Subject: **NAPL Recovery – Status Report for November and December 2016**
Site #: 7-09-011
NYSEG – Norwich Former MGP Site

Dear Ms. Saucier:

On behalf of New York State Electric and Gas Corporation (NYSEG), Parsons has prepared this status report to describe events associated with non-aqueous phase liquid (NAPL) recovery at the Norwich Former Manufactured Gas Plant (Site) in Norwich, NY. This letter provides a summary of activities at the Site during the months of November and December 2016. Figure 1 shows the layout of the NAPL recovery system, Figure 2 shows cumulative total fluids (NAPL and water) collected to date.

PRODUCT RECOVERY

During the months of November and December, the system was operational and recovered approximately 495 gallons of total fluids (NAPL and water), for a total volume of approximately 99,599 gallons to date. November and December system recovery, further discussed below, is estimated at approximately 8 gallons per day (gpd) on average. A cumulative total fluid recovery summary is provided in Figure 2.

Wells RW-09-03 and RW-10-02 were operational in the months of November and December. Each recovery well will continue to be monitored and pumping activities will be maintained through the month of January or until sustained sub-freezing temperatures prevent system operations.

RECOMMENDATIONS

NAPL recovery and monitoring will continue through the month of January, to the extent feasible.

Should you have any questions or require additional information, please do not hesitate to call me at (315) 552-9726 or Tracy Blazicek at (607) 762-8839.

Yours sincerely,

Paul Roth
Environmental Engineer
