Drinking water intake	Varies with age	L/day	default
Indoor dust lead level	NA	NA	Not Applicable
Soil/dust ingestion weighting factor (%)	NA	NA	Not Applicable
Paint lead intake	NA	NA	Not Applicable
Maternal contribution method	infant model	NA	default
Mother's blood lead at birth	2.5	ug Pb/dL	default
Target blood lead level	10	ug/dL blood	default
Goemetric Mean	5.6	ug/dL blood	IEUBK model
Geometric Standard Deviation	1.6	NA	default
Probability of exceeding target blood lead level	**10.6**	**%**	**IEUBK model**

IEUBK model output:

APPENDIX J
RAGS D LEAD WORKSHEET
FUTURE CHILD RESIDENT (<6 YEARS OLD) EXPOSURE TO MEDIA AS DESCRIBED
HONEYWELL, WILLIS AVENUE CHLORBENZENE SITE, GEDDES, NEW YORK

1. Lead Screening Questions

Medium	Lead Concentration Used in Model Run		Basis for Lead Concentration Used For Model Run	Lead Screening Concentration		Basis for Lead Screening Level
	Value	Units		Value	Units	
Groundwater	0.5897	ug/L	Average sitewide groundwater concentration.	0.015	mg/L	USEPA (2008) national primary and secondary drinking water regulations.

2. Lead Model Questions

Question	Response for Residential Lead Model
What lead model (version and date) was used?	Integrated Exposure Uptake Biokinetic Model for Lead in Children (IEUBK). Software: IEUBKwin32 Model 1, Build 264, Version 1, 2007
Where are the input values located in the risk assessment report?	RAGS Table 3.26 Sitewide Groundwater
What range of media concentrations were used?	Average detected lead concentration in site wide groundwater for future child resident.
What statistics were used to represent the exposure concentration terms and where are the data on concentrations in the risk assessment that support use of these statistics?	Average detected lead concentration in site wide groundwater for future child resident.
Was soil sample taken from top 2 cm? If not, why?	Not Applicable. Only exposure to groundwater for the future child resident was evaluated.
Was soil sample sieved? What size screen was used? If not sieved, provide rationale.	Not Applicable.
What was the point of exposure/location?	Sitewide Groundwater - Potable Water
Where are the output values located in the risk assessment report?	See Page 2.
Was the model run using default values only?	No. See Page 2
Was the default soil bioavailability used?	Not Applicable.
Was the default soil ingestion rate used?	Not Applicable.
If non-default values were used, where are the rationale for the values located in the risk assessment report?	Not Applicable.

3. Final Result

Medium	Result	Comment/PRG
Site-wide Groundwater	See Page 2.	

APPENDIX K

USEPA ProUCL Version 4.0 Output

APPENDIX K, TABLE 26
RAGS 3.26 - SITE WIDE - GROUND WATER
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

ProUCL Output
General UCL Statistics for Data Sets with Non-Detects
User Selected Options
From File C:\Documents and Settings\StrodeSA\Desktop\Willis Ave\Book1.wst
Full Precision OFF
Confidence Coefficient 95%
Number of Bootstrap Operations 2000

1,1,2,2-TETRACHLOROETHANE

General Statistics

Number of Valid Data	61	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	60
		Percent Non-Detects	98.36%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).
The data set for variable 1,1,2,2-TETRACHLOROETHANE was not processed!

1,2,3-TRICHLOROBENZENE

General Statistics

Number of Valid Data	4	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	3
		Percent Non-Detects	75.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,2,3-TRICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,2,4-TRICHLOROBENZENE

General Statistics

Number of Valid Data	32	Number of Detected Data	8
Number of Distinct Detected Data	8	Number of Non-Detect Data	24
		Percent Non-Detects	75.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.2	Minimum Detected	-1.609
Maximum Detected	1000	Maximum Detected	6.908
Mean of Detected	219.7	Mean of Detected	3.847
SD of Detected	340	SD of Detected	2.606
Minimum Non-Detect	2.5	Minimum Non-Detect	0.916
Maximum Non-Detect	150	Maximum Non-Detect	5.011

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	29
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	3
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	90.63%

Warning: There are only 8 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

1,2-DICHLOROETHANE

General Statistics			
Number of Valid Data	61	Number of Detected Data	2
Number of Distinct Detected Data	1	Number of Non-Detect Data	59
		Percent Non-Detects	96.72%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).
The data set for variable 1,2-DICHLOROETHANE was not processed!

1,2-DICHLOROPROPANE

General Statistics

APPENDIX K, TABLE 26
RAGS 3.26 - SITE WIDE - GROUND WATER
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Number of Valid Data	61	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	59
		Percent Non-Detects	96.72%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	2	Minimum Detected	0.693
Maximum Detected	3	Maximum Detected	1.099
Mean of Detected	2.5	Mean of Detected	0.896
SD of Detected	0.707	SD of Detected	0.287
Minimum Non-Detect	0.5	Minimum Non-Detect	-0.693
Maximum Non-Detect	5000	Maximum Non-Detect	8.517

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	61
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

2-NITROPHENOL

General Statistics			
Number of Valid Data	25	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	24
		Percent Non-Detects	96.00%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).
The data set for variable 2-NITROPHENOL was not processed!

APPENDIX K, TABLE 26
RAGS 3.26 - SITE WIDE - GROUND WATER
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

4-CHLORO-3-METHYLPHENOL

General Statistics			
Number of Valid Data	25	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	23
		Percent Non-Detects	92.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	3	Minimum Detected	1.099
Maximum Detected	4	Maximum Detected	1.386
Mean of Detected	3.5	Mean of Detected	1.242
SD of Detected	0.707	SD of Detected	0.203
Minimum Non-Detect	10	Minimum Non-Detect	2.303
Maximum Non-Detect	1000	Maximum Non-Detect	6.908

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	25
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

General Statistics

Number of Valid Data	56	Number of Detected Data	4
Number of Distinct Detected Data	4	Number of Non-Detect Data	52
		Percent Non-Detects	92.86%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.0036	Minimum Detected	-5.627
Maximum Detected	0.0354	Maximum Detected	-3.341
Mean of Detected	0.0142	Mean of Detected	-4.614
SD of Detected	0.0144	SD of Detected	0.962
Minimum Non-Detect	0.003	Minimum Non-Detect	-5.809
Maximum Non-Detect	0.0944	Maximum Non-Detect	-2.36

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	56
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: There are only 4 Distinct Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

TETRACHLOROETHENE

General Statistics			
Number of Valid Data	61	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	60
		Percent Non-Detects	98.36%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable TETRACHLOROETHENE was not processed!

Maximum Non-Detect	13	Maximum Non-Detect	2.565

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	12
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: There are only 7 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

DIELDRIN

APPENDIX K, TABLE 1
RAGS 3.1 - GENERAL PLANT AREA - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

General Statistics			
Number of Valid Data	12	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	11
		Percent Non-Detects	91.67%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable DIELDRIN was not processed!

HEXACHLOROBENZENE

General Statistics			
Number of Valid Data	12	Number of Detected Data	6
Number of Distinct Detected Data	5	Number of Non-Detect Data	6
		Percent Non-Detects	50.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.086	Minimum Detected	-2.453
Maximum Detected	28	Maximum Detected	3.332
Mean of Detected	5.298	Mean of Detected	-0.111
SD of Detected	11.14	SD of Detected	2.066
Minimum Non-Detect	0.37	Minimum Non-Detect	-0.994
Maximum Non-Detect	12	Maximum Non-Detect	2.485

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	11
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	1
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	91.67%

Warning: There are only 6 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

HEXACHLOROBUTADIENE

General Statistics			
Number of Valid Data	12	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	10
		Percent Non-Detects	83.33%
Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.12	Minimum Detected	-2.12
Maximum Detected	1.8	Maximum Detected	0.588
Mean of Detected	0.96	Mean of Detected	-0.766
SD of Detected	1.188	SD of Detected	1.915
Minimum Non-Detect	0.36	Minimum Non-Detect	-1.022
Maximum Non-Detect	12	Maximum Non-Detect	2.485
Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	12
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

Raw Statistics		Log-transformed Statistics	
Minimum	0.034	Minimum of Log Data	-3.381
Maximum	3.1	Maximum of Log Data	1.131
Mean	1.161	Mean of log Data	-0.623
Median	0.65	SD of log Data	1.562
SD	1.314		
Coefficient of Variation	1.132		
Skewness	1.085		

Warning: A sample size of 'n' = 7 may not adequate enough to compute meaningful and reliable test statistics and estimates!

APPENDIX K, TABLE 1
RAGS 3.1 - GENERAL PLANT AREA - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 7 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

TOTAL PCBs

General Statistics

Number of Valid Observations	7	Number of Distinct Observations	7
Raw Statistics		Log-transformed Statistics	
Minimum	0.034	Minimum of Log Data	-3.381
Maximum	3.1	Maximum of Log Data	1.131
Mean	1.161	Mean of log Data	-0.623
Median	0.65	SD of log Data	1.562
SD	1.314		
Coefficient of Variation	1.132		
Skewness	1.085		

Warning: A sample size of 'n' = 7 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 7 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

DELTA-BHC

General Statistics			
Number of Valid Data	16	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	15
		Percent Non-Detects	93.75%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable DELTA-BHC was not processed!

DIELDRIN

General Statistics			
Number of Valid Data	16	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	15
		Percent Non-Detects	93.75%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable DIELDRIN was not processed!

ACENAPHTHYLENE

General Statistics			
Number of Valid Data	14	Number of Detected Data	5
Number of Distinct Detected Data	5	Number of Non-Detect Data	9
		Percent Non-Detects	64.29%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.078	Minimum Detected	-2.551
Maximum Detected	0.42	Maximum Detected	-0.868
Mean of Detected	0.165	Mean of Detected	-2.029
SD of Detected	0.145	SD of Detected	0.697
Minimum Non-Detect	0.37	Minimum Non-Detect	-0.994
Maximum Non-Detect	56	Maximum Non-Detect	4.025

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	14
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: There are only 5 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

APPENDIX K, TABLE 2
RAGS 3.3 - GENERAL PLANT AREA - UPPER SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Maximum Detected	1.8	Maximum Detected	0.588
Mean of Detected	0.96	Mean of Detected	-0.766
SD of Detected	1.188	SD of Detected	1.915
Minimum Non-Detect	0.003	Minimum Non-Detect	-5.809
Maximum Non-Detect	56	Maximum Non-Detect	4.025

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	18
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

METHYL MERCURY

General Statistics			
Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable METHYL MERCURY was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

DELTA-BHC

General Statistics			
Number of Valid Data	16	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	15
		Percent Non-Detects	93.75%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable DELTA-BHC was not processed!

DIELDRIN

General Statistics			
Number of Valid Data	16	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	15
		Percent Non-Detects	93.75%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable DIELDRIN was not processed!

ACENAPHTHYLENE

General Statistics			
Number of Valid Data	20	Number of Detected Data	6
Number of Distinct Detected Data	6	Number of Non-Detect Data	14
		Percent Non-Detects	70.00%
Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.078	Minimum Detected	-2.551
Maximum Detected	6.8	Maximum Detected	1.917
Mean of Detected	1.271	Mean of Detected	-1.372
SD of Detected	2.712	SD of Detected	1.728
Minimum Non-Detect	0.37	Minimum Non-Detect	-0.994
Maximum Non-Detect	490	Maximum Non-Detect	6.194
Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	20
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: There are only 6 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

APPENDIX K, TABLE 3
RAGS 3.3 - GENERAL PLANT AREA - INTERMEDIATE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK
It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

APPENDIX K, TABLE 3
RAGS 3.3 - GENERAL PLANT AREA - INTERMEDIATE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: There are only 8 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

APPENDIX K, TABLE 3
RAGS 3.3 - GENERAL PLANT AREA - INTERMEDIATE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Maximum Detected	1.8	Maximum Detected	0.588
Mean of Detected	0.96	Mean of Detected	-0.766
SD of Detected	1.188	SD of Detected	1.915
Minimum Non-Detect	0.003	Minimum Non-Detect	-5.809
Maximum Non-Detect	490	Maximum Non-Detect	6.194

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	24
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

ALUMINUM

General Statistics

Number of Valid Data	4	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	1
		Percent Non-Detects	25.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ALUMINUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ARSENIC

General Statistics

Number of Valid Data	4	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	1
		Percent Non-Detects	25.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ARSENIC was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BARIUM

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BARIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

COPPER

General Statistics

Number of Valid Data	4	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	1

		Percent Non-Detects	25.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable COPPER was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

IRON

General Statistics

Number of Valid Data	4	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	2
		Percent Non-Detects	50.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable IRON was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

LEAD

General Statistics

Number of Valid Data	5	Number of Detected Data	4
Number of Distinct Detected Data	3	Number of Non-Detect Data	1
		Percent Non-Detects	20.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.0023	Minimum Detected	-6.075
Maximum Detected	0.488	Maximum Detected	-0.717
Mean of Detected	0.124	Mean of Detected	-4.597
SD of Detected	0.243	SD of Detected	2.6
Minimum Non-Detect	0.001	Minimum Non-Detect	-6.908
Maximum Non-Detect	0.001	Maximum Non-Detect	-6.908

Warning: There are only 3 Distinct Detected Values in this data set
The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

The data set for variable NICKEL was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

VANADIUM

General Statistics

Number of Valid Data	4	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	1
		Percent Non-Detects	25.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable VANADIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

2,4-DICHLOROPHENOL

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2,4-DICHLOROPHENOL was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

2-CHLOROPHENOL

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1

		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2-CHLOROPHENOL was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(G,H,I)PERYLENE

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(G,H,I)PERYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CHRYSENE

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CHRYSENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

INDENO(1,2,3-CD)PYRENE

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable INDENO(1,2,3-CD)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

NAPHTHALENE

APPENDIX K, TABLE 4

1,3-DICHLOROBENZENE

General Statistics

Number of Valid Data	4	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	3
		Percent Non-Detects	75.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,3-DICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,4-DICHLOROBENZENE

General Statistics

Number of Valid Data	4	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	2
		Percent Non-Detects	50.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,4-DICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZENE

General Statistics

Number of Valid Data	4	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	1
		Percent Non-Detects	25.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CHLOROBENZENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CHLOROFORM

General Statistics			
Number of Valid Data	4	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	3
		Percent Non-Detects	75.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CHLOROFORM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

METHYLENE CHLORIDE

General Statistics			
Number of Valid Data	4	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	3
		Percent Non-Detects	75.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable METHYLENE CHLORIDE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ARSENIC

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ARSENIC was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CHROMIUM

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CHROMIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

IRON

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable IRON was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

MANGANESE

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!

APPENDIX K, TABLE 5
RAGS 3.5 - FORMER CHLORINATION BUILDING - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable MANGANESE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

MERCURY

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable MERCURY was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

VANADIUM

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable VANADIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

HIGHLY CHLORINATED

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable HIGHLY CHLORINATED was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

TOTAL PCBs

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!

The data set for variable TOTAL PCBs was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ACENAPHTHYLENE

General Statistics			
Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ACENAPHTHYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)ANTHRACENE

General Statistics			
Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)PYRENE

General Statistics			
Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(B)FLUORANTHENE

General Statistics			
Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!

APPENDIX K, TABLE 5
RAGS 3.5 - FORMER CHLORINATION BUILDING - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

The data set for variable BENZO(B)FLUORANTHENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(G,H,I)PERYLENE

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	1

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(G,H,I)PERYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

DIBENZO(A,H)ANTHRACENE

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable DIBENZO(A,H)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

INDENO(1,2,3-CD)PYRENE

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable INDENO(1,2,3-CD)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

PHENANTHRENE

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!

APPENDIX K, TABLE 5
RAGS 3.5 - FORMER CHLORINATION BUILDING - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable PHENANTHRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,2,4-TRICHLOROBENZENE

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,2,4-TRICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,2-DICHLOROBENZENE

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,2-DICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,4-DICHLOROBENZENE

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,4-DICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

METHYL MERCURY

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!

APPENDIX K, TABLE 5
RAGS 3.5 - FORMER CHLORINATION BUILDING - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

The data set for variable METHYL MERCURY was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable MANGANESE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

MERCURY

General Statistics

Number of Valid Observations	3	Number of Distinct Observations	3

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable MERCURY was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

VANADIUM

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable VANADIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Highly Chlorinated

General Statistics

Number of Valid Observations	3	Number of Distinct Observations	3

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable Highly Chlorinated was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Less Chlorinated

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!

APPENDIX K, TABLE 7
RAGS 3.7 - FORMER CHLORINATION BUILDING - INTERMEDIATE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

The data set for variable Less Chlorinated was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Total PCBs

General Statistics			
Number of Valid Observations	3	Number of Distinct Observations	3

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable Total PCBs was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ALDRIN

General Statistics			
Number of Valid Data	3	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	2
		Percent Non-Detects	66.67%

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ALDRIN was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ACENAPHTHYLENE

General Statistics			
Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ACENAPHTHYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)ANTHRACENE

General Statistics			
Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!

Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)PYRENE

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(B)FLUORANTHENE

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(B)FLUORANTHENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(G,H,I)PERYLENE

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	1

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(G,H,I)PERYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

DIBENZO(A,H)ANTHRACENE

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!

APPENDIX K, TABLE 7
RAGS 3.7 - FORMER CHLORINATION BUILDING - INTERMEDIATE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable DIBENZO(A,H)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

HEXACHLOROBENZENE

General Statistics

Number of Valid Data	3	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	1
		Percent Non-Detects	33.33%

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable HEXACHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

INDENO(1,2,3-CD)PYRENE

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable INDENO(1,2,3-CD)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

PHENANTHRENE

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable PHENANTHRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,2,4-TRICHLOROBENZENE

General Statistics

Number of Valid Observations	3	Number of Distinct Observations	3

APPENDIX K, TABLE 7
RAGS 3.7 - FORMER CHLORINATION BUILDING - INTERMEDIATE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,2,4-TRICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,2-DICHLOROBENZENE

General Statistics

Number of Valid Observations	3	Number of Distinct Observations	3

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,2-DICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,4-DICHLOROBENZENE

General Statistics

Number of Valid Observations	3	Number of Distinct Observations	3

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,4-DICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

METHYL MERCURY

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable METHYL MERCURY was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ARSENIC

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ARSENIC was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CHROMIUM

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CHROMIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

COPPER

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable COPPER was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

IRON

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!

APPENDIX K, TABLE 8
RAGS 3.8 - ONSITE DITCHES - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable IRON was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

LEAD

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable LEAD was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

MANGANESE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable MANGANESE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

MERCURY

General Statistics

Number of Valid Observations	5	Number of Distinct Observations	5

Raw Statistics		Log-transformed Statistics	
Minimum	11	Minimum of Log Data	2.398
Maximum	4780	Maximum of Log Data	8.472
Mean	1701	Mean of log Data	5.707
Median	1800	SD of log Data	2.947
SD	1951		
Coefficient of Variation	1.147		
Skewness	1.097		

Warning: A sample size of 'n' = 5 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 5 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,

the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable NICKEL was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

VANADIUM

General Statistics			
Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable VANADIUM was not processed!

APPENDIX K, TABLE 8
RAGS 3.8 - ONSITE DITCHES - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Highly Chlorinated

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable Highly Chlorinated was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Total PCBs

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable Total PCBs was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ACENAPHTHYLENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ACENAPHTHYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)ANTHRACENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)ANTHRACENE was not processed!

APPENDIX K, TABLE 8
RAGS 3.8 - ONSITE DITCHES - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)PYRENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(B)FLUORANTHENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(B)FLUORANTHENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(G,H,I)PERYLENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(G,H,I)PERYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

DIBENZO(A,H)ANTHRACENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable DIBENZO(A,H)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

INDENO(1,2,3-CD)PYRENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable INDENO(1,2,3-CD)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

PHENANTHRENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable PHENANTHRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

METHYL MERCURY

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable METHYL MERCURY was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

2,3,7,8-TCDD Equivalent

General Statistics

Number of Valid Observations	3	Number of Distinct Observations	3

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2.9 was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ACENAPHTHYLENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ACENAPHTHYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)ANTHRACENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)PYRENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(B)FLUORANTHENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(B)FLUORANTHENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(G,H,I)PERYLENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(G,H,I)PERYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

DIBENZO(A,H)ANTHRACENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable DIBENZO(A,H)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

INDENO(1,2,3-CD)PYRENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable INDENO(1,2,3-CD)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

PHENANTHRENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable PHENANTHRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ACENAPHTHYLENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ACENAPHTHYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)ANTHRACENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)PYRENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(B)FLUORANTHENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(B)FLUORANTHENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(G,H,I)PERYLENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(G,H,I)PERYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

DIBENZO(A,H)ANTHRACENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable DIBENZO(A,H)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

INDENO(1,2,3-CD)PYRENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable INDENO(1,2,3-CD)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

PHENANTHRENE

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable PHENANTHRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,4-DICHLOROBENZENE

General Statistics			
Number of Valid Data	4	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	1
		Percent Non-Detects	25.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,4-DICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZENE

General Statistics			
Number of Valid Data	4	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	3
		Percent Non-Detects	75.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CHLOROBENZENE

General Statistics			
Number of Valid Data	4	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	2
		Percent Non-Detects	50.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

METHYL MERCURY

General Statistics			
Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!

APPENDIX K, TABLE 10
RAGS 3.10 - ONSITE DITCHES - INTERMEDIATE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

The data set for variable METHYL MERCURY was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

2,3,7,8-TCDD Equivalent

General Statistics

Number of Valid Observations	3	Number of Distinct Observations	3

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2,3,7,8-TCDD Equivalent was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ProUCL Output

General UCL Statistics for Data Sets with Non-Detects

User Selected Options	
From File	C:\Documents and Settings\StrodeSA\Desktop\Willis Ave\Book1.wst
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

2,3,7,8-TCDD Equivalent

General Statistics

Number of Valid Observations	5	Number of Distinct Observations	5

Raw Statistics		Log-transformed Statistics	
Minimum	470.9	Minimum of Log Data	6.155
Maximum	696.2	Maximum of Log Data	6.546
Mean	626.8	Mean of log Data	6.431
Median	666.1	SD of log Data	0.159
SD	90.61		
Coefficient of Variation	0.145		
Skewness	-1.847		

Warning: A sample size of 'n' = 5 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 5 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

ACENAPHTHYLENE

General Statistics			
Number of Valid Data	4	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	3
		Percent Non-Detects	75.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ACENAPHTHYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ALDRIN

General Statistics			
Number of Valid Data	8	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	6
		Percent Non-Detects	75.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.047	Minimum Detected	-3.058
Maximum Detected	0.12	Maximum Detected	-2.12
Mean of Detected	0.0835	Mean of Detected	-2.589
SD of Detected	0.0516	SD of Detected	0.663
Minimum Non-Detect	0.011	Minimum Non-Detect	-4.51
Maximum Non-Detect	0.41	Maximum Non-Detect	-0.892

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	8
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

BARIUM

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BARIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZENE

General Statistics

Number of Valid Data	8	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	7
		Percent Non-Detects	87.50%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable BENZENE was not processed!

BENZO(A)ANTHRACENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)PYRENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(B)FLUORANTHENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(B)FLUORANTHENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(G,H,I)PERYLENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(G,H,I)PERYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(K)FLUORANTHENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(K)FLUORANTHENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CHROMIUMb

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CHROMIUMb was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

DELTA-BHC

General Statistics

Number of Valid Data	8	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	7
		Percent Non-Detects	87.50%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable DELTA-BHC was not processed!

DIBENZO(A,H)ANTHRACENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable DIBENZO(A,H)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ENDOSULFAN I

General Statistics

Number of Valid Data	8	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	7
		Percent Non-Detects	87.50%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable ENDOSULFAN I was not processed!

		Percent Non-Detects	75.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.0039	Minimum Detected	-5.547
Maximum Detected	0.12	Maximum Detected	-2.12
Mean of Detected	0.062	Mean of Detected	-3.834
SD of Detected	0.0821	SD of Detected	2.423
Minimum Non-Detect	0.011	Minimum Non-Detect	-4.51
Maximum Non-Detect	0.41	Maximum Non-Detect	-0.892

Note: Data have multiple DLs - Use of KM Method is recommended	Number treated as Non-Detect	8
For all methods (except KM, DL/2, and ROS Methods),	Number treated as Detected	0
Observations < Largest ND are treated as NDs	Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

INDENO(1,2,3-CD)PYRENE

General Statistics			
Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable INDENO(1,2,3-CD)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

IRON

General Statistics			
Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!

The data set for variable IRON was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

LEAD

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable LEAD was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

MANGANESE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable MANGANESE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: A sample size of 'n' = 5 may not adequate enough to compute meaningful and reliable test statistics and estimates!

APPENDIX K, TABLE 12
RAGS 3.12 - SOUTHWEST OFFSITE/OUTFALL 006 AREA - UPPER SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 5 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

		Percent Non-Detects	80.00%
Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.047	Minimum Detected	-3.058
Maximum Detected	0.12	Maximum Detected	-2.12
Mean of Detected	0.0835	Mean of Detected	-2.589
SD of Detected	0.0516	SD of Detected	0.663
Minimum Non-Detect	0.011	Minimum Non-Detect	-4.51
Maximum Non-Detect	0.41	Maximum Non-Detect	-0.892
Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	10
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.

This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

SEC-BUTYLBENZENE

General Statistics			
Number of Valid Data	3	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	2
		Percent Non-Detects	66.67%

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable SEC-BUTYLBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

TERT-BUTYLBENZENE

General Statistics			
Number of Valid Data	3	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	2
		Percent Non-Detects	66.67%

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable TERT-BUTYLBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!

APPENDIX K, TABLE 12
RAGS 3.12 - SOUTHWEST OFFSITE/OUTFALL 006 AREA - UPPER SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

TOLUENE

General Statistics			
Number of Valid Data	10	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	8
		Percent Non-Detects	80.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.002	Minimum Detected	-6.215
Maximum Detected	3100	Maximum Detected	8.039
Mean of Detected	1550	Mean of Detected	0.912
SD of Detected	2192	SD of Detected	10.08
Minimum Non-Detect	0.003	Minimum Non-Detect	-5.809
Maximum Non-Detect	0.015	Maximum Non-Detect	-4.2

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	9
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	1
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	90.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

General UCL Statistics for Data Sets with Non-Detects

User Selected Options

From File	C:\Documents and Settings\StrodeSA\Desktop\Willis Ave\Book1.wst
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

1,2,3-TRICHLOROBENZENE

General Statistics

Number of Valid Data	5	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	2
		Percent Non-Detects	40.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.002	Minimum Detected	-6.215
Maximum Detected	7.4	Maximum Detected	2.001
Mean of Detected	2.471	Mean of Detected	-2.879
SD of Detected	4.268	SD of Detected	4.32
Minimum Non-Detect	0.0028	Minimum Non-Detect	-5.878
Maximum Non-Detect	0.0029	Maximum Non-Detect	-5.843

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	3
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	2
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	60.00%

Warning: There are only 3 Distinct Detected Values in this data set
The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

Note: DL/2 is not a recommended method.

2,3,7,8-TCDD Equivalent

General Statistics			
Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2,3,7,8-TCDD Equivalent was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZENE

General Statistics			
Number of Valid Data	5	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	4
		Percent Non-Detects	80.00%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable BENZENE was not processed!

APPENDIX K, TABLE 14
RAGS 3.14 - NORTHWEST OFFSITE/OUTFALL 004 AREA - UPPER SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

HEXACHLOROBENZENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable HEXACHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Highly Chlorinated

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable Highly Chlorinated was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Less Chlorinated

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable Less Chlorinated was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

MERCURY

General Statistics

Number of Valid Observations	5	Number of Distinct Observations	5

Raw Statistics		Log-transformed Statistics	
Minimum	7.3	Minimum of Log Data	1.988
Maximum	160	Maximum of Log Data	5.075
Mean	55.86	Mean of log Data	3.466
Median	40	SD of log Data	1.243
SD	62.04		
Coefficient of Variation	1.111		
Skewness	1.617		

APPENDIX K, TABLE 14
RAGS 3.14 - NORTHWEST OFFSITE/OUTFALL 004 AREA - UPPER SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Warning: A sample size of 'n' = 5 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 5 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

ALUMINUM

General Statistics			
Number of Valid Observations	6	Number of Distinct Observations	6
Raw Statistics		Log-transformed Statistics	
Minimum	4260	Minimum of Log Data	8.357
Maximum	8790	Maximum of Log Data	9.081
Mean	6585	Mean of log Data	8.751
Median	6845	SD of log Data	0.322
SD	1979		
Coefficient of Variation	0.301		
Skewness	-0.256		

Warning: A sample size of 'n' = 6 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 6 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

Skewness	0.496		

Warning: A sample size of 'n' = 6 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 6 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

General Statistics			
Number of Valid Data	6	Number of Detected Data	5
Number of Distinct Detected Data	5	Number of Non-Detect Data	1
		Percent Non-Detects	16.67%
Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.34	Minimum Detected	-1.079
Maximum Detected	3.4	Maximum Detected	1.224
Mean of Detected	1.426	Mean of Detected	-0.152
SD of Detected	1.465	SD of Detected	1.14
Minimum Non-Detect	0.36	Minimum Non-Detect	-1.022
Maximum Non-Detect	0.36	Maximum Non-Detect	-1.022

Warning: There are only 5 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

General Statistics			
Number of Valid Observations	6	Number of Distinct Observations	5
Raw Statistics		Log-transformed Statistics	
Minimum	13000	Minimum of Log Data	9.473
Maximum	19000	Maximum of Log Data	9.852
Mean	15283	Mean of log Data	9.622
Median	14250	SD of log Data	0.169
SD	2673		
Coefficient of Variation	0.175		
Skewness	0.746		

Warning: A sample size of 'n' = 6 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 6 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

General UCL Statistics for Data Sets with Non-Detects

User Selected Options
From File C:\Documents and Settings\StrodeSA\Desktop\Willis Ave\Book1.wst
Full Precision OFF
Confidence Coefficient 95%
Number of Bootstrap Operations 2000

2,3,7,8-TCDD Equivalent

General Statistics

Number of Valid Observations	3	Number of Distinct Observations	3

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2,3,7,8-TCDD Equivalent was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ACENAPHTHYLENE

General Statistics

Number of Valid Data	6	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	3
		Percent Non-Detects	50.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.057	Minimum Detected	-2.865
Maximum Detected	2.1	Maximum Detected	0.742
Mean of Detected	0.759	Mean of Detected	-1.414
SD of Detected	1.162	SD of Detected	1.904
Minimum Non-Detect	0.36	Minimum Non-Detect	-1.022
Maximum Non-Detect	7.4	Maximum Non-Detect	2.001

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	6
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: There are only 3 Distinct Detected Values in this data set
The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

ALUMINUM

General Statistics			
Number of Valid Observations	6	Number of Distinct Observations	6
Raw Statistics		Log-transformed Statistics	
Minimum	4260	Minimum of Log Data	8.357
Maximum	8790	Maximum of Log Data	9.081
Mean	6585	Mean of log Data	8.751
Median	6845	SD of log Data	0.322
SD	1979		
Coefficient of Variation	0.301		
Skewness	-0.256		

Warning: A sample size of 'n' = 6 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 6 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

CHROMIUM

General Statistics

Number of Valid Observations	6	Number of Distinct Observations	6
Raw Statistics		Log-transformed Statistics	
Minimum	20.9	Minimum of Log Data	3.04
Maximum	56.4	Maximum of Log Data	4.032
Mean	33.25	Mean of log Data	3.444
Median	28.05	SD of log Data	0.369
SD	13.33		
Coefficient of Variation	0.401		
Skewness	1.266		

Warning: A sample size of 'n' = 6 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 6 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

Skewness	2.378		

Warning: A sample size of 'n' = 6 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 6 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

Relevant UCL Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,4-DICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

2,4-DICHLOROPHENOL

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2,4-DICHLOROPHENOL was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

2-CHLOROPHENOL

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2-CHLOROPHENOL was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

2-METHYLNAPHTHALENE

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2-METHYLNAPHTHALENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

4-CHLORO-3-METHYLPHENOL

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1

		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 4-CHLORO-3-METHYLPHENOL was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

4-METHYLPHENOL

General Statistics

Number of Valid Observations	2	Number of Distinct Observations	2

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 4-METHYLPHENOL was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ARSENIC

General Statistics

Number of Valid Data	4	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	2
		Percent Non-Detects	50.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable ARSENIC was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BARIUM

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BARIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BERYLLIUM

General Statistics

Number of Valid Data	4	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	3
		Percent Non-Detects	75.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BERYLLIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CARBON DISULFIDE

General Statistics

Number of Valid Data	2	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	1
		Percent Non-Detects	50.00%

Warning: This data set only has 2 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CARBON DISULFIDE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CHLOROBENZENE

General Statistics

Number of Valid Data	4	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	2
		Percent Non-Detects	50.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CHROMIUM

General Statistics

Number of Valid Data	4	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	1
		Percent Non-Detects	25.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CHROMIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

IRON

General Statistics

Number of Valid Data	3	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	2
		Percent Non-Detects	66.67%

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable IRON was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

MANGANESE

General Statistics

Number of Valid Data	3	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	2
		Percent Non-Detects	66.67%

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable MANGANESE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ProUCL Output

General UCL Statistics for Data Sets with Non-Detects

User Selected Options	
From File	C:\Documents and Settings\StrodeSA\Desktop\Willis Ave\Book1.wst
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

2,3,7,8-TCDD Equivalent

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2,3,7,8-TCDD Equivalent was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ACENAPHTHYLENE

General Statistics

Number of Valid Data	7	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	5
		Percent Non-Detects	71.43%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.21	Minimum Detected	-1.561
Maximum Detected	0.51	Maximum Detected	-0.673
Mean of Detected	0.36	Mean of Detected	-1.117
SD of Detected	0.212	SD of Detected	0.627
Minimum Non-Detect	0.39	Minimum Non-Detect	-0.942
Maximum Non-Detect	1.3	Maximum Non-Detect	0.262

Note: Data have multiple DLs - Use of KM Method is recommended	Number treated as Non-Detect	7
For all methods (except KM, DL/2, and ROS Methods),	Number treated as Detected	0
Observations < Largest ND are treated as NDs	Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

ALUMINUM

General Statistics			
Number of Valid Observations	7	Number of Distinct Observations	7
Raw Statistics		Log-transformed Statistics	
Minimum	857	Minimum of Log Data	6.753
Maximum	11600	Maximum of Log Data	9.359
Mean	4115	Mean of log Data	8.044
Median	2820	SD of log Data	0.808
SD	3558		
Coefficient of Variation	0.865		
Skewness	1.914		

Warning: A sample size of 'n' = 7 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 7 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

APPENDIX K, TABLE 18
RAGS 3.18 - TRIBUTARY 5A - SEDIMENT
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Minimum Detected	0.14	Minimum Detected	-1.966
Maximum Detected	4.4	Maximum Detected	1.482
Mean of Detected	1.358	Mean of Detected	-0.666
SD of Detected	1.859	SD of Detected	1.607
Minimum Non-Detect	1.3	Minimum Non-Detect	0.262
Maximum Non-Detect	1.8	Maximum Non-Detect	0.588

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	5
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	2
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	71.43%

Warning: There are only 5 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

CHROMIUM

General Statistics

Number of Valid Observations	7	Number of Distinct Observations	7

Raw Statistics		Log-transformed Statistics	
Minimum	33.8	Minimum of Log Data	3.52
Maximum	12400	Maximum of Log Data	9.425
Mean	2750	Mean of log Data	6.528
Median	704	SD of log Data	2.15
SD	4413		
Coefficient of Variation	1.604		
Skewness	2.282		

Warning: A sample size of 'n' = 7 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 7 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

DIBENZO(A,H)ANTHRACENE

General Statistics			
Number of Valid Data	5	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	3
		Percent Non-Detects	60.00%
Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.45	Minimum Detected	-0.799
Maximum Detected	1.1	Maximum Detected	0.0953
Mean of Detected	0.775	Mean of Detected	-0.352
SD of Detected	0.46	SD of Detected	0.632
Minimum Non-Detect	0.42	Minimum Non-Detect	-0.868
Maximum Non-Detect	1.3	Maximum Non-Detect	0.262
Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	5
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

IRON

General Statistics			
Number of Valid Observations	7	Number of Distinct Observations	7
Raw Statistics		Log-transformed Statistics	
Minimum	12600	Minimum of Log Data	9.441
Maximum	229000	Maximum of Log Data	12.34
Mean	66743	Mean of log Data	10.66
Median	32800	SD of log Data	0.979
SD	76849		
Coefficient of Variation	1.151		
Skewness	2.028		

Warning: A sample size of 'n' = 7 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!

APPENDIX K, TABLE 18
RAGS 3.18 - TRIBUTARY 5A - SEDIMENT
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 7 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

ProUCL Output

General UCL Statistics for Data Sets with Non-Detects

User Selected Options	
From File	C:\Documents and Settings\StrodeSA\Desktop\Willis Ave\Book1.wst
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

1,4-DICHLOROBENZENE

General Statistics

Number of Valid Data	7	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	6
		Percent Non-Detects	85.71%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable 1,4-DICHLOROBENZENE was not processed!

ANTIMONY

General Statistics

Number of Valid Data	11	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	9
		Percent Non-Detects	81.82%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.0026	Minimum Detected	-5.952
Maximum Detected	0.003	Maximum Detected	-5.809
Mean of Detected	0.0028	Mean of Detected	-5.881
SD of Detected	2.83E-04	SD of Detected	0.101
Minimum Non-Detect	0.0025	Minimum Non-Detect	-5.991
Maximum Non-Detect	0.05	Maximum Non-Detect	-2.996

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	11
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

BIS(2-ETHYLHEXYL)PHTHALATE

General Statistics			
Number of Valid Data	7	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	6
		Percent Non-Detects	85.71%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable BIS(2-ETHYLHEXYL)PHTHALATE was not processed!

BROMODICHLOROMETHANE

General Statistics			
Number of Valid Data	7	Number of Detected Data	5
Number of Distinct Detected Data	2	Number of Non-Detect Data	2
		Percent Non-Detects	28.57%

For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

APPENDIX K, TABLE 19
RAGS 3.19 - TRIBUTARY 5A - SURFACE WATER
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

METHYL MERCURY

General Statistics

Number of Valid Data	4	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	1
		Percent Non-Detects	25.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable METHYL MERCURY was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

NAPHTHALENE

General Statistics

Number of Valid Data	7	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	6
		Percent Non-Detects	85.71%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable NAPHTHALENE was not processed!

NICKEL

General Statistics

Number of Valid Data	11	Number of Detected Data	9
Number of Distinct Detected Data	9	Number of Non-Detect Data	2
		Percent Non-Detects	18.18%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.001	Minimum Detected	-6.908
Maximum Detected	0.999	Maximum Detected	-0.001
Mean of Detected	0.171	Mean of Detected	-3.267
SD of Detected	0.315	SD of Detected	2.231
Minimum Non-Detect	0.0092	Minimum Non-Detect	-4.689
Maximum Non-Detect	0.015	Maximum Non-Detect	-4.2
Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	5
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	6
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	45.45%

Warning: There are only 9 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(A)PYRENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(A)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(B)FLUORANTHENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(B)FLUORANTHENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(G,H,I)PERYLENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(G,H,I)PERYLENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

BENZO(K)FLUORANTHENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!

APPENDIX K, TABLE 20
RAGS 3.20 - PETROLEUM STORAGE AREA - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable BENZO(K)FLUORANTHENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

CHROMIUM

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable CHROMIUM was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

DELTA-BHC

General Statistics

Number of Valid Data	4	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	3
		Percent Non-Detects	75.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable DELTA-BHC was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

DIBENZO(A,H)ANTHRACENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable DIBENZO(A,H)ANTHRACENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Highly Chlorinated

General Statistics

Number of Valid Observations	3	Number of Distinct Observations	3

Warning: This data set only has 3 observations!

Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable Highly Chlorinated was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

INDENO(1,2,3-CD)PYRENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable INDENO(1,2,3-CD)PYRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

IRON

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable IRON was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

MANGANESE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable MANGANESE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

MERCURY

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!

APPENDIX K, TABLE 20
RAGS 3.20 - PETROLEUM STORAGE AREA - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

The data set for variable MERCURY was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

METHYL MERCURY

General Statistics

Number of Valid Observations	1	Number of Distinct Observations	1

Warning: This data set only has 1 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable METHYL MERCURY was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

PHENANTHRENE

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable PHENANTHRENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Total PCBs

General Statistics

Number of Valid Observations	3	Number of Distinct Observations	3

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable Total PCBs was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

VANADIUM

General Statistics

Number of Valid Observations	4	Number of Distinct Observations	4

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable VANADIUM was not processed!

APPENDIX K, TABLE 20

Median	5945	SD of log Data	0.381
SD	3464		
Coefficient of Variation	0.509		
Skewness	2.582		

Warning: There are only 8 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

DELTA-BHC

General Statistics			
Number of Valid Data	8	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	7
		Percent Non-Detects	87.50%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).

The data set for variable DELTA-BHC was not processed!

DIBENZO(A,H)ANTHRACENE

General Statistics			
Number of Valid Data	8	Number of Detected Data	6
Number of Distinct Detected Data	6	Number of Non-Detect Data	2
		Percent Non-Detects	25.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.063	Minimum Detected	-2.765
Maximum Detected	1.7	Maximum Detected	0.531
Mean of Detected	0.717	Mean of Detected	-0.712
SD of Detected	0.563	SD of Detected	1.13
Minimum Non-Detect	0.36	Minimum Non-Detect	-1.022
Maximum Non-Detect	0.4	Maximum Non-Detect	-0.916

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	4
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	4
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	50.00%

Warning: There are only 6 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

ProUCL Output

General UCL Statistics for Data Sets with Non-Detects

User Selected Options	
From File	C:\Documents and Settings\StrodeSA\Desktop\Willis Ave\Book1.wst
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

2-METHYLNAPHTHALENE

General Statistics

Number of Valid Data	3	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	2
		Percent Non-Detects	66.67%

Warning: This data set only has 3 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 2-METHYLNAPHTHALENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

ALUMINUM

General Statistics

Number of Valid Data	6	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	3
		Percent Non-Detects	50.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	3.66	Minimum Detected	1.297
Maximum Detected	38.3	Maximum Detected	3.645
Mean of Detected	21.89	Mean of Detected	2.703
SD of Detected	17.39	SD of Detected	1.24
Minimum Non-Detect	0.0262	Minimum Non-Detect	-3.642
Maximum Non-Detect	0.0321	Maximum Non-Detect	-3.439

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	3
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	3
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	50.00%

Warning: There are only 3 Distinct Detected Values in this data set
The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

BARIUM

General Statistics			
Number of Valid Observations	6	Number of Distinct Observations	6
Raw Statistics		Log-transformed Statistics	
Minimum	0.0469	Minimum of Log Data	-3.06
Maximum	0.477	Maximum of Log Data	-0.74
Mean	0.191	Mean of log Data	-2.012
Median	0.154	SD of log Data	0.946
SD	0.167		
Coefficient of Variation	0.876		
Skewness	1.092		

Warning: A sample size of 'n' = 6 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 6 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,

the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

Maximum Non-Detect	0.0164	Maximum Non-Detect	-4.11

APPENDIX K, TABLE 22
RAGS 3.22 - PETROLEUM STORAGE AREA - SHALLOW GROUND WATER
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	4
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	2
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	66.67%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

MANGANESE

General Statistics			
Number of Valid Observations	6	Number of Distinct Observations	6
Raw Statistics		Log-transformed Statistics	
Minimum	0.131	Minimum of Log Data	-2.033
Maximum	2.62	Maximum of Log Data	0.963
Mean	0.918	Mean of log Data	-0.706
Median	0.629	SD of log Data	1.3
SD	0.983		
Coefficient of Variation	1.071		
Skewness	1.175		

Warning: A sample size of 'n' = 6 may not adequate enough to compute meaningful and reliable test statistics and estimates!

APPENDIX K, TABLE 22
RAGS 3.22 - PETROLEUM STORAGE AREA - SHALLOW GROUND WATER
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 6 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

MERCURY

General Statistics			
Number of Valid Data	6	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	4
		Percent Non-Detects	66.67%
Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.0022	Minimum Detected	-6.119
Maximum Detected	0.0026	Maximum Detected	-5.952
Mean of Detected	0.0024	Mean of Detected	-6.036
SD of Detected	2.83E-04	SD of Detected	0.118
Minimum Non-Detect	2.00E-04	Minimum Non-Detect	-8.517
Maximum Non-Detect	2.00E-04	Maximum Non-Detect	-8.517

Warning: Data set has only 2 Distinct Detected Values.

This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

APPENDIX K, TABLE 23
RAGS 3.23 - CHLOROBENZENE HOT SPOT AREA - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Warning: A sample size of 'n' = 7 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 7 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

Maximum Non-Detect	0.012	Maximum Non-Detect	-4.423
Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	7

APPENDIX K, TABLE 23
RAGS 3.23 - CHLOROBENZENE HOT SPOT AREA - SURFACE SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

HEXACHLOROBENZENE

General Statistics

Number of Valid Data	7	Number of Detected Data	3
Number of Distinct Detected Data	3	Number of Non-Detect Data	4
		Percent Non-Detects	57.14%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.038	Minimum Detected	-3.27
Maximum Detected	5.4	Maximum Detected	1.686
Mean of Detected	1.903	Mean of Detected	-0.964
SD of Detected	3.031	SD of Detected	2.496
Minimum Non-Detect	0.39	Minimum Non-Detect	-0.942
Maximum Non-Detect	10	Maximum Non-Detect	2.303

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	7
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: There are only 3 Distinct Detected Values in this data set
The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

Total PCBs

General Statistics			
Number of Valid Observations	6	Number of Distinct Observations	6
Raw Statistics		Log-transformed Statistics	
Minimum	0.75	Minimum of Log Data	-0.288
Maximum	120	Maximum of Log Data	4.787
Mean	23.09	Mean of log Data	1.716
Median	4.45	SD of log Data	1.68
SD	47.51		
Coefficient of Variation	2.058		
Skewness	2.441		

Warning: A sample size of 'n' = 6 may not adequate enough to compute meaningful and reliable test statistics and estimates!

It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

Warning: There are only 6 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

1,3-DICHLOROBENZENE

General Statistics			
Number of Valid Data	13	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	11
		Percent Non-Detects	84.62%
Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.35	Minimum Detected	-1.05
Maximum Detected	63	Maximum Detected	4.143
Mean of Detected	31.68	Mean of Detected	1.547
SD of Detected	44.3	SD of Detected	3.672
Minimum Non-Detect	0.36	Minimum Non-Detect	-1.022
Maximum Non-Detect	10	Maximum Non-Detect	2.303
Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	12
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	1
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	92.31%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

APPENDIX K, TABLE 24
RAGS 3.24 - CHLOROBENZENE HOT SPOT AREA - UPPER SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

APPENDIX K, TABLE 24
RAGS 3.24 - CHLOROBENZENE HOT SPOT AREA - UPPER SOIL
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.001	Minimum Detected	-6.908
Maximum Detected	2.4	Maximum Detected	0.875
Mean of Detected	0.412	Mean of Detected	-4.348
SD of Detected	0.974	SD of Detected	2.948
Minimum Non-Detect	0.011	Minimum Non-Detect	-4.51
Maximum Non-Detect	0.012	Maximum Non-Detect	-4.423

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	11
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	2
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	84.62%

Warning: There are only 6 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

General UCL Statistics for Data Sets with Non-Detects

User Selected Options	
From File	C:\Documents and Settings\StrodeSA\Desktop\Willis Ave\Book1.wst
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

1,2,3-TRICHLOROBENZENE

General Statistics

Number of Valid Data	4	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	3
		Percent Non-Detects	75.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,2,3-TRICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,2,4-TRICHLOROBENZENE

General Statistics

Number of Valid Data	11	Number of Detected Data	4
Number of Distinct Detected Data	4	Number of Non-Detect Data	7
		Percent Non-Detects	63.64%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.2	Minimum Detected	-1.609
Maximum Detected	360	Maximum Detected	5.886
Mean of Detected	162.8	Mean of Detected	3.422
SD of Detected	167.1	SD of Detected	3.459
Minimum Non-Detect	2.5	Minimum Non-Detect	0.916
Maximum Non-Detect	10	Maximum Non-Detect	2.303

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	8
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	3
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	72.73%

Warning: There are only 4 Distinct Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

CYANIDE

General Statistics			
Number of Valid Data	7	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	5
		Percent Non-Detects	71.43%
Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.206	Minimum Detected	-1.58
Maximum Detected	0.643	Maximum Detected	-0.442
Mean of Detected	0.425	Mean of Detected	-1.011
SD of Detected	0.309	SD of Detected	0.805
Minimum Non-Detect	0.01	Minimum Non-Detect	-4.605
Maximum Non-Detect	0.01	Maximum Non-Detect	-4.605

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

APPENDIX K, TABLE 25
RAGS 3.25 - CHLOROBENZENE HOT SPOT AREA - SHALLOW GROUND WATER
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

ProUCL Output
General UCL Statistics for Data Sets with Non-Detects
User Selected Options
From File C:\Documents and Settings\StrodeSA\Desktop\Willis Ave\Book1.wst
Full Precision OFF
Confidence Coefficient 95%
Number of Bootstrap Operations 2000

1,1,2,2-TETRACHLOROETHANE

General Statistics

Number of Valid Data	61	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	60
		Percent Non-Detects	98.36%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).
The data set for variable 1,1,2,2-TETRACHLOROETHANE was not processed!

1,2,3-TRICHLOROBENZENE

General Statistics

Number of Valid Data	4	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	3
		Percent Non-Detects	75.00%

Warning: This data set only has 4 observations!
Data set is too small to compute reliable and meaningful statistics and estimates!
The data set for variable 1,2,3-TRICHLOROBENZENE was not processed!

It is suggested to collect at least 8 to 10 observations before using these statistical methods!
If possible, compute and collect Data Quality Objectives (DQO) based sample size and analytical results.

1,2,4-TRICHLOROBENZENE

General Statistics

Number of Valid Data	32	Number of Detected Data	8
Number of Distinct Detected Data	8	Number of Non-Detect Data	24
		Percent Non-Detects	75.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.2	Minimum Detected	-1.609
Maximum Detected	1000	Maximum Detected	6.908
Mean of Detected	219.7	Mean of Detected	3.847
SD of Detected	340	SD of Detected	2.606
Minimum Non-Detect	2.5	Minimum Non-Detect	0.916
Maximum Non-Detect	150	Maximum Non-Detect	5.011

Note: Data have multiple DLs - Use of KM Method is recommended	Number treated as Non-Detect	29
For all methods (except KM, DL/2, and ROS Methods),	Number treated as Detected	3
Observations < Largest ND are treated as NDs	Single DL Non-Detect Percentage	90.63%

Warning: There are only 8 Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

1,2-DICHLOROETHANE

General Statistics			
Number of Valid Data	61	Number of Detected Data	2
Number of Distinct Detected Data	1	Number of Non-Detect Data	59
		Percent Non-Detects	96.72%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).
The data set for variable 1,2-DICHLOROETHANE was not processed!

1,2-DICHLOROPROPANE

General Statistics

APPENDIX K, TABLE 26
RAGS 3.26 - SITE WIDE - GROUND WATER
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Number of Valid Data	61	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	59
		Percent Non-Detects	96.72%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	2	Minimum Detected	0.693
Maximum Detected	3	Maximum Detected	1.099
Mean of Detected	2.5	Mean of Detected	0.896
SD of Detected	0.707	SD of Detected	0.287
Minimum Non-Detect	0.5	Minimum Non-Detect	-0.693
Maximum Non-Detect	5000	Maximum Non-Detect	8.517

Note: Data have multiple DLs - Use of KM Method is recommended	Number treated as Non-Detect	61
For all methods (except KM, DL/2, and ROS Methods),	Number treated as Detected	0
Observations < Largest ND are treated as NDs	Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

2-NITROPHENOL

General Statistics			
Number of Valid Data	25	Number of Detected Data	1
Number of Distinct Detected Data	1	Number of Non-Detect Data	24
		Percent Non-Detects	96.00%

Warning: Only one distinct data value was detected! ProUCL (or any other software) should not be used on such a data set!
It is suggested to use alternative site specific values determined by the Project Team to estimate environmental parameters (e.g., EPC, BTV).
The data set for variable 2-NITROPHENOL was not processed!

APPENDIX K, TABLE 26
RAGS 3.26 - SITE WIDE - GROUND WATER
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

4-CHLORO-3-METHYLPHENOL

General Statistics			
Number of Valid Data	25	Number of Detected Data	2
Number of Distinct Detected Data	2	Number of Non-Detect Data	23
		Percent Non-Detects	92.00%

Raw Statistics		Log-transformed Statistics	
Minimum Detected	3	Minimum Detected	1.099
Maximum Detected	4	Maximum Detected	1.386
Mean of Detected	3.5	Mean of Detected	1.242
SD of Detected	0.707	SD of Detected	0.203
Minimum Non-Detect	10	Minimum Non-Detect	2.303
Maximum Non-Detect	1000	Maximum Non-Detect	6.908

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	25
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

APPENDIX K, TABLE 26
RAGS 3.26 - SITE WIDE - GROUND WATER
PRO-UCL OUTPUT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Raw Statistics		Log-transformed Statistics	
Minimum Detected	2	Minimum Detected	0.693
Maximum Detected	4	Maximum Detected	1.386
Mean of Detected	3	Mean of Detected	1.04
SD of Detected	1.414	SD of Detected	0.49
Minimum Non-Detect	10	Minimum Non-Detect	2.303
Maximum Non-Detect	1000	Maximum Non-Detect	6.908

Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	27
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: Data set has only 2 Distinct Detected Values.
This may not be adequate enough to compute meaningful and reliable test statistics and estimates.
The Project Team may decide to use alternative site specific values to estimate environmental parameters (e.g., EPC, BTV).

Unless Data Quality Objectives (DQOs) have been met, it is suggested to collect additional observations.

The number of detected data may not be adequate enough to perform GOF tests, bootstrap, and ROS methods.
Those methods will return a 'N/A' value on your output display!

It is necessary to have 4 or more Distinct Values for bootstrap methods.
It is recommended to have 10 to 15 or more observations for accurate and meaningful results and estimates.

SILVER

General Statistics			
Number of Valid Data	56	Number of Detected Data	4
Number of Distinct Detected Data	4	Number of Non-Detect Data	52
		Percent Non-Detects	92.86%
Raw Statistics		Log-transformed Statistics	
Minimum Detected	0.0036	Minimum Detected	-5.627
Maximum Detected	0.0354	Maximum Detected	-3.341
Mean of Detected	0.0142	Mean of Detected	-4.614
SD of Detected	0.0144	SD of Detected	0.962
Minimum Non-Detect	0.003	Minimum Non-Detect	-5.809
Maximum Non-Detect	0.0944	Maximum Non-Detect	-2.36
Note: Data have multiple DLs - Use of KM Method is recommended		Number treated as Non-Detect	56
For all methods (except KM, DL/2, and ROS Methods),		Number treated as Detected	0
Observations < Largest ND are treated as NDs		Single DL Non-Detect Percentage	100.00%

Warning: There are only 4 Distinct Detected Values in this data
Note: It should be noted that even though bootstrap may be performed on this data set
the resulting calculations may not be reliable enough tp draw conclusions

It is recommended to have 10-15 or more distinct observations for accurate and meaningful results.

Future	Surface Soil	Surface Soils (0-2 ft)	On-Site Ditches Surface Soil	Industrial Worker	Adult	Ingestion	Quantitative	An industrial worker could have occasional incidental ingestion of surface soils while performing duties.
						Dermal	Quantitative	An industrial worker could have occasional dermal exposure to surface soils while performing duties.
	Subsurface Soil	Upper Soils (0-10 ft)	On-Site Ditches Upper Soil	Construction Worker	Adult	Ingestion	Quantitative	A construction worker could have occasional incidental ingestion of subsurface soils while performing duties.
						Dermal	Quantitative	A construction worker could have occasional dermal exposure to subsurface soils while performing duties.
						Inhalation	Quantitative	Construction workers may be exposed to fugitive dust or volatile emissions from Site soils during on-grade construction or excavation activites.
		Intermediate Soils (0-20 ft)	On-Site Ditches Intermediate Soil	Utility Worker	Adult	Ingestion	Quantitative	A utility worker could have occasional incidental ingestion of subsurface soils while performing duties. The sewer in this portion of the Site is generally below 10 feet.
						Dermal	Quantitative	A utility worker could have occasional dermal exposure to subsurface soils while performing duties. The sewer in this portion of the Site is generally below 10 feet.

TABLE 1.3
SELECTION OF EXPOSURE PATHWAYS
ON-SITE DITCHES
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Future (cont.)	Groundwater	Intermediate Groundwater (0-20 ft)	On-Site Ditches Intermediate Groundwater	Utility Worker	Adult	Ingestion	Quantitative	A utility worker could have occasional incidental ingestion of groundwater while performing duties. The sewer in this portion of the Site is generally below 10 feet.
						Dermal	Quantitative	A utility worker could have occasional dermal exposure to groundwater to performing duties.
		Air	Indoor Air -Vapor Intrusion	Industrial Worker	Adult	Inhalation	Quantitative	An industrial worker could inhale affected indoor air while performing duties. Site groundwater data will be compared quantitatively to USEPA (2002) risk-based generic screening levels for vapor intrusion.

TABLE 1.4
SELECTION OF EXPOSURE PATHWAYS
SOUTHWEST OFF-SITE/OUTFALL 006
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Current/Future	Surface Soil	Surface Soils (0-2 ft)	Southwest Off-Site/Outfall 006 Surface Soil	Trespasser	Adolescent (7 to <16 years)	Ingestion	Quantitative	It is possible that trespassing could occur on the southwest off-site/outfall 006 exposure area; incidental ingestion of soil could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on the southwest off-site/outfall 006 exposure area; dermal exposure to soil could occur while trespassing.
					Adult	Ingestion	Quantitative	It is possible that trespassing could occur on the southwest off-site/outfall 006 exposure area; incidental ingestion of soil could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on the southwest off-site/outfall 006 exposure area; dermal exposure to soil could occur while trespassing.
Future	Surface Soil	Surface Soils (0-2 ft)	Southwest Off-Site/Outfall 006 Surface Soil	Industrial Worker	Adult	Ingestion	Quantitative	An industrial worker could have occasional incidental ingestion of surface soils while performing duties.
						Dermal	Quantitative	An industrial worker could have occasional dermal exposure to surface soils while performing duties.
	Subsurface Soil	Upper Soils (0-10 ft)	Southwest Off-Site/Outfall 006 Upper Soil	Construction Worker	Adult	Ingestion	Quantitative	A construction worker could have occasional incidental ingestion of subsurface soils while performing duties.
						Dermal	Quantitative	A construction worker could have occasional dermal exposure to subsurface soils while performing duties.
						Inhalation	Quantitative	Construction workers may be exposed to fugitive dust or volatile emissions from Site soils during on-grade construction or excavation activites.

TABLE 1.5
SELECTION OF EXPOSURE PATHWAYS
STATE FAIR BLVD/NORTHWEST OFF-SITE/OUTFALL 004
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Current/Future	Surface Soil	Surface Soils (0-2 ft)	State Fair Blvd/Northwest Off-Site/Outfall 004 Surface Soil	Trespasser	Adolescent (7 to <16 years)	Ingestion	Quantitative	It is possible that trespassing could occur on the State Fair Blvd/northwest off-site/outfall 004 area; incidental ingestion of soil could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on the State Fair Blvd/northwest off-site/outfall 004 area; dermal exposure to soil could occur while trespassing.
					Adult	Ingestion	Quantitative	It is possible that trespassing could occur on the State Fair Blvd/northwest off-site/outfall 004 area; incidental ingestion of soil could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on the State Fair Blvd/northwest off-site/outfall 004 area; dermal exposure to soil could occur while trespassing.
				Transient*	Adult	Ingestion	Quantitative	It is possible that walking could occur along State Fair Boulevard during the NYS Fair; incidental ingestion of soil could occur while walking.
						Dermal	Quantitative	It is possible that walking could occur along State Fair Boulevard during the NYS Fair; dermal exposure to soil could occur while walking.
	Subsurface Soil	Upper Soils (0-10 ft)	State Fair Blvd/Northwest Off-Site/Outfall 004 Upper Soil	Utility Worker	Adult	Ingestion	Quantitative	A utility worker could have occasional incidental ingestion of surface soils while performing duties.
						Dermal	Quantitative	A utility worker could have occasional dermal exposure to surface soils while performing duties.

Notes:
* = refers to an adult walking legally along State Fair Boulevard during the NYS fair.

TABLE 1.6
SELECTION OF EXPOSURE PATHWAYS
LAKESHORE AREA
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Current/Future	Surface Soil	Surface Soils (0-2 ft)	Lakeshore Area Surface Soil	Trespasser	Adolescent (7 to <16 years)	Ingestion	Quantitative	It is possible that trespassing could occur on the Lakeshore Property; incidental ingestion of soil could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on the Lakeshore Property; dermal exposure to soil could occur while trespassing.
					Adult	Ingestion	Quantitative	It is possible that trespassing could occur on the Lakeshore Property; incidental ingestion of soil could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on the Lakeshore Property; dermal exposure to soil could occur while trespassing.
	Subsurface Soil	Upper Soils (0-10 ft)	Lakeshore Area Upper Soil	Utility Worker	Adult	Ingestion	Quantitative	A utility worker could have occasional incidental ingestion of surface soils while performing duties.
						Dermal	Quantitative	A utility worker could have occasional dermal exposure to surface soils while performing duties.
	Groundwater	Shallow Groundwater (0-10 ft)	Lakeshore Area Shallow Groundwater	Utility Worker	Adult	Ingestion	Quantitative	A utility worker could have incidental ingestion of groundwater while performing duties.
						Dermal	Quantitative	A utility worker could have occasional dermal exposure to groundwater while performing duties.

TABLE 1.7
SELECTION OF EXPOSURE PATHWAYS
TRIBUTARY 5A
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Current/Future	Surface Water	Surface Water	Tributary 5A Surface Water	Trespasser	Adolescent (7 to <16 years)	Ingestion	Quantitative	It is possible that trespassing could occur along Tributary 5A; incidental ingestion of surface water could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on along Tributary 5A; dermal exposure to surface water could occur while trespassing.
					Adult	Ingestion	Quantitative	It is possible that trespassing could occur along Tributary 5A; incidental ingestion of surface water could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on along Tributary 5A; dermal exposure to surface water could occur while trespassing.
				Utility Worker	Adult	Ingestion	Quantitative	A utility worker could have occasional incidental ingestion of surface water while performing duties.
						Dermal	Quantitative	Utility workers could have dermal exposure to surface water during excavations as part of activities related to on-Site utilities.
	Sediment	Sediment	Tributary 5A Sediment (0-1 ft)	Trespasser	Adolescent (7 to <16 years)	Ingestion	Quantitative	It is possible that trespassing could occur along Tributary 5A; incidential ingestion of sediment could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on along Tributary 5A; dermal exposure to sediment could occur while trespassing.
					Adult	Ingestion	Quantitative	It is possible that trespassing could occur along Tributary 5A; incidential ingestion of sediment could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on along Tributary 5A; dermal exposure to sediment could occur while trespassing.
			Tributary 5A Sediment (0-10 ft)	Utility Worker	Adult	Ingestion	Quantitative	Utility workers could incidentally ingest sediment during excavations as part activities related to on-Site utilities.
						Dermal	Quantitative	Utility workers could have dermal exposure to sediment during excavations as part of activities related to on-Site utilities.
		Fish Tissue	Fish Tissue	Trespasser	Adult	Ingestion	None	Exposure via fish consumption is considered an incomplete exposure pathway based on habitat, fish population sampling, and limited access.

TABLE 1.8
SELECTION OF EXPOSURE PATHWAYS
PETROLEUM STORAGE AREA
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario Timeframe	Medium	Exposure Medium	Exposure Point	Receptor Population	Receptor Age	Exposure Route	Type of Analysis	Rationale for Selection or Exclusion of Exposure Pathway
Current/Future	Surface Soil	Surface Soils (0-2 ft)	Petroleum Storage Area Surface Soil	Trespasser	Adolescent (7 to <16 years)	Ingestion	Quantitative	It is possible that trespassing could occur on the petroleum storage area; incidental ingestion of soil could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on the petroleum storage area; dermal exposure to soil could occur while trespassing.
					Adult	Ingestion	Quantitative	It is possible that trespassing could occur on the petroleum storage area; incidental ingestion of soil could occur while trespassing.
						Dermal	Quantitative	It is possible that trespassing could occur on the petroleum storage area; dermal exposure to soil could occur while trespassing.
Future	Surface Soil	Surface Soils (0-2 ft)	Petroleum Storage Area Surface Soil	Industrial Worker	Adult	Ingestion	Quantitative	An industrial worker could have occasional incidental ingestion of surface soils while performing duties.
						Dermal	Quantitative	An industrial worker could have occasional dermal exposure to surface soils while performing duties.
	Subsurface Soil	Upper Soils (0-10 ft)	Petroleum Storage Area Upper Soil	Construction Worker	Adult	Ingestion	Quantitative	A construction worker could have occasional incidental ingestion of subsurface soils while performing duties.
						Dermal	Quantitative	A construction worker could have occasional dermal exposure to subsurface soils while performing duties.
						Inhalation	Quantitative	Construction workers may be exposed to fugitive dust or volatile emissions from Site soils during on-grade construction or excavation activites.
				Utility Worker	Adult	Ingestion	Quantitative	A utility worker could have occasional incidental ingestion of subsurface soils while performing duties. The sewer is generally not deeper than 10 ft in this area.
						Dermal	Quantitative	A utility worker could have occasional dermal exposure to subsurface soils while performing duties. The sewer is generally not deeper than 10 ft in this area.

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT - Compound is an essential nutrient.
- = Compound detected in 100% of samples.
NA = Not applicable, minimum and maximum values are calculated.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.
f = RBC value for chlordane (CAS# 57749) and PRG value for technical chlordane (CAS# 12789-03-6) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007

											Sample Location TEQ =	**122.9**

NOTES:

TCDD/F = Tetra Chlorinated Dibenzo-p-dioxins/Dibenzofurans

PeCDD/F = Penta Chlorinated Dibenzo-p-dioxins/Dibenzofurans

HxCDD/F = Hexa Chlorinated Dibenzo-p-dioxins/Dibenzofurans

HpCDD/F = Hepta Chlorinated Dibenzo-p-dioxins/Dibenzofurans

OCDD/F = Octa Chlorinated Dibenzo-p-dioxins/Dibenzofurans

N/A = not applicable

EMPC = Estimated Maximum Possible Concentration

TABLE 2.1c
DERIVATION OF PCB EQUIVALENTS FOR CHLORINATED CHEMICALS
PLANT AREA SURFACE SOIL
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Sample Location	Chlorination Level*	Start Depth (ft)	End Depth (ft)	Sample Date	Sum of Location PCB Concentration	Units
WA-MPS-SS	Highly Chlorinated PCBs	0	0.5	10/26/1999	0.034	mg/kg
WA-SB-6	Highly Chlorinated PCBs	0	2	9/29/1998	0.26	mg/kg
WA-SB-2	Highly Chlorinated PCBs	0	2	9/29/1998	0.31	mg/kg
WA-SB-10	Highly Chlorinated PCBs	0	2	9/28/1998	0.65	mg/kg
WA-SB-9	Highly Chlorinated PCBs	0	2	9/28/1998	0.77	mg/kg
WA-SB-4	Highly Chlorinated PCBs	0	2	9/29/1998	3	mg/kg
WA-SB-12	Highly Chlorinated PCBs	0	2	9/28/1998	3.1	mg/kg

Notes:
* Less chlorinated PCBs were defined as Aroclors 1221, 1232, 1016, and 1242. Highly chlorinated PCBs were defined as Aroclors 1248, 1254, 1260, and higher if reported.

TABLE 2.1d
DERIVATION OF TOTAL CHLORDANES
PLANT AREA SURFACE SOIL
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Sample Location	Start Depth (ft)	End Depth (ft)	Sample Date	Sum of Location Chlordane Concentration	Units
WA-SB-9	0	2	9/28/1998	0.014	mg/kg
WA-SB-1	0	2	9/29/1998	0.029	mg/kg

TABLE 2.2a
OCCURRENCE, DISTRIBUTION, AND SELECTION OF CHEMICALS OF POTENTIAL CONCERN
PLANT AREA UPPER SOIL
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario: Current/Future
Medium: Soil
Exposure Medium: Upper Soil (0-10 ft)

Exposure Point	CAS Number	Chemical	Minimum Detected Concentration (1)	Maximum Detected Concentration (1)	Units	Location of Maximum Concentration	Detection Frequency	Range of Detection Limits	Concentration Used for Screening (2)	Background Value (3)	Potential ARAR/TBC Value (4)	USEPA RBC for Residential Soil (5)		USEPA PRG for Residential Soil (6)		Screening Toxicity Value (7)	COPC Flag (Y/N)	Rationale for Selection or Deletion (8)

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT - Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
NA = Not applicable, minimum and maximum values are calculated.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.
f = RBC value for chlordane (CAS# 57749) and PRG value for technical chlordane (CAS# 12789-03-6) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT - Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
NA = Not applicable, minimum and maximum values are calculated.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.
f = RBC value for chlordane (CAS# 57749) and PRG value for technical chlordane (CAS# 12789-03-6) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) United States Environmental Protection Agency. 2008. National Primary and Secondary Drinking Water Regulations
(5) USEPA Region 3 RBCs (USEPA 2007) for tap water; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for tap water; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT - Compound is an essential nutrient and not screened in.
- = Compound detected in 100% of samples.
a = Where mercury is not speciated, RBC and PRG values for methyl mercury utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
** Target soil gas concentration exceeds maximum possible vapor concentration at this soil gas to indoor air attenuation factor (pathway incomplete)
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) No background screening performed.
(4) United States Environmental Protection Agency. 2008. National Primary and Secondary Drinking Water Regulations
(5) USEPA - OSWER Draft Guidance for Evaluating the Vapor Intrusion to Indoor Air Pathway from Groundwater and Soils (Subsurface Vapor Intrusion Guidance) Tables. November 2002. ca = Cancer; nc = Noncancer
(6) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT - Compound is an essential nutrient and not screened in
[a] Where mercury is not speciated, RBC and PRG values for methyl mercury utilized.
†The target groundwater concentration is the MCL.

		2,3,7,8-TCDD Equivalent	0.0000018	0.25	mg/kg	WA-FCB5	34/34	-	2.52E-01			4.26E-06	C	3.90E-06	ca	3.90E-06	Y	ASL

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT - Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
NA = Not applicable, minimum and maximum values are calculated.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utlized.
c = When detected, reflects summary statistics of Aroclor 1221, 1232, 1016, and 1242. RBC and PRG values for Aroclor-1016 (CAS# 12674112) utilized.
d = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

TABLE 2.8a
OCCURRENCE, DISTRIBUTION, AND SELECTION OF CHEMICALS OF POTENTIAL CONCERN
FORMER CHLORINATION BUILDING INTERMEDIATE SOIL
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario: Current/Future
Medium: Soil
Exposure Medium: Intermediate Soil (0-20 ft)

Exposure Point	CAS Number	Chemical	Minimum Detected Concentration (1)	Maximum Detected Concentration (1)	Units	Location of Maximum Concentration	Detection Frequency	Range of Detection Limits	Concentration Used for Screening (2)	Background Value (3)	Potential ARAR/TBC Value (4)	USEPA RBC for Residential Soil (5)		USEPA PRG for Residential Soil (6)		Screening Toxicity Value (7)	COPC Flag (Y/N)	Rationale for Selection or Deletion (8)
	DIOXIN/FURAN																	
		2,3,7,8-TCDD Equivalent	0.0000018	0.25	mg/kg	WA-FCB5	34/34	-	2.52E-01			4.26E-06	C	3.90E-06	ca	3.90E-06	Y	ASL

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT - Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
NA = Not applicable, minimum and maximum values are calculated.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utllized.
c = When detected, reflects summary statistics of Aroclor 1221, 1232, 1016, and 1242. RBC and PRG values for Aroclor-1016 (CAS# 12674112) utilized.
d = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT - Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
NA = Not applicable, minimum and maximum values are calculated.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
NA = Not applicable, minimum and maximum values are calculated.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT - Compound is an essential nutrient and is not screened in
- = Compound detected in 100% of samples.
NA = Not applicable, minimum and maximum values are calculated.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utlized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT - Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.
f = RBC value for chlordane (CAS# 57749) and PRG value for technical chlordane (CAS# 12789-03-6) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.
f = RBC value for chlordane (CAS# 57749) and PRG value for technical chlordane (CAS# 12789-03-6) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level
- = Compound detected in 100% of samples.
a = Where mercury was not speciated RBC and PRG values for methyl mercury utilized.
b = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level
- = Compound detected in 100% of samples.
a = Where mercury was not speciated RBC and PRG values for methyl mercury utilized.
b = When detected, reflects summary statistics of Aroclor 1221, 1232, 1016, and 1242. RBC and PRG values for Aroclor-1016 (CAS# 12674112) utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

TABLE 2.16a
OCCURRENCE, DISTRIBUTION, AND SELECTION OF CHEMICALS OF POTENTIAL CONCERN
LAKESHORE AREA SURFACE SOIL
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario: Current/Future
Medium: Soil
Exposure Medium: Surface Soil (0-2 ft)

Exposure Point	CAS Number	Chemical	Minimum Detected Concentration (1)	Maximum Detected Concentration (1)	Units	Location of Maximum Concentration	Detection Frequency	Range of Detection Limits	Concentration Used for Screening (2)	Background Value (3)	Potential ARAR/TBC Value (4)	USEPA RBC for Residential Soil (5)		USEPA PRG for Residential Soil (6)		Screening Toxicity Value (7)	COPC Flag (Y/N)	Rationale for Selection or Deletion (8)
	DIOXIN/FURAN																	
		2,3,7,8-TCDD Equivalent	0.0000092	0.000076	mg/kg	WA-LS-3	3/3	-	7.62E-05			4.26E-06	C	3.90E-06	ca	3.90E-06	Y	ASL

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.
f = RBC value for chlordane (CAS# 57749) and PRG value for technical chlordane (CAS# 12789-03-6) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.
f = RBC value for chlordane (CAS# 57749) and PRG value for technical chlordane (CAS# 12789-03-6) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) United States Environmental Protection Agency. 2008. National Primary and Secondary Drinking Water Regulations
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = Where mercury was not speciated RBC and PRG values for methyl mercury utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered

USEPA: United States Environmental Protection Agency

TABLE 2.19a
OCCURRENCE, DISTRIBUTION, AND SELECTION OF CHEMICALS OF POTENTIAL CONCERN
TRIBUTARY 5A SEDIMENT
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario: Current/Future
Medium: Sediment
Exposure Medium: Sediment (0-1 ft)

Exposure Point	CAS Number	Chemical	Minimum Detected Concentration (1)	Maximum Detected Concentration (1)	Units	Location of Maximum Concentration	Detection Frequency	Range of Detection Limits	Concentration Used for Screening (2)	Background Value (3)	Potential ARAR/TBC Value	USEPA RBC for Residential Soil (4)		USEPA PRG for Residential Soil (5)		Screening Toxicity Value (6)	COPC Flag (Y/N)	Rationale for Selection or Deletion (7)

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(5) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(6) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(7) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endrin utilized
e = RBC value for chlordane (CAS# 57749) and PRG value for technical chlordane (CAS# 12789-03-6) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) United States Environmental Protection Agency. 2008. National Primary and Secondary Drinking Water Regulations
(5) USEPA Region 3 RBCs (USEPA 2007) for tap water; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for tap water; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = Total mercury was also analyzed, but not detected.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

TABLE 2.21b
DERIVATION OF PCB EQUIVALENTS FOR CHLORINATED CHEMICALS
PETROLEUM STORAGE AREA SURFACE SOIL
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Sample Location	Chlorination Level*	Start Depth (ft)	End Depth (ft)	Sample Date	Sum of Location PCB Concentration	Units
WA-PSA-3	Highly chlorinated PCBs	0	2	9/30/1998	0.14	mg/kg
WA-PSA-SS	Highly chlorinated PCBs	0	0.5	10/26/1999	0.309	mg/kg
WA-PSA-1	Highly chlorinated PCBs	0	2	9/29/1998	0.72	mg/kg

Notes:
* Highly chlorinated PCBs were defined as Aroclors 1248, 1254, 1260, and higher if reported.

TABLE 2.22a

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.
f = RBC value for chlordane (CAS# 57749) and PRG value for technical chlordane (CAS# 12789-03-6) utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

TABLE 2.22b
DERIVATION OF PCB EQUIVALENTS FOR CHLORINATED CHEMICALS
PETROLEUM STORAGE AREA UPPER SOIL
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Sample Location	Chlorination Level*	Start Depth (ft)	End Depth (ft)	Sample Date	Sum of Location PCB Concentration	Units
WA-PSA-3	Highly chlorinated PCBs	0	2	9/30/1998	0.14	mg/kg
WA-PSA-SS	Highly chlorinated PCBs	0	0.5	10/26/1999	0.309	mg/kg
WA-PSA-1	Highly chlorinated PCBs	0	2	9/29/1998	0.72	mg/kg

Notes:
* Highly chlorinated PCBs were defined as Aroclors 1248, 1254, 1260, and higher if reported.

TABLE 2.22c
DERIVATION OF TOTAL CHLORDANES
PETROLEUM STORAGE AREA UPPER SOIL
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Sample Location	Start Depth (ft)	End Depth (ft)	Sample Date	Sum of Location Chlordane Concentration	Units
WA-PSA-2	2	10	9/29/1998	0.0261	mg/kg

TABLE 2.23
OCCURRENCE, DISTRIBUTION, AND SELECTION OF CHEMICALS OF POTENTIAL CONCERN
PETROLEUM STORAGE AREA SHALLOW GROUNDWATER
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario: Current/Future
Medium: Water
Exposure Medium: Shallow Groundwater (0 - 10 ft)

(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) United States Environmental Protection Agency. 2008. National Primary and Secondary Drinking Water Regulations
(5) USEPA Region 3 RBCs (USEPA 2007) for tap water; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for tap water; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = Where mercury was not speciated RBC and PRG values for methyl mercury utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

TABLE 2.24
OCCURRENCE, DISTRIBUTION, AND SELECTION OF CHEMICALS OF POTENTIAL CONCERN
PETROLEUM STORAGE AREA SHALLOW GROUNDWATER: VAPOR INTRUSION
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Scenario: Current/Future
Medium: Water
Exposure Medium: Groundwater (0-10 ft)

Exposure Point	CAS Number	Chemical	Minimum Detected Concentration (1)	Maximum Detected Concentration (1)	Units	Location of Maximum Concentration	Detection Frequency	Range of Detection Limits	Concentration Used for Screening (2)	Background Value (3)	Potential ARAR/TBC Value (4)	Target Groundwater Concentration Corresponding to Target Indoor Air Concentration Where the Soil Gas to Indoor Air Attenuation Factor = 0.001 and Partitioning Across the Water Table Obeys Henry's Law (10^{-5}) (5)		Screening Toxicity Value	COPC Flag (Y/N)	Rationale for Selection or Deletion (6)

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) NYSDEC Part 375-6.8: Restricted Use Soil Cleanup Objectives, value for restricted residential
(5) USEPA Region 3 RBCs (USEPA 2007) for residential soil; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for residential soil; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened in.
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirements
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

TABLE 2.25b
DERIVATION OF PCB EQUIVALENTS FOR CHLORINATED CHEMICALS
CHLOROBENZENE HOT-SPOT AREA SURFACE SOIL
HONEYWELL, WILLIS AVENUE CHLOROBENZENE SITE, GEDDES, NEW YORK

Sample Location	Chlorination Level*	Start Depth (ft)	End Depth (ft)	Sample Date	Sum of Location PCB Concentration	Units
WA-CHSA-3	Highly chlorinated PCBs	0	2	9/30/1998	0.75	mg/kg
WA-CHSA-5	Highly chlorinated PCBs	0	2	9/30/1998	2.7	mg/kg
WA-CHSA-6	Highly chlorinated PCBs	0	2	9/30/1998	4	mg/kg
WA-CHSA-SS	Highly chlorinated PCBs	0	0.5	10/26/1999	4.9	mg/kg
WA-CHSA-1	Highly chlorinated PCBs	0	2	9/30/1998	6.2	mg/kg
WA-CHSA-2	Highly chlorinated PCBs	0	2	9/30/1998	120	mg/kg

Notes:
* Highly chlorinated PCBs were defined as Aroclors 1248, 1254, 1260, and higher if reported.

a = RBC and PRG values for chromium VI utilized.
b = RBC and PRG values for mercury compounds utilized.
c = When detected, reflects summary statistics of Aroclors 1248, 1254, and 1260. RBC and PRG values for Aroclor-1254 (CAS# 11097691) utilized.
d = RBC and PRG values for endosulfan utilized.
e = RBC and PRG values for endrin utilized.

Definitions:

Footnotes:
(1) J - estimated value; N - tentatively identified at an estimated value
(2) Concentration used for screening is the maximum detected concentration.
(3) N/A - No background screening performed.
(4) United States Environmental Protection Agency. 2008. National Primary and Secondary Drinking Water Regulations
(5) USEPA Region 3 RBCs (USEPA 2007) for tap water; C = Cancer RBC; N = Noncancer RBC; NV = No value in Region 3 RBC data set. Noncancer RBCs adjusted by multiplying RBC by 0.1.
(6) USEPA Region 9 PRGs (USEPA 2004) for tap water; ca = Cancer PRG; nc = Noncancer PRG; NV = No value in Region 9 PRG data set. Noncancer PRGs adjusted by multiplying PRG by 0.1.
(7) The Screening Toxicity Value represents the minimum of the Region 3 RBC and the Region 9 PRG.
(8) Selection Rationale: ASL - Above Screening Level; TOX - Class A Carcinogen; NTX - No Toxicity Information. Deletion Rationale: BSL - Below Screening Level; NUT- Compound is an essential nutrient and is not screened ir
- = Compound detected in 100% of samples.
a = RBC and PRG values for chromium VI utilized.
b = Where mercury was not speciated RBC and PRG values for methyl mercury utilized.

Definitions:
ARAR: Applicable or Relevant and Appropriate Requirement
CAS: Chemical Abstract Service
COPC: Compound of Potential Concern
NV: No Value
PRG: Preliminary Remediation Goals; USEPA, 2004
RBC: Risk Based Concentration; USEPA, October, 2007
TBC: To Be Considered
USEPA: United States Environmental Protection Agency

Footnotes:
a = Aroclor-1248,-1254, -1260 samples were combined for analysis by ProUCL 4.0 and determination of an EPC.
b = Max - maximum detected concentration; %UCL - % upper confidence limit.
NV = UCL could not be calculated because there were too few samples or too few detected samples among many non-detected samples
It is possible that in certain instances, the calculated 95% UCL is smaller than the mean detected concentration. This reflects a low detection frequency and non-detect samples largely outnumbering detected samples, causing the 95% UCL recommended by ProUCL v4.0 to be smaller than the mean detected concentration, since it reflects the large number of non-detect samples.
* = ProUCL does not provide 95% UCLs when there is insufficient data, as defined by fewer than 5 samples or fewer than 2 unique detected samples. In these cases, the EPC is obtained by using the maximum detected concentration.
Chebyshev (Mean, Sd) UCL = (1-α)100% UCL of the mean based upon the chebyshev theorem (using the sample mean and sample standard deviation - non-parametric).
Chebyshev (MVUE) UCL = (1-α) 100% UCL of the Mean of a Lognormal Population Based Upon the Chebyshev Theorem (Using the MVUE of the Mean and its Standard Error - parametric)
Gamma UCL = Computation of UCL of the mean of a Gamma, G(k,θ) distribution (parametric).
H-UCL = (1-α)100% UCL of the mean based upon H-statistic (H-UCL) (parametric).
KM (BCA) UCL = UCL based upon Kaplan-Meier Estimates using the bias corrected accelerated percentile bootstrap method. (non-parametric).
KM (Chebyshev) UCL = UCL based upon Kaplan-Meier estimates using the Chebyshev inequality (non-parametric).
KM (t) UCL = UCL based upon Kaplan-Meier estimates using student's t-distribution critical value (non-parametric).
Student's-t UCL = Computation method based upon student's t-distribution (parametric).
Chebyshev UCL or Student's-t UCL for nonparametric distribution based on ProUCL (V. 4.0) recommendation; Gamma UCL for gamma distribution; Nonparametric Bootstrap UCLs introduce some standard error and may not be reproduced precisely.

It is possible that in certain instances, the calculated 95% UCL is smaller than the mean detected concentration. This reflects a low detection frequency and non-detect samples largely outnumbering detected samples, causing the 95% UCL recommended by ProUCL v4.0 to be smaller than the mean detected concentration, since it reflects the large number of non-detect samples.
* = ProUCL does not provide 95% UCLs when there is insufficient data, as defined by fewer than 5 samples or fewer than 2 unique detected samples. In these cases, the EPC is obtained by using the maximum detected concentration.
Chebyshev (Mean, Sd) UCL = (1-α)100% UCL of the mean based upon the chebyshev theorem (using the sample mean and sample standard deviation - non-parametric).
Chebyshev (MVUE) UCL = (1-α) 100% UCL of the Mean of a Lognormal Population Based Upon the Chebyshev Theorem (Using the MVUE of the Mean and its Standard Error - parametric)
Gamma UCL = Computation of UCL of the mean of a Gamma, G(k,θ) distribution (parametric).
H-UCL = (1-α)100% UCL of the mean based upon H-statistic (H-UCL) (parametric).
KM (BCA) UCL = UCL based upon Kaplan-Meier Estimates using the bias corrected accelerated percentile bootstrap method. (non-parametric).
KM (Chebyshev) UCL = UCL based upon Kaplan-Meier estimates using the Chebyshev inequality (non-parametric).
KM (t) UCL = UCL based upon Kaplan-Meier estimates using student's t-distribution critical value (non-parametric).
Student's-t UCL = Computation method based upon student's t-distribution (parametric).
Chebyshev UCL or Student's-t UCL for nonparametric distribution based on ProUCL (V. 4.0) recommendation; Gamma UCL for gamma distribution; Nonparametric Bootstrap UCLs introduce some standard error and may not be reproduced precisely.

Footnotes:
a = Aroclor-1248,-1254, -1260 samples were combined for analysis by ProUCL 4.0 and determination of an EPC.
b = Max - maximum detected concentration; %UCL - % upper confidence limit.
NV = UCL could not be calculated because there were too few samples or too few detected samples among many non-detected samples
It is possible that in certain instances, the calculated 95% UCL is smaller than the mean detected concentration. This reflects a low detection frequency and non-detect samples largely outnumbering detected samples, causing the 95% UCL recommended by ProUCL v4.0 to be smaller than the mean detected concentration, since it reflects the large number of non-detect samples.
* = ProUCL does not provide 95% UCLs when there is insufficient data, as defined by fewer than 5 samples or fewer than 2 unique detected samples. In these cases, the EPC is obtained by using the maximum detected concentration.
Student's-t UCL = Computation method based upon student's t-distribution (parametric).

Footnotes:
a = Aroclor-1248,-1254, -1260 samples were combined for analysis by ProUCL 4.0 and determination of an EPC.
b = Max - maximum detected concentration; %UCL - % upper confidence limit.
NV = UCL could not be calculated because there were too few samples or too few detected samples among many non-detected samples
It is possible that in certain instances, the calculated 95% UCL is smaller than the mean detected concentration. This reflects a low detection frequency and non-detect samples largely outnumbering detected samples, causing the 95% UCL recommended by ProUCL v4.0 to be smaller than the mean detected concentration, since it reflects the large number of non-detect samples.
* = ProUCL does not provide 95% UCLs when there is insufficient data, as defined by fewer than 5 samples or fewer than 2 unique detected samples. In these cases, the EPC is obtained by using the maximum detected concentration.
KM (Chebyshev) UCL = UCL based upon Kaplan-Meier estimates using the Chebyshev inequality (non-parametric).
KM (t) UCL = UCL based upon Kaplan-Meier estimates using student's t-distribution critical value (non-parametric).
Student's-t UCL = Computation method based upon student's t-distribution (parametric).
Chebyshev UCL or Student's-t UCL for nonparametric distribution based on ProUCL (V. 4.0) recommendation; Gamma UCL for gamma distribution; Nonparametric Bootstrap UCLs introduce some standard error and may not be reproduced precisely.

Footnotes:
a = Aroclor-1248,-1254, -1260 samples were combined for analysis by ProUCL 4.0 and determination of an EPC.
b = Aroclor-1016,-1221,-1232,-1242 samples were combined for analysis by ProUCL 4.0 and determination of an EPC.
c = Max - maximum detected concentration; %UCL - % upper confidence limit.
NV = UCL could not be calculated because there were too few samples or too few detected samples among many non-detected samples
It is possible that in certain instances, the calculated 95% UCL is smaller than the mean detected concentration. This reflects a low detection frequency and non-detect samples largely outnumbering detected samples, causing the 95% UCL recommended by ProUCL v4.0 to be smaller than the mean detected concentration, since it reflects the large number of non-detect samples.
* = ProUCL does not provide 95% UCLs when there is insufficient data, as defined by fewer than 5 samples or fewer than 2 unique detected samples. In these cases, the EPC is obtained by using the maximum detected concentration.
Student's-t UCL = Computation method based upon student's t-distribution (parametric).

	87-86-5	PENTACHLOROPHENOL	ug/L	6	NV	6	6	ug/L	Max	Insufficient Data*
	VOC									
	106-46-7	1,4-DICHLOROBENZENE	ug/L	2	NV	2	2	ug/L	Max	Insufficient Data*
	71-43-2	BENZENE	ug/L	40.88	54.11	110	54.11	ug/L	95% UCL	95% KM (t) UCL
	75-27-4	BROMODICHLOROMETHANE	ug/L	1.8	2	2	2	ug/L	95% UCL	95% KM (BCA) UCL
	67-66-3	CHLOROFORM	ug/L	8.3	11.09	16	11.09	ug/L	95% UCL	95% Student's-t UCL

Footnotes:
a = Max - maximum detected concentration; %UCL - % upper confidence limit.
NV = UCL could not be calculated because there were too few samples or too few detected samples among many non-detected samples
It is possible that in certain instances, the calculated 95% UCL is smaller than the mean detected concentration. This reflects a low detection frequency and non-detect samples largely outnumbering detected samples, causing the 95% UCL recommended by ProUCL v4.0 to be smaller than the mean detected concentration, since it reflects the large number of non-detect samples.
* = ProUCL does not provide 95% UCLs when there is insufficient data, as defined by fewer than 5 samples or fewer than 2 unique detected samples. In these cases, the EPC is obtained by using the maximum detected concentration.
Chebyshev (Mean, Sd) UCL = (1-α)100% UCL of the mean based upon the chebyshev theorem (using the sample mean and sample standard deviation - non-parametric).
Gamma UCL = Computation of UCL of the mean of a Gamma, G(k,θ) distribution (parametric).
KM (BCA) UCL = UCL based upon Kaplan-Meier Estimates using the bias corrected accelerated percentile bootstrap method. (non-parametric).
KM (Chebyshev) UCL = UCL based upon Kaplan-Meier estimates using the Chebyshev inequality (non-parametric).
KM (t) UCL = UCL based upon Kaplan-Meier estimates using student's t-distribution critical value (non-parametric).
Student's-t UCL = Computation method based upon student's t-distribution (parametric).
Chebyshev UCL or Student's-t UCL for nonparametric distribution based on ProUCL (V. 4.0) recommendation; Gamma UCL for gamma distribution; Nonparametric Bootstrap UCLs introduce some standard error and may not be reproduced precisely.

	108-90-7	CHLOROBENZENE	mg/kg	6.072	47.92	56	47.92	mg/kg	95% UCL	99% KM (Chebyshev) UCL

Footnotes:
a = Aroclor-1248,-1254, -1260 samples were combined for analysis by ProUCL 4.0 and determination of an EPC.
b = Max - maximum detected concentration; %UCL - % upper confidence limit.
NV = UCL could not be calculated because there were too few samples or too few detected samples among many non-detected samples
It is possible that in certain instances, the calculated 95% UCL is smaller than the mean detected concentration. This reflects a low detection frequency and non-detect samples largely outnumbering detected samples, causing the 95% UCL recommended by ProUCL v4.0 to be smaller than the mean detected concentration, since it reflects the large number of non-detect samples.
* = ProUCL does not provide 95% UCLs when there is insufficient data, as defined by fewer than 5 samples or fewer than 2 unique detected samples. In these cases, the EPC is obtained by using the maximum detected concentration.
Chebyshev (MVUE) UCL = (1-α) 100% UCL of the Mean of a Lognormal Population Based Upon the Chebyshev Theorem (Using the MVUE of the Mean and its Standard Error - parametric)
Gamma UCL = Computation of UCL of the mean of a Gamma, G(k,θ) distribution (parametric).
KM (t) UCL = UCL based upon Kaplan-Meier estimates using student's t-distribution critical value (non-parametric).
Student's-t UCL = Computation method based upon student's t-distribution (parametric).
Chebyshev UCL or Student's-t UCL for nonparametric distribution based on ProUCL (V. 4.0) recommendation; Gamma UCL for gamma distribution; Nonparametric Bootstrap UCLs introduce some standard error and may not be reproduced precisely.
