *Notice of Intent to Delete*; and

4. Publication of a *Notice of Deletion* in the *Federal Register*.

This deletion will then be reflected in subsequent publications of the NPL.

My staff and I are available to discuss any questions that you might have regarding the Conklin Dumps site.

Six Month Survey - State Lead NPL Sites -To be completed via LAN by the Remedial Project Manager

1. Name of Site: Conklin Dumps
Location of Site (Municipality, County, and State):Town of Conklin,Broome County,NY
Name of Remedial Project Manager: Arnold R. Bernas
Telephone Number: 637-3964

2. What is (are) the current activities at the site:

Pre-Remedial___ Removal____RI___ FS_ RD___ RA____O&M X___Other____

3. Who had the lead on the conduct of the site work? State Contractor____PRP Contractor X____ Other_
—

4. This site_is_ an enforcement site. The site has not recently (within last 3 years) transferred from fund lead to enforcement lead or vice- a-versa. Provide brief explanation if there has been any change.

5. Have there been any major changes in site response activities from those previously reviewed and/or approved by EPA in Records of Decision, Administrative Orders, Consent Decrees, Work Plans, Standard Operating Plans, etc.? If yes explain.No

6. Has the State provided EPA with submissions/deliverables in a timely manner and has the State provided EPA with the opportunity to concur on actions when appropriate? Yes

7. Has the State generally met alternate target or alternate commitment dates or are unexplained delays in completing these commitments and targets routine. Is EPA informed early if there are going to be delays in meeting commitments or targets for the site? Yes

8. Does the State ensure that the response actions are conducted in accordance with CERCLA and the National Continency Plan -especially with respect to remedy selection and implementation. Does the State ensure work is conducted in accordance with EPA guidance (e.g. risk assessment). Has the State ensured that work conducted at State-lead NPL sites is conducted in accordance with EPA quality assurance and quality control policies and procedures. Yes

9. Do the personnel and contractors assigned to this site by the State exercise sound technical judgement with respect to the site response actions. If in your opinion the answer is no please explain.
yes
10.The State or a State contractor is present in the field for approximately what percent of the time for site investigation work, remedial design work conducted in the field, remedial construction activities, or O&M?
(Check any that apply) Don't know

RI	25%____	50%___	75%_____	100%_____
RD field work	25%____	50%___	75%_____	100%_____
RA (construction)	25%____	50%___	75%_____	100%_____
O&M				

Is State oversight of the field work conducted by PRPs or State contractors adequate? Yes

11. Does the State utilize EPA funds at this site effectively? Don't have any knowledge of EPA funds on this site.Project completed under estimate.

Letter to the Town of Conklin
from Mr. Robert L. Marino, NYSDEC Chief,
June 6, 1996

R. Dana

New York State Department of Environmental Conservation
50 Wolf Road, Albany, New York 12233 - 7010

Michael Zagata
Commissioner

JUN - 6 1996

Town of Conklin
1271 Conklin Road
P.O. Box 182
Conklin, New York 13748

Dear Sir/Madam:

As mandated by Section 27-1305 of the Environmental Conservation Law (ECL), the New York State Department of Environmental Conservation (NYSDEC) must maintain a Registry of all inactive disposal sites suspected or known to contain hazardous waste. The ECL also mandates that this Department notify the owner of all or any part of each site or area included in the Registry of Inactive Hazardous Waste Disposal Sites as to changes in site classification.

Our records indicate that you are the owner or part owner of the site listed below. Therefore, this letter constitutes notification of change in the classification of such site in the Registry of Inactive Hazardous Waste Disposal Sites in New York State.

DEC Site No.: 704013
Site Name: Conklin Upper Landfill
Site Address: Broome County Industrial Park Access Road, Conklin, NY 13748

Classification Change from 2 to 4

The reason for the change is as follows:

- The closure of the upper landfill has been completed in accordance with the Record of Decision (ROD) and the approved design. A long term O&M plan has been implemented by the Town and approved by the NYSDEC. Thus, reclassification to class 4 is justified.

Enclosed is a copy of the New York State Department of Environmental Conservation, Division of Hazardous Waste Remediation, Inactive Hazardous Waste Disposal Site Report form as it appears in the Registry and Annual Report, and an explanation of the site classifications. The Law allows the owner and/or operator of a site listed in the Registry to petition the Commissioner

JUN 1996
Received
Division of
Environmental
Enforcement

of the New York State Department of Environmental Conservation for deletion of such site, modification of site classification, or modification of any information regarding such site, by submitting a written statement setting forth the grounds of the petition. Such petition may be addressed to:

Michael Zagata
Commissioner
New York State Department of Environmental Conservation
50 Wolf Road
Albany, New York 12233-0001

NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
DIVISION OF HAZARDOUS WASTE REMEDIATION 5/29/96
INACTIVE HAZARDOUS WASTE DISPOSAL REPORT

CLASSIFICATION CODE: 4 REGION: 7 SITE CODE: 704013
EPA ID: NYD981486947

NAME OF SITE : Conklin Upper Landfill
STREET ADDRESS: Broome County Industrial Park Access Road
TOWN/CITY: COUNTY: ZIP:
Conklin Broome 13748

SITE TYPE: Open Dump- Structure- Lagoon- Landfill-X Treatment Pond-
ESTIMATED SIZE: 6.5 Acres

SITE OWNER/OPERATOR INFORMATION:
CURRENT OWNER NAME....: Town of Conklin
CURRENT OWNER ADDRESS.: 1271 Conklin Rd., P.O.B. 182, Conklin, NY
OWNER(S) DURING USE...: Town of Conklin
OPERATOR DURING USE...: Town of Conklin
OPERATOR ADDRESS.....: Route 6, Conklin, NY
PERIOD ASSOCIATED WITH HAZARDOUS WASTE: From 1964 To 1975

SITE DESCRIPTION:
Two former Town landfills; known as the upper and lower, were operated from the mid 1960s to the mid 1970s. A small amount of industrial chemical waste had reportedly been disposed of at each of them. Leachate analysis has indicated the presence of a number of volatile organic chemicals, including vinyl chloride chloroethane, methylene chloride, 1,1-dichloromethane and a number of other contaminants. After this site was closed, an industrial park was built around the two dumps. The Broome County Industrial Development Authority hired a consulting engineering firm to conduct a hydrogeological investigation of the two sites. The study was done to assess the impact of the dumps on the area groundwater. In 1987 the DEC entered into an agreement with the Town to develop a remedial plan. A Consent Order was signed by the Town to enable them to receive Title-3 EQBA funds. A Remedial Investigation/Feasibility Study (RI/FS) was completed in the fall of 1990.
A Record of Decision (ROD) was signed by the USEPA on March 29, 1991.
The Conklin dumps have been listed on the National Priorities List (NPL).
The Town has remediated the landfills by using two contracts. Contract No. 1 (the lower landfill) called for excavation and relocation of all municipal wastes into the upper landfill. Contract No 2 (the upper landfill) called for landfill capping and installation of a leachate collection system. The Town has obtained a permit to discharge the landfill leachate into the municipal sewer system. A holding and batch tank system was constructed so that the leachate could be tested before discharge.
All remedial work is now complete. The project is currently in the longterm operation and maintenance phase.

HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY (units)
Vinyl Chloride (U043 Waste)	unknown
Methylene Chloride (F002 Waste)	unknown

SITE CODE: 704013

REMEDIAL ACTION:

Proposed- Under design- In Progress- Completed-X
NATURE OF ACTION: Remedial program

GEOTECHNICAL INFORMATION:
SOIL TYPE: Hardpan or gravel
GROUNDWATER DEPTH: 24 ft.

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Leachate analysis indicates volatile organics in the upper landfill.

ASSESSMENT OF HEALTH PROBLEMS:

Because of groundwater contamination at and near the site, the NYSDOH recommended that public water be extended to residents downgradient of the site. Extension of the public water supply was completed in 1988. In March 1991, five private water supplies downgradient of the site were sampled and no volatile organic contaminants were detected. Arsenic was detected at levels below the maximum contaminant level for public water supplies in two wells. Residents have been advised to connect their homes to the public water supply.

APPENDIX K

USEPA Notice of Deletion of the Conklin Dumps Site from the National Priorities List, April 4, 1997

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 300

National Oil and Hazardous

Substances Pollution Contingency Plan;

National Priorities List Update

AGENCY: Environmental Protection Agency

ACTION: *Notice of Deletion* of the Conklin Dumps site from the National Priorities List.

SUMMARY: The Environmental Protection Agency (EPA) Region II announces the deletion of the Conklin Dumps site from the National Priorities List (NPL). The NPL is Appendix B of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), which EPA promulgated pursuant to Section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended. EPA and the State of New York have determined that all appropriate Hazardous Substance Response Trust Fund (Fund)-financed responses under CERCLA have been implemented and that no further cleanup by responsible parties is appropriate. Moreover, EPA and the State of New York have determined that remedial actions conducted at the site to date have been protective of public health, welfare, and the environment.

EFFECTIVE DATE: [Date of publication]

ADDRESSES: For further information contact: Arnold R. Bernas, P.E., Remedial Project Manager, U.S. Environmental Protection Agency, Region II, 290 Broadway, 20th Floor, New York, NY 10007-1866.

FOR FURTHER INFORMATION CONTACT: Mr. Bernas at (212) 637-3964.

SUPPLEMENTARY INFORMATION: The site to be deleted from the NPL is: Conklin Dumps site, Town of Conklin, New York. The closing date for comments on the *Notice of Intent to Delete* the site from the NPL was March 12, 1997. EPA did not receive any comments during the comment period; therefore, EPA has not prepared a Responsiveness Summary.

EPA identifies sites which appear to present a significant risk to public health, welfare, or the environment and it maintains the NPL as the list of those sites. Sites on the NPL may be the subject of Fund-financed remedial actions. Any site deleted from the NPL remains eligible for Fund-financed remedial actions in the unlikely event that conditions at the site warrant such action. Section 300.66(c)(8) of the NCP states that Fund-financed actions may be taken at sites deleted from the NPL. Deletion of a site from the NPL does not affect responsible party liability or impede EPA efforts to recover costs associated with response efforts.

List of Subjects in 40 CFR Part 300

Environmental protection, Air pollution control, Chemicals, Hazardous substances, Hazardous waste, Intergovernmental relations, Penalties, Reporting and record keeping requirements, Superfund,

Water pollution control, Water supply.

FILE COPY

April 4, 1985

Henry G. Williams
Commissioner

The Honorable John Guinan
Deputy County Executive
Broome County Office Building
Government Plaza, P.O. Box 1766
Binghamton, NY 13902

Dear Mr. Guinan:

This letter is a follow-up to my February 20, 1985 meeting with Mr. David Machlica, Broome County IDA, concerning the Conklin Landfills. At that meeting, it was agreed to evaluate the reclassification of the Conklin Landfills based on the Hydrogeologic Investigations, Proposed Broome County, Industrial Park prepared by O'Brien and Gere Engineers.

These reports generally exceed the scope of work of a Phase II study. A Phase II study is designed to determine if a significant threat to public health or the environment exists from the site. However, these studies are not usually sufficient to serve as the basis for the design of remedial actions or to determine the full extent of environmental contamination.

Based on our review of both the March 1984 and February 1985 Hydrogeologic Investigation Reports, we believe that sufficient data exists to conclude that the Conklin Landfills pose a significant threat to the environment and should be reclassified from a Class (2a) to a Class (2) site. This proposed classification is based on the contravention of groundwater standards; a preliminary HRS score of greater than 28.5, which may qualify this site for the National Priorities List (NPL); and a major leachate problem around the site.

Reclassification as a Class (2) site will require that remedial actions be undertaken. Proper design of remedial measures require the completion of a Remedial Investigation and Feasibility Study (RI/FS), which may incorporate information from the hydrogeologic studies conducted to date. The purpose of the RI/FS is to obtain sufficiently detailed data delineating the areal extent of waste disposal, character of hazardous waste disposal, the areal and vertical extent of groundwater contamination, extent of surface water contamination, air contamination, and detailed hydrogeological data throughout the site; and to perform a detailed evaluation of all viable remedial measures including an assessment of their costs and effectiveness. While the studies conducted to date provide some of this information, there are several items which require more detailed investigation; especially regarding geological characteristics between the upper/lower landfills, extent of waste disposal of the lower landfill, adequate definition of the extent of environmental contamination, and detailed evaluation of remedial alternatives. The landfilling of wastes below the groundwater table, leachate seeps to the south of the site, contamination of well 6 and well 18 and the mixed geology of the area also need to be further evaluated.

Enclosed are copies of detailed comments on the O'Brien and Gere reports from the New York State Department of Health (Syracuse Regional Office), the Bureau of Remedial Action, and the Bureau of Hazardous Site Control. These comments provide more specific guidance on items which need to be addressed in the RI/FS.

We would be pleased to meet with County representatives to discuss these issues in detail. Please contact Mr. Gross at (315) 428-4483 or me, at (518) 457-9538, to schedule a meeting.

APPENDIX M

Letter to Mr. Mark S. Gorgos,
from Mr. Michael J. O'Toole, Jr., NYSDEC Director,
April 25, 1990

R. Cozzy

New York State Department of Environmental Conservation
50 Wolf Road, Albany, New York 12233 -7010

Thomas C. Jorling
Commissioner

APR 25 1990

Mr. Mark S. Gorgos
Coughlin and Gerhart
One Marine Midland Plaza
PO Box 2039
Binghamton, New York 13902-2039

Dear Mr. Gorgos:

RE: Town of Conklin Landfills - Site #704013 GRANT

The Bureau of Environmental Conservation Investigation (BECI) has recently completed an investigation of past disposal activities at the Conklin site. The information obtained during the investigation, together with the sample results obtained at the site in the preliminary and remedial investigations and other information in the Department's files support the probability that hazardous waste was disposed of at the Conklin Landfills. The following is a summary of the evidence supporting the conclusion that hazardous waste was disposed of at the site:

The Right to Know (RTK) form received from GAF Corporation - Special Products Plant in Binghamton listed trichlorethylene and trichlorethane as being used for degreasing purposes. These substances qualify as hazardous wastes. The RTK form indicates that Malchak Garbage Service was its waste transporter and does not identify any landfills used for disposal. In separate interviews conducted by BECI, two former landfill employees stated that Malchak used the Conklin Landfill for disposal until the Town determined that Malchak was picking up waste from outside the Town boundaries, and bringing it (together with waste from within the Town) to the Conklin Dumps.

Groundwater sampling results downgradient of the landfill have detected trichlorethylene at 23 parts per billion. (The standard is 5 ppb.) In addition, vinyl chloride, dichloroethane and chloroethane were detected at 62 ppb, 80 ppb and an average of 17 ppb, respectively (with a standard of 5 ppb for each). Vinyl chloride is a breakdown product of trichlorethylene, and dichloroethane and chloroethane are breakdown products of trichlorethane.

The conclusion that these hazardous wastes originated from area industries is further strengthened by a BECI interview with the former president of NESCO, an industry operating in the Town during the time period the Dumps were being operated. NESCO used trichlorethylene and the spent solvents were, according to the former president, recycled in a distillation process at Hallstead, Pennsylvania. However, it is reasonable to assume that some of these spent solvents were disposed of at the landfill based on BECI's investigation. NESCO's former president did not know if the company's wastes were taken to the Conklin Dumps, but he did identify Suburban Sanitation as the hauler for the company. Suburban Sanitation was identified by both former landfill operators as a hauler which used the Dumps, and the owner of Suburban Sanitation acknowledged that he used the Conklin Dumps (although he stated he did not recall ever taking any drums to the Dumps).

In light of the additional information which has been obtained by BECI, a reasonable legal and technical basis exists for the conclusion that hazardous wastes have been disposed of at the site. Therefore, the Conklin Landfills will remain on the State Registry of Inactive Hazardous Waste Disposal Sites as a Class 2 Site. The remedial program currently under way will remain eligible for EQBA Title 3 funding in accordance with the Consent Order and State Assistance Contract.

The Town of Conklin should direct O'Brien and Gere to submit a revised schedule for the agreed upon confirmatory sampling and feasibility study as soon as possible. The proposed laboratory contract and Quality Assurance/Quality Control Program for the confirmatory sampling should be reviewed by the Department's Quality Assurance Officer. Mr. Brian Davidson, of my staff, will work directly with Mr. John Tomik, of O'Brien and Gere, on this matter.

The Department is hopeful that we can now move expeditiously toward a Record of Decision on this site. If you have any questions, please contact Mr. Brian Davidson at 518-457-1641.

APPENDIX N

User's Guide to Customized Program

Appendix N

Using the Database for the Potential Responsible Party Search

The Database for the Potential Responsible Party Search (DPRPS), developed in Microsoft *Access*, provides a variety of options for reviewing, retrieving and reporting information. The following provides a general description of the database, the information contained therein, and methods for retrieving and reporting the information.

General Database Description

The DPRPS provides four primary functions: (1) document management; (2) document referencing for easy retrieval; (3) document description; and (4) information retrieval.

Functions (1) and (2) are achieved through the use of the Bates identification number. Every document containing information which may be useful in the PRP search was assigned a separate and distinct number. This number can be located at the bottom right hand corner of each PRP search document. After a number was assigned, it was entered into the database, and a description of the document was given.

Every entry in the DPRPS has several fields, each of which describes (function 3) the document. The fields are as follows:

- Bates I.D. Number
- Box Number (identifies the box which contains the document)
- Possible PRP
- Source (where did the information originate)
- Type of Document (is the document a letter, questionnaire, memo, etc.)
- Date (the date the document was written)
- The Author and Recipient
- Subject
- Abstract

Information retrieval (function 4) is conducted using one, or a combination of several of the fields listed above. For example, a user can locate a particular document through its Bates I.D. number, search for key words, find all DEC questionnaires, or look up all documents produced in 1985. There are many ways of retrieving information once the user gets to know the database

Getting Started

When you first open the DPRPS, you will see the Main Switchboard Form. This form allows you to search through the data and print reports.

Searching For Data - click Search for Data and choose from the following options.

Note: You may view your search results in two ways: datasheet or form. The datasheet provides the information in table form, allowing you to view several entries at one time. The form view makes it easier to view the details of each entry. When your search is complete the database window will appear. In the database window click View, and choose between datasheet and form.

- Search for a Bates ID # - if you choose this option, you will be asked to enter the Bates ID number.

- Search by box number - if you choose this option, you will be asked to enter the box number.

- Search within a date range - if you choose this option, you will be asked to provide the starting data and the ending date within the range.

- Search by Possible PRP - if you choose this option, you will be asked to provide the PRP name.

- Search by Source keyword - if you choose this option, you will be asked to identify a specific source. Remember, the source is where the documentation originated, not necessarily the author.

- Search by Type Keyword - if you choose this option, you will be asked to identify which type of document you are looking for. For example, if you wish a listing of all memos, type "memo."

- Search for Author/Recipient - if you choose this option, type in either the name of the author or the recipient. Note: This option also allows you to find correspondence between a PRP and the DEC. To do this, type both the author and the recipient, separated by a "/."

- Search by Subject Keyword - click Search for Data and choose from the following options. type in the subject keyword you are looking for. A subject may be illegal dumping, in which case you could enter either "illegal" or "dumping. If the keyword search using the subject field does not yield results, try the same search in the abstract keyword search.

- Search by Abstract Keyword - if you choose this option, type in the abstract keyword you are looking for. Since the abstract for each entry in the database tends to be more extensive then any other field, this keyword search provides the most opportunities for success.

Reporting Data - click Print Reports and choose from the following options:

Note: Remember to view your data before printing. Simply click Preview Before Printing. This reduces errors and paper waste.

- Evidentiary Document - if you choose this option, all evidentiary documents will be printed.
- Search for specified Abstract Keyword
- Search for Specified Subject Keyword
- Search for Specified Date Range
- Search for Specified Possible PRP
- Search for Specified PRP within Date Range
- Sort All Data by Bates ID #
- Sort All Data by Date
- Sort All Data by Possible PRP

Sorting Data - The last three options listed above are not searches. Instead, they are a quick and convenient way to sort ALL the entries in the database. Each sort orders the entries differently, and provides a unique way of viewing the data.

Retrieving More Detailed Information, Entering Document Data, and Designing the Database

While the Main Switchboard Form allows you to perform must search and reporting functions, you will probably need to additional information, or want to make changes to the database. To do this, go to the top right hand corner of the menu, and click on Database Window (represented by an icon showing three sheets of paper).

Once you are in the Database Window, you will see several folders, each containing different types of information. They are as follows:

- The Table folder - allows you to view all the documents in table form, sorted by Bates ID #. Simply click Documents.

- The Queries Folder - Queries are similar to the searches conducted in the Main Switchboard Form. The data is automatically reported in datasheet view, and there are several queries to choose from.

- The Form Folder - The form folder also allows you to conduct searches similar to those conducted in the Main Switchboard form. The results of any search conducted while in the form folder will be reported in Form view. The form folder also contains the option "Enter Document Data." This option allows you to add new data. The forms folder also allows you to quickly switch back to the Main Switchboard Form by clicking that icon.

- The Reports Folder - The Reports Folder performs the same function as the Print Reports option in the Main Switchboard Form. However, the Reports Folder automatically provides you with a preview of your search results. If you then wish to print them, click the Print option on the top left hand corner of the menu.

- The Macros and Modules Folders - these folders are used to manipulate the design of the database. As a result, a discussion of them goes beyond the scope of this document.

APPENDIX O

0000056	1		NYSDEC	Report	10/1/87	O'Brien & Gere, Town of Conklin/ NYSDEC	Preliminary Report - Town of Conklin Landfills	Section 3.01 General information on investigation of the landfills. Between 1964 and 1969 Lower Landfill was used for disposal of municipal solid waste. Between 1969-1975 Upper Landfill used for disposal of municipal solid waste. Investigation was based on groundwater, surface water, and sediment to determine environmental impacts. Section 3.02 discusses the Nature of Waste Materials. Wastes deposited at both Landfills are municipal solid waste as there is no record of disposal of any industrial waste. Leachate samples revealed concentrations of iron, manganese, mercury, copper and benzene at the Lower Landfill. Upper Landfill samples revealed concentrations of iron, manganese, cadmium, chloride, trichloroethene, tetrachloroethene, 1,1-dichloroethane, 1,2-dichloroethane, ethyl benzene and benzene. Bates #s 000056-000057.

0000054	1		NYSDEC	Report	10/1/87	O'Brien & Gere, Town of Conklin/ NYSDEC	Preliminary Report - Town of Conklin Landfills	Section 1.01 Site Background (Bates 000055).
0000056	1		NYSDEC	Report	10/1/87	O'Brien & Gere, Town of Conklin/ NYSDEC	Preliminary Report - Town of Conklin Landfills	Section 3.01 General information on investigation of the landfills. Between 1964 and 1969 Lower Landfill was used for disposal of municipal solid waste. Between 1969-1975 Upper Landfill used for disposal of municipal solid waste. Investigation was based on groundwater, surface water, and sediment to determine environmental impacts. Section 3.02 discusses the Nature of Waste Materials. Wastes deposited at both Landfills are municipal solid waste as there is no record of disposal of any industrial waste. Leachate samples revealed concentrations of iron, manganese, mercury, copper and benzene at the Lower Landfill. Upper Landfill samples revealed concentrations of iron, manganese, cadmium, chloride, trichloroethene, tetrachloroethene, 1,1-dichloroethane, 1,2-dichloroethane, ethyl benzene and benzene. Bates #s 000056-000057.

0000050	1		NYSDEC	Memorandum	6/27/91	M. O'Toole,NYSDEC/ R. Torkelson, Dep. Comm.	Application for Federal Assistance Agreement for Conklin Dumps Site	NYSDEC is requesting federal funds for $6,000 from the USEPA for support agency assistance for Remedial Design activities at the Conklin Dumps Site. Bates #s 00050-00051.
0000052	1		NYSDEC	Memorandum	6/8/87	J. Forti, NYSDEC/ Commissioner Williams, NYSDEC	Proposed Order on Consent	Cover letter to an Order on Consent requiring the Town of Conklin to develop and implement an inactive hazardous waste disposal site remedial program at landfill site. The order states that Town has entered into agreement in order to qualify for financial assistance (EQBA). Bates #s 00052-00053.
0000054	1		NYSDEC	Report	10/1/87	O'Brien & Gere, Town of Conklin/ NYSDEC	Preliminary Report - Town of Conklin Landfills	Section 1.01 Site Background (Bates 000055).
0000056	1		NYSDEC	Report	10/1/87	O'Brien & Gere, Town of Conklin/ NYSDEC	Preliminary Report - Town of Conklin Landfills	Section 3.01 General information on investigation of the landfills. Between 1964 and 1969 Lower Landfill was used for disposal of municipal solid waste. Between 1969-1975 Upper Landfill used for disposal of municipal solid waste. Investigation was based on groundwater, surface water, and sediment to determine environmental impacts. Section 3.02 discusses the Nature of Waste Materials. Wastes deposited at both Landfills are municipal solid waste as there is no record of disposal of any industrial waste. Leachate samples revealed concentrations of iron, manganese, mercury, copper and benzene at the Lower Landfill. Upper Landfill samples revealed concentrations of iron, manganese, cadmium, chloride, trichloroethene, tetrachloroethene, 1,1-dichloroethane, 1,2-dichloroethane, ethyl benzene and benzene. Bates #s 000056-000057.

Re: Raymond L. Johnson, et al.
vs. Town of Conklin

Dear Mr. Gorgos:

As you know, the application to the U.S. District Court for approval of the proposed settlement of this action is pending. We are writing to confirm the efforts we have undertaken to discover any potentially responsible parties other than the Town, and to explain our conclusion that the likelihood of successfully pursuing claims for contribution is slight.

During the course of our investigation in connection with our representation of the Town, and in connection with answering interrogatories propounded by the plaintiffs, we reviewed Town documents and spoke with present and former Town officials and employees about the operation of the landfill. Although we were able to identify several local commercial and industrial establishments that are believed to have disposed of waste at the landfills, virtually no one we spoke with had any knowledge or belief that these companies disposed of hazardous substances, or indeed, any liquid wastes in the landfills.

In addition, we subpoenaed the two individuals, Oscar Ulco, and James Giammarino, who had operated the upper landfill under contract to the Town, and took their depositions under oath. Neither of these depositions revealed any evidence that disposal of industrial waste occurred at the landfill. Mr. Ulco, who operated the upper landfill from 1971 to 1976, very credibly testified that he strictly controlled disposal at the landfill, and did not permit disposal of liquid waste or closed drums which might have contained such wastes.

Mr. Giammarino, who operated the landfill for one year (1976-77), testified that he followed similar procedures.

The portion of the landfill in which hazardous substances were detected by O'Brien & Gere, appears to be in the area that was operated by Ulco. Based upon our present knowledge, however, we cannot clearly demonstrate that the substances were deposited during the period of Ulco's operation. We note that Ulco's operation was generally praised by officials of the Town and the Broome County Department of Health. We also note that, upon completion of Ulco's last annual contract, the Town delivered to him a written release from any liability associated with his operation of the landfill. Although it is debatable whether this release applies to all years of Ulco's operation or only to the last year of operation, it is an additional factor influencing our conclusion that an action against Ulco for contribution or indemnity is not likely to be successful.

Although there is evidence that leachate problems developed during the period of Giammarino's operation, we can point to no evidence that any hazardous substances were deposited at the landfill during his period of operation. Thus, we conclude that it is unlikely that an action against Giammarino for contribution would be successful.

To summarize, it is our judgment that the prospects for successful claims for contribution are questionable based upon information that has come to light after a reasonable investigation.

If you would like to discuss this in more detail, please contact me.

Very truly yours,

BOND, SCHOENECK & KING
