For the CT scenario, an incidental ingestion rate of 0.01 L/day was used based on the data from USEPA 1989 (swimmer incidental ingestion) and Best Professional Judgment.

* = Section 6.6.1 of USEPA 1989 (RAGS A) presents an incidential ingestion rate of 0.05 L/hr for a swimmer. For a non-simmwer, the RME incidential ingestion rate has been estimated to be lower, a value of 0.03 L/hr for 1 hr/day, resulting in an ingestion rate of 0.03 L/day.
For the CT scenario, an incidental ingestion rate of 0.01 L/day was used based on the data from USEPA 1989 (swimmer incidental ingestion) and Best Professional Judgment.

* = Section 6.6.1 of USEPA 1989 (RAGS A) presents an incidential ingestion rate of 0.05 L/hr for a swimmer. For a non-simmwer, the RME incidential ingestion rate has been estimated to be lower, a value of 0.03 L.hr for 1 hr/day, resulting in an ingestion
For the CT scenario, an incidental ingestion rate of 0.01 L/day was used based on the data from USEPA 1989 (swimmer incidental ingestion) and Best Professional Judgment.

* = Section 6.6.1 of USEPA 1989 (RAGS A) presents an incidental ingestion rate of 0.05 L/hr for a swimmer. For a non-swimmer, the RME incidental ingestion rate has been estimated to be lower, a value of 0.03 L.hr for 1 hr/day, resulting in an ingestion
For the CT scenario, an incidental ingestion rate of 0.01 L/day was used based on the data from USEPA 1989 (swimmer incidental ingestion) and Best Professional Judgment.

* = Section 6.6.1 of USEPA 1989 (RAGS A) presents an incidental ingestion rate of 0.05 L/hr for a swimmer. For a non-swimmer, the RME incidental ingestion rate has been estimated to be lower, a value of 0.03 L.hr for 1 hr/day, resulting in an ingestion rate of 0.03 L/day.
For the CT scenario, an incidental ingestion rate of 0.01 L/day was used based on the data from USEPA 1989 (swimmer incidental ingestion) and Best Professional Judgment.

Notes:

(1) Oral Absorption Efficiency from Exhibit 4-1 of USEPA (2004) RAGS Part E. For constituents not listed in Exhibit 4-1, an absorption efficiency of 1 is assumed. For constituents with absorption efficiencies in Exhibit 4-1, the highest value is reported.

(2) For Oral Absorption Efficiency for Dermal < 0.5, Absorbed RfD for Dermal = Oral RfD * Oral Absorption Efficiency for Dermal; otherwise, Absorbed RfD for Dermal = Oral RfD (USEPA 2004 RAGS Part E, Exhibit 4-1).

(3) Codes for Effects Endpoints: B - Hematological/Blood effect; E - Endocrine system effect; GI - Gastrointestinal system; H - Hepatic/Liver effect; I - Immune system effect; In - Integumentary/Skin effect; M - Mortality/Death/Longevity; N - Nervous system effect O - Other effect (e.g., hyperactivity, none reported); OC - Ocular effect; R - Renal/Kidney effect; T - Teratogenic effect; V - Vascular system effect; W - Decreased body weight.

* = For non-carcinogenic PAHs, the proposed surrogate benzo(a)pyrene was applied to estimate Oral Reference Dose (see USEPA 1993) Provisional Guidance for Quantitative Risk Assessment of Polycyclic Aromatic Hydrocarbons, EPA/600/R-93/089).

a = Because chromium was not speciated, the RfC for chromium VI was utilized.

b = Less chlorinated includes Aroclors 1221, 1232, 1016, and 1242. RfD values for Aroclor-1016 (CAS# 126741120) utilized.

c = Hightly Chlorinated includes Aroclors 1248, 1254, 1260 [and higher if reported]. RfD values for Aroclor-1254 (CAS# 11097691) utilized.

Notes:

(1) Oral Absorption Efficiency from Exhibit 4-1 of USEPA (2004) RAGS Part E. For constituents not listed in Exhibit 4-1, an absorption efficiency of 1 is assumed. For constituents with a range of absorption efficiencies in Exhibit 4-1, the highest value is reported.

(2) For Oral Absorption Efficiency for Dermal < 0.5, Absorbed Cancer Slope Factor for Dermal = Oral Cancer Slope Factor / Oral Absorption Efficiency for Dermal; otherwise, Absorbed Cancer Slope Factor for Dermal = Oral Cancer Slope Factor (USEPA 2004 RAGS Part E, Exhibit 4-1).

(3) Codes for Weight of Evidence: A - Human Carcinogen; B - Probable Human Carcinogen; C - Possible Human Carcinogen; D - Not Classifiable as to Human Carcinogenicity; E - Evidence of Non-Carcinogenicity in Humans.

* = For carcinogenic PAHs, relative potency approach with respect to benzo(a)pyrene applied to estimate Oral Cancer Slope Factor (see USEPA 1993 Provisional Guidance for Quantitative Risk Assessment of Polycyclic Aromatic Hydrocarbons, EPA/600/R-93/089).

a = Less chlorinated includes Aroclors 1221, 1232, 1016, and 1242. RfD values for Aroclor-1016 (CAS# 126741120) utilized.

b = Highly Chlorinated includes Aroclors 1248, 1254, 1260 [and higher if reported]. RfD values for Aroclor-1254 (CAS# 11097691) utilized.

c = Because the non-cancer oral reference dose as presented in IRIS is considered protective of oral carcinogenic exposure, oral carcinogenicity for chloroform is not assessed herein.

(2) Codes for Weight of Evidence: A - Human Carcinogen; B - Probable Human Carcinogen; C - Possible Human Carcinogen; D - Not Classifiable as to Human Carcinogenicity;
E - Evidence of Non-Carcinogenicity in Humans.

a = Because chromium was not speciated, the inhalation unit risk value for chromium VI was utilized

b = Less chlorinated includes Aroclors 1221, 1232, 1016, and 1242. RfD values for Aroclor-1016 (CAS# 126741120) utilized.

c = Highly chlorinated includes Aroclors 1248, 1254, 1260 [and higher if reported]. RfD values for Aroclor-1254 (CAS# 11097691) utilized.
