1 INTRODUCTION

This report provides the basis for review and certification of the groundwater extraction & treatment system and the institutional and engineering controls (ICs/ECs) implemented at Site No. 712006. Signed Institutional and Engineering Controls Certification Forms are included in Appendix A.

The Site is currently owned by Cortland Commerce Center, LLC (CCC) and Cortland Industrial Center, LLC (CIC) and this report is prepared for and submitted at the direction of CCC/CIC, consistent with the Site's remedial program as approved by the New York State Department of Environmental Conservation (NYSDEC) and the New York State Department of Health (NYSDOH). The reporting period addressed in this report is January 1, 2023 to January 1, 2024.

1.1 Summary of Site

Former manufacturing activities at the Site resulted in contamination of soil and groundwater with chlorinated organic solvents, primarily trichloroethylene (TCE) and its decomposition products. In 1986, the contaminant plume was found to extend approximately 1.5 miles downgradient (north) of the Site. The potential contaminant sources identified included a 3,000-gallon aboveground storage tank (AST) that formerly contained TCE, a 20,000-gallon underground storage tank (UST) that formerly contained tramp oil and four areas of stained surface soil associated with past material handling practices. Additionally, a former tumbling area was identified within the building footprint (adjacent to monitoring well MW-L16).

Remedial measures implemented at the Site have included installing a soil vapor extraction (SVE) system and a groundwater extraction and treatment system (GWETS). The SVE system was activated in 1990 and subsequently dismantled at an unknown date between 1996 and 1998. In June 1994, the Classification of the Site was changed from 2 to 4 (site properly closed – required continued management). In accordance with the NYSDEC's letter, dated December 20, 2021, the GWETS was shutdown for a period of two years beginning on January 5, 2022. Post-remediation groundwater monitoring is ongoing.

2 SITE OVERVIEW

2.1 Site Location and Description

The Site is located at 839 NYS Route 13, Town of Cortlandville, County of Cortland and State of New York (Drawing No. 1A, Appendix B). The current layout of the Site is depicted on Drawing No. 1B, Appendix B.

The Site is currently approximately 46.13 acres in size. The Site boundaries have been modified multiple times to remove parcels which were not impacted by the contamination. The Site is developed with a one-story building occupying approximately 415,000 square feet. The building is utilized for office space, warehouse storage and manufacturing. The remainder of the Site consists of employee parking areas, several small outbuildings, treated water infiltration lagoons and vacant undeveloped land.

The Site is bordered on the north by Lime Hollow Road and a predominately residential area. It is bordered on the east by NYS Route 13 and a predominately commercial area. It is bordered on the south by a cemetery and the JM Murray Center. It is bordered on the west by a mixture of undeveloped land, agricultural land and some residential properties.

2.2 Site History

The Site was formerly owned and operated by Smith Corona Corporation (SCC), previously known as SCM Corporation (SCM). SCC utilized the Site for the purposes of manufacturing typewriters. Trichloroethylene (TCE) was used on the Site by SCC during manufacturing processes.

In 1999, S. C. W. P., LLC. (SCWP) purchased land and buildings from SCC and assumed operational responsibilities for the groundwater remediation system.

Cortland Commerce Center, LLC. (CCC) purchased the Site in May of 2010 from SCWP and assumed operational responsibilities for the groundwater remediation system.

The Site boundary has been modified multiple times, including a sub-division in 2022. See Section 3.3. for details.

2.3 Nature and Extent of Contamination

The Site overlies the Otter Creek/Dry Creek aquifer. Town of Cortlandville municipal water wells are located approximately 2,300 feet west of the Site and the City of Cortland municipal water wells are located approximately 1.5 miles north-northeast of the Site.

In or around 1986 a plume of contaminated groundwater was detected during the investigation of an unrelated petroleum spill. This plume extended from the Site approximately 1.5 miles downgradient (generally north) toward the City of Cortland municipal well field. The contaminants in this plume were identified as TCE and related decomposition products.

In accordance with the 1989 Settlement Agreement, monitoring of off-site groundwater contamination has been conducted periodically by the NYSDEC, Cortland County Soil and Water Conservation District and the Cortland County Health Department.

2.4 Chronology of Site Remedial Program

The GWETS, consisting of a recovery well, aeration tower, pipeline, rock cascade and an infiltration lagoon system, remains in place and has not been modified since its original construction.

A brief summary of the Site remediation activities undertaken over the past 35 years is presented below[1]:

- October 1986 - March 1987: Use of TCE was discontinued. Various ASTs and USTs containing TCE, tramp oil, fuel oil and muriatic acid were removed. Visibly contaminated soil encountered during the tank work was also removed. In addition, four areas of stained soil related to past material handling practices were excavated

and disposed of off-site.

- January 1989: The Settlement Agreement for remediation of the Site was signed between the NYSDEC, other parties, and SCC on January 12, 1989.

- September – December 1989: Approval of the remediation Phase I design was obtained from the NYSDEC on September 22, 1989. Phase I consisted of investigation, design, construction and installation of a groundwater recovery well. The groundwater recovery well came on-line on December 29, 1989. The water from the recovery well was utilized for non-contact cooling purposes and discharged into an existing sewer line until the Phase II system could be completed.

- May 1990: Approval of the remediation Phase II design was obtained from the NYSDEC on May 29, 1990. Phase II included installation of a SVE system and groundwater remediation system. The groundwater remediation system consisted of an air stripping column (aeration tower), distribution piping (water from recovery well to the air stripper and from the air stripper to the rock cascade and infiltration lagoons), a rock cascade and engineered infiltration lagoons.

- August 1990: The SVE system came on-line.

- October 1990: The groundwater remediation system came on-line.

- 1996-1998: At an unknown date, the SVE system was shutdown and decommissioned. GeoLogic has not located or reviewed documentation related to the shutdown of the SVE system.

- 1997-1998: At an unknown date, the well monitoring frequency was reduced to annual. GeoLogic has not located or reviewed documentation related to the modification of the sampling frequency.

- April 1999: SCWP purchased the SCC land and buildings and assumed operational responsibilities for the groundwater remediation system.

- May 2001: With the permission of the NYSDEC, the stripping tower blower was turned off. The influent TCE concentration had reduced to the point that the tower was able to reduce TCE levels adequately to meet discharge limits without forced airflow. Sampling frequency for the tower influent, tower discharge and outfall cascade was increased from quarterly to monthly.

- December 2008: a former tumbling area was identified within the building footprint and a groundwater monitoring well (MW-L16) was installed in this area.

- May 2010: CCC purchased the SCWP land and buildings and assumed operational responsibilities for the groundwater remediation system.

- January 2012: A sub-slab depressurization/soil vapor extraction (SSD/SVE) system was energized in the former tumbling area located adjacent to monitoring well MW-L16.

- March to May 2021: A shutdown test of the GWETS was completed at the Site in accordance with a NYSDEC & NYSDOH approved work plan. The purpose of the Shutdown Test was to assess groundwater conditions at the Site under non-pumping conditions. The GWETS was shutdown on March 17, 2021 and returned to service on May 20, 2021. The findings of the shutdown were presented in GeoLogic's report entitled "Shutdown Test Report," dated September 16, 2021. In summary, no changes in groundwater contaminant concentrations were observed during the Shutdown Test and no exceedances were observed in any of the groundwater samples analyzed.

- December 20, 2021: The NYSDEC and NYSDOH accepted the recommendations in the "Shutdown Test Report" to shutdown the GWETS and initiate a two year post-remediation groundwater monitoring program.

- January 5, 2022: The GWETS was shutdown and post-remediation groundwater monitoring commenced.

- February 22, 2022: The NYSDEC and NYSDOH required that a Site Management Plan (SMP) be prepared for the Site. On November 28, 2022, GeoLogic submitted the SMP to the NYSDEC and NYSDOH for their review. On April 19, 2023 the NYDEC issued a response letter requiring revisions to the SMP. GeoLogic revised the SMP and submitted Revision No. 1 to the SMP to the NYSDEC and NYSDOH on September 14, 2023.

2.5 Cleanup and Site Closure Criteria

The site-wide groundwater cleanup criteria for the Site are the New York State Class GA groundwater quality standards. Currently, the standard for TCE is 5 micrograms per liter (µg/L).

Site wells were required to be monitored until all wells meet the clean-up criteria. When all wells meet the clean-up criteria, the remediation system may be shut-down.

Groundwater monitoring will continue for a period of five years after the remedial system is shut-down. If at any time during the post-remediation monitoring period any of the samples exceed the site-wide clean-up criteria, the system will be restarted. For the first two years, post-remediation monitoring will occur quarterly, then semi-annual for the next two years and finally once in the fifth year. If the remedial system must be restarted for any reason, the five-year post-remediation monitoring program will be restarted once the site-wide cleanup criteria has been re-achieved.

3 INSTITUTIONAL AND ENGINEERING CONTROLS

Signed Institutional and Engineering Controls Certification Forms are included in Appendix A.

3.1 Summary of Institutional Controls (ICs)

No ICs are identified in the Settlement Agreement or Record of Decision.

The following ICs have been implemented:

- The Site may only be used for commercial or industrial use;
- The Site and associated delisted parcels must comply with any deed restrictions filed with the Cortland County Clerk;
- All ECs must be operated and maintained as specified in the SMP;
- All ECs must be inspected at a frequency and in a manner defined in the SMP;
- The use of groundwater underlying the Site is prohibited without necessary water quality treatment as determined by the NYSDOH and/or the Cortland County Department of Health to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from the Department;
- Groundwater and other environmental or public health monitoring must be performed as defined in the SMP;
- Data and information pertinent to site management must be reported at the frequency and in a manner as defined in the SMP;
- All future activities that will disturb any remaining contamination material must be conducted in accordance with the SMP;
- Monitoring to assess the performance and effectiveness of the remedy must be performed as defined in the SMP;
- Operation, maintenance, monitoring, inspection, and reporting of any mechanical or physical component of the remedy shall be performed as defined in the SMP;
- Access to the Site must be provided to agents, employees or other representatives of the State of New York with reasonable prior notice to the Site owner;
- Prior to constructing any new buildings at the Site, the potential for vapor intrusion must be evaluated (Site boundaries are noted on Drawing No. 1B, Appendix B). Any potential impacts identified must be monitored or mitigated. See the SMP for additional details;

3.2 Summary of Engineering Controls (ECs)

The ECs implemented at the Site are described below:

- A GWETS consisting of an air stripping column (aeration tower), distribution piping (water from recovery well to the aeration tower and from the aeration tower to the infiltration lagoons) and an engineered rock cascade and infiltration lagoons had operated at the Site since 1990.
    - On January 5, 2022, the GWETS was shutdown and post-remediation groundwater monitoring commenced.

3.2.1 Summary of ECs Operations During Reporting Period

Site Monitoring & Groundwater Treatment System

On January 5, 2022, the GWETS was shutdown and post-remediation groundwater monitoring commenced. Section 4.2 details the post-remediation groundwater monitoring that was completed during this reporting period.

Sub-Slab Depressurization (SSD)/Soil Vapor Extraction (SVE) System

The SSD/SVE system, installed in the vicinity of the former tumbling pit, has operated without major breakdown during this reporting period. The system consists of a single extraction point (well MW-L16) connected at a Gast Model R6P350A regenerative blower that extracts 218 cubic feet per minute (cfm) of vapor from under and around the former tumbling pit. Routine maintenance has been performed on system components on an as-needed basis.

A sample of the system emissions was obtained on November 2, 2023. The TCE concentration was reported at 2,000 µg/m^3. The 2023 concentration is an 88.9% decline from the initial concentration of 18,000 µg/m^3 detected in the sample collected on January 10, 2012. The analytical results continue to demonstrate that the system has been and remains effective in removing residual contamination from under and around the former tumbling pit. Table 5 and Chart 6, located in Appendix C and Appendix D respectively, depict the TCE concentrations observed in the SSD/SVE exhaust samples collected since the system was energized in January 2012. The 2023 SSD/SVE analytical results are included in Appendix F.

3.3 Boundary Modification & Sub-Division

In March 2018, the NYSDEC approved a boundary modification for the Site. CCC petitioned the NYSDEC to modify the Site boundary given the specified parcel was not directly involved with the original contamination, was only used as a parking lot and consisted of a small percentage of the overall Site. The parcel was in the northeast quadrant of the Site and consists of 1.955 acres. The parcel was combined with another parcel, 1.550 acres in size, previously removed from the Site in 2008 to form the new Lot

3. Lot 3 is 3.505 acres in size. After the boundary modification, the 2018 Site was 46.226 acres in size.

In April 2022, a 60-Day Advance Notification of Site Change of Use, Transfer of Certificate of Completion, and/or Ownership (Change of Use) form was submitted to the NYSDEC. The Change of Use form detailed plans to sub-divide a portion of the Site and acquire part of an adjoining parcel. No source areas or monitoring wells were identified on the subdivided parcel. The new parcel also included approximately 4 acres of land that was purchased from the adjacent J.M. Murray Center, Inc. The owner of this newly subdivided parcel is Cortland Industrial Center LLC (CIC).

The Site currently consists of two tax parcels. Lot 1 is identified as Section 95.00 Block 10 and Lot 01.110 and Lot 2 is identified as Section 95.00 Block 10 and Lot 01.112 on the Cortland County Tax Map. The current layout of the Site is depicted on Drawing No. 1B, Appendix B.

3.4 Shutdown of GWETS

In their letter, dated December 20, 2021, the NYSDEC and NYSDOH accepted the recommendations in GeoLogic's report entitled "Shutdown Test Report", dated September 16, 2021. In summary, the NYSDEC concurred that the GWETS could be discontinued. The recommendations also detailed the groundwater monitoring required.

On January 5, 2022, the GWETS was shutdown and post-remediation groundwater monitoring commenced. The post-remediation groundwater monitoring is summarized in Section 4.2.

4 MONITORING PLAN

4.1 Monitoring Plan Components

For this reporting period, monitoring at the Site was completed in accordance with the NYSDEC's letter dated December 20, 2021, and consisted of quarterly and annual sampling of groundwater monitoring wells. See Section 4.2 for details. The locations of the monitoring wells are depicted on Drawing No. 2, Appendix B. Sampling event data is discussed in Section 5.

4.2 Summary of Monitoring Completed During Reporting Period

The following post-remediation groundwater monitoring was completed during this reporting period:

- The January 26, 2023 Quarterly Sampling Event included sampling 10 monitoring wells (MW-1S, MW-1D, MW-6, MW-7, MW-8, MW-10S, MW-10D, MW-11, MW-12S and MW-L16);
- The April 24 and 25, 2023 Quarterly Sampling Event included sampling 10 monitoring wells (MW-1S, MW-1D, MW-6, MW-7, MW-8, MW-10S, MW-10D, MW-11, MW-12S and MW-L16);

- The July 26, 2023 Quarterly Sampling Event included sampling 10 monitoring wells (MW-1S, MW-1D, MW-6, MW-7, MW-8, MW-10S, MW-10D, MW-11, MW-12S and MW-L16);

- The November 1 and 2, 2023 Annual Sampling Event included sampling 16 monitoring wells (MW-1S, MW-1D, MW-2S, MW-4D, MW-5S, MW-5D, MW-6, MW-7, MW-8, MW-9, MW-10S, MW-10D, MW-11, MW-12S, MW-12D and MW-L16);

During the 2023 quarterly sampling events all wells were in good working order and able to be sampled.

During the 2023 annual sampling event, all wells except MW-2D and MW-4S were in good working order and able to be sampled. The PVC riser at MW-4S remains broken and MW-2D remains blocked at a depth of approximately 50 feet below ground surface.

All groundwater samples were submitted for analysis to Life Science Laboratories, Inc. (LSL). LSL Central Lab is located at 5854 Butternut Drive, East Syracuse, New York. The groundwater samples were analyzed for specific Volatile Organic Compounds (VOCs) (1,1,1-Trichloroethane, 1,1-Dichloroethene, cis-1,2-Dichloroethene, trans-1,2-Dichloroethene, Trichloroethene, Tetrachloroethene and Vinyl Chloride) utilizing EPA Method 8260B.

4.2.1 Summary of Quarterly Post-Remediation Sampling

Post-remediation quarterly sampling events were completed on January 26, 2023, April 24 and 25, 2023 and July 26, 2023. Each quarterly sampling event consisted of sampling 10 monitoring wells (MW-1S, MW-1D, MW-6, MW-7, MW-8, MW-10S, MW-10D, MW-11, MW-12S and MW-L16). The Annual Sampling event was completed in the 4th quarter.

All quarterly laboratory reports are included in Appendix E. Section 5 below provides an analysis of the data.

4.2.2 Summary of Annual Sampling Event

The annual sampling event was completed on November 1 and 2, 2023. The depth to groundwater was measured in all sixteen (16) monitoring wells during the annual sampling event. Water level measurements were collected prior to groundwater sampling. Based on recorded water levels, shallow and deep groundwater contour maps were prepared (Drawing No. 3 and No. 4, Appendix B). The groundwater flow at the Site is to the north. This is consistent with historical data for non-pumping conditions at the Site.

The field observations, including water levels, for the 2023 annual sampling event are summarized in Table 1, located in Appendix C.

Groundwater samples are submitted for laboratory analysis, the results are reviewed, and the results are detailed in the annual PRR for the Site. The

laboratory reports for the 2023 Annual Sampling event are included in Appendix E. Section 5 below provides an analysis of the data.

The results for the 2023 annual sampling event have been up-loaded to the NYSDEC EQuIS database.

4.3 Monitoring Deficiencies

During the annual sampling event (November 1 and 2, 2023), the following deficiencies were noted:

- Monitoring well MW-4S remains unable to be sampled due to the PVC riser being broken at a depth of approximately 3 feet bgs. No TCE concentrations above 5 µg/L have ever been observed at this well; the maximum TCE concentration of 2 µg/L was observed in November of 1990 and August of 1991. Water levels will continue to be collected from this well.

- Monitoring well MW-2D remains unable to be sampled due to blockage within the well at a depth of approximately 50 feet bgs. The quarterly monitoring completed during this reporting period supplemented the monitoring of conditions at the down gradient property boundary.

5 DATA TRENDS AND REMEDIAL EFFECTIVENESS

5.1 Data Summary

Data from the monthly, quarterly and annual groundwater sampling events are summarized in the following tables and charts and are included in Appendix C and Appendix D.

- APPENDIX C: Tables

    - Table 1: Groundwater Sampling Field Observations – November 2023 Annual Sampling;
    - Table 2: Summary of Post-Remediation Groundwater Analytical Results – November 2023 Annual Sampling;
    - Table 3: Summary of Post-Remediation Groundwater Analytical Results – January through July 2023;
    - Table 4: Summary of Historic Groundwater Analytical Results;
    - Table 5: Comparison of TCE Concentrations in SSD/SVE Exhaust Samples.

- APPENDIX D: Charts

    - Chart 1: TCE Concentrations in Perimeter Shallow Wells;
    - Chart 2: TCE Concentrations in Perimeter Deep Wells;
    - Chart 3: TCE Concentrations in Interior Shallow Wells;
    - Chart 4: TCE Concentrations in Interior Deep Wells;
    - Chart 5: TCE Concentrations in MW-L16;
    - Chart 6: TCE Concentrations in SSD/SVE Exhaust.

5.2 Groundwater Quality Data

The groundwater monitoring wells are categorized into four (4) groups (Perimeter Shallow, Perimeter Deep, Interior Shallow and Interior Deep). Groundwater quality data trends are broken-down by the four groups of monitoring wells as indicated below:

- **Perimeter Shallow Wells (MW-1S, MW-2S, MW-4S, MW-5S and MW-10S)**

  No TCE concentrations above the cleanup objective of 5 µg/L were reported in any of the samples collected from the perimeter shallow wells sampled during the quarterly or annual sampling events.

  Note: MW-4S could not be sampled due to the broken PVC riser.

- **Perimeter Deep Wells (MW-1D and MW-10D)**

  No TCE concentrations above the cleanup objective of 5 µg/L were reported in any of the samples collected from the perimeter deep wells sampled during the quarterly or annual sampling events.

- **Interior Shallow Wells (MW-6, MW-7, MW-8, MW-11 and MW-12S)**

  No TCE concentrations above the cleanup objective of 5 µg/L were reported in any of the samples collected from the interior shallow wells sampled during the quarterly or annual sampling events.

- **Interior Deep Wells (MW-9 and MW-12D)**

  No TCE concentrations above the cleanup objective of 5 µg/L were reported in any of the samples collected from the interior deep wells sampled during the quarterly or annual sampling events.

5.3 Performance and Effectiveness of the ICs/ECs

Given that no TCE concentrations above the cleanup objective of 5 µg/L were reported in any of the samples collected during this reporting period, the GWETS was effective at removing contamination from the subsurface.

6 RECOMMENDATIONS

The post-remediation groundwater monitoring specified in the NYSDEC's letter, dated December 20, 2021, has been completed. No TCE concentrations above the cleanup objective of 5 µg/L were reported in any of the samples collected during the two year post-remediation groundwater monitoring.

The following modification to the groundwater monitoring is recommended:

- Semi-annual groundwater monitoring is recommended for a period of one year. All 16 monitoring wells (MW-1S, MW-1D, MW-2S, MW-4D, MW-5S, MW-5D, MW-6, MW-7, MW-8, MW-9, MW-10S, MW-10D, MW-11, MW-12S, MW-12D and MWL-16) will be sampled during each sampling event. The groundwater monitoring will be completed in the spring and fall.

- The groundwater samples will be submitted for analysis of specific VOCs (1,1,1-Trichloroethane, 1,1-Dichloroethene, cis-1,2-Dichloroethene, trans-1,2-Dichloroethene, Trichloroethene, Tetrachloroethene and Vinyl Chloride) utilizing EPA Method 8260B.

- The laboratory analysis results will be detailed in the annual PRR prepared for the Site.

- If at any time during the post-remediation monitoring period any of the samples exceed the site-wide clean-up criteria, the need to restart the GWETS will be evaluated.

It is also recommended that the SSDS/SVE system, installed in former tumbling area located adjacent to monitoring well MW-L16, continue to operate.

INSTITUTIONAL AND ENGINEERING CONTROLS CERTIFICATION FORM

Enclosure 2
NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION
Site Management Periodic Review Report Notice
Institutional and Engineering Controls Certification Form

Site Details **Box 1**

Site No. 712006

Site Name SCM - Cortlandville

Site Address: 839 Route 13 South Zip Code: 13045
City/Town: Cortlandville
County: Cortland
Site Acreage: 46.226

Reporting Period: January 01, 2023 to January 01, 2024

	YES	NO
1. Is the information above correct?	X	☐
If NO, include handwritten above or on a separate sheet.		
2. Has some or all of the site property been sold, subdivided, merged, or undergone a tax map amendment during this Reporting Period?	☐	X
3. Has there been any change of use at the site during this Reporting Period (see 6NYCRR 375-1.11(d))?	☐	X
4. Have any federal, state, and/or local permits (e.g., building, discharge) been issued for or at the property during this Reporting Period?	☐	X
If you answered YES to questions 2 thru 4, include documentation or evidence that documentation has been previously submitted with this certification form.		
5. Is the site currently undergoing development?	☐	X

Box 2

	YES	NO
6. Is the current site use consistent with the use(s) listed below? Industrial	X	☐
7. Are all ICs in place and functioning as designed?	X	☐

IF THE ANSWER TO EITHER QUESTION 6 OR 7 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.

A Corrective Measures Work Plan must be submitted along with this form to address these issues.

Parcel	Owner	Institutional Control
95.00-10-01.100	David Yaman Realty Services	Site Management Plan

Decision Document (ROD), Site Management Plan (SMP).

Box 4

Description of Engineering Controls

Parcel	Engineering Control
95.00-10-01.100	Vapor Mitigation Groundwater Treatment System Groundwater Containment

The ROD identified engineering controls required for OU1 (onsite). These controls include the continued operation and maintenance of the groundwater extraction & treatment system until groundwater quality meets the cleanup criteria of 5 ug/L for TCE for all wells.
The groundwater monitoring wells must be sampled at periodic intervals (currently annually). As outlined in 2001 correspondence, the groundwater extraction & treatment system may be operated without the blower component as long as effluent concentrations remain below 5 ug/L for TCE, and with monthly monitoring of the groundwater extraction & treatment system influent & effluent. The blower and a backup blower must remain in place and in working condition. The groundwater extraction system also acts as the onsite groundwater containment system, designed to eliminate contaminant migration offsite.
A Soil Vapor Extraction system was installed as part of the remedial program. The SVE was operational from August 1990 until operation was discontinued sometime after May 1994.
A sub-slab depressurization system (SSDS) is installed in portions of the main warehouse building in the area of the former Tumbling Pit. The SSDS is required to operate continuously.

Box 5

Periodic Review Report (PRR) Certification Statements

1. I certify by checking "YES" below that:

   a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the Engineering Control certification;

   b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and compete.

YES	NO
X	☐

2. For each Engineering control listed in Box 4, I certify by checking "YES" below that all of the following statements are true:

   (a) The Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;

   (b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;

   (c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;

   (d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and

   (e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES	NO
X	☐

IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.

A Corrective Measures Work Plan must be submitted along with this form to address these issues.

NOTES:
All concentrations reported in micrograms per liter (µg/L) ~ parts per billion (ppb). Refer to the laboratory's analytical report for additional details.
NYSDEC Groundwater (GW) Standard = Class GA water quality standards and guidance values listed in the NYSDEC Division of Water Technical and Operation Guidance Series 1.1.1 (TOGS 1.1.1, June 1998) and subsequent addendums.
ND - Not Detected at the Practical Quantitation Limit (PQL).
J - Analyte detected below the PQL.
Concentration exceeds NYSDEC GW standard or guidance value.

GROUNDWATER ANALYTICAL RESULTS

Life Science Laboratories, Inc.
5854 Butternut Drive
East Syracuse, NY 13057 (315) 445-1900

Tuesday, November 28, 2023

Mr. Christopher Gabriel
GeoLogic NY, Inc.
37 Copeland Ave.
Homer, NY 13077

TEL: 607 749-5000

Project: 210087 2023 ANNUAL SAMPLING
RE: Analytical Results Order No.: 2316988

Dear Mr. Christopher Gabriel:

Life Science Laboratories, Inc. received 18 sample(s) on 11/7/2023 for the analyses presented in the following report. Sample results relate only to the samples as received by the laboratory.

Very truly yours,
Life Science Laboratories, Inc.

David J Prichard
Project Manager

Life Science Laboratories, Inc.

Project: 210087 2023 QUARTERLY SAMPLING
RE: Analytical Results Order No.: 2311242

Dear Mr. Christopher Gabriel:

Life Science Laboratories, Inc. received 11 sample(s) on 8/1/2023 for the analyses presented in the following report. Sample results relate only to the samples as received by the laboratory.

Very truly yours,
Life Science Laboratories, Inc.

Project: 210087 2023 QUARTERLY SAMPLING
RE: Analytical Results Order No.: 2305609

Dear Mr. Christopher Gabriel:

Life Science Laboratories, Inc. received 11 sample(s) on 4/26/2023 for the analyses presented in the following report. Sample results relate only to the samples as received by the laboratory.

Very truly yours,
Life Science Laboratories, Inc.

David J Prichard
Project Manager

Project: 210087 2023 QUARTERLY SAMPLING
RE: Analytical Results Order No.: 2301270

Dear Mr. Christopher Gabriel:

Life Science Laboratories, Inc. received 11 sample(s) on 1/26/2023 for the analyses presented in the following report. Sample results relate only to the samples as received by the laboratory.

Very truly yours,
Life Science Laboratories, Inc.

David J Prichard

RE: Project #210087

Order No.: 2311010

Dear Chris Gabriel:

I certify that this data package is in compliance with the terms and conditions of the Contract, both technically and for completeness. Release of the data contained in this hardcopy data package and/or in the computer readable data submitted has been authorized by the Laboratory Manager or his designee, as verified by the following signature.

Centek/SanAir Laboratories performs all analyses according to EPA, NIOSH or OSHA-approved analytical methods.

Centek Laboratories is dedicated to providing quality analyses and exceptional customer service.

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the case narrative.

All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination
.
We do our best to make our reporting format clear and understandable and hope you are thoroughly satisfied with our services. Please contact your client service representative at (315) 431-9730 or myself, if you would like any additional information regarding this report.

Thank you for using Centek/SanAir Laboratories. This report cannot be reproduced except in its entirety, without prior written authorization.

Disclaimer: This report is the sole property of the client named on the Centek/SanAir chain-of custody (COC). Results in the report are confidential information intended only for the use by the customer listed on the COC. Neither results nor reports will be discussed with or released to any third party without our client's written permission. Final reports cannot be reproduced, except in full, without written authorization from Centek/SanAir. This report and any

Original

information contained within shall not be edited, altered, or modified in any way by any persons or agencies receiving, viewing, distributing, or otherwise possessing a copy of this final report. The laboratory reserves the right to perform amendments to any finalized report, of which shall supersede and make obsolete any previous editions. Such changes, modifications, additions, or deletions shall be effective immediately upon notice thereof, which may be given by means including but not limited to posting on the client portal website, electronic or conventional mail, or by any other means. The information provided in this report applies only to the samples submitted and is relevant only for the date, time, and location of sampling. The accuracy of the results of the analysis is dependent upon the method of sample procurement and information provided by the client on the COC. Centek/SanAir assumes no responsibility for the method of sample procurement. Centek/SanAir assumes no responsibility for the information provided by the client on the COC which includes the site name, project name, po number, canister order number, sample identifications or numbers, date sampled, canister numbers, regulator number, vacuum start/stop times in the field or in the lab, analyses requested, PM10# and PM2.5#, sampled by, relinquished by and date/time, and special instructions that may affect the validity of the results in this report. Centek/SanAir is not responsible for shipping or transport of the samples to be tested. Evaluation reports are based solely on the sample(s) in the condition at which they were received at the laboratory and the information provided by the client on the COC. Centek/SanAir assumes no responsibility or liability for the manner in which the results are used or interpreted. In receiving this report, the customer agrees that the full extend of any and all liability for actual and consequential damages of Centek/SanAir for the services performed sahll be equal to the fee charged to the customer for the services as liquidated damages. NELAP Accredited, NYSDOH ELAP, Lab Id No: 11830. NYSDOH ELAP does not offer accreditation for the following parameters by this method at present time: 4-ethyltoluene, ethyl acetate, propylene, Tetrahydrofuran, 4-PCH, sulfur derived, silcon series compounds, and EPA modified Method IP-10A. EPA Method IP-1A May 1990 has been replaced with Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999. The laboratory is also not accredited under NYSDOH ELAP for EPA Method TO-17. However, LEED requirements state that laboratories must be accredited under ISO 17025, which the laboratory does hold accreditation with AIHA LAP, LLC for ISO/IEC 17025:2017 under Unique Scopes (Laboratory ID LAP-182993). See www.centeklabs.us for an up to date list of laboratory accreditations and scopes. This report does not constitute nor shall be used by the client to claim product, process, system, or person certification, approval, or endorsement by NIST, NELAC, AIHA LAP, LLC, and/or any other US governmenal agencies; and may not be accredited by every local, state and federal regulatory agency.

Case Narrative

WO#: **2311010**
Date: **11/13/2023**

CLIENT: GeoLogic NY, PC
Project: Project #210087

All documents contain the SanAir Technologies DBA Centek Laboratories Work Order Number assigned to this report.

Samples were analyzed using the methods outlined in the following references:
Centek Laboratories, LLC SOP TS-80
Compendium of Methods for the Determination of Toxic Organic Compounds, Compendium Method TO-15, January 1999

All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objective except as indicated in the corrective action report(s). All samples were received and analyzed within the EPA recommended holding times. Test results are not Method Blank (MB) corrected for contamination.

NYSDEC ASP samples:
Canisters should be evacuated to a reading of less than or equal to 50 millitorr prior to shipment to sampling personnel. The vacuum in the canister will be field checked prior to sampling, and must read 28" of Hg (±2", vacuum, absolute) before a sample can be collected. After the sample has been collected, the pressure of the canister will be read and recorded again, and must be 5" of Hg (±1", vacuum, absolute) for the sample to be valid. Once received at the laboratory, the canister vacuum should be confirmed to be 5" of Hg,±1". Please record and report the pressure/vacuum of received canisters on the sample receipt paperwork. A pressure/vacuum reading should also be taken just prior to the withdrawal of sample from the canister, and recorded on the sample preparation log sheet. All regulators are calibrated to meet these requirements before they leave the laboratory. However, due to environmental conditions and use of the equipment Centek cannot guarantee that these criteria can always be achieved.

Any comments or problems with the analytical events associated with this report are noted below.

Definition / TAC

WO#: **2311010**
Date: **11/13/2023**

Definitions:

% REC: Percent Recovery; a measure of accuracy expressed as a percentage of a measured (recovered) concentration compared to the known concentration added to the sample.

% RPD: Relative Percent Difference; a measure of precision expressed as a percentage of the difference between two duplicates relative to the average concentration.

DF: Dilution factor; the dilution factor applied to the prepared sample.

DL: Detection Limit of the instrument used for the analysis. This does not reflect the maximum concentration of the regulatory limits.

DUP: Duplicate; aliquots of a sample taken from the same container under laboratory conditions and processed and analyzed independently, used to calculate Precision (%RPD).

LCS: Laboratory Control Sample; prepared by adding a known mass of target analytes to a specified amount of de-ionized water and prepared with the batch of samples, used to calculate Accuracy (%REC).

LCSD: The duplicate sample of the LCS, used to calculate both Accuracy (%REC) and Precision (%RPD)

MBLK: Method Blank; a sample of similar matrix that is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedure, and in which no target analytes
or interferences are present at concentrations that impact the analytical results for sample analyses.

MS: Matrix Spike; prepared by adding a known mass of target analytes to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available, used to calculate Accuracy (%REC)

MSD: The duplicate sample of the MS, used to calculate both Accuracy (%REC) and Precision (%RPD)

Qual: Qualifier that applies to the analyte reported

Result: Analyte concentration reported

RL: Reporting Limit/Limit of Quantitation; the limit to which data is compared for reporting. Analyte concentrations below the reporting limit are reported as ND or with a "J" qualifier.

Units: The units in which the analyte concentration is reported.

Centek/SanAir Laboratories - Terms and Conditions

Chain of Custody

Chain of Custody must be completed in full. Lack of any missing information will affect your Turn Around Times (TAT) Internal Chain of Custody provided when you notify Centek/SanAir Laboratories

Sample Submission

All samples sent to Centek/SanAir Laboratories should be accompanied by our Request for Analysis Form or Chain of Custody Form. A Chain of Custody will be provided with each order shipped for all sampling events, or if needed, one is available at our website www.Centek/SanAirLabs.us. Samples received after 3:00pm are a part of the next day's business.

Sample Media

Samples can be collected in a canister or a Tedlar bag. Depending on your analytical needs, Centek/SanAir Laboratories may receive a bulk, liquid, soil or other matrix sample for headspace analysis.

Blanks

Every sample is run with a surrogate or tracer compound at a pre-established concentration. The surrogate compound run with each sample is used as a standard to measure the performance of each run of the instrument. If required, a Minican can be provided containing nitrogen to be run as a trip blank with your samples.

Sampling Equipment

Centek/SanAir Laboratories will be happy to provide the canisters to carry-out your sampling event at no charge. The necessary accessories, such as regulators, tubing or personal sampling belts, are also provided to meet your sampling needs. The customer is responsible for all shipping charges to the client's destination and return shipping to the laboratory. Client assumes all responsibility for lost, stolen and any damages of equipment.

Any sampling equipment that exceeds holding times, cancellation of job or non-notice of rescheduling is subject to restocking fees

Turn Around time (TAT)

Centek/SanAir Laboratories will provide results to its clients in one business-week by 6:00pm EST after receipt of samples. For example, if samples are received on a Monday, they are due on the following Monday by 6:00pm EST. Results are faxed or emailed to the requested location indicated on the Chain of Custody. Non-routine analysis may require more than the one business-week turnaround time. Please confirm non-routine sample turnaround times

Reporting

Results are emailed or faxed at no additional charge. A hard copy of the result report is mailed within 24 hours of the faxing or emailing of your results. Cat "B" like packages is within 3-4 weeks from time of analysis (add 10%/sample for Cat B). Standard Electronic Disk Deliverables (EDD) is also available at no additional charge.

Payment Terms

Payment for all purchases shall be due within 30 days from date of invoice. The client agrees to pay a finance charge of 1.5% per month on the overdue balance and cost of collection, including attorney fees, if collection proceedings are necessary. You must have a completed credit application on file to extend credit. Purchase orders or checks information must be submitted for us to release results.

Rush Turnaround Samples

Expedited turnaround times is available. Please confirm rush turnaround times with Client Services before submitting samples.

Applicable Surcharges for Rush Turnaround Samples:
Same day TAT = 200%
Next business day TAT by Noon = 150%
Next business day TAT by 6:00pm = 100%
Second business day TAT by 6:00pm = 75%
Third business day TAT by 6:00pm = 50%
Fourth business day TAT by 6:00pm = 35%
Fifth business day = Standard

Statement of Confidentiality

Centek/SanAir Laboratories is aware of the importance of the confidentiality of results to many of our clients. Your name and data will be held in the strictest of confidence. We will not accept business that may constitute a conflict of interest. We commonly sign Confidential Nondisclosure Agreements with clients prior to beginning work. All research, results and reports will be kept strictly confidential. Secrecy Agreements and Disclosure Statements will be signed for the client if so specified. Results will be provided only to the addressee specified on the Chain of Custody Form submitted with the samples unless law requires release. Written permission is required from the addressee to release results to any other party.

WO#: **2311010**
Date: **11/13/2023**

Limitation on Liability

Centek/SanAir Laboratories warrants the test results to be accurate to the methodology and sample type for each sample submitted to Centek/SanAir Laboratories. In no event shall Centek/SanAir Laboratories be liable for direct, indirect, special, punitive, incidental, exemplary or consequential damages, or any damages whatsoever, even if Centek/SanAir Laboratories has been previously advised of the possibility of such damages whether in an action under contract, negligence, or any other theory, arising out of or in connection with the use, inability to use or performance of the information, services, products and materials available from the laboratory or this site. These limitations shall apply notwithstanding any failure of essential purpose of any limited remedy. Because some jurisdictions do not allow limitations on how long an implied warranty lasts, or the exclusion or limitation of liability for consequential or incidental damages, the above limitations may not apply to you. This is a comprehensive limitation of liability that applies to all damages of any kind, including (without limitation) compensatory, direct, indirect, or consequential damages, loss of data, income or profit and or loss of or damage to property and claims of third parties.
