MONTHLY PROGRESS REPORT

December 2005

MAESTRI SITE

The following Monthly Progress Report for December 2005 has been prepared as outlined in the order on consent concerning the Maestri Site.

1. Describe the actions, which have been taken toward achieving the remedial program during the previous month.
 - The groundwater treatment system continues to operate and the effluent sampled monthly under the equivalent SPDES program.
 - Recovery wells (RW) 2, 3, 5, 6, 7 and 8 are sampled monthly and analyzed for xylene to evaluate progress of the groundwater remediation at the site.
2. Summarize all results of sampling and tests and all other data received or generated by Stauffer or Stauffer's contractors or agents in the previous month.
 - Sampling was conducted in accordance with the equivalent SPDES permit effective September 1, 2000. All parameters were within the equivalent SPDES permit limits.
 - Monthly groundwater samples were taken from recovery wells (RW) 2, 3, 5, 6, 7 and 8 and analyzed for total xylene. The December 2005 RW-2 analytical result of 4757 ppb was within the historical range. Analytical results for the remaining wells were: RW-3 at 79 ppb, RW-5 at 7.8 ppb, RW-6 at 25 ppb, and below detection limit for RW-7 and RW-8. Xylene has not been detected at RW-8 for the past 31 months.
3. Identify all work plans, reports, and other deliverables which were completed and submitted during the previous month,
 - The monthly effluent monitoring and well gauging report was submitted.
4. Describe all actions, including but not limited to, data collection and implementation of work plans, which are scheduled for next month and provide other information related to progress at the site.
 - Monthly gauging and sampling of monitoring wells and sampling of the treated water discharge system effluent.
 - Two out of six groundwater recovery wells were below detection limits for xylene for the December sampling event. RW-8 has been non-detect for the past 31 months.

5. Include information regarding percentage of completion, unresolved delays encountered or anticipated that may affect the future schedule for implementation, and describe efforts to mitigate those delays or anticipated delays.
 - Biopile/SVE soil remediation was initiated in July 1996 and completed in September 1999.
 - Backfilling of treated soils, site re-grading and restoration was completed in October 1999.
 - The Construction Certification Report dated August 16, 2005 has been submitted and is under review by the NYSDEC.
 - The groundwater treatment system continues to operate. To enhance local groundwater remediation and remove possible residual contamination in the immediate vicinity of RW-2, SMC is proposing to remove RW-2, over-drill the area using a caisson rig, re-set the well, and backfill the area with a granular material mixed with biological/chemical reagents.
6. Include modifications to any work plans that Stauffer has proposed to the State or that have been approved by the State.
 - SMC submitted a letter work plan, entitled "Proposal for Groundwater Remedial Activities at RW-2," to the Department on January 9, 2006.
7. Describe all activities undertaken in support of the Citizen Participation Plan during the previous month and those to be undertaken in the next month.
 - None.
