Subject: **NAPL Recovery – Status Report for March 2016**
Site #: 7-09-011
NYSEG – Norwich Former MGP Site

Dear Ms. Saucier:

On behalf of New York State Electric and Gas Corporation (NYSEG), AECOM has prepared this monthly status report to describe events associated with non-aqueous phase liquid (NAPL) recovery at the Norwich Former Manufactured Gas Plant (Site) in Norwich, NY. This letter provides a summary of activities at the Site during the month of March 2016. Figure 1 shows the layout of the NAPL recovery system.

PRODUCT RECOVERY

During system operation throughout the month of March, the NAPL collection system recovered approximately 375 gallons of total fluids (NAPL and water) for a total volume of 97,326 gallons to date. The total fluid recovery rate was approximately 21 gallons per day (gpd). A cumulative total fluid recovery summary is provided in Figure 2.

The system is currently operational in wells RW-09-03, RW-09-06, and RW-10-02. The pumping rates at each of these wells were decreased during the month of March to optimize system performance. The system was shut down on March 18th in preparation for removal of the storage tank. The tank was removed from the site on March 22nd for fluid disposal. On March 29th, the empty tank was returned to the site and the system was restarted. Each recovery well will continue to be monitored and pumping activities will be maintained through the month of April.

RECOMMENDATIONS

NAPL recovery and monitoring will continue through the month of April.

Should you have any questions or require additional information in the meantime, please do not hesitate to call me at (518) 951-2391 or Tracy Blazicek at (607) 762-8839.

Yours sincerely,
