Subject: **NAPL Recovery – Status Report for February 2016**
Site #: 7-09-011
NYSEG – Norwich Former MGP Site

Dear Ms. Saucier:

On behalf of New York State Electric and Gas Corporation (NYSEG), AECOM has prepared this monthly status report to describe events associated with non-aqueous phase liquid (NAPL) recovery at the Norwich Former Manufactured Gas Plant (Site) in Norwich, NY. This letter provides a summary of activities at the Site during the month of February 2016. Figure 1 shows the layout of the NAPL recovery system.

PRODUCT RECOVERY

During system operation throughout the month of February, the NAPL collection system recovered approximately 732 gallons of total fluids (NAPL and water) for a total volume of 96,951 gallons to date. The total fluid recovery rate was approximately 25 gallons per day (gpd). A cumulative total fluid recovery summary is provided in Figure 2.

The system is currently operational in wells RW-09-03, RW-09-06, and RW-10-02. The pumping rates at each of these wells were increased slightly during the month of February to optimize system performance. The system's air compressor receives power through a dedicated 30 amp circuit breaker. The circuit breaker was tripped and the compressor was inoperative upon arrival on February 11th and February 26th. During both site visits, the breaker was reset and the compressor was restarted. The condition of the compressor and the associated electrical service will be evaluated to identify and eliminate the cause of the interruptions. Each recovery well will continue to be monitored and pumping activities will be maintained through the month of March.

RECOMMENDATIONS

NAPL recovery and monitoring will continue through the month of March.

Should you have any questions or require additional information in the meantime, please do not hesitate to call me at (518) 951-2391 or Tracy Blazicek at (607) 762-8839.

Yours sincerely,
