Re: ***National Grid Oneida Former MGP Site***
NYSDEC Site No. 727008
Oneida, New York
2023 Periodic Review Report

Dear Mr. Squire:

In accordance with the NYSDEC comments received on April 1, 2024, the attached report is a revision of the 2023 Periodic Review Report (PRR) initially submitted on February 29, 2024. The PRR pertains to the period from January 22, 2023 through January 22, 2024 and includes a brief report and Institutional Controls/Engineering Controls (IC/EC) Certification Form.

Please feel free to contact me at 315.428.5652 if you have any questions.

Sincerely,

for SPS
Steven P. Stucker, C.P.G.
Lead Environmental Engineer

National Grid- Oneida MGP Site (NYSDEC Site No. 727008)

Reporting Period – January 22, 2023 to January 22, 2024

I. Introduction

A. **Brief Site Summary** –

The Former Oneida Manufactured Gas Plant (MGP) Site (the Site) is located on an approximate 2.1-acre lot in Oneida, New York (refer to Figure 1 Site Location Map). Manufactured gas was produced at the Site by a predecessor company to Niagara Mohawk Power Corporation from approximately 1868 until around 1930 using the coal carbonization process. The majority of the buildings and above-grade structures were removed by 1964 with the exception of the Service Center Building which was expanded in 1974 and has remained essentially unchanged since that time.

An investigation of the Site began in 1994 with a PSA/IRM Study, the remedial investigation (RI) in 1997, and a feasibility study in 1998. In 2002, National Grid also conducted an investigation of the Tailrace/Oneida Creek confluence which is located downstream from the Site. These results prompted a supplemental site investigation in 2006.

The site investigations identified impacted soils from MGP related activities, specifically coal tar and purifier waste. The constituents of concern (COCs) are primarily the volatile organic compounds (VOCs) benzene, toluene, ethylbenzene, and xylenes (collectively, BTEX), the general class of semi-volatile organic compounds (SVOCs) known as polycyclic aromatic hydrocarbons (PAHs), and cyanide, all of which can be found at the Site and the off-Site area.

B. **Remedial Program Effectiveness** – During the reporting period (January 22, 2023 to January 22, 2024) the long-term remedial objectives were met for the site.

C. **Remedial Program Compliance** - The major elements within the Institutional Control/Engineering Control(s) (IC/EC) Plan are in compliance. The Institutional Control (IC) / Environmental Easement was recorded with Madison County on March 28, 2017,

D. **Remedial Program Recommendations** - It is recommended that no changes be made to the IC/EC Plan. It is recommended that an annual

Periodic Review Report (PRR) be submitted. The next PRR submittal will cover the period January 22, 2024 to January 22, 2025.

II. Site Overview

A. Site Location and Boundaries –

The Site is located in the City of Oneida, Madison County, New York (Figure 1 presents the site location map). The Site is an approximate 2.1-acre area bounded by vacant City-owned properties to the north and west, Sconondoa Street to the south, and a privately-owned commercial property to the east. Currently, the property contains a vacant, single-story office building/garage (Service Center Building), and is surrounded by a 6-foot chain link fence with barbed wire.

B. Regulatory History and Remedy Features –

The Site and off-Site area were remediated in three separate phases between January 2008 and December 2012 in accordance with the *Record of Decision* (NYSDEC, 2000)*, Amended Record of Decision* (NYSDEC, 2002), *Explanation of Significant Difference (NYSDEC, 2007), Remedial Design/Remedial Action Work Plan – Phase 1 Area and Phase 1 Area Extension* (Arcadis 2007)*, Phase 1 Remedial Action – Addendum to Work Plan and Contractor Submittals* (National Grid 2008), *Phase 2 Remedial Design/Remedial Action Work Plan* (Arcadis 2008), and *Phase 3 Remedial Design/Remedial Action Work Plan* (Arcadis 2011). The remedial efforts included excavating approximately 65,337 cubic yards of soil and debris at depths of five (5) to 20 feet below grade, and the demolition of former building foundations, underground facilities, and former MGP structures located within the remedial excavation limits including gas holder and purifier foundations. Approximately 57,407 cubic yards of excavated soil and debris received off-site treatment and disposal due to exceeding the soil remediation levels. Clean imported fill as well as the excavated materials that met the applicable soil remediation levels were used to backfill the excavation areas. Groundwater was collected, treated and discharged during the remediation work totaling approximately 6.9 million gallons of construction wastewater.

III. Evaluate Remedy Performance, Effectiveness, and Protectiveness

A. **Evaluation of Remedy Performance** – Annual visual inspections of the cover system are conducted on the Site. The remedy performance has been effective in protecting the public.

IV. IC/EC Plan Compliance Report

A. IC/EC Requirements and Compliance

1. **IC/EC Controls**

   The ICs/ECs:

   - Soil Cover System: Annual site inspection of the cover system includes identification of any damage to the cover. National Grid conducts quarterly inspections for internal security purposes.
   - Monitoring Wells Associated with Monitored Natural Attenuation (MNA): Semi-annual groundwater sampling of the monitoring well system, until either water quality is consistently below NYSDEC standards, or has become asymptotic at an acceptable level over an extended period.

2. **IC/EC Goals -** Each goal is being met and/or working effectively.

3. **IC/EC Corrective Measures –** No deficiencies were noted during the site inspections.

4. **IC/EC Conclusions/Recommendations –** The EC program is in compliance and there are no recommendations for the program at this time.

5. **IC/EC Certification** – Refer to PRR Form - Attachment 1 for the certification.

V. Monitoring Plan Compliance Report –

The 2023 Annual Monitoring Report was submitted to the NYSDEC under a separate cover on February 28, 2024, and is provided as Attachment 3.

VI. Operation & Maintenance (O&M) Plan Compliance Report – Not Applicable

VII. Overall PRR Conclusions and Recommendations

A. **Compliance with Site Management Plan (SMP)**

1. **Requirements –** All IC/EC Plan requirements were met during this reporting period.

2. **Exposure Pathways –** There are no new completed exposure pathways resulting in unacceptable risk.

3. **Proposed Plans and Schedule to Meet Compliance –** No plan proposed.

B. **Performance and Effectiveness of the Remedy –** The remedy as described in the Site Management Plan and executed by National Grid has been effective in meeting the program goals.

C. **Future PRR Submittals** – The frequency of PRR Submittals should remain annual. Therefore, the next PRR reporting period will cover January 22, 2024 through January 22, 2025.

VIII. Additional Guidance –

Well RW-1, which was damaged by a Town mower in 2022, was properly abandoned on September 13, 2023. A letter summarizing the well abandonment activity was submitted to the NYSDEC on November 2, 2023.

Description of Institutional Controls

Parcel	Owner	Institutional Control
30.64-2-16	National Grid	Ground Water Use Restriction Site Management Plan Landuse Restriction

The specific institutional controls to be implemented under the SMP are as follows:
1. The Site may only be used for commercial and industrial enterprises provided that the long-term institutional and engineering controls identified in the SMP are employed.
2. All engineering controls must be operated and maintained as specified in the SMP.
3. All engineering controls must be inspected at the frequency and in the manner defined in the SMP.
4. The use of groundwater underlying the Site is prohibited without necessary water quality treatment, as determined by NYSDOH or the Madison County Department of Health, to render it safe for use as drinking water or for industrial purposes, and the user must first notify and obtain written approval to do so from NYSDEC.
5. Groundwater and other environmental or public health monitoring must be performed as defined in the SMP.

Description of Engineering Controls

Parcel	Engineering Control
30.64-2-16	Cover System Fencing/Access Control Monitoring Wells

Exposure to remaining MGP-related impacts in soil at the Site is prevented by a soil cover system, which comprises the following:
? A woven geotextile demarcation fabric and a minimum of 12 inches of clean imported fill material meeting the SCOs for commercial use, as set forth in Table 375-6.8(b) of 6 NYCRR 375;
? Asphalt pavement;
? Concrete sidewalks; and
? The concrete foundation slab of the existing Service Center Building.

Periodic Review Report (PRR) Certification Statements

1. I certify by checking "YES" below that:

   a) the Periodic Review report and all attachments were prepared under the direction of, and reviewed by, the party making the Engineering Control certification;

   b) to the best of my knowledge and belief, the work and conclusions described in this certification are in accordance with the requirements of the site remedial program, and generally accepted engineering practices; and the information presented is accurate and compete.

YES	NO
X	

2. For each Engineering control listed in Box 4, I certify by checking "YES" below that all of the following statements are true:

   (a) The Engineering Control(s) employed at this site is unchanged since the date that the Control was put in-place, or was last approved by the Department;

   (b) nothing has occurred that would impair the ability of such Control, to protect public health and the environment;

   (c) access to the site will continue to be provided to the Department, to evaluate the remedy, including access to evaluate the continued maintenance of this Control;

   (d) nothing has occurred that would constitute a violation or failure to comply with the Site Management Plan for this Control; and

   (e) if a financial assurance mechanism is required by the oversight document for the site, the mechanism remains valid and sufficient for its intended purpose established in the document.

YES	NO
X	

IF THE ANSWER TO QUESTION 2 IS NO, sign and date below and DO NOT COMPLETE THE REST OF THIS FORM. Otherwise continue.

Re: 2023 Annual Groundwater Monitoring Report
Oneida (Sconondoa Street) Former MGP Site
Oneida, NY
NYSDEC Site No. 7-27-008

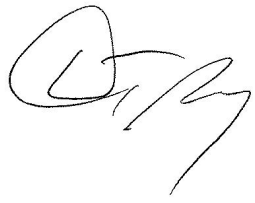
Dear Mr. Squire:

Enclosed is the 2023 Annual Groundwater Monitoring Report for the former manufactured gas plant (MGP) site located on Sconondoa Street in Oneida, NY. The Groundwater Monitoring Report details compliance site monitoring, groundwater sampling, and recommendations.

A few highlights from the report include:

- NAPL was not detected in any of the monitoring wells gauged during the year.
- Quarterly site inspections have been conducted. Overall, the site is in compliance and in good condition.

Very truly yours,



for SPS

1 Introduction

1.1 Introduction

Groundwater & Environmental Services, Inc. (GES) has prepared this 2023 Groundwater Monitoring Report on behalf of National Grid. This report compiles the groundwater monitoring activities completed in the Spring of 2023, and Fall of 2023 at the Oneida (Sconondoa Street) former manufactured gas plant (MGP) Site (the Site) located in Oneida, New York. The monitoring activities being conducted at the Site are based on the Site Management Plan (SMP) submitted by National Grid to the New York State Department of Environmental Conservation (NYSDEC) in September 2018, and approved by NYSDEC in December 2018.

1.2 Site Background

The Site is located at 215 Sconondoa Street in the City of Oneida, Madison County, New York, **Figure 1** provides a site location map. The approximately 2.1-acre property is identified as the Site. It is bordered by vacant City-owned properties to the north and west, Sconondoa Street to the south, and a privately-owned commercial property to the east. Currently the Site contains a vacant, single-story office building/garage and is surrounded by a six (6) foot high chain-link fence with barbed wire. A structure location map showing the location of features at the Site is presented as **Figure 2**.

The off-Site area occupies an area approximately 4.4 acres and comprises portions of several City of Oneida- or privately-owned properties along the alignment of an open drainage ditch, referred to as the "Tailrace", and an isolated area located at the confluence of the Tailrace and the Oneida Creek, referred to as the "Confluence".

Between 1896 and 1899 the manufactured gas plant was built on the Sconondoa Street property. The early gas works included coal retorts, a scrubber room, purifier room, lime storage room, a coal house, and a 25,000-cubic foot gas holder. Various modifications to the Site operations and the layout of the Site took place over time. In 1914 the electric plant was decommissioned a 100,000-cubic-foot distribution gas holder was installed on the north side of the Site. The New York Power and Light Corporation phased out the manufactured gas operations at the Site between 1928 and 1930. By 1964 all the MGP structures had been demolished to make way for the Niagara Mohawk Power Corporation service center. The Service Center Building was expanded in 1974 and has remained essentially unchanged since then.

1.3 Summary of Monitoring Activities

The following routine monitoring activities were conducted at the Site in 2023:

- Semi-Annual groundwater sampling was conducted in April 2023, and October 2023 at 13 monitoring wells. The samples were sent to Pace Analytical Laboratories (Pace) to be analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), polycyclic aromatic

hydrocarbons (PAHs) and Cyanide. The analytical data reports provided by Pace were validated by GES.

- Monitoring wells were monitored for any detections of non-aqueous phase liquid (NAPL).
- Quarterly site-wide inspections were conducted. General maintenance of the Site grounds, including snow removal, vegetation removal, and building upkeep was completed, as necessary.
- Well RW-1 was abandoned on September 13, 2023, following approval from the NYSDEC. A letter summarizing the well abandonment activity was submitted to the NYSDEC on November 2, 2023.

2 Groundwater Monitoring

2.1 General

The spring 2023 event was conducted on April 12, 2023, and fall 2023 event was conducted on October 12, 2023. Monitoring wells MW-1 through MW-7, MW-ES-8, MW-9, MW-ES-10S, MW-11, MW-12, and MW-103 were sampled during these events. Samples collected were sent to Pace for laboratory analysis of BTEX, PAHs, and Cyanide. Static water levels were measured in each well prior to purging. Purging data for the wells, field parameters measured during purging, and the chain of custody for the samples are included in **Appendix A**. The groundwater level measurements are provided on **Table 1**. Groundwater contours are shown on **Figure 3** and **Figure 4**.

2.2 Non-Aqueous Phase Liquid (NAPL) Monitoring

In April 2023, and October 2023, NAPL was not detected while measuring the static water levels in all the monitoring wells as well as the recovery well. NAPL was last detected in May 2019, in monitoring well MW-6. NAPL measurements are provided on **Table 2**.

2.3 Groundwater Sampling Analytical Results

Groundwater samples were collected by GES from 13 monitoring wells on April 12, 2023, and October 12, 2023 (MW-1 through MW-7, MW-ES-8, MW-9, MW-ES-10S, MW-11, MW-12, and MW-103). Low-flow sampling techniques were used to purge groundwater from each monitoring well prior to collecting groundwater samples. Field parameters (consisting of turbidity, temperature, pH, conductivity, oxidation reduction potential [ORP], and dissolved oxygen) were measured approximately every 5 to 10 minutes during well purging, and the depth to water was monitored throughout the pumping process to minimize drawdown within the well. Well purging activities continued at each well until the field parameters stabilized and the turbidity of the water in the wells was reduced to less than 50 nephelometric turbidity units (NTUs). Groundwater field data is presented in **Appendix A**.

Following purging, groundwater samples were collected. The groundwater samples were bottled and shipped to Pace Analytical for laboratory analysis for Benzene, Toluene, Ethylbenzene, and total Xylenes (BTEX; EPA Method 8260C), Semi-Volatile Polycyclic Aromatic Hydrocarbons (PAHs; EPA Method 8270D), as well as total cyanide (EPA Method 9012B). Quality assurance/quality control (QA/QC) samples, including a field duplicate, matrix spike, and duplicate matrix spike were also submitted for laboratory analysis. The laboratory analytical results for the groundwater samples were reported using NYSDEC Analytical Services Protocol (ASP) Category B data deliverable packages to facilitate data validation.

Purge water generated during the sampling activities was collected in 5-gallon buckets and transferred into 55-gallon steel drums for characterization prior to offsite treatment/disposal in accordance with applicable regulations.

Analytical results from the laboratory analysis report are summarized in **Table 3** and compared to the Class GA groundwater standards and guidance values presented in TOGS 1.1.1. VOC, where exceedances are bolded. Analytical data is also shown on **Figure 5** and **Figure 6**. The Data Usability Summary Report (DUSR) is included in **Appendix B**.

In April 2023, monitoring wells MW-3, MW-4, MW-12, and MW-103 had no detections of any analyzed compound. Monitoring wells MW-1, , MW-6, and MW-7 had exceedances of one or more compounds during the April 2023 sampling event. In October 2023, MW-1, MW-6, and MW-7 had exceedances of one or more compound. Monitoring well MW-3, MW-4, MW-5, MW-ES-8, MW-11, MW-12, and MW-103 had no detections of any analyzed compound in October 2023.

2.4 Analytical Results Data Validation

The analytical data reports provided by Pace for the April 2023, and October 2023 events were validated by GES. The primary objective of the data validation was to identify any questionable or invalid laboratory processes or data. The data validator reviewed all quality assurance/quality control information and the actual laboratory data to confirm the laboratory was operating within the required limits and results were correctly taken from the instruments.

The Data Usability Summary Reports for the groundwater monitoring including the validated laboratory data is presented in **Appendix B.**

3 Operation and Maintenance Activities

3.1 Quarterly Site-Wide Inspections

Quarterly site-wide inspections were conducted by GES and documented in inspection sheets. The vegetative cover, fence line, and security gates are inspected as part of site-wide inspection activities. Refer to **Appendix A** for photographs of the current site conditions, and to **Appendix C** for the quarterly inspection sheets.

3.2 Recommendations

For 2024, GES recommends that the OM&M site program continue with the following elements:

- Perform semi-annual groundwater monitoring well sampling/analysis.
- Perform quarterly site-wide inspections. Conduct site maintenance, including routine snow removal, vegetation removal, and system/building upkeep.
- Perform semi-annual NAPL collection and disposal, as necessary.
- Prepare and submit the annual Groundwater Monitoring Report to NYSDEC.

Pace Analytical Job Nos. 30416862,

Groundwater & Environmental Services, Inc. (GES) reviewed a data package (Laboratory Project Numbers 30416862) from Pace Analytical Services, Inc., for the analysis of groundwater samples collected on April 12, 2023 from monitoring wells located at the National Grid Oneida, NY Site. Thirteen aqueous samples, one field duplicate (MW-2) and a trip blank were analyzed for select volatile organics, PAHs, and cyanide. Data validation occurred per the guidance found in the National Functional Guidelines for Organic and Inorganic Superfund methods, revised in 2020. Methodologies utilized are the USEPA SW846 methods 8260B, 8270C and EPA 9012B, with additional method and QC criteria required under the NYSDEC ASP.

The data are reported as part of a complete full deliverable type B data validation. This usability report is generated from review of the following:

- Laboratory Narrative Discussion
- Custody Documentation
- Holding Times
- Surrogate and Internal Standard Recoveries
- Matrix Spike Recoveries/Duplicate (MS/MSD) Correlations
- Field Duplicate Correlations
- Laboratory Control Sample (LCS)
- Preparation/Calibration Blanks
- Calibration/Low Level Standard Responses
- Instrumental Tunes
- Instrument MDLs
- Sample Quantitation and Identification

The items listed above which show deficiencies are discussed within the text of this narrative. All of the other items are determined to be acceptable for the DUSR level review.

All of the items were determined to be acceptable for the DUSR level review.

Table 1 – Data Qualifications

Sample ID	Qualifier	Analyte	Reason for qualification
MW-2 MW-3 MW-ES-8 FD-0423	UJ-	VOCs	Residual chlorine
MW-1 MW-6	J	Benzo(b)fluoranthene Benzo(k)fluoranthene	Insufficient resolution
All Samples	UJ- (non-detects) J- (detects)	Acenaphthene Naphthalene	Low LCS recovery
All Samples	UJ-	Benzo(g,h,i)perylene	Low CCV

In summary, sample results are usable as reported, with the exception of the data listed above.

Residual chlorine was detected in MW-2, MW-3, MW-ES-8 and the field duplicate FD-0423. VOCs in these samples may be biased low.

Benzo(b)fluoranthene and benzo(k)fluoranthene were not sufficiently resolved in some sample chromatograms. For those samples that reported positive detections, the concentrations are qualified as estimated due to the resolution issue. No qualification was required for samples that did not report positive concentrations of the analytes.

Qualified data should be used with care, as the quantification cannot be assumed accurate and/or precise. Qualifications are detailed in Table 1.

The laboratory case narratives and sample identification summary forms are attached to this text, and should be reviewed in conjunction with this report.

BTEX Volatiles by EPA 8260C/NYSDEC ASP

Sample holding times for groundwater samples and instrumental tune fragmentations are within acceptance ranges.

Blanks show no contamination. Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines.

Surrogate and internal standard recoveries are within required limits.

Calibration standards show acceptable responses within analytical protocol and validation action limits.

LCS/LCSD recoveries were within project and laboratory criteria.

An MS/MSD pair that was analyzed was unassociated with the site, and was not used to determine site specific accuracy and precision.

MW-2 was the blind field duplicate location for both sampling events. Benzene was the only analyte detected in the pair, both of which reported 1 µg/L. The precision was within acceptable limits.

PAHs by EPA8270D/NYSDEC ASP

Sample holding times for groundwater samples and instrumental tune fragmentations are within acceptance ranges.

Blanks show no contamination. Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines with the exception of a low recovery in the following continuing calibration verification standards:

- Benzo(g,h,i)perylene

Data for this analyte is qualified as estimated non-detect with a possible low bias.

Surrogate and internal standard recoveries are within required limits.

The laboratory control spike recoveries and precision indicate the method is within laboratory control with the exception of low recoveries of acenaphthene and naphthalene. These analytes are qualified as low biased in all site samples.

Surrogate and internal standard recoveries are within required limits.

An MS/MSD was analyzed using MW-9- as the matrix. Matrix spike and matrix spike recoveries were within laboratory specified criteria with the following exceptions:

MW-2 was the blind field duplicate. The blind field duplicate correlations of MW- were not calculated, as all PAH analytes reported non-detect.

Cyanide by EPA 9012B /NYSDEC ASP

Holding times were met.

Blanks show no contamination.

Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines for both analytical runs.

The laboratory control spike recoveries and precision indicate the method is within laboratory control for both sampling events.

An MS/MSD was analyzed using MW-9. Although the sample reported cyanide recoveries (77%, 86%) below laboratory criteria (90% - 100%), the recoveries were above the EPA recommended 75% minimum, and met project DQO. No qualifications were required.

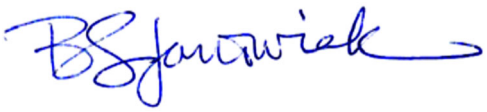
The blind field duplicate correlations of MW-2 were not were not calculated, as cyanide reported non-detect in both samples.

Data Package Completeness

Complete NYSDEC Category B deliverables were included in the laboratory data package, all information required for validation of the data is present.

Please do not hesitate to contact me if you have comments or questions regarding this report.

Sincerely,



Bonnie Janowiak, Ph.D.,
NRCC Environmental Chemist
Principal Chemist

PROJECT NARRATIVE

Project: National Grid - Oneida, NY
Pace Project No.: 30578680

Method: **EPA 8270D by SIM**
Description: 8270D PAH SIM Reduced Volume
Client: Groundwater & Environmental Services, Inc. (Syracuse)
Date: April 21, 2023

General Information:
16 samples were analyzed for EPA 8270D by SIM by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3510C with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

QC Batch: 581798

CL: The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.

PROJECT NARRATIVE

Project: National Grid - Oneida, NY
Pace Project No.: 30578680

Method: **EPA 8260C**
Description: 8260C MSV
Client: Groundwater & Environmental Services, Inc. (Syracuse)
Date: April 21, 2023

General Information:
17 samples were analyzed for EPA 8260C by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 581740

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30578834004

MH: Matrix spike recovery and/or matrix spike duplicate recovery was above laboratory control limits. Result may be biased high.

- MSD (Lab ID: 2825537)
  - o-Xylene

R1: RPD value was outside control limits.

- MSD (Lab ID: 2825537)
  - Benzene
  - Ethylbenzene
  - Toluene
  - m&p-Xylene
  - o-Xylene

PROJECT NARRATIVE

Project: National Grid - Oneida, NY
Pace Project No.: 30578680

Method: **EPA 9012B**
Description: 9012B Cyanide, Total
Client: Groundwater & Environmental Services, Inc. (Syracuse)
Date: April 21, 2023

General Information:
16 samples were analyzed for EPA 9012B by Pace Analytical Services Greensburg. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 9012B with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: 582637

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 30578680009,30578680016

ML: Matrix spike recovery and/or matrix spike duplicate recovery was below laboratory control limits. Result may be biased low.

- MS (Lab ID: 2829774)
  - Cyanide
- MSD (Lab ID: 2829775)
  - Cyanide

RE: Data Usability Summary Report for National Grid - Oneida, NY Site Data Package
Pace Analytical Job Nos. 30630887

Groundwater & Environmental Services, Inc. (GES) reviewed a data package (Laboratory Project Numbers 30630887) from Pace Analytical Services, Inc., for the analysis of groundwater samples collected on October 2023 from monitoring wells located at the National Grid Oneida, NY Site. Thirteen aqueous samples, one field duplicate (MW-2) and a trip blank were analyzed for select volatile organics, PAHs, and cyanide. Data validation occurred per the guidance found in the National Functional Guidelines for Organic and Inorganic Superfund methods, revised in 2020. Methodologies utilized are the USEPA SW846 methods 8260C, 8270D and EPA 9012B, with additional method and QC criteria required under the NYSDEC ASP.

The data are reported as part of a complete full deliverable type B data validation. This usability report is generated from review of the following:

- Laboratory Narrative Discussion
- Custody Documentation
- Holding Times
- Surrogate and Internal Standard Recoveries
- Matrix Spike Recoveries/Duplicate (MS/MSD) Correlations
- Field Duplicate Correlations
- Laboratory Control Sample (LCS)
- Preparation/Calibration Blanks
- Calibration/Low Level Standard Responses
- Instrumental Tunes
- Instrument MDLs
- Sample Quantitation and Identification

The items listed above which show deficiencies are discussed within the text of this narrative. All of the other items are determined to be acceptable for the DUSR level review.

All of the items were determined to be acceptable for the DUSR level review.

Table 1 – Data Qualifications

Sample ID	Qualifier	Analyte	Reason for qualification
MW-1	J- UJ UJ UJ	Ethylbenzene Toluene m&p-Xylene o-Xylene	MS/MSD outside compliance
All Samples	J- UJ	All SVOCs	Failed QC and re-analysis outside holding time

In summary, sample results are usable as reported, with the exception of the data listed above.

Qualified data should be used with care, as the quantification cannot be assumed accurate and/or precise. Qualifications are detailed in Table 1.

The laboratory case narratives and sample identification summary forms are attached to this text, and should be reviewed in conjunction with this report.

BTEX Volatiles by EPA 8260C/NYSDEC ASP

Sample holding times for groundwater samples and instrumental tune fragmentations are within acceptance ranges.

Blanks show no contamination. Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines.

Surrogate and internal standard recoveries are within required limits.

Calibration standards show acceptable responses within analytical protocol and validation action limits.

LCS/LCSD recoveries were within project and laboratory criteria.

An MS/MSD was analyzed using MW-9 as the matrix. Matrix spike and matrix spike recoveries were within laboratory specified criteria

An MS/MSD pair was analyzed utilizing samples from the MW-1 location. MS and MSD results were below acceptable criteria and the data may be biased low. RPDs were also above the maximum of 30%. Concentrations are qualified as estimated with a possible low bias.

MW-2 was the blind field duplicate location for both sampling events. The blind field duplicate correlations of MW-2 were not were not calculated, as BTEX reported non-detect in both samples.

PAHs by EPA8270D/NYSDEC ASP

Instrumental tune fragmentations are within acceptance ranges.

Blanks show no contamination. Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines

Surrogate and internal standard recoveries are within required limits.

An MS/MSD was analyzed using MW-9 as the matrix. Matrix spike and matrix spike recoveries were within project and EPA-specified criteria.

MW-2 was the blind field duplicate. The blind field duplicate correlations of MW-2 all fell within criteria.

Initial SVOC analysis occurred within hold time. SVOCs were subsequently re-extracted and analyzed due to LCS failure. The SVOC re-analysis was performed outside of holding time. Data results were confirmed in re-analysis. As the initial analysis had MS/MSD results within criteria, the initial data is considered reliable for reporting, although qualified with an estimated flag due to possible low bias.

Benzo(b)fluoranthene and benzo(k)fluoranthene were not sufficiently resolved in some sample chromatograms. For those samples that reported positive detections, the concentrations are qualified as estimated due to the resolution issue. No qualification was required for samples that did not report positive concentrations of the analytes.

Cyanide by EPA 9012B /NYSDEC ASP

Holding times were met.

Blanks show no contamination.

Calibration standards, both initial and continuing, show acceptable responses within analytical method protocols and validation guidelines for both analytical runs.

The laboratory control spike recoveries and precision indicate the method is within laboratory control for both sampling events.

An MS/MSD was analyzed using MW-9. The recoveries were above the EPA recommended 75% minimum, and met project DQO. No qualifications were required.

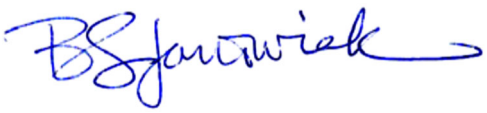
The blind field duplicate correlations of MW-2 were not were not calculated, as cyanide reported non-detect in both samples.

Data Package Completeness

Complete NYSDEC Category B deliverables were included in the laboratory data package, all information required for validation of the data is present.

Please do not hesitate to contact me if you have comments or questions regarding this report.

Sincerely,



Bonnie Janowiak, Ph.D.,
NRCC Environmental Chemist
Principal Chemist
