

Case Narrative

Site Name: Gladding Corp

Date received: 09/30/04

For sample delivery group(s): 274-01

The calibration verification that these samples were run under had two of the target analytes exceeding the calibration verification criteria that is associated with this method. However, since the initial calibration that these samples were quantitated against was valid, any reported values for these analytes should be considered valid. None of the analytes that exceeded the calibration verification criteria were found in the samples.

All other QA/QC associated with this sample delivery group were within acceptable method criteria.

Carbon dioxide was reported as a TIC in all of the samples - this is a lab contaminant and should be disregarded. It is reported because the method requires it and would be qualified with a B if it were a target analyte.
