1. INTRODUCTION

Miller Engineers has been retained by the Town of Dewitt to observe, assist and document post-closure monitoring activities at the Town of Dewitt Landfill in East Syracuse, New York. This report summarizes post-closure monitoring activities conducted in 2017 and provides the laboratory results of surface water, groundwater and landfill gas samples collected during the year.

2. BACKGROUND

The former Town of Dewitt Landfill is located between Butternut Drive and Burdick Street in East Syracuse, New York and is approximately 57 acres in size. Access to the site is from Fisher Road and is limited by a chain link fence and a locked gate. The site is surrounded by light industrial properties to the north and west and residential properties to the east. The Erie Canal, to the south, has been developed as a recreational area with multi-use trail, boating access and a picnic area.

The site is an inactive municipal landfill that previously accepted residential and industrial waste. The landfill was closed by the Town of Dewitt under the New York State Department of Environmental Conservation (NYSEC) state Superfund Program (site code 734012). Investigation and remediation efforts included a Remedial Investigation/Feasibility Study in 1992, an Interim Remedial Measure (IRM) completed in 1994 (Part 360 landfill cap) and a Record of Decision (ROD) in March 1994. This site was included on the NYSDEC's list of Legacy sites based on the potential for soil vapor intrusion. Based upon additional evaluation by the New York State Department of Health (NYSDOH), the site was removed from the list in April 2009. Currently the site is being monitored under the Monitoring and Maintenance Operations Manual (MMOM) prepared in December 1994 by O'Brien and Gere Engineers, Inc. for the Town of Dewitt.

3. LANDFILL RECONNAISSANCE

Site visits were performed during March, May, August, and December 2017 to assess general site conditions at the landfill and to collect environmental samples. Landfill reconnaissance included observations and assessments of the final cover and vegetation, landfill gas venting system, storm water management system and access road and perimeter fence conditions. A summary of the observations is provided below. Appendix A presents the Inspection and Maintenance checklist completed during the December 6, 2017 site visit. Appendix B provides a photographic log of typical conditions observed at the landfill during 2017.

3.1 Final Cover and Vegetation

The December site visit revealed mowed, wet, slightly brown growth of grasses across the landfill. Grass cover appeared uniform and healthy over most of the landfill. A few taller grasses

were observed near the gas vents, where mowing could not reach. Based on these observations, it appears that the cover layer and cap material are in good repair and that no deep-rooted plants are compromising the low-permeability cap layer or allowing precipitation to infiltrate the waste layer.

3.2 Landfill Gas System

There are a total of 24 gas vents that comprise the passive gas venting system at the landfill. All gas vents were observed to be in good repair and operable during the December 2017 visit. All vent screens were free of debris and blockages and appeared to be operating as designed.

Previous monitoring reports indicate that the most prolific gas producing vents are located along the east-west trending ridge at the top of the landfill (see Figure 1). Qualitative observations, gas flow measurements and gas sampling were scheduled for December 12, 2017, however a snow storm and subsequent deep snow and cold temperatures prevented access to the vents for the remainder of December.

3.3 Storm-water Management and Drainage

A series of radial drainage ditches lined with rip-rap overlying perforated drain pipe are spaced around the landfill to facilitate storm water run-off and to minimize ponding and infiltration into the waste mass. During each of the 2017 site visits the ditches were observed to be in good repair with no signs of erosion, fine sediment accumulation or ponding. There were no small trees or tall woody plants observed in the down chutes and the ditches appeared to drain efficiently. At this time the drainage system appears to be functioning as designed.

3.4 Access Road and Fencing

A crushed stone access road surrounds the landfill and is located on the lower side slope. Vehicle traffic accesses the road through a locked chain link fence gate located on the north side of the landfill at the southerly-most portion of Fisher Road (see Figure 1). In December, the access road was observed to be in good repair with no washouts and no impassable dips or ruts. The road was passable by two-wheel drive pickup truck during the March, May, and August 2017 site visits. From December 12 through December 31, 2017, the road was impassable due to accumulated snow.

The landfill is bounded on the south by an eight-foot tall chain link fence that separates the Erie Canal towpath from the landfill. The fence was observed to be in good repair with no openings or breaks in the fence and no damaged posts or rails. A short section of fence is also located at the access gate at Fisher Road and spans the northern landfill boundary between a stand of mature trees and a wetland. The fence and gate adequately prevent automobile and truck traffic from unauthorized entry to the landfill. However, a hole in the gate fencing is large enough to allow a

small person to crawl through. Additionally, recreational ATV traffic and snowmobile tracks have been observed, at various times of the year, circumventing the fence and accessing the landfill.

In general, the access road and fencing appear to be functioning as designed.

4. POST-CLOSURE SAMPLING

The Monitoring and Maintenance Operations Manual (MMOM) calls for surface water, groundwater and landfill gas monitoring. The sections below describe locations, frequency, methods and results for surface water, groundwater and gas vent sampling. Figure 1 shows the sampling locations. Sample results were tabulated and compared to standards, criteria and guidance (SCG) appropriate for each sampling media and described below.

4.1 Surface Water Sampling

The MMOM requires that surface water samples be collected once every calendar quarter at three designated locations. Surface sample locations SW-1, SW-2 and SW-3 are located at the toe of the landfill slope and on the edge of the surrounding wetland. Surface water samples were collected on March 30 and December 11, 2017. All three of the surface water locations were dry on the scheduled sampling dates of May 29 and August 10 and therefore no samples were collected on those dates.

Surface water samples were collected by digging a shallow hole in the wetland and allowing the hole to fill with water. Sample containers were filled by submerging them in the standing water. The samples were preserved on ice and shipped directly to the laboratory by the sampling crew. The samples were analyzed for Priority Pollutant Metals, volatile organic compounds (VOCs) using USEPA Method 624 and total dissolved solids (TDS).

Surface water sampling results were compared to SCGs defined in NYSDEC “*Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, June 1998*” and subsequent addendums.

The results of the surface water sampling events indicate that there were no exceedances of SCGs for any parameter at locations SW-1 and SW-3 in any of the four sampling rounds. Location SW-2 exhibited arsenic (0.094 mg/l) in exceedance of the 0.025 mg/l SCG and vinyl chloride (51 µg/l) exceeded the 2 µg/l SCG.

The full list of analytes and results for each surface water location and each sampling event are presented in Tables 1a, 1b and 1c. The full laboratory reports including field observations and quality assurance/quality control data are presented Appendix C.

4.2 Groundwater Sampling

The MMOM requires groundwater samples to be collected once every calendar year at 18 designated locations (see Figure 1). Groundwater samples were collected on December 11 and 12, 2017 from each of the monitoring wells with the exception of MW-8S, which was frozen.

The samples were collected using dedicated bailers to purge each of the wells of three volumes of water prior to sample collection. After purging, field parameters including temperature, pH, turbidity, conductance, oxidation-reduction potential, and dissolved oxygen were measured and recorded on field data sheets. The field data sheets are presented in the laboratory report in Appendix B. The sample containers were filled using bailers and then preserved with ice and shipped directly to the laboratory by the sampling crew. The samples were analyzed for Priority Pollutant Metals, VOCs using USEPA Method 624 and total dissolved solids (TDS).

Groundwater sampling results were compared to SCGs defined in NYSEDC “*TOGS 1.1.1 Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, June 1998*” and subsequent addendums.

The results of the groundwater sampling are presented in Table 2a and 2b. The results indicate that the SCG for arsenic was exceeded at MW-9M and chromium and nickel in MW-9D. Lead exceeded the SCG at MW-5D. No other metals exceeded SCGs at any other wells.

The VOC 1,2-dichloroethene exceeded SCGs at MW-4S. Trichloroethene exceeded SCGs at MW-4D. Also, vinyl chloride exceeded SCGs at MW-4S, MW-4D and MW-9M. No other VOCs exceeded SCGs at any other wells.

The full laboratory report including field observations and quality assurance/quality control data is presented Appendix C.

4.3 Gas Vent Sampling

Due to a heavy snow event on December 12, 2017, gas the vents were inaccessible for sampling. Subsequent snow and cold temperatures prevented access to the gas vents for the remainder of December 2017, therefore there are no gas vent sampling results to report for 2017. The next gas sampling event is scheduled for the second quarter of 2018.

5. CONCLUSION

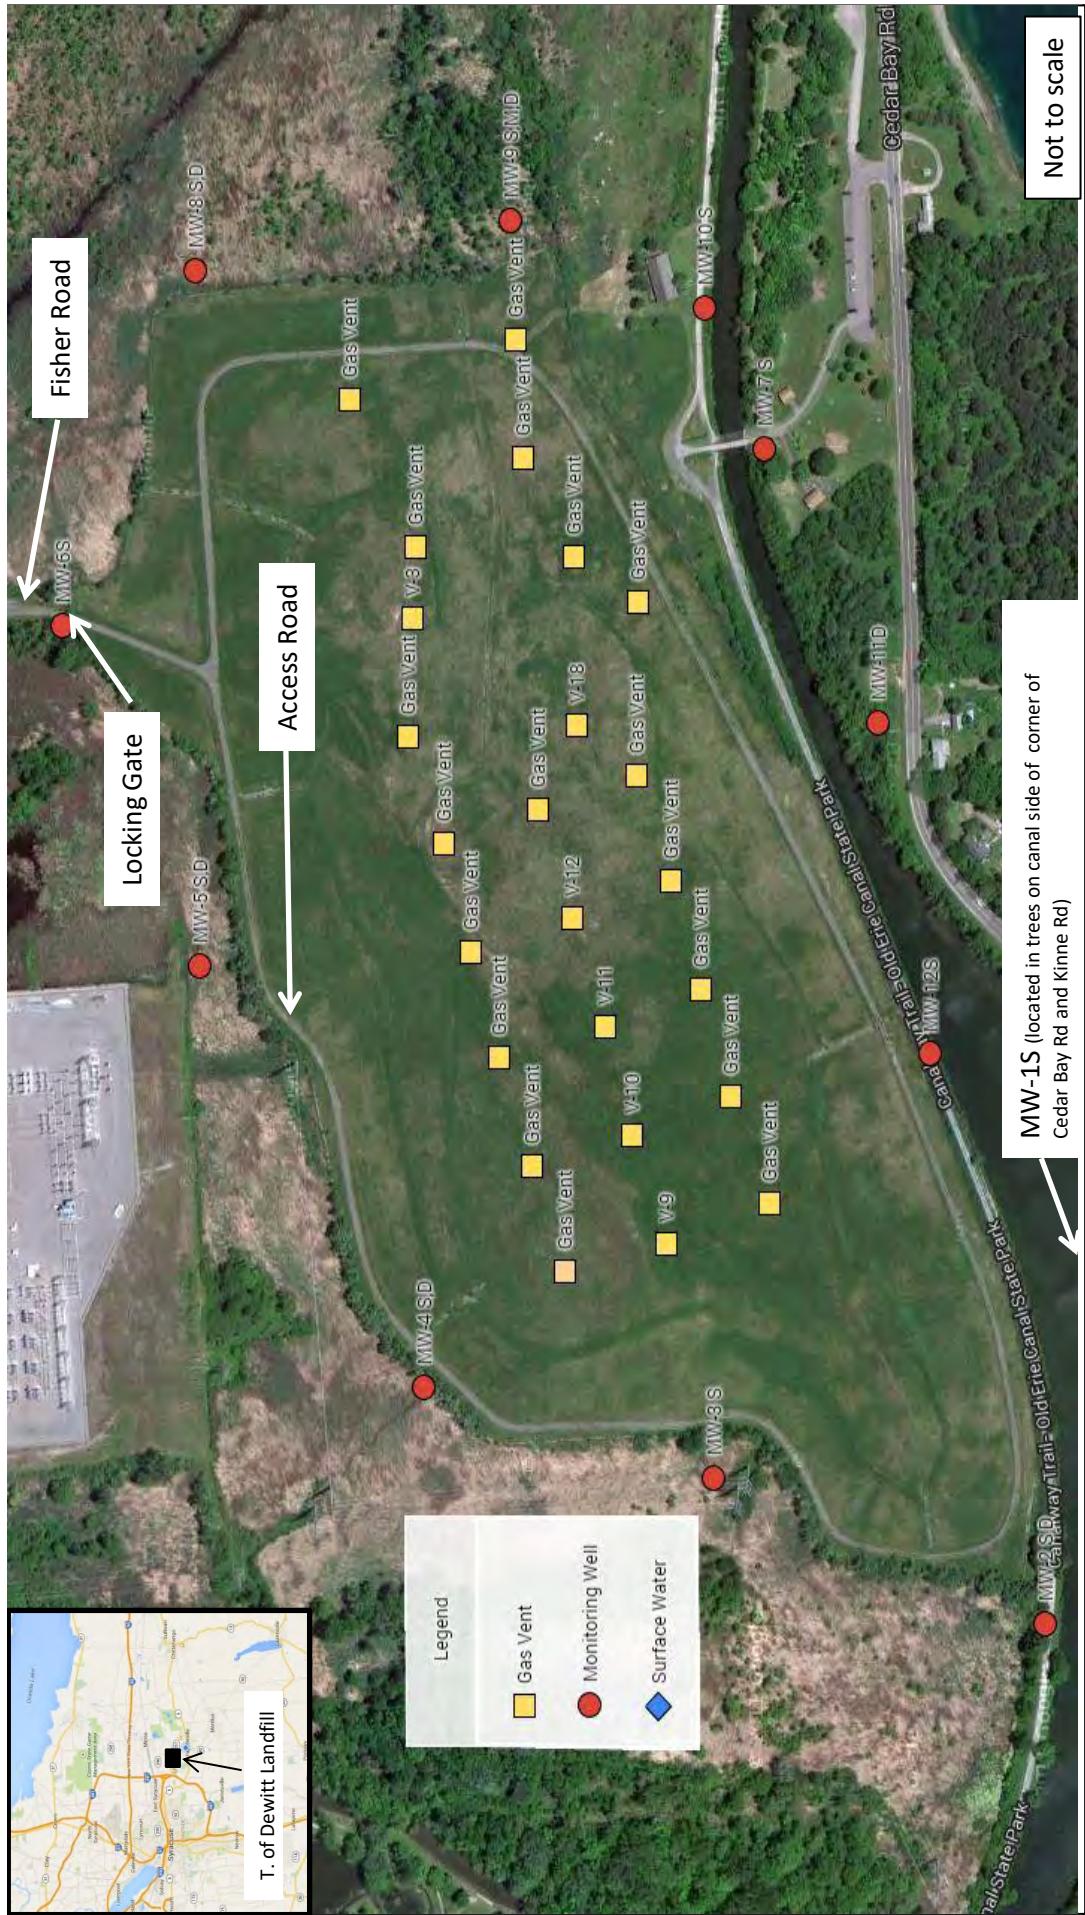

Based on site visits and the analyses of surface water, groundwater and gas vent samples, the general condition of the landfill is good and all systems appear to be operating as designed. A few exceedances of environmental sampling SCGs have been noted, however these are comparable

to previous years' results and, due to relatively low concentrations, isolated occurrences and lack of significant exposure risks, do not pose a significant threat to human health or the environment.

6. RECOMMENDATIONS

- Continue road maintenance and grass mowing as specified in the Maintenance Operations Manual (MMOM).
- Continue surface water, groundwater and vent gas monitoring as specified in the MMOM.
- Repair the hole in the entrance gate on Fisher Road.
- Hand cut or use a string trimmer to cut tall grasses inaccessible by mower near the gas vents.

* New York State Department of Environmental Conservation Division of Air resources (DAR-1) Guidelines for the Control of Toxic Ambient Air Contaminants, 1997.

¹SGC - Short-term Guideline Concentration

²AGC - Annual Guideline Concentration [REDACTED] - Concentration exceeds standard

ns - A snow storm on 12/12 and 12/13 prevented access to the gas vents. No samples were collected.

APPENDICES

Appendix A
Inspection and Maintenance Checklist

Town of Dewitt Landfill
Inspection and Maintenance Checklist

Date: 12/6/17

Inspector(s): Gerry Gould

Landfill Component	Checked/ Photos	Comments	Maintenance Action Needed
1. Barrier Protection Layer, Topsoil Layer and Vegetative cover	✓	Good grass cover. No signs of barrier layer. No erosion.	none
2. Gas Discharge Vents	✓	All vents free of blockage and in good repair	none
3. Swales, Ditches and Downchutes	✓	Free of brush & trees.	none
4. Storm Sewer System, including culverts	✓	Culverts clear.	none
5. Fence and Gates	✓	Fence and gates are in good shape. Gate is locked.	none
6. Access Road	✓	Clear and driveable.	none
7. Perimeter Service Road	✓	Clear and driveable.	none
8. Monitoring Wells	✓	Marked and accessible. Locks in place.	none

General Observations:

In general the landfill is in good shape. Mowing and brush cutting is adequate. There is evidence of recreational ATV traffic across landfill, ~~however~~ however the tracks have not compromised the cap.

Signed: Gerry Gould

Appendix B
Photographic Log

Photographic Log

Photo 1. Access road on north side of landfill facing west - December 2017.

Photo 2. Drainage chute in good condition without woody plants – December 2017.

Photo 3. Recreational ATV tracks coming from wetland onto west side of landfill - December 2017

Photo 4. Mowed grass and down chute with small trees removed since 2016. – December 2017.

Photo 5. Maintained down chute viewing North at Erie Canal. – December 2017.

Photo 6. Gas vent with small tree growing out of reach of mower. – December 2017.

Photo 7. Mowed grass and gas vents in distance. – December 2017.

Photo 8. Recreational ATV tracks leading to landfill near Fisher Road gate– December 2017.

Photo 9. Recreational ATV trail circumventing perimeter fence on east side of Fisher Rd. gate. – December 2017.

Photo 10. Viewing north at Fisher Rd gate. -- December 2017.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

General Chemistry

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

TestAmerica Job ID: 480-115358-1

Job ID: 480-115358-1

Laboratory: TestAmerica Buffalo

Narrative

Job Narrative 480-115358-1

Receipt

The samples were received on 3/31/2017 1:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.4° C.

GC/MS VOA

Method(s) 624: The following samples contained residual chlorine upon receipt: SW-2 (480-115358-2) and SW-3 (480-115358-3).

Method(s) 624: The preservative used in the sample containers provided is not compatible with the Method 624 analytes requested. The following samples were received preserved with hydrochloric acid: SW-1 (480-115358-1), SW-2 (480-115358-2), SW-3 (480-115358-3) and TRIP BLANK (480-115358-4). The requested target analyte list contains 2-chloroethyl vinyl ether, which is an acid-labile compound that degrade in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010C: The following sample was diluted due to the presence of Total Sulfur which interferes with Lead: SW-2 (480-115358-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method(s) SM 2540C: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: SW-3 (480-115358-3). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

List Source: TestAmerica Buffalo

List Number: 1

Creator: Williams, Christopher S

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TAL
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	False	LAB TO CHECK RC

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 480-128773-1

Receipt

The samples were received on 12/12/2017 3:10 AM, 12/13/2017 2:00 AM and 12/16/2017 1:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 1.1° C, 1.1° C, 1.1° C, 1.2° C and 1.8° C.

GC/MS VOA

Method(s) 624: The preservative used in the sample containers provided is not compatible with the Method 624 analytes requested. The following samples were received preserved with hydrochloric acid: SW-1 (480-128773-1), MW-11D (480-128774-1), MW-12S (480-128774-2), MW-1S (480-128774-3), MW-2D (480-128774-4), MW-2S (480-128774-5), MW-3S (480-128774-6), MW-6S (480-128774-9) and MW-10S (480-128774-10). The requested target analyte list contains 2-chloroethyl vinyl ether, which is an acid-labile compound that degrade in an acidic medium.

Method(s) 624: The preservative used in the sample containers provided is not compatible with the Method 624 analytes requested. The following samples were received preserved with hydrochloric acid: MW-7S (480-128774-11), MW-8D (480-128774-12), MW-9D (480-128774-13) and MW-9M (480-128774-14). The requested target analyte list contains 2-chloroethyl vinyl ether and/or acrolein, which are acid-labile compounds that degrade in an acidic medium.

Method(s) 624: The preservative used in the sample containers provided is not compatible with the Method 624 analytes requested. The following samples were received preserved with hydrochloric acid: MW-9S (480-128774-15), TRIP BLANK (480-128774-16), MW-5D (480-128834-1), MW-5S (480-128834-2) and TRIP BLANK (480-128834-3). The requested target analyte list contains 2-chloroethyl vinyl ether, which is an acid-labile compound that degrade in an acidic medium.

Method(s) 624: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 480-392049 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 624: The following sample was diluted to bring the concentration of target analytes within the calibration range: MW-4D (480-129119-2). Elevated reporting limits (RLs) are provided.

Method(s) 624: The preservative used in the sample containers provided is not compatible with the Method 624 analytes requested. The following samples were received preserved with hydrochloric acid: MW-4S (480-129119-1) and MW-4D (480-129119-2). The requested target analyte list contains 2-chloroethyl vinyl ether, which is an acid-labile compound that degrade in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 3005A: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: MW-9D (480-128774-13). The reporting limits (RLs) have been adjusted proportionately.

Method(s) 6010C: Due to sample matrix effect on the internal standard (Indium), a dilution was required for the following sample for Total Nickel, Lead, and Thallium: MW-9D (480-128774-13).

Method(s) 7470A: Due to interference with the sample matrix, the standard mercury preparation procedure was inadequate for the following samples(s): MW-9D (480-128774-13). This was demonstrated when the potassium permanganate reagent was added and the characteristic purple color faded rapidly. This loss of color indicates oxidizing conditions were not maintained. The sample(s) was prepared and analyzed at a <1:10> dilution, which maintained the purple color during digestion.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method(s) SM 2540C: Due to the matrix, the initial volume(s) used for the following sample deviated from the standard procedure: SW-1 (480-128773-1). The reporting limits (RLs) have been adjusted proportionately.

Case Narrative

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time (Excluding tests with immediate HTs)..	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	TAL
Samples received within 48 hours of sampling.	True	
Samples requiring field filtration have been filtered in the field.	N/A	
Chlorine Residual checked.	False	LAB TO CHECK RC
