**Re: Proposed Sampling Plan – Emerging Contaminants
Site No. 734034**

File: 195

Dear Ms. Fitzgerald:

On behalf of the Town of Clay, C&S Engineers, Inc. is submitting this proposed sampling plan for the Town of Clay Landfill, Onondaga County, New York to address the DEC undertaking of a Statewide evaluation of remediation sites to better understand the risk posed to New Yorkers by 1,4-dioxand and per- and polyfluoroalkyl substances (PFAS). This is in response to a letter received October 2, 2018 via email and dated May 16, 2018.

To accommodate the state's evaluation, C&S plans to sample three wells for the parameters mentioned above during the annual sampling of the Town's landfill during December. The planned date of sampling is December 26th and 27th, 2018. The location of the monitoring wells to be sampled are attached on Figure 1 of this letter. The three locations are a good representation of the groundwater surrounding the entire landfill. The method of sampling will utilize the documentation described in your letter: *Groundwater Sampling for Emerging Contaminants and Collection fo Groundwatr Samples for Perflouroctanoicj Acid (PFOA) and Perflourinated Compounds (PFCs) from Monitoring Sample Protocal*. The analytical data will be received in an EDD format and entered into the NYSDEC's EQuIS™ software application.

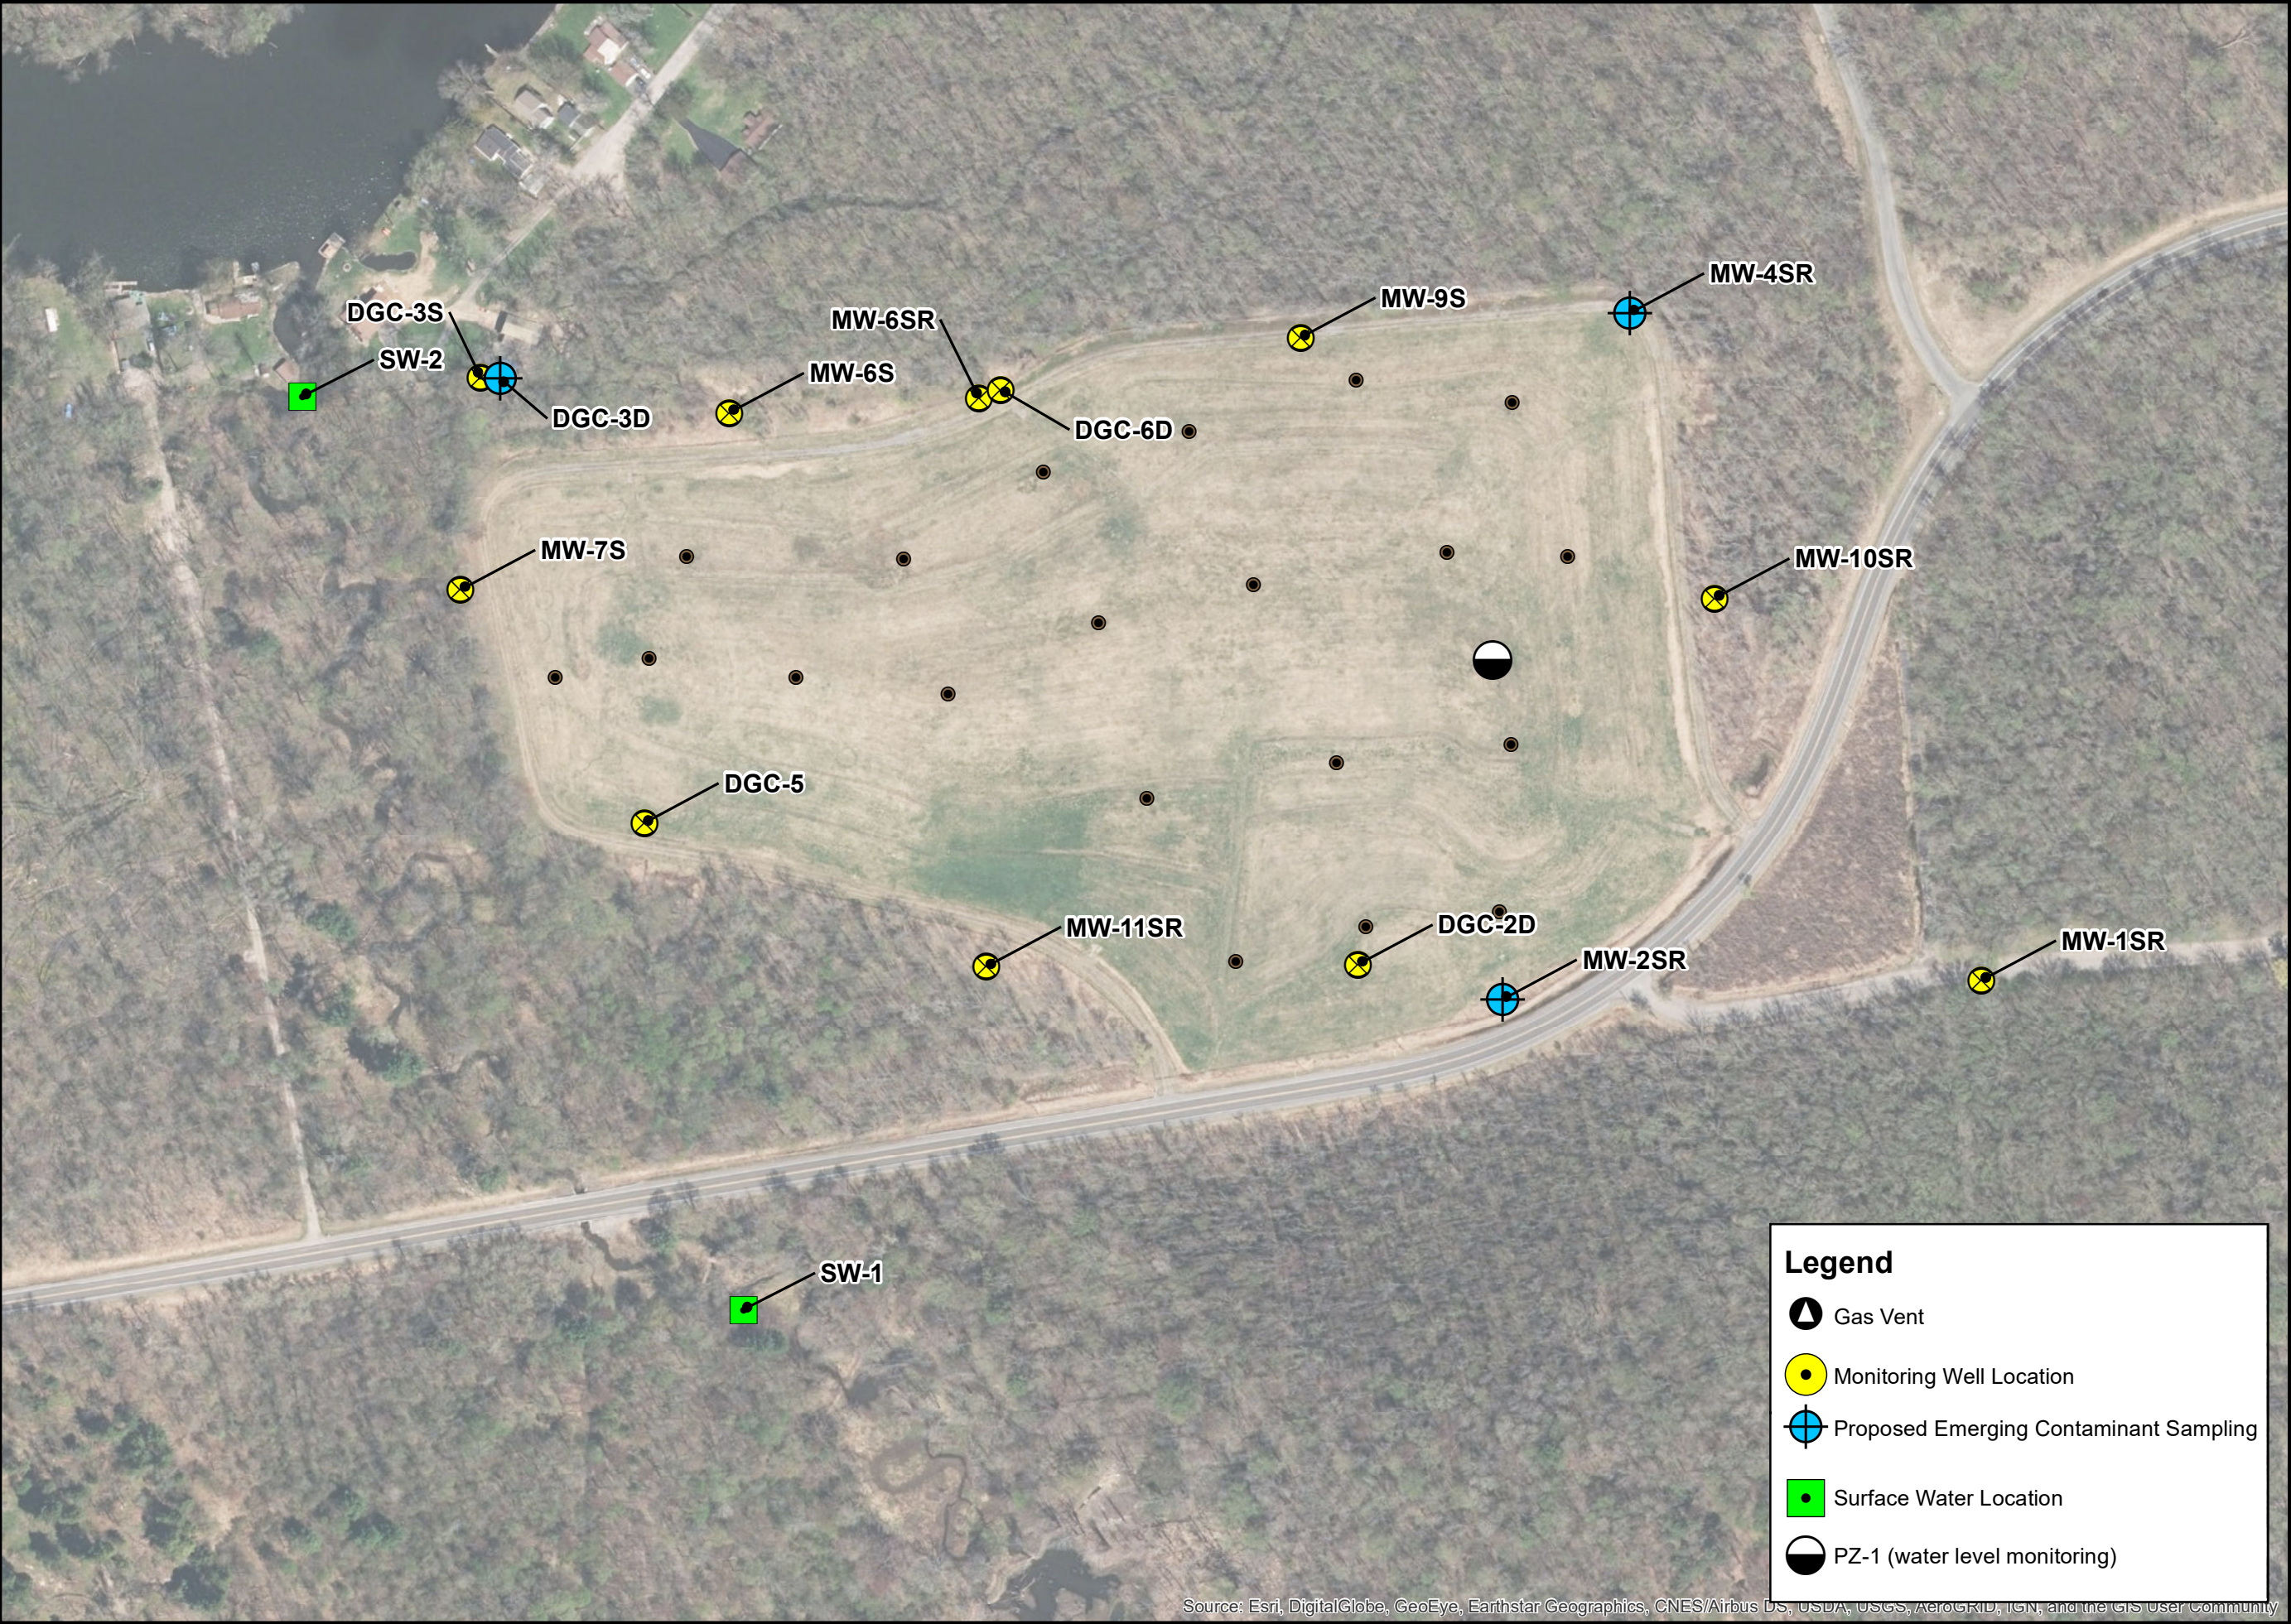

Please contact us should you have any questions regarding this proposed sampling plan.

Sincerely,
C&S ENGINEERS, INC.
